(SURAIYA FAROQHI)

SIDJILMĀSA, a town of pre-modern Islamic Morocco.

The ruined site of the ancient capital of the Tāfīlālt is as poorly known as it is famous. The town, situated on the Wadi Zīz some 300 km/190 miles from Fās, on the southeastern fringes of mediaeval Morocco, occupies a key position as gateway to the desert. Moreover, it has had the good fortune of being the foremost urban centre of the region which provided the land with its present-day dynasty of rulers, the ʿAlawīs. Thus history and legendary prestige have become mingled in order to preserve for this site, very eccentrically situated in regard to the great events of Moroccan history, an unaccustomed fame. Leo Africanus, who did much for the fame of a town where he stayed for some time in the 16th century, contributed to the spread of this legend; he makes Sidjilmāsa a foundation of Alexander the Great "for the sick and wounded of his army". The town was for long to have this image of a base and a refuge on the margins of the main track of history.

The *madīna* was actually founded, as al-Bakrī states, in the middle of the 2nd/8th century, in 141/758. It became the centre of an independent emirate connected with the Miknāsa, founders of Miknās and Tāza, that of the Banū Midrār or Midrārids [*q.v.*] who, following the examples of Tāhart and Tilimsān, rallied to the Khāridjite heresy [see ṢUFRIYYA. 2]. In the 4th/10th century, the land took part in the struggles between the Fāṭimids and the upholders of the Sunna, as protected by both the Aghlabids and the Spanish Umayyads; the town, without much pressure, welcomed the Mahdī. But orthodoxy soon came back; the dynasty was deposed by a Zanāta who had rallied to the Andalusians, Khazrūn al-Maghrāwī (365/976), and the Maghrāwa [*q.v.*] thus became masters of the independent amirate until the mid-5th/11th century.

The advance of the Almoravids [see AL-MURĀBIṬŪN] had some links with the region since their religious head, ʿAbd Allāh b. Yāsīn, had been chosen by his master, who had a school in a settlement on the banks of the Zīz and within the amirate. Above all, the Ṣanhādja [*q.v.*], from this point onwards adherents of the Almoravids, had been impeded in both their commerce and their transhumance by the domination of the Zanāta based in Sidjilmāsa. Their richness—a figure of 50,000 camels belonging to the *amīr* passing into the Draa is mentioned—and this local quarrel were caught up in the *djihād* to explain the end of the Banū Khazrūn and, with their line, the amirate of Sidjilmāsa.

It will be seen later how this annexation did not affect at all the region's prosperity. There is little mention of Sidjilmāsa, pillaged at the beginning of the 7th/13th century or adopted as a refuge by the Almohad ruler al-Rashīd towards the end of that dynasty. The Marīnid period gives us more information on the real life of the town and on that long band of territories which, lying between the Sahara and the Mediterranean, were the grazing lands of the Zanāta Banū Marīn, from Figuig towards the south, along the course of the Mulūya, and the region which they reached in summer, towards the north. Possession of the town oscillated between the Almohads and Marīnids, who made themselves masters of the town in 653/1255 and then took definitive possession of it twenty years later. The place was also the locus of a clash between the Marīnids of Fās and the ʿAbd al-Wādids of Tilimsān, who had to seek shelter under the walls of Sidjilmāsa. A further danger took shape in the 7th/13th century with the Maʿḳil [*q.v.*] Arabs' seizure of the Moroccan oases. Abu 'l-Ḥasan was probably able to repel them towards Sāḳiyat al-Ḥamrāʾ in the 8th/14th century, but the intrusion of these Bedouin tribesmen was irreversible.

At the same time, the town welcomed rebels and fugitives. Thus a son of Abū Saʿīd, Abū ʿAlī, made Sidjilmāsa the centre of a dissident amirate which he tried to extend towards Tuwāt (Touat) and towards Marrākush. His brother Abu 'l-Ḥasan confirmed him in this power, perhaps with the aim of neutralising him whilst Abu 'l-Ḥasan himself went to campaign against Tilimsān with the help of the Ḥafṣids. Abū ʿAlī nevertheless ended up a prisoner at Fās, where he died. But Abu 'l-Ḥasan himself, on his return from his disastrous Ifrīḳiyan expedition and threatened by his son Abū ʿInān, took refuge at Sidjilmāsa, which welcomed him but very soon preferred to him the future *amīr*. These episodes show that the Marīnids were not really able to control the outer fringes of Morocco from which they had actually themselves come. The end of the mediaeval period marks the end of the role, at times paradoxical, which the town had retained during the period of the Berber empires.

Under the Saʿdians, history seemed to follow a similar model. Al-Maʾmūn, in rebellion against his father al-Manṣūr, set himself up at Sidjilmāsa and in the Draa. The town was in Mawlāy Zīdān's hands in 1012/1603, and it was there that he received an Ottoman embassy from sultan Murād IV, whose ambitions had contributed towards breaking up the regional unity of Mediterranean Africa. But above all, this century saw the rise of the Abū Matalli marabouts who threatened the power of Mawlāy Zīdān (1020-2/1611-13) before another marabout, Abū Zakariyyāʾ, replaced his, to be in turn chased out of the Tāfīlālt in 1070/1660 by the ʿAlawid Mawlāy Rashīd.

The locus for this latest Moroccan dynasty ended up by enclosing if not the town, at least its region in the role of a sanctuary both venerated but also marginal. At the time when Mawlāy Sharīf, at the age of 52, became master of the Tāfīlālt, the district certainly served as a base for the expansion of the Sharīfs. Later, this place of famous name served to distance from the court powerful trouble-makers; in connection with the reign of Mawlāy Ismāʿīl, Henri Terrasse wrote that this ruler, richly endowed with numerous children, made it a kind of "dynastic depot" for them. In 1142/1729, it was at Sidjilmāsa that Mawlāy ʿAbd Allāh was to be found when people wanted to make him his father's successor. In 1206/1792, when Mawlāy Slīmān came to power, he was very familiar with Sidjilmāsa, where he had lived for a long time. In this way, the town and the Tāfīlālt became merged together in people's memories, and despite their decadence, the outer fringes of Morocco, of which the town was an integral part, showed itself nevertheless as the origin of four Moroccan dynasties: the Almoravids, the Marīnids, the Saʿdians and the ʿAlawīs.

However, in regard to Sidjilmāsa, one should tone down the severe judgment of the Saʿdian period historian al-Ifranī, "Sidjilmāsa has no greater merit except that it had the Sharīfs, and but for this fact, its name would have neither the popularity which it enjoys nor

the least prestige." In fact, the town was in mediaeval times in the front rank as an economic centre. The route to the Orient which joined the southern Sahara to Egypt and the East was both uncomfortable—sandstorms are mentioned—and dangerous. An itinerary which described a long curve accordingly led caravans to skirt the Sahara by the west. The caravan staging-point of Si̱djilmāsa could thus serve both Ifrīḳiya (al-Bakrī describes the route here) and Fās, or, by travelling northwards by the Mulūya, the Mediterranean. Numerous foreign merchants were known at Si̱djilmāsa in the High Midde Ages. With the Almoravids, who united under one rule not only the two sides of the Sahara but also those of the Western Mediterranean, the town enjoyed an exceptional situation. The reconquest of the Mediterranean basin by the Europeans impeded this prosperity, whilst the opening-up of the way to the New World, and also the re-opening of the route across the Sudan, finally ruined it.

The texts abound in references to this trade, in which gold from the Sudan figures, as in also African slaves, which appear as items of merchandise in the 5th-6th/11th-12th centuries. Various products of Moroccan agriculture are also cited: Si̱djilmāsa received the pistachios of Tunisia, but above all, it exported dates, henna, spices (carraway and cumin), indigo, cotton and sugar. Alum was valued, but also galls used for the tanning of leather. These rapid indications confirm that Si̱djilmāsa, an entrepôt as well as the centre of a prosperous regional hinterland, was a rich town. One can readily understand how it survived the end of its political independence, so long as the political geography of the lands surrounding the Mediterranean did not separate it from its customers. All this seems to make al-Idrīsī's description plausible: "It is a great and populous town, surrounded by orchards and gardens, fine both within and outside. It has no citadel, but consists of a series of palaces and cultivated fields along the banks of a river; the rise and swelling of this river during the summer resembles that of the Nile, and its waters are used for agriculture in the same fashion as those of the Nile by the Egyptians."

Descriptions exist from al-Bakrī to Leo Africanus and up to the present day. H. Terrasse has described the site, whose surrounding wall of brick on a stone base, attested in the 5th/11th century, no longer exists. But the site can easily be located by aerial photography and detection: a vegetation-less surface is bordered by an enceinte which has a fore-wall, but this strong but also fragile (because of its eroded material) wall appeared after the time of the amirate of Si̱djilmāsa. The position is the same for the remains which it encloses; these may be a sign of a rebuilding of the *madīna* in recent times. For the mediaeval period, only a few Marīnid survivals can be detected in a site badly affected by floodings. But only the track towards the Mag̲h̲rib and Spain has been explored; it would be useful to compare certain remains with those recently uncovered in Ifrīḳiya.

As the cradle of the ʿAlawī dynasty, the Tāfīlālt has readily attracted archaeologists, without Si̱djilmāsa having experienced the extensive scientific project which it deserves and which will, it is hoped, eventually take place. Explorations are in the course of being made, and a mosque has been uncovered, but the texts nevertheless remain today as the most eloquent testimonies to an age when the countryside of Si̱djilmāsa was not far from evoking a dream land. Half a millennium after its fall, Si̱djilmāsa remains present in the memories of our contemporaries; it is the witness of a time when the lands of the south, by their economies as well as by the technologies mastered by their peoples, were in advance of those of Western Europe.

TERRASSE)

AL-SI̱DJILMĀSĪ, ABŪ MUḤAMMAD AL-ḲĀSIM B. MUḤAMMAD b. ʿAbd al-ʿAzīz al-Anṣārī, Arab literary theorist, known for his highly original work *al-Manzaʿ al-badīʿ fī tadjnīs asālīb al-badīʿ* (ed. ʿAllāl al-G̲h̲āzī, Rabat 1401/1980).

In the colophon of the Tetuan ms., the author states that he finished his work on 21 Ṣafar 704/23 November 1304. No other bio-bibliographical details are known. His *nisba* and the provenance of the two extant mss. of his work show him to be a Mag̲h̲ribī scholar. More particularly, as the approach of his book clearly shows, he belongs to the Mag̲h̲ribī "school" of the likes of Ibn ʿAmīra (d. 656/1258 or 658/1260 [*q.v.*]) in his *al-Tanbīhāt ʿalā mā fī ʾl-Tibyān* [of Ibn al-Zamlakānī] *min al-tamwīhāt* (ed. M. Ibn S̲h̲arīfa, Casablanca 1412/1991), Ḥāzim al-Ḳarṭādjannī (d. 684/1285 [*q.v.*]) in his *Minhādj al-bulag̲h̲āʾ wa-sirādj al-udabāʾ* (ed. M. al-Ḥ. Ibn al-K̲h̲udja, Tunis 1966), and Ibn al-Bannāʾ al-Marrākus̲h̲ī (d. 721/1321 [*q.v.*]), in his *al-Rawḍ al-marīʿ fī ṣināʿat al-badīʿ* (ed. R. Bins̲h̲akrūn, Casablanca 1985), who, each in his own way, made use of the—otherwise spurned—Aristotelian Arabic tradition of poetics and rhetoric.

His book is a sustained effort at a logically strict classification of the various schemes of rhetoric and stylistics. His ten topmost genera are the following (the translations are tentative; "|" indicates unusual terms, "sic" marks unusual meanings): *īdjāz* (brevity), *tak̲h̲yīl* (imagery [sic]), *is̲h̲āra* (allusion), *mubālag̲h̲a* (emphasis), *raṣf* (patterning [!]), *muẓāhara* (doubling [!]), *tawḍīḥ* (clarification), *ittisāʿ* (ambiguity [sic]), *int̲h̲ināʾ* (digression [!]), and *takrīr* (repetition).

Bibliography: In addition to the references given in the text, see, for analyses of his thought, ʿAllāl al-G̲h̲āzī, *Taṭawwur muṣṭalaḥ "al-tak̲h̲yīl" fī naẓariyyat al-naḳd al-adabī ʿinda ʾl-Sidjilmāsī*, in *Madjallat Kulliyyat al-Ādāb wa ʾl-ʿUlūm al-Insāniyya* (Fās) 1409/1988, *ʿadad k̲h̲āṣṣ* 4, 285-334; Muḥammad Miftāḥ, *al-Talaḳḳī wa ʾl-taʾwīl*, Casablanca and Beirut 1994, 61-80. SI̱DJISTĀN [see SĪSTĀN].

AL-SI̱DJISTĀNĪ, ʿABD ALLĀH B. SULAYMĀN b. al-As̲h̲ʿat̲h̲, Abū Bakr Ibn Abī Dāwūd, early Islamic traditionist, born 230/844 in Si̱djistān, died 316/929 in Bag̲h̲dād. He was the author of *Kitāb al-Maṣāḥif*, a work on uncanonical readings of the Ḳurʾān [see ḲIRĀʾA] organised by "codex" and apparently the only book of its type still in existence. Famed as a memoriser of *ḥadīt̲h̲*, he wrote books mainly on Ḳurʾānic topics, including a book of *tafsīr* and work on *nas̲k̲h̲* (perhaps used as a source by Ibn al-Djawzī in his *Nawāsik̲h̲ al-Ḳurʾān*). While he is reputed to have composed several *ḥadīt̲h̲* collections (among which are mentioned a *Musnad* and a *Kitāb al-Sunan*), his reputation as a transmitter varies. He is generally considered trustworthy and it may be that his work on the text of the Ḳurʾān cast him in an unfavourable light for some later generations. His fame primarily rests on

his work on the codices which was, for example, quoted extensively by al-Suyūṭī in his *al-Itḳān fī ʿulūm al-Ḳurʾān*.

Al-Sidjistānī was a contemporary of Muḥammad b. Djarīr al-Ṭabarī [*q.v.*], and is pictured as his rival in writing a *tafsīr* and the one who lost the competition according to the judgement of history. A dispute arose between the two of them regarding al-Ṭabarī's alleged Shīʿī and Djahmī tendencies, as exposed by al-Sidjistānī with his Ḥanbalī point of view.

Bibliography: Sezgin, i, 174-5 and biographical sources cited there; A. Jeffery, *Materials for the history of the text of the Qurʾān. The old codices*, Leiden 1937, in which the Arabic pp. 1-223 includes an edition of *K. al-Maṣāḥif* (which has been repr. separately, Cairo 1986). On his relationship with al-Ṭabarī, see F. Rosenthal (tr.), *The History of al-Ṭabarī*, i, *General introduction and From the Creation to the Flood*, Albany 1989, 59-60, and C. Gilliot, *Exégèse, langue et théologie en Islam*, Paris 1990, 236-7, and sources cited in both works. (A. Rippin)

AL-SIDJISTĀNĪ, ABŪ ḤĀTIM [see ABŪ ḤĀTIM AL-SIDJISTĀNĪ].

AL-SIDJISTĀNĪ, ABŪ YAʿḲŪB [see ABŪ YAʿḲŪB AL-SIDJZĪ].

SIDJN (A.) "prison". In the Ḳurʾān it is mentioned only in connection with the story of Joseph (sūra XII and XXVI, 29). The etymology of the term is controversial, but it seems to be derived from the Latin *signum* via the Greek variant *signon*, which meant prison in Greek colloquial speech in Late Antiquity (see J. Niehoff, *Romanica Graeco-Arabica: lat, signum > gr. signon > arab. sign*, in *Romanica Graeco-Arabica, Festschrift R. Kontzi*, Tübingen 1995). *Ḥabs* in the Ḳurʾān means "detention", but is used in later literature to denote a prison too (*Aghānī*³, iv, 92; al-Tanūkhī, *al-Faradj baʿd al-shidda*, ed. ʿA. al-Shāldjī, Beirut 1978, ii, 116; Ibn al-ʿAdjamī (17th century), *Taʾrīkh*, ms. Gotha, Arab 1631, fols. 75a, 82a, 122b, 130a, 157b, 173a, 176a; al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270/1853, ii, 187). *Ḥubisa ʿinda fulān* in the sense of being imprisoned in the custody of a person could mean anything, from being kept in someone's house to rotting in a dungeon. *Tarsīm* as described by al-Maḳrīzī (and perhaps as used predominantly in Mamlūk sources, see *Khiṭaṭ*, ii, 187) means detaining a person in one place or putting him under guard.

House arrest as a punishment (with the root *m-s-k*) in the case of illicit fornication was imposed on the women in the Ḳurʾān (IV, 15-16), but was later abrogated and replaced by flogging (XXIV, 2). All Ḳurʾānic punishments, the *ḥudūd*, are thus corporal punishments.

The question of prisons and imprisonment in Islam has hardly been dealt with so far. Prisons seem to have been unknown in Bedouin society, but probably existed in cities like Mecca and Medina. Undoubtedly, Islam became acquainted with imprisonment as an institution through its conquests. Information concerning prisons and imprisonment is scarce in the Islamic *fiḳh* literature in the pre-classical and classical time (2nd-6th/8th-13th centuries). The first prison building is attributed to ʿUmar b. al-Khaṭṭāb, who is said to have bought a house in Mecca and turned it into a prison. ʿAlī allegedly did the same in Baṣra; however, prisoners could easily escape from ʿAlī's prison because it was not solid enough. So ʿAlī is said to have built another one like a fortress. Besides imprisonment in special prison buildings, house arrest existed, which allowed the detainees a great deal of freedom compared to normal prisoners. Bakkār b. Ḳutayba (d. 270/883) was, for example, held as a prisoner in his own home. However, this did not prevent him from sitting at his window and lecturing on *ḥadīth* to the people who had gathered in front of his house (al-Kindī, *K. al-Ḳuḍāt*, ed. R. Guest, Leiden-London 1912, 513). Special prison buildings are known to have existed in different cities, and very often the citadel was used as a prison (see e.g. al-Maḳrīzī, *Khiṭaṭ*, ii, 187 ff.).

Although different forms of imprisonment existed, the only form of imprisonment which the jurists dealt with in more detail is imprisonment for debt. It was imposed if the creditor thought that the debtor still had assets. The sole objective of this kind of imprisonment was to compel a debtor to satisfy his creditors. Thus he was released if it became clear that he was impecunious. Imprisonment was, according to the *fiḳh* literature, also used in cases of contempt of court and for apostates. Male apostates could be imprisoned for three days in an effort to revive their faith in Islam. If they were unwilling to reaffirm their faith within this period, they were to be executed. The same is true for female apostates, but according to some jurists, they were only to be imprisoned.

The jurists mention pre-trial detention, i.e. to detain a suspect until his trial commences. This was based on an alleged utterance of the prophet who is said to have had people arrested on suspicion (*fī tuhma*).

In all these cases, the prisons were subject to the control of the judges. According to the Ḥanafī Abū Yūsuf [*q.v.*], the maintenance of prisoners should be financed from state funds so that prisoners would not roam about the streets in shackles begging (*K. al-Kharādj*, ed. ʿU. Bashīr², Cairo 1933, 149). It seems, however, that occasionally prisoners had to pay rent to live in prison if they had assets. In the *adab al-ḳāḍī* literature, the prisoners' rights were strictly defined and it was emphasised that under no circumstances should anyone be kept in prison wrongfully. If there was no plaintiff, the judge had to release the prisoner. If he was sick, the prisoner could be looked after by his servant or he could be discharged from prison. Furthermore, he could receive guests in prison, especially members of his family and sometimes he was even allowed to have sex in prison if an appropriate place for it was available. A prisoner should not be beaten, chained, paraded through the streets or forced to work. Nevertheless, prisoners were prohibited from attending gatherings, festivals, the pilgrimage (*ḥadjdj*) and funerals (al-Khaṣṣāf, *K. Adab al-ḳāḍī*, ed. F. Ziyadeh, Cairo 1978, 264-5; al-Sarakhsī, *Mabsūṭ*, Beirut 1986, xx, 90.) However, evidence from historical and biographical sources suggests that in practice not all the requirements of the *fuḳahāʾ* were met.

Imprisonment not as a means of compulsion (like imprisonment for debt) or in the sense of pre-trial detention, but as a punishment, is only rarely mentioned in the *fiḳh* literature, and if so, mostly in addition to the *ḥudūd*, i.e. in addition to corporal punishment. For example, according to the Mālikīs, in the case of murder, if the *walī ʾl-dam* (the next of kin who has the right to demand retaliation) waives his right of retaliation, the murderer is imprisoned for a year. The imprisonment takes place only after he has been whipped a hundred times (Mālik b. Anas, *al-Muwaṭṭaʾ*, *riwāya* Yaḥyā b. Yaḥyā al-Laythī, ed. S.M. al-Laḥḥām and M. Ḳaṣṣāṣ, Beirut 1988, 671, *k. al-ʿuḳūl, bāb al-ʿafw fī ḳatl al-ʿamd*, 627).

In the field of *taʿzīr* [*q.v.*], imprisonment is generally accepted as a punishment and is listed next to admonishment, flogging and banishment. It could

be for one day or for an indefinite period.

Taʿzīr is left to the discretion of the jurists, and the *fiḳh* literature does not lay down special punishments for particular offences. Al-Kāsānī (d. 587/1189) divides society into four classes and mentions imprisonment as a punishment for the two lower classes, in addition to admonishments and beatings. It is possible that such prisoners were kept in the so-called "robbers' prison" (*sidjn al-luṣūṣ*) which is only rarely mentioned in the legal literature. The question in which cases and how often imprisonment was imposed in legal practice as a punishment, and whether it was used as often as corporal punishment, can only be answered by the study of historical or biographical literature. Here also, not much research has been done. It seems, however, that in practice imprisonment was used mainly as a compulsory measure for debtors and in cases of pre-trial detention, and only in very rare cases as a punishment, e.g. for a breach of official duty by an unreliable court secretary (al-Ḳāḍī ʿIyāḍ, *Tartīb al-madārik wa-taḳrīb al-masālik*, ed. A.B. Maḥmūd, Beirut 1967-8, iii-iv, 217), or in the case of refusal to pray (al-Wakīʿ, *Akhbār al-ḳuḍāt*, Cairo 1947-50, iii, 260). However, imprisonment seems not to have been a main punishment (cf. Schneider, *Imprisonment*, 166). This situation prevailed through the Ottoman era (U. Heyd, *Studies in old Ottoman criminal law*, Oxford 1973, 301 ff.).

In modern Islamic states, punitive detention is now one of the officially recognised and widespread forms of punishment, in addition to fines and—where they still exist—corporal punishment (see e.g. *The Gazette of Pakistan*, 25 October 1994, 796: it comprises imprisonment for life, rigorous imprisonment with hard labour and simple imprisonment). As in classical times, imprisonment is administered through the penal law, e.g. in the case of *ḳatl al-ʿamd* (homicide with deliberate intent), when the *walī 'l-dam* voluntarily waives his right of retaliation, cf. above, Mālik, *Muwaṭṭaʾ*, 671, *k. al-ʿuḳūl*, etc., cited above). In many modern Islamic legal codes, e.g. those of Saudi Arabia, Kuwayt and the UAE, imprisonment because of debt still exists (see *al-ʿAdāla, Madjalla Ḳānūniyya*, Abū Ẓaby, lxxii [Rabīʿ II 1412/October 1992], 8 ff.).

Historically, the legal aspects of imprisonment have to be distinguished from the political ones. As the ruler had the right to exercise judicial power in most cases concerning public order and safety, he also had the right to imprison people at will. Thus the government could send to prison proven or alleged heretics, religious fanatics, charlatans and all those guilty of violating public order. Officials who failed to carry out their order were imprisoned. Judges who were not willing to serve could be put in jail.

The same is true for political enemies, who were considered to be hostile to the ruler, and also for prisoners of war (for the 17th century, see e.g. Herberer von Bretten, *Aegyptiaca servitus. Warhafte Beschreibung einer Dreyjährigen Dienstbarkeit*, Heidelberg 1610, new ed. Graz 1967, 125 ff.). The living conditions for prisoners of the ruler are often described in historical sources as appalling. In what al-Maḳrīzī calls "prisons of the governors" (*sudjūn al-wulāt*), prisoners in chains were forced to do hard labour. Their cries of "hunger" were heard in the streets while the warders took the alms originally meant for them (*Khiṭaṭ*, ii, 187).

The sources, especially historical works, attest many cases of political imprisonment, often from the ruler's arbitrariness and without any trial; thus scholars like Aḥmad b. Ḥanbal, Ibn Taymiyya [*q.vv.*] and many others, were put behind bars.

(Irene Schneider)

ṢIDḲ (a.), a term in mysticism.

Here, the importance of *ṣidḳ* ("truthfulness, sincerity") and its derivatives, *ṣādiḳ* and *ṣiddīḳ* ("true, truthful, sincere") is determined by their frequent use in the Ḳurʾān, e.g., iv, 69, v, 119, vi, 115, ix, 119, x, 2, xix, 41, 54, 56, xxvi, 84, xxxiii, 8, xlvi, 16, liv, 55, etc. (see also H. Kassis, *A concordance of the Qurʾān*, Berkeley 1983, 1174-7) and in *ḥadīth* (Wensinck, *Concordance*, iii, 277-84). *Ṣidḳ* was treated as a cornerstone of mystical self-discipline by early Ṣūfī masters such as al-Ḥārith al-Muḥāsibī, al-Djunayd, al-Ḥallādj and the anonymous author of the *Adab al-mulūk* (late 4th/10th century). The purity of *ṣidḳ* was routinely contrasted with the foulness of lying (*kidhb*), this "menstruation of the souls" (*ḥayḍ al-nufūs*), as it was called by some Ṣūfī authorities. Abū Saʿīd al-Kharrāz (d. 286/899 [*q.v.*]) wrote a special tract, the *K. al-Ṣidḳ*, in which *ṣidḳ* was discussed in the context of other Ṣūfī notions, notably *ikhlāṣ* and *ṣabr* [*q.vv.*]. It received further elaboration in the works of the systematisers of the classical Ṣūfī tradition al-Sarrādj, Abū Ṭālib al-Makkī, Abū Nuʿaym al-Iṣfahānī, al-Ḳushayrī and al-Hudjwīrī. Later, it figured prominently in the theoretical writings of al-Ghazālī, al-Suhrawardī, Ibn ʿArabī and other later Ṣūfīs.

From the outset, *ṣidḳ*, defined as the complete agreement of one's inner convictions and outward acts, was held to be an indispensable condition of the true worship of God and a hallmark of the genuine Ṣūfī. Mystics emphasised that any good work is futile unless it springs from a sincere and disinterested desire to please God. The same goes for all the "stations" of the mystical path, *maḳāmāt* [*q.v.*], which cannot be mastered without *ṣidḳ*. The early Ṣūfī master Sahl al-Tustarī (d. 283/896 [*q.v.*]) named *ṣidḳ* among the five pillars of Ṣūfism alongside generosity, resoluteness, fearing God, modesty and scrupulousness in food. In Ṣūfī manuals, *ṣidḳ* was often paired with *ikhlāṣ*, the two words sometimes being treated as synonyms. The elevated rank accorded to these notions by the Ṣūfīs is attested by al-Sarrādj, who considered them to be part of the *uṣūl al-dīn* together with *tawḥīd, maʿrifa, īmān* and *yaḳīn*. In a similar vein, the author of the *Adab al-mulūk* counted *ṣidḳ* and *ikhlāṣ* among the five principal ways of achieving the mystical goal, the other being *zuhd* [*q.v.*], the desire to obtain God's pleasure, and the taming of one's lower self (*mudjāhadat al-nufūs*). Likewise, Ibn ʿArabī included *ṣidḳ* in his list of the nine principal conditions of the mystical path together with hunger, vigil, silence, retreat, trust in God, patience, determination and certainty, which he called "the Mothers of Virtue". *Ṣidḳ* was often also associated with sturdiness (*shidda*) and firmness (*ṣalāba*), the qualities which, according to Ṣūfī writers, rendered it both an effective offensive weapon in attaining self-perfection and a reliable shield against devil's temp-

tations. As time went on, Ṣūfī psychology provided increasingly detailed descriptions of it. A typical example is al-Ghazālī's treatment of this concept in a special chapter of his *Iḥyā'*, in which six different types of truthfulness are distinguished, i.e. in word, in intention and volition, in determination, in faithfulness to one's determination, in deed, and finally, in fulfilling the requirements of the mystical path (*ṭarīḳ*).

Despite its importance, adherence to *ṣidḳ* was not considered absolute. According to al-Ghazālī and Ibn 'Arabī, it is always contingent on concrete circumstances. Thus telling the truth about someone in his/her absence can amount to backbiting and will be judged accordingly in the hereafter. The same goes for those who speak publicly of their sexual life, although their accounts may be true. On the other hand, a pious lie that helps to save the life of a Muslim or to protect a state secret may, in God's eyes, be a meritorious deed.

Basing themselves on Ḳur'ān v, 108-20, and iii, 81, some Ṣūfī exegetes elaborated on the "question of sincerity" (*su'āl al-ṣidḳ*) which God posed to 'Īsā on the eve of the Judgment Day. In response, 'Īsā squarely disowned his misguided worshippers who took him and his mother for deities and thereby successfully passed the test, showing both a "pure sincerity" and "saintly humility".

Although man shares the attribute of *ṣidḳ* with God, who is sometimes described as "the Sincere One" (*al-ṣādiḳ*), human sincerity is of an imperfect, inferior nature, unless, in accordance with the famous *ḥadīth ḳudsī* [*q.v.*], he has reached the exalted spiritual state in which God "becomes his hearing ..., his sight ... his hand ... and his foot", i.e. his sole *raison d'être* and mover. This is, in the view of Ibn 'Arabī and some other Ṣūfīs, the utmost degree of *ṣidḳ*, which signifies the attainment of perfect servanthood (*al-'ubūdiyya*) and thus the consummation of the mystical path.

(A. Knysh)

SIDR (A.), n. of unity, Sidra, a shrub or tree of the various Rhamnaceae belonging to the genus *Ziziphus* which has a number of representatives in N. Africa and the Middle East. Various species were, and are, cultivated for their fruits, timber, and as hedging plants. *Ziziphus* are trees or shrubs of varied heights with tangled branches that usually grow in arid regions. The tallest is *Z. spina-christi*; heights given in modern floras vary between 5 and 12 m. Most species are spiky, although some varieties are thornless. They bear jujube-like fruits (*dūm*) highly valued for food, especially the cherry-sized bright yellow fruit of *Z. spina-christi* and the smaller, pea-sized, dark orange of *Z. leucodermis*. The fruit have a single dark pip, which was ground up and eaten with the flesh. Fruits were gathered and stored; they were crushed between stones and eaten raw or cooked to a paste in water, milk or buttermilk (Miller-Morris, 1988, 240-2).

Z. spina-christi derives its name from its being a possible candidate for the tree from which Christ's crown of thorns was made; since it does not grow in the region of Jerusalem, however, it has been suggested that *Sarcopoterium spinosum* (Rosaceae) is a more likely option (Miller-Morris, 1988, 242). There are a large number of synonyms for *sidr* in classical and modern Arabic. The current Latin name of the genus is also attested in mediaeval Arabic sources; the Syriac name for the *'unnāb*, the jujube tree (*Z. jujuba*), is *zīzūfī*, according to al-Bīrūnī, 1991, 438; cf. Greek σιζυφα.

For medical usage, the soothing and purifying qualities of *sidr* are applied in various ways. Ibn al-Bayṭār (Cairo 1291/1874, ii, 5), states that it is good for the stomach; beneficient if eaten before meals; laxative (but in some cases the fruit (*nabḳ*) is constipating); it frees the stomach and bowels from yellow bile; and it suppresses heat. Current uses in Dhofar (Miller-Morris, 1988, 240, 242, 329) include: a paste of crushed leaves (preferably of *leucodermis*), used for cleansing the scalp, hair or body in general; it is applied to swellings, sores or inflammations, or against headaches; water boiled with its crushed leaves is given to women in prolonged labour or with a retained placenta. The hard wood is used for making utensils (ladles, spoons, fire-tongs) (Miller-Morris, 1988, 242), also for carpentry in former days (cf. a *ḥadīth* in 'Abd al-Razzāḳ al-Ṣan'ānī's *Muṣannaf*, no. 19756).

In magic, popular modern treatises advise the use of *sidr* leaves as a means against sorcery. *Sidr* leaves are considered just as lawful in this respect as *kitāba*, the use of written Ḳur'ānic or other religious formulae. See e.g. al-Ḥanbalī 1409/1989, 41; al-Bālī, 1412/1992, 122; al-Ḳaḥṭānī, 1412/1992, ch. 88.

The *sidr* occurs several times in the Ḳur'ān: XXXIV, 16 (description of a poor area); LIII, 14, 16 (the "*sidra* of the ultimate boundary"); LVI, 28 (thornless *sidra* in Paradise). All the evidence suggests that the *sidr* was a tree of considerable importance in pre-Islamic Arabia. This is confirmed by a *ḥadīth* which describes a *sidra* to which the pagan Arabs used to withdraw and on which they used to hang their weapons. The tree was called *dhāt al-anwāṭ* "that of the suspended things". Upon passing a green *sidra*, the Muslims asked the Prophet to give them also a *dhāt al-anwāṭ*, and were rebuked with a reference to the Israelites asking Moses for "a god such as those people have" (Ibn Ḥanbal, v, 218).

The *sidr* is mentioned in various *ḥadīth*s, e.g. for washing the hair, corpses or clothes stained with menstrual blood. Cutting down *sidr* trees, especially those that offered shadow to man and beast, was forbidden by the Prophet, often in very strong terms (Abū Dāwūd, *Adab* 109, *bāb fī ḳaṭ' al-sidr*, nos. 5239, 5241; 'Abd al-Razzāḳ al-Ṣan'ānī, *Muṣannaf*, nos. 19756-8). References in the *ḥadīth* and elsewhere indicate that *sidr* trees were popular landmarks; the Ḳur'ānic *sidrat al-muntahā* fits in with this.

The most likely species of *Ziziphus* to be associated with the Ḳur'ānic and *ḥadīth* references to *sidr* is probably *Z. spina-christi*, because its characteristics, size and height make its connotation as a fruit-bearing (see al-Bayḍāwī, *Tafsīr*, on sūra XXXIV, 16), shade-offering and landscape-marking tree plausible, as opposed to *Z. lotus* which is a shrub less than two metres high. The Ḳur'ānic ref. to the "thornless *sidr* trees" in Paradise (LVI, 28) also points in this direction

(there exists a thornless variety of *spina-christi*).

The Ḳurʾānic *sidrat al-muntahā*, where Muḥammad saw Gabriel for the second time "when the tree became covered by what covered it", figures conspicuously in the story of the Prophet's celestial ascent [see MIʿRĀDJ]. See further on this, SIDRAT AL-MUNTAHĀ.

(REMKE KRUK)

SIDRAT AL-MUNTAHĀ (A.), "the lote tree on the boundary" as described in Ḳurʾān, LIII, 14: "Indeed, he [Muḥammad] saw him [Djibrīl] another time [other than that referred to in Ḳurʾān, LIII, 1-12] by the lote tree of the boundary nigh which is the garden of the refuge ... Indeed, he saw one of the greatest signs of his Lord." The full exegesis of this passage arises in a prominent *ḥadīth* report (repeated, for example, in al-Bukhārī, *K. manāḳib al-anṣār* and *K. badʾ al-khalḳ*; Muslim, *K. al-īmān*; also see al-Ṭabarī, i, 1158-9) which speaks at length of the *miʿrādj* [*q.v.*]. After Muḥammad (who was accompanied by Djibrīl) met with Ibrāhīm in the seventh heaven, he went on as far as *sidrat al-muntahā* (also *al-sidra ʾl-muntahā* in *ḥadīth*) beyond which no one can pass, and there he gazed upon God (this being "one of the greatest signs of his Lord"). This lote tree is described as having fruits the size of earthenware jars, leaves as big as the ears of elephants and composed of many indescribable and unknown colours. The four rivers of Paradise flow from under it. The idea of a tree being at the apex of the pyramid-shaped mountain of created worlds goes back to ancient Sumerian mythology, and the motifs of receiving food (as in the drinks from which Muḥammad may choose in some versions of the story) and having a vision of the divine are all integral parts of the same mythic structure.

In the Ṣūfī description of the quest for the experience of the divine as patterned on the story of the *miʿrādj*, the "lote tree on the boundary" symbolises the point to which knowledge can take the mystic (and up to which point one needs a guide) but beyond which the true experience lies. Other speculations about the tree include the idea that Adam saw Muḥammad's name written on the tree and that the tree is actually composed of the "light of Muḥammad" (*nūr Muḥammadī* [*q.v.*]).

(A. RIPPIN)

SIERRA LEONE, a country of coastal West Africa, in 1961 an independent republic, is in the forest belt of West Africa, separated geographically by inland mountain ranges from the West African Islamic heartland and so protected in the past from Muslim invasion. But individual Muslims, traders and holy men, visited it regularly from at least the 15th century, and settled there increasingly after the *djihād* of the early 18th century in Fūta Djallon [*q.v.*]. The indigenous peoples were not attracted to Islam and retained their own religions, which suited their own ways of life.

A British settlement was founded on the coast in 1787. In 1807 it became a British colony where slaves who had been captured by the British navy from slave-ships crossing the Atlantic were liberated and settled. Muslim traders, chiefly Fula and Mandingo, were attracted to Freetown, the capital, and by at least 1830 they had built a small mosque. Also, some of the liberated people, chiefly Yoruba (from modern Nigeria), known locally as "Aku", were Muslims, and formed their own Muslim community in East Freetown. Eventually the Aku split into two factions, worshipping in rival mosques, a division that has survived into the 1990s.

Though individual governors were occasionally hostile to Islam, official British policy tolerated Muslims, and they became recognised as part of the Freetown community. Some left Freetown and settled in neighbouring villages. Fearful of sending their children to Christian schools, they organised their own Ḳurʾānic schools, and a few went to study in the notable West African Islamic centres. From 1890 the government gave a small grant for Muslim education.

In 1896 a British Protectorate was established over the area of the present Sierra Leone (measuring 73,326 km^2), with an artificial frontier separating it from the neighbouring French Guinea and Liberia. When railways and roads were built the population became more mobile. People who left their villages were often ready to adopt a new religion, and, as a result, Islam spread, particularly in the northern part of the country where Christian missionary influence was weak. Many Muslims, however, remained (and many today still remain) members of the ancient and deeply-rooted secret societies, like the male *poro* and female *sande* societies.

From 1911 the government made explicit provision for educating Muslims. Government secondary schools were open to them, thus letting them into the higher ranges of employment. Though politics in the pre-independence years were dominated by non-Muslims, a leading Freetown Muslim, M.S. Mustapha, played a prominent part and became a cabinet minister after independence. Subsequently, though no Muslim has been head of state, Muslims have held senior cabinet posts in successive governments. The main Muslim festivals are recognised as public holidays and there is normally no open animosity between the members of the different religious faiths.

When, from the 1950s onwards, illegal diamond mining suddenly spread wealth through the country, much of it was diverted into mosque-building. Sub-

stantial new mosques were built in Freetown by members of the Temne, Limba and other ethnic communities who tend to worship apart from one another. Except for a small Aḥmadiyya [*q.v.*] presence, and a few Shīʿī Muslims in the Lebanese commercial community, the Muslims belong to Sunnī Islam. There are no influential religious fraternities. In 1990 Muslims were estimated to constitute 30% of a total population of about four million.

ṢIFA (A), lit "description".

1. In grammar. Here, the meaning is "attribute", syn. *naʿt*. Its syntactic sense overshadows that of a quasi-part of speech "adjective" (cf. *al-ṣifa al-mushabbaha* for such forms as *faʿīl* and *faʿl*) already in Sībawayhi's *Kitāb*. The fact that Kūfan grammarians employ the term to denote "locative" (roughly, Baṣran *ẓarf*; see below) may explain why *naʿt* is considered Kūfan although both terms appear in Sībawayhi's *Kitāb* and in al-Farrāʾ's *Maʿānī*. Their recurring definition as indications of praise or blame may well hark back to Dionysius Thrax's characterisation of "adjective" (επίθετον). Early occurrences of both *ṣifa* and *naʿt* are documented in several 2nd/8th-century exegetical works in which they are non-technical. The earliest modifications in the Graeco-Syriac origin of this grammatical category may be reconstructed according to Ibn Muḳaffaʿ's *K. al-Manṭiḳ*, where the term *ṣifa* signifies *inter alia* both ποιόν ("quality", the third of the ten categories) and the whole group of nine categories (also *naʿt*; "substance" [*ʿayn, djawhar*; Gr. οὐσια] excluded). In his elaborate epitome of *De Interpretatione*, he employs the terminological expression *al-kalām al-wāṣif* and the term *ṣifa* to signify such syntactic entities as the locative (in predicate position), the material modes ("possible, impossible, necessary") and a semi-adverbial qualifier *mudjīd* in *fulān al-ṭawīl kātib mudjīd*. *Naʿt* translates the Syr. *kunnāyā* (Gr. κατηγορία) of early treatises whereas *ṣifa* renders the early *znā* with its two significations mentioned above. The Kūfan grammarians, who were more faithful than Sībawayhi and al-Khalīl to the teaching of the earliest ʿIrāḳī grammarians, maintained a double role for *ṣifa*: the locative and, with *naʿt* as synonym, the adjective/attribute. By extension, the locative came to denote not only nouns expressing time and place and prepositional phrases but prepositions as well. Later works attribute to the earlier al-Kisāʾī and al-Farrāʾ the terms *ṣifa tāmma* and *ṣifa nāḳiṣa* (loc. in predicate position and as adjunct, respectively). On the use of *mawṣūf-ṣifa* as "subject-predicate" in logical and theological writings see, e.g. Versteegh, 1977 (index, s.v.) and in translations of philosophical writings, Zimmermann 1972, 534. Possible vestiges in Sībawayhi's book of a similar conception among grammarians include the contrast *yūṣafu bihi* and *djawhar yuḍāfu ilayhi mā kāna minhu* (i, 235,5; similarly, al-Farrāʾ, *Maʿānī*, iii, 215: *ṣifa min al-ṣifāt* vs. *ism thābit*). On the basis of the data in *K. al-ʿAyn* (e.g. ii, 43, 52, 246) we may conclude that Baṣran grammarians previous to Sībawayhi had adopted the two denotations of *ṣifa*. However, Sībawayhi neglected the locative denotation. He introduced two significant modifications in a prevalent conception of the adjectival/attributive category which have become part of all the later syntactic formulations in Arab grammatical writings: (a) Such nominals which may qualify pronouns (*kull-, nafs-*) are rejected from this category and become an independent category of *tawkīd*; (b) The copular pronoun is isolated from this category and is identified as *faṣl*.

Dānish-Pazhūh, Tehran 1978. (R. Talmon)

2. In theology. This originally grammatical term was subsequently borrowed by the theologians (*mutakallimūn*), who made it one of their key-words. In its "theological" usage, the word is generally translated by "attribute"—the reference being above all to the "divine attributes" (*ṣifāt Allāh*)—although in certain contexts, translation by "quality" seems preferable. As for the precise meaning to be given to this term, the issue is the cause of fundamental disagreement between theologians, essentially between Sunnī and Muʿtazilī theologians.

In grammar, as seen in 1. above, *ṣifa* represents a word of a certain kind, more precisely a certain type of the "noun" (*ism* [*q.v.*]), what we would call a qualifying adjective. Al-Zamakhsharī gives the following definition of it: "The *ṣifa* is a noun which indicates a certain state of an essence (*baʿḍ aḥwāl al-dhāt*), e.g. long, short, intelligent, stupid, standing erect, seated, ill, in a good state of health, poor, rich, noble, of low degree, honoured, despised" (*Mufaṣṣal*, Cairo 1323, repr. Beirut n.d., 114 ll. 4-7).

It would normally be expected that, when a theologian speaks of the *ṣifāt Allāh*, he means by these all the qualificatives capable of application to God, such as *ḳādir, ʿālim, ḥayy, karīm, laṭīf, khāliḳ, rāziḳ*, etc. And such indeed is the interpretation favoured by the Muʿtazilī theologians, in particular al-Djubbāʾī [*q.v.*]. For the latter, the "attributes" of God—which could also, in most cases, be called His "names"—are nothing other than the words (*aḳwāl*) by which we describe Him, words such as "knowing", "powerful", "living" (cf. al-Ashʿarī, *Maḳālāt*, 2nd ed. Ritter, 172, ll. 14-15, and 198, ll. 10-11). These "attributes" are definitely not all of the same sort: there are those which God merits from all eternity, on account of His essence (*ṣifāt al-dhāt* or *al-nafs*), and others which He merits on account of His acts (*ṣifāt al-fiʿl*). But it is always a matter of words. Thus al-Djubbāʾī is concerned to know whether the "word" *karīm*, the "word" *ḥakīm* and the "word" *ṣamad*, constitute part of the "attributes of the essence" or of the "attributes of the act" (cf. *ibid.*, 528, ll. 9-14; cf. also 506, ll. 8-9). It comes as no surprise to find that, henceforward, just like the grammarians, the Muʿtazilīs distinguish no difference between *ṣifa* and *waṣf* (cf. al-Bāḳillānī, *Tamhīd*, ed. McCarthy, § 367). In numerous instances in the *Maḳālāt*, they are observed to be wondering, still, whether a certain *waṣf* applied to God belongs to the *ṣifāt al-dhāt* or to the *ṣifāt al-fiʿl* (cf. 492, ll. 11-12; 506, l. 10; 507, ll. 10-11; 512, l. 16; 532. ll. 4-5). That *waṣf* and *ṣifa* are synonyms, expressing qualificatives in parallel, was a principle expressly sustained by al-Djubbāʾī (cf. *ibid.*, 529, ll. 14-15). Such would

also be the position of later Djubbāʾīs: thus ʿAbd al-Djabbār, in *al-Mughnī*, vii, 117, ll. 10-12.

Sunnī theologians see things quite differently. For them, on the one hand, the *ṣifāt Allāh* represent not qualificatives—such as *ḳādir, ʿālim, ʿādil*—but the corresponding substantives *ḳudra, ʿilm, ʿadl*; on the other hand, and in the same vein, these *ṣifāt* are not only words, they are real existents. They are "things" which exist in God (attributes of the essence), or are produced by Him (attributes of the act), and by means of which He is worthy to be described by the corresponding qualificatives. Al-Bāḳillānī expresses this in the form of a universal principle (i.e. one which is appropriate to every "qualified thing", whatever it may be): "The quality (*ṣifa*) is that which exists in the qualified (*yūdjadu bi 'l-mawṣūf*), or which belongs to it [in some manner] (*yakūnu lahu*) and which makes it acquire the qualificative (*yuksibuhu 'l-waṣfa*), that is, the epithet (*naʿt*) which derives (*yaṣduru*) from the quality" (*Tamhīd*, § 359). Here, the distinction between *ṣifa* and *waṣf* is clear: that which is a "word", exclusively, is the qualificative. "As for *waṣf*", al-Bāḳillānī continues, "it is a word (*ḳawl*) of one who qualifies God, or someone other than God, saying of Him that he is knowing, living, powerful, beneficent, benevolent. This qualificative (*waṣf*), which is a saying that is heard, or an expression of this saying, is other than the quality (*ṣifa*) residing in God, the existence of which in Him causes Him to be wise, powerful, purposeful. Similarly, when we say "Zayd is living, wise", what we have is a qualificative (*waṣf*) of Zayd ... Whereas the wisdom and the power of Zayd are, for their part, two qualities (*ṣifatān⁽ⁱ⁾*) belonging to him, existing in him, and from which the qualificative and the noun are derived" (*ibid.*, § 362).

This use of *ṣifa* in the sense of a substantive is typical of Sunnī theology: before al-Ashʿarī it is already found, systematically, in the work of Ibn Kullāb [*q.v.* in Suppl.], cf. al-Ashʿarī, *Maḳalat*, 169-70, 546. It seems, however, that the first to have practised it was the Imāmī theologian Hishām b. al-Ḥakam [*q.v.*], cf. *ibid.*, 37, ll. 10-12; 222, ll. 1-5; 494, ll. 1-3. Whatever the case, it has a curious consequence. It is known that one of the major disagreements between Muʿtazilīs and Sunnīs, in their conceptions of God, concerns the status of the attributes of the essence. For the Sunnīs, the principle (accepted furthermore by the Muʿtazilīs), according to which every qualificative has for its cause the corresponding substantive, cannot allow for any exception; since God is powerful, wise, etc., from all eternity, this necessarily implies the existence in Him, from all eternity, of a power, of a knowledge, etc. In the name of *tawḥīd*—such a conception apparently leading to the admission of a plurality of eternals—the Muʿtazilīs, reject this view; for them, God is powerful, wise, etc., by His very essence [see MUʿTAZILA, *Theses*, i, 1]. Now, as a result of their habit of calling the substantives in question *ṣifāt*—substantives the existence of which, in this instance, the Muʿtazilīs deny—and although the latter deal at length with the *ṣifāt Allāh*, the Sunnīs are found accusing their adversaries of "denying the *ṣifāt*" (cf. *Maḳālat*, 583, ll. 3-7; Abu 'l-Yusr al-Bazdawī, *K. Uṣūl al-dīn*, Cairo 1963, 35, ll. 7-8) and presenting themselves by contrast as "those who affirm the *ṣifāt*" and the "adepts of the *ṣifāt*" (cf. *Maḳālāt*, 170, l. 12; 171, ll. 12, 16).

For a more detailed analysis, see ḤĀL in Suppl., also D. Gimaret, *La doctrine d'al-Ashʿarī*, Paris 1990, 235-45. On the divine attributes, see ALLĀH, ii, A, 2.

Bibliography: Given in the article.

(D. GIMARET)

SĪFAWAYH AL-ḲĀṢṢ, a humorist of the 2nd/8th century. *Ḳāṣṣ* [*q.v.*] "storyteller" is employed here, as was quite common, in the same sense as other less ambiguous terms for jester; he was also described as the prototypical *mughaffal* "irresponsible wit". No decision is possible as to whether his nickname should be vocalised Sīfawayh or Sayfawayh, and the identification with another *ḳāṣṣ* called ʿAbd al-ʿAzīz, suggested on the basis of one shared remark by the recent editor of Ibn al-Djawzī, *Ḳuṣṣāṣ*, is probably unwarranted. Sīfawayh was credited with jokes and social comment, including irreverent remarks poking mild fun at Ḳurʾānic verses and the foibles of *ḥadīth* scholars. To our present knowledge, he is first attested in a work by al-Djāḥiẓ. Eventually, he caught the attention of Ibn Khaldūn and found a biographer in Ibn Ḥadjar, but the few data connecting him with supposed contemporaries are confused. His actual existence may well be doubted. The *Fihrist* speaks of an anonymous collection of his remarks. It is not preserved, and we have to be satisfied with comparatively few quotations in *adab* works.

(F. ROSENTHAL)

ṢIFFĪN, a famous battle (37/657), or rather a series of duels and skirmishes between the ʿIrāḳīs under the caliph ʿAlī b. Abī Ṭālib [*q.v.*] and the Syrians under the governor of Syria Muʿāwiya [*q.v.*]. The battle was a major factor in shaping the regional and political identity of both the ʿIrāḳī Shīʿīs and the Syrian Umayyads (cf. *Mukhtaṣar Taʾrīkh Dimashḳ li-Ibn ʿAsākir*, ed. al-Naḥḥās *et alii*, Damascus 1404/1984 ff., xxiii, 46: *naḥnu ahlu 'l-Shām, naḥnu aṣḥāb Ṣiffīn*; cf. P. Crone, *Slaves on horses. The evolution of the Islamic polity*, Cambridge 1980, 203, n. 30). The political and theological debates about the battle, and about the conflict between ʿAlī and Muʿāwiya in general, form the backdrop to many contradictory claims throughout Islamic historiography, in particular those regarding the biography of some of the Prophet's Companions (or alleged Companions) which have their roots in the dispute about the number of Companions on each side. In addition, Shīʿī apologetics account for some of the reports about Muḥammad's leniency at al-Ḥudaybiya [*q.v.*].

The site of the battle, Ṣiffīn, was a ruined Byzantine village not far from al-Raḳḳa, located a few hundred yards from the right bank of the Euphrates (al-Dīnawarī, 178, l. 18). It is now identified with the village Abū Hurayra near al-Raḳḳa (al-Dhahabī, *Taʾrīkh al-islām. ʿAhd al-khulafāʾ al-rāshidīn*, ed. Tadmurī, Beirut 1407/1987, 537n.).

The armies stayed on the battlefield for a long time before the outbreak of hostilities (they are said to have faced each other for 77 days; Ibn Kathīr, *Bidāya*, Beirut 1974, vii, 275, l. 14; cf. al-Madjlisī, *Biḥār al-anwār*, Tehran 1376/1957 ff., xxxii, 434, 572-3). This reflects the troops' aversion to the shedding of the blood of other Muslims. After all, units on both sides belonged to the same tribes. Moreover, there

were cases in which two cousins, or a father and his son, faced each other (Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, ed. Hārūn, Cairo 1401/1981 [= henceforth: *WṢ*], 334-5, 443; two sons of the famous Khālid b. al-Walīd [*q.v.*] fought on opposite sides: Ibn al-Kalbī, *Djamharat al-nasab*, ed. Nādjī Ḥasan, Beirut 1407/1986, 88; cf. Ibn Mākūlā, *al-Ikmāl*, ed. al-Yamānī, Ḥaydarābād 1381/1962, i, 36-7). The battle ended in Ṣafar 37/July 657 with an arbitration agreement that led to a split between ʿAlī and the Khāridjites [*q.v.*], who demanded that the fight go on until one side was victorious.

It is extremely difficult to establish the course of the battle and the precise chronology of its stages. The reason is by no means a lack of source material, since a huge literary output exists on Ṣiffīn, much of which is still unexplored. The reports on the battle include the description of short episodes whose arrangement often creates an illusion of successive events; Islamic historiography typically sacrifices the overview for a plethora of atomistic detail (cf. Wellhausen, *Arab kingdom*, Eng. tr. 80: "The description [of the battle] is a mass of one-sided traditions dealing with episodes, and the attempt of the editor to make a mosaic unity of it is a failure. There is a lack of inward connection; you cannot see the wood for the trees"). The compilers of the 2nd Islamic century were certainly not uninterested in reconstructing the course of events, but they were limited by the nature of the atomistic source material at their disposal.

We stand on relatively firm ground when we deal with evidence about the identity of the tribal units on both sides, the names of the leading warriors (as opposed to the battle order at any given stage of the fighting) and the weapons and military tactics employed. Significantly, although Shīʿī and pro-Shīʿī compilers are responsible for most of the literary output on this battle available to us now, Muʿāwiya's army is described in no less detail than ʿAlī's. The equal attention paid to the formation of both armies can be demonstrated by the following example which takes us back to the earliest days of Islamic historiography. We have a detailed description of the rival armies going back to Ḥabīb b. Abī Thābit al-Kūfī who died in *ca.* 120/738 and whose Shīʿī sympathies cannot be doubted (Khalīfa b. Khayyāṭ, *Taʾrīkh*, ed. Zakkār, Damascus 1968, i, 221-2; al-Mizzī, *Tahdhīb al-kamāl*, ed. Maʿrūf, Beirut 1405/1985 ff., v, 358-63; *WṢ*, 324; al-Balādhurī, *Ansāb*, i, ed. Ḥamīdullāh, Cairo 1959, 174, no. 420; cf. A. Noth, *The early Arabic historical tradition. A source-critical study*, 2nd ed., in collaboration with L.I. Conrad, tr. M. Bonner, Princeton 1994, 111-14).

Since the forces were made up of tribal units (M. Hinds, *The banners and battle cries of the Arabs at Ṣiffīn (657 A.D.)*, in *al-Abḥāth*, xxiv [1971], 3-42), the tribal politics of ʿAlī and Muʿāwiya played a crucial role. However, the ideological factor should not be underestimated since the élites on both sides included people motivated by religious considerations.

Some ʿIrāḳīs who doubted the legitimacy of the fighting kept away altogether, preferring to be stationed for the time being in border garrisons (*WṢ*, 97, 115-16). The *ʿUthmāniyya* or pro-ʿUthmān tribesmen from Kūfa and Baṣra shifted to the part of the Djazīra [*q.v.*] which was under Muʿāwiya's control (*WṢ*, 12), as did the Tamīmī Ḥanẓala b. al-Rabīʿ, a Ḳādisiyya [*q.v.*, section 2] veteran who at the time of ʿUthmān was the governor's deputy in Kūfa (*kāna ʾl-khalīfata mina ʾl-amīr*; Sayf b. ʿUmar, *K. al-Ridda* ..., ed. al-Samarrai, Leiden 1995, 19).

Kindīs who disliked ʿAlī left Kūfa when he came there, and went to Ruhā in the Djazīra. Reportedly, they could not bear to abide in a place where ʿUthmān was being cursed. At Ṣiffīn, they fought with Muʿāwiya (M. Lecker, *Kinda on the eve of Islam and during the ridda*, in *JRAS* [1994], 333-56, at 345-7; Ibn Ḥabīb, *K. al-Muḥabbar*, ed. I. Lichtenstaedter, Ḥaydarābād 1361/1942, 295). The people of al-Raḳḳa were then ʿUthmāniyya, including a tribal leader of the Asad, Simāk b. Makhrama, who defected from ʿAlī with one hundred fellow-tribesmen and then convinced six hundred more to join him (*WṢ*, 146). But even among those who chose to remain in Kūfa, there was no unanimous support for ʿAlī's policies. When he left for Ṣiffīn, people in Kūfa who had little respect for him became outspoken (*istakhaffū ʿAliyy^an^ fa-lammā kharadja ẓaharū*). Moreover, the man whom ʿAlī left in charge of Kūfa, Abū Masʿūd al-Anṣārī, was foolish enough to express indifference regarding the outcome of the battle and was dismissed immediately after ʿAlī's return from the battlefield (al-Ṭabarānī, *al-Muʿdjam al-kabīr*², ed. al-Salafī, Cairo 1400/1980 ff., xvii, 195).

Some of ʿAlī's troops returned while on the way to the battlefield (*WṢ*, 156). This was the outcome of fierce and at times cynical propaganda tactics in which Muʿāwiya was on the whole more successful than ʿAlī (on how the former won the support of Shuraḥbīl b. al-Simṭ al-Kindī and turned him into a propagandist, see al-Dīnawarī, 169-70; E.L. Petersen, *ʿAlī and Muʿāwiya in early Arabic tradition*, Copenhagen 1964, 31-2). Muʿāwiya performed better than his rival with regard to material benefits promised to tribal leaders in return for their loyalty. Muʿāwiya appears to have been less scrupulous, possibly because his standing was more precarious than his rival's (see, for example, *WṢ*, 306; Ibn Aʿtham al-Kūfī, *Futūḥ*, Beirut 1406/1986, iii-iv, 50-1; cf. *Mukhtaṣar Taʾrīkh Dimashk*, vii, 397). ʿAlī, on the other hand, perhaps due to self-confidence and the better prospects for which he hoped in the conflict, applied strict measures to governors who embezzled state money, and this led to their defection.

Among the tribal leaders alienated by ʿAlī mention should be made of Djarīr b. ʿAbd Allāh al-Badjalī, ʿUthmān's governor in Hamadhān, who was dismissed by ʿAlī after the battle of the Camel [see AL-DJAMAL] (*WṢ*, 15). He moved to Ḳarḳīsiyā [*q.v.*] together with men of his tribal group, the Ḳasr of the Badjīla, and later joined Muʿāwiya. As a result, few of the Ḳasr fought at Ṣiffīn on ʿAlī's side (*WṢ*, 60-1). On the whole, Muʿāwiya's *ḥilm* or "well-considered opportunism" (E.L. Petersen, *ʿAlī and Muʿāwiya. The rise of the Umayyad caliphate, 656-661*, in *AO*, xxiii [1959], 157-96, at 180; also idem, *ʿAlī and Muʿāwiya in early Arabic tradition*, 12, 118-19) was more fruitful than ʿAlī's strictness. The latter reacted to the defection of Djarīr b. ʿAbd Allāh al-Badjalī by destroying his court in Kūfa (*WṢ*, 61).

Far more influential than Djarīr was another tribal leader, al-Ashʿath b. Ḳays [*q.v.*] of Kinda, who, unlike Djarīr b. ʿAbd Allāh, fought at Ṣiffīn on ʿAlī's side (*WṢ*, 140; cf. Lecker, *Kinda*, 355; for Ashʿath's position among his fellow-tribesmen see idem, *Judaism among Kinda and the* ridda *of Kinda*, in *JAOS*, cxv/4 [1995], section 2). ʿUthmān safeguarded al-Ashʿath's loyalty by appointing him governor of Ādharbaydjān [*q.v.*]. He was still its governor for some time under ʿAlī (al-Balādhurī, *Futūḥ*, 329, l. 7; Ibn al-Faḳīh, 294, l. 2; Crone, *Slaves on horses*, 110), but after the Battle of the Camel he was dismissed (al-Ṭabarī, i, 3254). ʿAlī also dismissed al-Ashʿath from the *riʾāsa* of Kinda

and Rabīʿa (*WṢ*, 137; Ibn Aʿtham, *Futūḥ*, iii-iv, 64-5, 194; Ibn Abi ʾl-Ḥadīd, *Sharḥ Nahdj al-balāgha*², ed. Ibrāhīm, Cairo 1378/1959 ff., iv, 74-5). At the most crucial stage in the fighting, al-Ashʿath supported the arbitration which was to cost ʿAlī both his title, that of *amīr al-muʾminīn*, and then his life. With regard to the defection of these leaders of the Yemen, it should be borne in mind that most of Muʿāwiya's troops at Ṣiffīn belonged to Yemen while most of ʿAlī's troops were of the Nizār b. Maʿadd [*q.v.*], i.e. Rabīʿa and Muḍar [*q.v.*] (Ch. Pellat, *Une risāla inédite de Ǧāḥiẓ sur l'arbitrage entre ʿAlī et Muʿāwiya* (*Risāla fī ʾl-ḥakamayni* ...), in *al-Mashriq*, lii [1958], 417-91, at 426-7).

In addition to these tribal leaders ʿAlī lost the support of ʿUbayd Allāh, son of the caliph ʿUmar b. al-Khaṭṭāb, who fled to Muʿāwiya for fear that ʿAlī might execute him for having avenged his father's assassination by murdering innocent Persians. ʿUbayd Allāh was killed at Ṣiffīn, where he commanded Muʿāwiya's cavalry (*Mukhtaṣar Taʾrīkh Dimashk*, xv, 345, 346-51).

While with regard to the formation of the two camps we stand on relatively firm ground, this is not the case with regard to the figures given for warriors and casualties. For example, the two armies were supposed to have been of about the same size, each including 150,000 warriors (*WṢ*, 156). Another report mentions that in ʿAlī's camp there were 100,000 men or more, while on Muʿāwiya's side there were 130,000 (*WṢ*, 157; but cf. *WṢ*, 226; Khalīfa b. Khayyāṭ, *Taʾrīkh*, i, 218-19). However, far more important for the study of early Islamic historiography are the conflicting statistics and contradictory claims made by the two camps about the Islamic credentials of their respective supporters.

No sooner was the battle over than polemics began. The terrible bloodshed during ʿAlī's rule, at Ṣiffīn and elsewhere, had to be accounted for and justified and the positions of both sides had to be fortified. Eschatology was employed, the most widespread theme being the claim made by ʿAlī's camp that the Prophet foretold the killing of ʿAlī's aged supporter, ʿAmmār b. Yāsir [*q.v.*], by "the rebel band" (*al-fiʾa al-bāghiya*). Interestingly, Muʿāwiya's alleged response to this is recorded: "The one who killed him was the one who sent him out (to the battlefield)"; with these words, our pro-Shīʿī informant continues, Muʿāwiya was deceiving the fools among the people of Syria (*WṢ*, 343; cf. E. Kohlberg, *The development of the Imāmī Shīʿī doctrine of jihād*, in *ZDMG*, cxxvi [1976], 64-86, at 69-70, 73-6). Kaʿb al-Aḥbār foretold the battle of Ṣiffīn; the Banū Isrāʾīl fought nine times at that very place until they destroyed one another. The Arabs, Kaʿb added, would fight there the tenth battle until they slaughtered one another and hurled at each other the same stones hurled by the Banū Isrāʾīl (Nuʿaym b. Ḥammād, *K. al-Fitan*, ed. Zakkār, Beirut 1414/1993, 31). This is an attempt to explain the disastrous event which was hard to account for. The scale of the slaughter was unimaginable in terms of traditional Arab warfare. Also, a report putting the total number of dead from both camps at 70,000 has its origin in an eschatological tradition of Kaʿb (Ibn Abi ʾl-Dunyā, *al-Ishrāf fī manāzil al-ashrāf*, ed. Khalaf, Riyāḍ 1411/1990, 271). Beside establishing that ʿAlī's supporters were in the right, eschatology was to teach the Muslims that Ṣiffīn was part of a scheme of world history, the understanding of which was beyond human grasp.

Some of the polemics surrounding Ṣiffīn are associated with ʿAlī's conduct during the negotiations which led to the arbitration agreement. The truce itself, the arbitration and ʿAlī's relinquishing in the agreement of the title *amīr al-muʾminīn* all belong to the crucial theological debate which accompanied the emergence of the Khāridjites. The Shīʿī apologists justified ʿAlī's conduct by referring to the Prophet's agreement with the Ḳuraysh [*q.v.*] at al-Ḥudaybiya, which was met with opposition from many of the Prophet's Companions who were reportedly willing to fight the Ḳuraysh. Moreover, the Prophet relinquished his title *rasūl allāh* (see esp. al-Bayhaḳī, *Dalāʾil al-nubuwwa*, ed. Ḳalʿadjī, Beirut 1405/1985, iv, 147, where the scribe of the Ḥudaybiya agreement is ʿAlī himself; the Prophet informs him that he will live through the same experience; *WṢ*, 508). The analogy with al-Ḥudaybiya is even more explicit in a version of this report, according to which it was Muʿāwiya's father, Abū Sufyān, who demanded that the Prophet remove from the agreement his prophetic title (Ibn Aʿtham, *Futūḥ*, iii-iv, 197). It seems that the apologetic need to justify ʿAlī's attitude at Ṣiffīn influenced the shape, if not the contents, of the Ḥudaybiya story (cf. Ibn ʿAsākir, *Taʾrīkh madīnat Dimashk*, from ʿUbāda b. Awfā to ʿAbd Allāh b. Thuwab, 396; al-Balādhurī, *Ansāb*, iii, ed. al-Dūrī, Wiesbaden 1398/1978, 44).

But there was more to the link between the story of Ṣiffīn and the Prophet's biography. Shīʿī historical tradition sought to establish that the Prophet's cousin and son-in-law, ʿAlī, continued the former's fight against the infidels who were now led by the son of the Prophet's arch-enemy, Muʿāwiya son of Abū Sufyān (for the presentation of ʿAlī's *djihād* as an extension of Muḥammad's *djihād* see Kohlberg, *The development*, 70-1). ʿAlī rode on the Prophet's mare and she-mule and wore the Prophet's black turban (*WṢ*, 403; H. Eisenstein, *Die Maultiere und Esel des Propheten*, in *Isl.*, lxi [1985], 98-107, at 106). ʿAmmār b. Yāsir allegedly said that he had fought Muʿāwiya's chief counsellor, ʿAmr b. al-ʿĀṣ [*q.v.*] three times (i.e. at the time of the Prophet), and that the battle of Ṣiffīn was the fourth (al-Balādhurī, *Ansāb*, i, 171). The Umayyad army is referred to as the *aḥzāb* or combined forces, with reference to the battle of the moat (*khandaḳ*) between the Prophet and Ḳuraysh led by Abū Sufyān. Finally, Muʿāwiya's brother, ʿUtba, is supposed to have mentioned at Ṣiffīn the Umayyads killed by ʿAlī in the battle of Badr [*q.v.*] (al-Balādhurī, *Ansāb*, iv/a, ed. M. Schloessinger, rev. M.J. Kister, 99).

The other party answered with reference to the Islamic prestige of its own men which similarly went back to the Prophet. A black piece of garment raised by ʿAmr b. al-ʿĀṣ on the tip of a spear was a banner (*liwāʾ*) tied for him by the Prophet (i.e. giving him command over an expedition force; *WṢ*, 215). Another case in point was that of Ziml b. ʿAmr of the ʿUdhra [*q.v.*], who fought on Muʿāwiya's side. One of the two reports included in the section of Ibn Saʿd (i/2, 66-7) which deals with ʿUdhra's delegation to Muḥammad (*wafd ʿUdhra*) is in fact the story of Ziml's conversion to Islam. The Prophet reportedly tied for him a banner which was carried by Ziml at Ṣiffīn (Ibn Ḥadjar, *Iṣāba*, ii, 567-8). Al-Balādhurī (*Ansāb*, ms. Reisülküttap Mustafa Efendi 597, fol. 188a) significantly includes a report on Ziml's visit to the Prophet and the banner given to him in the section of the *Ansāb* dealing with Ṣiffīn. Al-Balādhurī adduces the report from Ibn al-Kalbī (< his father) and he probably took it from Ibn al-Kalbī's monograph on Ṣiffīn. The report on Ziml's banner, which seeks to establish that the Prophet gave his blessing to Ziml's support of Muʿāwiya, is precisely the kind of report one expects Umayyad propaganda to have used.

The competition over Islamic prestige is also reflected in various statistics. In ʿAlī's camp there were 2,800 Companions, 25 of whom were killed (al-ʿIṣāmī, *Simṭ al-nudjūm al-ʿawālī*, Cairo 1380, ii, 454). Those killed in ʿAlī's camp included 25 Badr veterans (Yāḳūt, *Muʿdjam al-buldān*, s.v. *Ṣiffīn*). One scholar claimed that 70 Badr veterans fought at Ṣiffīn (i.e. on ʿAlī's side). However, this was rejected by others: in ʿAlī's camp there was only one Badr veteran, Khuzayma b. Thābit (Ibn ʿAdī, *al-Kāmil fī ḍuʿafāʾ al-ridjāl*, Beirut 1404/1984, i, 239). One claim puts the number of Badr veterans in ʿAlī's camp at 130, and Saʿīd b. Djubayr reportedly stated that among ʿAlī's troops there were 900 Anṣār and 800 Muhādjirūn (*Biḥār al-anwār*, xxxii, 572). It is recorded that 800 of the Companions who pledged their allegiance to the Prophet at al-Ḥudaybiya fought with ʿAlī and 63 of them were killed, including ʿAmmār b. Yāsir (al-Dhahabī, *Taʾrīkh al-islām. ʿAhd al-khulafāʾ al-rāshidīn*, 545; R. Veselý, *Die Anṣār im ersten Bürgerkriege (36-40 d. H.)*, in *ArO*, xxvi [1958], 36-58, at 51-2, is not fully aware of the polemical value attached to these statistics). Beside confirming that ʿAlī was in the right, the Prophet's Companions, and in particular the Badr veterans among them, testify to the truthfulness of the Prophet's statements on which ʿAlī based his bid for power (*Biḥār al-anwār*, xxxiii, 147-51 = *Kitāb Sulaym b. Ḳays al-Kūfī*, Nadjaf n.d., 149 ff.). Unlike ʿAlī's companions, the two Anṣār who fought with Muʿāwiya could not boast of having participated in the ʿAḳaba meeting, or the battle of Badr, or the battle of Uḥud (*WṢ*, 445, 448-9; for a list of the Companions who fought with ʿAlī in the battles of the Camel and Ṣiffīn, see Ibn Ḥabīb, *Muḥabbar*, 289-93; it is followed by a list of the Companions who fought with Muʿāwiya at Ṣiffīn, 293-6; cf. al-Dhahabī, *op. cit.*, 547).

The effect of the ʿAlī-Muʿāwiya conflict on early Islamic historiography can be illustrated by the conflicting biographical details given for a central figure in Muʿāwiya's camp, the Ḳurashī Busr b. Abī Arṭaʾa al-ʿĀmirī. Busr's Companion status was disputed; the Syrians claimed that he heard the Prophet when he was a small boy (i.e. that he could transmit *ḥadīth* on the Prophet's authority). The counterclaim was that Busr was born two years before the Prophet's death and did not transmit any *ḥadīth* from him (Ibn Ḥadjar, *Iṣāba*, i, 289-90; *Mukhtaṣar Taʾrīkh Dimashḳ*, v, 182-3).

The battle of Ṣiffīn was a popular topic among compilers of historical monographs. We find among them Shīʿīs, scholars of Shīʿī sympathies and Sunnīs. The same compilers often compiled monographs about related topics such as *maḳātil* (cf. S. Günther, *Maqâtil literature in medieval Islam*, in *JAL*, xxv [1994], 192-212, at 200-1; U. Sezgin, *Abū Miḥnaf. Ein Beitrag zur Historiographie der umaiyadischen Zeit*, Leiden 1971, 103 n. 15; note that in the reports on Ṣiffīn some of the episodes are entitled "*maḳtal* so-and-so"; al-Dīnawarī, 188, 190, 191, 195, 198). The following list (which does not claim to be exhaustive) contains scholars known to have compiled monographs dealing with Ṣiffīn during the first three and a half centuries of the Islamic era. Obviously, their monographs overlap, probably considerably so; some of those listed were not compilers in the real sense of the word but merely transmitters of monographs compiled by others. It is the differences between the monographs, not their similarities, which define the particular features of each of them. For example, the name and tribal affiliation of the Syrian warrior who killed ʿAmmār b. Yāsir were disputed. Al-Balādhurī (*Ansāb*, ms., fols. 188a-9a) cites various claims made by al-Wāḳidī, Abū Mikhnaf, Ibn al-Kalbī and al-Madāʾinī and which are probably taken from these authors' monographs on Ṣiffīn.

1. Djābir b. Yazīd al-Djuʿfī (d. 128/746; [see DJĀBIR AL-DJUʿFĪ in Suppl.]; *GAS*, i, 307; U. Sezgin, *Abū Miḥnaf*, 103 n. 15, 133-4; J. van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra. Eine Geschichte des religiösen Denkens im frühen Islam*, Berlin and New York 1991 ff., i, 294-8).
2. Yaḥyā al-Djuʿfī's *Kitāb Ṣiffīn* is known through a quotation (al-Dhahabī, *op. cit.*, 539).
3. Abān b. Taghlib al-Bakrī (d. 141/758-9; al-Ṭihrānī, *al-Dharīʿa ilā taṣānīf al-shīʿa*, Nadjaf 1355/1936 ff., xv, 52, no. 333; E. Kohlberg, *al-Uṣūl al-arbaʿumiʾa*, in *JSAI*, x [1987], 128-66, at 143; al-Nadjāshī, *Ridjāl*, ed. al-Nāʾīnī, Beirut 1408/1988, i, 76).
4. Abū Mikhnaf Lūṭ b. Yaḥyā (d. 157/774; his *Kitāb Ṣiffīn* = ms. Ankara, Saib 5418; *GAS*, i, 309, no. 4; U. Sezgin, *Abū Miḥnaf*, 103-6, 123-45; Yāḳūt, *Udabāʾ*[2], ed. ʿAbbās, Beirut 1993, v, 2253; al-Nadjāshī, ii, 192). His great-grandfather, Mikhnaf b. Sulaym, was at one time ʿAlī's governor in Iṣfahān and was killed at Ṣiffīn (Ibn al-Kalbī, *Nasab Maʿadd*, ed. Ḥasan, Beirut 1408/1988, ii, 482; Ibn Ḥadjar, *Iṣāba*, vi, 55; U. Sezgin, *Abū Miḥnaf*, 219, 225; it is noteworthy that one of his monographs was entitled *Kitāb Akhbār āl Mikhnaf b. Sulaym*; al-Nadjāshī, ii, 192; cf. al-Ṭabarī, i, 3266).
5. ʿUmar b. Saʿd al-Asadī (d. perhaps *ca.* 180/796; *GAS*, i, 311; U. Sezgin, *Abū Miḥnaf*, 104 n., 137-45, Hinds, *The banners*, 5).
6. Hishām b. Muḥammad Ibn al-Kalbī [see AL-KALBĪ, section 2] (d. 204/819; van Ess, *Theologie und Gesellschaft*, i, 301; *Dharīʿa*, xv, 53, no. 345; *GAS*, i, 271; it is probably quoted in Ibn Kathīr, *Bidāya*, vii, 261, l. 11). Both Hishām's great-grandfather and his grandfather reportedly fought at Ṣiffīn on ʿAlī's side (Ibn al-Kalbī, *Nasab Maʿadd*, ii, 628).
7. Abū Hudhayfa Isḥāḳ b. Bishr (d. 206/821; *GAS*, i, 294; Yāḳūt, *Udabāʾ*[2], ii, 623, l. 5; al-Nadjāshī, i, 194-5).
8. Abū Isḥāḳ Ismāʿīl b. ʿĪsā al-ʿAṭṭār (d. 232/847; *GAS*, i, 294; U. Sezgin, *Abū Miḥnaf*, 103 n.).
9. Abū ʿAbd Allāh Muḥammad b. ʿUmar al-Wāḳidī (d. 207/823; *GAS*, i, 297, no. 7; Yāḳūt, *Udabāʾ*[2], vi, 2598, l. 12). A passage from this book (see *Sharḥ Nahdj al-balāgha*[2], ii, 267-8; *Biḥār al-anwār*, xxxiii, 340) indicates that al-Wāḳidī's book went beyond the battle of Ṣiffīn to include ʿAlī's war against the Khāridjites (cf. al-Ṭabarī, i, 3384, l. 2).
10. Abū ʿUbayda Maʿmar b. al-Muthannā (d. *ca.* 210/825) compiled *Kitāb al-Djamal wa-Ṣiffīn* (*Fihrist*, 54, l. 5; it is probably quoted in al-Dāraḳuṭnī, *al-Muʾtalif wa ʾl-mukhtalif*, ed. Muwaffaḳ b. ʿAbd Allāh, Beirut 1406/1986, ii, 561).
11. Naṣr b. Muzāḥim al-Tamīmī al-Kūfī al-ʿAṭṭār (d. 212/827) compiled the famous *Waḳʿat Ṣiffīn* (Yāḳūt, *Udabāʾ*[2], vi, 2750; *GAS*, i, 313).
12. Abū Bakr ʿAbd Allāh b. Muḥammad Ibn Abī Shayba/Ibrāhīm b. ʿUthmān [see IBN ABĪ SHAYBA] (d. 235/849; *Fihrist*, 229, l. 11; *GAS*, i, 108; al-Mizzī, *Tahdhīb al-kamāl*, xvi, 34-42). His monograph probably corresponds, at least partially, to the chapter entitled *Bāb mā dhukira fī Ṣiffīn* (and possibly also *Mā dhukira fi ʾl-Khawāridj* which immediately follows it), in Ibn Abī Shayba, *Muṣannaf* (ed. al-Afghānī,

Bombay 1399/1979 ff., xv, 288-333; cf. Noth-Conrad, *The early Arabic historical tradition*, 34).

13. Abu 'l-Ḥasan ʿAlī b. Muḥammad al-Madāʾinī (d. 235/850; *GAS*, i, 315, no. 16; cf. G. Rotter, *Zur Überlieferung einiger historischer Werke Madāʾinīs in Ṭabarīs Annalen*, in *Oriens*, xxiii-xxiv [1974], 103-33, at 115-19; *Sharḥ Nahdj al-balāgha*[2], xxi, 264; *Biḥār al-anwār*, xxxiii, 298). The book (which is probably quoted in al-Balādhurī, *Ansāb*, ms., fols. 183b-184a, 188a) goes beyond the battle of Ṣiffīn to include ʿAlī's war against the Khāridjites (cf. *Sharḥ Nahdj al-balāgha*[2], vi, 134-5; *Biḥār al-anwār*, xxxiii, 340).
14. Abū Isḥāḳ Ibrāhīm b. al-Ḥusayn b. ʿAlī al-Kisāʾī al-Hamdānī, better known as Ibn Dīzīl (d. 281/894; *GAS*, i, 321; *Dharīʿa*, xv, 52, no. 335; Petersen, *ʿAlī and Muʿāwiya in early Arabic tradition*, 159; *Sharḥ Nahdj al-balāgha*[2], xxi, 264; *Biḥār al-anwār*, xxxii, 491; xxxiii, 300-2, 303). The overlapping of Ṣiffīn monographs can here be demonstrated by reference to several quotations from this monograph (the fragment from Ibn Dīzīl < ... Naṣr b. Muzāḥim, in Ibn Kathīr, *Bidāya*, vii, 255, l. 5, is found—with differences—in *WṢ*, 147-8; see also *Bidāya*, 259-60, = *WṢ*, 188-91; *Bidāya*, 269, l. 18 = *WṢ*, 324; other passages from Ibn Dīzīl in *Bidāya*, vii, 261, ll. 9,-4, 264, l. 14, go back to Djābir al-Djuʿfī). Ibn Dīzīl's book goes on to describe ʿAlī's fighting against the Khāridjites (*Sharḥ Nahdj al-balāgha*[2], ii, 269-71, 276, 310-11; *Biḥār al-anwār*, xxxiii, 345-7).
15. Abū Isḥāḳ Ibrāhīm b. Muḥammad al-Thaḳafī, one of whose ancestors was ʿAlī's governor in Madāʾin (d. 283/896; *GAS*, i, 321; Yāḳūt, *Udabāʾ*[2], i, 105, l. 8; *Dharīʿa*, xv, 52, no. 334).
16. Abū ʿAbd Allāh Muḥammad b. Zakariyyā b. Dīnār al-Baṣrī, a *mawlā* of the Banū Ghalāb, compiled a monograph entitled *Ṣiffīn al-kabīr* (d. 291/904; U. Sezgin, *Abū Miḥnaf*, 104 n.; *Dharīʿa*, xv, 52, no. 340; *Fihrist*, 108, l. 14; al-Nadjāshī, ii, 240-1), and another entitled:
17. *Ṣiffīn al-ṣaghīr* or *al-mukhtaṣar*. Note, however, that he also transmitted some of Djābir al-Djuʿfī's monographs, including *Kitāb Ṣiffīn* (Muḥsin al-Amīn, *Aʿyān al-Shīʿa*, Beirut 1356/1938 ff., xv, 200). In addition, he transmitted at least some of Abū Mikhnaf's monographs which were transmitted, several decades earlier, by Ibn al-Kalbī (al-Nadjāshī, ii, 192-3).
18. Muḥammad b. ʿUthmān al-Kalbī (*GAS*, i, 314; Hinds, *The banners*, 6-7). Instead of "al-Kalbī", read perhaps: "al-ʿAbsī": Abū Djaʿfar Muḥammad b. ʿUthmān b. Muḥammad b. Abī Shayba al-ʿAbsī (d. 297/910; *GAS*, i, 164) was the nephew of ʿAbd Allāh b. Muḥammad Ibn Abī Shayba mentioned above at no. 12 (cf. S. Leder, *Das Korpus al-Haiṯam ibn ʿAdī (st. 207/822). Herkunft, Überlieferung, Gestalt früher Texte der Aḫbār Literatur*, Frankfurt a. M. 1991, 258-9).
19. Abu 'l-ʿAbbās Aḥmad b. ʿUbayd Allāh al-Thaḳafī, nicknamed *ḥimār al-ʿuzayr* (d. 314/926; Yāḳūt, *Udabāʾ*[2], i, 364, 367, l. -2).
20. Ibn Aʿtham al-Kūfī compiled *Ibtidāʾ khabar waḳʿat Ṣiffīn* (presumably d. in 314/926; *GAS*, i, 329).
21. Abu 'l-Ḳāsim al-Mundhir b. Muḥammad al-Ḳābūsī (d. at the beginning of the 4th century; *GAS*, i, 323; U. Sezgin, *Abū Miḥnaf*, 104 n.).
22. ʿAbd al-ʿAzīz b. Yaḥyā al-Djalūdī al-Azdī al-Baṣrī (d. 332/944; E. Kohlberg, *A medieval Muslim scholar at work. Ibn Ṭāwūs and his library*, Leiden 1992, 333, no. 547; U. Sezgin, *Abū Miḥnaf*, 104 n.; al-Nadjāshī, ii, 54).

Bibliography (in addition to references given in the article): Ibn Aʿtham al-Kūfī, *Futūḥ*, i-ii, 556-91, iii-iv, 3-192; *Biḥār al-anwār*, xxxii, 351-619, xxxiii, 7-324; J. Wellhausen, *The Arab kingdom and its fall*, tr. M.G. Weir, Calcutta 1927, 75-83 = *Das arabische Reich und sein Sturz*, Berlin 1902, 47-53; C. Ṣiffīn. (M. Lecker)

AL-ṢIFR (A.), a term which appears in Arabic dictionaries with the meaning of "void" and, by extension, of "zero". But it should be borne in mind that its doublet *s-f-r* signifies the opposite (Kazimirski, i, 1098b). Carra de Vaux (in *JA* [1917], ii, 459-460, and *Penseurs de l'Islam*, ii, Paris 1921, 102-10) drew attention to the conceptual opposition between the two roots "empty place" as against "written place". In the latter sense, the Hebrew *sefer* and Persian *sifr*, etc. "book", are encountered. Hence derive the mediaeval Latin *tzifra*, *ziffrae*, the Castilian *cifra* (1495), the French *chiffre*, the German *Ziffer*, all of which denote forms of numbers, unlike the English *cipher* which signifies "zero".

The sense of "empty place" was applied to a space left empty in the writing of numbers, for lack of a graphical and conceptual element facilitating the preservation of the order of units, tens, hundreds, etc. in a system of numeration by position such as the decimal system. The two meanings were known in the High Mediaeval period: primes have an absolute value, as also applies to *rūmī* figures and the *abūdjād* system generally employed in astronomical tables. In one case (based on the numerical values of Arabic letters), the written signs used are more than ten in number (Irani, *Arabic numeral forms*, in *Centaurus*, iv [1955], 1-12, repr. in *St. Isl. exact sciences*, by E.S. Kennedy, Beirut 1983, 710-20); in the other, the number of signs (figures) used can only be nine, if the zero is not acknowledged, or ten, if it is introduced. The latter system is that known as *guarismos* or *algorismos*.

The importance of the usage of the figures which are now called Arabic does not reside in the form of the numbers, which can be multiple, but in the fact that one individual, or a determined social group, uses them in a *positional system*, as is currently the case with motor vehicle registrations. In so far as these use only numbers, they are understood, as ideographical notations, throughout the world, although each language uses, in speech, very different words. In countries where motor vehicles exist in abundance, it is often the practice to introduce an alphabetic element which is less comprehensible to readers of all languages. This element could be "identified" with *rūmī*, Coptic figures, etc. (see Sánchez Pérez, in *al-Andalus*, iii [1935], 97-125; Ritter, in *RSO*, xvi [1936], 212-13; Levi Della Vida, in *RSO*, xiv [1933], 281-3, and xvi (1936), 213-14; Bartina, in *Studia papyrologica*, vii [1968], 99-110). It differs from the former.

The only grounds for confusion in Arabic numeration (just as was the case 4,000 years ago in the Sumero-Babylonian sexagesimal positional system) may be found in the absence of the 0 (*zero*) to mark the lack of units in a determined order. When, during the 2nd or 3rd century B.C., Greek astrologers adopted the Babylonian system of numeration (with *zero* included) for sexagesimal fractions (minutes ['], seconds ["] ...) they filled the temporary void of which Carra de Vaux was conscious. The latter, to account for the connection between Babylonia and Greece on the one hand, representing Antiquity, and the Arab Middle Ages on the other, propounded the hypothesis that numeration by position must have been confined to marginal groups, neo-Platonists and neo-Pythagorians who, taking refuge in Persia from the religious persecutions of the Byzantines, could have re-introduced to Mesopotamia the knowledge forgotten there. This hypothesis seems to be corroborated by a reference by Severos Sabojt, Bishop of Ḳinnasrīn (*ca.* 662) to the arithmetic of the Indians with its nine symbols (F. Nau, *La plus ancienne mention orientale des chiffres indiens*, in *JA* [1910], ii, 225-7). Numeric notation with nine symbols may be ambiguous, and recalls the uncertainty (Neugebauer, *Ancient mathematics and astronomy*, in *HT*, i (Oxford 1965) which must have afflicted the Babylonians. In the decimal system, 2 4 could signify 24, 204, 2040, etc., until the introduction of the zero made it possible to establish the exact reading. The difficulty could be similar to that faced today by a person of limited expertise confronted by the screen of a computer which moves automatically, to show large or small numbers, from ordinary to technical or scientific notation. In the mid-9th century, the zero was known in the Orient and the decimal system well-established. On the other hand, in the West, Leonardo Pisano still spoke, in his *Liber abbaci* of the "nine Indian figures".

However, the figures, fairly similar to those of today, which appear in the *ovetense* manuscript of the Escorial (R. ii. 18), are not decimal, as is the case in most of folio 55. These are *rūmī* figures, as has been proved by Ana Labarta and Carmen Barceló (*Numeros y cifras en los documentos arábigohispanos*, Cordova 1988). It may be concluded from their study that, while the decimal system was known in scientific and mercantile circles through the medium of Latin translations or adaptations of the *Kitāb al-Djamʿ wa-'l-tafrīḳ* of al-Khwārazmī, the same did not apply among Spanish Christians before the 15th century.

Attempts have been made to explain the form of the figures which are used today in terms of a linear evolution or a polygenesis. Woepcke considered that the primitive form corresponded to the first letter of the Sanskrit word denoting the number. Carra de Vaux, seeing that the numeric value of the letter depends upon its position within the corresponding alphabet, stated that the primitive figures were formed by interlinked rods as far as 6, and that the others were obtained by the rotation of the former from left to right (7, 8) (cf. G. Beaujouan, *Etude paléographique sur la "rotation" des chiffres* ..., in *RHS*, i [1948] = *Par raison des nombres*, Variorum Reprints, Aldershot, CS 344 [1991] no. IX; A. Allard, *L'époque d'Adélard et les chiffres arabes dans les manuscrits latins d'arithmétique*, in the series of articles concerning Adélard edited by Ch. Burnett, London 1987, 37-43; G. Menéndez-Pidal, *Los llamados numerales árabes en Occidente*, in *BRAH*, cxliv [1959], 179-208). See also art. AL-KHWĀRAZMĪ, above, vol. IV, 1070b, and J. Vernet, *Ce que la culture doit aux Arabes d'Espagne*, Paris 1985, 70-77, to be amended in accordance with the content of this article.

SIGETWĀR, the Ottoman orthography for SZIGETVÁR, a town and centre of a *sandjaḳ*, temporarily of a *beglerbegilik*, in Transdanubian Hungary. The originally not very important town and castle, situated in the morasses of the rivulet Almás, became a significant military centre of Habsburg Hungary after the fall of Székesfehérvár and Pécs, the main royal and episcopal towns in Transdanubia. An unsuccessful Ottoman attack was directed against it in 963/1556. Ten years later, Süleymān the Magnificent [*q.v.*] led his last campaign against Szigetvár, which put up a strong resistance. The sultan died two days before the final assault on 8 September 1566, during which Count Miklós Zrínyi ran out of the castle with his retinue and died after an heroic fight. Süleymān's internal organs were buried in the vicinity of the town, and a *türbe* was later erected above his tomb.

Szigetvár immediately became the centre of a *sandjaḳ*, first governed by the former *alaybegi* of Pécs, Iskender (Pečewī, *Tārīkh*, i, 420, confirmed by archival evidence: Istanbul, Başbakanlık Osmanlı Arşivi, Kepeci 74, p. 102, and Maliye defteri 563, p. 54). The territory of the *liwā* consisted of ten *nāḥiyes*, including former districts of the *sandjaḳ* of Pécs-Mohács and new acquisitions, side-by-side with places which, it was hoped, would be controlled in the future. In Ramaḍān-Shawwāl 1002/June 1594, Tiryākī Ḥasan, who had been governor here on five occasions, was nominated *beglerbegi* of Szigetvár, and the *sandjaḳs* of Pozsega (Pozhegha) and Pécs (Pečūy) were subordinated to his province (*BOA*, Mühime defteri 73, p. 104, no. 236; Kepeci 344, pp. 362-3). Two years later, the *pashalïḳ* was abolished and the *sandjaḳ* of Szigetvár became part of the *wilāyet* of Kanizsa (Ḳanizhe) in 1600.

The town had been abandoned by its Hungarian inhabitants by 1579, from which year the only *mufaṣṣal defteri* of the *liwā* survives (Munich, Bayerische Staatsbibliothek, Cod. Turc. 138). The registered civil population consisted of 5 converted gipsy households. The castle gave shelter to a modest, and in the 16th century decreasing, number of Ottoman soldiers.

Szigetvár surrendered to the Habsburg forces on 13 February 1689. Today, the *djāmiʿ*s of Sultan Süleymān and ʿAlī Pasha, together with a building of unknown purpose, keep in remembrance the Ottoman period.

Lajos Rúzsás, Budapest 1966, 61-104; Sugár István, *Szigetvár és viadala*, Budapest 1976; Géza Dávid, *Die Bege von Szigetvár im 16. Jahrhundert*, in *WZKM*, lxxxii (1993) (*In memoriam Anton C. Schaendlinger*), 67-96.

(G. DÁVID)

SIGHNĀḲ, SUGHNĀḲ (*Ḥudūd al-ʿālam*, tr. 119, Sūnākh), a mediaeval Islamic town on the middle Sïr Daryā, in the district known as Fārāb, between Isfīdjāb and Djand [*q.vv.* in Suppl.]. It seems to have been, together with the "new settlement" Yengikent, Sawrān and others, one of the settlements there of the Turks, explicitly defined by Maḥmūd Kāshgharī as "a town of the Oghuz" (Tkish. tr. Atalay, i, 471; Eng. tr. Dankoff and Kelly, i, 352). Al-Muḳaddasī, 323 n. *k*, links it with Utrār [*q.v.*], 24 *farsakhs* further up the Sïr Daryā. In Turkish, *sïghnak* means "place of refuge" (see Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 813b), and the same name is found for several other places in Transcaucasia.

In the 4th/10th century, Sighnāḳ was probably a frontier town where semi-sedentarised or sedentarised Oghuz exchanged products with the Islamic lands to the south; the *Ḥudūd al-ʿālam, loc. cit.* and cf. comm., 358, mentions the manufacture there of bows for export. The region long remained *dār al-kufr*. In the 6th/12th century it was the centre of a khānate of the pagan Ḳipčaḳ [*q.v.*], and *ghazawāt* against them by the Khwārazm Shāhs are mentioned for 547/1152, and specifically against Sighnāḳ and its then ruler Ḳayir Toḳu Khān in 591/1195, until in the early 7th/13th century ʿAlāʾ al-Dīn Muḥammad incorporated it within his empire (see Barthold, *Turkestan*³, 328, 342-3, 369; idem, *Histoire des Turcs d'Asie Centrale*, Paris 1945, 91). The Shāh's control of it was, however, brief, for in 617/1220 a Mongol army besieged Sighnāḳ and eventually captured it, massacring its population. (Djuwaynī-Boyle, i, 86-7; Barthold, *Turkestan*³, 414-15).

Sighnāḳ continues to be mentioned sporadically in the next three centuries or so. In the 9th/15th century it was a centre of the Čingizid Shībānī clan, and was held towards the end of that century by Muḥammad Shībānī Khān before he began his career of expansion in Central Asia [see SHĪBĀNĪ KHĀN]. Thereafter, Sighnāḳ fades from mention. Its ruins now lie at Sunak kurgan, a few miles north-west of the post-station Tiumen Arik on the Orenburg-Tashkent road and railway (see *Ḥudūd al-ʿālam*, comm. 358).

(C.E. BOSWORTH)

ṢIḤĀFA or ṢAḤĀFA (A.), the written press, journalism, the profession of the journalist (*ṣaḥāfī*).

The nineteen-fifties witnessed the attainment of national independencies and major political upheavals, such as the Egyptian revolution of 23 July 1952. The Arabic press which, paradoxically, enjoyed great success during the colonial period [see DJARĪDA. i], despite the somewhat repressive nature of judicial regulation of the press (since what was seen was the proliferation of a press of information, of ideas and even of warfare), developed in conjunction with the emergence of national independences. It needed to confront three major problems: the repressive nature of the new ruling powers, reflected in legislation designed to control the press; the spread of illiteracy, resulting from rapid population growth, in spite of the untiring efforts invested in education; competition from radio, and especially from television, and the indifference of most of the public regarding the written press. The fact remains, however, that the press, despite the inclination of governments to tame it, has constituted an important factor in the struggle for public liberties and democracy. The creation of national news agencies and schools for the training of journalists bear witness, moreover, to the interest taken by government departments in this vital sector.

1. The Arab Middle East

(i) *Egypt*

After the *coup d'état* of 23 July 1952, the Free Officers' Movement decreed the dissolution of parties (16 January 1953), established a provisional constitution and created its own weekly review, *al-Taḥrīr* (17 September 1952) and its first daily, the mouthpiece of the revolution, *al-Djumhūriyya* (7 December 1953). From 1952 onwards, most party journals ceased publication. The major titles of the Cairo press continued to appear, however: *al-Ahrām, Rūz al-Yūsuf, Akhbār al-Yawm* and *al-Hilāl al-Miṣrī*. But the new government was not slow to engage in conflict with the press. Two days after the unleashing of the revolution, the brothers Muṣṭafā and ʿAlī Amīn, founders of *Akhbār al-Yawm*, were arrested on the basis of mere suspicion; but the authorities relented and released them a few days later.

The crisis of March 1954

Two years after the *coup d'état*, the Free Officers' Movement split into two factions: the liberal faction, which advocated return to the barracks, and which was led by General Nagīb [see MUḤAMMAD NADJĪB] and Khālid Muḥyī 'l-Dīn, and the militant faction under the leadership of ʿAbd al-Nāṣir [*q.v.* in Suppl.]. The latter emerged victorious and imposed his own point of view: on 15 April 1954 the professional Union of Journalists (founded in March 1941) was dissolved. Leading journalists were imprisoned, including Maḥmūd Abu 'l-Fatḥ, proprietor of *al-Miṣrī*, and Iḥsān ʿAbd al-Ḳuddūs, editor-in-chief of *Rūz al-Yūsuf*. Censorship was rapidly restored, and even strengthened.

Some new titles appeared: in 1954, a literary and artistic review, *al-Risāla al-Djadīda*, with Yūsuf al-Sibāʿī as its editor-in-chief, joined by a second review, *al-Thawra*, and a magazine for women, *Ḥawwāʾ al-Djadīda* in 1956. The first news agency (M.E.N.A.) was founded in February 1956.

The Nasserite era (1956-70)

In July 1956 ʿAbd al-Nāṣir was proclaimed President of the Republic. The provisional constitution had been promulgated a few months previously, in January 1956. The Revolutionary Council was dissolved. Censorship, abolished in July 1956, was soon restored, at the time of the tripartite aggression in October 1956. Private ownership of journals still being the norm, ʿAbd al-Nāṣir organised the production of the following titles: *al-Shaʿb*, an important daily (June 1956); *al-Masāʾ*, editor-in-chief Khālid Muḥyī 'l-Dīn, of the Revolutionary Council; and *Madjallat Bināʾ al-Waṭan*, a propaganda monthly (1958).

The year 1959 was marked by the detention of numerous journalists suspected of opposition to the régime, including in particular Luwīs ʿAwaḍ, Luṭfī al-Khūlī, ʿAbd al-ʿAẓīm Anīs and Maḥmūd al-Saʿdāwī.

The year 1960 marked a turning point in the life of the Egyptian press. The law imposing the organisation (*tanẓīm*) of the press came into being on 24 May 1960. This *tanẓīm*, a disguised form of *taʾmīm* (nationalisation), effectively confiscated the leading publishing houses involved in the production of journals (i.e. those belonging to private persons), to the advantage of the National Unity Party, *al-Ittiḥād al-Ḳawmī*, created in January 1956 and renamed *al-Ittiḥād al-Ishtirākī al-ʿArabī*. This law was the first in a series of nationalisation laws applying to banks, factories, etc. Henceforward, it was the National Unity Party which would issue the authorisation necessary for the publication of any journal, would nominate boards of directors and would appoint editors-in-chief.

Thereafter, and until ʿAbd al-Nāṣir's death, the world of the press was destabilised, with arbitrary changes, dismissals and imprisonments. Fikrī Abāẓa, President and Director General of the Dār al-Hilāl, was barred from publication and dismissed. Muṣṭafā Amīn, of *Akhbār al-Yawm*, was sentenced in 1966 to hard labour for life, and did not obtain a conditional release until 1973.

It should, however, be acknowledged that the Dār al-Ahrām, moving into its new premises in 1968 and equipped with all the latest technology, became, through the leadership of the distinguished journalist Muḥammad Ḥasanayn Haykal, a respected press institution. The weekly editorial of Haykal, who had

bi-ṣarāḥa the ear of ʿAbd al-Nāṣir, was reprinted in all the world's major newspapers.

The defeat of June 1967

This was preceded by a campaign orchestrated by the régime and tending to extol the Egyptian armed forces, capable of annihilating the Israeli enemy within a few hours. It was not until 9 June 1967 that ʿAbd al-Nāṣir announced the *naksa* and his own withdrawal from office. Large public demonstrations persuaded him to stay.

The next development to affect the press was the publication on 30 March 1968 of the Manifesto (*bayān*), proclaiming the establishment of a permanent constitution; the régime, by taking certain liberal measures, seemed to be relaxing its grip. Cultural reviews of superior quality came into being, all edited by the Ministry of Culture: *al-Madjalla*, monthly; *Turāth al-Insāniyya*, quarterly; *al-Fikr al-Muʿāṣir*, monthly; *al-Kitāb al-ʿArabī*, quarterly; *al-Kitāb*, monthly; *al-Funūn al-Shaʿbiyya; al-Masraḥ*; and *al-Sīnimā*.

On 17 September 1970, a few days before his death, ʿAbd al-Nāṣir issued a new decree regulating the Union of Egyptian Journalists. The decree stipulated that no member of the Union could be arrested or detained, nor interrogated except in the presence of a member of the board of the Union, and then after judicial enquiry.

The Sādāt era (1970-81)

This was marked by a series of measures of "de-Nasserisation", generally known as measures of openness (*infitāḥ*): elimination of the "pressure centres" (*marākiz al-ḳuwā*) which had been all-powerful in ʿAbd al-Nāṣir's time; promulgation in 1971 of the permanent constitution; military success in the war of October 1973; in 1974, laws relating to *infitāḥ al-iḳtiṣādī* (economic openness); creation in 1975 of tribunes within the Arab Socialist Union (A.S.U.); expulsion of Soviet advisers in 1976, and the creation of three parties independent of the A.S.U.; visit to Jerusalem on 19 November 1977; and permission given to the Wafd Party to resume its activities under the name al-Wafd al-Djadīd.

On the other hand, Sādāt was also responsible for anti-democratic measures: a law of 1978 aimed at the protection of the social fabric and social peace (dismissal of all persons who had held public office before 1952); a law of 1979 modifying the law on parties; a law of 15 November 1980 on the protection of values against dishonour (*ḳānūn al-ʿayb*), consisting in depriving the offender of his political and union rights; a law of 20 May 1980 instituting tribunals of state security (*maḥākim amn al-dawla*) on a continual and permanent basis, whereas previously they had been constituted only in times of emergency; a law of 20 November 1980 creating the Consultative Assembly (*al-Shūrā*) alongside the National Assembly.

In matters specifically affecting the press, Sādāt used dilatory manœuvres. Although at the end of 1971 his Minister of Culture, ʿAbd al-Ḳādir Ḥātim, suppressed with the stroke of a pen all the reviews edited by this ministry, Sādāt took measures to the benefit of journalists: re-assignment and regularisation of the situation of journalists arbitrarily silenced in the time of ʿAbd al-Nāṣir; abolition of censorship after the war of October 1973; liberation of the brothers ʿAlī and Muṣṭafā Amīn; dismissal of Muḥammad Ḥasanayn Haykal; creation on 11 March 1975 of the first Higher Press Council (*al-Madjlis al-Aʿlā li 'l-Ṣaḥāfa*). Presiding over this council was the First Secretary of the Central Committee of the A.S.U., and it comprised notably the following persons: the Minister of Information; the President of the Journalists' Union; the President-Director General of the M.N.E.A.; the Dean of the Faculty of Journalism; and three editors-in-chief of newspapers. Its functions were the promulgation of codes of conduct, and the issuing of authorisations for the publication of newspapers.

Sādāt's institution of a multi-party system led to the appearance of partisan journals (*ḥizbiyya*) alongside national titles (*ḳawmiyya*): *Miṣr*, weekly paper of the *Ḥizb Miṣr al-ʿArabī al-Ishtirākī*, which in 1978 became the party of Sādāt, *al-Ḥizb al-Waṭanī al-Dīmūḳrāṭī*, which appeared on 2 March 1981; *Māyū*; *Uktūbir*, October 1976, editor-in-chief Anīs Manṣūr; *al-Aḥrār*, weekly of the *Ḥizb al-Aḥrār al-Ishtirākiyyīn* (liberals of the right), appearing 14 November 1977; *al-Ahālī*, weekly of the *Ḥizb al-Tadjammuʿ al-Waṭanī al-Taḳaddumī al-Waḥdawī*, appearing on 1 November 1978; and *al-Shaʿb*, weekly of the *Ḥizb al-ʿAmal al-Ishtirākī*, appearing 1 May 1979.

The opposition press showed great hostility towards the dictatorial laws of Sādāt, in particular, the law of 1978 regarding the protection of the social fabric, the law of 1980 concerning the protection of values against dishonour, and the law of 1980 on the authority of the press (*ḳānūn sulṭat al-ṣaḥāfa*), which made no changes in relation to the law of *tanẓīm* of 1970, since the ownership of national papers (*ḳawmiyya*) reverted to the Consultative Assembly (art. 22) and the president of this assembly was the President of the Higher Press Council (art. 32).

The opposition parties, the Journalists' Union, the Lawyers' Union, as well as independents, joined to form a united front against the dictatorship of Sādāt. Under the pretext of combatting *fitna ṭāʾifiyya* (sectarian sedition), the latter responded with the following draconian measures, brought into effect in September 1981: confiscations and imprisonments, the blacklisting of 1500 journalists and intellectuals, the arbitrary transfer of 60 university academics to non-university institutions, and restrictions imposed on correspondents of *Le Monde* newspaper and of the American television station ABC.

A month later, 6 October 1981, Sādāt was assassinated by an Islamic fundamentalist.

The Mubārak era (1981-)

During the fifteen years following his accession to the highest office, President Mubārak has practised and is still practising a liberal policy. Beginning in 1982, he attempted to lower the temperature by allowing the reinstatement of formerly blacklisted journalists. Between 1982 and 1984 he permitted certain titles, which had been prohibited in the latter years of the Sādāt régime, to re-appear: *al-Shaʿb*, of the *Ḥizb al-ʿAmal al-Ishtirākī; al-Ṭalīʿa*, progressive, editor-in-chief Luṭfī al-Khūlī; *al-Iʿtiṣām*, Islamist; *Waṭanī*, weekly; and *al-Ahālī*, of the *Ḥizb al-Tadjammuʿ*. Also, during the same period (1982-4), new titles appeared: *al-Liwāʾ al-Islāmī*, Islamist weekly; *Shabāb Bilādī*, of the *Ḥizb al-Waṭanī al-Dīmūḳrāṭī; al-Wafd*, of the *Wafd al-Djadīd; al-Umma*, of the *Ḥizb al-Umma; and al-Ahrām al-Duwalī* (London).

The legislative elections of May 1984 established the hegemony of the *Ḥizb al-Waṭanī al-Dīmūḳrāṭī* (390 seats) and the success of the Wafd (58 seats). Between 1984 and 1986, there appeared for the first time: *Wādī al-Nīl*, cultural monthly, editor-in-chief Anīs Manṣūr; *al-Ḳāhira*, monthly; and *Awrāḳ ʿArabiyya*, monthly, editor-in-chief Maḥmūd al-Marāghī.

Journalists barred from publication have resumed their writing, including Muḥammad Ḥasanayn Haykal. Administrative bodies such as the Higher Council of

Information have maintained stable and amicable relations with the Journalists' Union. Ibrāhīm Nāfiʿ, president of the Union since 1985, still leads this influential institution. New titles appeared in 1990: *Akhbār al-Riyāḍa*, a weekly supplement to *Akhbar al-Yawm; al-Ahrām al-Riyāḍī*, a journal edited by the Dār al-Ahrām; *Niṣf al-Dunya*, a women's magazine edited by the Dār al-Ahrām; *al-Yasār* (The Left), edited by the *Ḥizb al-Tadjammuʿ al-Waṭanī al-Taḳaddumi al-Waḥdawī*.

On 12 January 1990, President Mubārak dismissed his Minister of the Interior, Zakī Badr, following a press campaign objecting to the minister's hostile attitude towards journalists. There is only one blot on the landscape, Law no. 93 of 1995, which provides for the imprisonment of a journalist as a preventive measure: a hundred journalists risk falling foul of this "unjust law". The Journalists' Union is poised for further conflict in the future.

Bibliography: *al-Mawsūʿa al-ṣaḥāfiyya al-ʿarabiyya*, Alecso, Tunis 1991, ii, 3rd section, 98-215; Khālid Sābāt, *Wasāʾil al-ittiṣāl, nashʾatuhā wa-taṭawwuruhā*, 6th ed., Cairo 1991, 166-225; Aḥmad Ḥusayn al-Ṣāwī, *Ḳirāʾa fī milaff al-ṣaḥāfa al-miṣriyya*, in *al-Dirāsāt al-iʿlāmiyya*, Cairo, liv (January-March 1989), 9-25; Fuʾād Zakariyya, *al-Madjallat al-thaḳāfiyya wa-ʾl-mudjtamaʿ al-miṣrī*, in *al-Kitāb al-ʿArabi*, Kuwait 1984, 3rd part, 105-53; *al-Ṣaḥāfa fī Miṣr*, published by the Ministry of Information, Cairo 1994; *Dalīl al-ṣaḥāfa al-ʿarabiyya*, KUNA, Kuwait 1988.

(ii) *Sudan*

This country enjoys a long-standing journalistic tradition on account of its proximity to Egypt. It has known a daily press since 1935, when *al-Nīl* was published for the first time. October 1940 saw the appearance of *Ṣawt al-Sūdān* and *al-Sūdān al-djadīd*. In 1945 the bi-weekly *Kordofān* appeared. But with independence in 1955, the press was soon to find itself muzzled, especially after the military *coup d'état* of 1958.

The dictatorship of General Ibrāhīm ʿAbbūd (1958-64) was marked by the taming of the press. Only the daily *al-Thawra*, official organ of the military junta, was able to survive until 1964, alongside the two dailies *al-Ayyām* and *al-Ṣaḥāfa*, which laboured under severe restrictions.

After the fall of ʿAbbūd's régime and the revolution of October 1964, the press enjoyed a period of relative prosperity, especially following the introduction of multi-party politics: eleven dailies and seven weeklies came into being. But on 29 May 1969, the army regained power under the leadership of General Djaʿfar al-Numayrī. The dictatorship of the latter lasted fifteen years (1969-85). It was characterised by outright nationalisation of the press in the interests of the Single Socialist Unity, *al-Ittiḥād al-Ishtirākī*, the Nasserite model having proved its worth in the régime's eyes. The two dailies *al-Ayyām* and *al-Ṣaḥāfa* continued to appear, although nationalised. One new title came into being: *al-Ḳuwwāt al-Musallaḥa* (The Armed Forces).

The fall of Numayrī took place on 6 April 1985, and General Siwār al-Dhahab took power. Unlike his predecessors, he allowed a resurgence of the press and political pluralism. It was thus that the following titles, belonging to parties, came into existence: *al-Ittiḥādī*, *al-Nidā*, *Ṣawt al-Umma*, *al-Maydān* (parties of the Left); *Ṣawt al-Djamāhīr* (Islamist front); *al-Munāḍil* (the Syrian Baʿth); and *al-Badīl* (pro-Nasserite). All these papers opted for the tabloid format and were obliged to restrict their circulation, on account of the high cost of newspaper production.

On 30 June 1990, a fourth *coup d'état* took place, that of General ʿUmar al-Bashīr, with the support of Islamists led by Ḥasan al-Turābī. Once again, political parties were abolished and the press was muzzled.

It is interesting to note that five English titles have come into being in recent years, produced by southern Sudanese: *Forward; Guiding Star; Heritage; Nile Mirror*; and *Sudan Times*.

Sudan experienced the first legislation on the press in 1930; a second law in 1973 nationalising the industry in the interests of the Socialist Union; and a third in 1985 placing the Press and Printing Council under the authority of the Council of Ministers. This last-mentioned law abolished the Socialist Union's ownership of newspapers, but maintained the previous system of authorisation.

(iii) *Lebanon*

In the opinion of observers and of the public at large, Lebanon is a paradise for the press, both in terms of freedom and of superior technology. However, despite the liberal régime and the influx of foreign finance, economic precariousness remains the Achilles' heel of the Lebanese press.

After the end of the French mandate in 1946, and during the presidency of Bishāra al-Khūrī, then that of Camille Shamʿūn, the press was subject to the promulgation of two codes, both of a liberal nature. Two trends divided public opinion: pro-American and anti-American. The presence of numerous Palestinian refugees on Lebanese territory after 1948 had traumatic repercussions on public life. One phenomenon which appeared at this time was as unforeseen as it was alarming: terrorism (abductions and assassinations), of which journalists were the victims.

As early as the inter-World War period, daily newspapers existed in profusion: *al-Sharḳ*, from the al-Kaʿkī dynasty of Lebanese journalists, since 1926; *al-Nahār*, of Djubran Ṭuwaynī, since 1933; *al-ʿAmal*, of the Phalangist party, since 1939; *al-Diyār*, since 1945; *al-Ḥayāt*, of Kāmil Muruwwa, since 1946; *Bayrūt al-Masāʾ*, since 1946; *al-Safīr*, of Ilyās al-Huwayk, since 1951; and *al-Anwār*, since 1950. In the 1950s, a further fifty dailies were circulating in Beirut. Others were added: the *Ḥizb al-Ḳawmī al-Sūrī* launched a daily paper in Beirut in 1955, *al-Bināʾ*. *Al-Ḥawādith*, a political weekly, became the property of Salīm al-Lūzī and appeared in Beirut from 1955, having previously been published in Tripoli.

The period of General Fuʾād Shihāb (1958-64) saw the appearance of some important newspapers: *al-Usbūʿ al-ʿArabī*, a weekly, and likewise *al-Ḥurriyya*, but did not escape the wave of attacks and abductions which has since then characterised the life of the press in Lebanon. The period of the President Charles Ḥalū (1964-70), himself a journalist, was marked by the granting of increased freedom to the sector and the promulgation of a "code of conduct for journalists", which unfortunately was never put into effect. The defeat of June 1967 had the most calamitous effects on the Lebanese press, especially in terms of finance, the collapse in advertising revenue forcing certain papers to cease publication.

The time of the President Sulaymān Farandjiyya (1970-7) saw the birth in 1970 of the daily *L'Orient-Le Jour*, in French, following the fusion of two titles which had appeared separately. The foreign financing of Lebanese journals assumed tragic dimensions: in 1974, the Council of Ministers imposed control of advertising expenditure in the press sector.

The presidency of Ilyās Sarkīs (1976-83) saw the intensification of the civil war between nationalists (Phalangists) and Palestinians and Islamist progressives.

Two courses of action were then open to the Lebanese press: emigration or extinction. President Sarkīs promulgated a new law on the press (1977), instituting censorship and curbing the excessive freedom which the press had previously enjoyed. Despite instability, the dailies continue to appear: *al-Anwār, al-Nahār, al-ʿAmal, al-Safīr, al-Barḳ* and *L'Orient-Le Jour.*

The presidency of Ilyās al-Harāwī has experienced some easing of tension, especially since Michel ʿAwn has applied for political asylum in France.

(iv) *Syria*

After the French mandate and the evacuation of British and French troops, the first daily newspaper of the Syrian Baʿth Party, *al-Baʿth*, was established in 1947.

The first military *coup* led by Ḥusnī al-Zaʿīm took place on 30 March 1949, followed a few months later by that of Sāmī al-Ḥinnāwī, on 14 August 1949. The latter was deposed the same year by Adīb al-Shīshaklī, who maintained his grip on power until 1954.

During this "black series" of *coups d'état*, the press was muzzled; with the accession of Shukrī al-Ḳuwwatlī to the leadership of the Republic in 1954, a much more tolerant atmosphere prevailed in the land. In 1958, union between Egypt and Syria was proclaimed (the United Arab Republic) and in 1959 the model of the Egyptian press was applied to Syria: the press was confiscated by the Nationalist Union, *al-Ittiḥād al-Ḳawmī*, single party of the Province (*iḳlīm*) of the North (i.e. Syria). A law dating from 1958 allowed proprietors of newspapers to waive their rights in exchange for compensation; 47 titles waived their rights, and 19 continued to appear.

The U.A.R. was dissolved on 28 September 1961. In 1969 Ḥāfiẓ al-Asad came to power, and on 12 March 1971 he was proclaimed President of the Republic. In 1974 the General Union of Syrian Journalists was founded, followed in 1975 by the Syrian Arab Foundation for the Distribution of Printed Matter. In 1973 a new daily paper was launched, *Tashrīn*, published by the eponymous press institution.

Currently, the following dailies appear in Syria: *al-Baʿth*, founded 1946 in Damascus; *al-Thawra*, founded 1963 in Damascus; *Tashrīn*, founded 1973 in Damascus; *al-Djamāhīr*, founded 1973 in Aleppo; *al-Fidā'*, founded 1973 in Hama; *al-ʿUrūba*, founded 1973 in Ḥimṣ; and the *Syria Times*, in English, founded 1973 in Damascus. In addition, there are literary reviews of high quality, such as *al-Masīra*, founded 1974, and *al-Maʿrifa*, founded 1963.

(v) *Palestine*

The situation of the Palestinian press is complex in that it is possible to speak of an internal press (Israel and the territories occupied since 1967) and an external press published in Arab and western capitals.

After the defeat (*naksa*) of 1967 and the annexation of the West Bank of the Jordan, one group of Palestinian journalists established itself in Jordan, while the other emigrated to other Arab states, Lebanon in particular. The Arabs of Palestine were unable to express themselves except in the press of the Communist Party, *Rakaḥ*. With the inception of the armed struggle and the creation of the Palestine Liberation Organisation (P.L.O.), the Union of Palestinian Journalists came into existence in 1972. It held its first congress in Beirut, its second in Tunis (1977), its third in Beirut (1981) and its fourth in Algiers (1987). The press of Palestinian resistance became active after 1959: *Filasṭīnunā*, a monthly, appeared in Beirut in 1959, and *al-ʿĀṣifa*, also a monthly, in Beirut in 1965. In 1964, Ghassān Kanafānī began to include in *al-Muḥarrir* (Beirut) a supplement entitled *Filasṭīn*.

After the defeat of 1967, organs of Palestinian resistance proliferated: *al-Hadaf* (1967) of the P.F.L.P., editor-in-chief Ghassān Kanafānī, then Bassām Abū Sharīf; *al-Ḥurriyya* (1967) of the D.F.L.P.; and *al-Fatḥ* (1967) of the P.L.O. Currently, several daily newspapers are published in Jerusalem: *al-Ittiḥād, al-Shaʿb, al-Ṭalīʿa, al-Fadjr, al-Nahār* and *al-Ayyām*. Weeklies and monthlies are published either in Damascus or Beirut, or in Nicosia.

(vi) *Jordan*

The declaration of the State of Israel in 1948 and the Arab defeat of 1967 had a considerable impact on the Jordanian Press. Four dailies were already appearing: *al-Difāʿ* (suspended in 1971), *al-Dustūr, al-Urdunn*, and *al-Ra'y*.

In 1973 a Press Code was promulgated, imposing draconian conditions on the publication of newspapers (caution-money, the need to subscribe to foreign agencies of information, etc.). In 1975 the English language daily newspaper *Jordan Times* appeared; in 1976, a new daily *Ṣawt al-Shaʿb*; in 1982, the English language weekly *Jerusalem Star*; and in 1989, another daily from the publishers of *Ṣawt al-Shaʿb*.

It is important to note that in 1966 a law was promulgated replacing private ownership of newspapers with publicly-quoted companies in which private proprietors could hold shares amounting to a maximum of 30% of the overall capital. It is also worth noting the emergence of a juvenile press: since 1980, *Rīmā wa-Mamdūḥ* (becoming *Sāmir* in 1983) and *Fāris*.

(vii) *ʿIrāḳ*

After the abolition of the monarchy and the success of the conspiracy of the military junta on 14 July 1958, several newspapers continued to appear, including the daily *al-Bilād*. The new régime launched a number of titles: *al-Djumhūriyya* in Baghdād, from 17 July 1958; *al-Bashīr* in Kirkūk; and *al-Aḥrār* in Baghdād. After the assassination of ʿAbd al-Karīm Ḳāsim in 1968, the new ruler of Baghdād, ʿAbd al-Salām ʿĀrif, inaugurated the following dailies: *al-Djamāhīr, al-Thawra, al-Ṭalīʿa* and *al-Ta'ākhī* (pro-Kurdish). In 1967, the régime issued a law nationalising the press and placing it under the direct authority of the Presidency of the Republic. On 17 July 1968, the military wing of the Baʿth seized power and installed Aḥmad Ḥasan al-Bakr as head of state. In 1976, *al-Ta'ākhī* changed its title and became *al-ʿIrāḳ*. In 1979, Ṣaddām Ḥusayn seized power and displaced Aḥmad Ḥasan al-Bakr; he embarked on two wars, commonly known as the "Gulf Wars", the first against Iran (1980-8), the second against Kuwait (1990). Two other dailies appeared: *al-Ḳādisiyya* from 1981 and *al-Riyāḍī* from 1984. Two titles belonging to the category of juvenile press came into existence during the 1980s: *Madjallatī* and *al-Mizmār*. After the crippling defeat of Ṣaddām's régime in the Gulf, ʿIrāḳ was subjected to an economic blockade. The grip of the dictatorship of Ṣaddām becomes ever tighter; the press has been the first victim of this dictatorial régime.

(viii) *Saudi Arabia*

Early times

The Ḥidjāz, within the Ottoman sphere of influence, was the first region of Arabia to adopt printing in 1902, with the publication of the first official paper, *al-Ḥidjāz*. In 1916, during the First World War, Sharīf Ḥusayn published *al-Ḳibla*, the mouthpiece of the Arab movement, which ceased to appear in 1924. In 1916, the Ottomans published *al-Ḥidjāz* in Medina; this ceased publication in 1918. In September 1920 *al-Falāḥ* was launched in Mecca, to

be followed in December 1924 by the bi-weekly *al-Barīd al-Ḥidjāzī*, printed under the auspices of the *Ḥizb al-Waṭanī al-Ḥidjāzī.*

The Saudi dynasty

In December 1924 King ʿAbd al-ʿAzīz Ibn Suʿūd launched *Umm al-Ḳurā* in Mecca; a literary weekly, *Ṣawt al-Ḥidjāz*, appeared in 1932. With the development of the oil industry, titles proliferated, and in 1953 the monthly *al-Yamāma* appeared. In 1962 a Ministry of Information was created, and a code of press institutions promulgated. The al-Yamāma house published several titles, including the daily *al-Riyāḍ*. The Saudi Press Agency (W.A.S.) came into existence in 1971. In 1973, two faculties of journalism were created, in King Suʿūd University of Riyāḍ, and in King ʿAbd al-ʿAzīz University of Djudda. In 1976, a third faculty was established at the Imām Muḥammad b. Suʿūd University.

Currently, the landscape of the written press is composed as follows:

(a) Dailies: *al-Bilād* (since 1932 in Djudda); *al-Madīna al-Munawwara* (since 1937 in Medina); *al-Nadwa* (since 1958 in Mecca); *al-Riyāḍ* (since 1959 in Riyāḍ); *ʿUkāẓ* (since 1960 in Djudda); *al-Yawm* (since 1963 in Dammām); *al-Djazīra* (since 1964 in Riyāḍ); *al-Shark al-Awsaṭ* (since 1978 in London, then distributed in Dahrān, Riyāḍ and Djudda); *Saudi Review* (since 1966 in Djudda); *Saudi Gazette* (since 1976 in Djudda); and *Arab News* (since 1976 in Djudda)—a total of eight Arabic language dailies and three in English.

(b) The principal weeklies are: *Akhbār al-ʿĀlam al-Islāmī* (Mecca); *al-Tawʿiya al-Islāmiyya* (Mecca); *al-Muslimūn* (Djudda); *al-Daʿwa* (Riyāḍ); *Madjallat al-Madjallāt* (London and Djudda); *al-Ṭifl* (Djudda); *Ḥasan* (Djudda); *Saudi Business* (since 1977), besides major monthlies and numerous scientific and academic journals.

(ix) *Kuwait*

Under the rule of the prince Shaykh Aḥmad al-Djābir Āl Ṣabāḥ (1921-50), the press made a hesitant debut in 1928 with the appearance of the first literary review, *Madjallat al-Kuwayt*, printed in Cairo and founded by Shaykh ʿAbd al-ʿAzīz al-Rashīd, a disciple of Rashīd Riḍā and the true pioneer of the press in Kuwait. He was later to publish *Madjallat al-Kuwayt wa ʾl-ʿIrāḳ*. The monthly review *al-Biʿtha*, printed in Cairo, and widely distributed in Kuwait, came into existence in 1946. It was created by a group of Kuwaiti students pursuing their higher education in Cairo, and the editor-in-chief was ʿAbd al-ʿAzīz Ḥusayn. It continued until 1954. The monthly *Kaẓīma* was the first review printed in Kuwait; it was founded in 1948 by ʿAbd al-Ḥamīd al-Ṣāniʿ and Aḥmad al-Sakkāf (1948-9).

It was during the reign of the prince Shaykh ʿAbd Allāh al-Sālim Āl Ṣabāḥ (1950-65) and with the arrival of oil revenues that the press burgeoned in Kuwait. In 1954, the first official newspaper of Kuwait came into being, *al-Kuwayt al-Yawm*. In 1958, the Ministry of Guidance published the first major literary magazine of the Arab world, *al-ʿArabī*. This prestigious review has had three editors-in-chief: the Egyptian Aḥmad Zakī (1958-76); the Egyptian Aḥmad Bahāʾ al-Dīn (1976-82); and the Kuwaiti Muḥammad Rumayḥī (1982-).

In 1961, the year of the declaration of independence and promulgation of the constitution, the daily and periodical press acquired its own street in Kuwait City, and the Shāriʿ al-Ṣaḥāfa currently accommodates the major dailies and weeklies of Kuwait (more than 130 titles). The leading Kuwaiti daily is *al-Raʾy al-ʿĀmm*, founded in 1961 by ʿAbd al-ʿAzīz al-Masāʿid. Publication was suspended, briefly, in 1995; it was sold and published by a new proprietor. To this may be added *al-Siyāsa* (1963, proprietor and editor-in-chief Aḥmad Djār Allāh); *Kuwayt Times* (proprietor and editor-in-chief Yūsuf al-ʿĀliyān); *al-Ḳabas* (1972, proprietor and editor-in-chief Muḥammad Djāsim al-Ṣaḳr); *al-Waṭan* (weekly from 1962 and daily since 1974, editor-in-chief Djāsim al-Mutawwaʿ); *al-Anbāʾ* (1976, proprietor and editor-in-chief Bībī Khālid al-Marzūḳ); and *Arab Times* (1977, proprietor and editor-in-chief Aḥmad Djār Allāh).

Besides these dailies, scores of weeklies and monthlies have come into being. The Ministry of Information edits the bi-monthlies *al-ʿArabī*, *ʿĀlam al-Fikr*, *Thaḳāfa ʿĀlamiyya*, and the monthly *Madjallat al-Kuwayt*. For its part, the University of Kuwait publishes more than ten reviews of a high academic standard. Ministries, faculties and government departments all have their own review or liaison bulletin.

The major political and cultural weeklies are: *al-Ṭalīʿa* (1967, editor-in-chief Sāmī al-Munayyis); *al-Mudjtamaʿ* (1970, editor-in-chief Ismāʿīl Shaṭṭī); *al-Madjālis* (1970, proprietor and editor-in-chief Hidāya Sulṭān); *al-Mukhtalif* (editor-in-chief Nāṣir al-Sabīʿī); and *Samra* (1993, women's magazine, editor-in-chief Fāṭima Ḥusayn).

Newspapers belong to individuals or to mercantile families. The circulation of dailies varies between 70,000 and 100,000.

The Kuwaiti Association of Journalists, created in 1964, comprises both Kuwaiti journalists and residents belonging to various expatriate communities (Arab and Indian). Laws and decrees concerning the press, promulgated since 1961, revolve around the problem of the suspension of newspapers (duration and legal competence) (articles 35 and 35A). The state subsidises the press: 45,000 K.D. (= U.S. $135,000) are contributed annually to the dailies, 30,000 K.D. (= U.S. $90,000) to periodicals. At the time of the ʿIrāḳī aggression of 2 August 1990, the daily press had to choose between internal, or external resistance. During the seven months of occupation, a press of resistance continued to circulate and was successfully disseminated: *Nashrat al-Ṣumūd al-Shaʿbī; al-Ṣabāḥ; Ṣawt al-Ḥaḳḳ; Mūs* (a thorn in the flesh of the ʿIrāḳī enemy); and *Abnāʾ Djābir*. Externally, there was *Ṣawt al-Kuwayt al-Duwalī*, a daily launched in London (12 August 1990-31 December 1992), editor-in-chief M. Rumayḥī. Immediately after liberation, a new daily paper appeared in Kuwait, *al-Fadjr al-Djadīd* (21 April 1991-31 December 1991), editor-in-chief Yāsīn Ṭāhā Āl Yāsīn. On 12 December 1992, censorship of newspapers was abolished.

(x) *United Arab Emirates*

The union of these seven principalities (Abū Ẓabī, Dubayy, al-Shāriḳa, Raʾs al-Khayma, Umm al-Ḳaywayn, ʿAdjmān and al-Fudjayra) was declared on 2 December 1971. Before this date and since 1966 *Akhbār Dubayy* had been in circulation, as well as the official journal of the government of Dubayy. Abū Ẓabī also had its own press: a government official journal, and *Abu Ẓabi News*. After unification, a major daily came into existence, *al-Ittiḥād*, followed by an English language daily, *Emirate News*.

It is interesting to note that the proliferation of titles in the U.A.E. is due to the concern of governmental organisations and private institutions to issue their own journals or liaison bulletins, such as the following titles: *al-Djundī* (since 1974); *al-ʿAdāla* (since 1974); *al-Amn* (since 1976); and *al-Diblūmāsī* (since 1971).

Currently appearing are five dailies in Arabic, and three in English: *al-Ittiḥād; al-Khalīdj; al-Bayān; al-Fadjr; al-Waḥda; Gulf News; Khalidj Times*; and *Emirate Times*.

Circulation varies between 45,000 and 50,000 for each daily. A press code was published in 1971.

(xi) *Ḳaṭar*

In 1969, the Ministry of Information launched the monthly *al-Dawḥa*. The same year, the Dār al-ʿUrūba of ʿAbd Allāh Ḥusayn Niʿma created a weekly, *al-ʿUrūba*, also announcing the intention to launch a daily entitled *al-ʿArab*. In 1976 the review *Akhbār al-Khalīdj* appeared. Currently, four dailies appear regularly: *al-Rāya, al-ʿArab, al-Shark* and *Daily Gulf Times*, as well as five weeklies: *al-Dawrī* (sports), *al-ʿUrūba, al-ʿAhd, al-Fadjr* and *Weekly Gulf Times*, in addition to the official journal of Ḳaṭar, a monthly.

(xii) *Baḥrayn*

In 1939, ʿAbd Allāh Zāyid created the first newspaper for Baḥrayn, *al-Baḥrayn; Ṣawt al-Baḥrayn* came into existence ten years later. From 1957 the government's official journal appeared on a weekly basis, and from 1970 *Ḥumr al-Baḥrayn*, edited by the Ministry of Information. In 1976 a major daily, *Akhbār al-Khalīdj*, appeared, with an English version following in 1978, and 1989 saw the creation of a new daily, *al-Ayyām*, the editor-in-chief being Nabīl al-Ḥumr, formerly Director-General of the National Information Agency.

Sport and cultural weeklies, in Arabic as well as in English, enjoy wide circulation.

(xiii) *Sultanate of ʿUmān*

Before the accession of Sultan Ḳābūs on 25 July 1970, the majority of ʿUmānī periodicals were printed outside the sultanate. The first official journal, *Akhbār ʿUmān*, came into being in 1970, changing its title to *Djarīda Rasmiyya* in 1971. The first weekly, *al-Waṭan* (a tabloid), appeared at Masḳaṭ on 28 January 1971. It became a daily in 1974. The first government-controlled daily, published initially as weekly from 1972, as a bi-weekly from 1975, appeared in 1980. In 1975 and 1981 appeared respectively the *Observer* and the *Times of Oman*. As is the case in all the Gulf States, the periodical press emanating from both public and private sectors has flourished.

Currently, there are two dailies in Arabic, *al-Waṭan* and *ʿUmān*, and one in English, *Oman Daily Observer*, alongside a very active weekly and monthly press. The weeklies are *al-Nahḍa* (since 1973), *al-Adwāʾ* (since 1974), *al-Usra* (since 1974); and the monthlies *Djund ʿUmān* (1974), *al-ʿUmāniyya* (women's magazine, 1980), *al-Tidjārī* (1980), *al-Shurṭa* (1976), *al-Ghurfa* (Chamber of Commerce, 1980) and *Risālat al-Masdjid* (1980).

(xiv) *Yemen*

On 29 May 1990 the Republic of Yemen was declared, following the fusion of the two formerly separate states.

In 1877, during the period of Ottoman occupation, the first Yemeni weekly appeared, *Ṣanʿāʾ*, in Arabic and in Turkish. In 1926, with the independence of Yemen, a monthly appeared, *al-Īmām*. The revolution of 26 September 1962 swept away the rule of the Imāms. Three days later a new daily appeared, *al-Thawra*, published in 1963 at Taʿizz and then at Sanʿāʾ, followed by a second in 1968, *al-Djumhuriyya*. These two dailies continued to appear in North Yemen until unification.

In South Yemen, the Democratic and Popular Republic of Yemen (P.D.R.S.Y.) came into existence in 1968, with a single daily; *14 Uktūbir*, alongside numerous weeklies and monthlies. Before reunification in 1990, the P.D.R.S.Y. was considerably more liberal, in terms of press legislation, than the Yemenite Arab Republic (i.e. of the North). In anticipation of fusion, it had tolerated the presence of the foreign press since 1959.

(xv) *Somalia*

The Republic of Democratic Somalia came into being in 1960 after a long struggle against the British, the Italians and the French. Djibouti gained its independence in 1977; its press is Francophone.

The Somali government inaugurated two dailies, one in Arabic, *Ṣawt al-Sūmāl*, and the other in English, *Somalia News*. The opposition parties published weeklies and monthlies.

After the revolution (1969-89), the revolutionary government launched three dailies. *Nadjmat Uktūbir* (in Arabic), *Stella di Octobre* (in Italian) and *October Star* (in English). From 1973 onward there appeared an edition in the Somali language of the daily *Nadjmat Uktūbir* with the Somali name *Xiddigta Oktober*.

Bibliography: *al-Mawsūʿa al-ṣaḥāfiyya al-ʿarabiyya*, i (Syria, Lebanon, Palestine, Jordan), Alecso, i, Tunis 1990, *passim*; *ibid*., ii (Egypt, Sudan, Somalia), Tunis 1991, *passim*; Khalīl Sabat, *op. cit*., *passim; Dalīl al-ṣaḥāfa al-ʿarabiyya, op. cit*., *passim*; Muḥammad al-Fīlī, *La liberté de la presse au Koweit*, unpubl. thesis, Caen 1981, *passim*. See also DJARĪDA, i. A.

2. North Africa

(i) *Algeria*

At the time of the revolution (1954-61), *al-Mudjāhid*, a clandestine weekly in the French language, printed in Tunis, was in circulation. In 1962, the new régime brought to power by the revolution created two dailies, Arabic and French editions of the same title (*al-Shaʿb*). In 1963, a new daily newspaper in Arabic, *al-Djumhūriyya*, appeared in Oran, and the same year in Constantine *al-Naṣr*, a French language daily. The first evening daily newspaper, *Alger-Soir*, came into existence in Algiers in 1967. The same year, the three veteran daily newspapers of the colonial period were nationalised, these being *La Dépêche d'Algérie, L'Echo d'Oran* and *La Dépêche de Constantine*. *Al-Mudjāhid* resumed publication in 1965, as a French language daily.

The riots of 1988 constituted a turning-point in Algerian political life. A new press code was promulgated in 1990; it abolished censorship and introduced the private ownership of newspapers. The Ministry of Information was abolished, and the Higher Council of Information created, this consisting of twelve members: three appointed by the President of the Republic, three by the President of the National Assembly, and six elected from among professional journalists.

It is interesting to note that, despite tireless efforts aimed at literacy and arabisation, the circulation of newspapers in the Arabic language remains very meagre: 80,000 for each of the two Arabic dailies, compared with 350,000 for each of the French language dailies.

(ii) *Morocco*

After gaining its independence in 1956, Morocco, under the leadership of Muḥammad V and of his son Ḥasan II, instituted a multi-party system, promulgated a law covering civil liberties in 1958, established a centre for the training and exchange of journalists in collaboration with the German-based Friedrich Naumann Foundation, and in 1959 created the press agency Maghreb Arab Press (M.A.P.). In 1963, the Union of Moroccan Journalists came into being. In 1987, Ḥasan II instituted an annual subsidy to the press of the order of 20 million dirhams (10 million to cover the costs of paper and of telephones, 10 million

to compensate for the cost of subscriptions to the M.A.P.); free transport on Moroccan railways, 50% discount on airline tickets and on accomodation in the kingdom's hotels.

Five periods may be distinguished in the evolution of the Moroccan press:

(a) *From independence (1956) to the proclamation of the state of emergency (1965).*

First to be noted is the maintenance on a temporary basis of titles inherited from the colonial press. Censorship and the payment of caution-money were suppressed. Newspapers such as *al-ʿAlam*, of the Istiḳlāl, *al-Raʾy al-ʿĀmm*, of the Ḥizb al-S̲h̲ūrā, and *Ḥayāt al-S̲h̲aʿb*, of the Moroccan Communist Party, resumed publication. The government launched a new daily newspaper, *al-ʿAhd al-Ḏj̲adīd* (1957-60). The Istiḳlāl Party inaugurated a French language daily, *L'Opinion*, in 1965.

(b) *From 1965 to 1970.*

Following incidents in Casablanca in 1965, a state of emergency was decreed, but did not affect the freedom of the press; the parties continued to publish their newspapers. Furthermore, two new parties came into being in 1967: the party of Dr. ʿAbd al-Karīm al-K̲h̲aṭīb, *Ḥizb al-Ḥaraka al-S̲h̲aʿbiyya al-Dīmūḳrāṭiyya*, and the party of ʿAlī Yāṭa, *Ḥizb al-Taḥrīr wa 'l-Is̲h̲tirākiyya*. Thirteen or more titles appeared during this period, besides those already in place. Only four were subjected to enforced suspension: *Maroc Information, Libération, al-Ahdāf* and *al-Kifāḥ al-Waṭanī*.

(c) *From 1970 to the "Green March" (1975).*

This period saw the creation of three new parties: *al-Ḥizb al-Ḥurr al-Taḳaddumī, Ḥizb al-ʿAmal* and *Ḥizb al-Ittiḥād al-Is̲h̲tirākī li 'l-Ḳuwā al-S̲h̲aʿbiyya* and two major independent dailies, *Le Matin* and *Maroc Soir*, both in French.

(d) *From 1975 to 1983.*

Five new parties emerged, each with its own newspaper.

(e) *From 1983 to 1992.*

This period saw the creation of the Consultative Council for Human Rights (April 1990), press clubs after 1988 and the granting of the royal subsidy to the press. The same year, fifty new titles appeared to enrich the already burgeoning repertoire of the Moroccan press.

(iii) *Mauritania*

Mauritania obtained its independence in 1960. Four parties united to form the single ruling party headed by Muk̲h̲tar Wuld Daddāh and known as *Ḥizb al-S̲h̲aʿb al-Mūrītānī*.

Initially a weekly, *al-S̲h̲aʿb* became Mauritania's first daily newspaper in 1975. It was edited by the Ministry of Information and published in two versions, Arabic and French. The French edition, *Le Peuple*, changed its title to *Horizons* in 1991.

This change of title corresponds to the change experienced by the press in Mauritania since 1991, the date of the promulgation of the first constitution and the inauguration of the multi-party era. Besides this daily newspaper, there exist an independent press and an underground press, with very limited resources.

(iv) *Libya*

On the independence of Libya in 1951, the Sanūsī kingdom was divided into three departments, each having its own daily newspaper: in Tripoli, *Ṣaḥīfat Tarābulus al-G̲h̲arb*; in Beng̲h̲āzī, *Ṣaḥīfat Barḳa al-Ḏj̲adīda*; and in Sebha, *Ṣaḥīfat Fezzān*. A year before the abolition of the monarchy, the Ministry of Information changed the titles of the three dailies. Independent dailies also existed, in Tripoli, *al-Rāʾid* and *al-Ḥurriyya*, and in Beng̲h̲āzī, *al-Ḥaḳīḳa*, in addition to two foreign language dailies, the *Giornale di Tripoli* and the *Libyan Times*.

With the accession to power of Colonel Ḳad̲h̲d̲h̲āfī in September 1969, a new daily came into being, *al-T̲h̲awra* (1969).

Two periods may henceforth be distinguished in the evolution of the Libyan press.

(a) *Between 1969 and 1977*, promulgation of the law of the press (1972), and creation of the General Foundation of the Press, which published from 1 September 1972 a second daily in Tripoli, *al-Fad̲j̲r al-d̲j̲adīd*, a third, *al-Ḏj̲ihād* in Beng̲h̲āzī, and in Tripoli in 1977, an evening daily paper, *al-Raʾy*.

(b) *After 1977.* On 2 March 1977, Ḳad̲h̲d̲h̲āfī proclaimed the institution of popular congresses and committees, and the implementation of the theories of the *Green book* (*al-Kitāb al-ak̲h̲ḍar*). According to the "Brother-Colonel, Supreme Guide of the Revolution", the press is at the service of society and cannot be subject to private ownership. Daily newspapers ceased to appear, and since 1977 a specialist press has been created, covering particular sectors. Among these are *al-Ẓaḥf al-ak̲h̲ḍar*, a weekly since 1980, edited by the office of revolutionary committees; *al-Ḏj̲amāhīriyya*, bi-annual, edited by the same Bureau; and *al-Fuṣūl al-arbaʿa*, edited by the League of Libyan Writers.

(v) *Tunisia*

With Tunisia's accession to independence in 1956, the Neo-Destour Party led by Ḥabīb Būrgība seized power and proclaimed the Republic in July 1957. From 1956 to 1964, titles from the colonial period co-existed with those of the new era. Alongside the independent daily newspaper *al-Ṣabāḥ*, founded in 1952, there appeared from 1956 onward *al-Amal*, an Arabic language daily, and *L'Action*, a French language daily; *Presse de Tunisie, Dépêche tunisienne* and *Petit matin* continued to appear until 1968. *La Presse de Tunisie*, nationalised, resumed publication and continues to appear today, as a governmental daily managed by the Ministry of Information.

In 1961, at the time of the war over evacuation of the military base of Bizerta, and especially from 1964 onward, the single ruling party, which had become the Parti Socialiste Destourien (P.S.D.), imposed severe curbs on the press, both the independent and oppositional sectors. The newspapers of the Tunisian Communist Party, *al-Ṭalīʿa* and *Tribune du progrès* disappeared, as did *al-Irāda*, mouthpiece of the Old Destour.

Bas̲h̲īr Ben Yaḥmed, first Secretary of State for Information in the first post-independence government, opted for exile and founded the weekly *Jeune Afrique* in Paris. The student movement, suppressed in 1967, founded a review which was produced in Paris and widely distributed, surreptitiously, in Tunisia, *Perspectives Tunisiennes*.

With the failure of the collectivisation of agricultural land and the collapse of the co-operative movement, Būrgība decided on a change of course and opted for a degree of openness. Supporting the government were two weeklies, *Dialogue* (1974) and *Bilādī* (1974). In 1974, the independent newspaper *al-Ṣabāḥ* launched a new French language daily, *Le Temps*. In 1975 a new press code was promulgated, amending that of 1956. The League for Human Rights was created in 1977, and three weeklies came into existence: *al-Raʾy* (in Arabic), *Démocratie* (in French) and *al-S̲h̲aʿb*, organ of the General Union of Tunisian Workers. The former two belonged to the Movement of Democratic Socialists (M.D.S.) and the third to the

U.G.T.T. of Ḥabīb ʿĀs̲h̲ūr, which had never collaborated with the régime.

Two crises occurred in rapid succession, in January 1978 with the conflict between the ruling party and the U.G.T.T., and in January 1980 with the invasion of Gaisa, a city of southern Tunisia.

In 1980, Būrgība appointed a new Prime Minister, thereby inaugurating a change of policy. Multi-partyism was to be tolerated, as well as relative freedom of the press. Three opposition parties were recognised, and the Islamist Party barely tolerated. At the same time, the media landscape changed, and new weekly titles came into existence: *al-Mustaḳbal-L'Avenir*, of the Movement of Democratic Socialists (M.D.S.), *al-Waḥda*, of the Popular Unity Movement (M.U.P.), *al-Ṭarīḳ al-d̲j̲adīd*, of the Tunisian Communist Party (P.C.T.) and *al-Maʿrifa*, of the Islamic Tendency Movement (M.T.I.).

Independent journalists have also launched weekly titles: *Mag̲h̲reb Arabe*, bilingual, of ʿUmar S̲h̲abū, and *Réalités*, also bilingual, of Munṣif Ben Mrād. Another independent, Ṣalāḥ al- Dīn ʿAmrī, produced *al-Anwār* (1981) and *al-S̲h̲urūḳ* (1984). *Al-Ṣabāḥ*, an independent newspaper, has launched three new weeklies: *al-Ṣadā* (in Arabic), *al-Ṣabāḥ al-Usbūʿī* (in Arabic) and *Le Temps-Hebdo* (in French).

The "bread revolution", following the decision to increase the price of bread, put an end to this liberal euphoria. The régime returned to its repressive ways, and in 1987, it was on the point of extinguishing the Islamist movement when the constitutional change of 7 November 1987, inaugurated by Prime Minister Zayn al-ʿAbīdīn Ben ʿAlī, came into effect. The latter, according to the terms of the constitution and in view of Būrgība's inability for health reasons to continue in office, became President of the Republic. On 2 August 1988 he instituted a new press code, requiring economic transparency of press institutions, and reckoned fairly liberal by the profession.

Since then, the Tunisian press has regained a limited degree of its former prosperity.

Bibliography: *al-Mawsūʿa*, *op. cit.*, iv (Tunisia, Algeria, D̲j̲amāhīriyya, Morocco, Mauritania), Tunis 1995, *passim*; K̲h̲alīl Sābāt, *op. cit.*, *passim*; *Dalīl al-ṣaḥāfa*, *op. cit.* See also D̲J̲ARĪDA. i. B.

3. The Arab Diaspora

Three factors account for the emigration of the Arab press to foreign capitals (London, Paris and Nicosia): the Lebanese civil war, the expulsion of the Palestinians from Lebanon in 1982, and the suppression of freedom in the majority of Arab states. The financial resources of this press remain difficult to elucidate; it may be wondered to what extent it is dependent upon various régimes and their financial support. On the other hand, despite the popularity of this press, it does seem to ignore its primary, most directly accessible public, i.e. the Arabo-Muslim communities of Europe (France and Britain in particular).

(i) *Paris*

Jeune Afrique, weekly, founded by the Tunisian Bas̲h̲īr Ben Yaḥmed, is considered the doyen of the expatriate Arab press in France, having first appeared in 1962.

Al-Mustaḳbal, weekly, edited by Nabīl K̲h̲ūrī, appeared in 1977 and ceased publication in 1989 (pro-Gulf States).

Al-Waṭan al-ʿArabī, founded by Walid Abū Zahr in 1977, ceased publication after the Gulf War; it was pro-ʿIrāḳī.

Al-Nahār al-ʿArabī al-Duwalī, founded in 1977 by G̲h̲assān Ṭuwaynī.

Kull al-ʿArab, weekly, managed by Yāsir Harāwī (pro-ʿIrāḳī), ceased publication in 1991.

Al-Ṭalīʿa al-ʿArabiyya (pro-ʿIrāḳī), managed by Nāṣīf ʿAwwād.

Al-Yawm al-Sābiʿ, founded in 1984 by Bilāl al-Ḥasan, mouthpiece of the P.L.O.

Only one newspaper, the monthly *Arabies*, in French, seems to have risen to the challenge: founded in 1985 by Yāsir Harāwī, it has succeeded in serving both publics, that of the Arab community in France, and that of the Arab world.

(ii) *London*

(a) Dailies.

A major daily newspaper was launched in 1978, based in London, this being the pro-Saudi *al-S̲h̲arḳ al-Awsaṭ*. Also appearing in London since 1989 is the daily *al-Ḥayāt*, editor-in-chief D̲j̲ihād al-K̲h̲azīn, very close to the Arab states of the Gulf.

In 1989, *al-Ḳuds*, Palestinian.

In 1990, *Ṣawt al-Kuwayt al-Duwalī*, daily of the Kuwaiti resistance. After the liberation of Kuwait, it returned there, and ceased publication in November 1992.

In 1995, the Kuwaiti daily *al-Waṭan* launched a London-based international edition, *al-Waṭan al-Duwalī*.

(b) Weeklies.

Al-Dustūr (1977); *al-Ḥawādit̲h̲* (founded by Salīm al-Lūzī in 1978, purchased in 1980 by Milhim Karam); *al-Taḳaddum*, founded by Fu'ād Maḥār; and *al-Ṣayyād* (since 1984).

(iii) *Nicosia*

Given its proximity, the island of Cyprus has become a haven for press agencies and journalists having difficulty operating in Beirut: *al-D̲j̲īl* (1980); *Ufuḳ* (1981); *S̲h̲u'ūn Filasṭīniyya* (1983); *al-Karmal*, mouthpiece of the Union of Palestinian Writers, since 1987; and *al-Bilād* (1984).

Bibliography: *Mawsūʿa* ..., *op. cit.*, iii (*al-Ṣaḥāfa al-ʿarabiyya fī buldān al-Mahd̲j̲ar*), Tunis 1991, *passim*; Elias Hanna Elias, *La presse arabe*, *Orient*, Paris 1993, *passim*. See also D̲J̲ARĪDA. i. C.

(MONCEF CHENOUFI)

4. Persia [see Suppl.].

5. Turkey [see Suppl.].

SIḤĀḲ, like *musāḥaḳa*, verbal noun of stem III of a verb meaning "to rub" (compare the Greek τρίβειν, Eng. "tribadism"), commonly used to indicate lesbianism. Other derivatives of this root indicating the same are the stem I verbal nouns *saḥḳ* and *siḥāḳa*. Occasionally, stem VI *tasāḥaḳa* is found. Women engaging in lesbian love-making are referred to as *sāḥiḳāt*, *saḥḥāḳāt* or *musāḥiḳāt*. The *Lisān al-ʿarab* calls the term *musāḥaḳat al-nisā'* a *lafẓ muwallad*, an expression of post-classical origin. The earliest recorded, probably legendary, instance of lesbian love among the Arabs is a report of the *awā'il* genre [*q.v.*], cf. Abu 'l-Farad̲j̲ al-Iṣfahānī, *Ag̲h̲ānī*[3], ii, 132, in which it is alleged that, forty years before the emergence of male homosexuality (= *liwāṭ* [*q.v.*]), the first woman who loved another woman was Hind, the daughter of the last Lak̲h̲mid king of Ḥīra, al-Nuʿmān b. al-Mund̲h̲ir [*q.v.*], who fell in love with Zarḳā' bt. al-Ḥasan from Yamāma. The story is told in some detail in ch. 9 of *Rus̲h̲d al-labīb ilā muʿās̲h̲arat al-ḥabīb* by Aḥmad b. Muḥammad b. ʿAlī Ibn Falīta (d. 764/1363), ed. Mohamed Zouher Djabri, diss. Erlangen-Nürnberg 1968, 1-2 (see also *Bibl.*).

On the whole, *siḥāḳ* is frowned upon in Islam. There are no unambiguous references to it in the Ḳur'ān, but there is one remark traced to Mud̲j̲āhid b. D̲j̲abr (d. 100-4/718-22 [*q.v.*]) who, according to the Muʿtazilī exegete Abū Muslim Muḥammad b. Baḥr al-Iṣfahānī (d. 322/934, cf. *GAS*, i, 42-3), is

reported to have identified the word *fāḥis̲h̲a*, "abomination", from Ḳur'ān, IV, 15, with *musāḥaḳa* and not with *zinā* "fornication", "adultery", as all the other exegetes did, cf. his *Multaḳaṭ d̲j̲āmiʿ al-ta'wīl li-muḥkam al-tanzīl*, ed. Saʿīd al-Anṣārī, Calcutta 1340, 44, and also Abū Ḥayyān, *al-Baḥr al-muḥīṭ*, Cairo 1328, iii, 194-5. The punishment for *saḥḳ* laid down in this verse is house arrest until death. In al-Ṭabarī's *Tafsīr*, Mud̲j̲āhid's interpretation cannot be traced, but in those of al-Zamak̲h̲s̲h̲arī and al-Bayḍāwī there is a vague reference (without indication of the source) that *saḥḥāḳāt* may have been meant in IV, 15, and fornicators in v. 16 (cf. also M.R. Riḍā, *Tafsīr al-manār*, Cairo 1346-54, iv, 435-40). While describing the powers or faculties that determine a person's body, the exegete Fak̲h̲r al-Dīn al-Rāzī, *Mafātīḥ al-g̲h̲ayb*, cf. ed. Cairo 1278/1862, ii, 383, ll. 23-5, also mentions the power of sensuality (*ḳuwwa s̲h̲ahwāniyya*) and the corrupting influences that emanate from it: *zinā*, *liwāṭ* and *saḥḳ*.

The S̲h̲īʿa trace *siḥāḳ* indirectly to the Ḳur'ān too. While dealing with it in his *Man lā yaḥḍuruhu al-faḳīh*, 5th impr., Tehran 1390, iv, 31, the Shīʿī jurist Ibn Bābawayhi (d. 381/991 [*q.v.*]) records a statement ascribed to the *imām* D̲j̲aʿfar al-Ṣādiḳ [*q.v.*] that the *aṣḥāb al-rass* [*q.v.*] were responsible for the spread of this perversion. These were a community of pre-Islamic unbelievers, cf. Ḳur'ān, XXV, 38 and L, 12. Their story and the spread of lesbianism among them on the instigation of a daughter of Iblīs, al-Dalhān, is recorded in al-T̲h̲aʿlabī, *Ḳiṣaṣ al-anbiyā'*, ed. Cairo 1297, 144, 1 ff. Cf. also al-Kulaynī, *al-Kāfī*, ed. ʿAlī Akbar al-G̲h̲ifārī, Tehran 1954-61, v, 551-2, where we find a euphemism for *siḥāḳ*: *hunna allawātī bi-* (or *maʿa*) *allawātī*, who will be tormented in Hell in a spectacular manner. Another daughter of Iblīs, Lāḳīs, is mentioned here as having had a hand in its spread.

As for *ḥadīt̲h̲* literature, there are a few pre-canonical traditions, probably hailing from the time of the great 1st/7th-century *fuḳahā'*, which explicitly forbid lesbian love, the active as well as the passive party, and which prescribe a punishment as that for fornication, cf. Ibn Abī S̲h̲ayba, *Muṣannaf*, Ḥaydarābād 1966-83, x, 146, ʿAbd al-Razzāḳ, *Muṣannaf*, Beirut 1983, ed. Ḥabīb al-Raḥmān al-Aʿẓamī, vii, 334-5. The term *saḥḳ* emerges here occasionally indicating masturbation, cf. ʿAbd al-Razzāḳ, vii, 391-2 (read *al-saḥḳ* for *al-s.ḳ*), as indeed do some forms of stem III in several *adab* works. The best-known pre-canonical tradition is *siḥāḳ al-nisā' zinan baynahunna* with slight variants; it may conceivably be ascribed to the *mawlā* Makḥūl, a well-known Syrian *faḳīh* who died sometime between 112 and 118/730-6. The punishment for *liwaṭ* being the same as for *zinā* appeared eventually not to be a suitable one, for Abū Ḥanīfa, Sufyān al-T̲h̲awrī, Mālik b. Anas and Ibn Ḥanbal, as recorded in al-Rāzī, iv, 619, rejected this punishment in favour of judicial discretion (= *taʿzīr* [*q.v.*]); thus we find, beside *liwāṭ*, also *siḥāḳ*, *ityān al-mayta* (= necrophilia) and *istimnā'* (= masturbation) punishable by *taʿzīr*. The arguments adduced for reducing the punishment from flogging/stoning to judicial discretion was women's fear of pregnancy in the case of *siḥāḳ* = tribadism and their fear of the temptation to fornicate in the case of *siḥāḳ* = masturbation. See Ibn Ḥazm al-Andalusī, *al-Muḥallā*, ed. Muḥammad Munīr al-Dimas̲h̲ḳī, Cairo 1352, xi, 390 ff.; Ibrāhīm b. ʿAlī al-S̲h̲īrāzī, *al-Tanbīh fi 'l-fiḳh ʿalā 'l-mad̲h̲hab al-imām al-S̲h̲āfiʿī*, ed. A.W.T. Juynboll, Leiden 1879, 301, 17-18, and, furthermore, J.P.M. Mensing, *De bepaalde straffen in het Ḥanbalietische recht*, Leiden 1936, 21.

There are two canonical *ḥadīt̲h̲*s in which contact among women when they are naked or scantily dressed (= *muʿākama*) is discouraged. The one amounts to saying that a woman is not to touch another woman or describe the body of the other to her husband, for which the Kūfan *mawlā* al-Aʿmash (d. 147/764 [*q.v.*]) may be held responsible, cf. al-Mizzī, *Tuḥfat al-as̲h̲rāf*, ed. ʿAbd al-Ṣamad S̲h̲araf al-Dīn, Bombay 1965-82, vii, no. 9252, and the other forbids women to look at each other when naked or to enter in the presence of one another when dressed only in a shift; the *isnād* strands of this tradition seem to centre in al-Ḍaḥḥāk b. ʿUt̲h̲mān (d. 153/770), cf. idem, iii, no. 4115. For the texts of these traditions, see al-Tirmid̲h̲ī, *al-D̲j̲āmiʿ al-ṣaḥīḥ*, ed. A.M. S̲h̲ākir *et alii*, Cairo 1937-65, v, 109, al-Nasā'ī, *al-Sunan al-kubrā*, ed. ʿA.S. al-Bundārī and S.K. Ḥasan, Beirut 1991, v, 390, and for a commentary, see Ibn Ḥad̲j̲ar al-ʿAsḳalānī, *Fatḥ al-bārī*, Cairo 1959, xi, 252-3. The term *muʿākama* has the variant *mukāʿama*, cf. Ibn Abī S̲h̲ayba, *Muṣannaf*, iv, 398, which is also interpreted as the pressing of one's lips on the lips of a person of the same sex, a meaning which makes good sense in the present context. Both traditions are reflected in a passage from a text by a North African jurist published in M.J. Viguera Molins, *La censura de costumbres en el* Tanbīh al-ḥukkām *de Ibn al-Munāṣif* (1168-1223), in *Actas de las II Jornadas de Cultura Arabe e Islámica*, Madrid 1985, 591-611, which says on 602, 6 ff., that women should be discouraged from showing one another their finery and their naked bodies during gatherings in places of rejoicing as well as bath houses.

One other canonical tradition does not allude to lesbianism as such, but commentators think it does. The Prophet is supposed to have cursed certain women, the so-called *mutarad̲j̲d̲j̲ilāt*, who tried to resemble men in clothing habits and ornaments. Ibn Ḥad̲j̲ar, *Fatḥ*, xii, 452, elaborates on this. He mentions those persons who have an innate tendency towards opposite gender behaviour and quotes the otherwise unidentifiable Ibn al-Tīn, who is said to have specified to what women the Prophet's curse was ultimately especially applicable: those who go so far as to practice lesbian love. The Baṣran traditionist S̲h̲uʿba b. al-Ḥad̲j̲d̲j̲ād̲j̲ (d. 160/777 [*q.v.*]) is probably the originator of the wording, if not also of the gist, of this tradition, cf. al-Mizzī, *Tuḥfat al-as̲h̲rāf*, v, no. 6188.

In Shīʿī tradition there is the story of a woman who, just after her husband has left the marital bed, rubs her husband's sperm into her slave girl by means of a lesbian love act, which results in the slave girl becoming pregnant, cf. al-Kulaynī, *al-Kāfī*, vii, 203. In *ibid.*, v, 552, the *mutarad̲j̲d̲j̲ilāt* are thought to tend to lesbianism, too.

In Arabic literature, *siḥāḳ* is mentioned not infrequently, but much less often than *liwāṭ*, and mostly in a denigrating context, only occasionally in glowing terms, the term indicating at times masturbation rather than lesbian love. For a case of two slave girls caught in the act of lovemaking at the ʿAbbāsid court and quickly put to death, see al-Ṭabarī, iii, 590. In several *adab* works, some of which are of a decidedly scientific nature, more or less elaborate chapters are devoted to it, sometimes interlarded with verse. Perhaps the longest and most extensive treatment of *siḥāḳ* with a graphic description of its techniques is found in ch. XI of Aḥmad al-Tīfās̲h̲ī (d. 651/1253), *Les délices des cœurs ou ce que l'on ne trouve en aucun livre*, tr. by René R. Khawam, Paris (Phébus) 1981. There are, furthermore, special sections devoted to it in al-D̲j̲āḥiẓ (d. 255/869 [*q.v.*]), *Ḥayawān*, ed. ʿA.M. Hārūn, Cairo

1323-5, vii, 29, 7; Aḥmad b. Muḥammad al-Djurdjānī (d. 482/1089), *al-Muntakhab min kināyāt al-udabā' wa-ishārāt al-bulaghā'*, ed. M.Sh. Shamsī, Ḥaydarābād 1983, 107 ff., 142; al-Rāghib al-Iṣbahānī (d. 502/1108), *Muḥāḍarāt al-udabā'*, Cairo 1287, ii, 163-4; ʿAlī b. ʿAbd Allāh al-Ghuzūlī (d. 815/1412), *Maṭāliʿ al-budūr fī manāzil al-surūr*, Cairo 1299-1300, i, 272-5, containing an ode to the practice. A medical work, al-Samaw'al b. Yaḥyā b. ʿAbbās (d. 576/1180), *Nuzhat al-aṣḥāb fī muʿāsharat al-aḥbāb*, ed. Taher Haddad, diss. Erlangen-Nürnberg 1976, 13-17, attempts to give an explanation for the emergence of lesbianism. In a modern novel by Ḥanān al-Shaykh (b. 1945), *Women of sand and myrrh*, tr. Catherine Cobham, London-New York 1989, ch. I deals with a lesbian relationship in present-day Saudi Arabia.

Bibliography: Ṣalāḥ al-Dīn al-Munadjdjid, *al-Ḥayāt al-djinsiyya ʿinda 'l-ʿArab min al-Djāhiliyya ilā awākhir al-karn al-rābiʿ al-hidjrī*, ²Beirut 1975, 20, 60, 89 ff., 92, enumerating various techniques. Ibn al-Nadīm, *Fihrist*, ed. Riḍā Tadjaddud, n.p., n.d., 169, 376, lists two books entitled *K. al-Saḥḥākāt* and one book (116) by al-Madā'inī [*q.v.*] entitled *K. man tashabbaha bi 'l-ridjāl min al-nisā'*, all three of which do not seem to be extant. In the following sources *siḥāk* or *saḥk*, etc., is on the whole only briefly referred to: *Aghānī*³, xvii, 79-80, xxi, 72; Abū Ḥayyān al-Tawḥīdī, *K. al-Baṣā'ir wa 'l-dhakhā'ir*, ed. Ibr. al-Kaylānī, Damascus 1964, i, 380 (4-6), ii, 245 (5-7), iv, 156 (penult); Manṣūr b. al-Ḥusayn al-Ābī, *Nathr al-durr*, ed. M.ʿA. Ḳurna, Cairo 1985, iv, 257, 260; Ibn Rashīḳ al-Ḳayrawānī, *K. Unmūdhadj al-zamān*, ed. M. al-ʿArūsī and Bashīr al-Bakkūs, Tunis-Algiers 1986, 98; Ibn al-Nafīs, *al-Risāla al-kāmiliyya fi 'l-sīra al-nabawiyya*, ed. Schacht-Meyerhof, Oxford 1968, 34, 52; ʿAbd al-Ghanī al-Nābulusī, *Taʿṭīr al-anām fī taʿbīr al-manām*, Beirut 1991, 582; Ṣafadī, *al-Ghayth al-musadjdjam fī sharḥ Lāmiyyat al-ʿadjam*, Beirut 1975, ii, 405; Tīfāshī, *K. Rudjūʿ al-shaykh ilā ṣibāh fī ḳuwwa ʿalā 'l-bāh*, n.p., n.d., 57; Ibn Falīta, *Rushd al-labīb, al-bāb al-rābiʿ*, ed. Adnan Husni-Pascha, diss. Erlangen-Nürnberg 1975, 13; Ibn Waḍḍāḥ, *K. al-Bidaʿ*, Madrid CSIC 1988, ed. M. Fierro, 116 (introd.), 213 (text), 340 (tr.): *siḥāk* mentioned as an anomaly unique of the community which the author described in his book. In the *Thousand and one nights*, allusions to lesbianism are relatively rare and are either wholly non-committal (ed. MacNaghten, Calcutta 1839-42, i, 885, night 211, and ii, 256-7, night 329) or denigrating (i, 501, night 93, and iv, 133, night 824). Additional references to one or a few verses are the following: *Tādj al-ʿarūs*, iv, 233, s.v. *k-s-s*; Abū Tammām, *Ḥamāsa*, ed. Freytag, 822, 2; Abū Nuwās, *Dīwān*, ed. Wagner, Wiesbaden 1958-, ii, 75 (1), 88-9 (2 ff.); Ṣafadī, *Wāfī*, Wiesbaden 1931-, xix, 190 (19); Diʿbil, *Dīwān*, ed. ʿAbd al-Ṣāḥib ʿImrān al-Dudjaylī, ²Beirut 1972, 94; Muḥammad b. (G.H.A. Juynboll)

SIḤR (a.), magic.

This term is applied (1) to that which entrances the eye and acts on the psyche of the individual, making him believe that what he sees is real when it is not so. This is called *al-ukhdha*, "charm, incantation" [see RUḲYA], "artifice, stratagem" [see NĪRANDJ, SĪMIYĀ]; in short, everything that is known as "white" or "natural magic".

It also refers (2) to things, the apprehension (*ma'khadh*) of which is fine and subtle; this applies, for example, to certain poetry and certain eloquence, that of the Ḳur'ān in particular. The Prophet was allegedly told, *inna min al-bayānⁱ la-siḥrᵃⁿ* "there is a form of eloquent expression which has the effect of magic". The false prophet al-Aswad, who sought to restore the tribes of the Madhḥidj [*q.v.*] to paganism, "made them see wondrous things and enchanted the hearts of those who heard him speak" (al-Ṭabarī, i, 1796).

Thus *siḥr* consists essentially in a falsification of the reality of things and of actions. As such it is reprehensible, being allied to falsehood (*ufk*), to trickery (*khidāʿ*) and to astrology (*ʿilm al-nudjūm*; see NUDJŪM [AḤKĀM AL-]).

Finally, (3) it is applied to any action effected through recourse to a demon [see SHAYṬĀN] and with his assistance [see ISTINZĀL]. This is what is known as "black magic".

This definition, drawn from the entry *siḥr* in *LA*, does not cover all the aspects embraced by the term in Islamic literature, as detailed by Ḥādjdjī Khalīfa (*Kashf*, i, 35). In fact, this last group, under the vocable *siḥr*, includes a number of concepts and techniques, totalling 14, which confer on this term a considerably broader sense.

In fact, for the aforementioned author, *siḥr* is included among the physical sciences and covers, thereby, divination [see KIHĀNA], natural magic [see NĪRANDJ], properties φυσικα [see KHAWĀṢṢ] of the Most Beautiful Names (*al-asmāʾ al-ḥusnā* [*q.v.*]), of numbers [see DJAFR, ḤURŪF] and of certain invocations [see ISTINZĀL], sympathetic magic [see RUḲYA], demoniacal conjuration, incantations (*ʿazāʾim*), the evocation of spirits of corporeal beings (*istiḥḍār*), the invocation of the spirits of planets (*daʿwat al-kawākib al-sayyāra*), phylacteries (amulets, talismans, philtres), the faculty of instantaneous disappearance from sight (*khafāʾ*), artifices and fraud (*al-ḥiyal al-sāsāniyya*), the art of disclosing frauds (*kashf al-dakk*), spells (*taʿalluḳ al-ḳalb*) and recourse to the properties of medicinal plants (*al-istiʿāna bi-khawāṣṣ al-adwiya*).

This classification of Ḥādjdjī Khalīfa is presented as a development of that given by Ibn Khaldūn (*Muḳaddima*, ed. and tr. De Slane, iii, 124 ff., tr. 171 ff., tr. Rosenthal, iii, 156 ff.). For the latter, "the souls of magicians possess the ability to exert influences in the universe and to tap into the spirituality (*rūḥāniyya*) of the planets, in order to use it in the exercise of their influence, by means of a psychic or satanic force" (126). These souls are classified in three categories:

(1) Those which act exclusively through the force of the will (*himma*), without instrument or aid. This is what the philosophers denote by the term *siḥr*.

(2) Those which act through the intermediary of the temperament (*mizādj*) of the celestial spheres and of the elements, or with the aid of the occult properties of numbers. It is this which is known as theurgy [see ṬILASM]. It is of inferior rank in relation to magic.

(3) Those which act on the imaginative faculties [of spectators], using them, in a certain sense, and introducing various kinds of phantoms, images and forms, in connection with that which they mean to realise. Subsequently, they cause these elements to descend to the level of the sensory perception of spectators, this by means of the specific force which characterises them and which puts them into a position of exerting influence on the senses of the latter. Spectators imagine that they see these forms outside themselves, whereas in reality there is nothing there. The philosophers call these practices prestidigitation or phantasmagoria (*shaʿbadha* or *shaʿwadha* [*q.v.*]).

Such a diversification in the definition of the concept is encountered, considerably earlier, in the *Fihrist* of Ibn al-Nadīm, who devotes to this question the second section or *fann* (308-13) of the eighth *maḳāla* of his work, a section intitled "Exorcists, jugglers, magicians, practitioners of white magic, conjurors and makers of talismans" (ed. Flügel, 304 ff.; Eng. tr. B. Dodge, New York 1970, ii, 725-33; section summarised by R. Lemay in *Sciences occultes et Islam*, in *BEO*, xliv [1992], 24-5).

Similarly, the Ikhwān al-Ṣafāʾ deal with magic (*siḥr*), incantations (*ʿazāʾim*), the evil eye (*ʿayn*) in their fifty-second and last *risāla*, where all the aspects of magic, as later classified by Ibn Khaldūn and Ḥādjdjī Khalīfa are already involved. They go even further in basing the existence of magic, in its multiple and diversified forms, on the writings of the philosophers (Plato, Ptolemy, Abū Maʿshar), on astrology, on the sacred books (Bible and Ḳurʾān), with particular reference to the stories of Nimrod, Moses and Aaron, Jacob, Esau, Saul and Goliath, Solomon, on texts from India and the customs of the Sabians (ed. Beirut, iv, 283 ff.).

As for the proofs to be applied to each of the topics addressed, "the writings of the ancients and of the philosophers are full of them; it is impossible to exhaust the subject in a single book or in a single *risāla*" (306). The definition given by these authors to *siḥr* illustrates this difficulty. "*Siḥr*", they write, "denotes, in Arabic, clear expression (*bayān*), elucidation (*kashf*) of the true meaning of things and the exploitation of this, rapidly and with precision. It also signifies the announcement of an event before it takes place, induction on the basis of astrological data, divination, *zadjr* and *faʾl* [*q.vv.*]. All of this is obtained by means of astrology ..." Also involved here are transmutations of substances (*ḳalb al-ʿayn*), miracles, prestidigitation, vile smells, etc. (312-13). On "Magic among the Ikhwān al-Safāʾ", see Pierre Lory, in *Sciences occultes et Islam*, 147-59.

Having shown the vast extent occupied by magic in the occult sciences, the Ikhwān al-Safāʾ give the following definition of it. "It is everything which entrances the intellect and everything which bewitches the soul, word or action, in the sense of amazement, attachment, inclination, submission, appreciation, obedience, acceptance" (314). The example which they give is quite illustrative of their manner of conceiving *siḥr*: "The people of the Djāhiliyya said of those who followed the Messenger of God and adhered to Islam: Such a person has been converted to the religion of Muḥammad; the magic (*siḥr*) of the latter has had this effect on him (*ibid.*; cf. al-Tirmidhī on sūra LIV; Ibn Ḥanbal, iv, 57, 82; Abū Dāwūd, *Adab*, 87). This is licit *siḥr*, whereas that exercised by enemies of the prophets and sages, with the aim of abusing the credulity of simple people, is illicit *siḥr*" (314/15).

On the basis of these classifications and these generalising definitions, it is possible to tabulate the numerous manifestations of *siḥr* under three headings: black magic, theurgy and white or natural magic. Theurgy will be addressed under ṬILASM, while white magic has been dealt with under NĪRANDJ, RUḲYA, SĪMIYĀ. This article will focus on black magic.

The essence of this magic, as stated by the author of *Lisān al-ʿArab*, quoted above, is the recourse to demoniacal forces and the solicitation of their aid in the performance of the magical act. These forces are actually represented by the gods of paganism. In fact, *siḥr* is the equivalent, in the Ḳurʾān, of *kufr*, infidelity (VI, 7; XI, 7; XXIV, 43; etc.). The message of Muḥammad is described as *siḥr* by his Meccan adversaries, as had previously happened to the message of Moses (VII, 132; V, 110; X, 67; XXVII, 13; XXVIII, 36; XX, 57; etc.). *Siḥr* itself is of demoniacal origin: Hārūt and Mārūt, two fallen angels, taught *siḥr* to men: "They instructed nobody in their art without saying to him, 'We are a temptation! Beware lest you become an infidel!' People learned from them the means of sowing discord between man and woman—but they could not injure anyone without God's permission. Thus men learned that which was harmful to them and not that which could be advantageous to them; they knew that any person who had acquired this art was disinherited from any share in the future life. Such people had sold their souls cheaply!" (II, 102).

ʿIlm al-siḥr is often seen as equivalent to *ʿilm al-nudjūm*. This results from the notion that the planets exert beneficial and baneful influences over the three domains of the created being. The author of *Ghāyat al-ḥākim*, Abū Maslama Muḥammad (*not* Abu ʾl-Ḳāsim Maslama b. Aḥmad) al-Madjrīṭī, who wrote between 443/1052 and 448/1056 (Sezgin, *GAS*, iv, 294-8), taking inspiration from the *Rasāʾil* of the Ikhwān al-Ṣafāʾ which Abu ʾl-Ḳāsim Maslama b. Aḥmad al-Madjrīṭī (d. *ca.* 398/1007) had made known in

Andalusia, and from the *Nabataean agriculture*, apparently the work of Abu 'l-Ḳāsim al-Zahrāwī (d. *ca.* 400/1009), author of a *Mukhtaṣar Kitāb al-Filāḥa* (ms. Paris, 5774, fols. 152-86; Algiers, 1550, 2, fols. 154-80), writes: "Magic essentially comprises two parts, one theoretical and the other practical. The first consists in knowledge of the positions of the immobile heavenly bodies (which is where, in fact, the forms are located), the modalities of their radiation on the planets and, finally, aspects of conjunctions of the celestial spheres at the precise moment that the successful outcome of a project is desired. Under this heading, the ancients placed everything having to do with discernment of the beneficial and of the baneful [see IKHTIYĀRĀT] and with theurgy [see ṬILASM]. As for practical magic, it consists in the knowledge of the three domains of the created being (*al-muwalladāt al-thalāth*) and of the qualities of the planets which would be disseminated there. This is what is expressed by the term *khawāṣṣ*" [*q.v.*].

Ibn Khaldūn, who knew well the *Ghāya* and the *Nabataean agriculture*, underlines the astral connections of magic and its claims to inflect "the celestial spheres, the planets, the worlds above and the demons, by various types of veneration, adoration, submission and self-abasement" (iii, 127, tr. de Slane, iii, 176, tr. Rosenthal, iii, 159). On the concept of *siḥr* in *Ghāyat al-ḥākim*, see Fahd, in vol. i of *Ciencias de la Naturaleza en Al-Andalus*, Granada 1990, 11-21, entitled *Sciences naturelles et magie dans Ghāyat al-ḥākim du Psuedo-Maǧrīṭī*.

Considering the hostility of the Ḳur'ān and of *Ḥadīth* with regard to *siḥr*, one can only be astonished at the development experienced by the Hellenistic conception of magic in the lands of Islam.

While *siḥr* (mentioned 23 times in the Ḳur'ān) is not explicitly denounced there, being seen rather as an enchantment exerted over spirits, as a falsehood, as possession by a djinni, it is clearly abjured in *Ḥadīth*, where it is mentioned more than 29 times (see *Concordance*). The following *ḥadīths* may serve as examples: "Kill every *sāḥir* ... and *sāḥira*" (Ibn Ḥanbal, i, 190, 191); "The punishment (*ḥadd*) of the *sāḥir* [is decapitation] by the sword" (al-Tirmidhī, *Ḥudūd*, 27); "Among the seven sins which merit death" (*al-mūbiḳāt*) are "the attribution of a partner to God (*shirk*) and *siḥr*" (Muslim, *Īmān*, 144; al-Bukhārī, *Waṣiyya*, 23, *Ṭibb*, 48, *Ḥudūd*, 44).

The attitude of the Ḳur'ān is explained by its angelology and its demonology: the angels, charged with guiding men towards God, make use of physical beings belonging to the three domains, capable of acting on the spirit of men. Such is the case with the staff of Moses which becomes a serpent before Pharaoh (Ḳur'ān, XX, 18-24); it is also the case with the demons in the service of King Solomon (II, 96). Having refused to bow down before Adam (XXV, 26-34) Iblīs was expelled from Paradise with those who had followed him. Then the angels divided into two groups, the loyal and the rebellious. The former guide men towards God; the latter, opponents of men, seek to estrange them from Him by means of seduction (*siḥr*). The procedures of this seduction constitute the bulk of magical practices (on this subject, see Fahd, in vol. viii of *Sources orientales*, entitled *Anges, démons et djinns en Islam*, Paris 1971, 155-214, Ital. tr. Rome 1994, 131-78).

It follows from this principle that magic represents the débris of a celestial knowledge, transmitted to mankind by fallen angels such as Hārūt and Mārūt in Babylon (Ḳur'ān, II, 96). The djinn, inferior spirits, acquire their knowledge by eavesdropping at the portals of Heaven, whence the custodians of these portals chase them away, pelting them with shooting stars (XXXVII, 6-10). The fallen angels married the daughters of men and begat children with them; they taught them "sorcery, enchantments and the properties of roots and of trees" (cf. *Book of Enoch*, VII, 1 ff., inspired by Gen. vi. 4). Others taught men "the art of resolving spells", "signs" (*āyāt*), "the art of observing the stars" and "the movements of the Moon" (Ḳur'ān, VIII, 3-8). Against men and their informants, "the Lord has decided in his justice that all the inhabitants of the earth shall perish [in the Flood], because they have in their hands the hostile power of the demons, the power of magic" (LXVI, 6) and furthermore: "They have discovered secrets which they had no right to know; this is why they shall be judged" (LXIV, 10). See Fahd, in *Sciences occultes et Islam*, 37-8, whence this summary is taken.

It is on this angelological and demonological conception that the approach to *siḥr* in Islam is based. On the one hand, there are the miracles (*āyāt*) performed by the prophets and associated by the unbelievers and the feeble-minded with magic (the staff of Moses, mentioned above, the four birds cut into pieces and placed on the mountains by Abraham and returning to him (Ḳur'ān, II, 262), the wind and the demons obeying the orders of Solomon (XXI, 81-2: XXXIV, 11-13), the birth of Yaḥyā (John the Baptist) to a very old father and a sterile woman (III, 33-6), and the bird which 'Īsā (Jesus) formed out of mud, breathing life into it (V, 109-110).

On the other hand, there is sorcery (*siḥr*) which, in the eyes of the Prophet, is one of the greatest sins of mankind (al-Bukhārī, lv, 23, lxxvi, 47). He himself had been bewitched by a Jew (idem, *Ṭibb*, 47, *Bad' al-khalḳ*, 11, *Djizya*, 14; al-Nasā'ī, *Taḥrīm*, 20). This took place at the end of the year 6/628 and lasted forty days. He learned of what had happened from two beings in human form who were conversing by his bed. He went to the well where a lock of his hair, taken from a comb, had been deposited, retrieved it and was cured (Muslim, ii, 275).

Thus *Ḥadīth*, supplementing the Ḳur'ān, condemns the *sāḥir* to death, whereas what emanates from Ḳur'ānic verses is rather a denunciation of those who allow themselves to be bewitched by the *saḥara*, agents of fallen angels, who are reckoned to put men to the test, as in the case of Satan with Job (see in this connection the term *fitna* in the Ḳur'ān, in particular XXII, 52-3).

Reflection on the part of the *fuḳahā'* resulted in the separation of permitted from prohibited magic. What is permitted is natural magic, known as "white", including, among other elements, charms [see RUḲYA; NĪRANDJ; SĪMIYĀ]; imaginary phenomena produced by natural means, on the basis of properties [see KHAWĀṢṢ], having no connection with religion; psychic phenomena materialised by the use of philtres and amulets (*tamā'im*), activated by means of absorption or fumigation of heteroclitic powders and fats; etc. (see the classifications set out above).

The practice of this magic is tolerated insofar as it causes no harm to others. But when the magician influences nature with the object of doing harm, he is exercising prohibited magic. This, as was stated at the outset, implies recourse to demoniacal inspiration (black magic) and to the invocation of the planets (theurgy).

It is by awareness of the causal mechanism which rules nature and by penetrating the affinities which bind mankind and the cosmos closely together that

the magician attempts to influence the course of natural events, harnessing the forces emanating from the causality and relativity which he establishes between beings. This is why the magician's art is no business for amateurs; an innate predisposition, rich and multifarious knowledge, and consummate skill in handling composition, conjunction, mixture and combinations, are indispensable.

To attain his objective, the magician sets in motion two procedures aimed at constraining higher forces to place their efficacy at his disposal:

1. *Demoniacal conjuration*, known as *ʿilm al-ʿazāʾim*, "the science of the formulas of conjuration", which is, according to Ḥadjdjī Khalīfa, iv, 2057, an imperative, stern and insistent language, by which djinn and demons are commanded to put a scheme into effect. Each time that the magician pronounces the formula "I adjure you" (*ʿazamtu ʿalaykum*) he claims "to oblige them to obey, to respond to the summons without delay, to submit and to humble themselves before him". And the author adds, "This is possible and permissible, according to reason and to the Law ..., since subjugating the spirits, humbling them before God and rendering them subordinate to men, is one of the marvels of Creation". This conjuration becomes illicit when it consists in directing the spirit towards an object which is not God, and consequently, in being disloyal to Him. Such an attitude is aggravated by the depraved conduct of the magician and the harm caused by it to other beings. Hence the question which was the object of controversy between jurists, "Is the death penalty, inflicted on a magician, the consequence of the disloyalty which precedes the act, or is it rather the consequence of the depraved conduct in which he has indulged and the harm caused by it to other beings?" (Ibn Khaldūn, *Muḳaddima*, iii, 127 tr. de Slane, iii, 176, tr. Rosenthal, iii, 159).

The opinion which has prevailed in Islam, after centuries of theological and judicial cogitation, is that of al-Ghazālī (d. 505/1111), who gave Islamic theology its definitive formulation. For him, magic is based on the combined knowledge of the properties of certain terrestrial elements and of propitious astral dispositions. This knowledge is not culpable in itself, but its only practical application is to harm others and make mischief (*Iḥyāʾ ʿulūm al-dīn* i, 49-50).

Another question demanded clarification. What is the difference between magic and miracle, meaning those *karāmāt* attributed to the Ṣūfīs which border on black magic, such as, e.g., making the words of the dead heard, walking on water, transforming substances, practising ubiquity, making inanimate objects talk, altering the passage of time, having prayers answered, binding and releasing tongues, winning support in a hostile assembly, communicating certain secret knowledge and unwrapping mysteries, disposing of things which one does not possess, distant vision, intimidating people by looks alone, being spared an evil contrived by another and turning it into something good, immunity from poison, epidemics, fire, etc. (cf. al-Subkī, *Ṭabaḳāt al-ṣūfiyya*, Cairo 1224/1906, i, 2, 59-77; I. Goldziher, *Le culte des saints chez les musulmans*, in *RHR*, ii [1880], 336-7)?

Ibn Khaldūn replies to this question as follows: "The difference between miracle and magic resides in the fact that the miracle is [the effect of] a divine force which confers upon the soul [the power to exert] influence [over beings]. Thus [the thaumaturge] is supported, in his action, by the Spirit of God, while the magician realises his project through his own resources, through his own psychic force and sometimes with the assistance of demons. Therefore, the difference which separates them is simultaneously an issue of concept, reality and essence" (iii, 133-4, tr. Rosenthal, iii, 166-7).

2. *The evocation of spirits*, whether those of the dead (necromancy), those of less demons or those of planets.

(a) Necromancy belongs rather to the realm of divination (cf. Fahd, *La divination arabe*, Paris 1987, 174 ff.) but in terms of technique, it is allied to black magic, to the same degree as are the other two types of evocation. It consists of two phases. The first, of a material nature, comprises the preparation of a mixture of various products drawn from a special pharmacopoeia, and all kinds of fumigations; the second, of an intellectual nature, consists of the composition, in the form of an invocation, of a prayer mentioning all the qualities and all the attributes of the spirit invoked, and formulating all the pleas with which compliance is requested.

(b) The evocation of demons is accomplished with the aid of incantations (cf. above, no. 1). Three terms denote three procedures of spiritism: *istikhdām* (making a spirit do a certain thing), *istinzāl* (making a spirit descend in the form of a phantom) and *istiḥḍār* (making a spirit descend into a body).

(c) The invocation of the spirits of planets is described at length by al-Madjrīṭī (*Ghāya*, 182-6). It consists in drawing to oneself the spirituality (*rūḥāniyya*) of the planets. For this to be done, the nature of each one of them must be known: its colour, its taste, its odour; then it is necessary to observe the moment when this planet reaches the point corresponding to it in the zodiacal sphere, in a straight line which does not cross a line from another planet of different nature. If this is so, the line starting from this planet and terminating on the earth will be straight and unbroken. Subsequently, a cross is made from the same mineral as that associated with the planet invoked, and placed on an image representing the request that is to made of the spirit invoked (see the detailed description of the manner in which this image is used, according to the result which is sought, in Fahd, in *Sources orientales*, vii, 170-1).

Al-Madjrīṭī concludes (*ibid.*, 85) that it is a perfect nature which fulfils in man the condition of his accession to the world of the spirits; his progressive assimilation to the forces which he conjures, evokes or invokes, contributes to the efficacity of his action and to the success of his enterprise. Spiritual beings (*al-rūḥāniyya*) appear to him then as personalities, speak to him and give him all kinds of information.

From the simple bewitchment of the Prophet, using a lock of his hair, to the invocation of the spirits of planets, a long road has been travelled. Along the way Islam, the heir to the ancient civilisations, whether they be Semitic, Iranian or Hellenistic, has incorporated in its rich patrimony ideas, customs and practices which developed and intermingled throughout the vast area of the Near and the Middle East.

From pre-Islamic Arabia, the inheritance is scanty: incantations against "the evil (arising) from those who breathe on the knots" (*al-naffāthāt fī ʾl-ʿuḳad*), a practice analogous to that known as "tying the aglet", designed to keep husbands and wives apart (Ḳurʾān, CXIII, 4). According to the commentators, this usage was the inspiration for the revelation of the three earliest sūras of the Ḳurʾān (CXII, CXIII, CXIV), the last two being called *al-muʿawwidhatān*[i] [*q.v.*].

In writings intitled *al-Ṭibb al-nabawī* and *al-Ṭibb fī ʾl-Ḳurʾān*, numerous examples illustrate the use of incantations and charms by the Prophet and his

contemporaries (see *Sources orientales*, iv, 195-6, notes 63 ff.). Al-Bukhārī, *Ṭibb*, 53, devotes a *bāb* entitled *al-dawā' bi 'l-ʿadjwa li 'l-siḥr* to the use of date-pulp as a remedy against enchantment (see H. Reinfried, *Braüche bei Zauber und Wunder bei Bukhārī*, diss. Freiburg i. Br., Karlsruhe 1915; cf. also Goldziher, *Chatm al-Bukhārī*, in *Isl.*, vi [1916], 214).

Originating in this popular witchcraft, which serves, furthermore, as a motif in the poetry of the court, magic takes a new turn with the translation of Greek magical works. Michael of Syria, ed. Chabot, 478b, 30, relates that the Byzantine emperor Leo (IV, the Khazar, 775-80) sent as a gift to the ʿAbbāsid caliph al-Mahdī (158-69/775-85) the book by Ianis and Iambris dealing with the secrets of Egyptian magic. From this period onward there is a proliferation of magical works attributed to Indians, Copts, Nabataeans, Sabians, etc. A work of Hellenistic magic produced a synthesis of the concepts linking magic with astrology, namely *Ghāyat al-ḥakīm* by al-Madjrīṭī, utilised previously and translated into Latin under the title of *Picatrix*. It played an important role in the development of magic in the West (ed. H. Ritter, in *Studien der Bibliothek Warburg 13*, Leipzig 1933; Ger. tr. H. Ritter and M. Plessner, in *Studies of the Warburg Institute 27*, London 1962; see also Ritter, *Picatrix, ein arabisches Handbuch hellenistischer Magie*, in *Vorträge der Bibliothek Warburg 1921-22*).

From the *K. al-Sirr al-Maktūm fī ʿilm al-ṭalāsim wa 'l-siḥr wa 'l-nīrandjāt wa 'l-nudjūm* by Fakhr al-Dīn al-Rāzī (d. 606/1209-10) to *Shams al-maʿārif* by al-Būnī (d. 622/1225) and to Ibn Khaldūn (d. 808/1406), magic in Islam has experienced prodigious development. A very substantial magical library has been constituted, to which a competent scholar has yet to devote the study which it deserves.

Bibliography: See the numerous references in the text. It may be noted that, in this article, use has been made of two of the present writer's previous works devoted to this subject: *Le monde du sorcier en Islam*, in *Sources orientales*, vii, Paris 1966, 157-204 (numerous refs. in the notes and bibl.), and *La connaissance de l'inconnaissable et l'obtention de l'impossible dans la pensée mantique et magique de l'Islam*, in *Sciences occultes et Islam*, in *BEO*, xliv (1992), 33-44; see also idem, *Magic (Islam)* in *The Encyclopaedia of Religion*, ed. Mircea Eliade, repr. in *Hidden truths. Magic, alchemy and the occult*, ed. L.E. Sullivan, New York-London 1989, 122-30, and *Sciences naturelles et magie dans Ghāyat al-Ḥakīm (d'Abū Maslama l-Madjrīṭī)*, in *Ciencias de la Naturaleza en Al-Andalus*, ed. E. Garcia Sanchez, i, Granada 1990, 11-21. For Ibn al-Nadīm, the Ikhwān al-Ṣafā' and al-Madjrīṭī, see refs. in the text. Particular attention should be given to *Shams al-maʿārif* by al-Būnī, a synthesis of magical lore in Islam, which has appeared in three editions: lengthy, medium and short. The first was edited in Cairo in 4 vols. in 1905; many lithographs and a vast number of manuscripts exist. It may be noted that Pierre Lory has taken an interest in this; see his *La magie des lettres dans le Shams al-Maʿārif d'al-Būnī*, in *BEO*, xxxix-xl (1987-8). Another equally important text for this subject is the *K. al-Sirr al-Maktūm fī ʿilm al-ṭalāsim wa 'l-siḥr wa 'l-nīrandjāt wa 'l-nudjūm*, also known by the title *al-Sirr al-Maktūm fī mukhāṭabat al-nudjūm* and lithographed in Cairo; numerous mss. of it exist, the one consulted here being Nuruosmaniye 2792 (220 fols., 28 × 19 cm, fine *naskhī*, where the illustrations are lacking, their place having been left blank); the ms. Köprülü 925 (100 fols., *naskhī*, 25 × 17 cm) specifies that the work is by Abū Bakr al-Rāzī and not by Fakhr al-Dīn.

Among the studies, worthy of mention are E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1909; E. Mauchamp, *La sorcellerie au Maroc*, posthumously published work preceded by a documentary study of the author and the work by J. Bois, Paris n.d.; M. Gray, *Magie et sorcellerie en Afrique du Nord*, in *Bull. de l'Enseignement public marocain*, ccxxx (January-March 1954), 45-72; G. Bousquet, *Fiqh et sorcellerie*, in *AIEO Alger*, viii (1949-50), 230-4; A. Guillaume, *Prophétie et divination*, French tr. Paris 1941 (cf. ch. vi, "Magic and sorcery", 280-344, and note C: *Magie et religion*, 454-59); R. Kriss, *Volksglaube im Bereich des Islam*, ii. *Amulette und Beschworungen*, Wiesbaden 1961 (with 104 plates); A. Kovalenko, *Magie et Islam. Les concepts de magie (siḥr) et de sciences occultes (ʿilm al-ghayb) en Islam*, diss. Univ. of Strasbourg 1979, publ. Geneva 1991, 721 pp. (see 424-37, where the sources for *ʿilm al-siḥr* in Islam are to be found listed, and 566-619, where there is a general bibliography on the occult sciences).

On the Hellenistic legacy in Islam, see M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, H der O, i. Abt., Erganz, vi, 2. Absch., Leiden-Cologne 1972, 359-426. For magic in the mediaeval West and its oriental sources, see L. Thorndike, *History of magic and experimental science*, i, New York 1947, 641-71, and R.H. Robbins, *The Encyclopedia of Witchcraft and Demonology*, New York 1959.

(T. Fahd)

ṢIHYAWN, the Arabic name of Biblical *Ṣiyyôn*. The etymology of the Hebrew word צִיּוֹן (*Ṣiyyôn*) is uncertain. It may be related to a Semitic root "to be dry", "to suffer from thirst". But it is not entirely impossible that the root may be related to the Arabic root *ṣ-w-n*, also appearing in Geʿez, meaning "to guard", "to preserve". In the works of the Arab lexicographers, the word has the nominal pattern of *Ṣihyawn* meaning Jerusalem or Byzantium. The word possibly appears in this sense already in a verse of al-Aʿshā Maymūn (d. after 625). This form, *ṣihyawn*, is most probably derived from an Aramaic dialect which pronounced the word as in Syriac *ṣehyūn*.

Ṣiyyôn, David's Citadel and his traditional burial place, extended over southeastern Jerusalem, below the Temple Mount. By Josephus' time it was identified with the upper city, the southwestern hill of Jerusalem, including the sites presently identified with Mount Zion. The early Christians located the Biblical Mount Zion in the southwestern hill of Jerusalem not only following Josephus's mistaken identification, but also because early scenes and events of the Christian church sanctified this hill.

1. The Church of Zion.

The existence of a modest church on Mount Zion is first noted by Cyril of Jerusalem, around the year A.D. 348. In the days of Bishop John II (386-417), the Zion church was rebuilt becoming one of the largest and important churches in Jerusalem. Also, the tradition of Zion as the site of the Last Supper, the place where Mary fell asleep and where the Holy Spirit descended upon the disciples on the Pentecost, became established from the end of the 4th to the middle of the 5th century. During the Persian conquest (A.D. 614), the church was burned down, probably leaving its interior looted and despoiled. Modestus, Acting Patriarch of Jerusalem, rebuilt the church from its ruins.

Mount Zion and the Zion church are noted in

early Arabic texts from the beginning of the Arab conquest and onward. Prior to the 10th century, the word Ṣihyawn (Ṣahyūn?) is rare and refers to Jerusalem as a whole or an area in Jerusalem. Noteworthy is a rare tradition identifying Ṣihyawn as Mecca, possibly an attempt of an early tendency to enhance the holiness of Mecca by attributing to it holy merits of Biblical places and persons (*al-Sīra al-Ḥalabiyya*, i, 296; Ibn al-Djawzī, *Wafā'*, i, 69).

The Muslim conquest of Jerusalem (638) did not result in the immediate destruction of churches and monasteries, but many fell into abandonment and ruin. The wave of destruction against the churches in Palestine at the beginning of the 10th century bypassed Jerusalem. However, in 966 the Church of Zion was burned and pillaged with the direct encouragement of the Ikhshīdid governor of Jerusalem, Muḥammad b. Ismā'īl al-Ṣanādjī. At the beginning of the 11th century, Mount Zion and the Church of Zion were evidently outside the city walls. In the framework of the wall-building activity, by order of the Fāṭimid caliph al-Ẓāhir in 424/1033, the workers used stones of the many churches outside the city, including those of the Church of Zion, which was apparently destroyed.

2. The Crusader and Ayyūbid period.

On the Frankish capture of Jerusalem, the church and most of the sites on Mount Zion were handed over to the Latin Church. Presumably it was reconstructed a short time after the conquest on the site where the Holy Church of Zion previously stood. It was already noted by Christian pilgrims in the first decade of the 12th century; the building was evidently completed in 1141. The church was built in the cellular vaulted Latin fashion; it included the Cenacle, in the southwestern corner of the central hall, and under it, the room in which David's Tomb was identified.

David died in the City of David, which extended southeastward to the Temple Mount. Despite this, the ancient Christians located David's Tomb in Bethlehem or its close vicinity, an identification that prevailed for the entire Byzantine period, up to the 7th century. An early Muslim tradition locates David and Solomon's tombs in the Church of Gethsemane (*Kanīsat al-Djismāniyya*; Sibṭ Ibn al-Djawzī, *Mir'āt al-zamān*, ed. Iḥsān 'Abbās, Beirut 1985, i, 492, 523; Mudjīr al-Dīn, ed. Nadjaf, i, 116, from Wahb b. al-Munabbih; al-Mas'ūdī, *Murūdj*, i, 111).

The first Christian source that mentions explicitly David's Tomb on Mount Zion is dated slightly before the 11th century. The source of this tradition is apparently in memorial services for David and James, Jesus's brother, found in the liturgies conducted in this church on the 25th of December and later, on the 26th, already in the Byzantine period, and not in the later Muslim tradition that was influenced by Jewish sources. The ancient structure that has been identified as David's Tomb from the Crusader period to the present day was not a part of the Byzantine Church of Zion. Muslim writers and geographers of the 10th century, indeed, connect David with Mount Zion; however, they do not locate his grave on the mountain and certainly not in the church on it. The testimony of al-Muḳaddasī, 46 (most probably from the mid-10th century), that "people of the book say that David's Tomb is in Ṣihyawn" is not unequivocal evidence that the tomb is located on Mount Zion and certainly not in its church; this may possibly refer to the Biblical identification of Zion.

Nonetheless, it is apparent that the tradition claiming that David's Tomb is in the Church of Zion was already established at the beginning of the 11th century (Ibn al-Muradjdjā, 247, no. 368; but cf. al-Tha'labī, Būlāḳ 1320, i, 240, who locates it on Mount Zion, and not in the Church). In spite of its dubious origin, it was accepted by all three religions. The tradition claiming that David's tomb is in the Church of Zion also appears from the beginning of Crusader rule, and was noted often by the Christian pilgrims who visited Jerusalem in later centuries. Al-Harawī (1174) notes the tradition of David's tomb on Mount Zion, but is also familiar with other traditions regarding the site of the tomb.

When Ṣalāḥ al-Dīn approached Jerusalem (1187), the Christian churches outside Jerusalem, including the church of St. Maria of Mount Sion, were destroyed or seized. During the time of his stay in Jerusalem, Ṣalāḥ al-Dīn's brother, al-Malik al-'Ādil, lived in the Zion church, while his soldiers set up their tents in front of the church. Ṣalāḥ al-Dīn built up and renovated the walls of Jerusalem (1192), which were extended to include Mount Zion and the church on it. Al-Mu'aẓẓam 'Īsā began restoration in Jerusalem and on its walls in 1202-3, yet in 1219 he ordered the walls to be destroyed. The targeted area also included Mount Zion and apparently also the church on it. It does not seem that, prior to leaving Jerusalem in 1229, Frederick II took on the task of building and fortifying the walls of the city and its bastions. Mount Zion was never walled again. On Crusader maps of the 12th to 14th centuries, it appears outside the wall.

The church suffered destruction by the Khwārazmian troops that reached Jerusalem in 1244, and at the end of the 13th century it was described as desolate and in ruins.

3. The Mamlūk period.

In 1333 King Robert of Naples and his wife bought the place and gave it to the Franciscans, who restored the Cenacle and built a small monastery around the room to the south of it.

In decrees and documents from the Mamlūk period, the church is termed Kanīsat Ṣahyūn, Kanīsat 'Ulliyyat Ṣahyūn or Kanīsat Dayr Ṣahyūn, and the monastery: Dayr Kanīsat Ṣahyūn or Dayr Ṣahyūn. At the beginning of the reign of each new sultan, the Franciscan monks requested a royal decree confirming their rights on Mount Zion to the church, the monastery and its other sacred constructions. The last decree in hand is Ḳā'itbāy's, from 8 Dhu 'l-Ḳa'da 876/17 April 1472, in which he renews the decrees of the preceding rulers. Among the 28 documents from the Mamlūk period that Risciani published, eight are royal decrees, extending from the rule of al-Ashraf Sha'bān up to the 14th year of Ḳā'itbāy's rule. Often these decrees respond to letters of complaint from Jerusalem Christians in general, and from monks from Mount Zion, on the violation of rights and requests to repair parts of the holy constructions that were ruinous.

In the 15th century several attempts were made by the Muslim rulers to take control of David's tomb and to expropriate it from the Franciscans. The Jewish community in Jerusalem took an active part in these efforts. In 1428 the Muslims took control of the place and took it out of the hands of the Christians. In 1430 the Franciscans were allowed to enter the place, but the arrangements for prayer services depended on the good will of the régime and of the guards at the place. In 1448 David's Tomb and the Upper Room were evidently returned to the Christians; but in 1452 the place was taken out of their hands permanently, a *ḳibla* was built in it and a supervisor was appointed

to oversee the hall of David's Tomb. From this time on, Christians were forbidden to enter the premises. In 1436 the upper room was renovated and renewed by Duke Phillip the Good of Burgundy, but, as learned from one of the documents (11 Djumādā II 841/10 November 1437, Barsbāy's reign), ten years later the Upper Room, which is called ʿUlliyyat Ṣahyūn, is found on the roof of the monastery, most of whose vaulted roof and walls was destroyed. The chapel remained desolate until 1452, when it was completely destroyed by the Muslims. The Ottomans returned David's Tomb and the church of the Cenacle to the monks in 1519. In 1523 an order was given to banish the monks from the monastery and the Cenacle church and to turn the place into a mosque. In 1524 the hall was destroyed, the Cenacle church became a mosque and a *miḥrāb* was erected in it. The inscription on the eastern wall of the Cenacle commemorates this transformation to a mosque, which since then, together with David's Tomb, is known as Masdjid Nabī Dawūd.

4. The Ottoman period.

In the course of 25 years, step by step the Franciscans were pushed out of the buildings they held on Mount Zion, all the while suffering confiscation of property, fines and imprisonment from the hard hand of the Ottoman régime. Already in 1549 the sultan endowed the Zion monastery and adjacent gardens to the Shaykh Aḥmad al-Dadjdjānī, his offspring and his dervish followers. They were permanently removed from the monastery between 1551 and 1552. From that time, the monks were not permitted to enter the Cenacle or the place identified as David's Tomb.

The Franciscans were first allowed to pray again in the Cenacle during the period of Egyptian rule (1831-40), but only twice a year. At the end of the 19th century, the guards permitted the Christians to enter against payment. During the British Mandate, the Jews were allowed to pray at David's tomb once a year.

At the end of World War I, within the framework of its endeavours to gain a sphere of influence in Palestine, the Italian government attempted to lay claim to the Cenacle on Mount Zion and to transfer it to its authority, on the basis that the Italian king was the heir of the Neapolitan kings who purchased it. These efforts, accompanied by the intervention of the Vatican, continued until 1933, but came to naught. In 1936 the Franciscans returned to Mount Zion and settled in a small monastery north of David's tomb.

Today the Cenacle is identified in the second floor of the ancient structure that was part of the Crusader church. It is a long room built in the Gothic style of the 12th century. A cenotaph in honour of David is found on the ground floor of the structure, part of which is very ancient, from the end of the Roman or the Byzantine period.

5. The Church of the Dormition.

The Church of the Dormition was built between 1900 and 1910 on part of the grounds over which the ancient Church of Zion extended. The grounds were given to Kaiser Wilhelm II by ʿAbd al-Ḥamīd II. The Benedictine monks were given charge of the sanctuary of the Dormition in 1906. In 1926 the Benedictine priory was elevated to the status of an abbey by the Apostolic See, and in March 1951, the abbey was placed directly under the Pope.

4. The Church of Zion, the Coenaculum, David's Tomb, the Franciscans on Mount Zion. An extensive bibl. (excluding items in the Arabic language) is to be found in K. Bieberstein and H. Bloedhorn (eds.), *Jerusalem, Grundzüge der Baugeschichte vom Chalkolithikum bis zur Frühzeit der osmanischen Herrschaft* (*Beihefte zum Tübinger Atlas des vorderen Orients, Reihe B. 100/1-3*), Wiesbaden 1994, ii, 118-27, 163-5. (A. Elad)

SIʿIRD, Siʿirt, Isʿird, the orthography in medieval Arabic texts for a town of southeastern Anatolia, 150 km/95 miles to the east of modern Diyarbakir and 65 km/44 miles to the south-west of Lake Van (lat. 37° 56' N., long. 41° 56' E.). It lies on the Bohtan tributary of the upper Tigris in the foothills of the eastern end of the Taurus Mts. It is the modern

Turkish town of Siirt, now the chef-lieu of an *il* or province of the same name.

1. History.

(a) The pre-Ottoman period. Siʿird is mentioned very little in early Islamic sources; the absence of fortifications apparently made it of little strategic or military value. Some authorities accounted it as administratively within Armenia, others as within al-Djazīra. Siʿird (Syriac, Seʿerd) was, however, a notable centre for Eastern Christianity, and al-Shābushtī (3rd/9th century [*q.v.*]) mentions there the monastery of Aḥwīshā (Syr. "anchorite" = Ar. *ḥabīs*) which had 400 monks in their cells (*K. al-Diyārāt*, ed. ʿAwwād, 198). At some point after 1036, an unknown Nestorian author composed in Arabic the so-called *Chronicle of Seʿert*, a universal history based on Syriac sources (see Graf, *GCAL*, ii, 195-6).

In mediaeval times, Siʿird tended to share in the history of Ḥiṣn Kayfā and Diyār Bakr. Thus in the 5th/11th century it came within the dominions of the Marwānids [*q.v.*], and in the next one, of the Artuḳids [*q.v.*] of Ḥiṣn Kayfā. In 538/1143-4 it was taken by Zangī b. Aḳ Sunḳur. It was sacked by the Mongols after the defeat of the Khʷārazm-Shāh Djalāl al-Dīn, but seems to have revived, since Ḥamd Allāh Mustawfī, *Nuzha*, 105, tr. 104, describes it as a rich town, famed for the manufacture of brass utensils. Under the suzerainty of the Il Khānids and their successors the Djalāyirids, Siʿird was ruled by the local Ayyūbid line of Ḥiṣn Kayfā and Āmid until in *ca.* 866/1462 the Aḳ Ḳoyunlu Uzun Ḥasan [*q.v.*] ended this petty dynasty.

There do not seem to have been any *ʿulamāʾ* of note from Siʿird, but it did produce a poet in Nūr al-Dīn Muḥammad al-Isʿirdī (d. 656/1258 [*q.v.* in Suppl.], author of poems in praise of hashish-eating and wine-drinking (see F. Rosenthal, *The herb, hashish versus medieval Muslim society*, Leiden 1971, 6, 163-6 and index).

(b) The Ottoman and modern periods. For a short time, the Ṣafawid Shāh Ismāʿīl I held Siirt; but after the latter's defeat at Čāldirān, a surviving descendant of the Ayyūbid lords, by the name of Malik Khalīl, submitted to the Ottomans. Under the overlordship of the Diyārbekir *beglerbegi* Bïyïḳlï Meḥmed Pasha [*q.v.*], Malik Khalīl governed the town along with nearby Ḥiṣn Kayfā. In a *taḥrīr* dated 932/1526, Siirt is recorded as a *ḳaḍā* forming part of the *beglerbeglik* of Diyārbekir. At this time, Siirt consisted of 406 Muslim families along with 58 unmarried men, while the Christian communities numbered 448 households and 152 unmarried men. With the addition of a castle garrison and a small Jewish colony, the town should have held between 4,500 and 5,000 inhabitants. Among the notable buildings of the town, the *taḥrīr* records the Ulu Djāmiʿ and the Djemāliyye *medrese*, while Malik Khalīl had built a number of shoemakers' shops to provide income for one of his pious foundations. According to the same source, the rural area forming the district of Siirt was inhabited by 654 families and 151 unmarried men, all Muslims. A document dated 967/1560 describes Siirt as merely a *nāḥiye* in the *sandjaḳ* of Ḥiṣn Kayfā; but we cannot be sure that this really represented an administrative downgrading, as in this period, *taḥrīr*s often use the terms *ḳaḍā* and *nāḥiye* interchangeably.

In the 11th/17th century, Ewliyā Čelebi enumerated Siirt as an "Ottoman" *sandjaḳ* of Diyārbekir; by this term he meant that the *sandjaḳ* was not governed by a local Kurdish family of hereditary governors but formed part of the regular administrative structure. The *khāṣṣ* of the governor of Siirt supposedly produced 223,772 *aḳčes* a year. In 1080-1/1670-1, the accounts of the Diyārbekir governor Wezīr Silāḥdār Ḥādjdjī ʿÖmer Pasha showed Siirt once again as a *ḳaḍā*. The *pasha* collected a small sum as *ordu pazār aḳčesi*, dues presumably in connection with the obligation of the local craftsmen to furnish services to the army. Probably the campaign referred to here was directed against Bedouins; for a few lines later in the text, the *mütesellim* of Siirt was excused from participation in just this campaign. Moreover, the *ḳaḍā* of Siirt owed 350 *ghurush* as dues from vineyards, fabrics and firewood. These dues make it appear likely that Siirt, famous for its vineyards in the early 13th/19th century, and to some extent, down to the present day, already possessed them in the later 11th/17th century. As to the fabrics, they may correspond to the cotton, both white and striped, which Macdonald Kinneir observed in the area in the early 19th century, or to the calico from Bitlis which the Christians of early 19th century Siirt used to dye. This same traveller estimated the population of Siirt as numbering about 3,000; in addition to the Muslims, there were some Armenian, Chaldaean and Nestorian Christians. At that time, Siirt was ruled by a personage which the traveller describes as a "chief", but does not name; he controlled the harvested crops of the area, which he then passed out to his followers.

Many houses in the town, built of a locally manufactured gypsum, known as *djaṣṣ*, possessed some arrangements for defence. Houses of this type, with domes and vaults to minimise the need for wood, are still to be found in the older quarters of the 20th-century town; however, due to the fragility of the material, the buildings must be reconstructed about once in twenty-five years. At the time of Macdonald Kinneir's visit, there were three mosques and a *medrese*. This total should have included the Ulu Djāmiʿ, probably a Saldjūḳ structure whose wooden *minbar* has been preserved in the Ankara Museum of Ethnography, and the Čarshï Djāmiʿi, going back to Artuḳid times.

In the summer of 1838, von Moltke reported that three years before his visit, Siirt had been conquered by Reshīd Pasha [*q.v.*]. At that time, the authorities counted 600 Muslim and 200 Christian households; but due to excessive and constantly renewed demands for recruits, the Muslim population had subsequently been reduced to 400 households. When von Moltke visited Siirt, only boys and old men were visible on the streets.

When Cuinet collected his information in *ca.* 1890, Siirt had been transferred from the *wilāyet* of Diyārbekir to that of Bitlis. He thought that the town contained about 3,000 houses inhabited by 15,000 people. Among these, almost two-thirds were Muslims, while apart from the Christian churches which had been present in the town at the beginning of the 13th/19th century, there were now Protestant Armenians and Catholic Chaldaeans, whose schools were run by American missionaries and French Dominicans respectively. The number of mosques had now increased to five, one of which possessed two minarets which Cuinet considered to be of great antiquity. He also refers to an ancient fortress, complete with towers, crenellations and moat, where in the past Kurdish *aghas* had resided. These must have been the personages whom

Macdonald Kinneir had compared to mediaeval Scottish earls, but who had probably disappeared as a result of the repressive campaigns of Sultan Mahmud II.

Under the Republic, Siirt remained a remote little town, although the railway did by 1932 reach Kurtalan, 32 km/20 miles away, and Siirt was promoted to be a regional centre. According to the 1927 census, it had 14,380 inhabitants; increase was slow up to the 1970s, but in 1980 there were over 42,000 people. The building of local roads in the 1950s added the cultivation of pistachio nuts to the traditional vineyards, and oil was found in the Kurtalan region, with a refinery at nearby Batman, the only major industrial enterprise in the province. Further progress may be possible with the completion of new dams on the upper Tigris, but in the rural areas, poverty and isolation are the norm; the level of literacy in the province is one of the lowest in Turkey, electrification is sparse and medical facilities few.

2. Arabic dialect.

The Arabic dialect of Siʿird and the closely-related dialects of six neighbouring villages constitute a subgroup of the Anatolian branch of the Mesopotamian *qəltu* dialects [see ʿIRĀḲ. iv. Languages (a) Arabic dialects]; they form a linguistic island in the Kurdish language area.

A unique feature of the Siʿird subgroup is the regular shift of the interdental fricatives *ṯ*, *ḏ* and *ḏ̣* (the latter resulting from the merger of O[ld] A[rabic] *ḍād* and *ẓāʾ*) to the labio-dental fricatives *f*, *v* and *ṿ* (*baʿaf* "he sent", *əven* "ear", *ṿarab* "he beat", *ṿəhor* "noon"). OA *q* has been preserved as a voiceless uvular stop but alternates under undefined conditions with a glottal stop ʾ or even zero, thus *qāl* ~ *ʾāl* ~ *āl* "he said"; in a few lexical items OA ʾ can appear as *q* (*qarṿ* "earth"). The voiced pharyngal fricative ʿ is devoiced to *ḥ* word finally (*ytalloḥ* < *ytalloʿ* "he looks", cf. *ytalʿū* "they look"); word final *ḥ* in turn is pronounced rather weak and can be dropped altogether (*ytallo* "he looks", *yrō* "he goes" but *yrōḥū* "they go"). Initial *h* has been elided in the demonstratives: *āva* "this (m.)", *āvi* "this (f.)", *awle* "these". The vowel system comprises five long vowels (*ī*, *ū*, *ē*, *ō*, *ā*), all while preserving OA diphthongs *ay* and *aw*. As in all Anatolian *qəltu* dialects, OA *i* and *u* have been merged into *ə* (*bənt* "daughter", *əxt* "sister"); in unstressed word final *-əC* the vowel has the allophones *e* and *o* depending on front or back consonant environment (*yxallos* "he frees", *yənseğ* "he weaves").

Arabic verb stems II, III, V, VI and X have a single inflectional base for perfect and imperfect showing *ə* (*e*/*o*) in the last syllable (*xallos*/*yxallos* "to free", *ʿallem*/*yʿallem* "to teach", *tʿallem*/*ytʿallem* "to learn", *stanṿor*/*yəstanṿor* "to wait"). The 1. person sing. perfect ends in *-tu*, a hallmark of the *qəltu* dialects (*tʿalləmtu* "I learned", *stanṿərtu* "I waited"). In the imperfect, final *-n* has been dropped in the 2. f. sing. and 2. and 3. pers. pl., but stress has been retained on the final vowel (*yrōḥū* "they go", cf. Mārdīn *yrōḥūn*). The characteristic copula of Anatolian *qəltu* dialects is found also in Siʿird Arabic but precedes the predicate rather than following it (*ūwe malī* "he is good", cf. Mārdīn *maleḥ-we*).

Bibliography: The only treatment so far is to be found in O. Jastrow, *Die mesopotamisch-arabischen qəltu-Dialekte*, 2 vols., Wiesbaden 1978-81, esp. ii, 217-307. (O. Jastrow)

SIKANDAR [see ISKANDAR].

SIKANDAR b. Ḳuṭb al-Dīn Hindāl, called **BUT-SHIKAN**, sultan of Kashmīr (*r.* 791-813/1389-1410), who derived his name of "idol breaker" from his rigorist Muslim policies and draconian measures against the local Hindus.

As a minor, he had his mother as regent until 795/1393 when, with the support of the Bayhaḳī Sayyids [*q.v.* in Suppl.], refugees who had fled before Tīmūr [*q.v.*], he threw off this tutelage and became the effective ruler, now having the *khuṭba* read in his own name and minting coins. The campaigns of Tīmūr brought a considerable number of immigrants into India, and the most distinguished of these to reach Kashmīr in Sikandar's reign was Sayyid Muḥammad b. ʿAlī Hamadānī, who remained in Kashmīr for twelve years. The sultan lavished land-grants on him and on others, and built *khānaḳāhs* for Ṣūfīs. He also embarked on a strongly Muslim policy of enforcing the *sharīʿa*, imposing the *djizya* on non-Muslims and destroying Hindu temples. It was only after his death and the succession of his son ʿAlī Shāh that there was a reversion to more pacific and tolerant ways in Kashmīr.

SIKANDAR LŌDĪ [see LŌDĪS].

SIKANDAR SHĀH, Sultan of Bengal, son of Ilyās Shāh, the founder of the independent Sultanate in Bengal that lasted nearly two centuries. During his long rule (759-92/1358-90), Bengal enjoyed a steady growth and prosperity. Soon after his enthronement, Bengal was invaded by Fīrūz Shāh Tughluḳ, the mighty Dihlī Sultan. In order to avoid direct confrontation, Sikandar Shāh retreated to Ekdala fort near his capital Panḍuʾā [*q.v.*] and finally reached a peaceful settlement with Fīrūz Shāh. Except for two years of exile in Sonārgāʾon, the famous Čishtī Shaykh ʿAlāʾ al-Ḥaḳḳ lived mostly in Panḍuʾā during his reign.

A great patron of architecture, Sikandar Shāh is mostly remembered for Adīna Djāmiʿ Masdjid in Panḍuʾā—a very imposing architectural expression of its time in the Muslim world (see for it, Yolande Crowe, *Reflections on the Adina Mosque at Pandua*, in G. Michell (ed.), *The Islamic heritage of Bengal*, UNESCO, Paris 1984, 155-64). Epigraphic evidence suggests that his rule once extended up to the present district of Čampanagar (see Mohammad Yusuf Siddiq, *Arabic and Persian texts of the Islamic inscriptions of Bengal*, Watertown, Mass. 1992, 107-8). Sikandar Shāh died in a power struggle with his son and heir-apparent Ghiyāth al-Dīn Aʿẓam Shāh.

(Mohammad Yusuf Siddiq)

SIKANDARĀBĀD, SECUNDERABAD [see ḤAYDARĀBĀD. a. City].

SIKBĀDJ (A.), a vinegar- and flour-based meat stew or broth cooked with vegetables, fruits, spices and date-juice. It was apparently a popular ʿAbbāsid dish but very likely considered simple folk's food, as borne out by the many anecdotes that make satirical mention of it. Its origins, however, seem to have been royal, namely the Sāsānid court: Ibn Sayyār al-Warrāḳ (d. second half 4th/10th century) mentions, in his *K. al-Ṭabīkh*, ed. K. Öhrnberg and S. Mroueh, Helsinki 1987, 132, that Khusraw Anūshirwān [*q.v.*] once asked several cooks to prepare the finest dish they knew and all independently cooked *sikbādj*. (This perhaps explains the interest of certain ʿAbbāsid caliphs in the dish.) It merits inclusion here for its interesting appearances in: (1) numerous 3rd/9th- and 4th/10th-century collections (e.g. al-Shābushtī, *al-Diyārāt*, ed. ʿAwwād, Baghdād 1386/1966, 92; al-Djāḥiẓ, *al-Bukhalāʾ*, ed. al-Ḥādjirī, Cairo 1971, 24, 122, 288, 335; al-Azdī, *al-Risāla al-Baghdādiyya*, ed. al-Shāldjī, Beirut 1400-1980, 159, 167; al-Masʿūdī, *Murūdj*, § 2905; (2) important *adab* collections of later centuries (e.g. Yāḳūt, *Udabāʾ*, Cairo 1400/1980, xiii, 102; al-Ibshīhī, *Mustaṭraf*, Beirut 1988, i, 261); (3) two cookbooks, Ibn Sayyār, *op. cit.*, 132-7, and Muḥammad b. al-Ḥasan al-Baghdādī (d. 637/1239), *K. al-Ṭabīkh*, ed. al-Bārūdī, Beirut 1964, 13-14; (4) ʿAbbāsid proverbs (al-Ṭālaḳānī, *Risālat al-Amthāl al-Baghdādiyya allatī tadjrī bayn al-ʿāmma (djamaʿahā fī sanat 421)*, ed. Massignon, Cairo n.d.); and (5) poetry—in one of Ibn al-Rūmī's satires, for instance (*Dīwān*, ed. Naṣṣār, Cairo 1973, 1062), and also in some verses by al-Ḳisāfī the younger, who, according to an anecdote reported by Ibn Abī Ṭāhir [*q.v.*], was present one day when a certain Abū Ayyūd presented a pot of *sikbādj* to Ibn Mukarram (Mukram?) (Ibn al-Djarrāḥ, *al-Waraḳa*, ed. ʿAzzām and Farrādj, Cairo 1953, 9).

Sikbādj is an Arabicised word deriving from the Persian *sik*, meaning "vinegar", and *bāhā* (or *bādj*) meaning "type", i.e. of meat; *TA* also suggests a derivation from *sirka* (vinegar) and *bāča* (trotters) (Lane, i, 1389). In al-Khaṭīb al-Baghdādī, *al-Taṭfīl wa-ḥikāyāt al-ṭufayliyyīn*, Damascus 1346/1927, 86-7, *sikbādj* is described as most delicious with eggplant (*al-badhindjān*). But, in keeping with the sarcasm that often accompanies the mention of *sikbādj*, the gloss to the epithetic proverb *surmat baḳrā*, used to describe an arrogant man, reads "the cow's anus is the best thing in *sikbādj*" (al-Ṭālaḳānī, *op. cit.*, 18, no. 264). It is likely, therefore, that the opening line in a letter from Ibn Mukarram to the wit Abu 'l-ʿAynā [*q.v.*], which reads "I have a *sikbādj* stew that is the envy of its connoisseurs ..." (al-Raḳīḳ al-Ḳayrawānī, *Ḳuṭb al-surūr*, ed. al-Djundī, Damascus n.d., 352), is tongue-in-cheek.

The preparation of *sikbādj* has generated the verb *sakbadja* and prompted the writing of at least two works, both lost, praising its virtues: the *K. Faḍāʾil al-sikbādj* of ʿUbayd Allāh b. Aḥmad b. Abī Ṭāhir [*q.v.*] (*Fihrist*, 147) and that of the great wit, Djaḥẓa [*q.v.*] (*Fihrist*, 145, 317).

The proverbs *ilā kam al-sikbādj*! "What! *Sikbādj* again!", and *Yā bārid kam sikbādj*! loosely, "You blockhead! How much more *sikbādj* (al-Ṭālaḳānī, *op. cit.*, 8, no. 123, and 36, no. 597), are explained by al-Ṭālaḳānī as proverbs to be used when one has had enough of something. Indeed, it seems from the anecdotal literature that, satirically or otherwise, people either had enough, or could not get enough, of *sikbādj*.

(Shawkat M. Toorawa)

SIKHS (< Skr. *shishya* "disciple, learner"), a religious group of northern India whose beliefs and practices combine Islamic and Hindu elements and which was founded in the later 15th century by Nānak, the first Guru or teacher.

1. General.

The authoritative *rahit-nāma* or manual of Sikhism of 1950, the *Sikh Rahit Maryada*, defines a Sikh as one who believes in *Akāl Purakh* ("the Eternal One"); in the ten Gurus ("preceptors", identified with the inner voice of God) and their teachings; in the *Ādi Granth* ("the Ancient Book", the chief Sikh scripture, and the initiation (*amrit*) instituted by the tenth Guru; and in no other religion. In practice, this rigorous definition is widened to include persons who are not *amrit-dhārī*, i.e. those who have received the Khālṣa initiation, but are also recognised as Sikhs, such as the Keshdhārī Sikhs, who do not receive initiation yet keep their hair uncut. An act of the Indian Union legislature has defined a Sikh as "one who believes in the ten Gurus and the *Granth Ṣāḥib* ("Revered Book", sc. the *Ādi Granth*).

The centre of Sikhism has always been the eastern Pandjāb [*q.v.*], where the Sikhs by *ca.* 1980 numbered some ten millions. But there was always a movement of Sikh traders to other parts of India, and after the mid-19th century this movement was enlarged beyond the subcontinent by the substantial numbers of Sikhs who served in the British Indian Army in such outposts as Hong Kong and Singapore, so that a limited migration began to Australia, New Zealand and Fiji, mostly of Jat (Djāt) Sikhs (Jats being the dominant caste today in the rural parts of the Pandjāb and Haryana states of the modern Indian Union, and a particularly prominent social element—over 60%—in the Sikh community), initially of unskilled labourers. Others moved to the west coast of North America and to East Africa, engaged, e.g. in railway construction. Early in the 20th century, these doors to emigration were closed, but after the Second World War there was extensive emigration from both India and Pakistan, mainly to Britain but also to North America. By the early 1990s, there were approaching half-a-million Sikhs in Britain plus communities of over 200,000 each in Canada and USA.

(C.E. Bosworth)

2. Doctrines.

Sikhism aimed at purifying the religious beliefs of the Hindus. The teachings of its founder were therefore mainly negative. He strongly protested against caste restrictions and superstitious beliefs. He preached absolute equality of mankind; he taught that mechanical worship and pilgrimages do not elevate the human soul; that spirit and not the form of devotion was the real thing. No salvation is possible without a true love

of God and good deeds in this world. Sikhism, like Islam, condemns idolatry and teaches strict monotheism. Its God is the God of all mankind and of all religions, "whose name is true, the Creator, immortal, unborn, self-existent, great and beneficent" (*Djāpdjī of Guru Nānak*).

Reverence for the Guru is much emphasised, for although "God is with man, but can only be seen by means of the Guru" (Macauliffe, *The Sikh religion*, ii, 347). Sikhism also believes in the doctrine of Karma and metempsychosis.

The theology of Nānak was not formal; his sole object was to bring about a social and moral reform. Sikhism remained a pacific and tolerant cult until the social tyranny of the Hindus and political friction with Muslims transformed it into a militant creed. Govind Singh made Sikh theology more formal and prescribed rules for guidance in private and social affairs. He forbade the use of tobacco and wine, though the latter is now more freely indulged in by the Sikhs.

The sacred book of the Sikhs is the *Granth*, which is held by them in great reverence. The first portion of it, called the *Ādi Granth* was compiled, as mentioned below, section 3, by the fifth Guru Ardjan. It includes the hymns of the first five Gurus together with selections from the compositions of saints and reformers anterior to Nānak, notably Kabīr, Nāmdev, Djay Dev, Rāmānand and Shaykh Farīd. The *Granth* is composed wholly in verse with different metres. The bulk of it is in archaic Hindi written in Gurmukhi characters; other portions are in various other Indian dialects and languages including Sanskrit, together with a few verses and tales in Persian (written in Gurmukhi script).

The cosmopolitan views of Nānak were acceptable to both Hindus and Muslims; moreover, he did not prescribe any particular forms of worship, hence it is not surprising that he gained converts from both religions. But it was undoubtedly Hinduism—the faith of his own parents—whose social system he wanted to reform, therefore naturally his teachings were addressed to the Hindus rather than the Muslims. The majority of his disciples was derived from the Djāt, Arora and Khatri castes; to the last of them belonged all the Gurus, including Nānak himself. To the Brahmans and Rādjputs, whose social status was very high, the democratic tenets of Sikhism were less acceptable.

The sects and sub-sects of the Sikhs are numerous, but the main divisions are two: (1) the *Keshdhārīs*, otherwise called "Singhs", and (2) the *Sahjdhārīs*. The former represent the baptised and therefore more orthodox followers of Guru Govind Singh, while the latter were originally those who refused to accept his baptism and join the militant *Khālṣa*. There are several other sects of Sikhism, including the Akālīs (worshippers of Akāl, the Immortal, Timeless God), a militant organisation founded by Govind Singh, which still retains a characteristic martial ardour. The Sikh shrines are scattered over the greater part of the Pandjāb, but the better known among them are to be found in the Districts of Amritsar, Gurdāspur and Fīrūzpur, the holiest of them being the Golden Temple of Amritsar and Nankāna Ṣāhib (near Lahore) the birthplace of Nānak, where annual fairs, attended by a very large number of Sikhs, are held.

3. History to 1849.

Sikhism was founded, like Buddhism, as a protest against the spiritual despotism of the Brahmans and as a revolt against the restrictions of the caste system and the exaggeration of Hindu ritual. It aimed at teaching social equality and universal brotherhood, abolishing sectarianism and denouncing superstition. Nānak, the founder of the creed, was born of Khatri parentage in 1469 at Talwandī (now called after him Nankāna), a small town not far from Lahore. He did not receive much school education, yet he was from his early youth given to meditation and original thinking, and was, like the Arabian prophet, gifted by nature with strong common sense. He showed an aversion from all sorts of worldly pursuits and it was with some difficulty that he was persuaded by his father to go to Sulṭānpur (at present in the Kapūrthala District to the south-east of Amritsar) to enter the private service of Nawāb Dawlat Khān Lodi, the governor of the province. The Nawāb appointed him storekeeper to his household, and he performed his official duties for several years to the satisfaction of his employer. In his leisure hours he retired to the jungle for meditation, and tradition says that in one of these devotional excursions he was taken in a vision to the Divine Presence and there received his mission to preach to the world that "there is but one God whose name is True, the Creator, devoid of fear and enmity, immortal, unborn, self-existent, great and bountiful". Nānak now left the service of the Nawāb and became (at the age of 30) a public preacher. He began a series of tours in the course of which he visited all parts of India, particularly the sacred places of the Hindus and shrines of Muslim saints. Wherever he went he held controversies with priests and *shaykhs*, demonstrated the futility of their belief in dogmas and rituals, and taught the necessity of self-denial, morality and truth. He is also said to have travelled through Persia and to have visited Mecca and Baghdād. In Persia and Afghānistān he gained converts and even established dioceses (*mandjīs*), notably at Būshahr and Kābul (Sewaram Singh Thapar, *Life of Guru Nanak*, Rawalpindi 1904, 73). It is not stated, however, whether he knew enough Persian or Arabic to be able to preach to the people of these Islamic countries. The statement of the *Siyar al-muta'akhkhirīn* that Nānak studied Persian and Muslim theology with one Sayyid Ḥasan has been rejected by the modern Hindu and Sikh critics. "This", says one of them, "seems to be an effort on the part of a Muslim writer to give the credit of Nānak's subsequent greatness to the teachings of Islām" (G.C. Narang, *The transformation of Sikhism*, Lahore 1912, 9). Macauliffe, however, was inclined to accept that Nānak was "a fair Persian scholar" (*The Sikh Religion*, i, 15), but did not mention the source whence he received his instruction in that language.

For the last ten years of his life, Nānak settled at Kartārpur, a village founded in his honour by a very rich sympathiser on the bank of the Rāwi, where he continued to preach his new religion to the numerous visitors whom his piety attracted from far and wide. He died at the age of 70 in 1539, leaving behind him a fairly large number of disciples (*sikhs*) and two sons, one of whom named Sri Čand founded the Udāsi sect (see above, section 2).

Shortly before his death, Nānak nominated one of his devoted followers named Angad (a Khatri like himself) to succeed him as *guru* (apostle) of the Sikhs. After performing the ceremony of nomination, he declared that Angad was as himself and that his own spirit would dwell in him. Nānak had already preached the doctrine of metempsychosis, but this particular declaration gave rise to the belief among the Sikhs that the spirit of Nānak was transmitted to each succeeding *guru* in turn, and this is why all of them adopted *Nānak* as their *nom-de-plume* in their compositions. Guru Angad occupied the office of apostle for

13 years until his death in 1552. Tradition ascribes to him the invention of the Gurmukhi characters in which the sacred writings of the Sikhs have been preserved, but it has been pointed out, notably by Grierson and Rose, that the Gurmukhi script is of a different and earlier origin (*JRAS* [1916], 677; H.A. Rose, *A glossary of the tribes and castes of the Punjab*, Lahore 1911-19, i, 677). The tradition may have arisen from the fact that Guru Angad *adopted* the script in recording the life and compositions of Nānak.

Amar Dās, the third *guru* of the Sikhs, was nominated by Angad himself. His ministry lasted 22 years (1552-74), and was marked by his taking the first steps towards a religious and social organisation of the Sikhs. Missionary work was undertaken by him in a systematic manner; over twenty dioceses (*mand̲j̲īs*) were established in various parts of the country, where some of his zealous disciples preached the gospel of Sikhism. In order to promote feelings of equality and brotherhood among the increasing number of Sikhs, he maintained a public refectory (*langar*) where all ate together without distinction of caste or creed. Amar Dās cultivated friendly relations with the Mug̲h̲al Emperor Akbar, who visited him at his own residence in Goindwāl (on the Beās) and granted him a large estate. This very much enhanced his prestige and helped to increase the number of fresh converts. He kept up the spirit of Nānak in his own ethical teachings, denounced the superstitious customs of the Hindus, particularly the practice of widow-burning (*satī*), and enjoined re-marriage of widows.

Amar Dās was succeeded by his favourite disciple and son-in-law Rām Dās, who propagated the tenets of Sikhism with a still larger measure of success. He had the good fortune to find in Akbar a warm admirer who was ever keen to do him favour. The Emperor granted him (in 1577) a large plot of land in which he began the excavation of the sacred tank (meant for the devotional ablutions of the Sikhs) which was afterwards named *amrit sar* "the pool of nectar". Around the tank the Guru founded a small town, which he called after himself Rāmdāspur and which subsequently grew into the now-flourishing city of Amritsar. The construction of the tank was completed by his son Ard̲j̲an the fifth *guru*, who, in the midst of it, founded the *Har Mandar*—the temple dedicated to God—as a common place of worship for the Sikhs. To Europeans it is now known as "the Golden Temple of Amritsar". The Guru declared that "by bathing in the tank of Rām Dās, all the sins that man committeth shall be done away, and he shall become pure by his ablutions" (Macauliffe, *op. cit.*, iii, 13). Thus was created a Mecca for the Sikhs, a centre for their national life.

Ard̲j̲an succeeded his father in 1581, and henceforward the office of Guru became hereditary. Ard̲j̲an took further steps to organise the Sikhs as a community. The greatest service that he rendered to the cause of Sikhism was the compilation of the *Granth*, the sacred book of the Sikhs. Guru Angad had already committed to writing the life and compositions of Nānak; Ard̲j̲an carried the work further and added thereto the hymns of the next three Gurus, which he carefully collected. To these he added his own numerous compositions along with considerable extracts from the writings of several Hindu and Muslim saints anterior to Nānak. "It was one of the Guru's objects to show the world that there was no superstition in the Sikh religion, and that every good man, no matter of what caste or creed, was worthy of honour and reverence" (Macauliffe, *op. cit.*, iii, 61). The volume thus compiled by Guru Ard̲j̲an (completed in 1604 after some years of labour) is called the *Ādi Granth* as distinguished from the *Dasam Granth* or the Granth of the tenth Guru (see below).

Ard̲j̲an was an ambitious and enterprising leader. He combined business with spiritual guidance and deputed *Masands* (collectors or agents) to various districts of the country to realise the Guru's dues, which so far were only voluntarily offered by the disciples. This brought him wealth and with it pomp and show. He styled himself *sačā pād̲s̲h̲āh* "the true King", which clearly marks his ambition for political power. He encouraged commercial enterprise among his disciples, and sent them not only to various parts of India but also to Afg̲h̲ānistān and Central Asia for purposes of trade and propagation of the Sikh faith. In 1606, Ard̲j̲an financially helped Prince K̲h̲usraw who had rebelled against his father, the Emperor D̲j̲ahāngīr. After the defeat of the Prince, the Guru was imprisoned, by the Emperor's command, at Lahore, where he shortly afterwards died.

During the Guruship of Ard̲j̲an's son and successor Hargovind (1606-45), Sikhism made a great advance. The first four Gurus were peaceful teachers of quietism and self-denial, but Ard̲j̲an initiated the policy of secular aggrandisement, while Hargovind openly adopted active resistance, which marks the beginning of the military career of the Sikhs. He was by nature a soldier, passionately devoted to the chase and manly games. Systematic collection of tithes and offerings had made him extremely rich, and he was not slow to assume kingly authority. He cherished a hatred of D̲j̲ahāngīr, to whom he ascribed the death of his father; a desire for revenge was certainly one of the causes of his resorting to arms. He enlisted in his service a number of outlaws, malcontents and freebooters, "built the stronghold of Hargovindpur on the Beās and thence harried the plains. He had a stable of 800 horses; three hundred mounted followers were constantly in attendance upon him, and a guard of sixty matchlock-men secured the safety of his person" (J.D. Cunningham, *A history of the Sikhs*, ed. H.L.O. Garrett, Oxford 1918, 56). The alarming reports of the Guru's military organisation reached the Emperor, who summoned him to his court and ordered his internment in the fort of Gwāliyār. He was released after some time, but the imprisonment gave him a further cause of resentment. Soon after the death of D̲j̲ahāngīr and the accession to the throne of the Emperor S̲h̲āhd̲j̲ahān, Hargovind assumed a defiant attitude and took up arms against the government. In the course of six years, he thrice defeated the troops sent against him by the governor of Lahore. But he feared vengeance on the part of S̲h̲āhd̲j̲ahān and retired to the hills, where he lived unmolested until his death in 1645.

Under Hargovind, the Sikh faith was greatly transformed. They ceased to be mere recluses, and their Guru was no longer a mere spiritual guide, but a military leader as well. They felt their strength and saw the possibility of future political power.

Hargovind was succeeded by his grandson Har Ray, who was, unlike his grandfather, of a retiring nature. He had intimate friendly relations with Dārā S̲h̲ikōh [*q.v.*], the eldest son of S̲h̲āhd̲j̲ahān, and in 1658, when Dārā wandered in exile pursued by the hostile troops of his younger brother Awrangzīb, Har Ray assisted him in crossing the Beās and reaching a comparatively safe locality. Of course, he incurred the displeasure of Awrangzīb, who summoned him to Dihlī to answer for this affront. He sent on his own behalf his son

Rām Ray who was detained at the imperial court as a hostage to insure the peaceful conduct of his father. Har Ray died in 1661 and his younger son Har Kis̲h̲an (a child of six) succeeded him. His right to the Guruship was disputed by Rām Ray who laid his own case before Awrangzīb. The infant apostle was invited to Dihlī to settle the dispute with his brother. There he was attacked by smallpox and died (1664).

There followed a struggle for succession after the death of Har Kis̲h̲an, and it was after much opposition that Tegh Bahādur, son of Hargovind, was acknowledged as Guru from among a score of candidates for the pontifical throne. His opponents continued to assert their claims, and some of them were even set up as rival Gurus. Tegh Bahādur retired, in some bitterness, to the Siwālik Hills and there founded Anandpur, a town which played a part of some importance in the subsequent annals of the Sikhs. Further, he set out on an extensive tour in India, visiting the Deccan and the Eastern Bengal, where Sikh centres already existed. In the course of his travels, he resided for some time at Patna, the seat of one of the main centres (*tak̲h̲ts*), where his son Govind Ray, the future Guru and the real founder of the political power of the Sikhs, was born (1666). Tegh Bahādur's influence as Guru extended as far as Ceylon in the south and Assam in the east. After a time, he returned to the Pand̲j̲āb, where he "maintained himself and his disciples by plunder". He "gave a ready asylum to all fugitives and his power interfered with the prosperity of the country" (Cunningham, *op. cit.*, 64). The imperial troops marched against him, and he was made prisoner and brought to Dihlī, where he was put to death by the order of Awrangzīb (1675). The popular story is related in the Gurmukhi chronicles that, while in the presence of the Emperor, the Guru prophesied the coming of the English and destruction of Mug̲h̲al power at their hands. The words uttered by him on this occasion "became the battle-cry of the Sikhs in the assault on Dihli in 1857 under General John Nicholson and thus the prophecy of the ninth Guru was gloriously fulfilled" (Macauliffe, iv, 381).

The figure of Tegh Bahādur's son Govind Ray, who was saluted as Guru after the execution of his father in 1675, is perhaps the most prominent in the history of the Sikhs. He succeeded to the apostleship as a mere boy, but ended his career by completely transforming a community of mere devotees into a nation of warriors who were destined to rule the Pand̲j̲āb for nearly a century. The violent death of his father seems to have left a lasting impression on his young mind, and he cherished a bitter hatred towards Awrangzīb. But the power of the latter was too great to allow the possibility of revenge. He was therefore compelled to retire to the hills in order to be left in peace and receive the training necessary to befit him for the task of leadership. For twenty years he lived there, occupying himself in hunting and acquiring a knowledge of the sacred languages of the Muslims and Hindus and their religions. He nurtured his feeling of vengeance and formed his plans for the future with a view to destroying the power of the Mug̲h̲als. He set about the task of uniting the Sikhs into a nation by promoting amongst them feelings of democratic equality. He admitted both high and low into his fold and conducted a vigorous war against the caste system. In order to create uniformity in spirit as well as in form, he instituted the ceremony of initiation or baptism called *pahul*. The suffix "Singh" was to be added to the name of every baptised Sikh, the Guru himself to be called in future Govind Singh. He denominated his initiated disciples the *K̲h̲ālṣa* (the pure, elect, liberated) or *K̲h̲āliṣa* (in the past, considered to stem directly from Arabic *k̲h̲alaṣa* "to be pure", but now thought to come from *k̲h̲āliṣa* "land belonging directly to the ruler").

By his prolonged residence in the hills, Govind Singh wanted, besides carrying on his proselytising activities uninterrupted, to secure the assistance of the numerous hill chiefs against what he called the tyranny of Muslim rule. But in these objects he entirely failed, for the hill Rād̲j̲ās whose dynasties had ruled independently since time immemorial generally resented democratising principles being taught to their subjects and they unanimously resisted the religious propaganda of Govind. Failing to secure their alliance by friendly means, he tried the experiment of force. From his retreat at Anandpur he led marauding expeditions into their territories carrying away all that he could lay his hands on. The Rād̲j̲pūt chiefs of Bilāspur, Katōč, Handūr, D̲j̲asrota and Nālagaṙh united to attack the Guru with an army of 10,000. He opposed them at the head of 2,000 of his followers, including 500 Paṫhāns whom he kept in his service, and won his victory at Bhangāni chiefly through the help of Sayyid Budhū S̲h̲āh, chief of Sādhora. Govind's power now increased; he had a number of retreats in the hills and his depredations in the adjoining territories grew more frequent and violent. The Rād̲j̲ās jointly appealed for help to Awrangzīb, who despatched orders to the governor of Sirhind to effect an alliance with them and attack the Guru. In the battle that ensued, he was defeated and took refuge in the fortress of Anandpur (1701). Here he was besieged by the imperial forces and the siege was prolonged. Provisions ran short and his followers deserted him. His family, including his mother, wives and young boys, effected their escape to Sirhind, where they were betrayed and the two children were put to death. Govind himself escaped in disguise, and with a few faithful followers fled to the fortress of Čamkawr (in the present district of Amballa) hotly pursued by the enemy. He was forced to leave Čamkawr and again fly for his life. He wandered in disguise from place to place until he reached the wastes of Bhatinda, halfway between Fīrūzpur and Dihlī. "His disciples again rallied round him and he succeeded in repulsing his pursuers at a place since called 'Muktsar' or the Pool of Salvation", constructed in commemoration of the Sikhs who fell in the action. For some time he settled at a place called Damdama halfway between Hānsī and Fīrūzpur, where he occupied himself in preaching and composing the *Dasam Granth* (see below), which is regarded by the Sikhs as supplement to the *Ādi Granth* compiled by Guru Ard̲j̲an. Meanwhile, Awrangzīb died and was succeeded by his son Bahādur S̲h̲āh I [*q.v.*], who, contrary to the policy of his father, sought to conciliate the Guru. He conferred upon him the military command of the Deccan whither he proceeded to assume his charge. But shortly after his arrival there, he was stabbed by one of his Afg̲h̲ān servants for some private grievance, and he died at Nānder on the banks of the Godāwari (October 1708). On his deathbed, he refused to nominate anyone to succeed him, but enjoined upon his disciples to look upon the *Granth* as their future Guru, and upon God as their sole protector, thus putting an end to the apostolic succession. Govind's end came before his object had been achieved, "but his spirit survived to animate the Sikhs with courage".

Govind Singh was succeeded, not as a Guru but as a military leader of the Sikhs, by Banda, a Rād̲j̲pūt

of Kashmīr belonging to the Bayrāgi order. Meeting Govind in the Deccan, he was converted to Sikhism and styled himself *Banda* or "slave" (of the Guru). Banda was charged by Govind to return to the Pandjāb and urge the Sikhs to avenge the murder of his children and unite to destroy Muslim despotism. The Sikhs "flocked to him, ready to fight and die under his banner". At heart, Banda was ambitious, and under the pretext of carrying out the orders of the Guru he sought to attain to political power. He began his operations in the Pandjāb by committing highway robberies, freely distributing the spoils among his adherents. This attracted many criminals—"scavengers, leather-dressers and such like persons who were very numerous among the Sikhs"—to his person. The Mughal power, after the death of Awrangzīb, was fast declining; constant struggle among his sons and grandsons for the throne left the Sikhs free to increase their power, and the criminal activities of Banda went unchecked. He proceeded, with an army of lawless freebooters, from town to town in the very neighbourhood of Dihlī, plundering and mercilessly slaughtering the Muslims in thousands. Prospects of plunder and the sacred duty of avenging the death of the Guru's children swelled the number of Banda's followers. The accursed town of Sirhind, where the children were done to death, was stormed by them in May 1710 and freely given to plunder. The Sikhs perpetrated horrible atrocities on the Muslim inhabitants of the town, whom they butchered without distinction of age or sex. They extended their destructive activities to the very walls of Dihlī. The Emperor Bahādur Shāh, who was away in the Deccan, was alarmed on hearing the reports of these outrages and forthwith hastened to the Pandjāb to make redress. The imperial troops defeated Banda, but he escaped to the adjoining hills. The death of Bahādur Shāh in 1712 was followed by a war of succession between his sons, from which Djahāndār Shāh came out successful. He was, however, murdered, after a short reign of eleven months, by his nephew Farrukhsiyar [*q.v.*], who now ascended the degraded throne of Dihlī. These commotions were favourable to the Sikhs, who once more began to ravage the country under the notorious Banda. Farrukhsiyar charged ʿAbd al-Ṣamad Khān, governor of the Pandjāb, to put a stop to the atrocities of the Sikhs. With a large army he pursued Banda, who was at last besieged in the fortress of Gurdāspur on the Rāwi. Finally, he was seized, made prisoner and brought to Dihlī where he was tortured to death (1716).

The defeat and death of Banda was followed by a period of reaction and a severe persecution of the Sikhs in the reign of Farrukhsiyar. They were declared outlaws; many of them abandoned their faith, but the more loyal among them were forced to take shelter in the hills and forests. Successive governors of the Pandjāb, notably Muʿīn al-Mulk, better known as Mīr Mannū, carried out the repressive policy of Farrukhsiyar, and for a time it seemed that the Sikh community would become extinct. But the Mughal power was rapidly decaying, and in the Pandjāb it was more notably weakened by the frequent invasions of Aḥmad Shāh Abdālī or Durrānī [*q.v.*]. The distracted state of the province was favourable to the Sikhs, who began gradually to reappear and reorganise themselves. They built several fortresses and acquired wealth by freely plundering the defenceless towns. The centre of their national activities was Amritsar, which they greatly enriched and fortified. Prince Tīmūr, who governed the Pandjāb in the name of his father Aḥmad Shāh Durrānī, was hostile to the Sikhs. In 1756 he attacked Amritsar, demolished the Har Mandar and filled the sacred tank with the debris. The Sikhs mobilised in large numbers to avenge this outrage, and succeeded in driving the Prince out of Lahore, which they temporarily occupied. Their military leader Djassā Singh Kalāl ("the brewer") struck coins in his own name with a Persian inscription. But the advent of the Marāthās under Raghoba (in 1758) made them retire from Lahore, and brought the ferocious Aḥmad Shāh for the fifth time to the Pandjāb. He inflicted a crushing defeat on the Marāthās in the memorable battle of Pānīpat [*q.v.*] (1761). The Sikhs became active as soon as he left the Pandjāb and regained their lost power. He therefore came back with the definite object of breaking their power and recover his territories. In a desperate battle fought near Ludhiāna (1762), he totally defeated them with heavy carnage, but he had soon to leave the Pandjāb in order to suppress a rebellion at Ḳandahār. The Sikhs recovered soon, and in 1763 they defeated Zayn Khān, the Afghān governor of Sirhind, which they sacked and destroyed. Once more they took possession of Lahore, and this time their hold was more permanent. They assembled at Amritsar and proclaimed the regime of the Khālṣa as supreme in the Pandjāb (1764). The sovereign authority was vested in a national council called the *Gurumatta*. The coins of the Sikh commonwealth bore the Persian inscription:

Dīg u tīgh u fatḥ u nuṣrat bī dirang
Yāft az Nānak Gurū Govind Singh
"Guru Govind Singh received from Nānak
The sword, the bowl and victory unfailing"

(Khazan Singh, *The history and philosophy of the Sikh religion*, Lahore 1914, 264).

Now that the common danger which confronted the Sikhs was removed, they became disunited and divided into a number of states or confederacies called *Misals*. These *Misals* were twelve in number, governed independently of each other by their respective chiefs (*Sardār* [*q.v.*]), who were under no supreme authority and had nothing in common with one another except their religion. "They were almost constantly engaged in civil war, grouping and regrouping in the struggle for pre-eminence". They were "loosely organised and varied from time to time in power and even in designation". After thirty years of this variable rule in the Pandjāb, there appeared on the scene a strong man who united these jarring confederacies into a compact sovereignty. This was Randjīt Singh.

Randjīt Singh's father Mahā Singh was the chief of the Sukerchakia *Misal* with its headquarters at Gudjrānwala, 40 miles to the north of Lahore. At the age of 12 (in 1792), he succeeded to his father. He gradually rose to power through his personal character and genius with which he was gifted by nature. In 1799 he acquired possession of Lahore through a royal investiture granted to him by Zamān Shāh (grandson of Aḥmad Shāh Abdālī), who was still looked upon as virtual ruler of the Pandjāb. Amritsar was reduced by Randjīt Singh in 1802. The possession of Lahore and Amritsar, the two most important towns of the Pandjāb, made his personality conspicuous and enlarged his prestige. He assumed the title of Mahārādja and continued to extend his possessions until gradually he annexed all the *Misals* to his dominions. With the English, whose territories now extended to the Sutlej, Randjīt Singh had friendly relations. A treaty of alliance was concluded between the two powers in 1809, which Randjīt Singh very faithfully observed. He organised a powerful military force

trained by some of the European generals, notably French ones, who had previously served under Napoleon, and who after Waterloo came to the Pandjāb to enter the service of the Mahārādja. With this force, he was able to reduce the whole of the Pandjāb, annex Kashmīr (in 1819) and Peshāwar (in 1834). He died in 1839, leaving behind him a consolidated kingdom extending from the Sutlej to the Hindu Kush, but no one among his heirs was capable enough to manage it. Three of his sons ascended the throne in rapid succession; conspiracies were rife and led to assassinations, civil war and enormous bloodshed. The army had become uncontrollable and spread terror throughout the country. The court at last found an outlet for its activities by inciting the army leaders to cross the Sutlej and invade the British territory. This led to the first Sikh War (December 1845), in the course of which the Sikhs were defeated by the British general Sir Hugh (afterwards Lord) Gough in four successive battles fought at Fīrūzshāh and Mudkī (in the present district of Fīrūzpur) and ʿAliwāl and Sobrāon near Ludhiāna (January-February 1846). "The victory opened the way to Lahore, which was promptly occupied by the Governor-General" (sc. Sir Henry Hardinge). The Sikh Durbār accepted the British resident (Sir Henry Lawrence) to act as President of the Council of Regency to the minor Mahārādja Dalīp Singh, son of Randjīt Singh. The revolt of Diwān Mūbrādj, governor of Multān, against the government at Lahore (in 1848) tempted the Sikhs again to take up arms against the British. War was consequently declared, and Lord Gough inflicted two heavy defeats on the Sikh army, first at Čiliānwāla and then at Gujrāt (early 1849). The Pandjāb was declared annexed to the British dominions and Sikh rule came to an end.

The dethroned Dalīp (Duleep) Singh was given a Government of India pension, and later retired to England and the life of a country gentleman, becoming a Christian and dying in 1893.

(Muhammad Iqbal*)

4. History after 1849.

Having experienced the fighting qualities of the Sikhs, the Chief Commissioner of the Pandjāb after 1852, Sir John Lawrence, recruited Sikhs in considerable numbers into the British Indian Army. These Sikh troops, as also the Sikh *djāgīrdārs* or landowners who had retained part at least of their holdings or had received compensatory pensions, remained firmly loyal to the crown during the Sepoy Mutiny of 1857-8, with the Khālṣas forming nearly one-third of the 60,000 troops raised by the British at that time. After this, the proportion of Sikhs in the Army increased. New regulations requiring Sikh soldiers to observe the external symbols of the Khālṣa order, such as letting beards and hair grow long, played a notable role in the Sikhs' retention of their separate identity at a time when some European observers thought Sikhism likely to decline and disappear.

In the second half of the 19th century, there was a perceptible ferment among the Sikhs, with various movements aiming at religious, social and political revival. Thus the Nāmdhārīs or Kūkās, followers of Baba Ram Singh, formed a millenarian and iconoclastic movement in the central Pandjāb, objecting *inter alia* to Muslim butchers killing cattle for beef, and their activities culminated in British military action in the Ludhiana District against the Kūkās in 1872 and the exiling of Baba Ram Singh to Burma. The Singh Sabha movement which began towards the end of the century was largely concerned with religious and educational reform. It reflected a certain feeling of threat from conversions to Christianity and, to a lesser extent, to Islam, but much more from the militant Hindu Arya Samaj movement. The Singh Sabha reformers welcomed English education, and the Indian government founded several Sikh schools and colleges in different parts of the Pandjāb. A reflection of a new interest by European scholars in Sikhism as a religious phenomenon was M.A. Macauliffe's 6-volume study, *The Sikh religion, its Gurus, sacred writings and authors* (Oxford 1909, repr. Delhi 1963, 1986). The reformers also advocated the use of Pandjābī [*q.v.*] in Gurmukhi script rather than of Urdu or of Hindi in Devanagiri script.

During the First World War, recruitment for military service was higher amongst the Sikhs than amongst any other group in India, and Sikhs fought courageously in France, East Africa and the Middle East. There was, however, unrest among some sections of the Sikh community back in the Pandjāb, initially fanned by a new organisation, which had originated within the Sikh diaspora on the west coast of North America, the so-called Ghadarī ("Mutiny") movement; acts of terrorism led to police and military repression in 1915. Between 1918 and 1947 the Sikhs were involved in intense political activity. Initially, there were clashes with the Government of India over control of the *gurdawaras* or Sikh temples, and there ensued from 1921 onwards the so-called "Third Sikh War", a mainly, but not wholly, non-violent struggle, led by the radical Akālīs ("immortals"), basically a movement of the masses rather than of the professional and landed classes. Their demands were not assuaged by the 1925 Sikh Gurdawaras Act which handed over the historic shrines to a 160-man elected body. Politically articulate Sikhs now became concerned with the question of adequate representation of the community within the Pandjābī membership of the Council of State and the Legislative Assembly.

During the Second World War, Sikhs again cooperated with the Indian government, but with less enthusiasm than previously. The Akālīs in general favoured the unity and integrity of the subcontinent, as did the Indian National Congress, but if there was to be a separate Pākistān, they wanted a separate Sikh "Khālistān" also. A substantial number of Sikh prisoners-of-war joined the Japanese puppet organisation, the Indian National Army.

The Partition of August 1947 divided the Sikhs geographically, but with the greater part of them in India. Most of the Sikhs now within Pākistān, some 2 ½ millions, emigrated to India, displacing Muslims fleeing from East Pandjāb. In 1951 Sikhs formed about 35% of the Indian Pandjāb State, with Hindus over 62%. The scale of Indian government compensation for refuges was low and created much hardship. The central government refused to give any statutory weighting for a religious minority like the Sikhs, and also refused to extend to the Sikh scheduled (i.e. lowest) castes the concessions and reservations given to the Hindu scheduled castes (subsequently granted in 1956). A general sense of grievance increased Sikh demands for an autonomous Sikh state. In 1966 it was agreed to make a separate Sikh majority state in the Indian Union, Pandjābī-speaking and some 56% Sikh. But this proved inadequate to still discontent, and in 1973 the Akālī Dal party passed the so-called Anandpur Resolution demanding greater autonomy. Relations with New Delhi continued to deteriorate, and in June 1984 the Indian Army assaulted a group of radical Sikhs entrenched within

the Golden Temple complex of Amritsar, with estimated total casualties of 5-6,000. It was a Sikh who, in retaliation, murdered the Indian Prime Minister Mrs Indira Gandhi in October 1984. The movement for an autonomous Khālistān continues.

ṢIḲILLIYA or Siḳilliyya, Arabic adaptation of the Greek Σικελία (with the variants noted by Yāḳūt, iii, 406), as a name of the island of Sicily (but sometimes used to indicate the city of Palermo alone). Al-Bakrī (482, § 812), following the classical sources, gives the mythic etymology evoking the eponymous Sīkūl(os), brother of Īṭāl(os), while also supplying, in what is actually a considerably distorted form, the ancient Greek name Τρινακρία. Al-Ḥimyarī, who follows him in these data, retains for his part, implicit in a verse of Ibn Rashīḳ (d. 463/1071 [*q.v.*]), the false etymology, owed to the philologist Ibn al-Birr [*q.v.*], which explains the name as derived from συκῆ and ἐλαία, respectively "fig-tree" and "olive-tree".

1. History and culture.

(a) *The image of Sicily among the Arabs*

Geographical information concerning Muslim Sicily, as supplied by the sources (about a score of them), varies perceptibly, from a formal point of view, according to the character of the sources themselves: works of cosmography or of descriptive geography, toponomastic catalogues or accounts of journeys. In dimension it varies from a few lines giving information in an almost casual manner, to the "medium" account, typical of the general treatises but also sometimes specialised glossaries, and finally to the wide pictures which we owe to Ibn Ḥawḳal and Ibn Djubayr [*q.v.*]. A special place should be reserved for the work of al-Idrīsī [*q.v.*], who excels over all the other writers in the systematic nature of his survey, the only example of a genuine description, accompanied by all the available detail, of Sicily in the mid-6th/12th century. Furthermore, the case of al-Idrīsī, the accredited geographer at the Norman court of Roger II, as well as those of Ibn Ḥawḳal and Ibn Djubayr, who visited the island in 362/972-3 and 578/1184-5 respectively, serve to underline the fact that the greater, and often the best part of the available information concerning the Sicilian environment of the time, derives principally from writers who had the opportunity of experiencing it personally (it is for this reason that the journey through Sicily of Abū Ḥāmid al-Gharnāṭī in 511/1117, and al-Harawī's visit to Etna after 568-9/1173, have left no trace other than the disappointment, expressed by the latter, of not having seen a single *samandal* dive into the crater, a spectacle which had been described to him). For the rest, from al-Muḳaddasī to the authors of the 8th/14th century, it should be stressed that their testimony, essentially indirect, is of interest only in its capacity to surprise us with unexpected notions (such as the recollection of the Cyclops in the work of al-Bakrī, already mentioned for his familiarity with classical culture), or in that it conveys, according to the convention of word-for-word transmission, texts that have disappeared, as is done by Yāḳūt who often draws upon sources as specific as the *Ta'rīkh Ṣiḳilliya* by Ibn al-Ḳaṭṭā' [*q.v.*] and Abū 'Alī al-Ḥasan b. Yaḥyā (6th/11th century), while al-Ḥimyarī, for example, is largely dependent either on al-Idrīsī or on Ibn Djubayr.

Of general geographical observations concerning Sicily, the essential points are to be found among almost all the writers, who are aware of its triangular shape as well as its location, in relation either to Africa or to the Italian peninsula and to the smaller islands, who indicate, each in his own fashion, its dimensions and sometimes even the astronomical co-ordinates, who finally give details, and this is especially true of al-Idrīsī, of the distances from one locality to another. But the theme which takes precedence over all others, in the same context of physical geography, is without doubt that of Etna, the "mountain of fire" as the Arab authors call it, which with its imposing height, its perpetual snows, the chasm at its summit, the winds which reverberated there, the smoke and lava which it spewed out, could not but excite their curiosity and their imagination. It is for this reason that they stress the marvellous and mysterious aspects of these phenomena, which both astonish and enchant them, although they are concerned less with explaining them than with describing them, in varying degrees of detail.

Moreover the description of the landscape, brief though it is, clearly reveals admiration for everything which this island seems to possess in exceptional measure; it tends to evoke the notion of a land distinguished by pleasant localities and fertile soil, unbelievable abundance of water and richness of crops, in a word the prosperity of its numerous inhabitants, grouped according to al-Idrīsī in 130 major urban centres, without counting the villages and fortresses, of which al-'Umarī has meticulously compiled a list of 34 sites. As if in a refrain, the authors incessantly repeat their praise of a vegetation which spreads its richness in urban gardens as well as in mountain forests, reserves of wood for boat-building, or in the innumerable kitchen-gardens and orchards, supplying all kinds of vegetables and fruits. In this picture, supplemented by the mention of flourishing crops, wheat in particular, as well as pastures sufficient for the raising of substantial herds of cattle, the most striking feature is the presence, almost everywhere at this time, of hydraulic resources such that Sicily was never to enjoy in later times. This was rightly considered by the Arab authors themselves a considerable boon, and it is this which stands out in particular, to mention only two illuminating examples, from the scrupulous care which Ibn Ḥawḳal devotes to information concerning the water-supply of Palermo, and in parallel from the concern for meticulous precision with which al-Idrīsī, alone, sets out to describe the course of the rivers: Nahr al-Sulla, al-Ḳārib (= Belice), al-Wādī al-Malīḥ (= Salso), Wādī Mūsā (= Simeto), etc. With the single exception of Yāḳūt, however, the same authors seemed to be unaware of the fact that the origin of the prosperity owed to the development of agriculture, besides the favourable natural conditions, had

been the division into small plots of landed property which had been set in motion by the Muslim conquest, and finally, the work of the conquerors themselves, especially those of Berber origin, who were known for their agricultural skills. It is they who were responsible, among other things, for the introduction into this environment, where the crocus and the violet, according to al-Idrīsī, grew spontaneously, of "exotic" plants such as citrus fruits, cotton and dates, sugar-cane and the mulberry. This enrichment of the already varied vegetal repertoire of a land blessed with extraordinary fertility seemed to be symbolically illustrated by the silhouettes of thousands of windmills standing out against the sky, alternating with the battlements of numerous impressive castles.

If to this is added information regarding mineral products—the jasper and the sal ammoniac of Etna, the sulphur and the pumice-stone and, it is said, the gold of the same mountain, the iron in the neighbourhood of Messina and the oilwells near Syracuse—and finally regarding the fruits of the sea, the tunny and the coral in the Sea of Trapani for example, a glimpse of the economy of Arabo-Norman Sicily is genuinely seductive. It is a picture which is both established and brought to life wherever the authors uncover the traces of prolific activity on the part of craftsmen, and of an almost feverish circulation of merchandise, to the interior and with the exterior; where they indicate the existence of markets, work-shops and emporia, of warehouses and shops; where they evoke the coming and going of ships, Sicilian and foreign, in the ports, favoured sites of commerce. And while on this subject, too, it is al-Idrīsī who, in his methodical fashion, provides the most exhaustive information, mention should also be made in this context of the two texts, as brief as they are eloquent, in which Ibn Ḥawḳal, on the one hand, shows his concern for precision as he lists all the small businesses of the *sūḳ* of Palermo, and Ibn Djubayr, on the other hand, having just escaped from a terrifying shipwreck, turns to contemplate the spectacle of the port of Messina with "boats aligned along the quay, like a row of horses tethered in the stables".

Furthermore, these two travellers deserve credit for having left unique testimony regarding the social, and to an extent political reality of the island, without which the human geography of Sicily at that time would be almost unknown, and its image in the minds of the Arabs deprived of some essential traits.

It is known that they visited the place in totally different circumstances, Ibn Ḥawḳal at the finest hour of Kalbī domination, Ibn Djubayr at the zenith of the prosperity of Arabo-Norman civilisation. But it is also known that what gives their accounts a decidedly original and partially conflicting tone is the role played by personal temperament: rather cold and detached in the case of Ibn Ḥawḳal, endowed with an acute spirit of observation, but also sceptical and prejudiced, always ready to offer criticism, if not mockery and denunciation; enthusiastic and dreamy in the case of Ibn Djubayr, a man who believed absolutely in God and also in men, with an essentially optimistic and sociable disposition, with eyes always open to all things which could elicit either amazement or sympathy. This well explains, in the work of Ibn Ḥawḳal, the attention directed towards the urban reality of Palermo, the description of which is not only the most ancient but also the most detailed, such that nothing of importance could be added to it, with the exception of the names of the gates of the Khāliṣa [*q.v.*], by al-Muḳaddasī. But this also accounts for a series of remarks which he made regarding the people, which were so harsh that they gave rise to the suspicion that this traveller in the domain of the Kalbīs was nothing other than a spy acting on behalf of the Fāṭimids. It is, however, as a result of these passages that the document, which is both historical and literary, attains the highest quality: through mockery, applied to the incredible number of mosques (500!), and to the frivolous pride allied with hypocritical pietism of the Muslims of the city; through the disgust aroused in him by the military convents [see RIBĀṬ] on the seashores, which had become places of perversion and depravity, the haunts of ruffians and scoundrels; through denunciation of the ignorance and stupidity of school teachers; through the depiction, finally, of the absurdity of everyone, owed—he says—to the abuse of the onion, responsible for boundless material decadence, which had led to destitution, as well as to a return to barbaric customs.

Such an attitude, essentially hostile, is parallelled, although with naive traits of admiration, by that of the pious Ibn Djubayr, capable of perceiving anywhere the signs of the providence and the greatness of God, spontaneously disposed to appreciate the good deeds of men, to treat them with indulgence and even benevolence. The inevitable aversion to "worshippers of the cross", which is expressed from time to time in incantations, which are in fact rather lukewarm, does not prevent him from painting without prejudice a memorable picture of the Sicilian scene in the golden age that was the period of the Norman sovereigns. His experience in the island begins with his enchantment by the beauty of the surroundings of Messina, almost a terrestrial paradise with fruit-trees covering the slopes of the hills, but also with the surprise caused him by the liberality of King William II, paying on his behalf the tax demanded from shipwrecked Muslims. But it is in Palermo that Ibn Djubayr is impressed most of all, when he discovers the paradox of an Islamo-Christian community, living in harmony under the auspices of a régime of quite extraordinary tolerance. This spirit, which seems to permeate the relationships of social life, to such an extent that the foreign traveller perceives it in the amicable attitude of those who greet him, emanates from the court, or rather from King William himself. The portrait of this enlightened and refined monarch, a connoisseur of the pleasures of life, but also an Arabic scholar, a cultivated patron of philosophy and literature, simultaneously wordly and pious, guaranteeing freedom of religious observance to all, this portrait by the pen of Ibn Djubayr is surely the most striking eulogy ever made by a Muslim of a Christian historical individual. Nothing could better supplement it than the dazzling fresco which he paints of the monuments of the town, which he compares to Cordova, with noble buildings and the sumptuous royal palace, the elegance of gardens and stairways, the breadth of squares and streets, in short an architectural décor in the middle of which, on the night of Christmas 1184, he was able to see shining, like a jewel, with its flashing mosaics and stained glass windows of irridescent colours, the Antiochene Church (known as the Martorana). This vision came at an opportune time, to seal the representation, both charmed and charming, which Ibn Djubayr was to provide, towards the end of the 6th/12th century, of this "daughter of Andalusia", the affectionate epithet which he applied to Sicily.

(b) *The Arab conquest and domination*

The landing at Mazara, on 19 Rabīʿ I 212/18

June 827, of an army from Ifrīḳiya, did not only mark the beginning of the struggle which, over the course of the next seventy years, was to secure possession of Sicily by the Arabs, but also the culmination of a historical process which, since the middle of the first Islamic century, had affected the island to an ever increasing extent, in the context of the expansion of Islam throughout the Mediterranean region. The interest of the Arabs in Sicily may be traced back as far as their very first maritime experiments, when Muʿāwiya b. Abī Sufyān, at that time governor of Syria, conceived the idea of constructing a fleet. The first Arab incursion on the Sicilian coasts dates in fact from the year 31-32/652. Others followed over the course of a century, under the Umayyads, especially after the building of the naval dockyard of Tunis (79/698), but always with the sole objective of carrying off prisoners and booty, with the exception perhaps of the expedition planned by the governor of Ifrīḳiya ʿUbayd Allāh b. Ḥabḥāb, and put into effect in 122/739-40 by Ḥabīb b. Abī ʿUbayda, who succeeded in laying siege to Syracuse but was obliged to abandon any notion of invasion. On the other hand, no raids are recorded during the second half of the 2nd/8th century, and this is to be explained, among other factors, by the defensive dispositions adopted in Sicily at this time by Byzantium. Furthermore the same policy was implemented in Ifrīḳiya by its new masters, the Aghlabids [*q.v.*], who, following their accession to power in 184/800, took all appropriate measures to establish, in their turn, a fortified coastal defensive system and simultaneously, at the initiative of the second *amīr*, Abu 'l-ʿAbbās ʿAbd Allāh, to equip a fleet. Reciprocal concern for safeguarding respective commercial interests, which favoured this attitude of restraint and caution, ultimately had the effect of establishing cordial relations between Byzantines and Arabs, which persisted into the first quarter of the 3rd/9th century and were given formal expression in the treaty signed, apparently, by the founder of the dynasty, Ibrāhīm b. ʿAbd Allāh, and renewed by his son.

The fatal rupture of this equilibrium took place in 212/827, following the outbreak of disturbances in Syracuse and their repercussions at Ḳayrawān. In fact, paradoxically it was the Byzantines who supplied the Aghlabids with the pretext for engaging in hostilities, and, as is not unusual in history, it was a somewhat banal incident which provoked them. The spark which ignited the gun-powder was the revolt, in Syracuse, of the Byzantine *turmarchos* or army commander Euphemius, who approached Ziyādat Allāh b. Ibrāhīm, the third Aghlabid *amīr* (201-23/817-38) to appeal for his intervention in Sicily. The decision in his favour was not unopposed, but the authority of Asad b. al-Furāt [*q.v.*] overrode all judicial scruples. The die was cast for an enterprise, the advance against Sicily, which was to be the last example of the *futūḥ* of Islam, where the spirit of conquest and the zeal of *djihād* played the same role. The achievement of Asad, appointed to lead an army of 10,000 men, transported by a fleet of some hundred vessels, was as brief as it was extraordinary. A respected jurist, without any military experience whatsoever, he succeeded brilliantly in his task, in spite of his advanced age. One month after the landing at Mazara, he scored a decisive victory over the Byzantine Balāṭa near Corleone, after which he traversed the island to unleash an attack on the capital, Syracuse; the siege had been in process for more than a year when Asad died in an epidemic. The Muslims disengaged from the project and withdrew towards the interior, where they took possession of Mineo and of Agrigento [see DJIRDJENT], then, after an unsuccessful attempt at besieging Ḳaṣryānnih [*q.v.*] (the modern Enna), they fell back as far as Mazara. Exposed to the attacks of the enemy, they were extricated from their predicament by reinforcements sent from Ifrīḳiya in 215/830, who were joined by a Berber adventurer, Aṣbagh b. Wakīl, known as Farghalūs, leading a band of Spanish mercenaries. It was as a result of these events that the Muslims were in a position to lay siege to Palermo, which surrendered on 30 Radjab 216/12 September 831.

In operations pursued with the object of conquering territory, which continued until the opening of the 4th/10th century, the Muslims had many difficulties to contend with, owing to the uneven physical terrain and to the strong defensive dispositions of the enemy, but most of all to the disturbances which broke out from time to time between Arabs and Berbers or between the different social classes. On the other hand, they often benefited from the leadership of able chieftains, such as the two Aghlabid princes Abū Fihr Muḥammad (217-20/832-5) and Abu 'l-Aghlab Ibrāhīm (220-37/835-51), of whom the latter in particular achieved some remarkable successes. It was he who, *ca.* 227/842, secured possession of the valley of Mazara, and thus of the western sector of the island, and immediately undertook the occupation of the eastern sector of Sicily, which culminated in the taking of Messina (228-9/843) and soon afterwards, between 231/845 and 234/848, in the surrender of Modica, Lentini and Ragusa. An experienced politician, who had succceded in the meantime in concluding an alliance with Naples and had taken the precaution of equipping a fleet, he had the good sense to entrust the conduct of the campaigns to professional soldiers, such as al-Faḍl b. Djaʿfar, the conqueror of Messina, and Abu 'l-Aghlab al-ʿAbbās, who at the same time, at Butera, on the southern coast of the island, inflicted a crushing defeat on the Byzantines. It is to this last-named, who replaced him, on his death in 237/851, as third *wālī*, that credit belongs for the capture, on 26 Shawwāl 244/26 January 859, of Ḳaṣryānnih, for thirty years the pivot of the Byzantine defensive system. With his successors, Khafādja b. Sufyān (247-55/862-9) and his son Muḥammad (killed in 257/871), the advance of the Muslims towards eastern Sicily, in spite of mutinies on the part of the troops, which cost the lives of both generals, became increasingly menacing, and led to the surrender of Noto (250/864) and of Troina (251/865), in addition to a number of incursions against Taormina, Catania and Syracuse. The privilege of capturing the capital itself was to fall much later to Djaʿfar b. Muḥammad al-Tamīmī, who on 15 Ramaḍān 264/21 May 878, after a siege of nine months, succeeded in taking Syracuse, the objective of Muslim attacks for the past fifty years. During the last quarter of the century the situation became somewhat chaotic, as a result of mutinies and civil wars, most of them centred on Agrigento and Palermo, but this did not prevent the Muslim forces from pursuing the occupation of the Demona Valley (at the north-eastern corner of the island), as well as launching raids against Catania and Taormina. It was the fall of this city, on 22 Shaʿbān 289/1 August 902, which finally crowned the Muslim conquest. The protagonist of this last act was the ninth Aghlabid prince himself, Ibrāhīm II (in power since 261/875), who decided to abdicate in favour of his son ʿAbd Allāh, in order to take charge, in his place, of military operations in Sicily.

Reduced henceforward to the status of a province of Ifrīḳiya, Sicily followed the same historical path as the colonial power, even when, in 296/909, the Fāṭimid movement dealt a death-blow to the Aghlabid dynasty. However, the reception accorded to the Shīʿī propaganda of the new masters, which was manifested in the support offered to the Berber element (concentrated in Agrigento) at the expense of the Arab element (localised in Palermo), was anything but favourable, with the result that the first lieutenant of the Mahdī ʿUbayd Allāh, Ibn Abi 'l-Khinzīr, soon had to be recalled. The refusal to compromise with heterodoxy led to the formation of an overt opposition, symbolised by a remarkable individual, a certain Aḥmad b. Ḳurhub, who, between 300/913 and 304/916, was the spokesman of the Sunnī restoration and of loyalism to the caliphate of Baghdād. The repression which ensued was soon succeeded by a period of stability, owed to the discretion of the governor Sālim b. Rashīd (304-25/917-37) and to an improved administration, until a fresh outbreak of disorder required his replacement by the energetic soldier Khalīl b. Isḥāḳ (325-30/937-41). The latter took the decision to build within Palermo the citadel of al-Khāliṣa, which did not suffice, apparently, to discourage all aspirations towards revolt, in view of the fact that the Fāṭimid caliph found it necessary, in 337/948, to transfer the administration of Sicily to al-Ḥasan b. ʿAlī al-Kalbī.

Thus began the amīrate of the Kalbids, which was to become hereditary, in response to the actions of the Fāṭimids who, after their transfer to Egypt (362/973), turned their attention away from Sicily. In the first half of the century, during which power was in the hands of the new masters, Sicily experienced the golden age of the Arab domination, both on the level of political prestige and military success, and of cultural prosperity (despite certain negative traits in the account, mentioned above, by Ibn Ḥawḳal, present on the scene in 362/972-3). It is to the two sons of the founder of the dynasty, Aḥmad b. Ḥasan (342-58/953-69) and ʿAlī b. Ḥasan (359-72/970-82), that the régime owes its attainment of the high point of its power: the former, who finally put an end to the disorder of eastern Sicily, where he suppressed, in 351/962, the revolt of Taormina, renamed al-Muʿizziyya in honour of the caliph of Cairo, regained control of Rametta and ravaged Messina, after the memorable naval engagement known as "the battle of the Strait"; the latter, who was responsible for the last great victory of the Muslims of Sicily over the Christians, near Rossano in Calabria, where he could boast of having been invited by the Byzantines themselves to join an alliance against Otto II, before dying in battle. Although peace and prosperity, subsequently assured and almost personified by Abu 'l-Futūḥ Yūsuf (379-88/989-98), continued even after the forced retirement of the *amīr*, who was paralysed by a stroke, the seduction of worldly pleasures proved fatal to his son and successor Djaʿfar (in power until 410/1019), to the extent that it even provoked a fratricidal war. With him and after him, nothing could halt the decline of the Kalbid dynasty, reduced under Aḥmad al-Akḥal (410-29/1019-38), to begging for the aid of the old Byzantine enemy, and to submitting, on the other hand, to the depredations of the Zīrids, lieutenants of the Fāṭimids in Ifrīḳiya since 362/973. With the last scion of the line of Abu 'l-Futūḥ Yūsuf, al-Ḥasan, known as al-Ṣamṣām (431-45/1040-53), Sicily underwent a period of anarchy in which political unity disintegrated and the amīrate collapsed, to the benefit of lesser principalities, by a process similar to that which affected the *mulūk al-ṭawāʾif* [*q.v.*] in Spain at the same time. Individuals bearing the title of *ḳāʾid*, appearing on the scene during this final act of the drama of the Kalbid dynasty, took control of a situation which was soon to be subject to the arbitration of the Normans.

(c) *The Norman and Swabian period*

In the conflict which erupted between these minor warlords, those who gained the upper hand were the *ḳāʾid* of Syracuse Ibn al-Thumna [*q.v.*], and his adversary Ibn al-Ḥawwāṣ [*q.v.*], based at Ḳaṣryānnih, from where he controlled the centre of the island. It was in fact the hostility between them which provoked the intervention of the count Roger d'Hauteville, who in February 1061 landed near Messina, coming to the aid of Ibn al-Thumna. Taking advantage of battles in which the Muslims expended their last remaining resources, and of which even the two rivals were soon to be the victims, Roger and his brother Robert le Guiscard, returning to the island in force in 1071, set about occupying the territory, starting with Palermo, which capitulated in January 1072. They were confronted however by stubborn resistance on the part of Benavert [*q.v.*], the last champion of Islam in Sicily, who succeeded in holding them in check for a quarter of a century, and fell in the naval battle of Syracuse in 1086. The conquest was completed in 1091, with the surrender of Noto, which marked the end of the period of Arab domination.

Having first encamped in the south of the peninsula, and now also established in Sicily, the Normans pursued the struggle against the Muslims at sea, with the imperialist aim of controlling the central Mediterranean. Especially under the long reign of Roger II (1111-54), who became in 1130 king of Sicily, of Calabria and of Apulia, with the aid of powerful fleets, led by such prestigious admirals as George of Antioch and Christodoulos, they succeeded in occupying, between 1135 and 1153, the entire coast of Ifrīḳiya, from Tripoli to Bone. And even after the advance of the Almohads had put an end to this adventure in North Africa, they renewed their attacks, under the last sovereign William II, this time against the Egypt of Ṣalāḥ al-Dīn (1169 and 1174).

As for the Arabs who became their subjects in Sicily, now that their effort as warriors for the *djihād*, after more than two-and-a-half centuries, was finally exhausted, their lot was to serve in the ranks of the conquerors, who furthermore appreciated their valour, to the extent of discouraging their conversion to Christianity. This integration of Muslims into the army was nothing other than an aspect of the singular symbiosis which the Norman sovereigns, engaged as they were as knights of Christianity, sought to establish among the various cultures present in their state, in a spirit of tolerance based on both enlightened and pragmatic considerations. It is certain that the Arabs who, instead of emigrating, chose to live under the conquest, were guaranteed rights of citizenship in the framework of a feudal system established by the new régime, with a status which varied according to the different conditions imposed at the time of the conquest. It is this which emerges from the information supplied by the documents known as *djarāʾid* (sing. *djarīda*), also called *plataea*, which set out the different legal and social levels, defining the status, on the one hand, of the people of the countryside, having limited rights, if not reduced to outright slavery, and on the other that of the urban classes, who enjoyed equal, or almost equal treatment to that of the other subjects. In addition,

there was an élite of senior officials, in the entourage of the prince himself, where their presence bestowed a living and distinctive stamp of Arabism upon numerous persistent aspects of Arab civilisation, such as the ceremonial of the court, the chancellery, the system of land taxation, and currency, with the technical language applied to them. The favour accorded to Arabism and to Islam by the sovereign, already made explicit in the writings of al-Idrīsī with regard to Roger II, is also a theme, this time in reference to William II, in the text, mentioned above, of Ibn Djubayr, the richest Arabic literary source available, with its somewhat contradictory testimony, for the Arabo-Norman century, a period during which the Arabo-Muslim community of Sicily, neutralised from a political point of view, succeeded against all expectation, and albeit precariously, in maintaining its religious, economic and cultural vitality.

The bloody riots of which the Muslims were victims in 1161 under William I, and especially in 1189-90, with the severing of the lineage of Hauteville, were only the prelude to the end. Embroiled in the struggles between Tancred of Lecce and Henry VI of Hohenstaufen, respectively bastard son and son-in-law of Roger II, who were rivals in the succession to William II, the Muslims, persecuted by the princes and harassed by the Christian feudal system, took to the countryside and formed a resistance movement, or even resorted to brigandage. Anarchy persisted even after the accession of Frederick II, who as late as 1219-22 was obliged to crush a revolt of Muslims occupying the citadels of Jato and Entella. The heroes of this episode were the character whom western sources call Mirabetto, and his daughter whose proud spirit lives on in a text recently discovered, with the account, both tragic and romantic, of her death. Since even after this the resistance of the Muslims persisted, being all the more dangerous in that its points of resistance were hidden in the mountains, Frederick II, determined to assert his authority over all opposition, did not hesitate to resort to the extreme measure of mass deportation. In stages and over a period of several decades, tens of thousands of Muslims were uprooted, to be resettled in Apulia. Detached from any kind of political or cultural life, Sicilian Arabism which had enjoyed such prosperity in the 11th and 12th centuries, lived out its final phase confined within the colony of Lucera, until its annihilation, in 1300, by the Angevins. In this regard, history can only draw attention to the sad paradox according to which the political and human presence of Arab Islam in Sicily was sacrificed in the interests of the state by a sovereign, none other shall Frederick II who, nourished by Arabic culture since his youth, never ceased throughout his life to express his sympathy for it and his interest in it.

(d) *Cultural life*

While it is quite natural to compare, from a cultural point of view, in the context of western Islam, Sicily with Spain, it should not be too surprising to find that the literary and scientific output of the Sicilian Muslims is not comparable in its entirety to that of the scholars and erudite writers of al-Andalus. It is not unreasonable to add that, while the loss of many of its products is certainly regrettable, the cultural gulf between Sicily and Spain is an established fact, which no new discovery, an improbable event in any case, is likely to modify significantly. In terms of an objective judgment of what has survived, it is impossible to avoid gaining the impression that this Sicilian Arabism, in the literary sphere, with a few exceptions, was as modest as it was rather impersonal. In other words, there is no likelihood of finding productions exceeding the limits of a literature which is quite traditional, in both Arabic and Islamic terms: technical works of *ḳirāʾāt*, of *ḥadīth* or of *fiḳh*, treatises of grammar and of philology, and finally a poetry fixed in conventional moulds. This observation serves moreover to stress the absence, from the works of the Arabic authors of Sicily, of specific traits, to the intense regret of those who would like to find here references to the society and environment of the time, considerably more concrete than the nostalgic echoes, as sentimental as they are vague, preserved in the verses of Ibn Ḥamdīs [*q.v.*] and of other exiled poets.

All this said, it is probably fair to acknowledge that, if Arab culture in Sicily did not have the same opportunity to develop as elsewhere, the blame for this belongs to a considerable extent to the eventful history of the Arabs in the island. It must therefore be admitted that the vicissitudes and instabilities of the Arab domination, in addition to its brevity (two-and-a-half centuries, compared with seven centuries of Andalusian Arabism), strongly affected any cultural prowess. So matters stood during the Aghlabid and Fāṭimid periods, until the turn of the 4th/10th century when, for the first time, the Kalbid amīrate succeeded in creating conditions favourable to the arts and the sciences, a state of affairs also achieved by the Rogers and Williams in the 12th century and, after them, in the first half of the following century, by Frederick II. The fact remains that it was the precariousness of the political situation, as exemplified by the Christian reconquest on the part of the Normans, which was responsible for the singular phenomenon of a mass emigration of scholars to the Maghrib, al-Andalus and Egypt, in a process contrary to that which formerly had often seen the arrival on the Sicilian scene of some itinerant scholar or another. The devastating effect which this diaspora of the Arab intelligentsia of Sicily was to have on its cultural patrimony was hardly to be compensated for by the attribute of al-Ṣiḳillī which these people continued to attach to their names. But if in fact it only survives as an exterior brand, making no contribution to the intellectual life of Sicily, it has proved sufficient, in modern times, to arouse the patriotic ardour of M. Amari, restoring the memory of these individuals, effaced as it had been, to the annals of the cultural exploits of Sicilian Arabism.

A survey of the latter, which would seek to do more than amassing purely onomastic information, must, however, be confined to generalities, otherwise preserving only the memory of persons and of works which have left an appreciable trace. Given the cultural conformism of Sicilian society in relation to the international Islamic community, it is important to stress specifically the primacy of *fiḳh* and the total ascendancy of Mālikism, emanating from Ḳayrawān, over the Sicilian centres of judicial training. This fact seems almost personified by the figure of Asad b. al-Furāt, the pioneer of the conquest and, at the same time, the first promulgator of the Mālikī system, in alternation with the more authentic version of Saḥnūn [*q.v.*], imported by his disciples with their commentaries on his celebrated *Mudawwana*: Yaḥyā b. ʿUmar (d. 291/903), Maymūn b. ʿAmr (d. 316/928) and Luḳmān b. Yūsuf (d. 318/930). With the latter, also worthy of mention is the eminent jurist Muḥammad b. ʿAbd Allāh b. Yūnus (d. 451/1059), but it was in the following century that judicial theory attained its high-

est point with the *imām* al-Māzarī (d. 595/1141 [*q.v.*]), the author among other works of a commentary on the *Muwaṭṭaʾ*, and also renowned as a traditionist on account of his *al-Muʿlim bi-fawāʾid Kitāb Muslim*. The fact that this last-named work has been preserved, fortunately, in a number of manuscripts, does justice to some extent to the genre of traditionist studies, represented by a host of specialists, whose writings have, however, not survived. A somewhat better fate seems to have been reserved for the other canonical branch of religious studies, that concentrating on the text of the Ḳurʾān, judging by the contributions of Ismāʿīl b. Khalaf (d. 455/1063), with his *ʿUnwān fi 'l-ḳirāʾāt*, and especially of Ibn al-Faḥḥām (d. 516/1122 [*q.v.*]), with an analogous treatise, the *Tadjrīd fī bughyat al-murīd*. The interest also taken in grammar by this scholar, as a disciple in Egypt of Bābashādh [*q.v.*], whose glosses to his famous *Muḳaddima* he transmitted, serves as a reminder of the favour constantly enjoyed in Sicily by philology, in the broadest sense of the term: from the pure grammatical science, inaugurated by Ibn al-Birr (see above) and cultivated subsequently by, among others, al-Kattānī (d. 512/1118), to lexicography, represented especially by the *Tathḳīf al-lisān* of the purist Ibn Makkī [*q.v.*], a precious document for the study of the dialect of Sicily in relation to Maghribī Arabic; and in addition, the art of poetry, imported from Ifrīḳiya, with its masterpiece *al-ʿUmda* by Ibn Rashīḳ (d. 462/1070 [*q.v.*]), and finally literary history, dominated by the figure of Ibn al-Ḳaṭṭāʿ (d. 515/1121 [*q.v.*]), probably the most erudite of Sicilian critics. Although like many others, he left Sicily when it fell under Christian domination, he remained loyal to the values of his own culture, seeking out its language and its texts, and following the particular objective of collecting its poetic remnants in the anthology *al-Durra al-khaṭīra*, which comprised accounts of 170 authors with 20,000 verses (!). It is, however, most regrettable that of such a rich repertoire all that is known is the minimal portion preserved by two abridgments and by al-ʿImād al-Iṣfahānī [*q.v.*] in a special section of his *Kharīda*; the loss is made worse by the fact that the gap is not filled at all by other sources, such as the *Mukhtār*, composed a little later by Ibn Bashrūn (d. 561/1166).

Partial and fragmentary though it is, the available documentation leads to the conclusion that Sicily, in terms of the production of verse, which first became known in the period of the Kalbids, generally remained within the parameters of the Arab tradition, whether through the number and the fecundity of poets, or rather of rhymers, or through the predilection, shared with the poetic language of other countries, for the themes of courtly panegyric or of affected description. Paradoxically, if any new upsurge in poetic activity took place, however limited, it was as a result of the upheaval caused by the Norman invasion, and this last rekindling of *djihād* followed by the epilogue, painful for many, of exile. Memory of and nostalgia for the homeland are consequently the inspiration for the most personal verses of certain poets, primarily Ibn Ḥamdīs (see above), the only one whose *Dīwān*, of 6,000 verses in total, has survived in its entirety, along with the other, considerably more modest, of ʿAlī b. ʿAbd al-Raḥmān al-Billanūbī (5th/11th century). But this was not an absolute rule, since there were writers who gladly adjusted to the new situation, not hesitating to exploit their talent to describe, in verses as precious as they are sincerely emotional, the favoured haunts of the princes: these include ʿAbd al-Raḥmān b. Muḥammad al-Butīrī (= of Butera), writing a poem devoted to the royal palace of Palermo, and ʿAbd al-Raḥmān b. al-ʿAbbās al-Iṭrābanishī (= of Trapani), celebrating the former charm of al-Fawwāra, the splendid villa of Roger II. A little later, under William II, is located the somewhat enigmatic figure of Ibn Ḳalāḳis (d. 567/1172 [*q.v.*]), a native of Egypt, whose verses, especially those contained in *al-Zahr al-bāsim*, dealing with his visit to the island in 564/1168-9, should be considered the last poetic echo in the Arabic language produced by Sicily.

Bearing in mind this quite considerable corpus of poetry, it is all the more surprising to note the almost total absence of prose, whether in the context of historiography or of parenesis or, more especially, of *adab*. Setting aside the anonymous *Chronicle*, known as the *Cambridge chronicle*, composed also in Greek, the only two attempts at a history of Arab Sicily, as already mentioned at the outset, have disappeared; all that remains is to mention the remarkable polygraph Ibn Ẓafar (d. 565/1170 [*q.v.*]), associated particularly with the pleasing treatise on good government, the *Sulwān al-muṭāʿ*, made famous by the translation of Amari under the title of *Conforti politici*. But it was outside the sphere of literary prose that Sicilian Arabism, enjoying the patronage of the Normans, achieved the exceptional, even unique success, represented by the often-mentioned work of al-Idrīsī, *Nuzhat al-mushtāḳ fī ikhtirāḳ al-āfāḳ*, otherwise known as *Kitāb Rūdjār*, from the name of the sovereign who inspired it, Roger II, whose deeply-felt admiration of the civilisation and, in particular, the science of the Arabs is well reflected in this compendium of geographical information. The extent to which Arab science, as well as the Arabic language, was a welcome guest in his court, is illustrated among other things by the (partial) translation into Latin, from an Arabic version, of Ptolemy's *Optics*, made by the *amīr* Eugenius, as well as the singular novelty of the installation at the royal palace of a hydraulic clock by the Andalusian sage Abu 'l-Ṣalt Umayya [*q.v.*].

This privileged situation did not remain isolated, but was fortunately revived under Frederick II who, with his spirit of universal tolerance, made of Palermo an incomparable crucible of civilisations, and of his court a cosmopolitan meeting-place of scholars, Latins and Greeks, Jews and Arabs. Among these at least two should be mentioned: Michel Scotus, already renowned as a translator at Toledo, who spent his last years, between 1227 and 1235, in the service of Frederick II, translating the zoological section of Avicenna's *Shifāʾ* (*Abbreviatio Avicennae de animalibus*), and composing two books on astrology and one on physiognomy; then Theodore of Antioch, who in 1236 replaced Michel Scotus in the office of royal astrologer, was entrusted with the composition of official letters in Arabic, and translated, under the title *De scientia venandi per aves*, an Arabic treatise by a certain Moamin on hunting with falcons, which Frederick II used for his own *De arte venandi cum avibus*.

The sympathy for Arabo-Islamic civilisation felt by Frederick II was not at all an episodic attitude nor was it circumscribed, as might be suggested by this somewhat eccentric treatise on falconry, but arose from his intellectual moulding and was nourished by his versatile scientific curiosity. The latter was applied equally to mathematics and astrology, optics and alchemy, physics and medicine, branches of knowledge all dating back, as is well known, to a Greek origin, but conveyed to the West through the intermediacy of the Arabs and of their language, blessed as it was with remarkable flexibility. Also striking is

the singular role which this sympathy played at the level of personal relations maintained, on the one hand, with the Muslim princes, starting with al-Malik al-Kāmil [see AL-KĀMIL], the Ayyūbid sultan of Egypt, and on the other, with the scholars, whom he habitually consulted with lists of questions. Thus, just as he had previously inquired of Michel Scotus regarding many cosmological subjects, he did not hesitate to seek the advice of Muslim scholars everywhere concerning a series of metaphysical questions, the *Masāʾil Ṣiḳilliya*, according to the title of the Oxford *unicum*, which conveys the responses of Ibn Sabʿīn [*q.v.*]; this evocation of the philosopher of Murcia puts the finishing touches to the eclecticism of a proto-Renaissance, personified by Frederick II. After him, his son Manfred remained loyal, although on a considerably reduced scale, to this tradition of respect for Arab culture, evidenced by the reception accorded in 1261 to the ambassador of the Mamlūk sultan Baybars [*q.v.*], the famous historian Ibn Wāṣil [*q.v.*], by the foundation at Lucera, according to the latter, of a "House of Science", and finally by the patronage extended to Hermann the German (Hermanus Teutonicus), in his capacity as translator of the Middle Commentary of Ibn Rushd [*q.v.*] on Aristotle's *Ethics*. A little later, when Charles of Anjou had eliminated the line of the Hohenstaufens in 1268, it was in the realm of medical science that Sicilian Arabism spoke its last word, even though in the voice of two Jewish scholars: Moses of Palermo, who in 1277 translated into Latin, under the title *De curationibus infirmitatum equorum*, the Arabic version (no longer in existence) of a text of Pseudo-Hippocrates; and Faradj b. Sālim of Agrigento (*alias* Moses Farachi, Faragut), translator, in 1280, of the *Taḳwīm al-abdān* (= *Tacuinus aegritudinum*) of Ibn Djazla [*q.v.*], but especially, in 1279, of the major treatise by al-Rāzī [*q.v.*], *al-Ḥāwī* (in Latin, *Continens*). A finer tribute on the part of Sicily to Arab science cannot be imagined.

(e) *Arab survivals in Sicily*

Exhausted now even in its cultural vitality, and with its political presence long since effaced, Sicilian Arabism was not reduced to silence. It continues, even in the present day, to speak through the medium of the products of its artistic talent, as well as through the innumerable echoes of its language, incessantly repeated in Sicilian demotic speech. Of this permanence, the most striking feature is the Islamic influence retained in the structure of habitat, urban and rural, best preserved in the minor centres, where later arrangements have overturned to a lesser extent the original urban plan. If it is not always easy to recognise in Sicilian towns the structure of a Muslim urban ambience, where a fortified space was separated from the residential quarters, and the latter in turn divided between the *madīna* and the suburbs (in Sicilian *rabati*), what is perceptible everywhere, whether in the case of towns or villages, is the typically Arab road network, with its hierarchy of principal and secondary routes, down to lanes and dead-ends, often blocked by small courtyards, denoted by the customary technical terms (*shāriʿ, darb, zuḳāḳ*), sometimes bizarrely altered.

But nowhere are the traces of Muslim civilisation in Sicily as visible as in the edifices of that architecture which is correctly described as Arabo-Norman, represented mostly in the West and concentrated especially at Palermo. And while it seems appropriate, in regard to this cultural revenge, to repeat the ancient dictum, that Arabia, defeated by arms, subjugated its conquerors with its genius, the Norman princes also deserve credit for not having imposed Gothic traits on the face of their capital, in place of the Oriental character given it by the Muslims. At the most, they were content to add to the Oriental stylistic elements, including those introduced by the Byzantines, such European features as could reasonably co-exist with them. The result of this eclecticism, the artistic equivalent of their tolerance in politics and religion, was the realisation of an original scheme without parallel in Europe and also distinct from anything to be found in the Orient.

Examples of this combination, where arabesques are mingled with mosaics and where the geometric marquetries of Muslim art alternate with the curvilinear polychromes of the Byzantine tradition, are evidently to be found principally in religious monuments, even if churches such as St. Jean of the Eremites (1132), St. Mary of the Amiral (1143), *alias* Martorana, and St. Cataldo (*ca.* 1160) and the Dome of Monreale (1174), display architectural and decorative forms which are clearly of Arab inspiration. These features include the compact frame of the building and the arrangement of spaces, the decoration of the exterior by means of blind interlaced arches, use of the so-called Moorish arch in all its varied forms, hemispherical cupolas covered in red plaster and crenellations of Arab type, friezes with engraved inscriptions, systems of niches (*muḳarnas* [*q.v.*]), culminating in the unique phenomenon, in the pavilion of the cloister of Monreale, of a jet of water gushing from a marble fountain modelled in the form of the trunk of a stylised palm-tree. These are the elements which are to be found in their purest state in secular buildings, freed from all religious constraints, such as those which the Norman princes built in the western and southern outskirts of Palermo, conceived as magical residences, surrounded by gardens and ornamental lakes, places of ease and recreation, "disposed around the town"—according to the image coined by Ibn Djubayr—"like a necklace on the bosom of a girl". Of these pearls, those which survive in a state which permits appreciation of the structure at least, are the Zisa (= *al-ʿAzīza* "the glorious" or "the precious"), begun by William I and completed by his son, the Cuba (= *al-Ḳubba*, "the cupola"), a pavilion of festivities, built in 1180 by William II, and near it the little Cuba, finally the castle of Maredolce or Favara (= *al-Fawwāra* "the bubbling", a term applied to a spring), which Roger II built on the foundations of the *Ḳaṣr Djaʿfar*, named after this Kalbid *amīr* (998-1019), but which is now no more than a ruin.

The splendour, which one would have to seek in vain among these remains, is to be found elsewhere, in the Palatine Chapel, constructed in the interior of the royal palace by Roger II, between 1132 and 1143. Here, the sumptuous ceiling in carved wood of the central nave, joined to the supporting walls by an ornate structure of corbels with *muḳarnas*, unfolds within twenty caissons a cycle of paintings which constitutes one of the most remarkable productions of Islamic art in this domain. They develop the theme of the apotheosis of the sovereign, represented in the context of his recreations: at the hunt, surrounded by knights and falconers, or seated at a banquet, amid a throng of cup-bearers and revellers, dancers and tumblers, chess-players and musicians. Around him it is the entire universe which seems to turn. Such is the meaning of this gorgeous fresco, animated with living scenes, populated by animals, real or mythical, realistic in the details of an evolved material culture and enigmatic in the evocation of symbols and of myths. It is the homage paid to the magnanimous

king by the imagination of art, matched by the tribute which scientific rationalism, through the talent of al-Idrīsī, was to offer him soon afterwards. While on the subject of artistic creation, this brief glimpse at "posthumous" Sicilian Arabism should not be concluded without mention of the superb cloak (now in Vienna), which was woven for the coronation of Roger II, an incomparable masterpiece of the royal workshop known as the *ṭirāz* [*q.v.*].

But the survival of Arab culture in Sicily has an aspect which is, if possible, even more durable: it is the extent to which, grafted onto the language of its people, it remains an inherent part of its life, in spite of the ravages of time. It is obvious that the provision of isolated examples would not be adequate to reproduce the real dimensions of a global process, which has penetrated the lexicon with words of general usage, such as verbs, adjectives or even phrases, but especially with a number of technical terms concerning either the natural environment, or the human universe, its activities and institutions. Leaving this task to the specialised works mentioned below, it will suffice to recall how many Sicilian family names are of Arab origin, and how many toponyms have left, in geography and in history, in short, in the culture of Sicily, an ineradicable Arab stamp (see 2. below).

Bibliography: On studies concerning Sicilian Arabism, see the two surveys by F. Gabrieli, *Un secolo di studi arabo-siculi*, in *SI*, ii (1954), 89-102, and U. Rizzitano, *Gli studi arabo-siculi: bilancio e prospettive*, in *Atti Accad. di Palermo*, ser. IV, xxxv (1975-6) [Palermo 1977], 167-183. The fundamental work, for any study of the Arabs in Sicily, is still that of M. Amari, *Storia dei Musulmani di Sicilia*, Florence 1854-72, 3 vols. (2nd ed. revised by C.A. Nallino, Catania 1933-8), which has textual support in the collection of Arabic texts of the same author, *Biblioteca arabo-sicula*, Leipzig 1857, with two Appendices, appearing in 1875 and 1887 respectively (2nd ed. revised by U. Rizzitano, Palermo 1988), and an Italian version, also by Amari, 2 vols., Turin-Rome 1880-1. To these may be added the texts and essays contained in the *Scritti per il centenario della nascita di Michele Amari*, 2 vols., Palermo 1910 (repr. Palermo 1990). Essential information is provided by the synthetic, but useful manual of A. Aziz, *A history of Islamic Sicily*, Edinburgh 1975, with good bibliographical apparatus. A wide-ranging synthesis exists in the chapters concerning Sicily (including art) of the volume by F. Gabrieli and U. Scerrato, *Gli Arabi in Italia*, Milan 1979, 35-105, 149-221, 307-42, 359-98, with bibl. On particular themes there are numerous essays by F. Gabrieli, most of them reprinted in *Pagine arabo-siciliane*, Mazara del Vallo 1986, and by U. Rizzitano, collected in the volume *Storia e cultura nella Sicilia saracena*, Palermo 1975. For the Ag̲h̲labid period, the survey by M. Talbi, *L'émirat aghlabide*, Paris 1966, 380-536, remains of the highest importance. Of special interest is the reconstruction of facts by P.J. Alexander on *Les débuts des conquêtes arabes en Sicile et la tradition apocalyptique byzantinoslave*, in *Boll. Centro Studi Filol. e Ling. Siciliani*, xii (1973), 7-37. Also worthy of mention are the contributions by Mme. A. De Simone, *Palermo nei geografi e viaggiatori arabi del Medioevo*, in *Studi Magrebini*, ii (1968), 129-89; eadem, *L'Etna nei geografi e viaggiatori arabi del Medioevo*, in *Studi arabo-islamici*, Mazara del Vallo 1982, 9-33; eadem, *La descrizione dell'Italia nel Rawḍ al-miʿṭār di al-Ḥimyarī*, Mazara del Vallo 1984; and eadem, *Al-Ẓahr al-bāsim di Ibn Qalāqis e le vicende dei musulmani nella Sicilia normanna* (as yet unpublished). For Arabo-Sicilian poetry, the best versions in western languages are still those of A. von Schack, *Poesie und Kunst der Araber in Spanien und Sicilien*, Stuttgart 1877. Among studies concerning art, that by U. Monneret de Villard, *Le pitture musulmane al soffitto della Cappella Palatina in Palermo*, Rome 1950, remains a classic. In the linguistic field, to the basic work by G.B. Pellegrini, *Gli arabismi nelle lingue neolatine*, Brescia 1972, 2 vols., in the chapters dealing with Sicily (= i, 129-332), should be added G. Caracausi, *Arabismi medievali di Sicilia*, Palermo 1983. For the Jews in Muslim Sicily, see M. Gil, *Sicily 827-1072, in light of the Geniza documents and parallel sources*, in *Italia judaica. Gli Ebrei in Sicilia sino all'espulsione del 1492. Atti del V convegno internazionale Palermo, 15-19 giugno 1992*, Rome 1995, 96-171. Finally, attention should be drawn to the sumptuous book describing Sicilian gastronomy of Arab origin by T. D'Alba, *La cucina siciliana di derivazione araba*, Palermo, Vittorietti ed., 1980.

(R. Traini)

2. The Arabic toponomy.

Scientifically-based research on the toponomy of Sicily in the period of the Arab conquest begins with Michele Amari. In his *Biblioteca arabo-sicula*, Leipzig 1857, with its two Appendices of 1875 and 1887, he endeavoured to collect together, in effect, all the Arabic texts relating to the history, geography and literature of the island. In the final *Index* in Arabic characters and including all types of names, he gave an outline list of the Arabic and Arabised place names of Sicily. Then, in 1901, on the occasion of the centenary of Amari's birthday, two other volumes of texts appeared (*Centenario della nascita di Michele Amari. Scritti di filologia e storia araba*, Palermo 1910, 2 vols.). Finally, a century after the publication of the *Biblioteca*, Umberto Rizzitano published a final collection of texts (*Nuove fonti per la storia dei Musulmani di Sicilia*, in *RSO*, xxxii [1957], 531-55). Yet curious though it may seem, noone has as yet compiled a complete list of the Arabic place names of Sicily.

According to historical information, these names should date from the period between 256/870 and 462/1070, that of the Arab occupation of the island. One should nevertheless note that the Arabic toponomy did not change immediately on the Norman invasion, well illustrated by the description of Sicily (occupying forty large-format pages: *Opus geographicum*, fasc. 5, Naples-Rome 1975, sectio secunda, 583-626, Ital. tr. in Rizzitano, *Il libro di Ruggero*, Palermo n.d. [1966], 153) of the complete edition of the *K. Rud̲j̲ār* or *K. Nuzhat al-mus̲h̲tāḳ* of al-Idrīsī written towards the middle of the 6th/12th century, hence almost a century after the end of Arab domination.

From a linguistic point of view, the Sicilian place names of this period can be divided into two groups: a first one made up of names in origin Greek, Latin or otherwise but then Arabised, and a second one of Arabic names. With the end of Arab domination, part of these place names disappeared, whilst others underwent phonetic adaptations before assuming their recent form. In the first group, one may cite: *Ḳarīnis̲h̲* (Ital. Carini), *al-Ḳārūniyya* (Ital. Caronia), *Ḳaṭāniya* (Ital. Catania), *D̲j̲ulfūd̲h̲* (Ital. Cefalù), *D̲j̲afala* (Ital. Cefalà (Diana)), *Ḳurliyūn* (Ital. Corleone), *Balarm* (Ital. Palermo), *Fīkūda* (Ital. Filicudi), *Lanbadūs̲h̲a* (Ital. Lampedusa) and *Lībar* (Ital. Lipari).

The second group contains two types. (1) Where Arabic terms have had their Italian equivalents, with no connection in sense, substituted e.g. *al-Aṣnām* >

Selinunte, *al-Karīb* > the river Bilici, *Namūsa* > the island of Linosa, and *Ḳūṣira* [see ḲAWṢARA] > Pantelleria. (2) Where Arabic terms have been Italianised, e.g. *Wādī 'l-Tīn* > Dittano, *Marsā ʿAlī* > Marsala, *al-Khāliṣa* > Kalsa and *Shakka* > Sciacca.

Even so, there remain some names difficult to classify, because they are made up of two elements, one of which is translated whilst the other is Italian. This is the case with ʿUyūn ʿAbbās "the Fountains of ʿAbbās", which has become Tre Fontane, or Tirsat Abī Thawr, the modern Porto Palo.

3. Numismatics.

It should be emphasised that the minting of Arab coins of Sicily is here considered only in regard to the actual period of Arab occupation, in its Aghlabid, Fāṭimid, Kalbid and Zīrid phases, up to 462/1070. The Norman coins with Arabic inscriptions are not considered here at all.

Arab minting in Sicily seems to have begun with the military conquest of the island. The first known money is a silver dirham, diameter 24 mm and weight 2.90 gr and bearing the date 214/829-30. On it can be read the name of Muḥammad al-Djawharī, on the order of the *amīr* Ziyādat Allāh, son of Ibrāhīm Ziyādat Allāh, the Khurāsānian commander to whom Hārūn al-Rashīd had offered the province of Ifrīḳiya. The actual mint involved is uncertain, since the term *Sikilliya*, which can be read on the coin and which was later attributed to Palermo, cannot thus be considered in any way, since the town in question had not yet been captured. One must also take into account the fact that the Arab conquest spread over almost a century; Palermo was conquered in 216/831, Messina in 228/843, Noto in 257/865, Syracuse in 266/878 and finally, Taormina in 289/902. In the areas conquered by the Arabs, the monetary system changed, whilst the Byzantine authorities kept in circulation the totally different Byzantine system based on the gold *solidus*, with its fraction of one-third (*tremissis*) and the copper *follis* and its multiples.

The Arab system, on the contrary, was always based on bimetallism but seems to have been characterised by the issue of gold coins in a small format, in practice reduced to one-quarter in comparison with the coins issued in the Islamic East. As for silver, after the minting of a sole dirham and half-dirham, one reached the quarter-dirham in 250/864. Later, between 273/886 and 277/890, there comes into being a new silver coinage with the appearance of a miniature dirham with a weight varying between 0.17 and 0.55 gr and with a diameter of 9-11 mm, bearing the date but no indication of the place of minting.

One type particularly introduced by the Fāṭimids was the stellate *kharrūba*, whose weight was, theoretically, according to P. Balog, 0.195 gr but which in practice varied between 0.65 and 1.25 gr. This small-sized type of coin naturally raises numerous problems regarding its daily use. The term stellate or étoilé used by the numismatics who have described it, probably stems from the division of the obverse and reverse into diametric segments which divide the surface up into a series of little spaces vaguely reminiscent of the appearance of a star.

One can only conjecture at the reasons why the Arab governors in Sicily adopted this bimetallic system, but one in miniature.

The historical sources show that, in Fāṭimid Egypt and in its Sicilian dependency, there was no copper coinage. Nevertheless, there existed at that time a certain number of glass monetary weights, on the Byzantine model, used in daily life to control the correct weight of the coins. Given that there was a total absence of copper in Fāṭimid Egypt, to the extent that it had to be imported, these weights, issued in large quantities could very likely be used as pieces of subsidiary coinage instead of a copper coinage. Numismatists are not agreed on this interpretation, in favour of which one might add that these tokens have been largely found in hoards, where one would certainly not put glass weights which had no monetary value, and that at least 20% of these tokens are contemporary imitations.

4. Epigraphy.

At present in Sicily there are 82 Arabic inscriptions found either on buildings or on tombstones, to which another 18 texts can be added, according to literary sources. They are scattered throughout Agrigento, Cefalà Diana, Cefalù, Messina, Palermo, Syracuse, Termini Imerese and Trapani.

According to the historical events that attest the Arab presence on the island, these inscriptions can be divided into the following groups: 1. inscriptions belonging to the period of Arab occupation of Sicily (827-1061); 2. inscriptions belonging to the Norman period (1061-1194); 3. inscriptions with dates corresponding to the Swabian period onwards; 4. inscriptions imported from Egypt and Tunisia.

Only three inscriptions belong to the period of the Arab occupation. The oldest is a graffito on a baked brick found in a cave of Monte Bandiera on the island of Linosa. The text, dated 364/974, commemorates the landing of Ḥasan b. ʿAlī b. Yuḥannis (Yuḥannas, according to Lagumina's transcription) al-Ṣiḳillī. The second was inscribed on one of the gates of Palermo, known as Porta dei Patitelli and called in Arabic *Bāb al-baḥr* (Gate of the Sea), which was built in 942 and destroyed in the 16th century. The third inscription, attributed to 34(3-9)/954-61, was

once in the castle of Termini Imerese. It is a text that commemorates the erection of a building, probably the castle itself. The sandstone blocks containing the inscription are at present broken down into eleven fragments.

To these inscriptions perhaps could be added a burial text, dated x7x or x9x A.H., that M. Amari dates back to the years 883-92 or 980-90 on the grounds of the only figure extant. Nowadays, this tombstone is preserved in the Galleria Regionale di Palazzo Bellomo in Syracuse.

We may presume that the Arabic inscriptions belonging to the Norman period, like those belonging to the period of the Arab occupation, are of local origin even if Islamic burial grounds have not yet been discovered on the island. We know that during the Norman period, permanent Muslim colonies existed in Sicily, and Arabic was one of the languages spoken in the Court or used for official texts. Therefore Muslims must have enjoyed tolerance and welfare to enable them to afford paying such craftsmen as the lapicides, who besides the skill of cutting stone, must also have possessed a good knowledge of Islamic texts.

A similar presumption cannot, however, be made regarding Arabic inscriptions found in sites where the Arab presence was neither stable nor lasting or for those dated from the Swabian period onwards, since those Muslims who were still on the island enjoyed no longer social and economic privileges.

As to the inscriptions bearing dates belonging to the Norman period, it is possible to distinguish some, inscribed mainly on buildings, that could be called Norman inscriptions in Arabic characters because they were made in the Court workshop according to the taste of the Norman dynasty. The texts consist of single words that are expressions of good wishes, with frequent repetition (first half of the twelfth century). They seem to have a unique model, as they use the same phrases or words derived from the identical Arabic root, and most of them can be found woven in the inscription of the coronation mantle of Roger II, now preserved in Vienna.

Furthermore, there is a group of metrical inscriptions, in praise of the rulers, placed on the palaces of Roger II (1105-54), William I (1154-66) and William II (1166-89). The white marble slabs that decorate the Royal Palaces of Roger II in Palermo and Messina are really unique, as the inscriptions have been made with the technique of inlaid marble, with writing in serpentine and background fillers in porphyry, unknown to the Arabic epigraphy.

The use of the languages of the four different ethnic and religious groups living in Sicily, i.e. Latin, Greek and Arabic, which was in one of the texts also written in Hebrew characters, is attested on two tombstones belonging to the parents of King Roger's chaplain, dated respectively 1141-2 and 1153, and on a marble slab which commemorates the installation of a waterclock in 1142.

These "Norman inscriptions in Arabic characters" often contain terms belonging to the Oriental Christian vocabulary, as well as Christian symbols and a unique chronology which refers to the months of the Latin calendar and to the year of the Muslim era. The Arabic words also assumed new meanings related to the social customs and religious habits of the European courts.

(Vincenza Grassi)

SIKKA (A.), literally, an iron ploughshare, and an iron stamp or die used for stamping coins

(see Lane, *Lexicon*, 1937). From the latter meaning, it came to denote the result of the stamping, i.e. the legends on the coins, and then, the whole operation of minting coins.

1. Legal and constitutional aspects.

As in the Byzantine and Sāsānid empires to which the Arab caliphate was heir, the right of issuing gold and silver coinage was a royal prerogative. Hence in the caliphate, the operation of *sikka*, the right of the ruler to place his name on the coinage, eventually became one of the insignia of royal power, linked with that of the *khuṭba* [*q.v.*], the placing of the ruler's name in the bidding prayer during the Friday congregational worship.

This right of placing the ruler's name on the coinage did not appear immediately in the Islamic state. As is well known, up to the caliphate of the Umayyad ʿAbd al-Malik [*q.v.*] at least, the former Byzantine and Sāsānid money continued to circulate; and when the new holders of power within the conquered lands finally placed their own names on newly-minted coins or counterstamped them on older coins, this was not a sign of a prerogative reserved to the caliphs. Provincial governors like Ziyād b. Abīhi, al-Ḥadjdjādj, ʿUbayd Allāh b. Ziyād [*q.v.*], etc., minted coins bearing their own names only. Even when the use of the caliphs' names on coins spread, certain provincial governors continued to follow their own local minting practices; thus at the end of the 1st century A.H., the governor of North Africa Mūsā b. Nuṣayr [*q.v.*] still minted coins of his own, with legends in Latin. Also notable, during the period from Muʿāwiya to ʿAbd al-Malik, was the appearance of effigies of the caliphs on coins, and when the rulers' names appeared, these were often followed by the titles of *khalīfa* or *amīr al-muʾminīn*. Some ʿAbbāsid coins did not always have the caliph's name on them, but might be minted by the designated heir to the throne or *walī ʾl-ʿahd* or by a caliphal minister. But it became more and more general for the caliph's name to take precedence, usually with their honorifics or *laḳabs* [*q.v.*] also.

With the break-up of caliphal unity, provincial governors began to mint their own coins, placing their own names on them but usually continuing to place first the name of the reigning caliph as a witness to their theoretical subordination to the universal caliphate. Of course, when dynasties arose in deliberate defiance of or emnity to the ʿAbbāsids, as was the case with the Spanish Umayyads and the Fāṭimids of North Africa and Egypt, their coinage was a completely independent one, with their own names only inscribed on the coins.

(C.E. Bosworth)

2. Coinage practice.

In Lane's *Arabic-English lexicon*, the origin of the word *sikka* is given as *sakk*, originally a ploughshare, or a nail, pin or peg of iron, thus *sikka*, an engraved piece of iron, a die for striking coins, hence *maskūk*, plural *maskukāt*, coined money. In its literal meaning, *sikka* refers to coinage dies in a mint, in early days made of bronze rather than iron, which tended to shatter under the repeated blows of the hammering process that was used to transfer the inscriptions on the die to the metal blank or planchet. For the purposes of this section of the article, however, *sikka* is discussed in its figurative sense, the right of a Muslim ruler to have his name inscribed on the coinage (see above, 1).

From its origins in classical antiquity until today, manufacture of money, and the standards controlling it have been under governmental supervision. The manufacture of coin was an important source of revenue for the government which derived from the fees, or seignorage, charged by the mint for converting unrefined metal into coin. The government stamp on the metal served as a guarantee of its purity, and as a permit for it to become legal tender within the area of authority where it was issued. In the city states of antiquity, the coinage was first identified by images of local gods and other symbols, and was often guaranteed by the names of moneyers. Under the Roman and Parthian Empires, and later the Byzantines and Sāsānids, local coinages were swept away, and replaced by those whose principal feature was the ruler's bust, often with his name and titles, and thus monarchial coinage became the rule throughout the Mediterranean and Iranian world.

In the time of the Prophet Muḥammad the Ḥidjāz had no indigenous coinage of its own, and its monetary stock was composed of whatever coins were earned through trade or pilgrimage receipts. These were Byzantine gold and copper coins, Sāsānid silver, and a miscellany of older coins which had remained in circulation long after the states which issued them had passed into history. The rapid spread of Islam, however, resulted in the acquisition of large quantities of Byzantine and Sāsānid coins which fuelled the economy of the newly-conquered territories. The Byzantine money came mostly from outside the territories conquered by the Arabs, although there was a long-established Byzantine mint in Alexandria, and another in Jerusalem operational *ca.* A.D. 609-15. In the Sāsānid lands in the east, however, the Arabs acquired control of many local mints. The silver coinage struck in them bore the name and bust of the ruler, the mint mark and the regnal year of striking.

Because the Arabs had no coinage of their own, and the populations of the lands they conquered belonged to two empires with very different monetary systems, they took the pragmatic step of adopting both systems to avoid disrupting the local economy and antagonising their new subjects. The earliest dateable Islamic coins are silver drachms, or dirhams, bearing the name and bust of the last Sāsānid ruler Yazdigird III (11-31/632-51) with the legend *bism Allāh* in the obverse margin and on the reverse the mintmark and the date 20, his last regnal year, which corresponded to the year 31 A.H. Yazdigird's name and bust were then replaced by those of Khusraw II (590-628), which became the model for the remainder of the Arab Sāsānid series. It soon became the custom for local Muslim governors to replace the name *Khusraw* with their own names in Pahlawī script. The dates on these coins, however, are often difficult to elucidate because in many instances it is uncertain whether those above the year 31 were continuations of Yazdigird's regnal years or the actual Hidjra years of striking.

Outside of the former Sāsānid territories, the picture is far less clear. It is not known when Islamic coinage began in the former Byzantine lands, because none of the coins in circulation there were dated. Some authorities have argued that it started soon after the Arab conquest, while others have dated its inception to the early years of the caliph ʿAbd al-Malik b. Marwān (65-86/684-705). In either case it is clear

that the Arabs began to strike copper *fulūs* in long-dormant Syrian and Palestinian mints, with designs based on Byzantine prototypes, often giving the names of the towns in both Latin and Arabic. Occasionally, they bear the phrase *bism Allāh* to give them a specifically Islamic character. Mints did not usually share the same designs, which emphasised the local nature of each issue. None bore the name of a caliph or local governor. It can thus be said with some certainty that the idea of *sikka* as a prerogative of caliphal sovereignty had not yet developed in the early years of the Islamic community.

The situation changed significantly after ʿAbd al-Malik b. Marwān defeated the anti-caliph ʿAbd Allāh b. al-Zubayr [*q.v.*] in 73/692. This victory enabled him to direct his attention to the creation of institutions which would serve the needs of the Islamic community and strengthen centralised Umayyad rule over the empire. Several experiments were made to reform the coinage, which are dealt with in some detail in the articles DĪNĀR, DIRHAM and FALS. It should be noted that ʿAbd al-Malik introduced a series of copper *fulūs* showing a standing figure of the caliph drawing a sword in defence of the Muslim community with the legend *li-ʿAbd Allāh ʿAbd al-Malik Amīr al-Muʾminīn*, "For the Servant of God ʿAbd al-Malik Commander of the Faithful". This is the only instance where an Islamic ruler adopted the style of the imperial Byzantine coinage for use among the Muslims. Although these *fulūs* are undated, they may be attributed to the years 74-7, because they are linked stylistically to "standing caliph" dīnārs which bore these years of striking in their legends.

ʿAbd al-Malik's coinage reform of 77/696-7 removed all images, names and titles from the dīnār in favour of legends drawn from the Ḳurʾān, and this model was applied to dirhams in 79/698-9. The only human name to appear in the legends was that of Muḥammad, which implies that, as in the frequently used laudation *al-Mulk li'llāh*, "Sovereignty belongs to God", the right of *sikka* was vested in the hands of God and of His Messenger. While gold and silver were given this distinction, it was not always the case for the copper coinage where the names of a caliph or governor were occasionally used to indicate the name of the local issuing authority. This usage should not be confused with the right of *sikka per se*, but only as a means of holding a local governor responsible for coinage issued within the area of his jurisdiction. Despite their differing characters, none of the succeeding Umayyad caliphs altered the legends on the precious metal coinage, which suggests that it satisfied both the spiritual and economic needs of the Muslim community.

The revolutionaries in the late Umayyad period made a few alterations to the standard Umayyad dirham (no dīnārs are known from this time). Those of both ʿAbd Allāh b. Muʿāwiya and Abū Muslim [*q.vv.*] and their lieutenants bore an additional legend: *Ḳul lā asʾala-kum ʿalay-hi adjr^an illā 'l-mawaddata fi 'l-ḳurbā* "Say: 'I ask of you no recompense for this other than the love of kin'" (Ḳurʾān, XLII, 23). This was obviously intended to provide divine sanction for Djaʿfarid and ʿAbbāsid claims to the caliphate. There were also Khāridjite issues which bore their rallying cry *lā ḥukma illā li'llāh* "authority belongs to God alone". There is a third type of revolutionary issue, which was the only known post-reform dirham struck in the Umayyad period to bear the name of someone other than the Prophet Muḥammad. This was issued in the name of Djudayʿ b. ʿAlī al-Kirmānī, and carries the additional legend: *mim-mā amara bi-hi al-Amīr al-Kirmānī b. ʿAlī* "authorised by the Amīr al-Kirmānī b. ʿAlī".

Because the ʿAbbāsids based their claim to the caliphate on their close relationship to the Prophet, they replaced the *Sūrat al-Ikhlāṣ*, which was used by the Umayyads basically as an irritant to the Christians, with *Muḥammad rasūl Allāh*. Thus it could be argued that the original ʿAbbāsid *sikka* was in the name of the Prophet. They did, however, change the way in which the caliph was named. The Umayyad caliphs were known by their proper names and those of their father, e.g. ʿUmar (II) b. ʿAbd al-ʿAzīz or Hishām b. ʿAbd al-Malik, followed by the caliphal title *Amīr al-Muʾminīn*. The early ʿAbbāsid caliphs became known by their *ḳunya*, *ʿalam* and *laḳab*, e.g. Abu 'l-ʿAbbās ʿAbd Allāh al-Saffāḥ and Abū Djaʿfar ʿAbd Allāh al-Manṣūr, but neither of these names is known to appear on their coins. In 145/762, however, al-Manṣūr granted his son al-Mahdī the right of responsibility for the silver dirham coinage of Khurasān and Armenia. The wording of this privilege copied the style of legend used on some of the copper coinage: *amara bi-hi al-Mahdī Muḥammad b. Amīr al-Muʾminīn*. The name of a local governor, al-Ḥasan b. al-Ḳaḥtaba, was also found on a dirham of Armenia dated 154/771.

In the reign of al-Mahdī, 158-69/775-85, the ruler's style regularly appeared on dirhams in the form *li 'l-Khalīfa al-Mahdī* and rarely with his name *Muḥammad*. Two of his sons were occasionally granted responsibility for dirhams in the form *mim-mā amara bi-hi Mūsā walī ʿahd al-Muslimīn* for his heir, and *mim-mā amara bi-hi Hārūn b. Amīr al-Muʾminīn* for the future al-Rashīd. The names of governors also appeared on the dirhams more frequently. During his brief rule (169-70/785-6) al-Hādī was referred to either as *li 'l-Khalīfa al-Hādī* or *li 'l-Khalīfa Mūsā*. Al-Rashīd's earliest dirham coinage from al-Hārūniyya in 170 and 171 called him by his first throne name, *al-Marḍī* "The Approved One": *li 'l-Khalīfa al-Marḍī mim-mā amara bi-hi Hārūn Amīr al-Muʾminīn*. The caliph's name then made its first brief appearance on a few rare dīnārs of 170 and 171 in the form *mim-mā amara bi-hi ʿAbd Allāh Hārūn Amīr al-Muʾminīn*, where *ʿAbd Allāh* was used in its titular form as it had been on the coins of ʿAbd al-Malik.

Between 170 and 187/786-803, while al-Rashīd was under the tutelage of Abu 'l-Faḍl Djaʿfar al-Barmakī [see AL-BARĀMIKA], an extraordinary variety of coinage was issued. The gold dīnārs of Egypt carried the names of its governors ʿAlī, Mūsā, ʿUmar, Muḥammad, Dāwūd and Ibrāhīm, then that of its honorary governor Djaʿfar (al-Barmakī) and finally Khālid. Dīnārs issued in ʿIrāḳ between 177 and 187 bore the legend *mim-mā amara bi-hi al-Amīn Muḥammad b. Amīr al-Muʾminīn*. The silver coinage was far more complex, sometimes naming the caliph as either *Hārūn* or *al-Rashīd*, but often not mentioning him at all. Al-Amīn was usually called *walī ʿahd al-Muslimīn*, and his younger brother al-Maʾmūn the second heir, *walī walī ʿahd al-Muslimīn*. Djaʿfar's name appeared either alone after that of the caliph and his heir, or with the names of local governors. This coinage is particularly valuable for historians because the governors' names provide a chronology for the period which would otherwise have escaped posterity. Presumably they were granted the privilege of placing their names on the coins when they received their commissions from the ʿAbbāsid chancellory headed by Djaʿfar al-Barmakī.

After the latter's execution in 187/803, al-Rashīd curbed this practice, and most of the coinage recovered its former anonymity, particularly in mints such as Madīnat al-Salām, al-Rāfiḳa and al-Muḥammadiyya

which were under direct caliphal control. The conflict that erupted between al-Amīn and al-Ma'mūn after al-Rashīd's death in 193/809 was reflected in the coins they each struck. No specialised, systematic study has been made of the coinage of these two rulers, which is the most complex in the history of the Islamic world, because by this time responsibility for the *sikka* had become highly decentralised, and indeed fragmented. For example, after the year 145/762 the Umayyad rulers of Spain were striking conventional, anonymous Umayyad dirhams. In the Maghrib the Idrīsids and other local rulers placed their own names on the coinage without any titles. During al-Rashīd's rule, the province of Ifrīkiya had fallen into the hands of the Aghlabids, who became its hereditary governors. They retained the design of the early 'Abbāsid dīnār, but differentiated it by adding the governor's name and the dynastic symbol *ghālib* to its legends.

The province of Egypt, which al-Ma'mūn acquired in 196/812, now became the western boundary of the 'Abbāsid caliphate. From then until 213/829 the names of provincial governors appeared on the Egyptian coinage, usually with that of the caliph. Between 198 and 211 Syria was controlled by Muḥammad b. Bayhas, who placed the caliph's name above his on the dirhams which he struck. Madīnat al-Salām (Baghdād) was held by al-Amīn until 198/813, when it fell to the forces of al-Faḍl b. Sahl Dhu 'l-Ri'āsatayn [*q.v.*]. His conquest marked a turning point for the currency, because in 198 al-Faḍl struck the first 'Abbāsid dīnār to bear a mint name, sc. Madīnat al-Salām. More importantly for the purposes of this article, he added the word *li'llāh* "For God", above *Muḥammad rasūl Allāh* to the legends found on both dīnārs and dirhams. This dedication made it clear that the right of *sikka* was vested in the hands of God, passing through those of His messenger Muḥammad to the individual named as the issuing agent. This chain of authority can be seen in its most highly developed form on the dirhams struck by al-Ma'mūn after he chose the eighth Shī'ī Imām as his heir in 201/816. The reverse reads: *li'llāh; Muḥammad rasūl Allāh; al-Ma'mūn Khalīfat Allāh; mim-mā amara bi-hi al-Amīr al-Riḍā walī 'ahd al-Muslimīn, 'Alī b. Mūsā b. 'Alī b. Abī Ṭālib; Dhu 'l-Ri'āsatayn.*

The appointment of 'Alī al-Riḍā as *walī 'ahd* sparked off a Sunnī revolt in Baghdād, which was nominally led by al-Ma'mūn's uncle, Ibrāhīm b. al-Mahdī (202-3/817-19 [*q.v.*]). He refrained from placing his name in full on the few dīnārs attributed to him, but abbreviated it to its first and last letters, *alif/mim*.

Al-Ma'mūn celebrated his triumph over al-Amīn in 198/813 by adding a Ḳur'ānic passage to the dirhams he struck in Marw, the seat of his government: "With God is the Decision in the past and in the future; on that day the Faithful shall rejoice in the help of God" (XXX, 4-5). While this passage was almost certainly chosen by al-Ma'mūn to give immediate divine sanction to his seizure of the caliphate, with time and continuous usage it became the 'Abbāsid motto, and was found on all dīnārs and most dirhams issued by the dynasty until its downfall in 656/1258. At first its use spread gradually, coming to the dirhams of Madīnat al-Salām with al-Ma'mūn's arrival in the city in 204/819, but it achieved greater prominence in 206/821 when the capital mint issued new dīnārs and dirhams inscribed in a new monumental and highly legible Kūfic script. On this reform coinage, which had come into general use by 215/831, al-Ma'mūn harked back to the past by allowing neither his name nor that of any governor to appear in its legends. Thus the *sikka* was once again issued only in the name of God and His Messenger.

When Abū Isḥāḳ Muḥammad al-Mu'taṣim succeeded to the caliphate on the death of his brother al-Ma'mūn in Radjab 218/833, he continued to strike the same anonymous coinage, but distinguished it slightly by altering the former leftward slant of the word *li'llāh* to make it fully vertical. In 219/834, however, he introduced a new style of throne name, a participial phrase describing the caliph by his relationship to God rather than by the manner of his leadership of the Muslim community. From al-Saffāḥ until al-Ma'mūn, the *laḳab* is understood to have modified the title *al-Khalīfa*, e.g. "the Victorious Caliph", "the Orthodox Caliph" or "the Trusted Caliph", but the new *sikka* read *li'llāh; Muḥammad rasūl Allāh al-Mu'taṣim bi'llāh* "For God, Muḥammad is God's Messenger, the One Who Relies on God". This new style was probably chosen because it conformed to the theory that the *sikka* originated in and descended from God's sovereign power.

This form was used by all but one of al-Mu'taṣim's successors until the end of the dynasty, and was only modified for political purposes when the name of the heir was added to the legends. The practice began under al-Mutawakkil, whose son was first named *Abū 'Abd Allāh b. Amīr al-Mu'minīn*, and then received his later throne name *al-Mu'tazz bi'llāh b. Amīr al-Mu'minīn* on his father's dīnārs and dirhams. It was taken further when the feeble caliph al-Mu'tamid divided jurisdiction between his son and heir Dja'far in the West and his powerful brother Abū Aḥmad Ṭalḥa in the East. The heir was first named *Dja'far* on his coinage, and later *al-Mufawwiḍ ilā 'llāh*, while Ṭalḥa was always known as *al-Muwaffaḳ bi'llāh*. After al-Muwaffaḳ defeated the Zandj rebels he added another title to the coinage struck under his jurisdiction: *al-Nāṣir li-Dīn Allāh, al-Muwaffaḳ bi'llāh.* He subsequently included the name of his heir, *Aḥmad b. al-Muwaffaḳ bi'llāh*, who became known as al-Mu'taḍid bi'llāh after his father's death, in the year before he succeeded Mu'tamid as caliph.

Throughout the latter part of the 3rd/9th-10th century the unity of the 'Abbāsid state was breaking down because of the rise of powerful, virtually independent local rulers who emphasised their status by adding their names to both the coinage and the *khuṭba.* Even the caliphs had occasionally honoured individual *wazīrs* on their own coinage, but never in their own names. For example, al-Mu'tamid included the title *Dhu 'l-Wizāratayn* to honour Ṣā'id b. Makhlad in 270/883; al-Muktafī *Walī al-Dawla* to honour Abu 'l-Ḥusayn al-Ḳāsim b. 'Ubayd Allāh in the year of his death, 291/903-4; and al-Muḳtadir *'Amīd al-Dawla* to honour al-Ḥusayn b. al-Ḳāsim, the son of the caliph's *wazīr*, on some of his coinage dated 320/932. The local rulers, however, used only their own *'alam* without any titles on the coins which, in theory, they struck on behalf of the caliph. This practice started in Egypt and Syria in 265/879 when Aḥmad b. Ṭūlūn placed his name below that of the caliph in the reverse field. In the East, it began somewhat earlier when the first Ṣaffārid ruler added his own name Ya'ḳūb to the coinage (*ca.* 259-65). Before long the practice became universal, and whether by usurpation or grant from the caliph, the presence of names on the coinage came to be seen as a right that could be exercised by any serious rebel, semi-autonomous local governor or faithful ally of the 'Abbāsid caliphate. This adds an extra dimension of interest to the study of the series for the historian and numismatist, because new

coins fill in gaps in our knowledge which existing textual sources may be unable to do. In the words of Stanley Lane-Poole in his *Fasti Arabici*: "The coins of the Muslim East do not so much recall history as make it... If the complete series of coins issued by every Muslim state was preserved, we should be able to tabulate with the utmost nicety the entire line of kings and their principal vassals that have ruled in every part of the [Muslim Community] ... to draw with tolerable accuracy the boundaries of their territories at every period".

While in theory the right of *sikka* flowed downwards from God, through the Prophet, to his vicegerent the caliph, and from him to his vassal/ally, and ultimately perhaps to the latter's heir or an important governor, in practice it now moved in the opposite direction. The local strong man who controlled the mint defined his political and even religious position by acknowledging only those overlords who were valuable to his status, or by choosing Ḳur'ānic and other legends that defined his allegiance in the Sunnī-Shī'ī divide. No detailed account of the *sikka* in such cases can be given here, but for illustrative purposes examples are drawn from the principal Islamic dynasties which are not discussed elsewhere in this *Encyclopaedia*.

Until 297/909 there was only one caliphate in the Islamic community, but in that year 'Abd Allāh al-Shī'ī proclaimed the Fāṭimid claimant 'Abd Allāh al-Mahdī bi'llāh *Amīr al-Mu'minīn* at Ḳayrawān in Tunisia. The statement on his *sikka*: *al-Imām al-Mahdī bi'llāh 'Abd Allāh Amīr al-Mu'minīn* prompted the Umayyads of Spain to revive their claim to the Sunnī caliphate. After 316/928, 'Abd al-Raḥmān III issued a redesigned coinage placing his name in the reverse field, *al-Imām al-Nāṣir li-Dīn Allāh 'Abd al-Raḥmān Amīr al-Mu'minīn*, which paralleled that of his Fāṭimid rival. In later reigns this order was reversed, e.g. *al-Imām Hishām Amīr al-Mu'minīn al-Mu'ayyad bi'llāh*. Still later, the Spanish coinage often incorporated the title and name of the chief minister as well as that of the caliph, e.g. *al-Ḥādjib 'Abd al-Malik*. Other names also appeared, often those of *wazīrs* or masters of the mint. In such instances, however, these men should not be considered as the holders of the *sikka*, unlike in the East where it was usually the lowest-ranking name who actually controlled the currency.

This is well illustrated by the coinage issued during the crisis in the 'Abbāsid caliphate, when its erstwhile vassals brought about its prolonged eclipse. In 329/940 the *Amīr al-Umarā'*, Abu 'l-Ḥusayn Badjkam was able to have his name included on al-Rāḍī's dīnārs and dirhams beneath that of the caliph, where he was described simply as *mawlā* "client". On the accession of al-Muttaḳī, his name appeared in full: *Abu 'l-Ḥusayn Badjkam Mawlā Amīr al-Mu'minīn*. The *sikka* then reverted to the caliph and his heir al-Manṣūr. In 330/942 Abū Muḥammad al-Ḥasan, the Ḥamdānid ruler of Mawṣil, was appointed *Amīr al-Umarā'* with the title Nāṣir al-Dawla. The following year, his brother's name was added to the legends below that of the caliph's heir: *Sayf al-Dawla Abu 'l-Ḥasan*, and that of the senior *amīr* below the caliph's: *Nāṣir al-Dawla Abū Muḥammad*. In 333-4/945 the name of the *Amīr al-Umarā' al-Muẓaffar Abū Wafā'* (Tūzūn) appeared on coins of al-Mustakfī, who very exceptionally called himself *Imām al-Ḥaḳḳ al-Mustakfī bi'llāh*. Shortly after this, he was forced to cede Baghdād to Buwayhid control, which ended both 'Abbāsid independence and his life, but not before he had transformed the three sons of Buwayh from Aḥmad, 'Alī and Ḥasan into Mu'izz, 'Imād and Rukn al-Dawla. For a time, this style of *laḳab* was the highest form of title attained by a secular ruler in the East. The Buwayhid *sikka* can be difficult to determine, but the general principle to follow is to go from one side of the coin to the other starting with the name of the caliph, usually found in the reverse field below *Muḥammad rasūl Allāh* and then to work downwards from the highest-ranking *amīr* to the lowest, and thus arrive at the individual who actually exercised the right of *sikka*.

The next round of inflation in coinage titulature was set off when the caliph al-Ṭā'i' li'llāh invested 'Aḍud al-Dawla as supreme secular ruler in 367/977. He now styled himself *al-Malik al-'Ādil 'Aḍud al-Dawla wa-Tādj al-Milla Abū Shudjā'*. On other coins struck immediately before his coronation he was described as *al-Amīr al-'Ādil* and *al-Malik al-Sayyid*. Before long all the ruling Buwayhid *amīrs* had royal titles and *laḳabs* in both the *al-Dawla* and *al-Milla* forms, and often in an *al-Umma* form as well. Bahā' al-Dawla then assumed a superior *laḳab* in the *al-Dīn* form calling himself "The Just King of Kings and Shāh of Shāhs". His *sikka* thus read *Malik al-Mulūk, Shāhanshāh, Ḳiwām al-Dīn, Abu 'l-Nāṣir, Bahā' al-Dawla wa-Ḍiyā' al-Milla wa-Ghiyāth al-Umma*.

Titular excess reached its highest point under the Buwayhid ruler of Fārs, Abū Kālīdjār (415-40/1024-49), who was one of the greatest coiners in Islamic history. Following his investiture as *Amīr al-Umarā'* in 435/1044, his *sikka* read *Shāhanshāh al-Mu'azzam, Malik al-Mulūk, Muḥyī Dīn Allāh wa-Ghiyāth 'Ibād Allāh wa-Ḳasīm Khalīfat Allāh Abū Kālīdjār*. After his death, *laḳabs* in the *-Allāh, al-Milla* and *al-Umma* forms went out of fashion, and those remaining were usually shortened to the *al-Dunyā wa 'l-Dīn* form.

Between 449 and 541/1057-1146 the Almoravids or al-Murābiṭūn [*q.v.*] in the Maghrib struck a plentiful gold and silver coinage acknowledging the 'Abbāsid caliphate, but never naming the caliph individually. He was referred to as *al-Imām, 'Abd Allāh, Amīr al-Mu'minīn*, and in later years the epithet *al-'Abbāsī* was sometimes added. The rulers, who were known simply as *al-Amīr Abū Bakr b. 'Umar, al-Amīr Yūsuf b. Tāshufīn*, etc., later adopted the sub-caliphal title *Amīr al-Muslimīn*. 'Alī b. Yūsuf named two successive *walī 'ahds*, Sīr b. 'Alī between 522 and 533/1128-39 and Tāshufīn b. 'Alī (533-7/1139-43). The same style of titulature was used by the remaining Almoravid rulers, Tāshufīn, Ibrāhīm and Isḥāḳ.

When the Almohads or al-Muwaḥḥidūn [*q.v.*] dynasty seized power in Morocco in 540/1146, they altered their *sikka* radically. It was based on the belief that the sect's founder, Muḥammad b. Tūmart [*q.v.*], whose followers called him al-Mahdī, could purify Islam of its corruptions. After Ibn Tūmart's death the sect was led by his most capable disciple 'Abd al-Mu'min [*q.v.*] who, after his defeat of the Almoravids, introduced a new style of coinage unlike any found elsewhere in the Islamic community. Although nominally Sunnī in allegiance, the Almohads made no reference to the 'Abbāsid caliphate, and removed the traditional mint and date formula from the legends, which were inscribed within a new square in circle design. They did, however, take great delight in titulature and genealogy, which somewhat makes up for the lack of mints and dates. A sample *sikka* on a dīnār of Abū Ḥafṣ 'Umar (646-65/1248-66) illustrates this: in reverse square, *al-Mahdī Imām al-umma, al-Ḳā'im bi-Amr Allāh, al-Khalīfa al-Imām, Abū Muḥammad 'Abd al-Mu'min ibn 'Alī Amīr al-Mu'minīn*, in reverse segments, *Amīr al-Mu'minīn, Abū Ya'ḳūb Yūsuf ibn al-*

Khalīfa, and in obverse segments, *Amīr al-Mu'minīn al-Murtaḍā li-Amr, Allāh Abū Ḥafṣ b. al-Amīr, al-Ṭāhir Abī Ibrāhīm, ibn al-Khalīfatayn.* The same square in circle design, with similarly convoluted legends, was used by the Ḥafṣids, Marīnids and Ziyānids. Before leaving this type, there is the *sikka* found on a dīnār of the last Naṣrid ruler in Spain, Muḥammad XII, Boabdil, who lost Granada to the Christians in 897/1492. It reads: *'Abd Allāh, al-Ghālib bi'llāh, Muḥammad b. 'Alī b. Sa'd b. 'Alī, b. Yūsuf b. Muḥammad b. Yūsuf b. Naṣr, ayyadahu Allāh wa-naṣara-hu* with the Naṣrid motto *lā-ghālib illā Allāh* repeated four times in the margin.

Turning to the coinage of the Fāṭimid caliphs [see FĀṬIMIDS], it should be recalled that the first ruler's coins bore the legends of a first period 'Abbāsid dīnār, with no more than his name to distinguish them from the previous Aghlabid dīnārs. His successor, however, changed the design and calligraphy on the coinage and used as his *sikka Muḥammad Abu 'l-Ḳāsim al-Mahdī bi'llāh al-Ḳā'im bi-Amr Allāh Amīr al-Mu'minīn.* The coins of the third caliph still showed no overt signs of the Fāṭimid leadership of the Ismā'īlī Shī'īs: *Abd Allāh Ismā'īl al-Imām al-Manṣūr bi'llāh, Amīr al-Mu'minīn.*

Their real religious feelings burst forth with the first coinage of the fourth caliph al-Mu'izz. On the obverse, the *Kalima* was augmented by the sentence *wa-'Alī b. Abī Ṭālib waṣiyy rasūl nā'ib al-faḍūl wa-zawdj al-zahrā' al-batūl* "And 'Alī b. Abī Ṭālib is the Nominee of the Prophet, Most Excellent Representative, and Husband of the Radiant Chaste One". On the reverse the caliph styled himself *'Abd Allāh Ma'add Abū-Tamīm, al-Imām al-Mu'izz li-Dīn Allāh, Amīr al-Mu'minīn, muḥyī sunnat Muḥammad, sayyid al-mursalīn, wa-wārith madjd al-a'imma al-mahdiyyīn* "Revivifier of the Sunna of Muḥammad, Lord of the Transmitters and Heir to the Splendour of the Rightly-Guided Imāms". This coinage is said to have caused serious problems for the government because most of their subjects were Sunnī by persuasion, and a less inflammatory legend was quickly substituted in its place, "The Imām Ma'add summons (to belief in) the Unity of God, the Everlasting".

When al-'Azīz succeeded al-Mu'izz, he introduced the phrase *'Abd Allāh wa-waliyyuhu* "The Servant of God and His Companion" to the Fāṭimid *sikka*, preceding the *kunya* and *'alam* which were followed by the caliphal title and *Amīr al-Mu'minīn.* Only al-Ḥākim regularly placed the name of an heir on his coinage. Breaking all dynastic conventions, he disregarded the claim of his eldest son al-Ẓāhir and chose a distant cousin and nonentity for the position, 'Abd al-Raḥīm, who appears on the *sikka* as *wa-'Abd al-Raḥīm walī 'ahd al-Muslimīn.* In Ismā'īlī thinking the use of *al-Mu'minīn* was limited to those who held Ismā'īlī beliefs, while the general community were *al-Muslimīn.* Through his actions it would appear that al-Ḥākim saw himself as the last Imām. It is said that he secretly appointed a great religious scholar to lead the Ismā'īlī community as *walī 'ahd al-Muslimīn*, while 'Abd al-Raḥīm was to have exercised overt political leadership of the Muslim community.

Other Fāṭimid coins highlight the problems in the disputed succession after al-Āmir's death in 524/1130. He left no direct male heir, but one of his consorts was said to be pregnant by him. The *wazīr* al-Faḍl Abū 'Alī Aḥmad, who seized control of the government, first struck dīnārs in the name of the expected Imām, *al-Imām Muḥammad Abu 'l-Ḳāsim al-Muntaẓar li-Amr Allāh Amīr al-Mu'minīn*, but when the heir failed to materialise he is said to have discarded his allegiance to the "Sevener" Fāṭimids and revealed himself as a "Twelver" Shī'ī. He then proclaimed his beliefs by striking coins in the name of the Twelfth and last Imām, Muḥammad al-Mahdī, with himself as his lieutenant and viceroy, *al-Imām al-Mahdī, al-Ḳā'im bi-Amr Allāh Hudjdjat Allāh 'alā 'l-'ālimīn, nā'ibuhu wa-khalīfatahu al-Faḍl Abū 'Alī Aḥmad.* After al-Faḍl's overthrow the new ruler first proclaimed himself *walī 'ahd*, because of his collateral claim to the caliphate, *'Abd Allāh wa-waliyyuhu, Abu 'l-Maymūn 'Abd al-Madjīd walī 'ahd al-Muslimīn*, and then, casting aside his scruples, as caliph, *al-Imām 'Abd al-Madjīd Abu 'l-Maymūn al-Ḥāfiẓ li-Dīn Allāh Amīr al-Mu'minīn.*

Following Saladin's accession to power after the last Fāṭimid caliph in 567/1171, he took the cautious first step of striking his *sikka* in the name of the 'Abbāsid caliph: *al-Imām al-Ḥasan, al-Mustaḍī' bi-Amr Allāh, Amīr al-Mu'minīn*, and his overlord Nūr al-Dīn Maḥmūd b. Zangī, the ruler of Aleppo, then, after the latter's death, in his own name: *al-Malik al-Nāṣir Ṣalāḥ al-Dunyā wa 'l-Dīn Yūsuf b. Ayyūb.* This style of *sikka* became the standard form for subsequent Ayyūbid rulers.

After the death of the last Ayyūbid ruler of Egypt, al-Malik al-Mu'aẓẓam Ghiyāth al-Dunyā wa 'l-Dīn Tūrān Shāh b. Ayyūb in 648/1250, power was briefly held by one of the rare female rulers in the Muslim world, Shadjar al-Durr [*q.v.*]. Her *sikka* read: *al-Musta'ṣimiyya, al-Ṣāliḥiyya, Malikat al-Muslimīn, Wālidat al-Malik al-Manṣūr, Khalīl Amīr al-Mu'minīn.* Lane-Poole deduced from this legend that she was formerly in the harem of the caliph al-Musta'ṣim, who presented her to al-Ṣāliḥ Ayyūb, that she became Queen of the Muslims and mothered a prince, al-Malik al-Manṣūr, whom she termed "Friend of the Commander of the Faithful". The second Mamlūk ruler, Aybak, concealed himself behind two fictive rulers, first al-Ashraf Mūsā, *al-Malik al-Ashraf Abu 'l-Fatḥ Mūsā b. al-Malik al-Ṣāliḥ Ayyūb*, and then the last powerful Ayyūbid: *al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb b. al-Malik al-Kāmil, Aybak.* The succeeding rulers maintained the Ayyūbid style of *sikka* until Baybars gave refuge to an 'Abbāsid prince who fled the Mongol sack of Baghdād. In return for his name on the *sikka, al-Imām al-Mustanṣir bi'llah Abu 'l-Ḳāsim Aḥmad b. al-Imām al-Ẓāhir Amīr al-Mu'minīn*, the newly-recognised caliph granted Baybars the style *al-Sulṭān al-Malik al-Ẓāhir Rukn al-Dunyā wa 'l-Dīn Baybars Ḳāsim Amīr al-Mu'minīn.* For the remainder of Mamlūk rule, the conjoint title *al-Sulṭān al-Malik* remained as the royal protocol. Those rulers who were not themselves of royal descent were often identified by an epithet which indicated their original royal master; Baybars I and Ḳalāwūn called themselves *al-Ṣāliḥī* after al-Ṣāliḥ Ayyūb, while Kitbughā, Lācīn and Baybars II were known as *al-Manṣūrī* after al-Manṣūr Ḳalāwūn. All the later Baḥrī Mamlūk rulers were descendants of Ḳalāwūn, and carefully recorded their genealogy in their *sikka.*

The Burdjī Mamlūk rulers continued the same form of royal protocol as the Baḥrīs, but space limitations and, usually, a lack of royal descent kept it relatively brief. Two typical examples are *al-Sulṭān al-Malik al-Ashraf Abu 'l-Naṣr Ḳā'it Bāy, 'Azza naṣruhu* and *al-Sulṭān al-Malik al-Ẓāhir Abū Sa'īd Ḳānṣawh, 'azza naṣruhu.* The coinage does, however, hold one curiosity. In 815/1412 one of the 'Abbāsid caliphs in Egypt was elected to the sultanate as a political expedient. He styled himself either as *al-Imām al-A'ẓam* or *al-Sulṭān al-Malik al-Musta'īn bi'llāh Abu 'l-Faḍl al-'Abbās Amīr al-Mu'minīn.*

Elsewhere, the founder of the Rasūlid dynasty of Yemen, al-Manṣūr 'Umar, initially struck his coins in the name of his nominal Ayyūbid overloads, who had previously ruled the country. In 634/1236-7 he began to coin in his own name: *al-Malik al-Manṣūr*

Abu 'l-Fatḥ 'Umar b. 'Alī. He followed the Ayyūbid convention of acknowledging the spiritual overlordship of the 'Abbāsid caliphate, and further emphasised his Sunnī allegiance by becoming the first ruler to incorporate the names of the first four Orthodox Caliphs into the coin legends. This innovation was followed by a second when his son al-Muẓaffar Yūsuf became the first to style himself *al-Sulṭān al-Malik* as early as 648/1250, well before Baybars received the conjoint title in 659/1261.

For Saldjūḳ titulature on the *sikka*, see SALDJŪḲIDS, VIII. Among their successors, the Atabegs of Eastern Anatolia and Western Persia usually acknowledged the 'Abbāsid caliph as head of the Islamic community. As a reflection of the general insecurity of the age, each ruler was faced with the problem of how to express on his coinage the network of feudal allegiances and alliances which would maintain his security, and the coins provide a useful record of the many twists and turns in the political and military history of the time. A few examples will illustrate this. On a typical dīnār of the Zangids of Mawṣil dated 616/1219-20, the *sikka* read *Nāṣir al-Dīn Atabak b. 'Izz al-Dīn b. Arslān Shāh* (Nāṣir al-Dīn Maḥmūd, son of 'Izz al-Dīn Mas'ūd, son of Nūr al-Dīn Arslān Shāh), on the obverse *al-Malik al-Kāmil* referred to al-Kāmil Muḥammad, the Ayyūbid ruler of Egypt, and on the reverse *al-Malik al-Ashraf* referred to al-Ashraf Mūsā, the Ayyūbid ruler of the Djazīra and immediate neighbour of Nāṣir al-Dīn Maḥmūd. On a dīnār of Mawṣil, struck after the Mongol conquest of Baghdād, Badr al-Dīn Lu'lu' [*q.v.*] was quick to recognise the new order in 'Irāḳ: *Möngke Ḳā'ān al-a'ẓam Khudābanda-yi 'ālam, Pādishāh rū-i zamīn, ziyādat 'aẓmatahu*, and on the reverse *al-Malik al-Raḥīm Badr al-Dīn Lu'lu'*. After Lu'lu''s death in 657/1258, his son first struck coinage in the name of Möngke as above, naming himself *al-Malik al-Ṣāliḥ Rukn al-Dunyā wa 'l-Dīn Ismā'īl*. Then in 659, just before his downfall, he miscalculated by repudiating Mongol overlordship and struck dīnārs in the name of Baybars and the 'Abbāsid caliph in Cairo: *al-Imām al-Mustanṣir bi'llah Amīr al-Mu'minīn al-Sulṭān al-A'ẓam al-Malik al-Ẓāhir Rukn al-Dīn Ḳāsim Amīr al-Mu'minīn*.

The early Mongol Il Khāns of Persia inscribed their *sikka* in Uyghur script: "The coinage of (name) the Great Khān's Viceroy", and under Ghāzān Maḥmūd "By God's Power, Ghāzān's coinage". His successor Öldjeytü (Ūldjaytū) introduced an important innovation to his first coinage. To satisfy what was probably a felt need to define his stance on the Sunnī-Shī'ī divide, he incorporated the names of the first four Orthodox caliphs in the legends: *Abū Bakr, 'Umar, 'Uthmān and 'Alī*, around the Sunnī *kalima*. Öldjeytü then proclaimed his conversion to Shī'ism by adopting the Shī'ī *kalima* with the names of the Twelve Imāms surrounding it. His new *sikka* may have been intended to quell any controversy over this move: "Struck in the Days of Prosperity of our Master the Grand Sultan, Ruler of the Necks of the Community Ūldjaytū Sulṭān. Defender of the World and Faith, the Servant of God, Muḥammad, May God Preserve his Sovereignty". The later Il Khānid rulers returned to Sunnī beliefs, and placed the name of the Orthodox Caliphs on all their coinages. No other names appeared besides that of the ruler, even in the cases of the last Il Khāns, who exercised no actual power in the state whatever apart from being named in the *khuṭba* and *sikka*.

One extraordinary exception to this practice is found on the coinage of Tīmūr Gürkhān, or Tīmūr Lang. When he seized control of Transoxiana in 771/1369-70 he did not depose the Čaghatay Khāns from their position as its nominal rulers. Between 771 and 790/1369-88, the name of Suyūrghatmish appeared above that of Tīmūr, and between 790 and 800/1388-98 that of Maḥmūd. Tīmūr called himself *Amīr Tīmūr Gürkhān*, but his successor Shāh Rūkh employed the usual Persian style: *al-Sulṭān al-A'ẓam Shāhrūkh Bahādūr khallada Allāh mulkahu wa-sulṭānahu*.

For the Ottomans' and Ṣafawids' *sikka*, see 'OTHMĀNLİ. IX, and ṢAFAWIDS. 6. After the fall of the Ṣafawids in the part of Persia which came under the rule of the Hōtakī Afghāns, the Shī'ī *kalima* was replaced by the Sunnī one on the coinage struck by Shāh Maḥmūd (1135-7/1722-4) and Ashraf (1137-42/1724-9). The *sikka* was now often expressed through the use of Persian couplets which bore the name of the ruler in elaborate and often playful wording. Because of the many puns and multiple layers of meaning which can be read into these distichs, they lose most of their sense in translation. They were obviously intended for the "happy few" who had the necessary education and means to appreciate them.

On some of his coins the Afsharid Nādir Shāh (1148-60/1735-47) gave himself the title *Sulṭān Nādir khallada Allāh mulkahu*, on others he used distichs. Karīm Khān Zand struck no coinage in his own name, but employed the invocation *Ya Karīm*! in its place. R.S. Poole explains the background in *Coinage of the Shahs of Persia*: "The Zand and Ḳādjār Khāns before Fatḥ 'Alī Shāh did not assume full rights of sovereignty. Their money shows the position they took." The founder of each line first struck money in the name of Shāh Ismā'īl III; then Karīm Khān Zand, as *wakīl*, struck in the name of Imām Muḥammad al-Mahdī, also using the invocation *yā Karīm*! alluding to his own name. Muḥammad Ḥasan Khān Ḳādjār similarly coined in the name of Imām 'Alī al-Riḍā. Evidently, they had no official *djulūs*. The later Zand Khāns, at least in some cases, had a *djulūs*. But on their money they assume no regal titles; there was still a Ṣafawid heir. The principle of Karīm Khān is not deviated from except in the appearance of the names without titles of his first successor Abu 'l-Fatḥ and his last one Luṭf 'Alī; 'Alī Murād and Dja'far used allusive invocations (*Yā 'Alī*! and *Yā Imām Dja'far Ṣādiḳ*!), while Ṣādiḳ repeated that of Karīm Khān. Similarly, Āghā Muḥammad Khān Ḳādjār struck in the name of both Imāms and was content with an allusive invocation (*Ya Muḥammad*!) even after he had conquered his rivals, and as sole prince had a *djulūs*. Probably this was because a Ṣafawid prince, Sulṭān Muḥammad Mīrzā, had been proclaimed by him in Tehran in 1200/1786 and was still living, although not in Persia.

Fatḥ 'Alī Shāh made an extraordinary innovation. Before his *djulūs*, he issued royal money under his name Baba Khān with the title of *sulṭān*. On his later coinage he styled himself as *al-Sulṭān b. al-Sulṭān Fatḥ 'Alī Shāh Ḳādjār, sikka Fatḥ 'Alī Shāh Khusraw Ṣāḥibḳirān* or *sikka Fatḥ 'Alī Shāh Khusraw Kashwarsitan*. Muḥammad Shāh used the title *Shāhanshāh Anbiyā Muḥammad*. Nāṣir al-Din Shāh usually placed *al-Sulṭān b. al-Sulṭān Nāṣir al-Dīn Shāh Ḳādjār* on his hammered coinage, while on some of his high denomination, machine-struck coins there was room to inscribe *al-Sulṭān al-A'ẓam al-Khāḳān al-Fakhīm Ṣāḥibḳirān Nāṣir al-Dīn Shāh Ḳādjār*. Similar styles were used by the last three Ḳādjār rulers, Muẓaffar al-Dīn, Muḥammad 'Alī and Aḥmad Shāh.

The *sikka* of the Dihlī Sultans [*q.v.*] varies considerably, but the usual style followed the pattern of a coin of Maḥmūd Shāh (644-64/1246-66): *al-Sulṭān al-*

Aʿẓam Nāṣir al-Dunya wa 'l-Dīn Abu 'l-Muẓaffar Maḥmūd ibn al-Sulṭān. One of the many *sikkas* of Mūbarak Shāh (716-20/1316-20), who regarded himself as both a religious and secular ruler, read *al-Imām al-Aʿẓam Khalīfa Rabb al-ʿĀlamīn Ḳuṭb al-Dunya wa 'l-Dīn Abu 'l-Muẓaffar Mūbarakshāh al-Sulṭān b. al-Sulṭān al-Wāthiḳ bi 'llah Amīr al-Mu'minīn.* The most complex coins in the series were struck by Muḥammad Shāh II (725-52/1325-51), with over fifty varieties recorded. One group was struck in the name of his father, whom he very likely murdered: *al-Sulṭān al-Shāhid al-Shāhid al-Ghāzī Ghiyāth al-Dunya wa 'l-Dīn Abu 'l-Muẓaffar Tughluḳ Shāh al-Sulṭān.* On others he described himself as *al-Mudjāhid fī Sabīl Allāh Muḥammad b. Tughluḳ Shāh; al-Wāthiḳ bi-Ta'yīd al-Raḥmān Muḥammad Shāh al-Sulṭān; al-ʿAbd al-Rādjī Raḥmat Allāh Muḥammad b. Tughluḳ* ... Still others he struck exclusively in the names of two ʿAbbāsid caliphs in Cairo, al-Mustakfī and al-Ḥākim.

The titles used by the founder of the Mughal dynasty in India, Bābur (932-7/1525-30), were strongly influenced by his neighbours the Shibānids of Transoxania. They were Sunnī in character, and usually included the names of the four Orthodox Caliphs with their epithets. He often styled himself *al-Sulṭān al-Aʿẓam al-Khāḳān al-Mukarram Ẓāhir al-Dīn Muḥammad Bābur Pādishāh-i Ghāzī*; his son, Nāṣir al-Dīn Muḥammad Humāyūn (937-63/1530-56) used a similar style. The third ruler, Akbar (963-1014/1556-1605), employed three different styles for his *sikka.* The first, *al-Sulṭān al-Aʿẓam Djalāl al-Dīn Muḥammad Akbar Pādishāh-i Ghāzī* appeared in the early years of his reign. The next issue was anonymous in the strict sense of the word, but the legend *Allāh Akbar Djalla Djalāluhu* "God is Most Great, May His Greatness be Glorified" has caused many Westerners to assume that Akbar confused himself with God. It is more likely, however, that he placed this invocation on the coinage to draw attention to his newly established *Tawḥīd-i ilāhī Akbar Shāhī* "Akbar Shāh's Doctrine of the Unity of the Divine Being". The third type was an early instance of the use of Persian couplets in the coin legends. This may have been adopted in order to avoid placing the *kalima* on the coinage of a ruler who was not devoted to the practices of traditional Islam. One such example read "The sun-shaped die of Akbar is the honour of this gold, while the light of the sun remains an ornament to the earth and sky".

The coinage of Akbar's son Djahāngīr (1014-37/1605-28) was certainly among the most artistic of any Muslim ruler. Elegant distichs, superb calligraphy and figural designs, combined with careful striking, have made his name famous as the master coiner of the age. Each issue seems to have been an occasion for fresh legends and designs, but on many his *sikka* read *Nūr al-Dīn Djahāngīr Shāh [b.] Akbar Shāh.* His successor Shāh Djahān (1037-68/1628-58) reverted to a more traditional style of coinage, where the *kalima* and the four Orthodox Caliphs returned to the place of honour, and the ruler was styled *Shihāb al-Dīn Muḥammad Ṣāḥibḳirān al-Thānī Shāh Djahān Pādishāh-i Ghāzī.*

The accession of the austerely religious Awrangzīb (1068-1118/1658-1707) brought about the near permanent banishment of the *kalima* from the Mughal coinage. Like the Ottomans and the Ṣafawid Shāh Ismāʿīl II (984-5/1576-7), he believed that the profession of faith would be profaned if it fell into the hands of the unbelievers. This was quite opposite to the early Muslims' view that coins carrying texts from the Ḳur'ān acted as missionaries of the Faith. Most of Awrangzīb's coins bore the couplet "Struck coin in the world like the shining sun (for gold) or moon (for silver) Shāh Awrangzīb ʿĀlamgīr". The reverse inscription referred to the ruler's regnal year and became virtually invariable: "The year of accession associated with prosperity". The coins of the later Mughals either bore titles, as on the coinage of Shāh Djahān, or couplets in the style of Awrangzīb. They retained their pride and claims to greatness until the end of the dynasty. The *sikka* of the last Mughal ruler Bahādur Shāh II (1253-74/1837-58) read *Abu 'l-Muẓaffar Sirādj al-Dīn Muḥammad Bahādur Shāh Pādishāh-i Ghāzī.*

Today the use of the traditional *sikka* has virtually come to an end. The last ruler to place the *kalima* on his coinage was the Imām Aḥmad (1367-82/1948-62), ruler of Yaman, who styled himself *Aḥmad Ḥamīd al-Dīn Amīr al-Mu'minīn al-Nāṣir li-Dīn Allāh Rabb al-ʿĀlamīn.* His successor the Imām Badr struck a token coinage in exile which did not circulate in the Yaman. Now the only countries which use a royal style on their coins are: Morocco—*al-Ḥasan al-Thānī al-Malik al-Maghribī*; Suʿūdī Arabia—*al-Malik Fahd b. ʿAbd al-ʿAzīz al-Suʿūd Khādim al-Ḥaramayn al-Sharīfayn*; ʿUmān—*Ḳābūs b. Saʿīd Sulṭān ʿUmān* and Brunei—(in Latin characters) *Sultan Hassanal Bolkiah.* Elsewhere in the Muslim world, the coinage is issued in the name of the state or central bank. It has been entirely secularised and shorn of all its past associations, and is no more than a bland reflection of today's political realities.

Bibliography: There is no work *per se* that deals with the Islamic *sikka*, but in every catalogue where a coin is described the names and titles of the ruler are recorded. The material for further study is contained in the great museum catalogues, and in more specialised works which deal with a particular dynasty. There are also hundreds of articles on individual subjects.

(R.E. Darley-Doran)

3. The Maria Theresa *thaler*.

From the mid-18th century and even amongst Bedouin and in remote parts of Ethiopia at the present time, these *thalers* have been used as a conventional, albeit unofficial, means of exchange, throughout the Arabian peninsula and in the Sudanic belt, and as far eastwards as the Maldives and Indonesia. Since the Empress Maria Theresa's death in 1780 restrikes bearing that date have been issued at different times from official mints because of continued demand for one reason or another: Rome (1935-7), London (1936-61), Bombay (1941-2), Birmingham (1949-55), Brussels (1935-7), and Paris (1937-59), and still continuously from Vienna since 1961. In addition, counter-marked official and unofficial issues have been made in the Azores, Lourenço Marques, Pemba, Djibuti, Bab al-Mandab, the Ḳuʿayṭī State of Shihr and Mukalla, Nadjd (Ibn Suʿūd, *ante* 1916 until 1923), Ḥidjāz (under Ḥusayn, Sharīf and then King of Mecca, 1916-20), the Maldives and Madura in Indonesia. In Western Africa, issues have crossed the Sahara from the Sudanic belt as far as Timbuktu, Nigeria and Dahomey. In these regions both the British and French authorities demonetised them in 1930. They have been used not only as a means of exchange but also for feminine decoration, and especially for bridal costumes; they have also served as a convenient source of bullion for manufacturing silver jewellery. Dubious restrikes have also been attributed to Florence, Leningrad, Marseilles, Utrecht and Venice.

The first German crowns were the silver *guldiners* issued by Archduke Sigismund of the Tyrol in 1486, whose coinage was imitated by a number of German princes. The first *thalers* properly so-called originate from the discovery in 1518 of a silver mine by a Count von Schlick at Joachimsthal, on the border of Bohemia and Upper Austria. He obtained a licence to coin in silver, and made his first issues in 1525, denominating them *thalers*, an abbreviation of the toponym of origin. Variant spellings of this term occur in a number of European languages and in Amharic; in the Netherlands it became *daalder*, contorted into the American dollar. In Arabic, however, they are called *ḳirsh*, pl. *ḳurūsh*.

F.W. Hasluck has described in detail "the extreme remissness of the [Ottoman] Turkish Government in the matter of coinage". The quality of metal was notoriously bad, and fluctuated in quality, and neither the actual quantity of money circulated nor the denominations provided were sufficient for trade. Not only the treasury but also provincial Pashas debased the currency by the ancient double-weights trick, taking in good money at a premium and then reissuing it heavily alloyed.

Thus foreign merchants trading within the Ottoman Empire imported their own currencies for sound business reasons. These were principally from Venice, Spain, the Austrian Empire, Germany, Poland and the Netherlands. England was exceptional in forbidding the export of bullion, and generally employed Netherlands currency. An attraction for Ottoman subjects was the consistency and unvarying fineness of the coin. It was impossible to clip it because of a collar, or an inscribed, milled or patterned edge. There was also a constancy of decoration and imagery. Within the Austrian Empire, archdukes, archbishops and others issued crowns of a fixed type, and for Ottoman subjects, the imagery itself was a guarantee of genuineness. Few of them, indeed, could read the Latin inscriptions.

Spanish "pieces of eight" were first struck in 1497, and immediately entered into competition with the preceding currencies. In 1518, following its conquest, Mexico issued silver coinage, and then Peru after the conquest of 1524. Silver coinage of Spanish origins became even more plentiful after the discovery of the rich mines of Potosi in 1545. This was the situation for something like a century, until, in the mid-17th century, the Spanish royal ordinances attest "a scandalous falsification of the silver moneys coined in our Peruvian mints". It led to the total demonetisation of Spanish currency in the British colonies in the latter half of the century. In 1728 the millesimal fineness had been lowered from 930.5 to 916.6, and the weight reduced; in 1772, when a massive recoinage was carried out, the fineness was further reduced to 902.7.

The first Maria Theresa *thaler* was issued in 1751, the year of her accession. Ever since it has been consistently of 833.3 millesimal fineness, 1.553 ins in diameter, and weighing 433.14 gr. The legend is abbreviated, shown here by capital letters: obverse: Maria THERESIA Dei Gratia Romanorum IMPeratrix HUngariae et BOhemiae REGina; and, reverse: her coat-of-arms borne by a double-headed eagle, a decoration that could have appealed since it first occurs in Islamic numismatics in Artuḳid coinage, from an emblem depicted on a Byzantine tower restored by the Artuḳids at Āmid, Turkey, with their inscription dated 605/1208-9. The quarters display the arms of 1. Hungary; 2. Burgundy; 3. Bohemia; and 4. originally Upper Austria, but of Burgau in the restrike issues. The arms of Austria display a single-headed eagle only. The inscription reads: ARCHIDux AUSTriae DUX BURGundiae COmes TYRoli 1780. In the centre of the field is a shield of pretence bearing the arms of her husband, Francis, initially Duke of Lorraine, and after 1751 Duke of Milan and Holy Roman Emperor. On the edge of the flan is the inscription: JUSTITIA ET CLEMENTIA, with various decorative symbols, being the motto of her reign, making clipping impossible.

In 1764 the Günzburg mint was opened specifically to mint *thalers* for the use of bankers from Augsburg engaged in the Ottoman trade. Already in 1751 those destined for Turkey were controlled by a monopoly. The 583,250 pieces coined in 1751 had increased to 1,360,597 by 1757, and to more than 2 million by 1764. Such was the demand that issues were also authorised from Kremnitz and Karlsburg, and, later, Milan, Venice and Prague. By 1767 the traveller Carsten Niebuhr found them in Yemen. By the time that Maria Theresa died in 1780 it had become plain that coins bearing her bust were valued above all others in Arabia and Yemen. Thus in 1781 a bank-

ing firm sent a consignment of bullion to the Günzburg mint requesting *thalers* with the date 1780. Permission was given, but after 1866 Vienna held a monopoly. In the first years of the present century some 46 million pieces were minted.

It was the loss of her Italian territories in 1866 that caused Austria to reserve to herself the sole right to mint *thalers*. It was at this moment that Sir Robert Napier (later Lord Napier of Magdala) was preparing an expedition to Ethiopia to rescue beleaguered British diplomats and missionaries held by the Negus. The Vienna mint provided five million *thalers*; the British were well aware that no other currency could be acceptable in Ethiopia. It was a presage, but not foreseeable.

In 1935 Mussolini determined to conquer Ethiopia, and, on 9 July 1935 succeeded in wresting the right to mint *thalers* from Vienna. It was an intolerable position for Britain. Not only was Britain pledged to Ethiopian independence; she also had commitments to Aden and the Arabian peninsula, as well as the Persian Gulf. The matter was resolved by an international commission of jurists, who ruled that the effigy on the *thaler* was of a person already dead for 150 years, who had been sovereign of a state that had disappeared in 1918. The successor state had twice introduced new currencies, finally the *schilling*, in 1924.

It was in this way that the Tower Mint, in London, was enabled to mint more than 16 million pieces in 1941 when Britain invaded Ethiopia in order to restore the Emperor to his throne. Dies were also sent to Bombay, 8 million pieces being minted in 1940-1, and 10 million in the following year. Supplies were also needed for the Arab lands, and Birmingham also minted further supplies, some of which inexplicably reached Hong Kong. Small numbers were also manufactured in Brussels and Paris.

There were also unofficial mints. In the Ḥaḍramawt the present writer was able to pick up some fractions of *thalers* which had been manufactured locally as small change, and which were known as al-Kāf coins from a well-known family of *Sayyids*. This accords with a remark made by Sir Richard Burton in 1872, of the situation at Zanzibar in 1857, that there "are no mints, of which some sixteen exist at Maskat—private shops to which any man may carry his silver, see it broken up, and pay for the coinage whatever the workmen may charge". He says that a clutch of currencies was to be found there: "German crowns or Maria Theresa—coined in Milan, known as *Girsh Aswad*—as opposed to the Spanish or Pillar dollar *Girsh Abyaz*, or *Abu Madfa*ʿ—'Father of Cannon' from the columns, and *Girsh Maghrabi*. Also Mexican dollars ..." In 1811 Captain Smee R.N. had reported that Spanish dollars were commonly current. So far no work has been done to identify the purely local manufactures.

Regoudy is able to report a veritable curiosity, of a *trouvaille* of 672 Maria Theresa *thalers* confiscated by the French authorities from smugglers who were operating for the Front de Libération Nationale in Tunisia on 30 May 1959. They were chiefly restrikes from Rome, London, Bombay, Paris, Brussels, Vienna, Prague and Venice. Some 60% came from Rome and Bombay, suggesting that the *trouvaille* may have been formed in the 1940s in the Horn of Africa, only eventually to find its way into the hands of FLN arms dealers.

The late Francesco Carbone, when he served in the Italian legation in Yemen from 1931 until 1961, first in Ṣanʿāʾ, then in Taʿizz, assembled a remarkable collection of *thalers*. Apart from 1780 restrikes, eight pieces of Maria Theresa antedated 1780, and two of her husband, Francis III Stephen; there were a further forty-eight pieces in the name of Francis I, dating between 1810 and 1830, together with one only of Francis Joseph I, of 1853. The collection was wholly random. During the whole period of Carbone's residence, the 1780 Maria Theresa *thaler* was in normal circulation, brought up from Aden in conveniently packed boxes. The *ḳurūsh* minted in the name of the Imām Yaḥyā b. Muḥammad never sufficed for local needs. Carbone thus abstracted the pieces not bearing the date 1780, replacing them in the Legation account with conventionally-accepted restrikes. The earlier group helps to illustrate the early popularity of the *thaler* and to show that pieces minted after 1780 not bearing Maria Theresa's name were none the less acceptable. H.G. Stride's statement that "Maria Theresa died in 1780 and that all *thalers* issued subsequently bore this date" would appear to be incorrect. In 1961 the Yemeni Government enquired of the British Legation in Taʿizz what the cost of purchasing one million Maria Theresa *thalers* would be. A quotation was passed to them: the cost of the silver was about five shillings, and the charge of the Royal Mint for manufacture at £16 per thousand pieces, the insurance and freight to be borne by the purchasers. The Yemeni Government did not proceed with the purchase. Ordinarily supplies of fresh *thalers* were introduced into circulation by Aden banks and merchants, whenever the cost of the silver, the minting charge, and insurance and freight were sufficiently below the exchange rate of the *thaler* to allow the bank a profit on the transaction.

It remains to mention what best may be described as a medal in the Carbone collection. It is a copy in gold about 1 m thick of a *thaler* issued by Francis Joseph I from the Vienna mint in 1898. It was specially minted in Ṣanʿāʾ at the mint there [see RIYĀL] by command of the Imām Yaḥyā on the occasions of his visit to King ʿAbd al-ʿAzīz Ibn Suʿūd and his pilgrimage to Mecca. Only a few were minted, for the Imām to give as presents to his friends, of whom Signor Carbone was one.

(G.S.P. FREEMAN-GRENVILLE)

SIKKAT AL-ḤADĪD (A.), lit. "iron line", in Persian *rāh-i āhan*, in Turkish *demiryolu* (like the Persian term, meaning "iron way") and *şimendifer* (< Fr. *chemin de fer*), railway.

1. *Railway policy in Egypt and India.*

The opening of the Liverpool and Manchester Railway in 1830 marked the start of the railway era. Shortly after, plans were being laid for building railways in Egypt and India. The first Egyptian railway, between Alexandria and Cairo, was opened in 1855. George Stephenson had originally proposed it in conjunction with the direct line between Cairo and Suez, now disused, as an alternative to the Maritime Canal across the Isthmus of Suez. The main Egyptian line up the Nile from Cairo to Luxor and Aswan was added later.

In India, the first railways were evidently built for purposes other than the purely commercial. In 1846 Lord Hardinge, the Governor-General, remarked of the proposed railways that "the facility of rapid concentration of infantry, artillery and stores may be the chief prevention of an insurrection". Sadly, his advice was not heeded in time to forestall the Sepoy Mutiny of 1857-8. Three short lines, from Bombay to Kalyan (30 miles), from Calcutta to the coalfield at Raneegunge (120 miles), and from Madras to Arcot (63 miles) were opened between 1854 and 1856, but, when trouble broke out at Meerut in the next year, the extension of the Calcutta line to Delhi was only under construction, and its engineers suffered in the unrest. Not surprisingly, in subsequent years railway stations in North India were often constructed with an eye to defence: the station at Lahore, in particular, resembled a large frontier fort.

The line from Calcutta to Delhi was completed in 1864, and extended to Multan the following year. By 1869 the engineers had surmounted the obstacles of the Western Ghats behind Bombay (by risking gradients steeper than the maximum considered safe in Britain), and the main sections of the lines connecting the great ports were in place. Until then, Lord Dalhousie's policy of using a uniform broad gauge of 5 ft. 6 ins. had been strictly enforced; but under Lord Mayo's viceroyalty (1869-72) other gauges were permitted, to the regret of later operators.

These early Indian railways were essentially intended to open up the interior to international trade, especially in cotton and jute, and in this they succeeded. However, it stands to the credit of the enlightened policy of Lord Ripon that, after a sequence of disastrous famines in the late 1870s, he followed the recommendations of the Famine Commissioners that railways be constructed with an eye to the rapid movement of surplus food to regions liable to suffer shortage. A further, and perhaps unforeseen, general effect of the railways was to facilitate pilgrimage among both the Hindu and Muslim communities.

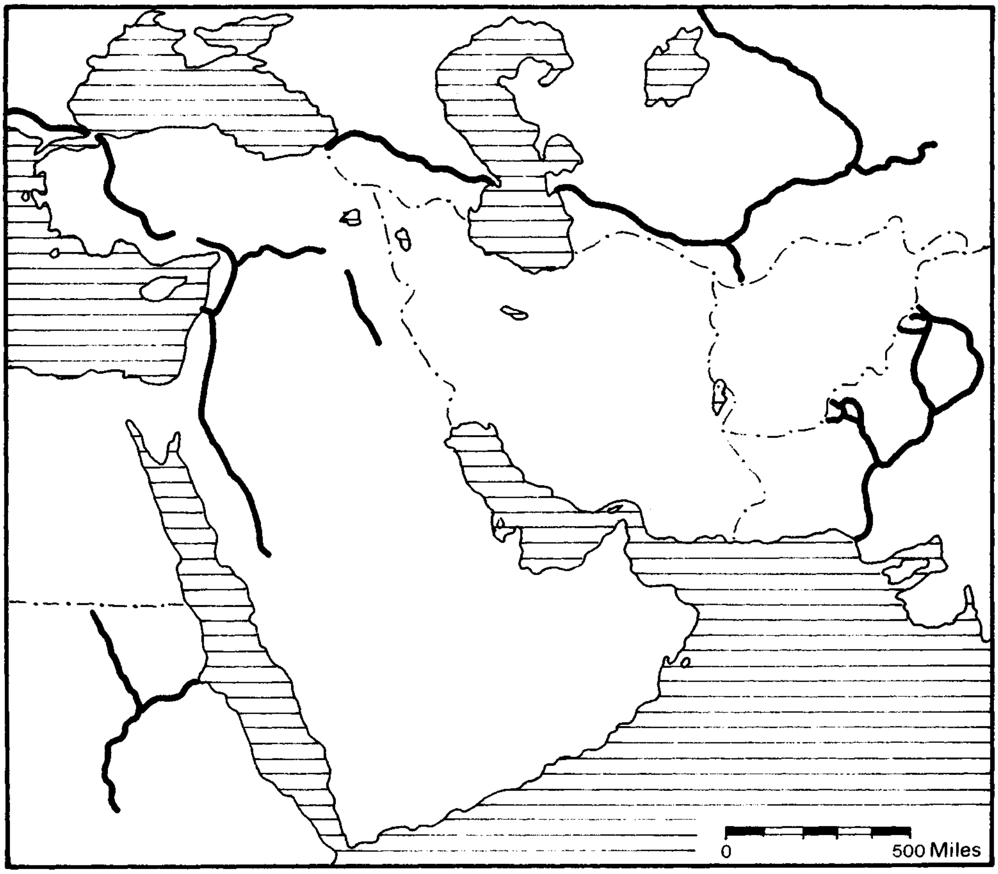
The last of the great ports of the sub-continent to be constructed and connected by railway with its hinterland (Sind and the Punjab) was Karachi. The railway from Lahore, completed to Karachi in 1872, was built primarily to serve the newly irrigated "canal colonies". In addition, however, it operated as a baseline for the narrow-gauge mountain railways which led westwards to the advance frontier posts near the border with Afghanistan—Landi Kotal, Thal, Bannu, Tank, Fort Sandeman and Chaman.

At that time, India's frontier defences were mainly in the North-West; the North-Eastern frontier with Burma was of much less concern. During the Second World War, however, the reverse was the case. During the re-conquest of Burma from the Japanese in 1943-5, the lines of communication by rail through the predominantly Muslim territory of East Bengal (later Bangladesh) were few and difficult. The line to Chittagong, which served the Arakan Front, involved a long ferry crossing of the Ganges from Goalando Ghat to Chandpur; and the track, managed by the American Army, to Manipur Road, the railhead for the Chindwin Front, could only be reached by the rail-ferry over the Brahmaputra at Amingaon.

In retrospect, the sub-continent has been well served by its railways, which aided commerce and helped to banish famine; China, by contrast, languished economically through lack of a wide network of railways.

2. *The strategic lines.*

In 1880 the Russian General Annenkov began the conquest of the Turkman steppes to the east of the Caspian Sea. A new railway was built from the harbour of Krasnovodsk to keep pace with the advance and to bring forward supplies and reinforcements. When the "Turksib" railway, coming from the north, was linked with the Trans-Caspian line in 1905 near Tashkent, the encirclement of the Muslim emirates of Central Asia [see BUKHĀRĀ, KHĪWA, KHOḲAND] was complete.



From the Trans-Caspian railway, a branch line was built in 1898 southwards from Merv to Kushka on the Afghan frontier, as a manifest threat to Herat; just as, on the opposite side of Afghanistan, the Indian line from Sukkur to Quetta and Chaman would be construed as a menace to Kandahar. In the event, neither Russia on the one side nor India (and later Pakistan) on the other had the temerity to advance a railway over the Afghan border, and, when the U.S.S.R. did eventually invade Afghanistan in 1979, the days of the strategic railway were over, and it was much easier and more efficient to use the road through the Salang Tunnel under the Hindu Kush.

In 1898 Kitchener launched his campaign of reconquest of the Sudan [see AL-MAHDIYYA] by building a supply rail-line southwards from Wadi Halfa. Atbara was reached in July 1898 and Halfaya (Khartoum North) by the end of 1899. Atbara was linked by rail to Port Sudan on the Red Sea by 1906, and Khartoum to El Obeid by way of Sennar by 1912. In the 1920s, the cotton-growing districts by the Blue Nile were served by a new loop through Kassala and Gedaref to Sennar, and in 1955 branch lines were extended into the Western Sudan as far as Darfur and El Roseires.

More ambitious than either the Russian or the Sudanese military lines was the "Berlin-Baghdād" Railway, planned by the German Empire from about 1880, to gain access to the commerce of the Black Sea, the minerals of the Middle East, and even the shipping of the Indian Ocean. The Turkish railway from Istanbul to Eskişehir, begun in 1871, fell in 1899 into German financial control as the "Ottoman Railway". It was extended to Konya, where ambitious irrigation works were also established, and a branch line across the north of the plateau reached Ankara in 1892. Concessions were also obtained for the port of Alexandretta, and for a rail link from Baghdād to Baṣra. However, at the outbreak of the First World War, there were still uncompleted sections of the Berlin-Baghdād project in Northern ʿIrāḳ and in the Taurus Mountains.

At the turn of the century, Lord Curzon in India was also planning an overland raid link from Karachi to the Mediterranean, through Baluchistan and across Central Persia by way of Kirmān to Baghdād, and thence over Syria. Only the section through Baluchistan to Duzdap (Zahidan) on the Persian frontier was ever laid, in 1917, to supply the Expeditionary Force to Persia.

Another railway line designed as an arm of empire

The Middle East—Frontiers and strategic railways, 1880-1910

was that from Aleppo to Medina, completed in 1906 to the orders of Sultan ʿAbd al-Ḥamīd II [*q.v.*] to stimulate pilgrimage traffic and to keep his Arab garrisons reinforced. The northern section, as far as Rayak, was laid on standard gauge, the southern (the Hijaz Railway) on a gauge of 1.05 metres. The controlled interruption of this line during the First World War by T.E. Lawrence and his Arab irregulars made it more a burden than a facility for the Turks.

The last of the "strategic" railways were laid during the First World War to support particular campaigns of the Allies, sc. the Quetta-Duzdap line just mentioned; Allenby's line from Egypt along the Palestine coast to Haifa (extended to Tripoli in the Second World War, but now abandoned to the west of El Arish near the Egyptian frontier); and the line in Mesopotamia (ʿIrāḳ) from Baṣra through Bag͟hdād to Baiji and Table Mountain.

3. *The national networks.*

After the First World War, no more strategic railways seem to have been built, doubtless partly because they had been shown in the War to be vulnerable to sabotage and air-attack, but mainly because the old empires were disintegrating into smaller national states.

The "Berlin-Bag͟hdād" line was completed, and carried the Orient Express, but its main value was as a component part of the rail networks of the several countries through which it passed. One of its sections formed part of the frontier between Turkey and Syria.

Each of the new states of the Middle East regarded the fragments of line which it inherited as part of a national network of railways centring on the capital city. The modest coastal lines built in the late 19th century by French and British companies by the shores of the Levant, in Western Asia Minor, Lebanon and Palestine, were incorporated in the new plans. Turkey added major lines to link the new capital at Ankara to the Black Sea (at Samsun, and at Ereğli by the "Coal Line"), to the southern plateau, and to the eastern Frontier (by the "Copper Line" through Diyarbekir, and along the Upper Euphrates).

Afghanistan has remained free of railways, but Iran, with the aid of oil royalties, constructed a bold framework of lines, beginning with the technically superb "Trans-Iranian" Railway of 1936, linking the Gulf with the Caspian. Eastern and Western arms join Mashhad to Tabriz through the capital, and there is also a central branch to Yazd.

In Saudi Arabia, Ibn Suʿūd in 1947-51 had a new line laid to link Riyadh with Damman on the Gulf coast. Although Saudi Arabia has surveyed the Hijaz Railway, abandoned since the end of the First World War, with an eye to reconstruction, it has so far only been re-laid within Jordan, over some 60 miles to the south of Maʿan as far as Mudawwara. Early in the Second World War a short extension of the Hijaz Line towards Aqaba was laid from Maʿan as far as Naqb Ishtar, with rails salvaged from the abandoned section. Subsequently, Aqaba has been connected by

a more southerly route with the rebuilt section of the Hijaz Railway [see further, ḤIDJĀZ RAILWAY].

Syria, too, has constructed a new railway to link the oilfields near its eastern frontier with the coast at Latakia. However, in the Middle East generally, as in Europe, roads have, since the Second World War, superseded railways as the principal means of communication.

In North Africa, the French, in the late 19th century, constructed a main rail line through Algeria from Morocco to Tunis, with branches over the Atlas Mountains to Bechar, Djelfa and Touggourt. Morocco, since gaining independence in 1965, has extended and improved its rail network, and has plans for new lines to the mining districts of the former Spanish Sahara south of Marrakesh. Libya has plans for a line along the coast, but so far has only one short line between Benghazi and Al Marj. The Tunisian line ends at Gabès, and the line along the Egyptian coast, so celebrated in the Second World War, terminates at al-Muʿarrid on the Libyan frontier, just short of Tobruk.

In Java, the Dutch completed in 1873 a short line from Samarang on the north coast to Jogjakarta on the south. This was supplemented in 1906 by a long east-west line from Batavia to Surabaya.

Bibliography: Information is highly scattered. The Admiralty Handbooks, Naval Intelligence Division, London, issued during the Second World War, pay considerable attention to railways and describe routes and stations (see, e.g. *Persia; Syria; Palestine and Transjordan; Iraq and the Persian Gulf; Turkey; Egypt*). Of specific studies, see R. Hill, *Sudan transport. A history of railway, marine and river services in the Republic of the Sudan*, London 1965; H. Mejcher, *Die Bagdadbahn als Instrument deutschen wirtschaftlichen Einflusses im Osmanischen Reich*, in *Geschichte und Gesellschaft*, i/4 (1975), 447-81; M. Satow and R. Desmond, *Railways of the Raj*, London 1980; P. Luft, *The Persian Railway Syndicate and British railway policy in Iran*, in R.I. Lawless (ed.), *The Gulf in the early 20th century: foreign institutions and local responses*, Univ. of Durham, CME and IS, Occasional Papers 31, Durham 1988, 158-215; Kadhem K.F. Al-Rawi, *The railway system of Iraq: its construction, administration and political importance (1914-1923)*, diss., Leeds University 1989, unpubl. The feasibility of railway connections through eastern Persia and Afghanistan between the Imperial Russian railways to Central Asia and the British Indian railway system in Baluchistan (never in fact to materialise) was discussed by G.N. Curzon in his *Persia and the Persian question*, London 1892, i, 236-41.

(W.C. BRICE)

ṢILA (A.), lit. "connection", "what is connected".

1. In grammar.

Here the meaning is lit. "adjunct". It is a syntactical term which denotes in the grammatical literature following Sībawayhi the clause which complements such word classes termed *mawṣūl* as the relative pronouns *alladhī, man, mā, ayy-* and the subordinative *an, anna.* Its early development may be reconstructed as follows. Elements of two different Greek systems of parts of speech were imported synchronously into Arabic by the earliest Arab grammarians: an Aristotelian tripartite division of noun and verb as meaningful elements and another "meaningless" (ἄσημος) part whose function is "conjunction" (Gr. σύνδεσμος, Syr. *esarā*; and Dionysius Thrax's eight-part division, which is also dichotomised into the two major parts and the other "adjunct" parts (Syr. *nekpā*, documented in Elias of Ṭirhān). A significant Syriac modification of this division concerns the status of the article (4th part, ἄρθρον), whose absence in this language forced the native grammarians to either ignore it or annex it to the class of prepositions. In this class, *d-* is the closest to the relative function of the article ὅ and *B,D,L* represent the "oblique" accusative, genitive and dative cases respectively. In the early Arabic grammatical treatises *ṣila* and its synonyms *ḥashw, zāʾid, faḍl* and *laghw* reflect earlier formulations of the categories borrowed from the two systems of their Greek and Syriac predecessors. On the one hand, *ṣila* is a "meaningless" unit which functions as a conjunction and fills up gaps, just like σύνδεσμος in the Dionysian system or even as its sub-group, termed παραπληρωματικός (Syr. *memalyānā* = *ḥashw*), exemplified by a stock of redundant words. On the other, this category known mainly as *zāʾid* denotes the class of prepositions. It reflects the above-mentioned Syriac conception of noun cases. Sībawayhi's employment of *ṣila* as relative clause seems to have originated from identification of *alladhī* with the relative sense of ἄρθρον or its rendition in Syriac as *sharīthā/artherōn*. Al-Farrāʾ still preserved such a broader application of the term *ṣila* for relative clauses.

On the morpho-phonetic plane, *ṣila/waṣl* "conjoins" words and parts of the same word. Genetic relation with מַקֵּף was offered by Guidi. Its relation to ὑφέν (Syr. *mḥayydānā*) is not clear.

In non-grammatical literature, *ṣila* appears in its various denotations mentioned above. In two early exegetical works of the 2nd century A.H. it takes the sense and function of "redundant" words and word segments. In the Djābirian corpus *ṣilāt* and *ḥurūf al-ṣila* are both the prepositions and the prosthetic *alif.* Al-Fārābī's account of classes of particles includes *wāṣilāt* which reflects Dionysius' ἄρθρον class with the article, *alladhī*, the vocative particle and a few additions. The metrical term *ṣila* is closely related to the redundant, "gap filling" function. It appears in *Kitāb al-ʿAyn* as *ṣila* (iv, 158) and in al-Akhfash's *al-Ḳawāfī* as *waṣl* (10, 32, 81).

(R. TALMON)

2. In literature.

Here, it denotes the continuation, the complement of a work (Dozy, *Suppl.*, ii, 813). Thus it is said of the *Ṣila* of al-Farghānī (see below): "it is a book which is a continuation of the *Annales* of Ibn Djarīr" (*waṣala bihi taʾrīkh Ibn Djarīr*) (Yāḳūt, *Udabāʾ*, vi, 426/xviii, 44).

I. *The genre of complements in Arabic*

The generic term which denotes them is *mutammima* (pl. *mutammimāt*), "supplement/complement": not only *ṣila* but also *dhayl* (pl. *dhuyūl*, less frequently *adhyāl*), *fāʾit/fawāt, ikmāl, mustadrak/istidrāk, takmīl, takmila, tālī, tamām, tatimma, zawāʾid, ziyādāt*, etc. The semantic

field may be arranged in terms of the relative continuity (root *w-ṣ-l*) or discontinuity (root *f-w-t* "pass by, escape") which the work denoted by either of these titles manifests in relation to the work which it is reckoned to "complete".

Ṣila is located, in principle, in the quasi-absolute continuity of the work which it supplements. On the other hand, *fā'it* or *fawāt* connotes discontinuity in relation to the original work; furthermore, numerous books of this type are relatively ancient, dating from a period when it was still possible to produce something "new". They belong to the genre of "complement" or of *addendum* to a work, which is supposed to repair its "omissions" or errors, especially in philology.

Dhayl, like "tail", is simultaneously attached to the work of which it is the "appendix" and detached from it ("at the bottom of the work" denoted, Dozy, *Suppl.*, i, 493). Thus "Ibn al-Zubayr wrote an appendix to (*dhayyala 'alā*) the *Ṣila* of Ibn Bashkuwāl" (al-Kattānī, *Fahras al-fahāris*, ed. I. 'Abbās, Beirut 1982, i, 454). The work in question being called *Ṣilat al-Ṣila*, it may be concluded from this that there is no essential difference between *ṣila* and *dhayl*, although it seems that, in certain cases, at least in historiography, a *ṣila* can be both a kind of summary or partial rewriting, with additions, of the original work and a continuation of the latter.

Mustadrak (*addendum et emendandum*) is characterised by both continuity and discontinuity: it follows the line of the original work, but amends it by means of reflection (*adraka*) on the basis of the constitutive principles of the latter. The omissions of the author of the book are corrected, especially in *ḥadīth*. *Istidrāk*, featuring particularly in philology, connotes to a greater degree the idea of "correction of errors" (see *Fihrist*, 43, ll. 20-2, on the *K. al-'Ayn: wa-ḳad istadraka 'alā 'l-Khalīl djamā'a ... wa-huwa muhmal*).

Takmila expresses the idea of completion with a moral connotation; furthermore, with one exception, the works bearing this title are fairly late. In principle, it should be less the continuation of an original work than its complement, its perfection; but it is not always so, and this can also be a continuation (Dozy, *Suppl.*, ii, 489). *Takmilat al-Ṣila* and *Ṣilat al-Takmila* are both encountered. Sometimes the notions of "continuation/appendix" and of "complement" are combined in the same title in the form; *al-Dhayl wa 'l-takmila li-Kitābay al-Mawṣūl wa 'l-Ṣila*. The same work may be described by *dhayl*, *istidrāk*, *mustadrak*, *takmila*, or *ikmāl* (see below, the *Ikmāl al-Ikmāl*. It may be noted that with the passage of time, the precise sense of these terms is lost, and nuances tend to vanish.

Ẓiyāda/*ziyādāt* refers to the quantitative rather than to the qualitative; it is no accident that this title is encountered especially in the *furū'* of law and in lexicography: all that can be added here are cases; otherwise, the rules are being broken. It seems that with *zawā'id* it is once again an issue of discontinuity, but without taking a stand (eight titles in Ḥādjdjī Khalīfa, ed. Yaltkaya, ii, 906-7: eight, without counting those which feature under the entry of a work or of a genre; Brockelmann, S III, 1164: five; three in Sezgin, i, 922), especially for compilations of *ḥadīth* and in law.

Not all the works intitled *ṣila* belong to the category of "continuation". Thus *Ṣilat al-khalaf bi-mawṣūl al-salaf* by al-Rūdānī (d. 1094/1683; Brockelmann, II, 459), ed. M. Ḥadjdjī, Beirut 1988, is an index of the works which he has received permission to transmit. Other examples: Sezgin, viii, 84_{11}; Brockelmann, I, 360_6, S I, 612; *Īḍāḥ al-maknūn*, ii, 70).

In historiography, it is probable that *ṣilas* first appeared in the earlier half of the 4th/10th century; see below, II. But it seems that in philology the date can be pushed back in time considerably as regards the other titles (*fā'it*, *istidrāk*, *ziyādāt*); see below, III.

II. *Historiography, bio-bibliography and onomastics*

It is in this literature that the genre of "continuations"/"complements" (*ṣila*, *dhayl*, *takmila*) is the most abundant.

(a) *"Universal" or dynastic chronicles*. Al-Farghānī (Abū Muḥammad) continued the *Annales* of al-Ṭabarī: Sezgin, i, 337 (two fragments surviving). Abū Manṣūr al-Farghānī (d. 398/1007) continued his father's *Ṣila* (Yaḳūt, *Udabā'*, ed. Rifā'ī, iii, 106; *Īḍāḥ al-maknūn*, i, 70: "The Continuation of the Appendix to the *Annales* of al-Ṭabarī"). Other complements to the *Annales* have come to light, such as that of 'Arīb al-Ḳurṭubī [*q.v.*], ed. de Goeje, Leiden 1897/*Ṣilat Ta'rīkh al-Ṭabarī*, in *Dhuyūl Ta'rīkh al-Ṭabarī*, 10-184, years 291-320/903-32, which combines a partial re-working for the years 291 to 302 with the continuation proper for the remaining years to 320. The same was done, in an identical way, by Muḥammad b. 'Abd al-Malik al-Hamadhānī (d. 521/1127) in his *Takmilat Ta'rīkh al-Ṭabarī* (years 295-367/907-77) which he wrote on the instructions of the caliph al-Mustaẓhir (*Dhuyūl Ta'rīkh al-Ṭabarī*, 185-489). The complement of Thābit b. Sinān (d. 363/974) carried on until 360/970; that of Hilāl al-Ṣābi' (Brockelmann, I, 324; S I, 556), until 447/1055; that of his son, Ghars al-Ni'ma al-Ṣābi' (d. 480/1087), intitled *'Uyūn al-tawārīkh*, until 479/1086. To be noted finally is that of al-Ṣāliḥ Nadjm al-Dīn b. al-Kāmil al-Ayyūbī (d. 647/1249?). Many of these texts do not seem to have survived in manuscript form; others have, but are incomplete: Brockelmann, S I, 217; Sezgin, i, 327; Rosenthal, 81-3.

The universal history, from the Creation to the beginning of 654/1256, intitled *Mir'āt al-zamān* by Sibṭ Ibn al-Djawzī [*q.v.*] has also been the object of several "continuations" (*dhayls*: Ḥādjdjī Khalīfa, ii, 1647-8; Brockelmann, I; 347; S I, 589), including that of al-Yūnīnī (see *Bibl.*).

The book by Ibn al-Wardī (d. 749/1349 [*q.v.*], *Tatimmat al-Mukhtaṣar*, also known as *Ta'rīkh Ibn al-Wardī*, is a summary and a continuation for the years 729-49/1329-49 of *al-Mukhtaṣar fī akhbār* [*ta'rīkh*] *al-bashar* by Abu 'l-Fidā' [*q.v.*]: besides the ancient editions, Nadjaf 1969^2; A.R. al-Badrāwī, Beirut 1970.

As for Ibn Ḳāḍī Shuhba (d. 851/1448 [*q.v.*], Ḥādjdjī Khalīfa attributes to him a *Dhayl Tawārīkh al-Ḥāfiẓ al-Dhahabī wa 'l-Birzālī wa-Ibn Kathīr* (Brockelmann, II, 51, S II, 50). Darwīsh, ii, 27, distinguishes between: (i) *K. al-I'lām bi-ta'rīkh al-islām*, extract from the *History* of al-Dhahabī, with complements drawn from the *Histories* of Ibn Kathīr and of al-Kutubī (years 300-792/912-1390; (ii) *al-Dhayl al-muṭawwal*, from 741/1340, where al-Dhahabī comes to a halt in the *'Ibar*, a complement and a rectification to that which has been omitted by al-Birzālī, Ibn Kathīr, Ibn Rāfi', etc., with a supplement up until 810/1408; (iii) *Ta'rīkh Ibn Ḳāḍī Shuhba*, a summary of the above-mentioned *Dhayl*, which concludes in 808/1406 (see *Bibl.*); and (iv) *Mukhtaṣar Mukhtaṣar al-Dhayl*.

Abū Shāma (d. 665/1268 [*q.v.*] continued *al-Rawḍatayn fī akhbār al-dawlatayn*, in his *Dhayl al-Rawḍatayn*, Cairo 1947, Beirut 1974.

(b) *Local chronicles*. The *Ta'rīkh Baghdād* of al-Khaṭīb al-Baghdādī was continued by al-Sam'āni (d. 562/1167) in *Dhayl Ta'rīkh Baghdād*, which comprised fifteen volumes (surviving extracts, Brockelmann, I, 330, S I, 565; Ḥādjdji Khalīfa, i, 288). It was expanded by Ibn al-Dubaythī (d. 637/1239; Brockelmann and Ḥādjdjī

Khalīfa, *ibid.*), in *Dhayl Madīnat al-salām*, ed. B. ʿAwwād Maʿrūf, Baghdād 1974. The *Dhayl Taʾrīkh Baghdād* by Ibn al-Nadjdjār (d. 643/1245 [*q.v.*], Brockelmann, I, 360, S I, 613; Ḥādjdjī Khalīfa, i, 288) has survived only in part: i-iv, ed. C.E. Farah *et alii*, Ḥaydarābād 1978-86; M.M. Khalaf, 31-46. As for *al-Mustafād min Dhayl Taʾrīkh Baghdād* (see *Bibl.*) by Ibn al-Dimyāṭī (Shihāb al-Dīn, d. 749/1348), this is a summary of the preceding.

Similarly, the *Taʾrīkh madīnat Dimashk* of Ibn ʿAsākir [*q.v.*] was furnished with an incomplete *dhayl* by his son al-Ḳāsim (d. 600/1203). Also worthy of mention are the *dhayls* of Ṣadr al-Dīn al-Bakrī (d. 656/1258) and of ʿUmar b. al-Ḥādjib (d. 630/1233). Abū Shāma made a summary of this chronicle: *Taʾrīkh Abī Shāma* prolonged (*fi ʾl-dhayl ʿalayhi*) until the year of his death (Brockelmann, I, 331). Al-Birzālī (ʿAlam al-Dīn, d. 739/1338) completed it in *al-Muktafā li-Taʾrīkh Abī Shāma*, or *Wafayāt al-Birzālī* (Brockelmann, S II, 35). As for Ibn Rāfiʿ (d. 774/1372), he composed a *dhayl*, years 737-74/1336-73, to the work of al-Birzālī: *Wafayāt Ibn Rāfiʿ* (Brockelmann, II, 33, S II, 30; S.M. ʿAbbās, 47) which has been edited (see *Bibl.*). The *Taʾrīkh* of Ibn al-Ḳalānisī (d. 555/1160 [*q.v.*] or *Dhayl al-Taʾrīkh al-Dimashkī*, sometimes considered on account of this title a continuation of the *History* of Ibn ʿAsākir, or that of the lost *History* of Hilāl al-Ṣābiʾ, is in fact neither one nor the other (Ḥādjdjī Khalīfa, i, 294).

Other local histories have also been continued: the *History* of Aleppo by Ibn al-ʿAdīm [*q.v.*] (Ḥādjdjī Khalīfa, i, 291-2), *Taʾrīkh Bukhārā* by Ghundjār (Sezgin, i, 353), the histories of Medina (Ḥādjdjī Khalīfa, i, 302-3), *Taʾrīkh Naysābūr* by al-Ḥākim al-Naysābūrī, d. 404/1014 [*q.v.*] (Ḥādjdjī Khalīfa, i, 308), *Taʾrīkh Samarkand* by al-Mustaghfirī (Sezgin, i, 353), etc.

(c) *Biography and onomastics.* While the preceding works also contain biographical notices, others exist in which the biographical aspect is dominant. Many of them have had a substantial lineage. The obituary register compiled by Ibn Zabr al-Rabaʿī (d. 379/989), *Wafayāt al-nakala/Taʾrīkh mawālid al-ʿulamāʾ wa-wafayātihim* (Brockelmann, S I, 280), covering the period from the Hidjra to the year 338/949, was continued with an appendix contributed by his pupil, ʿAbd al-ʿAzīz al-Kattānī (d. 466/1073), as far as the year of the latter's death, in turn supplemented by the contribution of his pupil al-Akfānī (d. 524/1130): *Djāmiʿ al-wafayāt*, as far as the year 485/1092, supplemented by that of ʿAlī b. al-Mufaḍḍal al-Makdisī (d. 611/1214; Brockelmann, I, 366), who completed the work of his predecessor as far as 581/1185. All these works bear the title of *Wafayāt*; although their titles make no mention of *ṣila* or any equivalent term, they are nevertheless "continuations". The *Takmilat Wafayāt al-nakala*, 4 vols. ed. B. ʿAwwād Maʿrūf, Beirut 1984[3] (Baghdād, 1967[1]), by al-Mundhirī (ʿAbd al-ʿAẓīm, d. 656/1256) continues the last-mentioned appendix, from 581/1185 to 642/1244. Ibn al-Ḥalabī (ʿIzz al-Dīn al-Ḥusaynī; d. 695/1295) continued (*dhayl*) the work of his master al-Mundhirī until 674/1275 and perhaps even until the year of his death: *Ṣilat al-Takmila li-wafayāt al-nakala* (autograph ms.): R. Sellheim, *ʿIzzaddīn al-Ḥusainīs Autograph seiner Ṣilat al-Takmila*, in *Oriens*, xxxiii (1992), 156-80. Ibn al-Dimyāṭī composed an appendix to the preceding, and Zayn al-Dīn al-ʿIrāḳī (d. 806/1404) supplied one to that of Ibn al-Dimyāṭī. The son of al-Ḥāfiẓ al-ʿIrāḳī, Walī al-Dīn al-ʿIrāḳi (d. 826/1243), continued in his turn his father's work. For the overall scheme, see Ḥādjdjī Khalīfa, ii, 2019-20; S.M. ʿAbbās, i, 58-60.

The *Obituary of famous men* by Ibn Khallikān [*q.v.*] has also experienced a pedigree, although less extensive. It was continued for the years 658/1259 to 725/1325 by the Christian Ibn al-Ṣuḳāʿī (d. 726/1326) in his *Tālī K. Wafayāt al-aʿyān*, ed. and tr. J. Sublet, Damascus 1974, then by al-Zarkashī (d. 794/1392) in his *Dhayl al-Wafayāt*.; Brockelmann, S I, 561; Sublet, *op. cit.*, p. xi, n. 1. Ibn Shākir al-Kutubī (d. 764/1363) wrote a supplement to it: *Fawāt al-Wafayāt* [*wa ʾl-dhayl ʿalayhā*], 5 vols. ed. I. ʿAbbās, Beirut 1973-4. One of the latest of these complements is the *Durrat al-ḥidjāl* of Ibn al-Ḳāḍī [*q.v.*].

Ibn Ḥadjar al-ʿAskalānī (d. 852/1449) wrote an appendix to his *al-Durar al-kāmina* (alphabetical order, 8th/14th century), *Dhayl al-Durar*, ed. ʿA. Darwīsh, Cairo 1992 (obituary years 801-32/1408-29); Gilliot, in *MIDEO*, xxii, no. 190.

As for al-Dhahabī (d. 748/1348), his *K. al-ʿIbar* was supplied with a *Dhayl* composed by himself for the years 701-40/1301-39 (ed. M. Rashād ʿAbd al-Muṭṭalib, Kuwait 1970, with the *Dhayl* following). His disciple, Shams al-Dīn al-Ḥusaynī (d. 765/1354) pursued this work in his *Dhayl al-ʿIbar* (years 741-64/1340-62). (The whole, *al-ʿIbar* with the two *Dhayls*, ed. Abū Hādjir Muḥammad al-Saʿīd b. Basyūnī Zaghlūl, 4 vols. Beirut 1985.) His son Muḥammad b. Muḥammad al-Ḥusaynī (d. 791/1389) continued this work until 785/1383. Ibn Sanad al-Lakhmī (d. 792/1390) in his turn completed the *Dhayl* of Shams al-Dīn al-Ḥusaynī from 763 to *ca.* 780. Then Zayn al-Dīn al-ʿIrāḳi wrote his *Dhayl*, following on directly from that of al-Dhahabī (years 741-63/1340-62); his son Walī al-Dīn al-ʿIrāḳī completed his father's work (years 762-86/1361-84) in his *Dhayl al-ʿIbar*, 3 vols., ed. S.M. ʿAbbās, Beirut 1989. As for Ibn Ḥadjar al-ʿAskalānī, he wrote a *Dhayl* on that of Shams al-Dīn al-Ḥusaynī. For an overall view, see Brockelmann, II, 47, S II, 46; Ḥādjdjī Khalīfa, ii, 1123-4; Introd. by S.M. ʿAbbās to the ed. of al-ʿIraki's *Dhayl*. The *Tadhkirat* (or *Ṭabaḳāt*) *al-ḥuffāẓ* has also been the object of appendices: *Dhayl Tadhkirat al-ḥuffāẓ* by Shams al-Dīn al-Ḥusaynī; *Laḥẓ al-alḥāẓ bi-Dhayl Ṭabaḳāt al-ḥuffāẓ* by Ibn Fahd (Taḳī al-Dīn, d. 871/1466); *Dhayl Ṭabaḳāt al-ḥuffāẓ* by al-Suyūṭī; all three ed. Rafīʿ al-Ṭahṭāwī, Damascus 1347/1928, repr. Baghdād 1968, and Beirut n.d. Brockelmann, S II, 46; Ḥādjdjī Khalīfa, ii, 1097.

Among the books on the classes of scholars, Ibn Radjab (d. 795/1392) wrote *al-Dhayl ʿalā Ṭabaḳāt al-Ḥanabila*, ed. H. Laoust and Sāmī al-Dahhān, i, Damascus 1951, i-ii, Cairo 1952-3, a continuation of the work of Ibn al-Farrāʾ (Ibn Abī Yaʿla, d. 526/1133). Al-Maṭarī al-ʿAbbādī (d. 765/1364: al-Subkī, *Ṭabaḳāt al-shāfiʿiyya*, no. 1355; Kaḥḥāla, vi, 108-9) wrote *Dhayl Ṭabaḳāt al-shāfiʿiyya*, ed. Hāshim and ʿAzab, Cairo 1993; Gilliot in *MIDEO*, xxii (1995), and corrs. in *MIDEO*, xxiii (1996).

The *Dhayl Rafʿ al-iṣr* or *Bughyat al-ʿulamāʾ wa ʾl-ruwāt* by al-Sakhāwī, ed. Djawdat Hilāl and M. Maḥmūd Ṣubḥ, Cairo 1966, is an *addendum* to what was omitted by Ibn Ḥadjar al-ʿAskalānī in his *Rafʿ al-iṣr ʿan ḳuḍāt Miṣr*. The *Dhayl al-taḳyīd li-maʿrifat ruwāt al-sunan wa ʾl-masānīd* by Taḳī al-Dīn Muḥammad al-Fāsī al-Makkī (d. 832/1428), ms. DK 198, *muṣṭalaḥ ḥadīth*, is a supplement to the *Taḳyīd* of Ibn Nuḳta (d. 629/1231).

Muslim Spain has also produced a series in the genre. Ibn Bashkuwāl (d. 578/1183 [*q.v.*]) wrote a "sequel" to the *Taʾrīkh ʿulamāʾ al-Andalus* of Ibn al-Faraḍī which he intitled *al-Ṣila fī Taʾrīkh ʿulamāʾ al-Andalus*. Ibn al-Abbār (d. 658/1260 [*q.v.*]) continued this work in *al-Takmila li-K. al-Ṣila*. Ibn al-Zubayr (d. 708/1308 [*q.v.*]) composed a sequel to the *Takmila* which he intitled *Ṣilat al-Ṣila*. Ibn ʿAbd al-Malik al-

Marrākus̲h̲ī [*q.v.*] wrote a complement/supplement to the works of Ibn al-Faraḍī and of Ibn Bas̲h̲kuwāl: see *Bibl.*; M. Meouak, *Cahiers d'onomastique arabe* (1985-7) [1989], 61-96.

The onomastic literature which specialises in the identification and correct writing of the proper names of traditionists and scholars likewise shows no lack of supplements. Thus the *Tālī al-Talk̲h̲īṣ*, sometimes called *Bāḳī al-Talk̲h̲īṣ* (2 mss.; al-S̲h̲ihābī, 42) of al-K̲h̲aṭīb al-Bag̲h̲dādī, is an appendix to his *Talk̲h̲īṣ al-Mutas̲h̲ābih*, 2 vols. ed. S. al-S̲h̲ihābī, Damascus 1985, on the correct orthography of the names of traditionists. The same author wrote a complement to *al-Mu'talif wa 'l-muk̲h̲talif* of al-Dāraḳuṭnī which he intitled *al-Mu'tanif fī takmilat al-Mu'talif wa 'l-muk̲h̲talif*; Brockelmann, I, 329, S I, 564; Muwaffaḳ b. 'Al. b. 'Aḳ., 73_{17}. Ibn Mākūlā (d. 487/1094 [*q.v.*]) added considerably to the materials collected by al-Dāraḳuṭnī, and this in *al-Ikmāl*. Ibn Nuḳta composed a *d̲h̲ayl* to this work: *Ikmāl al-Ikmāl* (*al-Istidrāk/al-Mustadrak 'alā/Takmilat al-Ikmāl*) ed. 'Abd al-Ḳayyūm 'Abd Rabb al-Nabī, Mecca, Umm al-Ḳurā Univ. (date?). Ibn al-Ṣābūnī (D̲j̲amal al-Dīn, d. 680/1281) completed this last work in *Takmilat Ikmāl al-Ikmāl*, ed. M. D̲j̲awād, Bag̲h̲dād 1957, Beirut 1986 (Brockelmann, I, 355, S I, 602; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, ii, 1637; Muwaffaḳ b. 'Al. b. 'Aḳ., 73-8). Also worth mentioning is *al-Ẓiyādāt fī K. al-Mu'talif wa 'l-muk̲h̲talif li-'Abd al-G̲h̲anī* [al-Azdī, d. 409/1018] by al-Mustag̲h̲firī (d. 432/1040); Sezgin, i, 353; Muwaffaḳ b. 'Al. b. 'Aḳ., 72_{11}. In the same context, Ibn Rāfi' is the author of an appendix to *al-Mus̲h̲tabih fi 'l-rid̲j̲āl* of al-D̲h̲ahabī: *D̲h̲ayl Mus̲h̲tabih al-nisba*, ed. Ṣ. al-Munad̲j̲d̲j̲id, Beirut 1974.

III. *Language and literature*

In lexicography, the *K. al-'Ayn* of al-K̲h̲alīl was completed and amended by its author in the *K. Fā'it al-'Ayn; Fihrist*, ed. Flügel, 43, l. 26; Sezgin, viii, 54. Numerous *al-Istidrak 'alā K. al-'Ayn* are attested by al-Naḍr b. S̲h̲umayl (d. 203/818; Sezgin, viii, 54_3), al-Mu'arrid̲j̲ al-Sadūsī (d. after 204/819; Sezgin,viii, 60), Ibn Durayd (d. 321/933; Sezgin, viii, 103), al-Zubaydī (d. 379/989); Sezgin, viii, 255: *Istidrāk al-g̲h̲alaṭ al-wāḳi' fī K. al-'Ayn*, also *al-Mustadrak min al-ziyāda fī K. al-Bāri' li-Abī 'Alī al-Bag̲h̲dādī* [i.e. al-Ḳālī] *'alā K. al-'Ayn*, according to Ibn K̲h̲ayr, *Fahrasa*, 350. Abū 'Umar al-Zāhid also wrote a *K. Fā'it al-'Ayn*; Sezgin, viii, 55_{10}. Abū Ḥāmid al-K̲h̲ārzand̲j̲ī (d. 348/959) composed the *Takmilat K. al-'Ayn*; Sezgin, viii, 195-6.

The *G̲h̲arīb al-muṣannaf* of Abū 'Ubayd has been the object of *addenda: Ẓiyādāt fī G̲h̲arīb al-muṣannaf* by S̲h̲amir d. Ḥamdawayh (d. 255/869; Sezgin, viii, 83); *K. Ẓiyādat al-G̲h̲arīb al-muṣannaf* or *Ẓiyādāt K. al-Mu'allaf li-Abī 'Ubayd* by al-Mund̲h̲irī (d. 329/941; Sezgin, viii, 195). The same was the author of the *K. Ẓiyādāt G̲h̲arīb al-ḥadīt̲h̲ li-Abī 'Ubayd* and of the *K. Ẓiyādāt Ma'ānī 'l-Ḳur'ān li 'l-Farrā'* (*ibid.*).

The *K. al-Faṣīḥ* of T̲h̲a'lab (d. 291/904) was also the object of complements and of *emendanda: Ẓiyādāt al-Faṣīḥ* by al-D̲j̲a'd al-S̲h̲aybānī (d. *ca.* 320/922; ms. Princeton; Sezgin, viii, 142, 175). *Fā'it al-Faṣīḥ* by Abū 'Umar al-Zāhid (d. 345/957), ed. Aḥmad, Cairo 1986[2]; Sezgin, viii, 156; Gilliot in *MIDEO*, xix, no. 5. *Tamām Faṣīḥ al-kalām* by Ibn Fāris (395/1005), ed. I. al-Samarrā'ī, in *MM'I'I*, xxi (1971), 160-95; Sezgin, viii, 212_6. *D̲h̲ayl Faṣīḥ al-kalām* by al-G̲h̲aznawī (Abu 'l-Fawā'id, wrote 442/1050); Sezgin, viii, 143_{19}. *D̲h̲ayl al-Faṣīḥ* by 'Abd al-Laṭīf al-Bag̲h̲dādī (d. 629/1231), ed. al-K̲h̲afād̲j̲ī, in *Faṣīḥ T̲h̲a'lab wa 'l-s̲h̲urūḥ allatī 'alayhi*, Cairo 1949; Sezgin, viii, 143-4.

The *Tād̲j̲ al-lug̲h̲a wa-ṣiḥāḥ al-'arabiyya* by al-D̲j̲awharī [*q.v.*] has engaged the attention of numerous authors (Sezgin, viii, 215-24), and two works at least are relevant to this study: that of Raḍī al-Dīn al-Ṣāg̲h̲ānī (d. 647/1249 or 651), *al-Takmila wa 'l-d̲h̲ayl wa 'l-ṣila* (Sezgin, vii, 219_{15}), 7 vols. ed. 'Abd al-'Alīm al-Ṭaḥāwī *et alii*, Cairo 1970-9: Anawati, in *MIDEO*, xiii (1977), no. 5, and that of al-Basṭī (wrote 622/1225), *Takmilat Ḥās̲h̲iyat Ibn Barrī* which is lost: Sezgin, viii, 218_{9c}. Murtaḍā al-Zabīdī (d. 1205/1791), for his part, is the author of *al-Takmila wa 'l-d̲h̲ayl wa 'l-ṣila* [*limā fāta ṣāḥib al-Ḳāmūs min al-lug̲h̲a*], 7 vols. ed. Muṣṭafā al-Ḥid̲j̲āzi *et alii*, Cairo 1986-90, which includes many additions not found in the *Tād̲j̲ al-'arūs*, especially regarding proper names, names of tribes and of places, and, remarkably, Egyptian dialectal forms indicated as such: Gilliot, in *MIDEO*, xx (1991), no. 2; for an overall assessment, in lexicography, see J. Kraemer, *Studien zur altarabischen Lexicographie*, in *Oriens*, vi (1953), 201-38.

In grammar, the *K. al-Mut̲h̲allat̲h̲* on the forms *fa'l, fi'l and fu'l* by Ḳutrub (d. 206/821) was completed by Abū Ḥabīb Tammām b. 'Abd al-Salām al-Lak̲h̲mī (?) in his *Takmila* (ed. Ḥ.S̲h̲. Farhūd, Cairo 1969; Riyāḍ 1981; Kāẓim Baḥr al-Mard̲j̲ān, Cairo, Faculty of Letters, 1972); Sezgin, viii, 65_{10}. Abū 'Ali al-Fārisī (377/987) wrote a complement to his own *K. al-Īḍāḥ* called *al-Takmila*. While the first of these deals with syntax, the subject of the second is morphology (*ṣarf/taṣrīf*): P. Larcher, in *Arabica*, xl (1993), 250.

Al-D̲j̲awālīḳī [*q.v.*] composed a book concerning incorrect locutions called *al-Takmila fīma yalḥan fīhi al-'āmma*, also known as *Tatimmat Durrat al-g̲h̲awwāṣ*, *The book of solecisms* (Brockelmann, I, 280, for the Derenbourg and Tanūk̲h̲ī editions). It is often presented as an appendix to *Durrat al-g̲h̲awwāṣ* by al-Ḥarīrī [*q.v.*] but is in fact a complement to works of the genre. He is also the author of *Takmilat Iṣlāḥ al-manṭiḳ* (Sezgin, viii, 132) which is lost. Al-Zad̲j̲d̲j̲ād̲j̲ī (d. 337/949) had already written *al-Istidrāk 'alā Iṣlāḥ al-manṭiḳ*: Sezgin, viii, 105.

In *adab*, Abū 'Alī al-Ḳālī (d. 356/967 [*q.v.*]) wrote an appendix to his *Amālī*, the *D̲h̲ayl al-Amālī*, Cairo 1344/1926. To Abū Manṣūr al-T̲h̲a'ālibī (d. 429/1038 [*q.v.*]) is owed a complement to his own *Yatīma*, *Tatimmat al-Yatīma* (or *al-Yatīma al-t̲h̲āniya*; Brockelmann, S I, 499), ed. 'Abbās Iḳbāl, Tehran 1353/1934; ed. Mufīd M. Ḳumayḥa, Beirut 1983.

The author declares (p. 8) that he composed it and gave it this title because many things had escaped him in the two versions of the *Yatīma* [*al-dahr*]. Al-Bāk̲h̲arzī (d. 467/1975 [*q.v.*]) in his turn continued the *Yatīma* for the poets of the 5th/11th century, until 450/1058, in *Dumyat al-ḳaṣr* [*wa-'uṣrat ahl as-'aṣr*]. Al-Ak̲h̲sīkat̲h̲ī (d. 528/1134) composed a commentary on the *Saḳṭ al-zand* of al-Ma'arrī: *al-Ẓawā'id* [*fī s̲h̲arḥ Saḳṭ al-zand*]; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, ii, 906, 993, ll. 1-3.

Al-Sakallī al-Mag̲h̲ribī is the author of *al-Takmila wa-s̲h̲arḥ al-abyāt al-mus̲h̲kila min Dīwān Abi 'l-Ṭayyib al-Mutannabī*, ed. Anwar Abū Suwaylam, 'Ammān 1935: Sezgin, ii, 595.

Ḥadīt̲h̲ and law

In this domain, there are no *ṣilas* as such, but there are complements and corrections (*mustadrak*), and *addenda* (*ziyādāt, zawā'id*). Thus al-Ḥākim al-Naysābūrī wrote *al-Mustadrak 'alā 'l-Ṣaḥīḥayn* ("Complement to the two authentic collections") with the object of including prophetic traditions omitted by al-Buk̲h̲ārī and Muslim which, according to him, conform to the conditions of acceptance (*s̲h̲urūṭ*) determined by them; al-D̲h̲ahabī checked, completed and amended this work in *al-Mustadrak 'alā 'l-Mustadrak*: Sezgin, i, 221. Abū D̲h̲arr al-Harawī (Ibn al-Sammāk, d. 435/1042) is also the

author of a *Mustadrak ʿalā ʾl-Ṣaḥīḥayn*: al-Dhahabī, *Siyar*, xvii, 559. Abū Nuʿaym al-Iṣfahānī (d. 430/1038) also completed Muslim's *Ṣaḥīḥ* in *al-Mustadrak ʿala Saḥīḥ Muslim*: *op. cit.*, xvii, 462.

Still in the context of *ḥadīth*, Nūr al-Dīn al-Haytamī (d. 807/1405; Brockelmann, II, 76; not to be confused with Shihāb al-Dīn Ibn al-Ḥadjar al-Haytamī (d. 974/1567 [*q.v.*]) wrote his *Zawāʾid Ibn Mādja ʿalā ʾl-kutub al-khamsa*: Brockelmann, S II, 82; Sezgin, i, 148: *Zawāʾid ʿalā ʾl-kutub al-khamsa*. But he also wrote *Zawāʾid* on the *Musnads* of Ibn Ḥanbal, of Abū Bakr al-Bazzār (d. 292/905; Sezgin, i, 162), of Abū Yaʿlā al-Mawṣilī (d. 307/919; Sezgin, i, 170-1) and on the *Dictionaries of traditions* (the three *Muʿdjams*; Sezgin, i, 196: *Ziyādāt Muʿdjama al-Ṭabarānī*, i.e. *al-Awsaṭ* and *al-Ṣaghīr* together, according to the author in his introd., i, 11) of al-Ṭabarānī (d. 360/971). He combines them and makes them into a single work, *Madjmaʿ al-zawāʾid wa-manbaʿ al-fawāʾid*, numerous eds. or reprs., including 9 vols. Beirut 1986; Gilliot, in *MIDEO*, xxiii (1996), no. 71.

The son of Ibn Ḥanbal, ʿAbd Allāh, made additions to his father's *Musnad*, known as *Ziyādāt* [*Zawāʾid*] *al-Musnad*; al-Dhahabī, *Siyar*, xi, 75; Ḥādjdjī Khalīfa, ii, 1680, l. 9. He is also the author of a supplement to his father's *K. al-Zuhd*, *Zawāʾid al-Zuhd*, mentioned in al-Baghdādī, *Khizāna*, ed. Hārūn, ii, 256, l. 6, *ubi leg.* ʿAbd Allāh, *not* Aḥmad; Ḥādjdjī Khalīfa, ii, 957. Al-Haytamī wrote *Ghāyat al-maḳṣad fī zawāʾid al-Musnad*: Brockelmann, I, 182.

In Ḥanafī law, al-Shaybānī (d. 189/80) is the author of *al-Ziyādāt* and *Ziyādāt al-Ziyādāt* which are *addenda* to his *Djāmiʿ al-kabīr* [*fi ʾl-furūʿ*]: Ḥādjdjī Khalīfa, ii, 962-4, with the list of other *ziyādāt* and *addenda* of *addenda*; Spies, 240-1; Sezgin, i, 422-3. In Shāfiʿī law, *al-Mukhtaṣar* of al-Muzanī (264/877) was completed by Ibn al-Mundhir al-Naysābūrī (d. 318/930) in his *Ziyādāt*: Sezgin, i, 493. Ibn Ziyād al-Naysābūrī (d. 324/936) wrote *Ziyādāt, K. al-Muzanī*: al-Shīrāzī, *Ṭabaḳāt al-fuḳahāʾ*, ed. I. ʿAbbās, Beirut 1981, 113. Al-ʿAbbādī [*q.v.*] is the author of *al-Ziyādāt* [*fi ʾl-furūʿ al-shāfiʿiyya*], of *al-Ziyāda ʿalā ʾl-Ziyādāt* and of *al-Ziyāda ʿalā Ziyādat al-Ziyādāt*: Ḥādjdjī Khalīfa, ii, 964; G. Vitestam, Introd. to al-ʿAbbādī, *K. Ṭabaḳāt al-fuḳahāʾ al-shāfiʿiyya*, Leiden 1964, 6. In Zaydī law, al-Murādī (d. 290/903) transmitted and completed the *Amālī* of Aḥmad b. ʿĪsā b. Zayd (d. 247/861) in *Ziyādāt al-Amālī*: Sezgin, i, 563.

(CL. GILLIOT)

3. In the sense of a gift.

Here it is often found in the more restricted sense of reward and remuneration; it is thus ubiquitous in stories in which payment of a panegyrist for his poem is mentioned. For the contexts of gift-giving in general, see the various sections of HIBA. The word *ṣila* is the *maṣdar* of the doubly transitive verb *waṣalahu ṣilat^{an}*, "he gave him a present/reward". The underlying notion of using the root *w-ṣ-l* "to connect" to express the idea of "gift" is said to be either "that by which the giver establishes a connection with the recipient" or "that by which the recipient's livelihood is continued" (*LʿA*, xi, 728a-b). A synonym of *ṣila* is *djāʾiza*, with the concomitant verb *adjāza*. For an *awāʾil* story about the origin of the term *djāʾiza*, see al-Balādhurī, *Futūḥ*, 392. (ED.)

AL-SILAFĪ, AL-ḤĀFIẒ ABŪ ṬĀHIR, *shuhra* of the Shāfiʿī traditionist al-Ḥāfiẓ Ṣadr al-Dīn Abū Ṭāhir Aḥmad b. Muḥammad b. Aḥmad b. Muḥammad b. Ibrāhīm (Silafa) al-Iṣfahānī al-Djarwānī (from Djarwān, a quarter of Iṣfahān) al-Iskandarānī. He was born in Iṣfahān in 472/1078-9 (or 474, 475, 478), and died on 5 Rabīʿ II 576/28 August 1180, in Alexandria (al-Dhahabī, *Siyar*, xxi, 5-7). Al-Samʿānī, *Ansāb*, s.v., gives an abridged genealogy of his name, making Silafa the agnomen of his grandfather Muḥammad. It should be noted that he signed himself sometimes Aḥmad b. Muḥammad b. Silafa, sometimes Aḥmad b. Muḥammad b. Ibrāhīm (Zaman, *Silafī's biography*, 3). According to different versions, he died at 98, or 106 years of age; whatever the case, he is classed among the excessively long-lived (al-Dhahabī, *Ahl al-miʾa*, 134) but also as one of the "cyclical renovators" (*mudjaddids* [*q.v.*], in partnership with al-Ghazālī (E. Landau-Tasseron, in *St. Isl.*, lxx [1989], 95). The origin of his attributive name poses a problem.

According to some, Silafa was the agnomen of his great-great-grandfather Ibrāhīm, the expression signifying in Persian "the man with three lips" (*silabi*, from *si* "three", and *lab* "lip"), since he had a cleft lip, according to Abū Ṭāhir. For others, and again according to Abū Ṭāhir himself, his grandparents allegedly belonged to a clan of the Ḥimyarī tribe, the Banū Silafa. There is little support for a third hypothesis, according to which this name would have derived from a quarter of Iṣfahān known as Silafa (Ibn Khallikān, i, 107, who was in contact with a number of his disciples in Egypt and in Syria; Ibn Mākūlā, iv, no. 1, 468-70; al-Zabīdī, *Takmila*, v, 78-9; Zaman, *art. cit.*, 1-3). Also called al-Silafī is his grandson, the traditionist Abu ʾl-Ḳāsim ʿAbd al-Raḥmān b. al-Ḥāsib Makkī al-Ṭarābulusī al-Iskandarānī (al-Sibṭ, i.e. *sibṭ* al-Ḥāfiẓ Abī Ṭāhir, d. 651/1253; *Siyar*, xxiii, 278-9). It is said that the traditionist Abū Djaʿfar al-Ṣaydalānī (d. 568/1173; *Siyar*, xx, 530-1) was also described as al-Silafī because the name (nickname?) of his grandfather was Silafa (Ibn Ḥadjar, *Tabṣīr*, ii, 738).

Abū Ṭāhir's grandfather was a Ṣūfī, a disciple of al-Sayyid al-Zāhid Abū Hāshim al-ʿAlawī; his father, for his part, was a traditionist of some renown, a disciple of Ibn al-Ṭuyūrī (al-Mubārak b. ʿAbd al-Djabbār, d. 500/11-7; *Siyar*, xix, 213-16, and also one of Abū Ṭāhir's teachers in Baghdād. The fact that Iṣfahān was his birthplace was not to prove inconsequential in the intellectual destiny of the great traditionist that Abū Ṭāhir became, if it is true that "No city has produced so many scholars and masters in all disciplines, especially having regard to the high quality of chains of authority (*ʿuluww al-isnād*, i.e. the least possible number of transmitters in a chain), for people there live long; furthermore, they have a pronounced

interest in the audition (*samā*ʿ) of *ḥadīth*, and the great masters of *ḥadīth* (*ḥuffāẓ*) are innumerable there" (Yāḳūt, *Buldān*, Beirut 1955, i, 209a). It was the favoured residence of the great Saldjūḳ sultan Malik Shāh [*q.v.*] during the infancy of the subject of this article; the ruler even founded a *madrasa* there and was buried in its precincts.

His first experience of audition of *ḥadīth* in the city of his birth was owed to Rizḳ Allāh al-Tamīmī al-Baghdādī al-Ḥanbalī (d. 488/1095). He also attended the classes of other scholars of Iṣfahān, including al-Ḳāsim b. al-Faḍl al-Thaḳafī (*al-ra*ʾ*īs, al-musnid*, d. 489/1096). It was also there that he received instruction in reading the Ḳurʾān. He was indebted for his education to his father (d. 498/1104-5) with whom he performed the Pilgrimage in 497. The number of teachers whose courses he attended in Iṣfahān is said to have exceeded six hundred. He also composed a dictionary of his authorities in this city entitled *Mu*ʿ*djam Iṣfahān/al-Safīna al-iṣfahāniyya* (al-Biḳāʿī, no. 1); al-Dhahabī quotes this (lost) work on numerous occasions, as well as borrowing from it without acknowledgement.

The Pilgrimage was an opportunity for him to profit by acquaintance with the masters of Mecca and Medina; he pursued the same objective in Kūfa and in Baghdād, where he stayed until 500/1106-7. It was there that he attended courses in *fiḳh* given by the leading Shāfiʿīs of the Niẓāmiyya; Ilkiyā al-Ṭabarī (d. 505/1111), Abū Bakr al-Shāshī (d. 507/1114), the classes of Abū Zakariyyā al-Tibrīzī (d. 502/1109 [*q.v.*]) and of ʿAlī al-Faṣīḥī (d. 516/1123) at the same school, as well as those of Ibn Fākhir (Abu 'l-Karam al-Mubārak, d. 505/1112) in language and in *adab*. The same year, he made his way to Baṣra and then to Wāsiṭ. In 509/1115-16 he was in Damascus, where he stayed for some time (Ibn ʿAsākir, vii, 179-80; al-Biḳāʿī, 7-8). It was there that he encountered Ibn al-Akfānī (d. 524/1130), and also there that he composed a summary of the *K. Makārim al-akhlāḳ* of al-Kharāʾiṭī on the basis of the original, then verified his text with a recitation before ʿAlī b. Muslim al-Sulamī (Djamāl al-Islām, d. 533/1138-9), al-Ghazālī's master, in 511 (below, no. 7; Ḥāfiẓ, 13-14, on the two modes of *intiḳā*ʾ). The list given by al-Dhahabī of the masters from whom he received his education, including women, is vast. That of his disciples, especially in Alexandria, is no less impressive.

The same year (511/1117-18), he embarked at Tyre for Alexandria, where he settled and remained until his death, a period of sixty-five years, and this not only at the solicitation of the scholars of this town but also because he married a wealthy local lady who placed her fortune at his disposal (Ibn ʿAsākir, *ibid.*; *Siyar*, xxi, 25). Furthermore, Ibn Sallār al-ʿĀdil had a school and a religious institution constructed on his behalf. The choice of Alexandria was quasi-strategic, since there he could meet Muslim intellectuals of East and West (for example, al-Tudjībī of Tlemcen (d. 610/1212-13), who, according to his prediction, was to be the principal traditionist of the Maghrib; al-Kattānī, 264) without leaving his domicile, and this purpose was duly achieved (I. ʿAbbās, 8; al-Biḳāʿī, 10). He left Alexandria only once, for a journey to Cairo in 517/1123-4 (although according to one source he was in residence there from 515 to 517: Ṭarābīshī, 13 no. 1). His library was impressive, since he invested all his property in the acquisition of literature, but it was discovered after his death that these volumes had been seriously damaged by the humidity of Alexandria.

His eminence as a great traditionist (*ḥāfiẓ*) is demonstrated, in particular, by the countless fascicles (*djuz*ʾ), collections of traditions, which he left behind in the form of audition, reading or of dictation (below, no. 15); they are sometimes called *al-Adjzā*ʾ *al-Silafiyyāt* or *al-Silafiyyāt* which exceeded, according to Ḥādjdjī Khalīfa, nos. 4093, 7216/ed. Yaltkaya, i, 587, ii, 996, a hundred. They were established on the basis of source-texts (*uṣūl*) of Baghdādīs such as al-Anmāṭī (d. 538/1143) or al-Ṭuyūrī (above, below no. 13) and others. In common with numerous other scholars, he devoted a collection to the "Tradition of Mercy" (*ḥadīth al-raḥma*), "Those who are merciful, the Merciful One shows them mercy; show mercy to those who are on the earth, and those who are in the Heavens will show you mercy" (al-Kattānī, 94).

His renown extended far beyond that of a traditionist and a writer, since it is impossible to count the number of times that he appears in certificates of audition (*samā*ʿ*āt*) or of reading, or in licences of transmission (*idjāzāt*) (see G. Vajda, *Les certificats de lecture*..., Paris 1957, 70, index; al-Rūdānī, *Ṣilat al-khalaf bi-mawṣūl al-salaf*, ed. M. Ḥadjdjī, Beirut 1988, 516, index). This is particularly evident in his *Wadjīz* (below, no. 14). "Brief account of the master who delivers the certificate of transmission and the one who receives it", in which he sets himself the objective of presenting a list of scholars with whom he has been in correspondence, in most cases without having met them. He awarded to many of them a "general licence" (*idjāza* ʿ*āmma*), i.e. the right to transmit all his works, among others to al-Ḥātimī (d. 638/1239-40; al-Kattānī, 317-18), al-Randī (d. 616/1219; al-Kattānī, 340, dating from 560/1165), al-Ghāfiḳī (d. 619/1121-2; al-Kattānī, 884). For others, in particular the scholars of the Maghrib, it is known that he sent to them licences in writing from Alexandria (al-Kattānī, 995, gives six names), in particular to the *Ḳāḍī* ʿIyāḍ (d. 544/1149): *kataba ilayya yudjīzunī djamī*ʿ *riwāyātihi wa-madjmū*ʿ*ātihi* (*al-Ghunya, fahrasat shuyūkh al-Ḳāḍī* ʿ*Iyāḍ*, ed. M.Z. Djarrār, Beirut 1982, 102). His longevity was such that four generations of traditionists were enabled to transmit traditions from him: his last eastern disciple, his grandson (see above), died in 651 (*corr. Tadrīb*, which gives the date 605), and the last western one in 662, while the first to die, Abū ʿAlī al-Bardānī (*Siyar*, xix, 219-22), was deceased in 498/1105, thus an interval of more than one hundred and fifty years! In the science of *ḥadīth*, this is considered a unique case in terms of anteriority and posterity in relation to the demise of a master (*al-sābiḳ wa 'l-lāḥiḳ*) (al-Kattānī, 996; al-Tahānawī, 677; al-Suyūṭī, *Tadrīb al-rāwī*, ch. 46; W. Marçais, in *JA* [July-August 1901], 131-2). The advantage in this is the production of "high quality" chains of authority.

His *Mu*ʿ*djam al-safar* (below, no. 5) testifies to the same interest. Here he assembled articles regarding scholars whom he had met "in other places" (i.e. outside Iṣfahān and Baghdād) and more specifically those with whom he was acquainted in Alexandria (Egyptians, Maghribīs, etc.). He wrote a lengthy biography of one of his masters, Abu 'l-Muẓaffar al-Abīwardī (d. 507/1113 [*q.v.*]) (*Siyar*, xix, 289, l. 3; Ḥādjdjī Khalīfa, no. 2911/1, 398: *Tardjamat al-Silafī*; Zaman, *Sources of Silafī's biography*, 493-5).

Among hundreds of other examples of works for which he features in certificates of authenticity is al-Djūzdjānī (d. 259), *Aḥwāl al-ridjāl*, ed. S. al-Samarrāʾī, Beirut 1985, 20, no. 6 (*corr.* al-Biḳāʿī, no. 37, who attributes *al-Niṣf al-thānī min K. al-Shadjara fī aḥwāl*... to al-Silafī; see Sāmarrāʾī, 17-8). Similarly, he is in the list of authorities of certain ms. of the

K. Gharīb al-Ḳur'ān attributed to Ibn ʿAbbās (Gilliot, in *MIDEO*, xxii [1995], no. 47, 37, l. 2 of the edited work), to the point where the elucidation of certain Ḳur'ānic expressions is, probably erroneously, attributed to him (in the case of Brockelmann, I², 450 no. 4, ms. Berlin 427, more developed and critically evaluated in al-Biḳāʿī, no. 6). Such details apart, he played a fundamental role in the transmission of knowledge in Islam, and represents one type of the great traditionists of the *madrasa* era.

Bibliography: 1. Biographical sources in chronological order.

Ibn ʿAsākir, *Ta'rīkh Dimashḳ*, vii, ed. ʿA. al-Daḳar, Damascus 1984, 179-82; Yāḳūt, *Udabā'*, which quotes al-Silafī extensively, but has no article regarding him; Ibn Nuḳta, *al-Taḳyīd [li-maʿrifat al-ruwāt wa 'l-sunan wa 'l-masānīd]*, Ḥaydarābād 1983, i, 203-10, no. 198; Ibn Khallikān, ed. I. ʿAbbās, i, 105-7, no. 44; Dhahabī, *Siyar aʿlām al-nubalā'*, xxi, ed. B. ʿAwwād Maʿrūf and M.H. al-Sarḥān, Beirut 1984, 5-39 (with parallel places, 5 n.*); idem, *Ahl al-mi'a fa-ṣāʿidan*, ed. B. ʿAwwād Maʿrūf, *al-Mawrid* (Baghdād), ii/4 (1973), 134; Maḳrīzī, *al-Muḳaffā*, ed. M. al-Yaʿlāwī, Beirut 1991, i, no. 660; Ibn Ḥadjar al-ʿAsḳalānī, *Tabṣīr al-muntabih*, ed. ʿA.M. al-Bidjāwī, Cairo 1964-8, ii, 738; Zabīdī, *al-Takmila wa 'l-dhayl wa 'l-ṣila li-mā fāta ṣāḥib al-Ḳāmūs min al-lugha*, ed. Muṣṭafā Ḥidjāzī, v, Cairo 1988, 78-9; Ibn Mākūlā, *al-Ikmāl*, iv, no. 1, 468-70; Kattānī, *Fihris al-fahāris*, ed. I. ʿAbbās, Beirut 1982, no. 565.

2. Studies. Ḥ. ʿAbd al-Wahhāb, *al-Iskandariyya fi 'l-ʿaṣr al-islāmī*, in *al-Kitāb*, iii/3 (1947), 383-5 [379-93]; Biḳāʿī (below, no. 14), 5-46; Brockelmann, I², 450, S I, 624; Ḥasanī (below, no. 5), 7-104; Dj. al-Shayyāl, *Aʿlām al-Iskandariyya*, Cairo 1965, 130-59: Ṭarābīshī (below, no. 10), 11-33, to be supplemented by Biḳāʿī; G. Vajda, *Un opuscule inédit d'as-Silafi* [since edited, see below no. 14], in *Bull ... de l'Inst. de Rech. et d'Hist. des Textes*, xiv (1966), 85-92 (= embellished translation of material by M.Kh. al-Biḳāʿī, *Kutayyib makhṭūṭ li 'l-Silafī*, in *MMLʿAU* (ʿAmmān), xxxix [1990], 281-318); "study" by Ḥ. ʿAbd al-Ḥamīd Ṣāliḥ, Damascus or Beirut (?) 1977, mentioned by Biḳāʿī, 45, without title (n. *c.*); S.M. Zaman, *Sources for Silafī's biography*, in *Isl. Stud.*, xxiv (1985), 493-502; idem, *Silafī's biography: his birth and family background*; idem, *Ḥāfiẓ Abū Ṭāhir al-Silafī (d. 576/1180), acquisition of Ḥadīth and Qirā'āt in Isfahan*, in *Isl. Stud.*, xxv (1986), 1-10, 151-9; Maḥmūd Zaytūn, *al-Ḥāfiẓ al-Silafī*, Alexandria 1972; Ziriklī, i, 216a, mentions a biography, ms. Rabat 1046d.

3. Edited or preserved works. (1) *K. al-Arbaʿīn al-buldāniyya/al-Arbaʿīn al-mustaghnī bi-taʿyīn mā fīhi ʿan al-muʿīn* [ms. Paris BN, Algiers, DK, 3 Ẓāh.; Brockelmann, I², 450 no. 3; Biḳāʿī, no. 5; Şehid 540/1; Gilliot, in *MIDEO*, xx (1991), no. 130, following Kh. Alavi: *Forty traditions of forty shaykhs living in forty places*; Kattānī, 111]. (2) *Arbaʿūn ḥadīthan fī ḥaḳḳ al-fuḳarā'*, collected by his disciple, probably his grandson, ʿĪsā b. Ḥ. al-Silafī; ms. Alex., Brockelmann, I², 450 no. 11; Biḳāʿī, no. 29). (3) *al-Faḍā'il al-bāhira fī maḥāsin Miṣr wa 'l-Ḳāhira* (ms. Cambridge, Brockelmann, S I, 624 no. 8, erroneously attributed to Sulamī; Biḳāʿī, no. 9; Ziriklī, i, 216a; ms. Istanbul Hamid 363 *ta'rīkh*). (4) *Muʿdjam Baghdād/al-Mashyakha al-baghdādiyya* (ms. Esc., Ẓāh., Feyz.; Brockelmann, I², 450, S I, 624; Biḳāʿī, no. 1; Ḥasanī, 76-82); according to Brockelmann, a summary of it exists, *al-Safīna al-baghdādiyya*, by A. al-Labbādī (?). (5) *Muʿdjam al-safar*, ed. S.M. Zaman, Islamabad 1988 (794 entries) [*corr.* Brockelmann, S I, 624 no. 9: *Muʿdjam al-shuʿarā'*; Biḳāʿī, no. 7, seems to show that its title was *al-Muʿdjam al-mu'akhkhar*]; partial editions: Bahīdja Bāḳir al-Ḥasanī, i, Baghdād 1978 (145 entries), and I. ʿAbbās, *Akhbār wa-tarādjim andalusiyya mustakhradja min Muʿdjam al-safar*, Beirut 1963. (6) *al-Muntakhab [al-Tadjzi'a] min K. al-Irshād fī maʿrifat ʿulamā' al-ḥadīth* of al-Khalīlī (d. 446/1055; *Siyar*, xvii, 666-8), ed. Saʿd, Beirut 1986/ed. Idrīs, Riyāḍ 1989. (7) *al-Muntaḳā min K. Makārim al-akhlāḳ wa-maʿālīhā wa-maḥmūd ṭarā'iḳihā*, summary of the celebrated work by al-Kharā'iṭī [*q.v.*], ed. M. Muṭīʿ al-Ḥāfiẓ and Ghazwa Burayd, Damascus 1986. (8) *Murāsalāt al-Silafī maʿa 'l-Zamakhsharī*, ed. B. al-Ḥasanī, in *MMʿIʿ*, xxiii. (9) *al-Salamāsiyyāt* [five sessions of dictation to the scholars of Salamās, in Ādharbaydjān, in 506/1112-13; 2 ms. Ẓāh.] (10) *Su'ālāt* [al-Ḥāfiẓ al-Silafī] *li-Khamīs al-Ḥawazī ʿan djamāʿa min ahl Wāsiṭ*, ed. al-Ṭarābīshī, Damascus 1976 (Brockelmann, I², 450 no. 12). (11) *Ḳaṣīda*, Brockelmann, S I, 624 no. 5; Biḳāʿī, no. 33; Ḥasanī, 64-75, has reproduced some of his poetry. (12) *al-Sudāsiyyāt [allatī akhradjahā al-Ḥāfiẓ ...]* (traditions with a chain of six authorities which he had received in 512/1118-19, by means of audition, from Ibn al-Ḥaṭṭāb al-Rāzī al-Shurūṭī, d. 524/1130; *Siyar*, xix, 583-5; Kattānī, no. 525; besides the ms. in Brockelmann, S I, 624 no. 6, ms. Ẓāh.; Biḳāʿī, no. 10). (13) *al-Ṭuyūrāt*, choice and *emendatio* of traditions drawn from collections (*adjzā'*) of Ibn al-Ṭuyūrī (ms. Ẓāh.; Biḳāʿī, no. 12). (14) *al-Wadjīz fī dhikr al-mudjāz wa 'l-mudjīz*, ed. M. Khayr al-Biḳāʿī, Beirut 1990: rev. by Gilliot, in *Stud. Isl.*, xli (1994), 143-5. (15) Seventeen collections or fragments of collections of traditions (*aḥādīth, aḥādīth muntakhaba, amālī, djuz', djuz' fīhi fawā'id, fawā'id, ḳiṭʿa*, etc.) drawn from those of other authors, as well as certificates of audition (*samāʿāt*), preserved in ms., Biḳāʿī, nos. 13-30. See Kattani's index, iii, 85a.

4. Works no longer extant (*addenda* to the 38 entries of Biḳāʿī): *Djuzʿ Ḳulunbā*, fascicle of traditions dictated by al-Silafi to the traditionist Ibn Ḳulunbā in 511 in Alexandria (*bi 'l-thaghr*), according to Zabīdī, *Takmila*, i, 328b; *corr.* Ḥādjdjī Khalīfa, no. 4092: *Djuz' ḳalbinā*, tr. as *Cor nostrum*/i, 587: *Ḳalanbā. Man ismuhu Dhu 'l-Nūn* (Kattānī, 421). *Manāḳib al-ʿAbbās*; Ḥādjdjī Khalīfa, no. 13040/ii, 1843. *Mashyakha Ibn al-Ḥaṭṭāb* (or *al-Rāzī*), *takhrīdj al-Silafī*; Kattānī, nos. 252, 276; cf. above, no. 12.

(Cl. Gilliot)

SILĀḤ [see Suppl.].

SILĀḤDĀR (A., P.) ("arms-bearer"). This military-administrative title and function have a long history in the Islamic world, going back to the days of the Great Saldjūḳ sultans, whose state organisation followed early Persian and ʿAbbāsid models. Niẓām al-Mulk's *Siyāsat-nāma*, describing the organisation of the Saldjūḳ state, lists the *silāḥdār* as one of the most trusted personnel in the sultan's palace, who was directly responsible to the person of the sultan. As chief of the army's arsenal (*zarad-khāna*), where the armour and weapons were stored, the *silāḥdār* had a military unit under his command and the responsibility of carrying the sultan's weapon (Niẓām al-Mulk, *Siyāsat-nāma*, ed. Ch. Schefer, Paris 1891, 94-95, 109; Ibn al-Bībī, *El-Evāmirü 'l-ʿalā'iyye fī 'l-umūri 'l-ʿalā'iyye*, ed. Adnan Erzi, Ankara 1956, 216).

The Mamlūks retained the same title in its Arabic form *amīr silāḥ*, who was one of the nine most important office holders in the Mamlūk state and ranked among the Amīrs of a Thousand (*amīr alf*), the highest

rank in the military echelon. In this capacity, he was in command of a Royal Mamlūks' unit (*ṭulb*), called *silāḥdāriyya*, with a number of horsemen ranging from 110 to 120. He was also in charge of the arsenal (*silāḥ-khāna*) and over the amīrs of the arsenal, who were called *zaradkāshiyya* and whose duty was to guard the arsenal. He was therefore sometimes called *al-zaradkāsh al-kabīr*. During public appearances, the *amīr silāḥ*'s duty was to bear the sultan's arms. The role of *amīr silāḥ* reached its highest importance in the 9th/15th century and involved the participation in military campaigns (Ibn Taghrībirdī, vi, 386-7; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, iv, 14 ff.; Khalīl b. Shāhīn al-Ẓāhirī, *K. Zubdat kashf al-mamālik*, ed. P. Ravaisse, Paris 1894, 111-16).

The Ottomans, who used the title in its Persian form *silāḥdār*, continued Saldjūḳ and Mamlūk traditions and even elevated its role to a higher level in the Imperial Palace (*saray*). During Meḥemmed II's reign (1451-81), the Inside Service (*enderūn*) in the palace, under the direction of the *ḳapî aghasî*, was made up of four Chambers, of which the Privy Chamber (*khāṣṣ-oda*) was the highest-ranking. Immediately beneath the chief of the Privy Chamber, the *khāṣṣ-oda bashî*, was the *silāḥdār agha*, along with other principal officials who performed the general service of the sultan and therefore were the nearest to him. Being the second-in-command in the Privy Chamber, the *silāḥdār agha* handled all communications to and from the sultan and accompanied him with his sword in public ceremonies, travels and campaigns. He also commanded his own unit, the *silāḥdār bölüghü* (sometimes called *sarî bayraḳ bölüghü* because of its yellow flag). During public ceremonies, such as the Friday procession (*selamlîḳ*), the *silāḥdār bölük* took position on the left side of the sultan. In the battlefield, as part of the *ḳapîḳulu* cavalry, they served as the sultan's personal guards protecting his flanks. Over the years, as the *silāḥdār aghas* gained greater power and expanded their functions, the number of their *bölüks* increased, comprising 2,000 *silāḥdārs* during Meḥemmed II's time, 2,780 in 1568, 2,930 in 1588, 5,000 in 1597, 6,244 in 1660, 7,683 in 1699, 10,821 in 1713, reaching the staggering number of 12,000 during the reign of Maḥmūd II (1808-39). Since the sultans appointed their favourite men to high offices in the administration, the ranks of the *silāḥdār agha* provided countless viziers and dignitaries. Two such *silāḥdār aghas* were Silāḥdār Yūsuf Pasha who, during Sultan Ibrāhīm's reign, conspired successfully to bring about the fall and execution in 1644 of the Grand Vizier Ḳara Muṣṭafā Pasha [*q.v.*], and Silāḥdār ʿAlī Pasha, Aḥmed III's son-in-law, who engineered the overthrow of Čorlulu ʿAlī Pasha [*q.v.*] and in 1713 became Grand Vizier himself. With the death of Silāḥdār Giritli ʿAlī Agha in 1831, Maḥmūd II eliminated the office of the *silāḥdār agha*, and incorporated it into the office of the Treasury under the control of the *khazîne ketkhüdāsî* (*Ḳānūn-nāme-i Āl-i ʿOthmān*, ed. M. ʿĀrif, in *TOEM*, supplement, 23-4; Luṭfī Pasha, *Âsâfnâme: devlet adamlarına öğütler*, Ankara 1977; Ottaviano Bon[-Robert Withers], *A description of the Grand Signiour's Seraglio*, ed. John Greaves, London 1653, 78-9).

SILĀḤDĀR, FÎNDÎḲLÎLÎ MEḤMED AGHA, (1068-1139/1658-1726-7), Ottoman historian.

The palace official Silāḥdār Meḥmed Agha was born on 12 Rabīʿ I 1068/8 December 1658 in the Fîndîḳlî district of Istanbul. A protégé of the *bash muṣāḥib* Shāhīn Agha, he was educated in the *sarāy* and entered the palace *bostāndjî* [*q.v.*] corps in 1084/1674. In 1089/1678 he became a *zülflü baltadjî* [*q.v.*] and in 1090/1679, was promoted to the *seferli odasî*. In this capacity he took part in the 1683 Vienna campaign led by Ḳara Muṣṭafā Pasha [*q.v.*]. In 1099/1688 he entered the *khāṣṣ oda* [*q.v.*] and was promoted successively to *dülbend ghulāmî*, *čukhādār* (in the reign of Muṣṭafā II), and, finally, *silāḥdār* [*q.v.*], in Rabīʿ II 1115/August 1703 immediately upon the accession of Aḥmed III (1703-30), this despite his closeness to the deposed Muṣṭafā II. He subsequently played an important role in quelling *bostāndjî* unrest and in overseeing arrangements for the funeral of Muṣṭafā II in Shaʿbān 1115/December 1703. However, in Shawwāl 1115/February 1704, when a protégé of one of Aḥmed III's favourites was appointed *silāḥdār* in his place, Meḥmed Agha chose to retire from palace service, refusing the offer of a provincial governorship with the rank of vizier and accepting instead a daily pension of 300 *aḳčes*. He settled in the Demirkapî district of Istanbul and on his death in 1139/1726-7 was buried at Ayāzpasha.

He compiled a detailed chronicle of Ottoman history during the years 1065-1133/1655-1721, written in a matter-of-fact prose style. This is generally considered as two separate works: (i) *Dheyl-i Fedhleke* ("Supplement to the *Fedhleke*") (sc. of Kātib Čelebi [*q.v.*]), detailing events of the years 1065-1106/1655-95 (published as *Silāḥdār taʾrīkhi*, 2 vols., Istanbul 1928, introd. by Aḥmed Refīḳ [Altınay]); (ii) *Nuṣret-nāme*, comprising initially a day-to-day account of the reign of Muṣṭafā II (1106-15/1695-1703), then continuing with a less detailed account for 1115-33/1703-21 (*Nusretnâme*, modern Turkish tr. İ. Parmaksızoğlu, 2 vols., Istanbul 1962-9). Meḥmed Agha's history is a particularly valuable first-hand account for the period *ca.* 1683-1703, when he was in close attendance upon the sultans. The *Nuṣret-nāme* was probably a major source for the *waḳʿa-nüwīs* Rāshid [*q.v.*] (O. Köprülü, *Râşid'in kaynaklarından biri Silahdâr'in Nusretnâmesi*, in *Belleten*, xi [1947], 473-87).

Bibliography: Aḥmed Refīḳ [Altinay], *ʿĀlimler ve ṣanʿatkārlar*, Istanbul 1924, 228-55 (and introd. to *Silāḥdār taʾrīkhi*, i, pp. iii-xii); *GOW*, 253-4; İ.H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, esp. 342-53; İ. Artuk, *Silâhdâr Fındıklılı Mehmed Ağa*, in *Tarih dergisi*, xxvii (1973), 123-32.

SILHET, conventional form Sylhet, a famous city, a district and a division at the easternmost part of Bangladesh. The present Division of Sylhet (a District prior to 1 August 1995) covers approximately 4,785 square miles (lat 23° 58'-25° 12' N., long. 91°-92° 38' E.) and comprises the districts of Sylhet, Sunamganj, Maulvi Bazar and Habibganj. Before the advent of Islam, Sylhet formed part of Samatata region (Djūzdjānī mentions it as Suknāt; see *Ṭabaḳāt-i Nāṣirī*, ed. Ḥabībī, i, 426, tr. Raverty, i, 557-8) and was divided into small kingdoms (i.e. Laor, Jayantia, Gauḍa) ruled by Hindu dynasties. Some parts of Sylhet were also ruled by

the neighbouring kingdom of Kamrup. An economically prosperous land where cowrie-shells were used for currency, Arab traders sometimes visited Sylhet on their overland route to China. Muslim conquest of the area began in early 14th century during the reign of Sultan Fīrūz Shāh (d. 1322) of Lakhnawati. The celebrated Suhrawardī *shaykh*, Shāh Djalāl Mudjarrad Kūnyā'ī (see Mohammad Yusuf Siddiq, *Arabic and Persian texts of the Islamic inscriptions of Bengal*, Watertown, Mass. 1992, 158), and his disciples played an important role in consolidation of Islam in this region. Mughal rule was extended up to Sylhet in the early 17th century. In 1874, during British colonial rule, the District of Sylhet was made part of the newly-formed Assam State. In 1947, the Muslim majority of this area opted for Pakistan, and Sylhet became a District of East Bengal Province (now Bangladesh).

Sylhet is quite rich in its natural resources such as natural gas and limestone. Huge cement, fertiliser and tea factories have provided it with an industrial base. The tea plantations of Sylhet are famous. A sizeable number of people from Sylhet have emigrated to the U.K., and their remittances enrich the country with much-needed foreign exchange.

SILIFKE (Greek Seleucia; Armenian Selefkia, Selewkia; Frankish Le Selef, Salef, Saleph; Arabic Salūḳiya), important rural centre in the (present-day) Turkish province of Adana, 87 km/48 miles east of the port of Mersin [*q.v.*], on the river Göksu (ancient Calycadnus), about 14 km/9 miles from the Mediterranean Sea. In a strategic position where the coastal road and the route inland over the Taurus Mountains meet, it was founded before 300 B.C. by Seleucus I Nicator. Extant monuments in Silifke include a 2nd century A.D. temple to Zeus, a large Byzantine rock-hewn cistern and, most importantly, a mediaeval castle. In spite of being exposed to Arab incursions, the castle remained in Byzantine hands until the end of the 6th/12th century. Thereafter it was, at different times, under Armenian, Hospitaller and seignurial Frankish control, until at least the second half of the 7th/13th century, when the record is lost. The castle occupies the long, narrow platform of an outcrop overlooking the town. While little remains of the structures within the castle save at the western end, the outer gateway and some of the outer wall are still in place, as well as most of the inner wall and salients. Although the Byzantine Emperor Alexius 1 ordered his secretary Eustathius to rebuild the castle at the beginning of the 6th/12th century, the work visible today is probably largely Frankish, with perhaps some Armenian contribution, reflecting the occupancies of the 7th/13th century.

(D.W. Morray)

SILSILA (A.), literally "chain", a term used in the terminology of Ṣūfism and the Ṣūfī orders (*ṭuruḳ*) for a continuous chain of spiritual descent, a kind of mystical *isnād* [*q.v.*]. This connected the head of an order, the *shaykh* or *pīr*, with a person regarded as the order's founder and back to the Prophet. These persons might stem from early Islam, such as the Yemeni contemporary of the Prophet, Uways al-Ḳaranī (actually, not initiated directly but after the Prophet's death, in a dream), and the Patriarchal Caliphs, especially Abū Bakr, ʿUmar and ʿAlī. That such claims to descent were fictitious, given the obviously intensely practical and unmystical bent of the first caliphs, was early recognised by some authorities, such as Ibn Khaldūn [*q.v.*] (who suspected here Shīʿī influence; see his *Muḳaddima*, iii, 73-4, tr. Rosenthal, iii, 93-4). Somewhat more plausible were *silsila*s traced back to early undoubted Ṣūfīs like Abū Yazīd al-Bisṭāmī (d. 261/875 or 264/878 [see abū yazīd]) and Abu 'l-Ḳāsim al-Djunayd (d. 298/910-11 [*q.v.*]).

SILVES [see shilb].

al-SĪM, Lughat, a secret vocabulary or argot employed by criminals, beggars, gypsies, and other groups for communication among themselves without the risk of being understood by outsiders. The word *sīm* (variant *sīn*) is well attested in Arabic from the 19th century to the present, but its earlier history and etymology are obscure; M.J. de Goeje's proposal of a Gypsy and ultimately Indian origin for the term, and his citation of an isolated 7th/13th century instance of its use by an Arabic author (*Mémoire sur les migrations des Tsiganes à travers l'Asie*, Leiden, 1903, 71), require further investigation. For the mediaeval Islamic world, our sources mainly associate such an argot with the Banū Sāsān [see sāsān, banū] a loose confraternity of beggars and other marginal types; this group's esoteric vocabulary is known to us primarily from two remarkable jargon poems, by Abū Dulaf al-Khazrajī (*fl.* fourth/tenth century [*q.v.*]) and Ṣafī al-Dīn al-Ḥillī (d. *ca.* 750/1349 [*q.v.*]), which have been thoroughly analysed by C.E. Bosworth (*The medieval Islamic underworld: the Banū Sāsān in Arabic society and literature*, 2 vols. Leiden, 1976). A degree of continuity in this argot is traceable into modern times, notably in the vocabulary of the Ḥalab, a pseudo-Gypsy group in Egypt, which is shared as well by traditional Egyptian musicians and entertainers in general, who call it *sīm al-fannānīn* or "artistes' argot." Scholars have also documented a number of other secret vocabularies in the contemporary Arabic world, of which the most elaborate appears to be the *sīm al-ṣāgha*, or argot of gold- and silversmiths, based largely on Hebrew, distinctive forms of which have thus far been recorded in Cairo and Damascus. Some forms of contemporary argot in Persian and Turkish are also known. In addition to argot in the strict sense of secret vocabularies, the phenomenon of encrypting one's language by means of phonetic and morphological distortion, as in English "pig Latin," is known in all three languages, and in Arabic is also sometimes called *sīm*.

SIMANCAS [see SHANT MĀNKASH].

SIMAW, modern Turkish SIMAV, a town of northwestern Anatolia, lying on the river of the same name and just to the south-east of the Simav Gölü, 90 km/58 miles as the crow flies to the south-west of Kütahya [*q.v.*] and on the road connecting Balıkesir with Usak (lat. 39° 05' N., long. 28° 59' E., altitude 823 m/2,700 feet). In later Ottoman times, it was the chef-lieu of a *ḳaḍāʾ* of the same name, and is now the centre of the *ilçe* or district of Simav in the *il* or province of Kütahya. One should not confuse it, as did Babinger in his *EI*[1] art., with Simāwnā in eastern Thrace, the birthplace of the early Ottoman rebel, Shaykh Badr al-Dīn b. Ḳāḍī Simāwnā [*q.v.*].

In Antiquity, it was the Synaos of western Phrygia, and vestiges of the town's classical past remain. In Byzantine times it was the seat of a bishop, and there are relics of the Byzantine citadel. In the 8th/14th century it came within the *beylik* or principality of the Germiyān Oghullarï [*q.v.*], but was ceded to the Ottoman sultan Murād I in 783/1381 (see N. Vatin, in R. Mantran (ed.), *Histoire de l'empire ottoman*, Paris 1989, 43). Simaw was the birthplace of several well-known Ottoman scholars, such as Shaykh ʿAbd Allāh Ilāhī (d. 896/1491) and Ḳara Shams al-Dīn (see Ewliyā Čelebi, *Seyāḥat-nāme*, iii, 377). It was visited by several 19th-century scholars, including Wm. Hamilton, A.D. Mordtmann Senr., K. Buresch and Th. Wiegand.

Modern Simaw was rebuilt after a fire of 1911. After the First World War, it was occupied by the Greek army from July 1921 to September 1922. Carpet-weaving has been one of its industries. In 1965 the population was 7,877.

(C.E. BOSWORTH)

SĪMDJŪRIDS, a line of Turkish commanders and governors, originally of slave origin, for the Sāmānids in 4th/10th-century Khurāsān.

The founder, Abū ʿImrān Sīmdjūr, was the *amīr* Ismāʿīl b. Aḥmad's [*q.v.*] ceremonial ink-stand bearer (*dawātī*). He became Sāmānid governor of Sīstān [*q.v.*] in 300-1/913-14 when the local dynasty of the Ṣaffārids [*q.v.*] were temporarily driven out. Thereafter, the family was prominent as governors of Khurāsān for the *amīrs*, involved in warfare with the Sāmānids' rivals in northern Persia such as the Būyids, and they acquired a territorial base of estates in Ḳuhistān [*q.v.*]. They were active in the tortuous politics and campaignings of the last decades of the Sāmānids. The last-mentioned member of the family is Abu 'l-Ḳāsim ʿAlī, commander in Khurāsān till 392/1002.

(C.E. BOSWORTH)

SĪMIYĀʾ, in form like *kibriyāʾ*, belongs to old Arabic beside *sīmā, sīmāʾ* (Ḳurʾān, XLVIII, 29 etc.; al-Bayḍāwī, ed. Fleischer, i, 326, 14, 15), in the sense "mark, sign, badge" (Lane 1476a; *Ṣaḥāḥ*, s.v., ed. Būlāḳ, 1282, ii, 200; *Ḥamāsa*, ed. Freytag, 696; *LʿA*, xv, 205). But the word, as a name for certain genres of magic, had a quite different derivation; in that sense it is from σημεῖα, through the Syriac *sīmya* (pl.), and means "signs, letters of the alphabet" (Dozy, *Suppl.*, i, 708b, and references there; Payne Smith, *Thesaurus Syriacus*, ii, col. 2614). In Bocthor, *Dictionnaire français-arabe*, i, 154b, under *Chiromancie*, *sīmiyāʾ* is given as one of three Arabic renderings. By Barhebraeus (d. 685/1286) the Syriac and Arabic forms are used together (*Chron. Syr.*, ed. Paris, 14, 7; *Mukhtaṣar*, ed. Pococke, 33); according to these passages the science (*ʿilm*) was "invented" in the time of Moses by a certain انونيوس, which Bruns and Kirsch rendered "Eunumius", but he seems to be quite unknown. The *Muḥīṭ al-muḥīṭ*, ii, 1032b, suggests a derivation from שֵׁמָה "name of Allāh", and the Names of Allāh certainly play a large part in *sīmiyāʾ* (Doutté, *Magie et religion*, 344, who also suggests, 102, that the form of the word has been affected by *kīmiyāʾ*; but see above).

The term, apart from this dubious sense of "chiromancy", has been and is applied to two quite different branches of magic. (1) It is very widely applied at the present day to what is often called "natural magic", but is evidently hypnotism. Ibn Khaldūn (*Muḳaddima*, ed. Quatremère, iii, 126, tr. Rosenthal, iii, 158) gives this as the third division of magic (*siḥr*) in his arrangement and says that the philosophers (*al-falāsifa*) call it *shaʿwadha* and *shaʿbadha* [*q.v.*]. Ibn Khaldūn expresses it very clearly as a working of the *nafs* of the magician on the imagination of his subject, conveying certain ideas and forms which are then transferred to the senses of the subject and objectify themselves externally in appearances which have no external reality. Well-described cases of this will be found in Lane's *Arabian nights*, ch. i, n. 15, ii, *Modern Egyptians*, ch. xii; Ibn Baṭṭūṭa, iii, 452, iv, 277; Nöldeke, *Doctor und Garkoch*, 5 and *passim*. Cf. also Doutté, *Magie et religion*, 102, 345, who calls it also *nīrandj*; *Muḥīṭ*, ii, 1032b; Chauvin, *Bibl. ar.*, part vii, 102, and references there.

(2) The second is dealt with at length by Ibn Khaldūn in a special section (ed. Quatremère, iii, 137 ff., tr. Rosenthal, iii, 170 ff.). In Ibn Khaldūn's time (d. 808/1405) it was called distinctly *sīmiyāʾ*. Ibn Khaldūn prefers to call it the science of the secret powers of letters (*ḥurūf* [*q.v.*]) because *sīmiyāʾ* was originally a broader term applied to the whole science of talismans and this limited use only originated in the extremist school of Ṣūfīs, who professed to be able to control (*taṣarrafa*) the material world by means of these letters and the names and figures compounded from them. It was thus considered a possible study and practice for pious Muslims. But the Ṣūfīs who took it up were of the speculative and pantheistic school and claimed control of the elemental world and power to invade its order (*khawāriḳ al-ʿāda*) and asserted that all existence descended in a certain sequence from a Unity (the Neoplatonic Chain). In their system the entelechy (*kamāl*) of the Divine Names proceeds from the help of the spirits of the spheres and of the stars, and the natures and secret powers of the letters circulate in the Names built out of them. Then they circulate similarly in the changes of transient becoming (*al-akwān*) in this world and these *akwān* pass from the first initial creation (*al-ibdāʿ*) into the different phases of that creation and express clearly its secrets. This seems to mean that letters contain the primal secrets of creation and the secret powers

which still circulate in the *akwān* and that the Divine Names and Allocutions (*kalimāt* [*q.v.*]) are produced from letters; therefore the elemental world and the *akwān* in it can be controlled by these names and allocutions when used by spiritual souls (*nufūs rabbāniyya*). That is the doctrine of al-Būnī [*q.v.*], Ibn ʿArabī [*q.v.*] and their followers. As to the nature and origin of this secret power in letters, there is dispute. Some assign it to an elemental nature or constitution (*mizādj*) and divide letters into four classes according to the four elements. Others ascribe it to a numerical relationship (*nisba ʿadadiyya*) based on the value of the letters as numbers (*abdjad*). Ibn Khaldūn admits that there does exist such control of the material world but it is by divine grace in the *karāmāt* [*q.v.*] of the *walīs* [*q.v.*], and when those who lack that divine grace and insight endeavour to exert the same control by means of these names and allocutions, they are in the same class as the workers of magic by means of talismans, except that they have not the scientific training and system of these magicians. They may produce effects through the influence of the human *nafs* and purpose (*himma*)—which for Ibn Khaldūn is the basis of all such working, licit and illicit—but these effects are contemptible besides those of the professional magicians. Ibn Khaldūn, therefore, disapproves of this attempt by al-Būnī and others to produce a pious and licit magic; but there is no question that al-Būnī has imposed his system upon Islam. The best description of this state of mind which sees in letters relations to the universe and a science of the universe is in Louis Massignon's *Al-Ḥallâdj*, 588 ff.; see also Doutté, 172 ff. It is evident that this is a sister phase of thought to the Jewish Ḳabbāla of the alphabetic and thaumaturgic type connected with the divine names, teaching that the science of letters is the science of the essences of things and that by letters God created and controls the world and that men by suitable knowledge of these can control material things (see C.D. Ginsburg, *The Kabbalah*, 127; art. KABBALA, by H. Loewe, in Hastings' *Encyclopaedia of Rel. and Ethics*, vii, 622-8).

Finally, one should note that the term *sīmā*, mentioned in the Ḳurʾān (II, 273, VII, 46, 48, XLVIII, 29, LV, 41), denotes a mark of recognition of the believer, either physical (mark on the forehead from practising the Muslim worship) or moral (the result of his good or bad behaviour). Likewise in *Ḥadīth*, *sīmā*, *sīmāʾ*, denotes the distinctive mark of Muslims in relation to other peoples (*umam*) (Muslim, *Ṭahāra*, 36-7) and the mark resulting from the effects of the worship on their foreheads, allowing one to distinguish them from other peoples on the Day of Resurrection (al-Tirmidhī, *Djumʿa*, 74). This term has thus no connection with *sīmiyāʾ*, a transliteration of σημεῖα, a derivative of σημεῖον, with the same sense as *sīmā*. But just as *sīmiyāʾ* evokes *siḥr* "magic, white or phantasmagoric", *sīmā* evokes *firāsa* [*q.v.*] "physiognomy". In Persian, *sīmyā* "natural magic" is distinguished from *sīmyāʾ* "mark, sign", according to Steingass, *Dictionary*, 718.

Bibliography: On *sīmiyāʾ*, see Ibn Khaldūn, *Muḳaddima*, ed. Quatremère, iii, 137-61, tr. idem, iii, 188-200 (pp. 147-91 of text not tr. by him), Eng. tr. Rosenthal, iii, 182-227; Ḥādjdjī Khalīfa, *Kashf*, iii, 646-7. There are several works on *sīmiyāʾ*, from which one may cite Abu 'l-Ḳāsim Aḥmad al-ʿIrāḳī, known as al-Sīmāwī (7th/13th century), *ʿUyūn al-ḥadāʾiḳ wa-īḍāḥ al-ṭarāʾik*, Cairo 1321/1906; Aḥmad b. Muḥ b. al-Bannāʾ (d. *ca.* 721/1321), *ʿUyūn al-ḥadāʾiḳ fī ʿilm al-sīmiyāʾ*, B.N. of Tunis, ms. 431, fols. 131-54; Ibn al-Ḥādjdj al-Maghribī al-Tilimsānī (d. 736/1336), *R. fi 'l-Sīmiyāʾ*, Cairo, *Fihris*, vi, 418; Djīlī (d. 831/1428), *ʿUyūn al-ḥadāʾiḳ fī kull mā yuḥmal min ʿilm al-ṭarāʾiḳ*, B.N. Paris ms. 2595. There are three anonyma in the B.N., Paris: *al-Sharāsīm al-hindiyya fī ʿilm al-sīmiyāʾ*, mss. 2634-5; *al-Shaʿbadha wa 'l-sīmiyāʾ*, ms. 2595, fols. 136-48; and *Sīmiyāʾ*, ms. 2357, fols. 143-56.

On these texts, see the refs. in M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, HdO, Leiden-Cologne 1972, 391 ff.; A. Kovalenko, *Magie et Islam. Les concepts de magie (siḥr) et de sciences occultes (ʿilm al-ghayb) en Islam*, diss. Strasbourg 1979, publ. Geneva 1981, 22 ff., 434.

(D.B. MACDONALD-[T. FAHD])

SIMNĀN, a town of northern Persia (long. 53° 24' E., lat. 35° 33' N., alt. 1,138 m/3,734 ft.), in mediaeval Islamic times coming within the province of Ḳūmis [*q.v.*] and lying on the great highway connecting Rayy with the administrative centre of Ḳūmis, sc. Dāmghān [*q.v.*], and Khurāsān. To its north is situated the Elburz Mountain chain and to its south, the Great Desert.

1. History.

Simnān comes within what was the heartland of the Parthians (whose capital almost certainly was at Shahr-i Ḳūmis, southeast of Dāmghān on the Simnān road), but nothing is known of any pre-Islamic history for the town, even though legend later attributed its foundation to Ṭahmūrath (Mustawfī, *Nuzha*, 161, tr. 157). At the time of the ʿAbbāsid Revolution (131/748-9) it was described as a mere village, occupied by the forces of the *dāʿī* Ḳaḥṭaba's son al-Ḥasan in the course of the march westwards in pursuit of the Umayyad governor Naṣr b. Sayyār [*q.v.*] (al-Ṭabarī, iii, 2-3). In 267/880-1 the soldier of fortune Aḥmad al-Khudjistānī, who had seized Khurāsān from the Ṣaffārid ʿAmr b. al-Layth, reached as far as Simnān in an abortive attack on Rayy (*ibid.*, iii, 2008).

By the time of the 4th/10th century geographers, however, Simnān had become a flourishing town, with fertile gardens and agricultural lands watered by the stream which came down from the Elburz and ran through it. The waters were canalised and allotted to the users in rotation, and also stored in cisterns. Simnān is mentioned in the accounts of the fighting between various Caspian princes and the generals of the Sāmānids in the early 4th/10th century (see Ibn al-Athīr, ed. Beirut, viii, 191, 390). In Ghaznawid times, the local governor Abū Ḥarb Bakhtiyār carried out building works in the town (see 2. below), and although in 427/1036 it was plundered by the so-called "ʿIrāḳī" Turkmens en route for Rayy and Ādharbaydjān (Ibn al-Athīr, ix, 379), by 437/1046 it must have been rebuilt enough for Nāṣir-i Khusraw to have halted there on his Pilgrimage westwards and to have had learned discussions with local scholars (*Safar-nāma*, ed. M. Dabīr-Siyāḳī, Tehran 1335/1956, 3, Eng. tr. W.M. Thackston, Albany 1986, 2-3). When Yāḳūt described Simnān (probably utilising earlier information of al-Samʿānī), there were signs of ruin and decline (*Muʿdjam al-buldān*, ed. Beirut, iii, 251-2), which must have been intensified by the devastation in 618/1221 of the Mongol commander Sübetey (Djuwaynī-Boyle, i, 146-7).

Simnān has nevertheless survived as a town of moderate importance, largely because of its position on the Khurāsānian highway. It was the home town of the famous Sunnī mystic ʿAlāʾ al-Dawla Simnānī (659-736/1261-1336 [*q.v.*]). At the end of the 19th century, Curzon found it prosperous enough, with tobacco

grown in its environs as a cash crop and with a small colony of Hindu traders living off trade coming from Yazd and the Persian Gulf coastlands (*Persia and the Persian question*, i, 290-1).

The modern town is the chef-lieu of a *shahrastān* or county in the province (*farmāndārī-yi kull*) of Simnān. It is on the Tehran-Mashhad railway and is a lively market centre for local agricultural produce and for textiles and carpets. In 1991 the town had a population of 93,715 (*Preliminary results of the census*, Statistical Centre of Iran, Population Division).

Bibliography (in addition to references given in the article): *Ḥudūd al-ʿālam*, tr. Minorsky, 135; Samʿānī, *Ansāb*, ed. Ḥaydarābād, vii, 229-31; Le Strange, *Lands*, 366; Schwarz, *Iran im Mittelalter*, 819-20; Barthold, *An historical geography of Iran*, Princeton 1984, 119-20; Razmārā (ed.), *Farhang-i djughrāfiyā-yi Īrān-zamīn*, iii, 157-9.

2. Monuments.

Al-Muḳaddasī, 356, visited what he describes as the fine Friday mosque in the bazaar, but the earliest surviving elements of this are from the 5th/11th and 6th/12th centuries. They include a minaret which has an inscription of the benefactor, the *amīr* Abū Ḥarb Bakhtiyār b. Muḥammad Dāmghānī, governor of Ḳūmis under Masʿūd I of Ghazna [*q.v.*] and dateable therefore to 421-5/1030-4 (this same Bakhtiyār had previously built the Pīr-i ʿAlamdār tomb tower for his father Abū Djaʿfar Muḥammad at Dāmghān and also a minaret at the Tārīk-khāna mosque there). There are also in Simnān a 6th/12th century *ḥammām*, and the *khānaḳāh* and tomb of ʿAlāʾ al-Dawla Simnānī, built nearly a century after his death by the Tīmūrid sultan Shāh Rukh in 828/1424. The Masdjid-i Sulṭān or M.-i Shāh, built by the Fatḥ ʿAlī Shāh [*q.v.*] in 1242/1826, together with a *madrasa*, is a particularly fine example of Ḳādjār architectural and inscriptional art.

Bibliography: Pope, in *Survey of Persian art*, ii, 1033, 1038; Sylvia A. Matheson, *Persia, an archaeological guide*[2], London 1972, 192-3; Chahryar Adle, *Le minaret du Masjed-e Jâmeʿ de Semnân, circa 421-25/1030-34*, in *Stud. Iranica*, iv/3 (1975), 177-86; Nasratollah Mechkati, *Monuments de sites historiques de l'Iran*, Tehran n.d., 253; P. Soucek, in R. Ettinghausen and E. Yarshater (eds.), *Highlights of Persian art*, Boulder, Colo. 1979, 138-41; R. Hillenbrand, *The role of tradition in Qajar religious architecture*, in E. Bosworth and Carole Hillenbrand (eds.), *Qajar Iran, political, social and cultural change 1800-1925*, Edinburgh 1983, 359; Sheila S. Blair, *The monumental inscriptions from early Islamic Iran and Transoxania*, London 1992, 7, 99-100, 102, 109.

3. Language.

The man whom Nāṣir-i Khusraw encountered at Simnān who spoke Persian with a "Daylamī" accent (*Safar-nāma, loc. cit.*), may have been reflecting the idiosyncratic speech patterns of the town. At the present day, Simnānī is a distinct dialect of New Persian, phonologically connected with the central Persian dialects but, from the point of view of morphology, it departs from these last and forms a transitional dialect with the Caspian ones. The masc. and fem. genders are distinguished in nouns; this may be by separate forms of the indefinite suffix or by the endings of the nouns in question. An oblique case is distinguished in nouns and pronouns.

Bibliography: Earlier studies by Christensen (1915), Mann (1926) and Morgenstierne (1950s and early 1960s, plus in *Hdb. der Orientalistik*, Abt. I, IV. *Iranistik*, 1, 172-3) are outdated. See now P. Lecoq, in R. Schmitt (ed.), *Compendium linguarum iranicarum*, Wiesbaden 1989, 307-9, cf. bibls. at 312; Mohammed-Reza Majidi, *Strukturelle Beschreibung des iranischen Dialekts der Stadt Semnan. Phonetik, Morphologie, Syntax*, Hamburg 1980. M. Sitūda published a *Farhang-i Simnānī* (Tehran 1343/1964) on Simnānī and neighbouring dialects. (C.E. Bosworth)

AL-SIMNĀNĪ, Abū Djaʿfar Muḥammad b. Aḥmad b. Muḥammad, traditionist, Ḥanafī jurist and Ashʿarī theologian, born at a place called Simnān in ʿIrāḳ (and not at the better-known one in Ḳūmis) in 361/971-2, died at Mawṣil in Rabīʿ I 444/July 1052.

He lived mainly in Baghdād, and then in Mawṣil, where he acted as *ḳāḍī*. In *ḥadīth*, his masters included al-Dāraḳuṭnī [*q.v.*] and Naṣr b. Aḥmad al-Mawṣilī, and amongst his own disciples was al-Khaṭīb al-Baghdādī [*q.v.*]. In *fiḳh*, he is said to have composed several works, whose titles are not specified. But it was as a theologian that he was known above all, displaying the rare peculiarity of being a Ḥanafī adherent of the Ashʿarī doctrine. His master in this regard was the *ḳāḍī* Abū Bakr al-Bāḳillānī [*q.v.*], himself a Mālikī; al-Simnānī was known as his disciple par excellence (cf. al-Subkī, *Ṭabaḳāt*, v, 301, ll. 11-12) or the main disciple (cf. Ibn Ḥazm, *Fiṣal*, Cairo 1317-21, iv, 208 l. 14, and also, al-Ḳāḍī ʿIyāḍ, *Tartīb al-madārik*, Beirut 1965, ii, 586-7). He is vigorously called to account as such by Ibn Ḥazm in the chapter of his *Fiṣal* devoted to criticism of the Ashʿariyya (iv, 206-26), in the course of which the author cites, growing indignant about it, several extracts from a work by al-Simnānī in which the latter sets forth the theses of his companions (see also *ibid.*, ii, 168, where one should read al-Simnānī for al-Samʿānī). This work, for which no title is given, most certainly differs from that preserved in the ʿUthmāniyya madrasa at Aleppo (no. 577) under the title *K. al-Bayān ʿan uṣūl al-īmān wa ʾl-kashf ʿan tamwīhāt ahl al-tughyān*. On this important treatise of 145 fols., of which an edition remains to be done, there are some apposite references in Gardet and Anawati, *Introd. à la théologie musulmane*, Paris 1948, 73, 184-5, 365-7, 378-9 (where one should read throughout al-Simnānī for al-Sumnānī) and D. Gimaret, *Théories de l'acte humain en théologie musulmane*, Paris 1980, 93-4, 101-2, 326.

Abū Djaʿfar Muḥammad's son, Abu ʾl-Ḥasan Aḥmad (384-466/994-1074) had a "profile" quite similar to that of his father: he was also both Ḥanafī and Ashʿarī, and also a *ḳāḍī* (but in Baghdād).

On the son Abu ʾl-Ḥasan Aḥmad, see *T. Baghdād*, iv, 382 no. 2260; Ibn al-Djawzī, viii, 287 no. 338; Ibn Abi ʾl-Wafāʾ, i, 95-6. (D. Gimaret)

SIMSĀR [see dallāl].

SIMSIM, sesame, a family of plants with some 16 classes, of which *sesamum indicum* or *sesamum orientale, Pedaliaceae*, primarily qualifies for consideration. Sesame is an ancient cultivated plant, whose habitat is probably in Central Asia and which spread in the tropics and sub-tropics. The name can be derived from Akkadian *shamashshammu*, which became on the

one hand Greek σήσαμον, on the other Arabic *sumsum* and the more usual *simsim* via Hebrew *shumshōn* and Aramaic *shushmā* (and variants). An often-used synonym is *djuldjulān*, wrongly interpreted by some authors (like Ibn Baklārish, *Mustaʿīnī*, ms. Naples fol. 71b) as coriander (*kuzbara*). The greasy oil of sesame is indicated as *duhn al-ḥall* (*sic, al-khall* is wrong), as *ṣalīṭ djuldjulān* or *shīradj* (Persian *shīra*). The small, angular, yellow-white to black seeds are kept in elongated capsules which develop from the blossoms of the plant. In many countries, sesame is an important foodstuff. In India sesame flour is boiled into pulp, in Asia Minor and in Egypt bread and pastry are flavoured with sesame. If pressed when cold, sesame oil is liquid, odourless and of a pleasant taste. Like olive oil, it has served at all times as a valuable salad oil, and also as a substitute for butter fat (*samn*).

In medicine, sesame belongs to the softening and resolving remedies. When grilled and eaten with linseed (*badhr al-kattān*), it increases virility. It is quite efficient against breathing difficulties and asthma, as well as against coughing and hoarseness. Sesame may harm the stomach, but this can be avoided or alleviated if it is taken together with honey. Sesame herb boiled in wine is efficient against inflammation of the eye. Its oil is a remedy against raw and chapped skin and brings ulcers to ripening. Mixed with attar, it soothes headaches originating from sunburn (*iḥrāḳ al-shams*). It is also used in cosmetics. In the bazaars of Cairo, sesame is sold in great quantities, but, in pursuit of profit, lotus seeds (*nīlūfar*) are often deceitfully passed off as *djuldjulān miṣrī*, and the seeds of the black poppy (*khashkhāsh aswad*) as *djuldjulān al-ḥabasha*. Finally, there were also "sesame-like" plants (*sisāmuwīdā*, σησαμοειδές), a large one and a small one, which were considered as classes of a wild sesame (*simsim barrī*) (A. Dietrich, *Dioscurides triumphans*, Göttingen 1988, iv, 138-52).

As a means to neutralise magic, sesame is already mentioned in Babylonian-Assyrian incantations. Until today, the Arabs consider sesame presses as dwelling-places of spirits. The formula "Sesame, open your door" (not "Sesame, open up") became popular through the well-known story of Ali Baba and the forty thieves from *Alf layla wa-layla* (270th night).

(A. Dietrich)

SĪMURGH (P.), the name of a mythical bird. There are two passages in the Avesta referring to the "bird Saēna-" (*mərəγō saēnō*; Yašt 14: 41) or the "tree of Saēna-" (*vanam yam saēnahe*; Yašt 12: 17); the latter specifies that this tree stands in the middle of Lake Vourukaša, that its name is "all-remedies" and that it bears the seeds of all plants. The word *saēna-* is etymologically identical with Sanskrit *śyēná-*, "eagle, falcon", but it is not clear from the two Avestan passages whether it designates a species of bird (though the fact that Saēna- is used elsewhere in the Avesta as a personal name supports this view), or whether it is the name of an individual supernatural bird. However, the latter is clearly the case with Middle Persian *sēn murw* ("Sēn the bird") and New Persian *sīmurgh* (which is no longer separable). In the Persian epic tradition, best recorded in Firdawsī's *Shāh-nāma*, Sīmurgh is a gigantic creature, the special protector of Zāl, who is brought up by this bird after being abandoned by his parents, and of his son Rustam, whom it helps in his battle against Isfandiyār. Remnants of ancient Avestan conceptions can be seen in the fact that Sīmurgh's feathers have magical healing powers. On the other hand, the original function of the tree of healing seems to be inverted in the story of how Sīmurgh conveys Rustam to a far-away tree, from the branches of which he forges the fatal arrow which kills Isfandiyār. Similarly, the story of how Isfandiyār himself slays Sīmurgh must be a later accretion.

It is perhaps not surprising to see the Sīmurgh of Iranian mythology amalgamated with the Arabic *ʿanḳāʾ* ("phoenix" [*q.v.*]) and even with Garuḍa, the giant bird which in Hindu mythology transports the god Viṣṇu. A striking example for this syncretism can be found in the book of *Kalīla wa-Dimna*; in the story of the strand birds and the sea, as told in the first book of the Sanskrit *Pañcatantra*, the birds complain to their king Garuḍa; in the old Syriac translation (and evidently in its lost source in Middle Persian) Garuḍa has become *sīmur(gh)*, while in the Arabic translation by Ibn al-Muḳaffaʿ (from the same Middle Persian original) he becomes *al-ʿuḳāb al-ʿanḳāʾ*. Similarly, in Arabic accounts of the "history" of pre-Islamic Persia (e.g. al-Ṭabarī, al-Thaʿālibī) the Sīmurgh of the Rustam story is represented by *al-ʿanḳāʾ*, and conversely Arabic *ʿanḳāʾ*, is often translated in Persian by *sīmurgh*.

Sīmurgh plays a role in Islamic mystical literature. The *Risālat al-ṭayr* (extant in an Arabic and a Persian version, attributed, on very questionable authority, to Muḥammad and Aḥmad al-Ghazālī respectively [see AL-GHAZĀLĪ, AḤMAD]) uses a story of how the birds set off in search of their king, *al-ʿanḳāʾ*/Sīmurgh, as an elaborate allegory for the relationship between the worshipper and God. Farīd al-Dīn ʿAṭṭār [*q.v.*] developed this story further in his Persian narrative poem *Manṭiḳ al-ṭayr*, where it is given a pantheistic twist; through their search for God, the "thirty birds" (*sī murgh*) become of one essence with the Sīmurgh himself.

Boyce, *A history of Zoroastrianism*, i, Leiden-Cologne 1975, 88-9, 138.

(F.C. de Blois)

SĪN and **SHĪN**, the 12th and 13th letters of the Arabic alphabet. Both letters have the same form (*rasm*), which derives from that of the Aramaic letter *shīn*, and are distinguished only by diacritics, *shīn* having three dots above, while *sīn* is in principle unpointed (*muhmal*), though in carefully written manuscripts it can be distinguished by a V-shaped sign above the letter, or else by three dots below. In the Eastern form of the *abdjad* [*q.v.*], *sīn* occupies the position of Aramaic *semkath* and, like this, has the numerical value 60, while *shīn* has the position of Aramaic *shīn* (= 300), but in the Western *abdjad*, *sīn* occupies the position of Aramaic *shīn* (= 300), while *shīn* stands at the very end with the value 1000. It is worth mentioning that *s* (*semkath*) is the only Aramaic letter which has no graphic descendant in the Arabic alphabet.

For the hypothetical common ancestor of the Semitic languages it is possible to postulate three unvoiced, non-glottalised sibilants, for which we can use the conventional symbols s^1, s^2 and s^3. In most Semitic languages these have coalesced into two or even one single phoneme (in Arabic and Old Ethiopic s^1 merges with s^3; in Akkadian, Ugaritic and some Canaanite dialects s^1 merges with s^2; in Aramaic and modern Hebrew s^2 merges with s^3; in modern Ethiopic languages all three are reduced to a single sibilant), but they survived as three separate phonemes in Biblical Hebrew (where they are represented by שׁ, שׂ and ס respectively), in Ancient South Arabian (which has three different characters for these sibilants) and in the modern South Arabian languages (Mehrī, Dj̲ibbālī, Soḳoṭrī, Hobyōt). In the latter the descendant of Semitic s^1 is a palato-alveolar [š]—with a frequent (except in Dj̲ibbālī) secondary shift to [h]—, s^2 is represented by the unvoiced lateral conventionally transcribed as [ś]—roughly like Welsh *ll*—and s^3 by the alveolar [s]; it is probable that these were approximate realisations of the three sibilants in proto-Semitic. Already in the earliest documents in North Arabian (with the exception only of Taymanite, which appears to have retained the three Semitic sibilants), s^1 and s^3 have become a single phoneme, which is represented by the South Arabian sign for s^1, and which in classical Arabic is continued by the phoneme represented by the letter *sīn*, while s^2 survives as the separate phoneme represented in classical Arabic by *s̲h̲īn*. The etymological correspondence of Arabic *sīn* and *s̲h̲īn* with the sibilants in other Semitic languages is clear and well-established; what remains uncertain is the chronology of the sound-shifts in Arabic and the precise pronunciation of the sibilants at any particular stage in the history of the language. It seems, however, that one must reckon with at least two sound-shifts: the first resulting in the merger of s^1 and s^3 into one phoneme, which in remote antiquity was probably realised as [š] but in modern Arabic has become a very sharp [s]—produced with the tip of the tongue just behind the ridge of the upper teeth—, and a second, evidently more recent, shift of Semitic s^2 from a lateral [ś], perhaps via some intermediary stage, to a palato-alveolar [š].

The mediaeval grammarians give detailed phonetic descriptions of *sīn* and *s̲h̲īn* which, though much discussed by modern scholars, remain rather obscure; in particular, one must ask to what extent these descriptions really reflect the pronunciation at the time of a given author and are not merely repeated from an earlier tradition. Some light on the history of Arabic pronunciation is shed by the treatment of loan-words from non-Semitic languages (the many Arabic borrowings from Aramaic are less instructive, as there is always the possibility that their form has been influenced by that of cognate Arabic roots). It can be observed that in early Arabic borrowings from Greek the σ of the latter language, though often represented by *sīn*, quite frequently appears as *ṣād* (e.g. *ḳayṣar* from χαῖσαρ, though here, velarisation as a suprasegmental feature should be considered), which would seem to indicate that the Arabic phoneme represented by *sīn* was in any case not perceived as being completely identical with the Greek or Aramaic [s], though the difference may be merely that the latter were produced with a more retracted tongue, i.e. with a tongue-position closer to that of Arabic [ṣ]. In Arabic words borrowed from Iranian languages, original [š] is, as the mediaeval philologists noted, normally represented by *sīn* (e.g. Arabic *sarāwīl*, "trousers", plural of *sirwāl*, from Middle Persian *šalwār*/*šarwāl*; Arabic *banafsadj̲*, "violet", from MP. *wanafšag*; also proper nouns like Arabic Sābūr for MP. Šābuhr), though in some (presumably more recent) loan-words Iranian [š] is represented by *s̲h̲īn* (e.g. in *s̲h̲āh*, "king [in the game of chess]"). Conversely, Arabic *sīn* is represented by Persian [š] in the early loan-word *las̲h̲kar*, "army", from Arabic *al-ʿaskar*, itself evidently borrowed (via Aramaic and Greek) from Latin *exercitus* (thus Nöldeke, *apud* S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, Leiden 1886, 239; but this borrowing is not accepted by everybody, nor is it entirely clear in which direction the borrowing occurred). Such examples confirm that early Arabic *s̲h̲īn* was not pronounced like the Persian palato-alveolar [š], for otherwise *s̲h̲īn* would have been used consistently for its supposed Persian equivalent.

On the other hand, Sībawayh (ed. Derenbourg, ii, 376) cites the *sīn* of the above-cited word *sarāwīl* as an example for how Arabic can substitute one "letter" for another in a borrowed Persian word even in cases where the replaced letter is one that occurs also in native Arabic words; in other words, the [š] of Persian *šarwāl* was, in Sībawayh's judgement, one of the "letters of the Arabs". From this one must conclude that in the 2nd/8th century *s̲h̲īn* already had its modern value [š] and that the grammarians consequently saw the substitution of [s] for [š] no longer as a case of the replacement of an unknown sound by a known one but as a phenomenon within the phonological system of Arabic.

ṢĪN- or ČĪN KALĀN, literally, "Great China", a name appearing in Islamic sources, e.g. Ibn Baṭṭūṭa and Western travellers of the Mongol period, for the Chinese port of Canton, more generally known in Islamic sources as K̲h̲ānfū [*q.v.*].

al-ṢĪN, the usual designation in mediaeval Arabic for China; properly, it means the Chinese people, but is normally used, with the prefixed *bilād*, for the land of China itself.

1. The name.

The initial consonant of the word represents the customary rendering of Persian *čīm* into early Arabic as *ṣād*. Thus the forms Čīnistān and Čīn appear in the Persian *Ḥudūd al-ʿālam* (*ca.* 372/982), the first form going back to the 2nd century A.D. Sogdian letters and appearing subsequently in Middle Persian and Armenian; in New Persian, the form Čīn is more common. The Arabic version al-Ṣīn appears in geo-

graphical and historical texts from the time of Ibn Khurradādhbih (mid-3rd/9th century [*q.v.*]) onwards. The origin of the name lies in that of the first of the Chinese empires, i.e. the Ch'in (Qin) (221-210 B.C.) (see V. Minorsky, *Ḥudūd al-ʿālam*, comm. 227).

One also finds in later Islamic sources the place name Mādjīn = Māčīn, said to be called by the Indians Mahāčīn "Great China", referring to the Northern and Southern Sung (Song) (960-1279), so that when Islamic sources link Čīn with Māčīn, the latter term refers to southern China where the Sung emperors ruled after 1127. A reminiscence of the dynastic name is to be found in the local history of Bayhaḳ by Ibn Funduḳ (later 6th/12th century), the *Taʾrīkh-i Bayhaḳ* (ed. A. Bahmanyār, Tehran 1317/1938, 18): *S.nḳū* = the capital of Mahāčīn.

2. The present distribution of Muslims in China and a characterisation of Islam there.

The modern People's Republic of China (PRC) contains 55 recognised ethnic minority groups, ten of which include Muslims amongst their numbers: (a) The Turkic group: Uyghur, Kazakh, Kirghiz, Uzbek, Tatar and Salar [see the arts. on these various peoples]. (b) The Mongol group: Tung-hsiang (Dongxiang) and Puo-an (Baoan) [see MONGOLIA. Muslims in the modern Mongolian People's Republic, at the end]. (c) The Iranian group: Tadjiks. (d) The Chinese group: the Hui or native Chinese Muslims. The Turkic group and the small number of Tadjiks are essentially concentrated in what was historically Eastern Turkestan. This was only fully incorporated into the Chinese empire after a lengthy military campaign in the mid-18th century, and is now the Hsin-chiang (Sinkiang or Xinjiang) Uighur Autonomous Region, comprising about one-sixth of the total area of the Chinese Republic and its largest administrative unit. It contains over half of the Muslims in the Republic as a whole. For this region, see SINKIANG, and for its peoples and languages, see also TURKS.

These facts show that Islam in China, although with indigenous Hui elements in various regions, such as Yün-nan (Yunan), Sichuan (Ssu-chuan, or Szechuan), Shan-tung (Shandong), Shan-si (Shanxi), Shensi (Shaanxi), Kan-su (Gansu), Ning-hsia (Ningxia), Hu-nan (Henan) and T'in-fang (Tianfang) is essentially a religion of the western lands lying between Tibet and Mongolia and of the interiors, rather than of the eastern coastlands. Hence Chinese Islam has over the centuries only been able sporadically to keep in touch with the main centres of Muslim piety and scholarship outside China, such as Western Turkestan, the Iranian world and Muslim India. Maritime contacts, e.g. with the very numerous Muslims of Indonesia, have been minimal in recent centuries, after European naval powers like the Portuguese, Dutch and British took control of the Indian Ocean and China Seas. On the other hand, Chinese Muslims have always had a consciousness that the focus of their faith lay in the "Western lands", the *T'ien fang* or "celestial region", and have endeavoured to send a trickle at least of believers for the Arabian Pilgrimage. This has increased in recent years, with a slackening in the anti-religious stance of the Chinese Communist government and the diplomatic need to cultivate Muslim powers of the Middle East, Africa, etc.; in 1983 over 1,000 pilgrims went to Mecca (see further below, 4).

A consequence of geographical isolation has been intellectual impoverishment; at the present time, Kansu, traditionally a concentration-point for Muslims, has the lowest literacy rate (2%) of all China's eighteen provinces. No contributions to Muslim culture or scholarship of any significance have ever come out of China. Up to the 20th century, the sole religious knowledge of the Hui Muslim leaders, the *Ahongs* (< Persian *ākhūnd*) or Imāms, was often of a few Ḳurʾānic texts and prayers. Only in the last few years, with the ending of the Cultural Revolution and its excesses, have *madrasas* been allowed to cater for increased numbers of students and potential religious leaders, with *Ahongs* being allowed to study abroad, in e.g. Pakistan. It was not really till the 18th and 19th centuries (the first Chinese Muslim literature seems to date from *ca.* 1600) that there grew up a Muslim apologetic literature in Chinese emphasising the faith and trying to demonstrate a certain degree of conformableness to the mainstream of Han Chinese culture and traditional Confucian religion, with which Chinese Islam was always in a state of tension and, at times, of outright rebellion. It was at this time, too, that Chinese translations from Arabic and Persian religious literature were made, the first complete Chinese translation of the Ḳurʾān being that by Tu Wen-hsiu [*q.v.*] (Du Wenxiu), leader of the western Yunnan Muslim rebels in the Panthay [*q.v.*] revolt of 1855-73 [see AL-ḲURʾĀN. 9. Translation of the Ḳurʾān, 4]. Nevertheless, despite all such handicaps, the faith has survived in China and despite the repression of the 1950s, 1960s and 1970s, retains its place, so far as one can now discern, as one of the active and flourishing religions of China.

Reliable population statistics for the Muslims of China have never been easy to obtain. Estimates in the early part of the 20th century, as attempted by M. Broomhall (*Islam in China, a neglected problem*, Shanghai 1910, repr. London 1987, and the French military mission whose findings were published as *Mission d'Ollone 1906-1909, recherches sur les musulmans chinois*, Paris 1911, could only be tentative, but tended to show that their numbers had at that period been often much exaggerated. In the modern Peoples' Republic of China (PRC), an often-cited, semi-official estimate (1995) is 16 to 18 millions, with 7 to 8 millions of these being Hui.

Bibliography: See also G.F. Andrews, *The crescent in north-west China*, London *ca.* 1921, and the articles on the various Muslim nationalities of China in R.V. Weekes (ed.), *Muslim peoples, a world demographic survey*², London 1884; M. Dillion, *Islam in China*, in Azim Nanji (ed.), *The Muslim almanac*, Detroit 1996, 91-105. (C.E. BOSWORTH)

3. Geographical and historical information to the year *ca.* A.D. 1050.

The early connections of the pre-Islamic Near East with China were primarily commercial, involving above all the silk trade, carried on by land through eastern Persia, Transoxania, the Tarim basin (with a route along its northern rim passing through Ḳuča and Ḳarashahr and one along the southern rim through Yarkand and Khotan) and the Kansu corridor to northwestern China. The native Chinese seem to have brought their goods only to the western borders of their empire, and the great carriers of the trade across Inner Asia were the Western Turks or Kök Türks—in Chinese, T'u-chueh (Tujue)—and, above all, the Indo-European peoples of the Tarim basin, such as the Tokharians and the Khotanese, and the Sogdians of Transoxania, whose colonies were spread out along the route and into China itself (on the silk trade here, see A. Herrmann, *Die alten Seidenstrassen zwischen China und Syrien*, Quellen und Vorschlagen zur alten Geschichte und Geographie, Berlin 1910, repr. Tient-

sin 1941; W. Watson, ch. *Iran and China*, in *Camb. hist. of Iran*, iii/1, 537-58). The main consumers of silk goods in the Near East were the Sāsānid Persians and the Byzantines, both of whom required a steady inflow of silk textiles for their elaborate court ceremonial and, in the latter case, for religious ceremonies. In the later 6th century, the Western Turks under their Ḳag̲h̲an or Yabg̲h̲u Istemi (in the Byzantine historian Menander Protector, Silzibul < Yabg̲h̲u) and his son and successor Tardu—in Chinese, Ta-t'u (Datu)—endeavoured to bypass the Persians, who claimed to act as sole intermediaries in the trade, and to deal directly with Byzantium, and diplomatic missions took place between the Kag̲h̲ans and the Emperors Justin II and Tiberius II (see on these, R. Grousset, *L'empire des steppes*[4], Paris 1951, 128-30, Eng. tr. *The empire of the steppes. A history of Central Asia*, New Brunswick, N.J. 1970, 83-5; Gy. Moravcsik, *Byzantinoturcica. I. Die byzantinischen Quellen der Geschichte der Türkvölker*[2], Berlin 1958).

We have numerous accounts of the relations of the Islamic world with China, which in part prove to be very accurate. To the Arab geographers, China was the land of the unknown and mysterious, into which only the boldest might venture. It must be noted that even in the oldest Arab geographers, who deal with China, that have survived for us, the connection of South and North China is known; it is one and the same land whose coasts are washed by the Indian Ocean (*Baḥr Fāris, Baḥr al-Hind* [*q.vv.*]) and whose mountains are connected with the mountains of Farg̲h̲āna and their continuation; so we are told by al-Balk̲h̲ī in al-Iṣṭak̲h̲rī and Ibn Ḥawḳal (sea-coasts, 40, 193; mountains, 109, 249). What the tradition of the Muslims of China itself tells us about the earliest connections of China and western Asia, is legendary, although it is stated in numerous monuments in stone. It deals with the famous companion of the Prophet Saʿd b. Abī Waḳḳāṣ [*q.v.*], whom it makes a maternal uncle of Muḥammad and whose grave in Canton (Guangzhou) is revered, although he really never came to China (de Thiersant mentions the name Wahb Abū Kabs̲h̲a in addition to Saʿd b. Abī Waḳḳāṣ, without sufficient authority, cf. Broomhall, *Islam in China*, 76 ff.). Tradition also tells of the bringing of Islam to China by land via Hami (Ḳumul) by Arab envoys and the exchange of 3,000 Arab and Chinese soldiers as a result of a dream of the Emperor T'ai-tsung (Taizong) (A.D. 626-49). These legends have been collected by de Thiersant and, more critically, by Devéria, *Origine de l'Islamisme en Chine*. The oldest document on the beginnings of Islam in China is a stele in the chief mosque of Hsi-an (Si'an, or Xi'an), which under the name of Ch'ang-an (Chang'an) was the principal capital of the T'ang (Tang) emperors, K̲h̲umdān of the early Islamic sources (see below), situated on the River Wei, a tributary of the Yellow River. This stele professes to have been erected in A.D. 742. According to this, Islam must have been known in China under Won-ti (Wonti), first emperor of the Sai Tien-ch'e (Sai Dianche) dynasty (A.D. 581-604). Equally impossible dates for the introduction into China of Islam are given in other places also. In any case, the inscription is a palpable forgery. It was probably erected when the mosque was repaired, possibly at the renovations undertaken in the Yüan or Mongol period by Sai Tien-ch'e (Sayyid-i Ad̲j̲all, see below). The Chinese official tradition found in the dynastic histories is not much more reliable than that of Chinese Islam. These also are full of legendary matter, profoundly influenced by national pride and compiled with a lack of critical judgement; nevertheless, they cannot be entirely neglected as they contain a few geographical and linguistic data. One should note also that, in the older Chinese literature, the land of the Muslims is called *Ta-shih* (*Dashi*), i.e. *Tād̲j̲ik* (*tād̲j̲ik* being the Middle Persian form of the modern Persian *tāzī*; it is the Persianised form of the Syriac *ṭayyāyē*, properly "Arab of the tribe of Ṭayyi'". The change in meaning is explained by the fact that once the Muslim Ṭayyi' Arabs were regarded by one body of Persians as the representatives of the Arab world, their name was extended to all Arabs and thus came to mean "Arab" or "Muslim". Later, they learned to distinguish more accurately between various branches of Muslims and *tād̲j̲ik* again became limited in application and was applied to the Muslim inhabitants of northeastern Persia; see TĀD̲J̲IK).

The Arabic sources are much better. We have such splendid works as al-Ṭabarī's history, which gives us all the material available in his time so that we can reconstruct the history for ourselves; it is improbable that any important notices from older times have escaped him. The Arabic sources afford a check on the Chinese ones, which we cannot afford to neglect; they are quite silent regarding the legends handed down by the traditions of indigenous Chinese Islam.

The Arab geographers are of particular importance. While no exact definition of the locality of China or its chief towns is given by the historians, the geographers by the very nature of their works have to give this information. Striking differences are found when one compares the different authors, according to the views prevailing when they wrote. Particularly striking is the utter disagreement between the statements of Ibn Rusta [*q.v.*] (who wrote his *al-Aʿlāḳ al-nafīsa ca.* 290/903) and al-Masʿūdī (who wrote his geographical work *al-Tanbīh wa 'l-is̲h̲rāf* in 344-5/955-6). According to Ibn Rusta (96, l. 5), the first clime begins in the east in the farthest borders of China, passes over China, thence over the coast lands in the south of the land of Sind, etc.; the second clime begins (96, ll. 13 ff.) in the east, passes over China, thence over India and thence to the land of Sind, etc.; the third clime (97, ll. 1 ff.) begins in the east passes over northern China, then over India, etc.; Tibet is the first station of the fourth clime (97, l. 12); the fifth clime begins in the land of Yād̲j̲ūd̲j̲ in the east (98, ll. 3 ff.) and passes immediately into northern K̲h̲urāsān; the sixth clime begins in the land of Mād̲j̲ūd̲j̲ and passes over the land of the K̲h̲azars; the seventh clime (98, ll. 13 ff.) begins in the east with the northern Yād̲j̲ūd̲j̲, passes over the land of the Turks, the coast lands of the Caspian Sea, etc.; Ibn Rusta adds (98, ll. 16 ff.); "what lies behind these climes, in addition to the inhabited areas enumerated by us, begins in the east with the land of Yād̲j̲ūd̲j̲, then passes over the land of the Tog̲h̲uzg̲h̲uz (i.e. Tog̲h̲uz Og̲h̲uz [*q.v.*], the 'Nine Og̲h̲uz) and the land of the Turks, then over the land of the Alahs, then over the Abars (the land of the Avars), then over Burd̲j̲ān or Burčān (the land of the Danubian or "Inner" Bulg̲h̲ārs) and the Ṣaḳāliba [*q.v.*] (the land of the Slavs) and ends in the Western Ocean". It is clear from this sketch that Ibn Rusta and his contemporaries only knew of South China, which was only reached by sea; China is a country by the sea, and so he speaks (83, ll. 15 ff.) of the Sea of the Indians, Persians and Chinese. When he says (87, ll. 19 ff.): "The Sea of the Indians is bounded on the east side [at the beginning] by the island of Tīzmakrān, at the end by China and is

bounded on the west side at the beginning by the Gulf of Aden, at the end by Java", he evidently means that the Indian Ocean is divided into an eastern and a western section, the first of which ends on the one side at the island of Tīzmakrān and on the other at China, which is a vast expanse of land reaching in the north to the land of Tibet in the fourth clime and to the land of Yādjūdj and Mādjūdj in the fifth to seventh climes. Characteristic of Ibn Rusta's views is also the statement (88, l. 24, 89, l. 1) that the sea on which one sails from Baṣra to China is one sea and one water reaching to China, in which India also is situated. It was, however, thought that there were really seven seas, each of which had its characteristic features, such as different winds, different taste, different colour and different animals; on this opinion, cf. al-Masʿūdī, *Murūdj* i, 325 = § 356, where it is stated that the sea is one but is to be navigated in different ways in different parts (this point is not raised in Ibn Rusta, 88, ll. 11 ff., where probably *al-zābadj* should be read for *al-ṣīn*). Ibn Rusta unconcernedly makes another land adjoin China, sc. Japan and Korea. He says, 82, l. 23, 83, l. 1: "Every Muslim who enters a land at the end of China, which is called al-Sīlā and where there is much gold, settles there and never comes back again from it"; we are also told elsewhere of Muslims who had come to al-Sīlā (Silla was the name of the dependent kingdom of Korea during T'ang times).

Al-Masʿūdī is better informed, though there are many confusions in his account of the climes (*Tanbīh*, 32 ff.). It is in the main based on a knowledge of the northerly situation of China; according to the general view (31 ff.), the sixth clime is particularly associated with Yādjūdj and Mādjūdj and the seventh with the *Yawamāris* (?) and the Chinese; on the other hand, we find the other view manifesting itself on 26, ll. 3 ff., where China and Korea are regarded the last inhabited areas in the east: "the farthest outposts of civilisation in the east are the frontiers of China and al-Sīlā (or al-Shīla [*q.v.*], i.e. Korea), up to where they end in the wall of Yādjūdj and Mādjūdj, which Alexander built, and the mountains behind, through the ravines of which the wall runs; Yādjūdj and Mādjūdj used to sweep down on the plains from there. The beginning of this wall is outside the habitable region in the seventh clime ... it then takes a southward direction and runs right along till it finally reaches the Sea of Darkness. In the caliphate of al-Wāthiḳ (227-32/842-7) there had allegedly been an embassy from the court in Sāmarrā' to the wall of Gog and Magog led by one Sallām the Interpreter. See M.J. de Goeje, *De muur van Gog en Magog*, Leiden 1888; C.E. Wilson, *The wall of Alexander against Gog and Magog, and the expedition sent out to find it by the Khalif Wāthiq in 842 A.D.*, in *F. Hirth anniversary volume = Asia Major*, introductory vol., ed. B. Schindler, London 1927, 575-612.

Al-Masʿūdī also knows that India and China are near one another: "thither go ships of the Muslims, who on the voyage thither and to Djidda and al-Ḳulzum are attacked by the pirates of the land of Sind ... on *bawāridj*, which are like the *shawānī* of the Mediterranean" (55, ll. 9 ff.). Al-Masʿūdī gives more information about China in his *Murūdj al-dhahab* (written in 332/943, revised in 336/947 and again in 345/956). There was no longer a direct connection by sea in his time but ships came from either side to Galla (Point de Galle), which was almost the halfway point, from which Chinese ships sailed to Khānfū (Canton): "in olden times it was otherwise, when the Chinese ships sailed to the land of ʿUmān in Sīrāf, the coasts of Fārs and Baḥrayn, to Ubulla and Baṣra, and ships from these places likewise traded directly with China: it was only after justice could not longer be relied on and the above-described state of affairs in China had come about that they began to meet at this intermediate point" (i, 308 = § 336). The journey was actually undertaken by this route by a contemporary of al-Masʿūdī's, a merchant of Samarḳand, whose experiences al-Masʿūdī gives (i, 307-12 = §§ 336-41), while a Ḳurashī in the time of the revolt of the Zandj in Baṣra (255-65/869-79) sailed from Baṣra to India, thence proceeded partly by water and partly by land to China and landed at Khānfū, from which he visited the Emperor in his residence Khumdān (*ibid.*) (but the capital city in T'ang times was Ch'ang-an (Chang'an), hence there is a problem here). In i, 303 = § 329, Khānfū is also mentioned as an important commercial town, up to which ships from Baṣra, ʿUmān, Sīrāf, the towns of India, the islands of al-Zābadj and al-Ṣanf sail from the mouth of the river, some six or seven days' journey distant (on al-Zābadj, see *Ḥudūd al-ʿālam*, 163-4, comm. 472-3; according to Minorsky, the form stems from *Javaga "Javanese", the term being applied by Islamic writers at various times to Java, Sumatra and the whole of the Sunda archipelago; on al-Ṣanf = Čampa in South-East Asia, see AL-ṢANF and also ČAM).

The roads leading to China have been most fully described by the oldest Arab geographer whose work has survived, Ibn Khurradādhbih, who held the office of chief superintendent of roads, in his *K. al-Masālik wa 'l-mamālik* written around the middle of the 3rd/9th century. According to him, relations with China were principally maintained by sea, and his account of the ports of South China is surprisingly thorough. After giving the route of the traveller to China from Baṣra to al-Ṣanf on the coast, three days' journey from Ḳumār, he continues (69, ll. 1-19): "from al-Ṣanf to Lūḳīn, which is the first harbour in China, is 100 *farsakhs* by land and water ... from Lūḳīn to Khānfū, which is the largest port, is a journey of four days by sea and of twenty days by land ... from Khānfū to Khāndjū is an eight days' journey ... from Khāndjū to Ḳānṣū is a journey of twenty days ... every harbour of China has a large river which the ships sail into; there is ebb and flow of the tide there. ... The length of China along the coast from Armābīl to the end of the land is a journey of two months. There are 300 flourishing towns in China, ninety of which are particularly renowned: the [northern] frontier of China runs from the sea to Tibet and the land of the Turks, in the west to India; to the east of China is the land al-Waḳwaḳ, rich in gold ... (70, ll. 7 ff.) (on Wāḳwāḳ, concerning which there is utter confusion in the Arabic sources between a Wāḳwāḳ on the East African coast and a Wāḳwāḳ = Sumatra, "the gold island", at the side of other names for this last like Zābadj and Fanṣūr, see the art. s.v.). At the end of China opposite Ḳānṣū, there are many mountains and many kings, this is the land of al-Sīlā, where is much gold; the Muslims who enter this land settle in it on account of its attractions (cf. the account of Ibn Rusta above); it is not known what lies beyond". The whole route from Ceylon to Ḳānṣū is discussed by A. Sprenger in his *Post- und Reiserouten des Orients*, Leipzig 1864, 82 ff. (on the route to Ceylon, it should be noted that "the harbour between ʿUmān and China" is not a place called Kila, to be identified with the town of Malacca, but Galla, which still survives in Point de Galle, see above). Al-Ṣanf he

identifies (with Reinaud and Peschel) with Čampa, i.e., the southern part of Cochin China, and locates Lūḳīn at the mouth of the Songkoi. As to the latter part of the route, one should note that Khānfū is undoubtedly Canton (Guangzhou), and Ḳānsū, in which we readily recognise the Khansā of Ibn Baṭṭūṭa, is clearly Hang-chou (Hangzhou, or Hangchow), and Khāndjū should be identified as Ch'üan-chou, with Khāndjū a copyist's mistake for *Djāndjū*; this would agree with the distance, and we would then have evidence of the existence of Zaytūn, afterwards so important, in this period.

Ibn Khurradādhbih was, however, also acquainted with the land-routes to China. He only briefly describes the route followed by the Jewish Rādhān merchants [see AL-RĀDHĀNIYYA] in connection with the route followed by them by sea from the land of the Franks (Mediterranean—al-Faramā—carrying their goods on their backs over the isthmus to al-Ḳulzum = Suez) (153, ll. 13-15) "beyond Rūm into the land of the Slavs, then to Khamlīdj, the capital of the Khazars, then across the Caspian Sea, then to Balkh and Transoxania, then to the *wurut* (i.e. *yurt* 'pasture-grounds') of the Toghuzghuz and thence to China". He is much more detailed in describing the roads which lead from Transoxania to the east, and gives a vivid picture of a journey by the main route from the lands of the west to the east (178 ff.). At the ford on the upper course of the Oxus where it separates the Pamirs from Ṭukhāristān (Badakhshān), the Turks used to wait on the Pamir side and watch for foreign merchants appearing and signalling to them on the summit of the mountains opposite; they crossed the river and brought back the strangers and their goods to set them on their journey again to China or to India; he describes in thrilling fashion the skill with which these mountain Turks travelled through the great deserts of rocks where no path was visible; this agrees pretty closely with what modern travellers tell us about the Pamir districts of Darwāz and Shughnān, which is the locality referred to by Ibn Khurradādhbih; even the name has survived, for we may easily recognise Shughnān in the *Shikinān* of Ibn Khurradādhbih (179), who calls the Turks of this district *Shikīna* (178, 15) and gives the name of the district in the form *Shikinān* (37, 173). When Ibn Khurradādhbih calls the *Shigīna* Turks (178, ll. 15: *al-Turk alladhīna yusammawna Shigīna*), he is using the word in a very general sense; the inhabitants of Shughnān as well as of the whole of the rest of Ṭukhāristān were certainly Indo-Iranians and probably spoke the same dialect (*Shughnī*) as they do at the present day [see further, SHUGHNĀN].

Ibn Khurradādhbih's account makes it quite clear how distinctly the difference between China and the land of the Turks was understood in his time. This is all the more remarkable, as in his time the influence of China in the Turkish lands between China proper and the T'ienshan (Tianshan) was still significant; the Khāḳān and the lesser Turkish princes were regarded by China as vassals, and these princes endeavoured to place themselves under the protection of the Chinese Emperor or *Faghfūr* [*q.v.*] when threatened, e.g. by the Arabs. Through contacts with the harbours of China, the Muslims were well enough acquainted with the characteristics of the Chinese to understand the differences between them and the Turks. The division of the earth into four continents by Ibn Khurradādhbih is characteristic (155): Arūfā (Europe), Lūbiya (Africa), Ityūfiyā (Ethiopia) with Tihāma, Yemen, Sind, India and China, and Isḳūtiya (?) with Armenia, Khurāsān, the land of the Turks and the land of the Khazars, which cuts up Asia in a peculiar fashion.

There are also other important extant sources of information on the connections by sea, namely the accounts collected by Abū Zayd al-Sīrāfī in his *Akhbār al-Ṣīn wa 'l-Hind*, ed. and tr. J. Sauvaget, *Relation de la Chine et de l'Inde*, Paris 1948. Though the first part of this work is merely a repetition of the notes compiled in 237/851 by Sulaymān the Merchant (Reinaud, *Relations de voyages faits par les Arabes et les Persans dans l'Inde et dans la Chine*, Paris 1845, ii, 61), supplemented by Abū Zayd's own materials, the second part deals with the changes that had taken place in commerce by sea, in their relation to history and gives the narrative of the Ḳurashī Ibn Wahb (of the family of Habbār). This narrative is of no geographical importance: only two towns are fully dealt with, *viz.* Khānfū, which has just been discussed above and shown to be Canton, and Khumdān or Khamdān (= *Khān* "Emperor" + *t'ang* "court"?) the capital of the empire, Hsi-an fu (Xi'an fu), which Ibn Wahb visited. In the *Akhbār*, Khānfū is the great centre of trade between the Arabs (the word is of course not to be taken literally, but means Muslims generally) and the Chinese; on account of the frequent fires and shipwrecks, the goods exposed were not numerous, however; trade was also seriously hampered by piracy (ed. Sauvaget, § 11); Sulaymān is quoted as authority for the statement that a Muslim was appointed law-giver to the Muslim colony by the King of China; this judge was also *Imām* and prayed for the caliph. His decisions were universally respected (§ 12). The voyage from the Gulf to Khānfū was made in fresh water (§§ 13 ff.); the Chinese governor of Khānfū bore the title *dayfū* = *t'ai fu* (*taifu*) (§ 37); the revolt of the Banshua was a disastrous period in the history of Khānfū; he attacked the town which lay in the interior, a few days' journey from the coast, on a large river; this was in 264/878; after the capture of the town by the rebels over 120,000 souls perished from among the foreigners alone, Muslims, Christians, Jews and Magians; it was possibly this blow to Khānfū which brought Ch'üan-chou (Quanzhou), the nearest commercial town to the north, to the front. Lastly, Abū Zayd tells of a native Khurāsānī, who came with his wares to Khānfū and from there visited the capital Khumdān, more than two months journey distant.

It is not till a later period that the seaport of Zaytūn appears in Arabic literature, probably for the first time in Ibn Sa'īd, whose statements Abu 'l-Fidā' (365, tr. in Reinaud, ii, 124) utilised along with those of one who had been there, probably a fellow countryman and subject. It is next described by Ibn Baṭṭūṭa (iv, 268-72, tr. Gibb and Beckingham, iv, 894-5), who first stepped ashore on Chinese soil at Zaytūn. Zaytūn (i.e. Ch'üan-chou-fu or Quanzhou, near Amoy (Hsiamen, or Xiamen), in Fukien or Fujian province) had an enormous harbour where the Moroccan traveller saw a hundred large junks and innumerable smaller ones. The Muslims lived in a separate town of their own, with a *ḳāḍī*, a *shaykh al-Islām*, a Ṣūfī convent and a colony of leading merchants who, to judge by their *nisbas*, were all Persians. He made Zaytūn his base for further journeys in China, e.g. to Ṣīn Kalān or Ṣīn al-Ṣīn or Canton (i.e. Khānfū), then after a return to Zaytūn, by river to Ḳandjanfū, a large city on a plain (? Fu-chou, or Fuzhou, Foochow, further north on the Fukien coast), which again had a Muslim colony with its *shaykh*. Then he went via al-Khansā

(Hang-chou-fu or Hangzhou, Hangchow), Marco Polo's Kinsai, in Chekiang province, which had a large Muslim community, including a merchant descended from the Caliph ʿUthmān and a group of Ṣūfīs; and then to the capital of the Yüan, Khān Bālik (Peking) also said to be called Khānikū (read Khānfū, hence a confusion with the name for Canton?). The lengthy florescence and importance of a Muslim Arab and Persian colony at Zaytūn is further attested by the survival there of several hundred mosque and tombstone inscriptions in Arabic script, mostly in Arabic language but with some in Persian and with some Arabic-Chinese bilingual ones, dating from the 7th to the 15th century. See Chen Da-sheng, *Islamic inscriptions in Quanzhou (Zaitun)*, tr. Chen En-ming and Zheng De-chao, Ningxia and Fujian 1984; R.B. Serjeant, *Yemenis in mediaeval Quanzhou (Canton)* [*sic*], in *New Arabian Studies*, i, Exeter 1993, 231-4.

The land route connecting Transoxania with China via Inner Asia figures in the travel account, his first *Risāla*, of the Arab author Abū Dulaf Misʿar b. Muhalhil al-Khazradjī [*q.v.*], purporting to describe his membership of an embassy *ca.* 331/943 to the King of China, Ḳālīn b. al-Shakhīr (Minorsky suggested for this last component of the name **Čaḳir* = Tkish. *čaghrï* "falcon") from the Sāmānid Amīr of Bukhārā, who refused to give a daughter in marriage to an infidel but allowed his son to marry a Chinese princess. The embassy travelled to Sandābil [*q.v.*], which Marquart identified (*Streifzüge*, 85-90) with Kansu or Kan-ču, capital of the eastern, so-called "Yellow" (*Sarï*) Uyghurs, whose head was recognised as Khān by the Chinese Emperor (see A. von Rohr-Sauer, *Des Abû Dulaf Bericht über seine Reise nach Turkestân, China und Indien neu übersetzt und untersucht*, Bonn, 1939, tr. 25-30, comm. 56-60). Unfortunately, Abū Dulaf's *Risāla* contains so many fanciful elements and problems of itinerary that it cannot be relied upon for firm evidence of Sāmānid-Chinese relations at this time.

Very important, however, for such considerations as these is the information in the *Ḥudūd al-ʿālam* (tr. Minorsky, 83-6, comm. 223-35) and in the geographical-ethnographical section of the *K. Zayn al-akhbār* of the Ghaznawid historian Gardīzī [*q.v.*], who wrote in the mid-5th/11th century (ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 268-71; the significance of this passage was first noted and translated by Barthold in his *Otčet o poyezdkie v Sredniyu Aziyu 1893-1894*, St. Petersburg 1897, 92-4). These two sources are the first Islamic ones to speak of China and Tibet [see for this last, TUBBAT. 1] in any detail, and though they have many resemblances, they do not entirely coincide. Minorsky surmised, with great probability, that they both went back to the lost geographical work of the Sāmānid vizier Abū ʿAbd Allāh Muḥammad al-Djayhānī [see AL-DJAYHĀNĪ, in Suppl.]. Both sources give roughly the same itinerary for the land route to China. The *Ḥudūd al-ʿālam* notes that the Chinese monarch was called the Faghfūr-i Čīn, and was said to be a *shamanī* (? Buddhist). His capital was at Khumdān (Ch'ang-an fu, Hsi-an-fu), although after the fall of the T'ang dynasty in 907 it was transferred elsewhere. China is said to have nine large provinces, but the places mentioned, apart from the capital, tend to be in the Tarim basin-Kansu region rather than in China proper further to the east and south. Gardīzī, however, was by his time aware that there were many kings in China, "of whom the greatest is the Faghfūr", thus reflecting the post-T'ang political divisions of the land. The statement in both sources that the main religion of China was Manicheism can only, of course, reflect the state of affairs amongst the eastern Uyghurs on the western fringes of the Chinese empire proper (see above).

Writing some 70 years after Gardīzī, in *ca.* 514/1120, the section on China in Marwazī [*q.v.*] is less concerned with itineraries and places than with ethnological and sociological details plus an emphasis on the importance of trade and manufactures for the Chinese (Minorsky, *Sharaf al-Zamān Ṭāhir Marwazī on China, the Turks and India*, London 1942, tr. 13-27, comm. 61-92). Chinese artisans had long been famed in the Islamic world for their aptitudes; thus al-Thaʿālibī [*q.v.*] praises their fine silk textiles and their porcelain, and states that "The Arabs used to call every delicately or curiously made vessel and such like, whatever its real origin, 'Chinese', because finely-made things are a speciality of China" (*Laṭāʾif al-maʿārif*, tr. Bosworth, Edinburgh 1968, 141-2). This fame of Chinese technical skills may go back to the capture of Chinese paper-makers at the battle of Talas in 133/752 and the consequent establishment by means of these workers of paper manufacture at Samarḳand (see *ibid.*, 140, and KĀGHAD).

From all these accounts, there emerges that the road from Turfan via the Kansu corridor to north-western China was always the main land route for diplomatic and commercial contacts with China up to the Mongol period. It appears that, in the 13th century, the Mongol Great Khāns tended to take a more northerly route from their *ordo* at Karakorum [*q.v.*] in Mongolia, one going north of the T'ienshan via Bishbalïḳ, Almalïḳ, Talas and Sayram [*q.vv.*] to the Sïr Daryā valley, though much of the traffic in the Mongol period was military rather than commercial.

The above analysis of the accounts of the land of China by Islamic writers will facilitate the investigation of the history of Islam in China. For the older period, this investigation must be undertaken in two quite separate fields. The two routes by which Islam came to China were quite different in character and object: the land route, which led into northern China, brought Islam into the western parts of the northern kingdom only, and did not send out colonies to the coast; the route by sea ran along the coast of China as far as Hangchow, founding colonies everywhere, which carefully avoided any attempt to advance into the interior. This was one of the features of the advance of Islam; when it came by water, it remained on the coast, and when it came by land, it remained in the interior. The maritime contacts of the Islamic lands of Western Asia and China remained strong well into the Yüan period of Chinese history (1260-1368), and probably into that of the early Ming (1368-1644), but as noted in 2. above, the appearance of the Portuguese in the Indian Ocean and the China Seas during the 16th century severed this connection; thereafter, Islamic-Chinese contacts were to be almost entirely by the land route, and it is now the Hui Muslim communities of western and northwestern China which become significant for Chinese imperial history.

The story of the maritime contacts has largely emerged from the geographers' and travellers' accounts detailed above. However, for the story of political and military relations via the land route across Inner Asia, one needs to go back to the early decades of Islam.

The earliest notices of the relations of Islam with China that are worthy of mention, are connected with the political events which arose out of the expansion of Islam. Fīrūz, son of the last Sāsānid king, Yazdigird III, had fled to China after his father's death in 651 [see SĀSĀNIDS] and had sought to persuade the Emperor

to take action on his behalf. His prospects seemed on the whole not unfavourable, as an important dynastic change had just been accomplished in China at this time; the Sui Dynasty had been superseded by the T'ang (A.D. 618), whose first emperors were pursuing an energetic career of conquest. Muḥammad and his successors were similarly engaged in the west. The fact that the huge mountain wall of the T'ienshan formed a barrier between these two new powers, and that on the Chinese side between it and China proper lay the inhospitable Tarim basin, did not prevent Muslim legend from supposing that the Prophet and his companions entered into relationships with the distant empire. According to an oft-repeated tradition (see Goldziher, *Muh. Stud.*, i, 270-1, Eng. tr. Barber and Stern, i, 245-6), Muḥammad issued a warning against provoking the Turks, whose name he possibly did not even know. Such stories are later inventions, whose object it was to increase the prestige of the Messenger of God by crediting him with foreseeing later events. The Chinese were accustomed to hold aloof when, under exceptional circumstances, strangers entered their territories or when their armies would have to be sent beyond the natural frontier. They followed this policy in the case of Fīrūz, son of Yazdigird. The Emperor T'ai-tsung (Taizong) refused his request for help (this we may assume from al-Ṭabarī, i, 2685-6, even if the report of the envoy is legendary; cf. i, 2876). Islam, on the other hand, began to expand eastwards from Khurāsān, and by 94/713 the great general Ḳutayba b. Muslim [*q.v.*] had led an army out of the conquered Farghāna across the mountains into the adjoining land of the Turks. His campaign was unsuccessful; the comparison of the original authorities in al-Ṭabarī, i, 1275-9, shows that his expedition did not result in the conquest of Kāshghar, a conclusion confirmed by H.A.R. Gibb (*The Arab invasion of Kashghar in A.D. 715*, in *BSOS*, ii [1923], 467-74).

There are various mentions in the T'ang annals of diplomatic contacts and military clashes with the Arabs during the 8th century A.D. in the Central Asian region, over which the Emperors claimed a general suzerainty, and records of appeals for aid from the Soghdian city-states of Transoxania now threatened by the Arabs [see MĀ WARĀ' AL-NAHR. 2]. Thus in A.D. 715 the Tibetans and Arabs are said to have attacked, in concert, Farghāna, provoking the Chinese governor in Kāshghar to send a punitive expedition to extend Chinese overlordship in the province. But the Chinese failed to maintain their position in Transoxania, and three or four decades later, in 133/751, the Arab general Ziyād b. Ṣāliḥ defeated the imperial army under Kao Hsien-chih (Gao Xianzhi) at the battle of Talas, determining the future orientation of Transoxania, that it was to become an integral part of the Islamic and not the Chinese world, and deterring the Chinese from ever again intervening there militarily. China was in fact racked by internal revolts from 751 onwards. The Emperor Hsüan-tsung (Xuanzong) fled from his capital to Szechuan, but his son and successor Su-tsung (Suzong) recaptured Ch'ang-an with the aid of troops from Kāshghar, Farghāna and the upper Oxus lands, including Arabs; in the Chinese annals these last are said to have been lent by the 'Abbāsid caliph al-Manṣūr. Gibb pointed out (*Chinese records of the Arabs in Central Asia*, in *BSOS*, ii [1923], 615-22) that there is no mention of any of the episode in the Arab historians and that the so-called "Arabs" must have mercenaries and adventurers, who probably subsequently settled in China and may have formed a nucleus for the spread of Islam there. The Arabic sources are equally silent about what was a long series of Arab diplomatic missions mentioned as being received at the T'ang court from 716 onwards (detailed in E. Chavannes, *Notes additionelles sur les Tou-kiue Occidentaux*, in *T'oung Pao*, v [1904], 32 ff.); there seems no reason to doubt the authenticity of this information, but the embassies were probably sent by the governors of Khurāsān rather than directly by caliphs.

From the 3rd/9th century onwards, overland connections between the Arab Persian governors of Khurāsān and the successor-states there to the caliphate (e.g. those of the Sāmānids and Ghaznawids [*q.vv.*]) and China, tended to be blocked by the constituting of powerful Turkish states like those of the Uyghurs of Eastern Turkestan and Mongolia, with their capital on the Orkhon river (till A.D. 840), and, in the 4th/10th century, the ascendancy of the Ḳarluḳ Turks [*q.v.*] and the Ilig Khāns or Ḳarakhānids which almost certainly arose out of them. Hence contacts were only sporadic. From this period, we know of the possible embassy to the Emperor of China sent by the Sāmānid Amīr Naṣr b. Aḥmad in response to a Chinese approach (see above), and of a more historically-attested embassy from the rulers of Ḳitā and of the Uyghurs to Maḥmūd of Ghazna in 417/1026 (Gardīzī, ed. Ḥabībī, 191) or in 418/1027 (Marwazī, tr. 19-21), bearing presents of the specialities of China and Siberia and seeking marriage alliances, in fact refused to the infidels by the Sultan; the potentates in question would appear to be Sheng-tsung (Shengzong), emperor of the (probably Mongolian) Liao (Khitan) dynasty (982-1031) [see ḲARA KHITAY] and the Uyghur Khān of Kansu, head of the "Yellow" (*Sari*) Uyghurs there. See Minorsky, *Marvazī*, comm. 76-80).

4. History of Islam in China from *ca.* A.D. 1050 to the present day.

During the Sung (Song) period (Northern Sung, 960-1127, Southern Sung, 1127-1279) we again hear in the Chinese annals of Muslim mercenaries. In 1070, the Sung emperor, Shen-tsung (Shenzong), invited a group of 5,300 young Arabs, under the leadership of Amīr Sayyid So-fei-er (this name being as mentioned in the Chinese source) of Bukhārā, to settle in China. This group had helped the emperor in his war with the newly-established Liao empire (Khitan) (on these, see above, 3) in northeastern China. Shen-tsung gave the prince an honorary title, and his men were encouraged to settle in the war-devastated areas in northeastern China between Kaifeng, the capital of the Sung, and Yen-ching (Yanjing) (today's Peking or Beijing) in order to create a buffer zone between the weaker Chinese and the aggressive Liao. In 1080, another group of more than 10,000 Arab men and women on horseback are said to have arrived in China to join So-fei-er. These people settled in all

the provinces of the north and northeast, mainly in Shan-tung (Shandong), Ho-nan (Henan), An-hui (Anhui), Hu-pei (Hubei), Shan-hsi (Shanxi) and Shen-hsi (Shaanxi). As settlers in the area between the Chinese and the northern nomads, these Muslims became an important local element in the 11th and 12th centuries, being involved in the land commercial traffic along the Silk Road with the support of the Chinese, the Khitan, and the Tibetan and Tangut authorities.

So-fei-er was not only the leader of the Muslims in his province, but he acquired the reputation also of being the founder and "father" of the Muslim community in China. Sayyid So-fei-er discovered that *Arabia* and *Islam* were misnamed by the T'ang and Sung Chinese as *Ta-shi kuo* (*Dashi guo*) ("the land of the Arabs") or as *Ta-shi fa* (*Dashi fa*) ("the religion, or law, of Islam"). This was derived from the ancient Chinese name for Arabia, *Ta-shi* (*Dashi*), which remained unchanged even after the great developments in Islamic history since that time. He then introduced *Ta-shi kuo* (*Dashi guo*) ("the Religion of Double Return") to substitute for *Ta-shi fa* (*Dashi fa*), and then replaced *Ta-shi kuo* (*Dashi guo*) with *Hui-hui chi'ao* (*Huihui jiao*) ("the Islamic state"). "The Religion of Double Return" meant to "submit and return to Allāh". Thus, in Chinese, *Hui-hui kuo* (*Huihui guo*) was universally accepted and adopted for *Islam* by the Chinese, Khitan, Mongols and Turks of the Chinese border lands before the end of the 11th century.

The appearance of the Mongols [*q.v.*] in China meant a new phase in the development of Islam there. The Yüan Dynasty was founded by Ḳubilay K͟hān (r. 1260-94 [*q.v.*]), a grandson of the Great K͟hān, Čingiz K͟hān (1206-27 [*q.v.*]). His military forces, used for the overunning of both North and South China, were built largely upon the thousands of Muslim soldiers which he brought with him from the Middle Eastern and Central Asian campaigns. At least two of the commanders-in-chief of the three Mongol war zones were Arabs: Amīr Sayyid Bayan (Po-yen, Boyan) (1235-94) and Amīr Sayyid-i Ad̲j̲all S̲h̲ams al-Dīn ʿUmar (1211-79) (see below). They fought in the war against the Sung, and helped to establish Mongol power in China, with many thousands of Muslims serving as high officials in the central and provincial governments. Because large numbers of the Mongol soldiers were Muslims, the K͟hān decreed them to be second-class citizens of the Mongol empire (after the Mongols themselves in Yüan China). One of Ḳubilay's Muslim commanders was the Buk͟hāran, who claimed to be a *sayyid*, i.e. descendant of the Prophet, S̲h̲ams al-Dīn ʿUmar, called Sayyid-i Ad̲j̲all, given by the Great K͟hān the transliterated Chinese title *Sai-tien-ch'e* (Saidanche). He was Ḳubilay's governor of the southwestern Chinese province of Yunnan [*q.v.*] for the period 1273 till his death in 1279. He was buried there, and his tomb, with its inscriptions, was subsequently discovered at the opening of the 20th century by the French Mission d'Ollone; a second grave also exists at Hsi-an (Xi'an), also with an inscription, this being a cenotaph which only contained the dead governor's ceremonial court dress (see A. Vissière, *Etudes sino-mahométanes*, Paris 1911, 41 n. 1). Sayyid-i Ad̲j̲all probably did much for the spread of Islam in Yunnan, but it is his son Nāṣir al-Dīn who is given the main credit for its spread there. The latter had been governor of Shensi, and when he died in Yunnan as governor there in 1292, he was succeeded by his brother Ḥusayn. Other sons of Sayyid-i Ad̲j̲all and their sons in turn held high office under the Yüan emperors, and the family remained famous in Chinese life. Thus the famous scholar Ma-chu (Mazhu) (*ca.* 1630-1710) supervised the renovation of the tomb and shrine of his ancestor Sayyid-i Ad̲j̲all, as attested by an inscription. It is certain that the dominant position of Islam in Yunnan dates from the Yüan period, being accomplished through land contacts and not maritime ones, and the Muslims of Yunnan must have remained in constant contact with the Hui Muslims of the northern provinces of Shensi and Kansu, especially as Muslims became famous as traders and hirers of animals for transport.

The tolerant, or rather, indifferent Great K͟hāns thus encouraged the Muslims, as they did other religious groups within their empire. Under such conditions, the Muslim community in China made great strides, and the evidence of such Muslim travellers as Ibn Baṭṭūṭa shows that there were also flourishing mercantile colonies in the coastal cities along the China Sea (see above, 3.). Muslims became prominent in occupations such as engineering, medicine, technology, transportation and overseas trade, agriculture and handicraft work. Under the Yüan, there was a significant change in religious life as well; mosques and schools were built, and a network of Muslim hostels was established for travelling Muslim merchants. In the 14th century, by the end of the Mongol role in China, the Muslims totalled about 4,000,000, more than any other minority in China. They took their place in all aspects of Chinese life: political, economic, administrative and military; yet they were still confined to their own communities, somewhat isolated from the vast Chinese population surrounding them. Most of their large communities were still located in areas distant from "China Proper".

The high profile of some Muslims under the Yüan inevitably provoked a backlash. Many Muslim officials and commanders behaved arrogantly and oppressively, lording it over the native Chinese majority, with its own, much more ancient Confucian ethos and traditions, very much at variance with many Muslim attitudes (e.g. in regard to taboos on food and to ritual cleanliness). Already in Ḳubilay's reign, Marco Polo noted the tyranny of a certain Aḥmad, who secured an ascendancy of the K͟hān and used it to further the interests of his own family, until after suffering 22 years of oppression, a Chinese revolt took place in which Aḥmad was killed (Yule-Cordier, *The Book of Ser Marco Polo*³, London 1903, i, 415-23; cf. also H. Franke, *Aḥmed. Ein Beitrag zur Wirtschaftsgeschichte China's unter Qubilai*, in *Oriens*, i [1948], 222-36).

Hence the situation changed for the Muslims under the indigenous Chinese Ming dynasty (1368-1644), during whose period the Hui-hui evolved from being Muslims in China to being Chinese Muslims but for whom the golden age under the Yüan was now over. At the beginning, Muslims were granted political, economic, social and religious freedom, but later this attitude changed. The new régime forced many Chinese immigrants to settle in the border zones, such as the northwest and the southwest where the Muslims had established their communities, and the majority of the people in these areas became Chinese. Moreover, the Muslims were prohibited from upholding their dietary, marriage, dress and speech customs. Under these circumstances, they adopted Chinese names, wore Chinese dress and often married Chinese spouses. This process of acculturation into Chinese culture continued steadily, and the Muslims in China came to consider themselves Chinese.

But with the increase of Sinicisation, they also insisted on retaining many customs and traditions attesting to their origin. Many Arabic and Persian words were preserved, particularly in religious life. This syncretisation of the two cultures created the *Hui* as we know them today, namely, not merely "Chinese with Islamic faith", but a minority with various ethnic distinctions from the Chinese. Towards the end of the Ming rule, in the late 16th century, the first Chinese translations of Arabic and Persian books concerning Islamic history, ritual and philosophy appeared in China. This was probably the most obvious sign of the culmination of the process of Sinicisation. By the end of the Ming, in the year 1644, the total Chinese Muslim population had increased considerably. But then, the almost 1,000 years of Islamic existence in China were undergoing a violent form. The new Manchu rulers, who conquered China and established the Ch'ing (Qing) Dynasty (1644-1911), would act adversely as far as the Hui minority was concerned.

The Muslims greeted the new dynasty with a series of rebellions. Muslim "Ming loyalists" led uprisings against the Manchus in various locations where large Muslim populations resided. Such was the Ting Kuo-tung (Ding Guodong) rebellion (1648) in Kansu. This ill-prepared uprising lasted one year and resulted in many cities destroyed and hundreds of thousands of Chinese and Muslims killed. The Ch'ing rule in China was characterised by many Muslim rebellions, and an uneasy coexistence between Chinese and Muslims. Intercultural and inter-religious violence usually triggered significant rebellions of the Muslims in mid-19th century China also, when Muslim leaders established ephemeral Muslim states and threw all northwestern and southwestern China into chaos. A case in point was Tu Wen-hsiu (Du Wenxiu), who took over much of Yunnan and styled himself "Sultan Sulaymān". After 17 years of struggle, in 1872, he was defeated by the Manchu forces with more than one million Muslims killed [see PANTHAY]. This was probably the last significant chapter history of Islam in Imperial China. In Kansu, Ma Hua-lung [*q.v.*] (Ma Hualong) and in Sinkiang, Yaʿḳūb Beg [*q.v.*] of Kāshghar attempted also to throw off the Manchu rule, but they were likewise suppressed.

Religious aspects of Islam in China

Some scholars tend to divide the development of Islamic religion in China into three tides of influence or movements which entered China from without, thus relating the changes in Chinese Islam to developments in the Islamic world. Not surprisingly, it was the maltreatment of the Muslims in China by the Manchus which conditioned much of their predisposition to rebel, when their oppression under the Ch'ing coincided with the new winds of reform and change which blew from the core of the Islamic world.

During the T'ang and Sung, the Muslim merchants of the China Sea fringes lived in their separate quarters in the major coastal cities where they had settled down and continued their Middle Eastern lifestyle undisturbed. Under the Yüan, their status was second only to the Mongols and they were prominent throughout China; but under the Ming, they adopted a low profile. All this while, they stuck to their Ḥanafī law school allegiance with moderation and without raising much suspicion in their environment. They paid lip-service to the Imperial Calendar, but they lived by their own Muslim one. They built their mosques often without a minaret, in order not to give any prominence to their houses of prayer in comparison with Chinese temples. They behaved as Chinese outwardly, but as Muslims indoors. They spoke Chinese outdoors, but inside the mosque they used Arabic script and ornaments, and sprinkled their speech with Arabic or Persian words. These Muslims are referred to today as *Gedimu* ("the Ancients") (Ar. *Ḳadīm*).

A second phase set in after the 13th century, when Ṣūfī orders penetrated to China. The Ṣūfī wave intensified and widened the roots of Islam in China, and it generated the spread of Islamic learning as well as the construction of new mosques. Of several Ṣūfī orders, the Naḳshbandiyya [*q.v.*], brought from Central Asia via Sinkiang, became the most deeply and widely rooted in China.

The next stage was connected with a movement renewal (*tadjdīd*) generated by a prominent 18th century scholar, Ma Ming-hsin [*q.v.*] (Ma Mingxin). His group was known as the *Hsin chiao* (Xin'jiao) ("New Teaching"). When he returned to China in 1761 from his trip to the Middle East and Central Asia, Ma Ming-hsin was imbued with revivalist ideas which generated much of the unrest in 18th and 19th-century China. He introduced new variants of ritual, for example, the reading out loud and declamation of the Ḳur'ān (hence the name, the *Djahriyya* sect, compared with *khufya*, the silent reciting of before). There is reason to believe that many of the leaders of the rebellions, notably Ma Hua-lung and Tu Wen-hsiu, were related to this revivalist trend.

Islam in Communist China

Under the Republic (1911-49), and then under Communist rule (since 1949), the Muslims have been recognised as a "national" minority, but under the PRC they are kept atomised under their various ethnic appellations (Hui, Uyghur, Kazakh, etc.; see 2., above). Generally speaking, because of the régime's necessity to have relations with Muslim countries on the international arena, it attempted to avoid any overt and brutal oppression of the Muslims domestically. But during the harsh periods of ideological oppression (the Great Leap in the 1950s, and the Cultural Revolution in the 1960s), Muslims were grossly mistreated, as were members of other religious groups. *Waḳf* lands were confiscated, mosques destroyed (only one remained open in the capital Beijing) and Muslims forced to undergo Marxist education. On some occasions, even physical attacks were launched by Chinese troops against Muslim villages. However, since the advent of Teng Hsiao ping (Deng Xiaoping) (1979) and the opening up of China to the outside world, there has been a considerable relenting regarding these policies. More Chinese Muslims than ever are allowed to go on the *Ḥadjdj*. Muslim delegations are allowed in from outside. There are at present several mosques open in the capital to serve its considerable Hui population, the largest and oldest of which, that in Niu chieh (Niujie) or Ox Street, now (1995) has six *Ahongs* on its staff. Scattered manifestations of Islamic revival are again evident in many a Chinese Muslim locality. Whether these emergences of Islam amongst the Hui will follow the path of fundamentalism, as has been the case amongst the Turks of Sinkiang in the early 1990s, or will settle into a pattern of mild protest and peaceful religious re-emergence, remains to be seen.

5. Chinese Islamic literature [see Suppl.].

SĪNĀʾ, the Arabic form for Sinai (as in Ḳurʾān, XXXIII, 20, though whether this term denoted Mount Sinai itself or the region in which it was situated, was not clear to the exegetes; cf. Jeffery, *The foreign vocabulary of the Qurʾān*, 184-5). The present article deals with the Sinai peninsula in general, and specifically, its history and ethnography in more recent times; for its early and mediaeval Islamic history, see AL-TĪH and AL-ṬŪR.

The Sinai peninsula is an arid, desert region, now part of Egypt, bounded by the Mediterranean on the north, the Suez Canal and the Gulf of Suez on the west, the Gulf of Aqaba on the east, and the Negev [see AL-NAḲB] and the Gaza strip on the north-east. It covers about 23,000 sq. miles. The topography comprises a coastal plain bordering on the Mediterranean, with the land gradually rising as one goes southwards, culminating in the mountainous southern tip, with its highest point the Djabal Kātirīnā at 2,637 m/8,651 feet. Close by this last is Mount Sinai itself (Ar. Djabal Mūsā, the Ḳurʾānic al-Ṭūr [*q.v.*], with a height of 2,285 m/7,493 feet, just to the north of which lies the celebrated monastery of St. Catherine's, founded in A.D. 530 and probably the oldest continuously-inhabited Christian monastery in the world.

The people of the Sinai peninsula call the northern plateau region *Bādiyat al-Tīh* "the Desert of the Wanderings", i.e. of the Children of Israel, as depicted in Ḳurʾān, V, 23-9/20-6, and the mountainous southern part *Bilād al-Ṭūr* "the Land of the Mountain", i.e of Mount Sinai, as in Ḳurʾān, II, 60/63. Since the 18th century, the main administrative centre has been al-ʿArīsh [*q.v.*] on the Mediterranean coast, whose older, very mixed population comprised the descendants of Ottoman officials, Egyptian peasants and migrant cultivators from the Ḥidjāz, but whose present population has been much swelled by refugees, incomers, etc. (population in 1975: 40,000). At times, al-Ṭūr, on the Gulf of Suez, and Nakhl, in central Sinai, have served as district administrative posts.

Until recently, two-thirds of Sinai's population have been Bedouin tribesmen, adhering to a number of tribal confederations, such as the Ṣawālḥa, ʿUlaygāt and Muzayna forming the Ṭawara confederation in the south, the Suwārka, Tarābīn, Tiyāhā, Aḥaywāt and Bayāḍiyyīn groups in the north. Being mainly arrivals from the Arabian peninsula in the 15th and 16th centuries, most tribes already inhabited their present areas by 1807, when Seetzen visited Sinai. Since then, peace has prevailed amongst the Bedouin, except for some who participated in the 19th century tribal wars of fellow-tribesmen in the adjacent Negev desert.

During the 19th century, various Western travellers visited Sinai and wrote about the region, including the German Seetzen, the Swiss Burckhardt, the English professor Palmer, the American E. Robinson and the Czech explorer Musil. The most comprehensive work on Sinai's history is that of the official in British service, Naʿʿūm Shuḳayr. Britain took over administrative responsibility for Sinai, along with the rest of Egypt, in 1882 [see MIṢR. D. 7]. The major impact of this change of power was that the whole peninsula was for the first time under regular administration. In 1884 the Cairo-Mecca Pilgrimage caravan was ended, and, on the diplomatic level, the Ottoman government was compelled to recognise that Sinai was part of Egypt, with the present eastern border of Sinai delimited in 1906. During the First World War, Sinai was occupied by the Turks, and there was strenuous fighting in northern Sinai between Ottoman forces under Djemāl Pasha, attempting to push towards the Suez Canal, and British forces, who in 1917 after defeats at Gaza nevertheless broke through under General Allenby towards Palestine. For much of the interwar period, Major C.S. Jarvis, whose various books are an interesting and amusing commentary on life in Sinai during this period (see *Bibl.*), was governor of Sinai. In 1946, Egypt gained control of Sinai, which became a *muḥāfaẓa* or governorate, and was the setting for large-scale warfare against Israel in 1948, 1956, 1967, 1968-70 and 1973. Sinai was under Israeli military occupation 1967-82. Since its retrocession to Egypt, the latter power has constructed several strategic roads, developed tourism on the two Gulf coasts, sedentarised the Bedouin and settled Egyptians in newly-founded towns.

ṢINĀʿA (A., pl. *ṣināʿāt*), the occupation of and production by artisans; craft, industry, derived from the verb *ṣanaʿa* "to do, to produce". The Arab lexicographers provide several meanings of *ṣināʿa*, *ṣunʿ*, *ṣanʿa*; the common significance is "occupation" (defined as *ḥirfa*); *ṣāniʿ*, pl. *ṣunnāʿ* meaning *ḥādhiḳ* (adj.) = "skilful, skilful artisan". The original verb means "to produce, to keep well or take care of (a horse)"; *ṣanīʿ*

(adj.) would mean "polished (sword)", *maṣnaʿa* (pl. *maṣāniʿ*) means "notable palaces, fortresses and edifices in which special endeavours are invested". This denotation originated from Ḳurʾān, XXVI, 129, where the people of ʿĀd [*q.v.*] are reproved on account of the *maṣāniʿ* that they built to dwell forever (see Ibn Sīda, *al-Mukhaṣṣaṣ*, x, 53, xii, 255-61). *Ṣināʿa* could also denote the action of shipbuilding that flourished in Umayyad, Fāṭimid and Mamlūk times and was adopted in *dār al-ṣināʿa*, in both English and French, arsenal, arsenale = workshop or house for handwork. In modern Arabic, *maṣnaʿ* denotes "factory" and *ṣināʿa* means "industry".

Ṣināʿa meant in the Middle Ages the activities of the craftsmen which were usually concentrated in the market (*sūḳ* [*q.v.*]), the latter consisting of lanes and streets, each specified in a given category: a street of shoemakers producing and selling ordinary shoes, a street of producers and vendors of special shoes, streets of saddle makers, tent makers, goldsmiths, etc. On the periphery of the town one finds industries requiring space or causing bad smells and dirt, such as pottery, dyeing and tanning. The *sūḳs* of Cairo are minutely depicted by Ibn Duḳmāḳ in his *al-Intiṣār li-wāsiṭat ʿiḳd al-amṣār*, and al-Maḳrīzī, *Khiṭaṭ*, as well as by authors of *ḥisba* manuals [see ḤISBA; SŪḲ]; see also L. Massignon, in *Enc. of the Social Sciences*, art. *Guilds*, in the section *Islam*; B. Lewis, *The Islamic guilds*, in *Economic History Review*, viii (1937), 20-35; idem, *An epistle on manual crafts*, in *IC*, xvii (1947) 142-51; G.E. Von Grunebaum, *Islam. Essays in the nature and growth of a cultural tradition*, ch. vii, 141-55; G. Baer, *Guilds in Middle Eastern history*, in M.A. Cook (ed.), *Studies in the economic history of the Middle East*, Oxford 1970, 11-17; S.M. Stern, *The constitution of the Islamic city*, in A. Hourani and Stern (eds.), *The Islamic city*. Several vocations, such as medicine (sometimes defined as *ʿilm* = science, sometimes as craft), singing, poetry, calligraphy and astrology, that one describes today as technical and free professions, were considered by the Muslim world, before modern times, as mere *ṣināʿāt* (see Ikhwān al-Ṣafāʾ, *Rasāʾil*, in the 8th *risāla*; al-Māwardī, *Adab al-dunyā wa ʾl-dīn*, Beirut 1986, 213-14; Ibn Khaldūn, *Muḳaddima*, Beirut n.d., 382-3, 405-34). The classification of crafts is an important issue. Al-Djāḥiẓ is one of the first authors in Islam who dealt with crafts and craftsmen. He claims that God planned the differentiation between artisans in order to keep society in harmony (see his *Ḥudjadj al-nubuwwa*, in *Rasāʾil*, ed. ʿA.-S. Hārūn, Beirut 1991, iii, 242-3). In some of his other works, he describes the two principal categories of crafts:

(a) The trades that bring wealth to their occupiers, like jewellers (*aṣḥāb al-djawhar*), vendors or producers of embroidery (*aṣḥāb al-washy*), money-changers (*ṣayārifa*).

(b) Minor crafts and trades that hardly suffice the provisions of their occupier, like water-supplier (*saḳḳāʾ*), plasterer (*ṭayyān*) and ploughman (*ḥarrāth*); see *Ḥayawān*, ed. ʿA.-S. Hārūn, Cairo 1988, iv, 434-5; *Bukhalāʾ*, Cairo 1983, ii, 48-9; *Risāla fī ṣināʿāt al-ḳuwwād*, in the above-mentioned *Rasāʾil*, 379-97 (partly tr. in Ch. Pellat, *Life and works of Jāḥiẓ*, London 1963, 114-16, and minutely discussed in Sadan, *Kings and craftsmen*, in *SI*, lvi [1982], 5-49, lxii [1985], 89-120); see also W.T. al-Nadjm, *al-Djāḥiẓ wa ʾl-ḥādira al-ʿabbāsiyya*, Baghdād 1965, 44-101; Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, Paris 1953, ch. vi; M. ʿUways, *al-Mudjtamaʿ al-ʿabbāsī min khilāl kitābāt al-Djāḥiẓ*, Cairo 1977, 156-75.

The above-mentioned Ikhwān classify the crafts according to their simplicity and according to the materials used and according to ranks (*Rasāʾil Ikhwān al-Ṣafāʾ*, ed. Ziriklī, Damascus 1928, i, 210-26; see also the analysis of the eighth *risāla* by B. Lewis, in *op. cit.*). This classification was adopted in the *Kitāb al-Siyāsa*, ascribed to Ibn Sīnā (see *al-Mashriḳ*, ix [1906], 967), as well as al-Māwardī, *op. cit.*, 193-4, and Ibn Khaldūn, *op. cit.* It is possible that the Muslims followed the pre-Islamic classification of Bryson (see M. Plessner, *Der Oikonomikos des Neupythagoreers Bryson*, Heidelberg 1928, 145-8; see also R. al-Sayyid, *Abu ʾl-Ḥasan al-Māwardī: dirāsa fī ruʾyatihi al-idjtimāʿiyya*, in *al-Abḥāth*, xxxiii (1985), 55-97.

In addition to *ṣināʿa* and *ḥirfa*, there are two other terms with the same denotation, *mihna* and *ṣinf*. *Mihna* (pl. *mihan*) means "profession, service and handiness, mostly domestic", while *aṣḥāb al-mihan* means artisans. *Māhin* is one who serve others skilfully, a servant, and is to be distinguished from *mahana* and *imtahana* signifying "to submit, to be humiliated" (see *LʿA*, s.v. *m-h-n*; J. Sadan, *A new source*, in *IOS*, ix, 375, n. 15).

Ṣinf (pl. *aṣnāf* and *ṣunūf*), means literally "sort, kind", whereas *taṣnīf* means "classification". In the wider sense, *ṣinf* means a group of something, *ṭāʾifa min kull shayʾ*; at the beginning of the ʿAbbāsid period *ṣinf* means also various kinds of crafts and trades. Al-Yaʿḳūbī uses the term *aṣnāf*, meaning various artisans that the caliph al-Manṣūr grouped, classified and arranged in the *sūḳs* of his new capital (*Buldān*, Leiden 1891, 242, 253). Concerning the controversy regarding the beginning of *aṣnāf* and whether they constituted real guilds, see Massignon, *op. cit.*, in *Enc. of Soc. Sc.*, 215; idem, *Les corps de métiers et la cité islamique*, in *Opera minora*, i; Lewis, *loc. cit.*, Stern, *loc. cit.*; Baer, *loc. cit.*; Goitein, *Studies in Islamic history and institutions*, Leiden 1968, 267; S. al-Shaykhalī, *al-Aṣnāf fi ʾl-ʿaṣr al-ʿabbāsī*, Baghdād 1967; Dūrī, *Nushūʾ al-aṣnāf wa ʾl-ḥiraf fi ʾl-islām*, in *Bulletin of Fac. of Arts, Baghdād* (1959), 133-69; and see ṢINF. The *ṣunnāʿ* (craftsmen) play an important role in the Islamic society. They constitute a distinct group within the *ʿāmma* [*q.v.*]. Ethnically, the *ṣunnāʿ* class consisted of Arabs, Persians, Syriac Christians, *Nabaṭ* [*q.v.*] ("autochtonous" speakers of Aramaic), Kurds, Turks, Jews and others. Many of them, especially those who embraced Islam or were born Muslims, played an important part in the religious, political and the social movements, and even in the rebellions against the Sunnī authorities. They were also organised in professional groups in order to resist any kind of hostile actions or governmental sanctions (al-Ṭabarī, iii, 895-6; al-Masʿūdī, *Murūdj*, vi, 452-7; Ibn al-Athīr, *al-Kāmil*, vi, 271-3; Pellat, *Milieu*, *loc. cit.*; al-Nadjm, *loc. cit.*; Fahmī Saʿd, *al-ʿĀmma fī Baghdād*, Beirut 1983; al-Dūrī, *Taʾrīkh al-ʿIrāḳ al-iḳtiṣādī*, Beirut 1974, 75-116, 246-8.

The nomad Arabs and dwellers of the desert towns esteemed trade and despised crafts; they respected the brave horsemen who used to take part in wars and raids; even robbery was not despised. When someone worked for himself, performing any occasional handwork, or when he was served by his wife in works such as clothing and manufacturing tents, it did not provoke any criticism (see Sadan, *The art of the goldsmith*, in D.J. Content (ed.), *Islamic rings and gems in the collection of B. Zucker*, London 1987, 462-73). However, earning one's living by serving others was disdained. Accordingly, *ḳayn* (blacksmith), *ṣāʾigh* (goldsmith), *dabbāgh* (tanner) and *ḥāʾik* (weaver) were despised by pre-Islamic Arabs (see Goldziher, *Die Handwerke bei den Arabern*, in *Gesammelte Schriften*, 1967-73, iii, 316-18; Ettinghausen, *The character of Islamic art*, in N. Faris

(ed.), *The Arab heritage*, 251-67; and see the reaction of Ağa-oğlu to these arguments, "*Remarks on the character of Islamic art*, in *Art Bulletin*" [Sept. 1954], 175-202). When some circles spoke in favour of the tradesmen, they quoted the tradition according to which Muḥammad earned his living as a herdsman and merchant. According to this tradition, the Prophet also used to perform repairing works (mending shoes and clothes) for himself; in this manner, the Islamic tradition could praise modesty and handiwork, without depicting the Prophet contrary to the old Arab values. One should not neglect the traditions ascribed to the Prophet and to his Companions encouraging *kasb* ("earning") in all its permitted forms, including trade and crafts (special chapters titled *al-Buyūʿ wa ʾl-tid̲j̲ārāt* and *Ṣināʿāt* in *Ḥadīth* collections, such as those by Abū Dāwūd, Ibn Mād̲j̲a, al-Kulaynī, al-Rāzī and others; see also al-G̲h̲azālī, *Iḥyāʾ*, ch. *Adab al-kasb wa ʾl-maʿās̲h̲*; al-S̲h̲aybānī, *al-Iktisāb fī ʾl-rizq al-mustaṭāb*; Abū Bakr al-K̲h̲allāl, *al-Ḥat̲h̲t̲h̲ ʿalā ʾl-tid̲j̲āra wa ʾl-ṣināʿa*; see also Goitein, *The rise of the Middle Eastern bourgeoisie*, in *Journal of World History*, iii [1957], 583-604.

In the Ḳurʾān one encounters a positive attitude towards the outcome of the various crafts, i.e., the products, especially those which will be used by believers in paradise (see the various utensils described in the verses XVII, 31; XLIV, 53; LXXVI, 21; LV, 54; XXII, 23; XXXV, 33). On the other hand, the excessive use of luxury products in this world (*al-dunyā*), especially precious objects and imposing buildings, is far from being praised. It is possible that the period of the Prophet inherited certain concepts from pre-Islamic times, namely, the discrepancy between the taste for fine objects and the attitude towards their producer, the artisan. Many Ḳurʾānic verses praise *kasb*, i.e., earning from any permitted craft and trade (LXII, 8-10; XX, 73; II, 198, 267). Verses XXXIV, 10-11; XXI, 80, tell the story of David. God taught him how to use iron and produce armour in order to defend himself at war (XXI, 80, *wa-ʿallamnāhu ṣanʿat^a^ labūs^in^*), whereas verse LVII, 25 speaks about the various uses of iron. No wonder that the Ḳurʾānic verses indicating positively the crafts of iron and linking them to a prophetic figure are quoted, in later periods, by those who try to plead for the apparently despised professions. Is it possible that through these verses the Ḳurʾān intended to change the negative pre-Islamic attitude towards such crafts? However, in Arabic literature we encounter a real discrepancy between the positive attitude towards the product and the negative attitude towards the producer (Sadan, *The art*, and *Kings*, in *SI*, especially lxii [1985], 89-120). One can conclude that the first generations of Islam were still under the influence of pre-Islamic concepts, transmitted, *inter alia*, by language and poetry. On the other hand, one should not forget the continuation of the sedentary concepts inherited from the civilisations, the territories of which were occupied by the Muslims; even these civilisations felt a certain contempt towards certain crafts. However, in the D̲j̲āhiliyya, there was a general disdain of manual crafts; when some artisans were especially mocked, it is due to the fact of their presence in the society of the Arabian tribes, while other trades, more sophisticated, sedentary and refined, were absent or rare; but in the Islamic world, some trades were more despised than others, due to both the concepts inherited from the D̲j̲āhiliyya and the contempt felt by the Persians and others towards particular trades. Such are the trades of the cupper (*ḥid̲j̲āma*), the tanner (*dibāg̲h̲a*) and the weaver (*ḥiyāka*). R. Brunschvig (*Metiers vils en Islam*, in *SI*, xvi [1962]) excludes the weavers and stresses that they were despised in particular by the free Arab spirit because of the hard labour and servitude involved in this trade; the rich testimony to the inter-sedentary aspect, namely the disdain of the pre-Islamic Persian aristocracy towards weavers, is rejected by Brunschvig (who accepts, however, this argumentation concerning other trades, relying mainly on Talmudic sources), because he suspects the evidence to be non-authentic projected into the past by the Arab historiographers who were influenced by their own standpoint and the atmosphere prevailing in their period (*ibid.*, 49, n. 1). For a different opinion, emphasising the continuation of the Persian concept, see Sadan, in *SI*, (1986), 89-91, and n. 33, who takes into consideration the great skill of A. Christensen, *L'Iran sous les Sassanides*², Copenhagen 1944, in distinguishing, in the Arabic sources, between authentic and doubtful data.

In his so far unpublished *Kitāb al-Mat̲h̲ālib*, Ibn al-Kalbī, one of the first Arab historiographers, depicted the crafts despised by the Arabs; his descriptions reflect urban circles, i.e. those of Mecca, probably at the beginning of the Islamic era; for instance, trades such as *d̲j̲azzār*, *ḳaṣṣāb*, *laḥḥām*—all designating butcher, with probable different nuances—as well as teacher, tailor and smith (Sadan, *op. cit.*, 120).

There were also serious attempts to defend crafts and craftsmen and give the latter a better place in Muslim society. Al-D̲j̲āḥiẓ, who does not refrain from humoristic statements concerning tradesmen, shows respect and understanding of their vocation and responsibility to mankind, from the practical and moral point of view. He also praises *tid̲j̲āra* (commerce) and considers the high status of merchants in society. Weavers, he believes, are essential for the religious duty of *satr al-ʿawra* ("hiding of intimate parts"); without builders, people would not live safely (*Rasāʾil*, ii, 242-3, and al-D̲j̲āḥiẓ's dialogue with a carpenter in *al-Ḥayawān*, iii, 276-7, iv, 434-5; see also *al-Bayān*, ed. ʿA.-S. Hārūn, Cairo 1990, i, 248-9 and the conclusions drawn from these passages by al-Nad̲j̲m, *op. cit.*, 52-62; Sadan, *Kings*, 89-94; F. Saʿd, *op. cit.*, 85-91). Another kind of pleading for the manual crafts is manifested by jurists and theologians such as Abū Ḥanīfa, *al-ʿĀlim wa ʾl-mutaʿallim*; al-S̲h̲aybānī, *op. cit.*; al-K̲h̲allāl, *op. cit.*; al-Ḥabas̲h̲ī al-Wiṣābī, *op. cit.* One of their arguments is based on the tradition according to which every prophet was given by God at least one trade for his living: Ādam knew one thousand crafts which he taught his descendents; his wife was a weaver; Idrīs was a tailor and calligrapher; Nūḥ and Zakariyyā were carpenters; Hūd and Ṣāliḥ were merchants; Ibrāhīm was a farmer and carpenter; Dāwūd was an armourer; and lastly, Muḥammad used to repair his own garments and shoes, as mentioned above, and he also tended his herd as a shepherd and was engaged in the housework of his family. Thus the trades of the various prophets include all kinds of *kasb*; and *imāra* ("governing"), trading, farming and *ṣināʿa* are equal and of the same status (see al-S̲h̲aybānī, *al-Kasb*, 36; al-Wiṣābī, *op. cit.*, 6-7; al-K̲h̲allāl, *op. cit.*, 5-21). Apparently, this apologetic attitude was needed in the 3rd/9th century; certain Ṣūfī circles believed in relying totally on God (*tawakkul* [*q.v.*]) even in everyday economic life and those who exaggerated this principle, called for *taḥrīm al-makāsib*, i.e. the prohibition of all forms of earning (see al-Muḥāsibī, d. 243/857, *al-Makāsib*, Cairo 1969, 180-212). From the 5th/11th century onwards, more positive views towards *kasb* (earning) and crafts are expressed by theologians such

as al-Māwardī and al-G̲h̲azālī. They laid down the legal grounds for all kinds of *kasb*, including almost all trades and crafts. At the same time, the role played by the lower classes, especially craftsmen, in the Islamic city became more important. However, religious opposition movements, such as the Ismāʿīliyya (and associated groups like the Ḳarāmiṭa), may possibly have tried to get close to the spirit of the *ʿāmma*. Thus the Ik̲h̲wān al-Safā', who reflect Ismāʿīlī tendencies, may have sought positively to change the social attitude towards them in order to recruit them against the Sunnī caliphate. On this ground, certain orientalists have sought the origin of the *aṣnāf* organisations in these movements, e.g. Massignon, and B. Lewis, in his *Islamic guilds*, repeats the same argument (see also Lombard, *L'Islam dans sa première grandeur*, 153-8). But more recent opinion denies any connection between the *aṣnāf* and the Ismāʿīlī movement; see, e.g., Stern, *op. cit.*; Goitein, *op. cit.*, 255-70 and especially Cahen, *Y-at-il eu des corporations professionelles?*, in Stern and Hourani (eds.), *Islamic city*, 51-63; Baer, *op. cit.*; al-S̲h̲ayk̲h̲alī, *op. cit.*, 48-57.

The Ṣūfī movements were used by the various categories of tradesmen as a means to improve their position in Islamic society. They used to adopt a *wālī* (a patron, like a saint chosen by Christians for each of the arts and crafts) for each of the trades, such as Salmān al-Fārisī [*q.v.*], a Companion of the Prophet, for the barbers. The religious ground for this was the tradition that every prophet had a special craft from which he earned his living. Those prophets are considered by the *aṣnāf* as *d̲j̲ud̲h̲ūr* ("roots") of the various crafts, while the patrons chosen among the Companions of Muḥammad and the Successors are the *bīrs* (*pīrs*), the elder heads of the trades, who inaugurated these trades in Islam. By this the *aṣḥāb al-ḥiraf* intended to prove the religious origin of their crafts and to assure their legitimacy in Islam (see anon., *al-D̲h̲ak̲h̲ā'ir wa 'l-tuḥaf fī bīr al-ṣanā'i' wa 'l-ḥiraf*, ms. Gotha, Or. 903; Lewis, *op. cit.*, 29; S̲h̲ayk̲h̲alī, *op. cit.*, 116-20).

An interesting resemblance exists between the organisation of *aṣnāf* and *futuwwa* [*q.v.*] associations. The mediaeval phenomenon of *futuwwa* groups organised as *ʿayyarūn* [*q.v.*] ("robbers, brigands") provoked a controversy between those who were eager to define them as representatives of the proletarians and those who saw in them (as well as in other elements, such as the *aḥdāt̲h̲*) the latent expression of civil and corporate feeling in Islamic city life. According to Ibn al-Miʿmār, *Kitāb al-Futuwwa*, Bag̲h̲dād 1958, the *naḳīb* (the assistant of the *s̲h̲ayk̲h̲ al-fityān*, the leader) presides over the ceremony held in honour of the newly-recruited members, reads the names of the elder masters of trades and blesses them. The ceremony is called *s̲h̲add al-futuwwa* [see SHADD]. (The *futuwwa* of the following categories is defined as "deficient" (*futuwwa nāḳiṣa*): *mudallisūn* ("cheaters"), *arbāb al-ḥiyal* ("people using trickery devices") and of the despised crafts (see Ibn al-Miʿmār, *op. cit.*, 139-78; F. Taeschner, *Futuwwa Studien*, in *Islamica*, iv [1932], 285-333; idem, *Die Islamischen Futuwwabünde*, in *ZDMG*, lxxxvii [1934], 6-49; Cahen, *Mouvements populaires*, in *Arabica*, vi [1959], 47-48; Von Grunebaum, *Mediaeval Islam*, Chicago 1954, ch. 6; E. Ashtor, *Social and economic history of the Near East in the Middle Ages*, Berkeley etc. 1976, 183-92). The craftsmen's associations were apparently based on the fraternity principle used to bring together the members within a strong unit in order to protect their trades from outside depredations, such as those of robbers and governmental sanctions. According to Ibn Baṭṭūṭa, *futuwwa* associations were transformed in Anatolia into *ak̲h̲īs* [*q.v.*] organisations called *ak̲h̲iyyāt al-fityān* ("fraternity associations of *futuwwa* brethren"). He defines the *ak̲h̲ī* as one who, in his *zāwiya* joins his fellow-tradesmen, *ahl ṣināʿatihi*, and other young people who like their company. Thus craftsmen were the initial and essential members of the *ak̲h̲ī* associations, although the associations were non-professional (see Taeschner, *op. cit.*, Baer, *op. cit.*, 16-30; M. D̲j̲awād, *al-Futuwwa wa-aṭwāruhā*, in *Mad̲j̲allat al-Mad̲j̲maʿ al-ʿIlmī al-ʿIrāḳī*, v [1958], 46-81; D.A. Breebaart, *The* Fütüvvet-name-i kebīr, *a manual on Turkish guilds*, in *JESHO*, xii [1970], 203-15).

A very important aspect of *ṣināʿa* in the mediaeval Islamic city was the agoranomos (*muḥtasib*); see B. Foster, *Agoranomos and Muhtasib*, in *JESHO*, viii [1965], 128-44, and ḤISBA. The latter's task included inspecting the morality, integrity and quality of the various trades. He inspected prices, measures, weights and scales, as well as religious and moral regulations. Obviously, the *muḥtasib* relied on the assistance of specialists chosen from each of the various trades. He also appointed an *ʿarīf* (a man responsible) for each craft and each market. The candidate for such an appointment should be "one who is experienced in the craft, and familiar with all the swindlings and deceits; one who is well-known for trustworthiness and honesty and who will be a true observer of the craftsmen's affairs and who will inform about it the *muḥtasib*" (see anon., in Sadan, *A new source of the Būyid period*, in *IOS*, ix [1979], 355-76; al-S̲h̲ayzarī, *Nihāyat al-rutba fī ṭalab al-ḥisba*, Cairo 1946, 12; Ibn al-Uk̲h̲uwwa, *Maʿālim al-ḳurba*, ed. R. Levy, Cambridge 1938, 217-21, and Eng. tr., *ibid.*, 88; R.B. Buckley, *The* Muḥtasib, in *Arabica*, xxxix [1992], 59-117). With the help of the *ʿarīf*, the *muḥtasib* could keep in touch with the people of the market, both tradesmen and customers. A special literary genre dealt with tricks and devices of the various craftsmen and reveals their secrets. It began in the time of al-D̲j̲āḥiẓ, who composed the lost epistle *G̲h̲is̲h̲s̲h̲ al-ṣināʿāt* (see Pellat, *Inventaire*, in *Arabica*, iii [1957], in the alphabetical list, under *ṣināʿāt*). There are other works, such as the anonymous *Raḳā'iḳ al-ḥilal fī daḳā'iḳ al-ḥiyal*, Fr. tr. René Khawam, who also published separately the Arabic text; the manuscript on which both the translation and the edition are based contains only the sections dealing with the relatively better-off classes, whereas the part dealing with the masses (and which, according to the list of contents, should have dealt with the various artisans and tradesmen) is now lost. Other lost works are *Kas̲h̲f al-dakk wa-īḍāḥ al-s̲h̲akk* of Ibn S̲h̲uhayd al-Mag̲h̲ribī (d. 425/1035 [*q.v.*], see Ibn K̲h̲allikān, *Wafayāt*, Beirut 1968, i, 116-18). A manuscript of *Irk̲h̲ā' al-sutūr wa 'l-kilal fī kas̲h̲f al-dakkāt wa 'l-ḥiyal* of Ibn Dahhān (d. 591/1195) is to be found at the Rampur Library, no. 1/689. The best-known work in this literary genre is the *Kas̲h̲f al-asrār wa-hatk al-astār* by al-D̲j̲awbarī [*q.v.* in Suppl.], Fr. tr. R. Khawam, *Le voile arraché*, Paris 1980. An Arabic summary of this book was published in Damascus 1885 and in Beirut 1992 (the latter edited by ʿIṣām S̲h̲apparō). In his book al-D̲j̲awbarī reveals all the devices and secrets used by perfumers (*ʿaṭṭārūn*), alchemists (*ahl al-kāf*), wandering physicians (*aṭibbā' al-ṭarīḳ*), jewellers (*d̲j̲awhariyyūn*), armourers (*ahl al-ḥarb wa-ālāt al-silāḥ*), money-changers (*ṣayārifa*) and so forth; many of the tricks described here are also mentioned briefly by *ḥisba* manuals.

A noteworthy phenomenon in Islamic *ṣināʿa* is the fact that one craft can be referred to by more than one term. For example, the goldsmith (*ṣā'ig̲h̲* [*q.v.*]) is

also called *ṣawwāgh*, *dhahabī*, *sabbāk* and *djawharī* (see Ibn Sīda, *op. cit.*, xii, 256-261; Sadan, *The goldsmith*, in *Islamic rings*, 480, and H. Shay, *A glossary of goldsmithing terms*, in *ibid.*, 502-16).

Bibliography: Given in the article, but note also the philosophers, e.g. al-Rāghib al-Iṣfahānī, *al-Dharīʿa ilā makārim al-sharīʿa*, ed. Ṭāhā ʿAbd al-Raʾūf Saʿd, Cairo 1393/1973, 197-219, with an interesting classification of the crafts at 202-3. (A. GHABIN)

SINAI [see SĪNĀʾ; AL-TĪH; AL-ṬŪR].

SINĀN, born in 895/1490, the chief Ottoman court architect from 945/1538 until his death in 996/1588. Although the names of several other Ottoman court architects are known, none match his fame. Combining a long life with the opportunities afforded by the resources of the Ottoman empire at its zenith, he produced an œuvre that is unmatched in quantity and quality, not just in Ottoman, but in Islamic architecture as a whole. Of Christian Greek origin, he was recruited in the *devshirme* levy within the reign of Sultan Selīm I (1512-20). He first participated in a military campaign at Belgrade in 1521 under Süleymān, and subsequently, until his appointment as court architect, in locations as far apart as Vienna (1529) and Baghdād (1535). He would have had the opportunity to learn his profession in the repair and erection of military architecture, such as bridges and citadels and, in the early 1530s, in building mosques in Istanbul between campaigns. Sinān's accomplishments as an architect are detailed in three late 16th-century manuscript sources: Muṣṭafā Sāʿī's *Tadhkirat al-bunyān* and *Tadhkirat al-abniya* and the anonymous, but partially autobiographical, *Tuḥfat al-miʿmārīn*. Between them they list some 477 buildings, ranging over the following categories: congregational mosques (*djāmiʿ*), neighbourhood mosques (*masdjid*), colleges (*madrasa*, *dār al-kurrāʾ*, *dār al-ḥadīth*), infant schools (*maktab*), mausoleums (*türbe*), hospitals (*dār al-shifāʾ*), aqueducts, bridges, caravansarays, soup kitchens (*ʿimārat*), palaces (*sarāy*) and baths (*ḥammām*) (see the list in F. Babinger's *EI*[1] art.). The sheer number attributed to Sinān is proof in itself that he could not have overseen each project. For those in centres remote from Istanbul he can hardly have done more than send a plan with more or less detailed instructions on how the finished buildings should be realised. For instance, the Süleymān complex at Damascus (962/1554-5) and the Melek Aḥmed Pasha mosque at Diyār Bakr which have been attributed to Sinān have stonework and decorative detailing which locate them fully within their local style. Even some of the buildings in Istanbul which are listed as Sinān's work such as the Ḳïlïč ʿAlī Pasha mosque at Topkhāne (988/1580), a diminutive copy of Hagia Sophia, or the Piyāle Pasha mosque (981/1573-4) at Ḳāsïmpasha in Istanbul, have been questioned on grounds of quality (Kuran, *Sinan*, 126, 220).

Major projects. The three largest complexes (*külliyes*) erected by Sinān, the Shehzāde, Süleymāniyye and Selīmiyye, each represent a significant step in his maturity. In each, however, he chose to work with the form that had become standard for major Ottoman mosques since the building of the Üč Sherefeli in Edirne (841-51/1438-47), namely, the combination of large dome chamber and square or rectangular courtyard.

The death of Süleymān's son Meḥmed in 1543 gave Sinān his first major commission, the Shehzāde complex at Istanbul (950-5/1543-8). A prototype for its plan of a central dome surrounded by four semi-domes has been suggested in the Fātiḥ Pasha Mosque (1516-20) in Diyār Bakr. While this is a possibility, it does not take great imagination to alter the dome flanked by two semi-domes of the Sultan Bāyezīd II mosque at Istanbul (906-11/1501-5) to the four flanking semi-domes of the Shehzāde. But a comparison of the Shehzāde with the mosque of Bāyezīd II reveals two striking differences, each repeated in his later major projects, which are indeed the result of a new vision.

The first is the fenestration. Sinān virtually doubled the number of windows of the Bāyezīd mosque by a novel approach to the supporting walls: thickening them with buttresses at regular intervals to open up the intervening spaces, these buttresses being disguised. The second innovation is the treatment of the roofscape. In the Bāyezīd Djāmiʿ the square block which supports the dome is awkwardly obvious; in the Shehzāde, it is all but invisible due to two alterations. The first is the enlarged height and diameter of the round turrets which stand at the four corners of the square; the second is the stepped profile, both horizontal and vertical, of the area between the turrets and the central dome. Sinān obtained a pyramidal effect by raising the height of the four corner domes to be in line with the diagonal axis created by the central dome and the turrets. Further evidence of his concern for variety in this area is seen in the height of the semi-domes and their exedrae, the first a little higher, the second a little lower, than the corner domes.

The Süleymāniyye in Istanbul (957-64/1550-7) was the most ambitious single Ottoman complex, with an array of some 14 buildings of various functions accommodated ingeniously on the sloping site around the mosque. The mosque itself was divorced from these by a surrounding garden which can be viewed as a variation of the *ziyāda*. Set on a hill overlooking the harbour, the mosque still dominates the skyline of the city. Sinān took up the challenge of the Hagia Sophia, the largest dome in Istanbul, by reproducing its vaulting scheme of two axial flanking domes. At ground level, however, the vast interior is adjusted to the requirements of Islamic ritual by having the maximum uninterrupted space, to enable the faithful to pray in rows, the plan being actually quite similar to that of the Shehzāde, apart from the three smaller domes on the sides that replace the earlier mosque's semi-dome and exedrae.

In the complex built for Selīm II at Edirne (972-82/1564-75) Sinān determined to surpass the dome of Hagia Sophia, although as built it was approximately the same diameter; it is lower if measured from the ground, but its steeper profile makes it higher if measured from the base of the dome. The challenge resulted in a ground plan radically different from the previous two large mosques: based on an octagon, so that eight instead of four piers are the main load-bearing elements. This in turn permitted the most striking feature of the building: a reduction of the curtain walls to enable light to pour into the building from an even greater multitude of windows than in his previous mosques. The only drawback of the octagonal plan is the arrangements that had to be made for the *miḥrāb*. To leave it on the plane of the rest of the *ḳibla* wall would have been to overshadow it by the colossal flanking piers, so a deep recess was made between them. In contrast to the rest of the mosque, this area has few windows and so leaves the *miḥrāb*, despite its flanking Iznik tile panels, in relative obscurity. The exterior treatment of this recess is also less than satisfactory. Its bulk necessitated a link to the corner minarets, but the diminutive paired columns of the arcade which accomplish this

are on too small a scale. The minarets are the tallest in Ottoman architecture; their slender form at the four corners of the dome chamber provides an effective complement to the massiveness of the dome between them.

Smaller projects. Among the myriad of Sinān's smaller projects, we may single out four of particular interest. The complex of the Grand Vizier Rüstem Pa<u>sh</u>a [*q.v.*] at Ta<u>kh</u>taḳalʿe in Istanbul was finished not long after his death in 1561. Structurally its mosque is of interest for being raised on a vaulted substructure that enables it to dominate its commercial neighbourhood. However, the relatively simple architectural lines of its interior, with a dome on an octagonal base, are unfortunately sabotaged by the very thing that gives the mosque its fame: its lavish revetment of Iznik tiles. Seen close up these are indeed superb examples of their kind, but the overall effect of repeated small-scale patterns, especially on the four large piers, is to negate the stability of the structure.

The exact date of the complex of Mihrimāh Sulṭān, the daughter of Süleymān, at Edirneḳapî in Istanbul is not known, although a teaching appointment to it was first made in 976/1568-9. From the exterior the mosque is the embodiment of the dome on pendentives: the four arches which support it soar above the roofline of smaller domes, their form emphasised by both the setback of the tympana and by lightening them with as many windows as possible—nineteen in all.

The complex of the Grand Vizier Ṣoḳullu Meḥmed Pa<u>sh</u>a [*q.v.*] at Ḳadîr<u>gh</u>a in Istanbul (979/1571-2) was expertly fitted into an awkward sloping site downhill from the ancient hippodrome. Here it is the interior which holds the greatest interest. The dome is seamlessly incorporated within the rectangular prayer hall without using columns by means of a hexagonal base. For once, the balance of decoration seems appropriately weighed: the central arched panel on the *ḳibla* wall is revetted to its full height near the base of the dome with Iznik tiles patterned on a large scale.

Notwithstanding these comments on decoration, it is as well to remember that we are unfortunately missing an essential ingredient in evaluating the decorative programme of Sinān's buildings: their painted interiors. Not one has survived intact without restoration. Judging from the lavishly-painted decoration of a provincial Ottoman building such as the mosque of Süleymān Pa<u>sh</u>a in the citadel in Cairo (935/1528), the loss is a major one that might have tempered a view of Sinān's structures as usually being of exclusively architectonic interest.

One other architectural masterpiece should be mentioned, partially because it is so unexpected: the aqueduct at Ma<u>gh</u>lova (1553-64). Its diamond-shaped piers support twin buttresses which are faceted like the Turkish triangles of early Ottoman zones of transition. The upper story has a second tier of buttresses arranged so that the knife-edged lines of support continue unbroken from top to base. It is strikingly modern in its blend of form and function, a concept that also encapsulates the successes of his domed mosques.

SINĀN PA<u>SH</u>A, <u>KH</u>ĀDÎM (? - 922/1517), Ottoman Grand Vizier under Selīm I.

Sinān al-Dīn Yūsuf Pa<u>sh</u>a was of Christian, probably Bosnian, origin, recruited into Ottoman service through the *dew<u>sh</u>irme* [*q.v.*] system. Promoted from amongst the white eunuchs of the Palace to the rank of vizier, he served as *beg* of Bosnia, and then in 920/1514, at the beginning of the eastern campaign against <u>Sh</u>āh Ismāʿīl, was appointed *beglerbegi* [*q.v.*] of Anatolia. Commanding the right wing of Selīm I's army at the battle of Čaldiran [*q.v.*] (August 1514), he played a decisive role in the Ottoman victory and was immediately appointed to the vacant post of *beglerbegi* of Rumelia. In 921/June 1515, as a result of his victory over <u>Dh</u>u 'l-Ḳadr-og<u>h</u>lu ʿAlāʾ al-Dawla, he was made Grand Vizier, remaining in that post until the reinstatement of the former Grand Vizier Hersekog<u>h</u>lu Aḥmed Pa<u>sh</u>a in August 1515. In 922/April 1516 Sinān Pa<u>sh</u>a was appointed Grand Vizier for a second time and also commander-in-chief of that year's campaign. He was the chief architect of the Ottoman victory against the Mamlūk sultan Ḳānṣawh al-<u>Gh</u>awrī [*q.v.*] at Mar<u>dj</u> Dābiḳ [*q.v.*] (922/August 1516) and the subsequent conquest of Syria. Marching south towards Egypt, he gained a second victory over the Mamlūks at <u>Kh</u>ān Yūnis (922/December 1516), but was killed at the battle of Raydāniyya (922/January 1517). One of only two white eunuchs to rise to the rank of Grand Vizier in this period, <u>Kh</u>ādîm Sinān Pa<u>sh</u>a was renowned for his personal bravery and was particularly well-regarded by Selīm I.

Bibliography: Meḥmed <u>Th</u>üreyyā, *SʿO*, iii, 105; İ.H. Uzunçarşılı, *Osmanlı tarihi*, Ankara 1943, ii, 266 ff., 536 ff.; for a full account and other bibl., see *İA*, art. *Sinan Paşa, Yusuf, Hadım*, at x, 661-6. (Christine Woodhead)

SINĀN PA<u>SH</u>A, <u>KH</u>O<u>DJ</u>A, the name of two Ottoman dignitaries.

1. The vizier, scholar and prose writer (845-91/1440-86).

Sinān al-Dīn Yūsuf Pa<u>sh</u>a was born probably in 845/1440, in Bursa, the son of <u>Kh</u>îḍr Beg b. Ḳāḍī <u>Dj</u>elāl al-Dīn (d. 863/1459 [*q.v.*]), the first Ottoman *ḳāḍī* of Istanbul. Through his mother, a daughter of Mollā Yegān (d. 878/1473), he was also descended from a second *ʿulemāʾ* family prominent in the early Ottoman period. After initial appointments as *müderris* in Edirne, he was promoted by Meḥemmed II to a teaching post at the Istanbul *ṣaḥn-i <u>th</u>emāniye* [*q.v.*], to be held jointly with that of <u>kh</u>o<u>dj</u>a to the sultan. In 875/1470 he was raised to the rank of vizier and

became known consequently as "Khodja Pasha". In 881/1476 he was apparently appointed Grand Vizier to succeed Gedik Aḥmed Pasha [*q.v.*], but was himself disgraced and imprisoned within a year. Although the precise cause remains unknown, one possibility is that, as a prominent member of a particular *ʿulemā'* group, he may have been a victim of factional rivalry (*IA* art. *Sinan Paşa, Hoca*, at x, 666-7). Meḥemmed II ordered his release following *ʿulemā'* protests, but removed him to Sivrihisar as *ḳāḍī*, where he remained five years. On the accession of Bāyezīd II in 886/1481, Sinān Pasha was restored to the rank of vizier and appointed *müderris* at the Dārü 'l-ḥadīth in Edirne with a daily salary of 100 *aḳčes*. He died in 891/1486, either in Edirne or in Istanbul. His brothers, Aḥmed Pasha, *müftī* of Bursa (d. 925/1519), and Yaʿḳūb Pasha, *ḳāḍī* of Bursa (d. 891/1486), were also prominent members of the *ʿulemā'*.

Sinān Pasha was a noted scholar and sceptic, with wide-ranging interests and a talent for debate; he became a follower of the dervish Sheykh Wefā'. His early works comprised learned treatises in Arabic on law and mathematics, but he is better known for his three works in Ottoman Turkish written during Bāyezīd II's reign: (i) *Taḍarruʿ-nāme*, a work on *taṣawwuf*, particularly admired for its fluent rhymed prose (ed. M. Tulum, Istanbul 1971); (ii) *Naṣīḥāt-nāme* or *Maʿārif-nāme*, a work on ethics (ed. İ.H. Ertalayan, Istanbul 1961); (iii) *Tedhkiretü 'l-ewliyā'*, containing the biographies of 28 saints, a partial translation of ʿAṭṭār's [*q.v.*] *Tadhkirat al-awliyā'* (ed. E. Gürsoy-Naskali, Ankara 1987).

2. The vizier and statesman (d. 1004/1596). He was born in Albania, in the village of Topoyan, belonging to the province Lurë, *ca.* 1520. His father was a Muslim, with the name of ʿAlī. He first appears in the Serai as the *čashnegīr bashi*, chief taster of Süleymān the Magnificent [*q.v.*]. Narrative sources maintain that he was later promoted to be *mīr-i liwā* of Malaṭya, Ḳasṭamūnī, Ghazza, Ṭarābulus in Syria, and *beglerbegi* of Erzerum and Ḥaleb (*Ḥadīḳat ül-wuzerā*, 35). Archival evidence suggests a somewhat different career. At least the appointment of a *čashnegīr bashi* Sinān, who must be identical with the later Grand Vizier, to the *sandjaḳ* of Ṭarābulus on 17 Djumādā II 963/28 April 1556 can be documented (cf. Istanbul, Başbakanlık Osmanlı Arşivi, Mühimme defteri 2, p. 68, no. 618). Sinān, the former *sandjaḳbegi* of Ṭarābulus, is referred to on 4 Rabīʿ I 967/4 December 1559 (Mühimme defteri 3, p. 234, no. 666). Then he is mentioned as the *sandjaḳbegi* of Ghazza in April 1560 (*ibid.* 317, no. 929), from where he—"the brother of Ayās Pasha"—was transferred to Malaṭya on 28 Djumādā II 968/16 March 1561 (Mühimme defteri 4, p. 191, no. 1998). After some years, Sinān was *beglerbegi* of Erzerum in 1564 and 1565 (Mühimme defteri 6, p. 9, and Mühimme defteri 5, p. 144, no. 325). His holding office in Aleppo can also be proved in October 1565 (BBOA, Kepeci 7502, p. 115). At the end of 1567, he became governor of Egypt. While in this function, he was nominated vizier and *serdār* on 20 Ṣafar 976/15 August 1568, to undertake campaigns against the Yemen and to suppress the revolt of the *Imām* Muṭahhar. He succeeded in regaining the territory for the Ottomans, for which his panegyrists gave him the epithet "conqueror of the Yemen". He undertook the *ḥadjdj* in 1571, and was again appointed governor of Egypt on 18 Dhu 'l-Ḥidjdja 978/13 May 1571 (Mühimme defteri 12, no. 542, cited by Hulûsi Yavuz, *Kâbe ve Haremeyn için Yemen'de Osmanlı hâkimiyeti (1517-1571)*, Istanbul 1984, 117, n. 92), and remained in this position for almost two years. He returned to Istanbul as sixth vizier.

In the spring of 1574 he was given supreme command of the Ottoman land forces, which were marching against Tunis. Goletta (Ḥalḳ al-Wādī) was stormed after a long siege and Tunis incorporated once again in the Ottoman Empire (consequently, Sinān Pasha used the epithet "conqueror of Tunis"). For his success, he was honoured by the rank of fourth vizier, in which position his old rivalry with Lala Muṣṭafā Pasha [*q.v.*], who happened to be the third vizier, intensified. This led to their unprecedented double nomination as *serdārs* of the campaign against Persia in 1577. Later, he lost this position, but when his rival was unsuccessful, he was charged with the continuation of the warfare alone. In the spring of 1580 he led the Ottoman army against Georgia, and on 18 Djumādā II 988/31 July 1580 was appointed Grand Vizier in succession to Lala Muṣṭafā Pasha, who was *wakīl-i salṭanat* for three months after Aḥmed Pasha had died. Since, however, the Ottoman conquests in Georgia were not secure and peace with Persia could not be concluded, Sinān Pasha was dismissed on 10 Dhu'l Ḳaʿda 990/6 December 1582 and he was banished to Dimetoḳa, and later to Malḳara [*q.v.*] in Thrace. After four years in disgrace, through harem influence and appropriate presents (allegedly 100,000 ducats), he attained the governorship of Damascus in December 1586. Having lost this office, he was staying in Üsküdar when he was appointed Grand Vizier for the second time on 16 Djumādā I 997/2 April 1589. During this term, a peace treaty with Persia was signed, thus ending twelve years of hostilities. His new rival, Ferhād Pasha [*q.v.*], however, was able to denigrate him and oust him from his position (11 Shawwāl 999/2 August 1591), using as a pretext the huge expenses spent for the realisation of the old plan of connecting the Black Sea with the Gulf of Nicomedia by digging a canal from the lake of Ṣabandja; also the aborted project of ordering galleys from provincial governors for a large-scale naval campaign in the Mediterranean must have played some role in his fall from favour (cf. Pál Fodor, *Between two land wars: Ottoman naval preparations in 1590-1592*, in *Armağan. Festschrift für Andreas Tietze*, ed. Ingeborg Baldauf and Suraiya Faroqhi, Prague 1994, 89-111). One and a half years later, however, a rising of the Janissaries brought him back again from Malḳara, and from 25 Rabīʿ II/29 January 1593 onwards, he filled the Grand Vizierate for the third time.

Henceforth, all his energies were concentrated on winning military laurels in the west, especially in Hungary. In the spring of 1593, he therefore personally led the army in the Hungarian campaign which followed the defeat of Ḥasan Pasha, the *beglerbegi* of Bosnia, at Sisak. The first year of the Long War between 1593 and 1606 resulted in the capture of two fortresses of secondary importance, Veszprém and Palota, by the Ottomans, while some Ottoman strongholds were lost to the Habsburgs. In 1594, Sinān's forces were more successful since—besides Tata and Pápa—they took Györ, a significant trading town

situated in the strategic zone before Vienna, and made it the seat of a new province. A month after the death of Murād III [*q.v.*] on 16 February 1595, he again had to leave his post and go into exile at Malḳara, but only for a few months. On 29 Shawwāl 1003/7 July 1595 he replaced his rival and relative Ferhād Pasha, and immediately began a campaign against Wallachia. His defeat at Giurgiu (Yergöğü) and the loss of Esztergom in Hungary brought about his dismissal and banishment to Malḳara on 16 Rabīʿ I 1004/19 November 1595. But when his successor, Lala Meḥmed Pasha, died on the third day after his appointment, the imperial seal was again entrusted to Sinān Pasha, this great survivor, for the fifth time. In this office he died, when just engaged in plans to attack Transylvania, on 4 Shaʿbān 1004/3 April 1596. He was buried in his own *türbe*, built by Miʿmār Dāwūd, in the Čarshiḳapi̊ quarter in Istanbul.

Sinān Pasha's fabulous wealth, with which he could finance the state in cases of emergency, explains why he was able—besides his personal capacities—to survive four periods of disgrace. He established several pious foundations in various places of the Empire. Although some of them were confiscated by the treasury when he was dismissed, many others survived or were renewed later. The handsomely-fitted *köshk* of the Serai on the shore of the Golden Horn bore his name and survived till 1827.

It was during his terms as Grand Vizier that—as a result of the consummation of the process of princely isolation of the sultans—the communication in writing of the ruler and his "absolute attorney" became a general practice in the form of the *telkhīṣ* [*q.v.*].

His strong personality provoked his contemporaries, mainly those who belonged to the Bosnian faction in the Serai. The chronicler Muṣṭafā ʿĀlī [*q.v.*] had a special hatred for him, partly because the vizier openly expressed his contempt for the literati. On the other hand, for people of lower rank he symbolised the Ottoman soldier, the true pillar of the empire, and the suppressor of the infidels.

SIND, the older Indian Sindhu, the name for the region around the lower course of the Indus river (from which the region takes its name, see mihrān), i.e. that part of the Indus valley south of approximately lat. 28° 30' N., and the delta area, now coming within the modern state of Pākistān.

There are alluvial soils in the delta and in the lands along the river, liable to inundation when the river rises in spring from the melting snows of the northern Indian mountains and rendered fertile by a network of irrigation canals and channels for flood control. To the west of the lower Indus lies the Sind hill country, much of this comprising the Kīrthar range, which rises to an average height of 1,500 m/ 5,000 feet and which forms a natural frontier with Balūčistān [*q.v.*]. To the east of the river valley begins a desert of sand dunes, the southwestern end of the Thār Desert which lies mainly in modern Rādjāsthān [*q.v.* in Suppl.] (see H.G. Raverty, *The Mihrán of Sind and its tributaries*, in *JASB*, lxi (1893), special number, repr. Lahore 1979; H.T. Lambrick, *Sind, a general introduction*, Ḥaydarābād-Sind 1964, chs. 1-4; Kazi S. Ahmad, *A geography of Pakistan*[2], Karachi 1969, index; O.H.K. Spate and A.T.A. Learmonth, *India and Pakistan, a general and regional geography*[3], London 1972, 504-13).

1. History in the pre-modern period.

Sind forms part of one of the early centres of human civilisation, that of the Indus valley (overall span, approximately 2500-1700 B.C.), with its epicentre at Mohenjo-daro on the right bank of the river in Upper Sind (see Sir R. Mortimer Wheeler, *Civilizations of the Indus valley and beyond*, London 1966; idem, *The Indus civilization*[3], Cambridge 1968). This civilisation was succeeded by the one brought into the subcontinent by the Indo-Europeans or Aryans, doubtless in several waves but apparently covering the years 1750-1000 B.C. The Achaemenid king Darius the Great (522-486 B.C.) made Sind and Gandhara parts of his empire, but these were soon lost to the Persians, certainly by the time Alexander the Great traversed the region in 326-325 B.C. before turning westwards and homewards through Gedrosia (the later Makrān [*q.v.*]) (see M. Stein, *On Alexander's track to the Indus*, London 1929; P.H.L. Eggermont, *Alexander's campaigns in Sind and Baluchistan and the siege of the Brahmin town of Harmatelia*, Leuven 1975). Various conquerors subsequently controlled Sind, from the Mauryas through the Indo-Bactrian Greeks and the Parthians, the Scyths and the Kushans. Under the Kushan emperor Kanishka (1st century A.D.), Sind apparently became, at least in part, Buddhist in faith, in addition to its existing Hinduism, so that, at the time of the Arab invasion of the early 8th century, Sind seems to have been in majority Hindu but with a very substantial Buddhist minority.

The Arab general Muḥammad b. al-Ḳāsim al-Thaḳafī [*q.v.*] invaded Sind in 93/711, during the governorship of ʿIrāḳ and the east of al-Ḥadjdjādj and the caliphate of al-Walīd I b. ʿAbd al-Malik, marching from southern Persia through the arid region of the Makrān [*q.v.*] coastland to the Indus delta, and by the time of his recall and death three years later, the Arabs controlled all the lower Indus valley up to and including Multān [*q.v.*] and beyond. Despite the brevity of this conquest period, fierce and bloody campaigning was necessary. Probably a majority of the towns of Sind sought *amān* from the Arabs and submitted under a treaty of peace, *ṣulḥ*, as was the case, e.g. at Arōr/al-Rār, Armabīl and Sīwistān. But resistance at the capital Dēwal/Dēbal/Daybul [*q.v.*] by the local king, named in the Arabic sources as Dāhir (whose attacks on Muslim shipping in the Arabian Sea had allegedly provoked the Arab's punitive expedition) was strenuous, with the invaders conducting a massacre of the inhabitants over three days; 6,000 were killed at Rāwar and another 6,000 at Multān (see F. Gabrieli, *Muhammad ibn Qāsim ath-Thaqafī and the Arab conquest of Sind*, in *EW*, N.S. xv [1964-5],

281-95; Y. Friedmann, *A contribution to the early history of Islam in India*, in Myriam Rosen-Ayalon (ed.), *Studies in memory of Gaston Wiet*, Jerusalem 1977, 309-33). In the succeeding decades, when Arab rule was well established, it seems to have been the Buddhists who collaborated more readily with the Muslim Arabs than the Hindus, and there may have been a process of absorption which contributed to the comparatively rapid extinction of Buddhism in Sind. When the Arab geographers and travellers of the 4th/10th century give descriptions of Sind, there is no mention of the *sumaniyya/samaniyya*, and al-Bīrūnī (d. 440/1048 [*q.v.*]), when he visited Sind, was unable to find any information there on Buddhist and Buddhism for his book on the religions of India (see D.N. McLean, *Religion and society in Arab Sind*, Leiden 1989, 22-82).

During the three centuries of Arab rule in Sind up to the Ghaznawid period (5th/11th century), the province was governed by officials sent out by the caliphs, with the capital and residence of these governors at al-Manṣūra (perhaps 78 km/45 miles to the northeast of modern Ḥaydarābād, Sind), founded by Muḥammad b. al-Ḳāsim's son ʿAmr [see AL-MANṢŪRA]. By the mid-3rd/9th century, caliphal control had become very tenuous, and Arab families of Sind like the Habbārids, who claimed Ḳurashī descent, ruled this out-post of the *Dār al-Islām* largely undisturbed. Islam as a faith settled down into a generally peaceful co-existence with the Hindus, doubtless still very much a majority of the population. It produced a good number of traditionist scholars (*muḥaddithūn*), the majority of whom were accounted amongst the stricter school of the *aṣḥāb al-ḥadīth* (McLean, *op. cit.*, 95-110, cf. also 120-5).

Ibn Ḥawḳal (mid-4th/10th century) found the *khuṭba* in Sind pronounced in the name of the ʿAbbāsid caliph (ed. Kramers, 320, tr. Kramers and Wiet, 313), but in this century, *duʿāt* (pl. of *dāʿī* [*q.v.*]) of the Ismāʿīlīs [see ISMĀʿĪLIYYA] arrived in Sind and Multān from Yemen. During the reign of the Fāṭimid caliph al-Muʿizz (341-65/953-75 [*q.v.*]), an Ismāʿīlī principality was set up in Multān, and the *khuṭba* accordingly made there for the Fāṭimids (see S.M. Stern, *Ismāʿīlī propaganda and Fatimid rule in Sind*, in *IC*, xxiii [1949], 298-307). This nest of heresy attracted the attention of the rigidly Sunnī orthodox military conqueror Maḥmūd of Ghazna [*q.v.*], who was concerned at this time to display his loyalty to the ʿAbbāsids and his abhorrence of the Fāṭimids. In 396/1006 he attacked Multān, capturing the city, and four years later he returned, extinguished its independence completely and deposed the local ruler Abu 'l-Futūḥ/Fatḥ Dāwūd b. Naṣr. The latter's son Dāwūd al-Aṣghar led a rebellion against the new Ghaznawid sultan Mawdūd [*q.v.*] in *ca.* 432/1030-1 or shortly thereafter, but his failure marks the end of Ismāʿīlism in Multān and Upper Sind. Less is known about Lower Sind at this time, but Ismāʿīlism does not seem to have secured a significant hold there in the face of a strong adherence to Sunnī orthodoxy (M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 96-7; Bosworth, *The Ghaznavids*, Edinburgh 1964, 76; idem, *The later Ghaznavids*, Edinburgh 1977, 31; McLean, *op. cit.*, 126-53).

At some point in the first half of the 5th/11th century, Lower Sind came under the rule of a Rādjput family, the Sūmeras [*q.v.*] or Sūmras, but Upper Sind remained under Ghaznawid control. After the demise of the Ghaznawids, the whole of Sind came into the hands of their supplanters, the Ghūrids, and it was conquered by Muʿizz al-Dīn Muḥammad b. Sām [*q.v.*], passing after the sultan's death in 602/1206 to his commander Nāṣir al-Dīn Ḳubāča. The latter submitted to the Dihlī Sultan Aybak, but was defeated by Iltutmush, whose authority he refused to recognise. The Khʷārazm Shāh Djalāl al-Dīn [*q.v.*], fleeing before the Mongols, invaded the Indus valley in 618-20/1221-3, reaching as far as Dēwal/Daybul and the Indian Ocean coast, with the local Sūmera chief fleeing before him (see J.A. Boyle, *Jalal al-Din Khwarazm Shah in the Indus valley*, in *Sind through the centuries*, 124-9). The Moroccan traveller Ibn Baṭṭūṭa [*q.v.*] visited Sind in 734/1333-4, probably entering the Indus valley via the Bolan Pass, and almost certainly again in 741/1341 (C.F. Beckingham, *Ibn Battuta in Sind*, in *ibid.*, 139-42); he mentions the Sūmeras (whom he calls by the familiar Arabic term *al-Sāmira* [*q.v.*], *recte* the Samaritans) as an endogamous clan, with an *amīr* called Wunār who led a rebellion against the Dihlī Sultans, the suzerains of Sind (*Riḥla*, iii, 101-8, tr. Gibb, iii, 596-600). When Ibn Baṭṭūṭa was in Sind, the ancient capital Dēwal/Daybul had ceased to exist, and its place must have been taken by Ṭhaṭṭā [*q.v.*], probably a foundation of the Sūmeras. The Sūmeras themselves ceased to rule Sind in *ca.* 733/1333, and their power was crushed in 752/1351 by a new ruling dynasty, also of Rādjput origin, the Sammās [*q.v.*], whose monarchs, the Djāms, were to rule Sind for nearly two centuries until the early 10th/16th century. Sultan Muḥammad b. Tughluḳ [*q.v.*] of Dihlī died in Muḥarram 752/March 1351, on the banks of the Indus, while in pursuit of a rebel whom the Sammās had harboured, and Sind contended successfully with the imperial arms until the Sammās were reduced to obedience and vassalage by Fīrūz Shāh, Muḥammad's successor. With the decline of the power of Dihlī, that of the Sammās revived, the greatest of their line being Djām Nanda, or Niẓām al-Dīn, who reigned for forty-six years and died in 915/1509. In 926/1520 Sind was invaded by Shāh Beg Arghūn [*q.v.*], who, having been driven from Ḳandahār by Bābur, succeeded in establishing himself in Sind. Djām Fīrūz, the last of the Sammās, was driven into Gudjarāt, where he died. The Mughal Humāyūn [*q.v.*], expelled from Hindūstān by Shīr Shāh Sūr [*q.v.*], made two abortive attempts to conquer Sind, during the second of which his son Akbar was born at ʿUmarkot in 949/1542, but was compelled to flee into Persia. On the death of Shāh Ḥasan, the last of the Arghūns, in 961/1554, the Tarkhāns, another short-lived dynasty, related to the Arghūns, became rulers of Sind, and witnessed the sack of Ṭhaṭṭā by the Portuguese in 1555, but in 1000/1592 Akbar defeated Mīrzā Djānī Beg Tarkhān and annexed Sind, which was incorporated in the *ṣūba* of Multān. The province was a part of the empire, but owing to its remoteness local affairs remained much in native hands. The Dāūdputras were powerful in Lower Sind in the 11th/17th century, and were succeeded by the Kalhoras, who in 1112/1701 ousted them from Shikārpūr and obtained from Awrangzīb a large grant of land. For the next forty years, the Kalhoras increased their power, but in 1153/1740 Nūr Muḥammad Kalhora incurred the displeasure of the Persian invader Nādir Shāh [*q.v.*], to whom that part of Sind lying to the west of the Indus had been ceded, and was compelled to surrender Shikārpūr and Sībī and to pay a heavy tribute. In 1167/1754 Aḥmad Shāh Durrānī (Abdālī) [*q.v.*], to whom Sind had passed on after the death of Nādir Shāh, drove Nūr Muḥammad to Djaysalmer, where he died, but his son, Muḥammad Murād Yār Khān, appeased the Afghān and retained the kingdom. In

1182/1768 his brother and successor, Ghulām Shāh, founded Ḥaydarābād on the site of Nerankot. The relations of the Kalhoras with the English East India Company, which in 1772 opened a factory at Thaṭṭā, were the reverse of friendly, and the factory was closed in 1775. Some years later, Mīr Bidjar, a chief of the Tālpūr tribe of the Balūč, rose in rebellion, and the Kalhora compromised the matter by appointing him minister, but he was assassinated in 1195/1781 after defeating an Afghān army near Shikārpūr, and his son ʿAbd Allāh Khān Tālpūr drove ʿAbd al-Nabī, the last of the Kalhoras, to Kalāt [*q.v.*]. ʿAbd al-Nabī regained his throne and put ʿAbd Allāh to death, but the latter's kinsman, Mīr Fatḥ ʿAlī, defeated him and finally compelled him to take refuge in Djodhpūr, where his descendants held distinguished rank till the end of British Indian days. In 1197/1783 Fatḥ ʿAlī, the first of the Tālpūr Mīrs, established himself as Raʾīs of Sind. The history of the country under its new rulers was bewildering, owing to its partition among different members of the family: (1) the Ḥaydarābād or Shāhdādpūr branch, ruling in Central Sind, (2) the Mīrpūr or Manikānī branch, seated at Mīrpūr, and (3) the Suhrābānī branch, ruling at Khayrpūr [*q.v.*].

The English East India Company had had a factory at Thaṭṭā for some thirty years in the mid-17th century and, as noted above, again in the later 18th century. In 1799 an attempt to establish commercial relations was made by the Governor of Bombay, with the additional motives of excluding possible French Revolutionary influence from Sind and, more pressingly, that of the Tālpūr Mīrs' suzerains, the Durrānī rulers of Afghānistān. By *ca.* 1830 the possibility was being mooted in British Indian circles of trade along the Indus waters, and a mission under Henry Pottinger was sent to Sind in 1832. At the time of the First Afghan War, British Indian troops insisted on transit through Sind and the Bolan Pass into Afghānistān, and in 1839 a treaty was imposed on the Mīrs. Military disasters in Afghānistān and north-eastern Balūčistān weakened British prestige. In the rising in Sind of 1843 against British interference there, Sir Charles Napier defeated the insurgents at Miyānī near Ḥaydarābād. Mīr ʿAlī Murād, of the Suhrābānī branch, remained faithful to the British connection, and was permitted to retain his principality of Khayrpūr and the honorary office of *Raʾīs* of Upper Sind. The rest of Sind was annexed to British India, attached administratively to Bombay, and until 1847 was in fact governed by Napier, until his retirement from the post, as Commissioner for Sind.

2. History from 1843.

Sind was annexed by the British in 1843 following the defeat by British troops commanded by Sir Charles Napier of the local Tālpūr *mīrs* at the battles of Miani (17 February) and Ḥaydarābād (22 March). This action was taken as part of a wider plan to secure India's northwestern frontier in the aftermath of the unsuccessful First Afghan War of 1838-41, and was officially justified by claims that Sind's rulers had failed to honour agreements entered into with the British administration in India. Contemporary public opinion, however, was divided over the way in which the *mīrs* had been treated, some observers alleging that Britain had behaved dishonourably, which led to the famous "Peccavi" (I have sinned/Sind) saying attributed by the magazine *Punch* to Napier.

Under British administration, a hierarchy of officials was installed along the same lines as other parts of British-controlled India. A similar land revenue system was also introduced which did not differ very greatly from the situation under the *mīrs*. In return for their allegiance, most landholders were confirmed in their estates. From the British point of view, Sind remained a frontier province, albeit attached to the Bombay Presidency after 1847, and consolidating and maintaining the security of its borders was consequently a high priority. The other main concern of Sind's new authorities was to encourage the development of the local economic infrastructure in order to expand the region's usefulness as a source of raw materials and a market for British goods. The introduction of new irrigation schemes such as the Jamrao canal in 1900 and the Sukkur barrage in 1932 facilitated a steady shift to cash cropping as thousands of acres were released for cultivation. Helped by the expansion of the railway network, the port of Karachi [*q.v.*] acquired all-India importance. The strains of commercialisation combined with British revenue demands resulted in a familiar pattern of alienation, with land often moving out of Muslim into Hindu hands. The events of 1857-8 had passed by almost unnoticed in Sind, but economic problems in the 1890s produced a period of instability when the administration was confronted with problems of law and order. Local people also began to resent the presence of settlers from outside the region, who were officially encouraged to exploit the new agrarian opportunities.

While the province escaped the communal bitterness of many other parts of India, Muslim-Hindu differences gradually came to dominate local politics. By 1936, enough public support had been generated to win Sind's separation from the Bombay Presidency, which had communal implications, as on the whole Muslims supported the break while Hindus remained wary. Sindhi Muslims had enthusiastically supported the Khilāfat movement [*q.v.*] of 1919-22, but it was not until the Second World War that Sindhi politics were drawn more fully into the wider nationalist debate. Both the Indian National Congress and the All-India Muslim League had only acquired toe-holds in the province prior to the war years. However, during 1939-45 the League, in particular, with the help of influential Muslim landed élites, increased its support, winning victory in the post-war elections of 1945-6.

At independence in 1947, Sind became a province in the new state of Pakistan, with Karachi the federal capital until 1962. As a result of the demographic

upheaval which accompanied partition, Sind received large numbers of refugees from north and west India who were largely urban-based and so filled to some extent the gap left behind by Sind's departed Hindu community, contributing to Karachi's dramatically-swelling population, which rose from 400,000 at independence to nearly 1.5 million in the early 1950s. Provincial politics continued to be the domain of rural élites, but with the introduction of One-Unit in 1955, for which Sind's Chief Minister M.A. Khuhro mobilised support, Sind's separate political identity was once again lost until the late 1960s. Sind's towns and cities continued expanding, and further irrigation schemes such as the G.M. Barrage across the Indus at Ḥaydarābād helped to strengthen commercial agriculture.

Despite the advantages of having a Sindhi Prime Minister, Zulfikar Ali Bhutto, during the 1970s, economic problems, exacerbated by widescale waterlogging and salination, and competition for scarce employment, contributed to political instability, producing riots as migrants protested against the introduction of quotas favouring local Sindhis, while Sindhis resented the dominance of Urdu. The martial law régime of General Zia was interpreted by many Sindhis as undisguised rule by the Panjab, and there was much support mobilised in Sind for the Movement for the Restoration of Democracy (MRD) which campaigned hard against it in 1983. With the return to parliamentary democracy in the late 1980s, another Sindhi, Benazir Bhutto, became Prime Minister but ethnic tensions fractured the province, which fell victim to the widespread violence that erupted between the province's communities. New political organisations, such as the *Muhajir Qaumi Mahaz* (MQM) which represented refugee interests, clashed with Sindhi nationalists and also Panjabi-Pathan groups in battlegrounds provided by the province's main cities and towns. By the early 1990s, Sind was facing an uncertain political and economic future.

Bibliography: Several of the works listed in the *Bibl.* to 1. above deal with events leading up to the annexation of Sind and its aftermath, but see also Hamida Khuro, *The making of modern Sind. British policy and social change in the nineteenth century*, Karachi 1978; Sarah Ansari, *Sufi saints and state power. The Pirs of Sind, 1843-1947*, Cambridge 1992.

(Sarah Ansari)

3. Language and literature.

Sindhī is the Indo-Aryan language of Sind, spoken by an estimated 15 million speakers in Pakistan, where they constitute the third largest speech community after speakers of Pandjābī and Pashtō, and a further 2.6 million (1991) in India.

(a) Language. Within Indo-Aryan, Sindhī is most closely related to the Sirāikī of the southwestern Pandjāb, which is also widely spoken bilingually with Sindhī in northern Sind. Even Sirāikī, however, which was classified by Grierson in the *Linguistic survey of India* under Lahndā [*q.v.*], shares many more features with Pandjābī [*q.v.*] than with Sindhī. The somewhat isolated status thus conferred upon Sindhī by its peculiar mix of conservative and innovatory features is largely to be accounted for as a natural consequence both of its geographical position on the extreme western perimeter of the Indo-Aryan speech area and of the high degree of isolation from other parts of South Asia imposed upon Sind by the deserts and hills with which the historically inhabited riverain area is largely surrounded. Internal dialectal divisions, e.g. between the standard Vičōlī of the central region, including Ḥaydarābād, and the Lāṛī of the Indus delta, are less significant than those between Sindhī proper and Kaččhī, a distinct variety of Sindhī which betrays its cultural subordination to Gudjarātī.

Among the more notable conservative features of Sindhī particular mention may be made of the widespread retention of short final vowels (albeit often as whispered vowels) now entirely lost in most other New Indo-Aryan languages, thus permitting the retention of such grammatical distinctions as *gharu* "house", *ghara* "houses", *ghari* "at home". Other conservative features include the continued existence of distinctive feminine pronouns, partial distinctions in conjugation between intransitive and transitive verbs, and the maintenance of more than 100 irregular past participles. Innovatory distinctive features include the formation of the future from the present participle, and the exceptionally widespread use of pronominal suffixes not only with verbs, e.g. *atha-mi* "is for me", but also with nouns of relationship, e.g. *pi'u-mi* "my father", and common postpositions, e.g. *sāñu-mi* "with me". While Sindhī is naturally further distinguished from Urdū and the other Indo-Aryan languages of Pakistan by many distinctive lexical items, its vocabulary also shares with these a very considerable component of Perso-Arabic loans, although here too there are some unexpected contrasts, e.g. Sindhī *kitābu* "book", masculine, versus the feminine Urdū and Pandjābī *kitāb*.

Phonologically, the most distinctive feature of Sindhī (and Sirāikī) is the presence of the voiced implosives *g' dj' ḍ' b'*, which are derived from Middle Indo-Aryan initial and medial geminate voiced unaspirates, and which now stand in phonemic contrast with the corresponding explosives *g dj d(ḍ) b*. As a result of these and other contrasts, Sindhī possesses 41 consonant phonemes, an exceptionally large inventory which led to rather far-reaching adaptations of the Arabic script. Earlier conventions were formalised soon after the British conquest of 1843, with the implementation in 1853 of the recommendations of the Ellis Committee of 1851. A regularised Sindhī orthography was thereby instituted, using a 52-letter alphabet normally written in *naskhī* style as opposed to the *nastaʿlīḳ* favoured for Urdū and other South Asian languages. Many letters are distinguished by additional dots, so that, e.g. the *djīm* set also includes separate letters for implosive *dj'* (with two vertical subscript dots), palatal *ñ* (with two horizontal subscript dots) and aspirated *čh* (with four subscript dots). Other unusual conventions include the specialisation of different forms of *kāf* for *k* and aspirated *kh*, and such creative spellings as *hamza* with nunation for *aē̃* "and". Although the unsystematic character of these innovations was deplored by Trumpp, whose Germanic enthusiasm for order led him to devise a confusingly different orthography in his classic grammar, the quite distinctive character of the Sindhī script has done much to ensure the subsequent literary and cultural autonomy of the language. The autonomy of Sindhī was fostered by the region's separate administration from Bombay during the British period, but came to be challenged after 1947 by the settlement of very large numbers of Urdū-speaking *muhādjirīn* in Karāčī, Ḥaydarābād and other urban areas and the accompanying expulsion of most of the Sindhī Hindū population to India, and by subsequent attempts by centralising régimes to enhance the unique status of Urdū as national language of Pakistan. In spite of enduring tensions, however, the status of Sindhī as the most highly developed of Pakistan's provincial languages has now been amply secured, while in India its national status was recog-

nised in 1967 in the eighth schedule of the Indian Constitution.

(b) Literature. The beginnings of a reliable literary record hardly predate the late 16th century. In spite of the claims sometimes more or less extravagantly advanced to the contrary, the early date of Muslim conquest of Sind is therefore not matched by the preservation of any substantial early Muslim Sindhī literature. The Sindhī and Kaččhī elements to be discerned in some of the hymns (*ginān*) of the Ismāʿīlī Pīr Ṣadr al-Dīn (d. 1416?) and his successors provide tantalising indications of the likely early existence of an important sectarian literature, but much has been obscured by uncertain textual transmission and the tendency of later copyists and editors to impart a strongly Gudjarātī character to the language of these Ismāʿīlī compositions.

The classical tradition of Sindhī literature has a strongly Ṣūfī emphasis, already apparent in the brief couplets ascribed to Ḳāḍī Ḳāḍan (d. 1551) and the better authenticated and poetically more memorable set composed by ʿAbd al-Karīm of Bulṙī (1536-1623). The apogee of this tradition is reached in the *Risālo* of Shāh ʿAbd al-Laṭīf of Bhiṭ (1689-1752), a collection of verses designed for musical performance in *ḳawwālī*, which has subsequently become the focus of extraordinary veneration as the supreme expression of Sindhī cultural identity. Arranged under the modal headings called *sur*, the *Risālo* draws for its poetic inspiration not only upon the Ḳur'ān and *Mathnawī*, but also variously upon directly observed phenomena of Sindhī rural life, upon such local folk-romances as the tragic stories of Sasuī and Māruī, and upon memorable evocations of the yogis to whose company the author appears to have been so particularly drawn. Many later Ṣūfī poets were inspired by the example of ʿAbd al-Laṭīf, but his ecstatic inspiration is genuinely matched only by Saččal Sarmast (1739-1827) of Khayrpūr [*q.v.*] in Upper Sind, who also wrote in Sirāikī. The primacy of the Ṣūfī lyric has caused the considerable Islamic literature produced in other traditional poetic genres in the Kalhoṙā and Ṫālpur periods (1748-1843) to appear to be of rather lesser interest.

During the British period, there was the usual shift in fashion away from indigenous genres to more prestigious external models, involving extensive adaptations into Sindhī both of the pedantic niceties of Perso-Urdū *ʿarūḍ* and the Western genres now being made familiar through English. While Hindu writers played an important part in these modernising developments in Sindhī, both tendencies were most vigorously if often prosily promulgated by the extraordinarily prolific writer Mīrzā Ḳalīč Bēg (1853-1929), the son of a Georgian Christian convert to Islam. Ḳalīč Bēg was one of those figures characteristic of the age who devoted his life to the service of his mother tongue. Fluent in Persian, Arabic, Urdū and English, he drew upon the most varied sources in his 300-odd books, which embraced poetry, dramas, novels, essays, grammar, biography and children's books, as well as many translations of all sorts. In the Pakistani period, the leading figure in Sindhī literature has been the poet Shaykh Ayāz (b. 1923), whose extensive œuvre has drawn profoundly upon the resources of ʿAbd al-Laṭīf's *Risālo* in its often outspoken articulation of Sindhī cultural nationalism.

Bibliography: (a) Language. E. Trumpp, *Grammar of the Sindhi language*, London and Leipzig 1872, remarkably long-lived as the standard work of reference, may be supplemented by R.E. Yegorova, *The Sindhi language*, Moscow 1971. G.A. Grierson (ed.), *Linguistic survey of India*, viii/1, *Sindhī and Lahndā*, Calcutta 1919, has a full bibl. of the earlier sources. Later items may be found in the bibliography of C.P. Masica, *The Indo-Aryan languages*, Cambridge 1991, 508-9.

(b) Literature. Besides the useful account of L.H. Ajwani, *History of Sindhi literature*, New Delhi 1970, the summary description in A. Schimmel, *Sindhi literature*, Wiesbaden 1974, is an excellent guide to the primary and secondary bibliography, including many of her own valuable contributions to the subject. Further information may be conveniently sought in G.R. Garg, *International encyclopaedia of Indian literature*, viii, *Sindhi*, New Delhi 1991. H. Khuhro (ed.), *Sind through the centuries*, Karachi 1981, includes articles on various aspects of Sindhi language and literature.

A comparative analysis of the earliest examples of Sindhi verse is offered in C. Shackle, *Early Muslim vernacular poetry in the Indus valley: its contexts and its character*, in A.L. Dallapiccola and S. Zingel-Avé Lallemant (ed.), *Islam and Indian regions*, i, *Texts*, Stuttgart 1993, 259-89. The language and content of the Ismāʿīlī literature is described in C. Shackle and Z. Moir, *Ismaili hymns from South Asia*, London 1992. M. Jotwani, *Shah Abdul Karim*, New Delhi 1970, offers an introduction to one early poet with complete translation of his verses. The overwhelming reputation of ʿAbd al-Laṭīf has generated a considerable literature in English, but this is largely uncritical. The classic account in H.T. Sorley, *Shāh Abdul Laṭīf of Bhit*, London 1940, should be supplemented by A. Schimmel, *Pain and grace*, Leiden 1976, and Durreshahwar Sayed, *The poetry of Shah Abd al-Latif*, Jamshoro-Ḥaydarābād 1988. The character of the pre-modern Islamic literature may be deduced from the descriptions in C. Shackle, *Catalogue of the Panjabi and Sindhi manuscripts in the India Office Library*, London 1977, 58-71. More recent literature is much less well described, but mention may be made of the useful small anthology *Sindhi short stories*, tr. H.K. Ramani, Karachi *ca.* 1972, and the coverage of modern poetry in Fahmida Riaz, *Pakistan, literature and society*, New Delhi 1986.

(C. Shackle)

4. Architecture.

Deserts, marshes and inhospitable ranges of hills and mountains have isolated Sind from the architectural traditions and building techniques of Persia, the Pandjāb and other parts of the subcontinent. The earlier tradition of building in brick was followed throughout the Islamic period, with plinths of stone to protect the walls from rising salt. The use of stone structures and carving could have been introduced from neighbouring Gudjarāt in the late 8/15th century. A century earlier, the glazed tilework tradition of Persia started to enliven brick buildings with two shades of blue and white; the occasional touch of yellow appeared later.

Built under Arab rule, the earliest mosque of the subcontinent in Bhambōr [see daybul] contains two dated inscriptions: 109/727 and 294/906. Excavations only reveal the outline in stone of the ground plan; it follows the square plan of the earlier mosques in Kūfa and Wāsiṭ with a sanctuary without *miḥrāb*, three bays deep and with three rows of eleven columns on stone bases. The *ṣaḥn* is surrounded by the usual *riwāḳs*. Presumably the mosques in al-Manṣūra [*q.v.*] followed the same plan. Later mosques can be grouped according to their tilework decoration inspired by Persian work. Their ground plans recall Lōdī and Mughal prototypes. The earliest example is the Dabgīr

mosque 966/1558 in Thaṭṭā [*q.v.*] as well as the better-known one, the Djāmiʿ Masdjid built between 1053/1644 and 1056/1647. Other such mosques in bad repair are scattered throughout Sind in Sukkur, Khūdābād, Rōhrī (*ca.* 990/1583) and Ghotki (1144/1732).

More than mosques, tombs stand out as the major architectural achievement of Sind. Many of them are characterised by a funerary enclosure which includes a *miḥrāb*. Once more, baked brick remains the basic material and in the earlier examples of Arūr [*q.v.*] near Sukkur, such as the tombs of Farīd al-Dīn Masʿūd Shakar-Gandj [*q.v.*] or Khatal al-Dīn, the relief patterning in terra cotta recalls the decoration of the tomb towers of Kharraḳān from 486/1093 in northern Persia. On the other hand, the square plans with dome are drawn from monuments such as the tomb of the Sāmānids [*q.v.*] in Bukhārā or in Sind from indigenous stupas. Although Multān [*q.v.*] remains the province of grandiose mausolea with glazed tiles, yet in the Maklī [*q.v.*] Hills near Thaṭṭā, the largest Muslim cemetery of the subcontinent, there are also brick tombs with intense patterning in tilework. The best preserved brick-and-tile mausoleum is that of Dīwān Shūrfā Khān (1048/1638) with its mosque; inside its enclosure the square domed building with corner round towers, is sited on a plinth. In Ḥaydarābād, the massive tomb of the founder Ghulām Shāh Kalhōrā buried in 1186/1772 follows the same building traditions as do the two groups of later Tālpūr tombs.

The impact of Gudjarātī stone carving is also echoed in the stone mausolea of the Sindī ruling dynasties. In the Maklī Hills, the most richly carved is the tomb of Djām Niẓām al-Dīn, who died in 914/1508. Amongst other large cemeteries, that of Chaukundi, meaning domed roofs, contains numerous stone burials of the Jokhia tribe (12th/18th century); they exhibit geometric carvings and crude representations of warriors on horseback.

To protect cities, fords and bridges, forts were an essential feature of river and desert landscapes. Nothing much remains of the walls of Bhambōr or al-Manṣūra, but the battlements of the two forts of Ḥaydarābād still dominate the city. In Sukkur, one imposing brick watch tower (1003/1594) survives by the *Ārām-gāh* or resthouse of Mīr Muḥammad Maʿṣūm [*q.v.*], the gifted courtier of the Mughal court. South of Sukkur, the fort of Kōt Didji (12th/18th century) stands out as an impressive landmark; and the ruined battlements of Rōhrī still overlook the Indus, as do those of the fortress on the island of Bhakkar near by. The early 13th/19th century fort at Ranikot, with its 24 km/15 miles of walls, is said to be the largest in the world.

Urban architecture during the British period in Karāčī [*q.v.*], in particular, took on a syncretic European style of great exhuberance. After independence, Mahdī ʿAlī Mīrzā (1910-61), the first president of the Institute of Architects of Pakistan, directed the next generation into a more modern international form of building, although in Karāčī's university complex planned by M. Ecochard, the materials used are a combination of cement and local stone, sand and aggregate.

All over Sind, wind catchers, *mangh* or *mungh*, from around 1 m square and up to 2 m high/3.3-6.6 feet high, rise above the flat roofs of houses to catch the summer wind. From the *shikargāhs* or the game reserves comes the *acacia arabica* for the building of houses. In Thaṭṭā, fine lime plaster or *čunam* covers the mud rendering of the walls; it is carved into mouldings and pilasters. Doors for the fort of Ḥaydarābād are elegantly carved in Indian rosewood or *shīsham*, as are in Lārkhānā the doors for the tomb of Shāh Bahra, who died in 1148/1735.

SINDĀBŪR, Sandābūr, a port on the western coast of peninsular India. Al-Idrīsī describes it as a trading town on a large estuary with an anchorage. It has been tentatively identified with either Siddhāpūr/Shiddāpūr or the modern Shadāshivagad, some 80 km/50 miles south of Goa, hence in what is now the union territory of Goa, Daman and Diu in the Indian Union.

Bibliography: S. Maqbul Ahmad, *India and the neighbouring territories in the* Kitāb Nuzhat al-Mushtāq ... *of al-Sharīf al-Idrīsī*, Leiden 1960, 58, 62, 102, 159. (Ed.)

SINDĀN, Sandān, a port on the western coast of peninsular India, mentioned by the early Islamic geographers (Ibn Khurradādhbih, Ibn Ḥawḳal, the *Ḥudūd al-ʿālam*) as a flourishing mercantile town with a mixed population of Hindus and Muslims. It has been identified with the Sanjam of Portuguese maps and the St. John of English ones and as lying south of Damān and north of Thāna, hence in the modern Bombay state of the Indian Union.

Bibliography: *Ḥudūd al-ʿālam*, tr. Minorsky, 57, comm. 244-5; S. Maqbul Ahmad, *India and the neighbouring territories in the* Kitāb Nuzhat al-Mushtāq ... *of al-Sharīf al-Idrīsī*, Leiden 1960, 56, 102. (Ed.)

SINDBĀD (the sailor), narrator and protagonist of a collection of travel narratives, originally an independent work, but since the time of Antoine Galland's adaptation (1704-6), forming an integral part of the *Arabian Nights* (*Alf layla wa-layla* [*q.v.*]).

The frame story tells of how the wealthy merchant Sindbād overhears a passing porter, his namesake (alternatively also called Hindibād), complain about the injustice of fortune. He invites the porter, and at a number of subsequent occasions narrates about his seven mercantile voyages at sea. On all occasions he is shipwrecked by some misfortune, saved by chance, endurance, and cleverness, and after experiencing varying numbers of adventures, at the end of each journey eventually returns home richer than before. All of Sindbād's adventures mention a number of mirabilia, e.g. wonderful objects, creatures, facts, etc.

Generally speaking, the various voyages focus on the following central episodes: (1) Sindbād's companions mistake a huge fish for an island on which they light a fire. Later, he finds a mare that is to be impregnated by the magic stallion of the sea. (2) Sindbād finds the huge egg of the giant bird Rukhkh [*q.v.*]. Tying himself to the bird's leg, he is carried

to the diamond valley guarded by huge snakes. From there he is saved by clinging to a large piece of meat, which has been thrown down by human merchants exploiting the diamonds. (3) Sindbād's company is kidnapped by hairy dwarfs. A cannibal giant roasts and devours his companions. The giant is blinded with a glowing spike, but only Sindbād himself manages to escape from the wrath of his fellow giants. Later, he saves himself from being devoured by a giant snake by tying his body to large pieces of wood. (4) Caught by black people, Sindbād's comrades are fattened and slaughtered. Managing to escape, Sindbād teaches a foreign king the use of the saddle. He gets married, but later, according to local custom, is deposited in a cave together with his deceased wife. He survives on the scarce nutrition gained by killing other people lowered into the cave until an animal by chance points out to him a way to escape. (5) Sindbād's comrades on the island of the Rukhkh destroy some eggs, and the returning birds bombard their ships with rocks. Sindbād is saved on an island where an old man, taken on Sindbād's back, slings his legs around his body and forces him to obey his orders until Sindbād gets him drunk and kills him. On another island, the inhabitants regularly flee from hordes of monkeys until Sindbād teaches them how to exploit the monkeys' habit of throwing back items thrown at themselves. (6) Sindbād's ship is wrecked at the shores of the magnetic mountain, and he entrusts himself on a raft to a river leading through an underground passage. Eventually emerging in Sarandīb [*q.v.*] (Ceylon), the kingdom's ruler furnishes him with numerous presents intended for Hārūn al-Rashīd. (7) Hārūn subsequently orders him to repay the ruler's generosity, but Sindbād is kidnapped by pirates, who sell him into slavery. When his master orders him to go hunting elephants, he does not engage in killing the animals. In return, they lead him to their cemetery, where he finds huge amounts of ivory.—A variant recension renders the last adventure in a different way: (7a) Sindbād saves himself through the passage of an underground river, and lives with people who turn into flying demons at certain occasions. Not knowing their true nature, he evokes God's name while airborne and is cursed for risking their life.

The Sindbād tales usually are considered as originating from the context of sailors' yarns such as are preserved in Buzurg b. Shahriyār's [*q.v.*] *ʿAdjāʾib al-Hind.* Attempts at establishing an exact dating delineate a period ranging from about A.D. 900—since the Sindbād tales contain numerous verbatim quotations from Ibn Khurradādhbih [*q.v.*]—to the 12th century, after which date analogous tales are quoted by al-Ḳazwīnī [*q.v.*]. Probably the earliest mention of the *Ḥadīth Sindbād* is in al-Ṣūlī's *K. al-Awrāḳ* (Brockelmann, S I, 252; N. Abbot, in *JNES*, viii [1949] 155); since the title there is mentioned in close context with a book entitled *ʿAdjāʾib al-baḥr*, it seems quite likely that this quotation does not refer to the *Sindbād-nāma*, a collection of edifying stories, focusing on a homonym protagonist, which was popular in Persian and Arabic at an early period. The further textual history of the Sindbād tales remains largely unknown, though obvious similarities exist between the Sindbād tales and other narratives of fabulous journeys, such as the Latin *Navigatio Sancti Brendani* (*ca.* 10th century; see M.J. de Goeje, *La légende de Saint Brandan*, in *Actes du viii*ᵉ *Congrès International des Orientalistes*, ii, Leiden 1893, 43-76), the German *Herzog Ernst* (12th century; see C. Lecouteux, *Herzog Ernst*, in *Enzyklopädie des Märchens*, vi, Berlin-New York 1990, 939-42), or the Arabic romance *Sayf al-mulūk*, itself integrated in the *Arabian Nights* (V. Chauvin, *Bibliographie*, vii, 64-73). The Sindbād collection was first publicised by the French orientalist scholar Galland (see M. Abdel-Halim, *Antoine Galland, sa vie et son œuvre*, Paris 1964, s.v.) towards the end of the 17th century. Galland initially intended to publish an independent French translation, but becoming aware of the fact that the Sindbād tales were similar to the larger collection of the *Arabian Nights*, he included them in his translation *Les mille et une nuits*, adapted to the literary taste of the contemporary French mode of *contes de fées.*

Since then, the Sindbād tales have achieved an immense popularity, notably in the Western literatures, where they continue to constitute a mine of inspiration for literary and artistic production (see e.g. *The Arabian Nights in English literature*, ed. P.L. Caracciolo, Houndmills 1988, s.v.; R. Irwin, *The Arabian Nights*, London 1994, s.v.). In this respect, their impact is challenged only by that of the tale of *ʿAlāʾ al-Dīn (Aladin) and the wonderful lamp* (U. Marzolph, *Das Aladdin-Syndrome*, in *Sehen, Hören, Lesen, Lernen, Festschrift Rudolf Schenda*, Frankfurt am Main 1995). In the literatures of the Islamic lands, where pure fiction traditionally appears to be regarded with discretion, the impact of the Sindbād tales is less well articulated (compare, however, several mentions in F. Saʿd's *Min waḥy Alf layla wa-layla*, i-ii, Beirut 1962-6). Rare distinct examples of the collection's reflection in oral literature are represented by the Persian popular romance *Salīm-i djawāhirī* (see U. Marzolph, *Social values in the Persian popular romance "Salīm-i Javāhirī"*, in *Edebiyât*, N.S. v [1994], 77-98), or the Persian storyteller's Mashdī Galīn Khānum's re-telling of Sindbād's fourth journey (see *Die Erzählungen der Mašdi Galin Ḫānom/Ḳiṣṣahā-i Mashdī Galīn Khānum*, ed. U. Marzolph and A. Amirhosseini-Nithammer, Wiesbaden 1994, i, no. 60).

As for single traits, numerous motifs incorporated in the Sindbād tales find analogues in other literatures, prior and posterior to the collection (E. Rohde, *Der griechische Roman und seine Vorläufer*, ³Leipzig 1914, 191-6). To name only the most important: The huge fish (or turtle) in the first journey appears already in the *Ps.-Callisthenes* (see J. Runeberg, *Le conte de l'île poisson*, in *Mémoires de la société néophilologique à Helsingfors*, iii [1902], 343-95). The huge egg of the Rukhkh in the second and fifth journeys is known by Lucian (*True history*, ii, 40). The diamond valley and the particular way to harvest its treasures also form the basis of another story of the *Arabian Nights* (see U. Marzolph, *Hasan von Basra*, in *Enzyklopädie des Märchens*, vi, 538-40). The blinding of the giant cannibal in the third journey reminds one of the Homeric adventure of Odysseus and Polyphemus (*Odyssey*, ix, 231-499; see J.L. Comhaire, *Oriental versions of Polyphem's myth*, in *Anthropological Quarterly*, xxxi [1958], 21-8), and the fattening of Sindbād's companions in the fourth journey bears a vague memory of Odysseus' adventure with Circe (*Odyssey*, x, 229-347; see Chauvin, *Homère et les 1001 nuits*, in *Le Musée Belge*, iii [1899], 6-9). The old man in the fifth journey, often misinterpreted as an orang-utan of Sumatra or Borneo, undoubtedly represents a popular repercussion of the ancient and widely spread belief in a race of strap-legged monsters (see F. Meier, *Das Volk der Riemenbeinler*, in *Festschrift Wilhelm Eilers*, Wiesbaden 1967, 341-67). The mountain in the sixth journey, although its magnetic qualities are not mentioned in an outspoken way in the Sindbād tales, derives from a Plinian tradition rendered in the *Commonitorium Palladii* which was popularised by the latter's incorporation into the Alexander legend (see

C. Lecouteux, *Die Sage vom Magnetberg*, in *Fabula*, xxv [1984], 35-65). Finally, the story of the cemetery of the elephants, as in Sindbād's seventh journey, is already included in al-Tanūkhī's (d. 384/994) *al-Faradj ba'd al-shidda*, ed. al-Shālidjī, iv, no. 424.

In addition to inspiring Western artistic imagination, the Sindbād tales have occasioned a number of specialised interpretations, such as concerning the real geographical background of the travels (B. Walckenaer, *Analyse géographique des voyages de Sind-bad le marin*, in *Nouvelles annales des voyages et des sciences géographiques*, liii [1832], 5-26; J. Henninger, *Der geographische Horizont der Erzähler von 1001 Nacht*, in *Geographica Helvetica*, iv [1949], 214-9). Here, it has been stated that Sindbād's travels almost exclusively head eastward toward India, Ceylon, and the Indonesian archipelagoes, with the sole exception of East African islands (the home of the Rukhkh). While M. Gerhardt has pointed out the structural characteristic of fixing the culmination point of the small cycle of travel narratives in the middle rather than at the end (*Les voyages de Sindbad le Marin*, Utrecht 1957; eadem, *The art of story-telling in the Arabian Nights*, Leiden 1963, 236-63), P. Molan additionally deciphered the underlying ethics of violence (*Sindbad the Sailor, a commentary on the ethics of violence*, in *JRAS* [1978], 237-47), which justify the means of solving a conflict by ultimate success. Probably, this point is the most responsible for the Sindbād tales' enthusiastic reception in Western societies.

SINDBĀD al-ḤAKĪM (Syntipas), a collection of tales also known by the title *Book of the seven viziers*.

The existence, as early as the 4th/10th century, of an Arabic version translated or adapted from Pahlavi, is mentioned by al-Mas'ūdī. This version, revised, was later incorporated into certain editions of the *Thousand and one nights* as well as the *Hundred and one nights*, but independent references to it exist (in particular, that given by A. Ateş following his edition of the Persian *Sendbād-nāme* by Ẓāhirī Samarḳandī, Istanbul 1948). From the 4th/10th century onwards, numerous Persian versions also appeared (mentioned in that of Ẓāhirī, mid-5th/11th century, cf. D. Bogdanovic, *Le livre de sept vizirs de Ẓāhirī de Samarḳand*, Paris 1975, "Postface"); then, towards the end of the 5th/11th century, a Greek version, *Syntipas*, was made, based on a Syriac intermediary (*Sindbān*), as well as a Hebrew version (*Sindabār*); the work was finally translated into Spanish in 1253, at the court of Alfonso the Wise, under the title *Libro des los engannos y los assayamientos de las mujeres*. It was also the subject of numerous adaptations in the literatures of mediaeval Europe, in particular the *Book of the seven sages of Rome*, of which numerous editions exist, as well as the *Dolopathos*. It is also worth mentioning the fact that several tales from *Sindibād*, in more or less adapted form, are reprinted in collections of *exempla* intended for preachers; such volumes proliferated from the 12th-13th centuries onward.

The framework-narrative of *Sindibād* adopts the thoroughly classical theme of "rescue through story-telling". A young prince, commanded to keep silence for seven days by his teacher, the sage Sindibād, is accused by one of his father's wives of having attempted to seduce her; he is condemned to death, but the king's seven viziers take turns in delaying the execution from day to day, each telling a story designed to show the perfidy of women. Each evening, their work is undone by the guilty wife, who tells the king a story presenting the contrary case. After seven days the prince, permitted once more to speak, exculpates himself and then pardons his accuser.

The Indian origin of this theme, accepted by the majority of specialists, has been contested by B.E. Perry (*The Origins of the Book of Senbād*, in *Fabula* [Berlin 1960], 1-95), according to whom it is linked to a very ancient Greco-Oriental tradition; there is also close kinship between certain stories in the collection and tales known in classical Antiquity. Although there can be no definitive resolution of this point, it may be noted that *Sindibād* apparently exploits international thematic material, which was probably constituted in such an early period that its origin is not easily to be determined.

A variation on the framework-narrative of *Sindibād* appears in the *Story of the ten viziers*, also known by the title of *Bakhtiyār-nāma*, of which an Arabic version (probably based on a Persian version from the second half of the 8th/14th century; later versions exist in Persian, Turkish, Malay and Syriac) also appears in certain editions of the *Thousand and one nights* and has been translated by R. Basset (Paris 1883); here, it is the ten viziers who accuse the prince Bakhtiyār of having attempted to seduce one of the king's wives. The cycle of *Shāh Bakht*, likewise incorporated into certain versions of the *Thousand and one nights*, and known in Turkish, is also close to the two preceding in terms of its framework-narrative and some of its thematic material; in this case, it is a vizier who, unjustly accused of trying to assassinate his master, postpones his execution by telling the king stories intended to exonerate himself.

Chauvin, *Bibliographie des ouvrages arabes*, Liège-Leipzig, viii, 1904; M. Gaudefroy-Demombynes (annotated tr.) *Les cent et une nuits*, Paris 1911, repr. 1982, 134-71.

(J.-P. Guillaume)

SINDHIND, a word understood by various Arabic authors to mean "eternal" because its astronomical system is based on a Kalpa of 4,320,000,000 years, but in fact a clever calque (Sind and Hind) on *siddhānta* ("perfected"), a term applied to a class of Sanskrit astronomical texts. Such a *siddhānta*—probably entitled *Mahāsiddhānta* because there is mention of *al-Sindhind al-kabīr*—was brought to Baghdād by an embassy sent from Sind in 773, and there translated into Arabic by an Indian scholar collaborating with an Arab, probably Muḥammad b. Ibrāhīm al-Fazārī. The original Sanskrit *siddhānta* was either a part (*adhyāyas* I-X) of the *Brāhmasphuṭasiddhānta*, composed by Brahmagupta at Bhillamāla in southern Rādjasthān in A.D. 628 for the Cāpa ruler Vyāghramukha (Fiyāghra in Arabic), or a separate treatise, the hypothetical *Mahāsiddhānta*, derivative from it, but mixing with it elements from other Sanskrit astronomical works. The Arabic translation is known only through its remote descendents, each of which has distorted its immediate ancestor in various ways.

The original translation would have been characterised by numerous parameters and by rules for computation based on certain geometrical or other mathematical models; the only table would have been (though not in tabular form) one for Sines and Versines. From the (now lost) translation, al-Fazārī fashioned a set of astronomical tables accompanied by canons for their use; his models would have been the Sāsānid *Zīk-i Shahriyārān* and the latter's model, Ptolemy's *Handy tables*. Al-Fazārī entitled his work *Zīdj al-Sindhind al-kabīr*, in which he mingled elements from Indian, Pahlavi and Greek sources into a usable but internally contradictory set of rules and tables for astronomical computations.

A different solution to the problem of combining the various astronomical traditions known in the early ʿAbbāsid period was achieved by Yaʿkūb b. Ṭārik, apparently a collaborator with al-Fazārī, in his *zīdj*, also written in the mid-770s. Fifty years later, in the 820s, the task was undertaken again by Muḥammad b. Mūsā al-Khʷārazmī [*q.v.*] in his *Zīdj al-Sindhind*. Of this work we know much more than we do of the earlier two, and so can perceive most clearly the process of Ptolemaicisation that gradually rendered the Indian part of the *Sindhind*, except for its trigonometry and its analemmata, meaningless to Muslim astronomers.

Shortly after al-Khʷārazmī composed it, the *Zīdj al-Sindhind* was brought to Spain, and it was there and in Western Europe that it thrived the longest. Though it is the basis of a Byzantine treatise of the 11th century and still survives today in Samaria, the last eastern astronomer writing in Arabic to base, at least nominally, his *zīdj* upon it was Ibn al-Ādamī, whose *al-Zīdj al-kabīr* was completed by his pupil, al-ʿAlawī, who completed it under the title *Naẓm al-ʿiḳd* in 338/949. To scholars like al-Bīrūnī, the *Sindhind* was simply a curious antiquity. Meanwhile, the *Zīdj al-Sindhind* of al-Khʷārazmī was revised by Maslama al-Madjrīṭī at Cordova in the late 10th century, and later by two of his students, Ibn al-Ṣaffār and Ibn al-Samḥ. Through the work of Ṣāʿid al-Andalusī [*q.v.*] and al-Zarḳālla, some elements of the *Sindhind* were incorporated into the *Toledan tables*; the translation of these tables into Latin in the 12th century, along with the translations of the commentary on al-Khʷārazmī's original version by Ibn al-Muthannā (which was also translated into Hebrew by Abraham ben Ezra, who wrote elsewhere about the *Sindhind* in Latin works and in Hebrew works that were translated into Latin), of the *Zīdj al-Sindhind* itself in Maslama's recension, and of Ibn Muʿādh's *Zīdj al-Djayyānī*, written in Jaén in about 1080, strongly established *Sindhind* astronomy (of course, with modifications of or replacements for many of its Indian components) as the basis of that of Western Europe. This position it held till the introduction of the *Alfonsine tables* in the 14th century.

(D. Pingree)

al-**SINDĪ, ABŪ ʿAṬĀʾ** [see abū ʿaṭāʾ al-sindī].

SINDJĀBĪ (in Kurdish, Sendjāwī/Sindjāwī), a Kurdish tribe of Persia, playing an important role in the inter-tribal relations of western Persia, on account of its loyalty to the Iranian state and its defence of the frontiers, confronting foreign powers—Russian, British and in particular, the Ottomans.

Localisation of the tribe. The areas of habitation and of agricultural and stock-rearing activity comprised two regions: that of transhumance in summer and that of settled residence in winter.

The territories of transhumance (*kishlāk*) included the regions of Bāghča, Ḳaṭār, Āḳ-dāgh and Ḳalʿa-Sabzī with their numerous villages and pasturing places extending from Ḳaṣr-i-Shīrīn to the neighbourhood of Khānaḳīn as well as Ḳizil-Ribāṭ and Naft-i Shāh. The Zehāb was located to the north and the pasturages of the Kalhors to the east. Other tribes originating from more or less far-flung districts (Bādjelān, Māfī, Morādī and Ṭālebānī) bordered on territory of this tribe and sometimes engaged in legal disputes with them. Following the treaty of 1914 and the determination of the Persian-Ottoman frontiers imposed by the representatives of Britain and Russia, Sir Arnold Wilson and V. Minorsky, a significant proportion of these territories was ceded to the Ottomans and is currently part of ʿIrāḳ.

Eighty per cent of this population was sedentary, still living on a permanent basis in the regions of winter residence to the north of the Māhīdasht plain (neighbouring the Kalhor and Gūrān tribes) in the province of Kirmānshāh. This geographical position has never been favourable for rebellion against the central government; rebellion tends to be the prerogative of mountain-dwellers, with access to mountain refuges.

The Djalīl-wand and Surkhakī clans and numerous other minor branches inhabit the mountainous region in the capacity of *khorda-mālek* (small-holders), each peasant owning his portion of land; in ancient times these included major landowners.

This region of sedentary habitation is thus subdivided into two districts, plain and mountain. These districts were at all times centres of stock-rearing and comprised huge pasturages later transformed into arable land. The horses of Māhīdasht were and still are famous.

Origins, history and clans. The organisation of the numerous clans constituting this tribe is relatively recent and mention of the "Sindjābī" does not date back beyond two centuries, although the existence of its components is much more ancient. The denomination of this tribe cannot be accounted for with precision. It is said to derive, however, from the word

sandjāb (Persian)/*sindjāw* (Kurdish) "squirrel", which is corroborated by tradition. In fact, the first time that its members were thus named dates back to the period of the war for the reconquest of Harāt (formerly in Khurāsān, currently in Afghānistān), in which the rebellious chieftains were supported by the British, to detach it from Persia. This war had begun at a time when the Sindjābīs were still a part of the tribe of the Zangena, before joining with the Gūrāns and finally forming an independent tribe; they then constituted a group apart, supplying the government with soldiers in return, as was normal under the *bonīča* system, for retention of their equipment and the security of their families. The Persian defence of Harāt was begun in 1249/1833, but was interrupted on account of the death of ʿAbbās Mīrzā (the Crown Prince), son of Fatḥ ʿAlī Shāh. The second war for the reconquest of Harāt took place in 1255/1838 under the reign of Muḥammad Shāh and the third in 1273/1856 in the time of Nāṣir al-Dīn Shāh. It was actually in the course of the second war for Harāt that a detachment of 200 horsemen from this tribe took part for the first time in the siege of this city of Khurāsān. The lining of their tunics being made of squirrel fur, it is said that the army commander assigned them the nickname of Sindjābī "those dressed in the fur of squirrels".

At the outset, there existed in this geographical zone numerous families of diverse origin led by a succession of chieftains (*khāns*), known as Čālāwī/Čālābī, from the province of Fārs. They claimed that their ancestors belonged to the Shabānkāra Kurds [*q.v.*], they themselves constituting a branch of the descendants of the pre-Islamic Sāsānids. This is at least the version of this family's tradition. According to other oral versions, they were descended from the Daylamīs, the best known of whom was the Amīr ʿAḍud al-Dawla of the Būyid dynasty (who reigned from 338/949 to 372/982). In the period of Nādir Shāh (1736-47) they left their original home and migrated to western Persia before settling in their region of current residence.

The line of chieftains included the branches of the *khāns* of Bakhtiyār, Barkhordār, Khodā-Morowwat and Allāhyār-Khān. Other groupings which followed them in this migration were the clans of ʿAbbās-wand (in Kurdish, Hawāsa-wan), Khorda-dasta, Djalīl-wand (in Kurdish, Djalīla-wan), Sorkhakī, Sorkha-wand (in Kurdish, Sura-wan), Dāliyān, Dawlat-mand (in Kurdish, Dawla-man), Dastadja, Dārkhor and the minor clans of the Ṣūfī and the ʿAlī-Walī, all including their subgroups. Some groups and clans which no longer exist also accompanied them, sc.: Rahbar-wand (in Kurdish, Rīwara-wan) Wotka-wand (in Kurdish, Wotka-wan), Bīwa-Djashniyān (Bīwar-Djashniyān?) and Modjrīlān. The suffix *-wand* (*l-wan*) which follows certain names of clans, of mountains and villages shows that outside elements (coming from Luristān) were mingled at the very outset with the clans of the Sindjābīs. It is even probable, on account of numerous names of places and mountains, that at least a part of this ethnic group was in residence, even before the arrival of other branches of the Sindjābīs. This is the only tribe which succeeded in assimilating within itself, in a spirit of great tolerance, the three communities—Sunnī, Shīʿī and Ahl-i Ḥaḳḳ—side-by-side in each village, even though its lineage of chieftains was Shīʿī.

Major figures. The individual who was among the last to contribute to the prosperity and unification of these clans and families, detaching them from other tribes, was a descendant of the Čālāwī family named Ḥasan Khān. Through his wisdom and energy, the majority of the villages were purchased by this family. In years of plenty he stored the produce (grain), reselling it during the years of famine which followed. It was thus that this family, at the outset nomadic, practising livestock husbandry and participating in wars of survival, passing through periods of prosperity and of penury, became, for some time, influential and rich. The son of Ḥasan Khān, Shir Muḥammad Khān Sandjābī, officially nicknamed Ṣamṣām al-Mamālik "the sharp sword of the Kingdom", was the governor of Ḳasr-i Shīrīn, a frontier town in western Persia, and to some extent, the warden or margrave entrusted with the protection of a border zone. He tirelessly defended the frontiers of Persia against the incursions of the army of the Ottoman Pashas and sporadic attacks by Russian and British units before and during the First World War.

After the death of Ṣamṣām al-Mamālik, it was his three illustrious sons, ʿAlī Akbar Khān Sardār Muḳtadir, Ḳāsim Khān Sardār Nāṣir and Ḥusayn Khān Sālār Ẓafar, who continued their father's activities. Sardār Muḳtadir, the best known of the three, was frequently imprisoned and finally exiled to Tehran and placed under house arrest; he died in 1935. Sardār Nāṣir, exiled to Ḳazwīn and dispossessed of his lands and property, died in 1950. Sālār Ẓafar, the youngest, who survived the repressions under Riḍā Shāh Pahlawī, unwisely took refuge in 1930 in Russia, and was killed at the time of the Stalinist purges.

The last celebrity produced by this family was Dr. Karim Bakhtiyār Sandjābī, son of Sardār Nāṣir, statesman, former professor and Dean of the Faculty of Law, Minister of National Education in the cabinet of Muḥammad Muṣaddiḳ [*q.v.*] and the Iranian judge at the Hague, during the Anglo-Iranian dispute over the nationalisation of Iranian oil. He was Minister of Foreign Affairs at the outset of the Islamic Revolution in Iran, before retiring and going into self-imposed exile, disappointed at the turn of events.

In summary, in the preceding decades, before the policy of sedentarisation pursued by the state from the time of Riḍā Shāh onwards, and before the damage which this caused, each tribe had a place designated for the pasturing of its livestock. By consensus and by traditionally established regulations, changes could be made in the allocation of territory. Conflicts resulting from the greed of individuals, owners of substantial herds of cattle and sheep and from the belligerence of young nomads, were not uncommon. Tribal elders and government officials tried to solve these problems amicably. Such disputes were ended by force or by the decision of the government, or by the payment of compensation calculated by head of animals, for the use of pasturage possessed by another tribe. Ultimately the Sindjābīs and other tribes were deprived of their regions of transhumance.

This sedentarisation (which was, however, partially abandoned after the fall of Riḍā Shāh), has contributed to the impoverishment of the peasantry and a decline in livestock numbers, the policy being hastily introduced and badly planned. Instability has reigned in recent years, and reigns still among the nomads, semi-nomads and sedentary tribes. It has led to the decline of herds and progressive pauperisation, in turn entailing an increase in the importation of foreign meat and dairy products, as well as malnutrition of country dwellers; this process is thus changing the economic structure of the tribes of these regions.

Bibliography: The late nature of the formation of this tribe accounts for the absence of ancient and recent sources. In the capacity of representative of a commission for the training and education of the nomadic and sedentary tribes of Iran, founded in 1944, the author of this article has travelled extensively among these tribes, and has had the opportunity to question the elders and dignitaries of tribes. Thus the first study relating to the Sin̲dj̲ābīs was published in the historical and literary review *Yādigār*, Tehran, in 1948, then printed as a book in its own right, in Tehran in 1951; new ed. Mohammad Mokri, *Les tribus kurdes. I. Tribu des Sandjābīs, Histoire, géographie, toponymie, groupes et clans*, Paris-Louvain 1993. This third edition has been revised and expanded with the addition of a supplement containing new notes and hitherto unpublished documents, as well as a summary in French from which a substantial part of this article has been drawn. See also Karim Sanjabi, *Hopes and despairs. Political memoirs* [in Persian], London 1989, and M. Mokri, *Le foyer kurde*, in *Ethnographie* [Review of the Ethnographical Society of Paris] (1961), 79-95; idem, *Notes sur la généalogie des fondateurs de la secte des Fidèles de Vérité (Ahl-i Ḥaqq), d'après un manuscript inédit de source sunnite*, in *JA* (1994), 37-109 (see esp. 83, 92). The *Farhang-i d̲j̲ug̲h̲rāfiyā-i Īrān*, Tehran 1951, mentions the names of certain villages in the Sin̲dj̲ābī district, but the majority of these are inaccurate and incomplete.

(M. Mokri)

SIN̲DJ̲ĀR, D̲j̲abal, a steep mountain range to the west of Mawṣil, rising to 1,463 m/4,798 feet in height, in the desert zone between the Tigris and K̲h̲ābūr rivers. At the present time, it lies mainly in ʿIrāḳ, but has its western slopes in Syria. There are only a few valleys with vegetation and timber; some wādīs of the southern slopes are affluents of the Nahr al-T̲h̲art̲h̲ār, and irrigated agriculture (in mediaeval Islamic times, with figs, date palms and mulberry trees for a flourishing silk production) is possible. The town of Sin̲dj̲ār lies on this side also. An important ancient east-west route, in Sald̲j̲ūḳ times called *al-darb al-sulṭānī*, connects Mawṣil with Syria, and there is a more minor road to Takrīt and Ḥasakiyya. In the main, the D̲j̲abal Sin̲dj̲ār has functioned, like other such areas in the Syria-al-D̲j̲azīra region, as a refuge for minority groups.

For the ancient city of Singara, of which hardly any original traces remain, see Oates (in *Bibl.*), Dussaud, *Topographie historique*, 484-6, 495-8, and J.-M. Fiey, *Pour un Oriens Christianus Novus*, Beirut 1993, 268-9. Both Nestorian and Jacobite bishops are mentioned, and Fiey, *op. cit.*, records five Jacobite bishops in the period from the 7th century until A.D. 818, one in 1278 and another in 1345. According to early Islamic sources, control of the region had oscillated in pre-Islamic times between Persians and Byzantines (see al-Balād̲h̲urī, *Futūḥ*, 177; Abū Yūsuf, *K. al-K̲h̲arād̲j̲*, 64). A fascinating view of the mixed Christian, Zoroastrian and Jewish population is given in a 6th century *vita* (see P. Peeters, *La passion arabe de S. ʿAbd al-Masīḥ*, in *Anal. Bollandiana*, xliv [1926], 270-341); the decline of Christian culture there under early Islam is reflected in the Apocalypse of Ps.-Methodius, written in Sin̲dj̲ār (see G.J. Reinink, in *Bibl.*). From the late 5th century, this part of the later Diyār Rabīʿa [*q.v.*] was inhabited by the Arab tribe of Tag̲h̲lib [*q.v.*].

At the time of the conquests, it was taken over by ʿIyāḍ b. G̲h̲anm. Already in 117 or 118/735-6, Dionysius of Tell Mahré (*Chronique*, 30, tr. Chabot, 27-8) mentions the revolt in Sin̲dj̲ār of one ʿAtīḳ, perhaps a K̲h̲ārid̲j̲ite, and al-Masʿūdī, *Murūd̲j̲*, ii, 302 = § 1994, mentions Ibāḍiyya there at an unspecified date. Since the 4th/10th century until today, Yazīdī Kurds have been dwelling there (see R. Lescot, *Enquête sur les Yézidis de Syrie et du Djebel Sindjar*, Paris 1938). It was taken by the Ḥamdānids in 359/970, but the citadel seems to be of ʿUḳaylid origin (Elisséeff, *Nūr al-Dīn*, 129). Its most flourishing phase came in the period of the Turkmen commanders and dynasties, who from the time of Čekermis̲h̲ of Mawṣil (*ca.* 500/1106-7) tried to secure their independence in this remote region. Nūr al-Dīn Zangī twice conquered Sin̲dj̲ār (563 and 566/1169-71) and a branch of the Zangid dynasty grew up there, beginning with ʿImād al-Dīn Abū Saʿīd Zangī II (565-94/1170-97), whose petty court achieved a high cultural level. There followed Ayyūbid rule under al-Malik al-As̲h̲raf Muẓaffar al-Dīn of Diyār Bakr (607-17/1210-20) and then that of the vizier of Mawṣil, Badr al-Dīn Luʾluʾ (619-57/1222-59).

Ibn S̲h̲addād describes the town as having a double wall and two citadels, the old ʿUḳaylid one and a new one built by the local Zangid ruler Ḳuṭb al-Dīn Muḥammad in the early 6th/12th century, both of them devastated by the Il-K̲h̲ānid Mongols in 660/1261-2, together with a *mas̲h̲had ʿAlī* next to the wall, subsequently rebuilt by the Il-K̲h̲ānids' Persian governor Muḥammad al-Yazdī. Also mentioned are two mosques and six *madrasa*s, for both the Ḥanafī and S̲h̲āfiʿī *mad̲h̲hab*s. A minaret is preserved with an inscription by Ḳuṭb al-Dīn from 598/1201 (Van Berchem, in Sarre-Herzfeld, *Reise*, i, 9-10, ii, 229, 308, 318, iii, pls. 4, and 84-5, with a view of the town; *RCEA*, ix, 3544). According to Ibn Baṭṭūṭa, the Friday mosque was encircled by a running stream (*Riḥla*, ii, 141, tr. Gibb, ii, 352). Ibn S̲h̲addād also mentions three *k̲h̲ānḳāh*s, and a further *zāwiya* is mentioned by Ibn al-ʿAdīm, *Bug̲h̲ya*, viii, 3647. Al-Ḳazwīnī calls Sin̲dj̲ār a "little Damascus", especially from its fine baths with mosaic floors and walls and its octagonal stone-lined ponds (*Āt̲h̲ār al-bilād*, ed. Wüstenfeld, ii, 263). A Yazīdī sanctuary, that of Imām Pīr Zakar, one km to the south of the town, is mentioned by Sarre-Herzfeld, *Reise*, ii, 204, and they also mention (ii, 200-1) two shrines, apparently of the Ḳādiriyya. Ibn al-ʿAdīm records several *ʿulamāʾ* of Sin̲dj̲ār, to which others may be added from al-D̲h̲ahabī, such as the polymath Ibn al-Akfānī al-Sin̲dj̲ārī, d. 749/1348 [*q.v.* in Suppl.].

After the Tīmūrid interlude, for which Ewliyā Čelebi records the local tradition of a seven months' siege by Tīmūr (*Seyāḥat-nāme*, iv, 64), the region passed under the control of the Ḳara Ḳoyunlu and then the Aḳ Ḳoyunlu until the Ṣafawid conquest of 913-14/1507-8 and the Ottoman conquest in 941/1534. Under the Ottomans it was a *sand̲j̲aḳ* of the province of Diyār Bekir, then a *nāḥiye* of the *sand̲j̲aḳ* of Mārdīn until *ca.* 1830, and thereafter of Mawṣil. According to Ewliyā, there were 45,000 Yazīdī and Bāburī Kurds in the D̲j̲abal Sin̲dj̲ār and, within the town itself, Kurds and Arabs of the tribe of Ṭayyiʾ. For long, the Yazīdīs were a threat to travellers through the region (cf. Layard, *Nineveh and its remains*, London 1849, 317; M. von Oppenheim, *Von Mittelmeer zum Persischen Golf*, ii, 17-18). In spite of the efforts of the governor of Bag̲h̲dād, Dāwūd Pas̲h̲a, Yazīdī revolts in the period 1850-64 could not be suppressed by force, and it was only after careful diplomacy that Midḥat Pas̲h̲a [*q.v.*] was able to introduce Ottoman taxation and customs to the D̲j̲abal (see ʿAbbās al-ʿAzzāwī, *Taʾrīk̲h̲ al-ʿIrāḳ*, vii, 173-4, viii, 119-20). The modern town of

Sindjār (lat. 36° 20' N., long. 41° 51' E.) comes within the Mawṣil governorate (*muḥāfaẓa*) of ʿIrāḳ.

ṢINF (A.), pl. *aṣnāf*, a term denoting "profession" (synonyms *ḥirfa*, pl. *ḥiraf*, and *kār*, pl. *kārāt*), and not "corporation".

1. In the Arab world.

In Cairo, in the Ottoman period, *ṣinf* is not used in this sense, except by the Turkish traveller Ewliyā Čelebi, in his renowned description of professional corporations (*Seyāḥat-nāme*, x, 358-86). There is no word in Arabic specifically denoting the professional corporation: texts frequently use the word *ṭāʾifa*, pl. *ṭawāʾif*, which has the much more general connotation of "group", "community". It is only in the expression *arbāb al-ḥiraf wa 'l-ṣanāʾiʿ* that *ḥirfa* takes on a very similar meaning, "the masters of arts and professions". It is important to stress this limitation before describing the corporative system in the Arab world with reference to the word *ṣinf*, as was done by L. Massignon in *EI*[1].

This lexical lacuna could be one of the reasons which has recently led scholars to reconsider the classical notions of the origin and development of professional corporations in the Muslim world, such as were expounded by L. Massignon (see his *EI*[1] articles SHADD and ṢINF) and synthesised by B. Lewis in his article of 1937. The idea that professional corporations were born in the 3rd/9th century in an Ismāʿīlī environment (in the framework of the Ḳarmaṭī movement) was subjected to vehement criticism on the part of S. Stern and Cl. Cahen, in *The Islamic City* (1970). These two authors concluded that professional corporations did not exist in the classical Muslim world, the date of their appearance needing to be postponed until the 16th century, i.e. the start of the Ottoman period: influences emanating from the Anatolian Turkish world would then have led to the formation in the Arab world of professional organisations of a powerfully religious nature, with the *akhī* [*q.v.*] ("brothers") of the *fityān* ("young people"), whose activities and ritual were described by Ibn Baṭṭūṭa (*Riḥla*, ii, 260-5).

This revisionism seems, in its turn, excessively radical. According to all the evidence there were, before the 16th century, professional communities (*djamāʿas*) directed by *shaykhs*, which could be quite legitimately be considered corporations. The *ḥisba* [*q.v.*], in particular, was under their control. But there is no doubt that the 16th century has to be considered effectively as a turning-point. In the Arab Near East it was at this time that there was introduced, in the corporative system, the *futuwwa* [*q.v.*], which constituted its "catechism". In the Maghrib, the corporative organisation seems to have been regenerated under the influence of Andalusian immigration, very strong in the 16th and the early 17th centuries; this was, evidently, the case of Tunisia where the corporative system was controlled entirely by Andalusians, who were to dominate it until the 19th century.

The functioning of professional corporations comprises internal aspects (organisation) which often remain obscure, and external aspects (ceremonies) which are in general better known. The hierarchy in professions is described in detail in the manuals of *futuwwa* of the Arab East, rites of passage being marked by the *shadd* [*q.v.*]. It does not appear with the same clarity in the practices revealed by the texts currently available. The essential grades were those of apprentice (*mubtadiʾ*), of companion (*ṣāniʿ*) and of master (*muʿallim* or *usṭā*): there is only fragmentary information regarding the tests which eventually existed, and, in particular, regarding the presentation of a "masterpiece", with a view to accession to the status of master. Corporations were directed by a *shaykh* (*amīn* in the Maghrib) appointed by his peers, but often confirmed by the administration which intervened in cases of difficulty. The older masters constituted a council, that of the *ikhtiyāriyya*. It seems that the corporative organisation was often headed by a senior dignitary: in Damascus there was (according to Qoudsî) a *shaykh al-mashāʾikh*, in Tunis an *amīn al-tudjdjār* (an Andalusian), in Algiers (Touati) an *amīn al-umanāʾ*). But these individuals seem to have performed a purely ceremonial role.

The number of professional corporations varied according to the importance of cities and their economic activity: Algiers contained only about sixty and Cairo more than two hundred. But the number of professions was much higher: Qasimi and Azem have referred to 435 in Damascus where A. Rafeq thinks that there were between 160 and 180 corporations.

The efficacy of professional corporations was assured, on the one hand, by the very thorough specialisation of professions which gave them strong cohesion, on the other by a very effective geographical localisation, each profession, and the corporation which represented it, occupying a specified zone of the urban centre: there was thus a correspondence between profession, corporation, market (*sūḳ*) and quarter. The corporation also played an important role as a factor of integration when, as was the case in Aleppo it united members of different communities (in this case, Muslims, Christians and Jews) (A. Rafeq).

The activity of the corporations was multifarious. Their economic role is evident. They regulated dealings between artisans and merchants and with consumers; and they co-operated with the authorities in the fixing of prices in times of crisis. They played the role of a "para-administrative" structure, helping to represent the working population in dealings with rulers, and enabling the latter to control their subjects and to raise taxes and contributions. They were one of the communities (*ṭawāʾif*) which assisted the functioning of the city, the absence of a precise judicial statute constituting no obstacle, either to their existence or to their role (on this point, too, the analysis of S.M. Stern, in *The constitution of the Islamic city*, is to be treated with caution). In the central (public) part of the city they were an active instrument for urban generation: they palliated the lack of "public services", since it was through their agency that citizens were assured of the supply of water, street-cleaning, and fire-fighting. They contributed to the vitality of the city, participating in public festivals (decoration of markets to celebrate the arrival of an important individual), in religious ceremonies (in Cairo, the *ruʾya* [see RUʾYAT AL-HILĀL] at the beginning of the month of Ramaḍān was the occasion for a kind of

major review of the corporations which paraded with floats symbolising the activities of the different professions).

There can be doubt that the strict organisation of professions did not favour a spirit of competition, the causative motivator of progress; the quasi-hereditary principle in professional activities which institutionalised the practice of *gedik* (a right awarded by shopkeepers and giving access to the profession) also contributed to a certain technical stagnation. But the importance of these negative factors should not be exaggerated: the introduction into the corporative system (and into the *futuwwa*) of new professions (such as those involving coffee and tobacco, the permissibility of which had been long debated) clearly shows that the corporative organisation was not totally immovable.

These corporations were profoundly affected by the political, economic and social changes experienced in the Arab world during the 19th century: their disappearance was, in general, gradual and was not the result of formal decisions (such as, in France, the Le Chapelier law of 1791). Economic changes (decline of traditional activities, appearance of new professions, competition from western products, emergence of national industries) played a decisive role in the decline of the corporations. Rapid urban growth in the second half of the 19th century led to the installation in cities of populations having no place in the corporate framework, while modernised states took charge of the administrative functions traditionally exercised by corporations (raising of taxes, administration of central zones) and organised genuine public services, substitutes for the services formerly supplied by the corporations. Colonisation accelerated this process with the imposition of free enterprise and the installation of a foreign population engaged in the most modern economic activities.

However, this evolution was slow. In Egypt, the industrialising efforts of Muḥammad ʿAlī did not put an end to the activity of the corporations: in 1868, ʿAlī Pas̲h̲a Mubārak, organising the development of the modern city of Cairo, used the services of the building workers' corporations. But the process was inevitable. In Damascus in 1927, according to a survey conducted by L. Massignon, only 10% of the working population still belonged to corporations (*La structure du travail à Damas*). The retention, here or there, of a few corporations and a few corporative practices constitutes nothing more than an anachronistic survival, of only folkloristic significance. There is no evidence to suggest that the emergence of modern trade unionism [see NIḲĀBA] represents an element of substitution: the work of J. Gaulmier in Hamāt (1932) seems to show that this was an independent process.

2. In Persia.

(a) *The pre-Islamic period.* In Sāsānid Persia, groups of artisans existed, which formed distinct groups (*tegme*, *teg̲h̲mē* in Syriac), paying taxes and some even having a festival peculiar to them. Their chiefs were called (in Syriac) *ḳas̲h̲s̲h̲ē* or *rēs̲h̲ē*. There was even a chief of all artisans known (in Middle Persian) as *ḳarugbed*. However, the chiefs were appointed by the emperor and the artisans concerned worked in the royal workshops and were not representative of the other artisans and traders present in the cities. See N. Pigulevskaya, *Les villes de l'état iranien aux époques Parthes et Sassanides*, Paris 1963, 160-1; eadem *et alii*, *Tārīk̲h̲-i Īrān az dawrān-i bāstān tā pāyān-i sada-i hid̲j̲dahum*, tr. K. Kis̲h̲āwarz, Tehran 1352/1973, i, 90, 141-4).

(b) *The Islamic period.* For the pre-Tīmūrid period, there are scattered data that indicate that artisans groups existed, but little is known about them. Some scholars have identified these groups as guilds without any evidence. The earliest confirmation of the existence of organised urban labour is given by Ibn Baṭṭūṭa, writing that in S̲h̲īrāz and Iṣfahān "the members of each craft appoint one of their members as headman over them, whom they call *ḳolu*". He also relates that they were taxed as a body and that they had an active social life in Ṣafawid Persia, each *ṣinf* elected its own chief or *kadk̲h̲udā*, who settled disputes and distributed the guild tax burden known as *bunīča*. See Mīrzā Rafīʿā, *Dastūr al-mulūk*, ed. M.T. Dānis̲h̲pazhūh, in *MDAT*, xvi/5-6 (Tehran 1347/1968), 121; Minorsky, *Tad̲h̲kirat al-mulūk*, 81-3. Any person who wanted to set up shop had to receive permission from the guild chief. He had, however, to keep a certain distance between his own and already existing shops outside the central bazaar (Chardin, iv, 93, vi, 119-24).

In the 19th century, the *kadk̲h̲udā*'s power had been considerably diminished (Mīrzā Ḥusayn K̲h̲ān Taḥwīldār, *D̲j̲ug̲h̲rāfiyā-yi Iṣfahān*, ed. M. Sutūda, Tehran 1342/1963, 93). Due to their loose organisation, guilds were unable to fix minimum prices or to guarantee the standard of workmanship. Certain guilds had the *ḥaḳḳ-i bunīča*, a right to exercise a trade, a right which was transferable. The number of shops in every quarter was therefore fixed as a function of the number of households. New shops could only be started outside the restricted area (*gud̲h̲ār*) already served and then only after the guild gave its permission (A.K.S. Lambton, *Islamic society in Persia*, London 1954, 24; de Rochechouart, *Souvenir d'un voyage en Perse*, Paris 1867, 180-3; J. Greenfield, *Die Verfassung des persischen Staates*, Berlin 1904, 145).

Notwithstanding a widespread idea that guilds were part of the *futuwwa* organisation [*q.v.*], there is no shred of evidence for this supposition in the Persian context (Floor, *Guilds and futuwat in Iran*, in *ZDMG*, cxxxiv [1984], 106-14). Many guilds had their own habitual location (*patuk*), or festivals peculiar to them, but guilds seldom provided for mutual assistance. During the period of the Constitutionalist Movement (1905-6), guilds acquired some political influence, which resulted in their receiving 32 seats in the first *Madjlis*. However, they lost all their seats in 1909 and reverted to their traditional role.

During the Pahlavī period, guilds were strictly controlled and basically became trade organisations and an extension of the state, membership of which was compulsory. The guilds themselves were in the hands of wealthy members, who had links with the prevailing political power. Rather than being voluntary organisations with social and other functions, guilds became amorphous intermediaries, haggling over taxes and price policies. Despite the fact that the guilds and other *bāzārīs* helped finance the Islamic Revolution of 1978-9, their situation has not much changed under the Islamic Republic. As in previous times, the Islamic government, by using financial, economic and other instruments, has a fair control over the *aṣnāf*.

Bibliography: See also Floor, *The guilds in Iran: an overview from the earliest beginnings till 1972*, in *ZDMG*, cxxv (1975), 99-103; idem, *EIr* art. *Aṣnāf*; M. Keyvani, *Artisans and guild life in the later Safavid period*, Berlin 1982 (to be used with caution).

(W. Floor)

3. In Turkey.

Trade guilds (*eṣnāf londjaları*) were first established in Anatolia during the later 13th century and were called *Akhilik*, and continued until the beginning of the 20th century [see AKHĪ, AKHĪ BABA, AKHĪ EWRĀN, FUTUWWA]. In Arabic, *Akhī* means "my brother", but the resemblance to Tkish. *akī* is fortuitous; in old and middle Turkish, *akī* means "generous, brave, stout-hearted".

The *Akhīs* were typically a Turkish trade guild, arising from economic and social necessity, which aimed to regulate the relationship between the producer and the consumer. Within the organisation they had several meeting places, called *zāwiyes*, where they taught morals, good manners and ceremonial behaviour to the young members of this organisation. The members of a *zāwiye* had different tasks: they acted as religious leaders, teachers, preachers, poets and dancers. These members ranked in nine categories: (1) *Yigitler* (apprentices) were the lowest category; (2) *Akhiler*, divided into six divisions: the first three divisions were *aṣḥāb-tark*, the experienced, and the last three, *nakībler*, inexperienced; (7) *Khalīfeler*, who could not function outside the *zāwiye*; (8) *Sheykhler*, heads of the previous seven categories; and (9) *Sheykh ül-meshāyikhler* (the heads of the *Sheykhs*).

Akhīs did not like yellow and red colours in their costumes, but preferred turquoise, white, black and green. Teachers, judges and nobles wore green; white was for the writers, poets and preachers; and black for the apprentices.

Each apprentice had two comrades, one master teacher, and one *pīr* (founder of his order). The apprentices learned their craft and trade under the supervision of a master. When an apprentice, after several years of work, was qualified in his craft, a ceremony, called *teferrüdj*, was held, where the master awarded his pupil an apron. In such ceremonies, and also in various other festivities, these guilds—whatever their field was—organised amusements and performances. Apart from the actors' guilds, called *ḳol*, most of the trade guilds were interested in spectacles. Skilful members of a guild entertained guests in the ceremonies by verbal and musical recitals of poems, songs and epics, dances; and jugglers, rope dancers, sword-swallowers, conjurers, acrobats, etc. showed their skills. They also entertained those watching a procession by various shows [see MAWĀKIB. 4]. What they achieved was something like a carnival, or a preliminary form of today's street theatre. Each guild played a representative scene relating to its profession, exhibited mostly on carts pulled by horses or oxen. Apart from these scenes, these corporations demonstrated clowning, with giant marionettes with dazzling costumes, pennants and flags. Each guild had its own pennant. In the festival of 1539, for instance, one of the guilds showed a dragon with seven heads. The festival of 1582 witnessed a sea monster which could plunge into the sea and come up again with three dancers on board. The guild of feather merchants caused giant birds to fly. The miniatures painted by ʿOthmān, in his *Sūr-nāme-yi humāyūn* (reign of Murād III, 1582) show big fans on sticks, which could be used in several ways. Some of these corporations had instrumental groups, giant whirligigs, and corpulent puppets which could be set in motion. In the festival of 1675, in Edirne, the actor's guild carried huge phalluses.

SINGAPORE (literally, "the lion city" in Hindi), a diamond-shaped island which lies 137 km/85 miles north of the equator at the southern tip of the Malay

Peninsula [*q.v.*]. The island itself is 544 km²/210 square miles in extent and there are a further 50 islets, many of which are uninhabited.

Singapore was an important Malay city in the Middle Ages, acting as a port of call between India and China. Singapore's fortunes declined in the 14th century following its sacking by the Majapahit Javanese, and in the following century it was superseded by the port of Malacca [*q.v.*]. The modern history of Singapore can be dated from 6 February 1819, when Sir Thomas Stamford Raffles of the East India Company secured from the titular sovereign, Sultan Ḥusayn of Johore, cession of the island. Britain's position was consolidated five years later when the Dutch recognised Britain's claim to Singapore.

When Raffles arrived on the island, it was inhabited by a mere two hundred or so Malay fishermen. The island's rapid economic expansion, which followed Raffles' intervention, witnessed profound demographic and social changes. By 1824, the population had risen to over 10,000, 30% of whom were Chinese immigrants. By the 1830s and 1840s, Chinese were arriving at the rate of 2,000-3,000 a year, with the Malays [*q.v.*] soon assuming the position of a minority community. Nevertheless, Singapore became a centre for Islamic reformism in the late 19th and early 20th centuries. Not only did it stand on the pilgrimage route from South-East Asia to the Middle East, but it also enjoyed a large measure of religious freedom under the British colonial régime. Moreover, the presence of Ḥaḍramawt [*q.v.*] Arabs, Indo-Malays descended from Indian Muslims, and Indonesians, enriched the Islamic community of Singapore. These groups maintained links with Islamic centres in the Middle East and encouraged the spread of new ideas through writing and journalism.

British colonial rule in Singapore came to an abrupt end on 15 February 1942, when the island fell to the invading Japanese. Despite suffering dislocation during the Japanese occupation, Singapore soon recovered. The post-war period has been characterised by rapid and sustained economic growth, the island becoming one of the most prosperous countries in South-East Asia. In 1963 Singapore became formally independent from Britain and on 16 September of that year entered the new federal state of Malaysia [*q.v.*]. The constitutional experiment, however, proved unsuccessful. The large Chinese majority in Singapore radically affected the racial composition of the new country and challenged traditional Malay supremacy on the Peninsula. Indeed, politics assumed the appearance of a struggle between Malays and non-Malays. Relations with the federal capital, Kuala Lumpur, became increasingly strained and in 1965, just two years after the inauguration of Malaysia, Singapore seceded from the federation.

ṢĪNĪ (a., p. *čīnī*), a generic term for Chinese ceramics including porcelain. High-fired Chinese wares were exported to South-East Asia, India and the Islamic world from at least as early as the ʿAbbāsid period. T'ang dynasty (A.D. 618-907) white wares have been found at Sāmarrāʾ, as well as their local imitations. Similar T'ang sherds have been discovered at Daybul, Sīrāf, Fusṭāṭ, ʿAḳaba and Antioch; and much material from Mantai (a trading emporium in northern Sri Lanka, which ceased commercial activity in the early 4th/11th century), including white wares, Changsha painted stoneware, *yue*, *sancai* sherds, and "Dusun" storage jars, suggesting the Chinese exports were largely sea-borne.

Amongst the earliest references to Chinese ware is that of the author of the *Akhbār al-Ṣīn wa 'l-Hind*, who recorded in 243/851 that "[The Chinese] have a fine clay, from which they make drinking cups as fine as glasses, through which you can see the gleam of water, though they are made of clay" (ed. and tr. J. Sauvaget, *Relation de la Chine et de l'Inde*, Paris 1948, 16). Ibn Khurradādhbih, his contemporary, mentions that the port of Lūḳin was well stocked with Chinese wares, *al-ghaḍār al-djayyid al-ṣīnī*. Al-Djāḥiẓ (d. 256/869) refers to coloured Chinese pottery, *awānī ṣīniyya mulammaʿa*, probably Changsha ware. Ibn al-Faḳīh (*ca.* 291/903) notes pottery as a Chinese craft, *al-ghaḍāʾir al-ṣīniyya*. According to al-Thaʿālibī (d. 429/1038), "The Arabs used to call any delicately or curiously-made vessel and such like, whatever its real origin, 'Chinese' (*ṣīnī*), because finely-made things are a speciality of China ... They also have translucent pottery (*al-ghaḍāʾir al-mustashiffa*), used for cooking purposes; a piece of this may be used equally for boiling things, for frying or simply as a dish for eating from. And the best of these are the delicate, evenly-pigmented, clearly-resounding, apricot-coloured (*mishmishī*) and after that, the cream-coloured (*zabādī*) ware with similar characteristics" (*Laṭāʾif al-maʿārif*, tr. C.E. Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968, 141). As al-Thaʿālibī was writing at the beginning of the Sung dynasty (349-678/960-1279), he must be referring to such wares as *yue* and *qingbai*. Al-Bīrūnī (363-440/973-1048) saw no less than thirteen different types of Chinese ware in the house of a merchant from Iṣfahān, who lived in Rayy; these included bowls, dishes, bottles, trays, jugs, drinking vessels, ewers, hand basins, baskets, incense-burners, lamps, lamp standards and other objects. Naṣīr al-Dīn al-Ṭūsī (after 656/1258) mentions cups, mugs, plates and dishes of Chinese ware, and is one of the first to repeat the popular fallacy that poison is detectable when served on it.

Chinese blue-and-white porcelain was developed in the first quarter of the 7th/14th century. The cobalt blue was imported from Persia, probably by Persian merchants living on the China coast. Initially, blue-and-white ware was largely exported to India, Central Asia and the Islamic world, with massive and highly decorated bowls and dishes representing a complete break with the more delicate and plain wares of the Song period. Evidence of early blue-and-white, whether sherds or complete specimens, has been found at Karakhoto in Inner Mongolia and on the Central Asian trade routes, and at Samarḳand; in Dihlī, South India, Hurmuz, Fusṭāṭ, East Africa, Ḥamāt, Damascus and Aleppo; and specimens exist in the two great royal collections of Persia and Turkey, now housed in the National Museum in Tehran and the Topkapı Sarayı Museum in Istanbul (see Pls. VIII and IX, 6).

A most important authority for the early 7th/14th century is the traveller Ibn Baṭṭūṭa [*q.v.*] who not only remarks on the technique and manufacture of fine wares when he was in China (*ca.* 749/1348), *al-fakhkhār al-ṣīnī*, made in Zaytūn (Quanzhou) and Ṣīn-i Kalān (Canton/Guangzhou), and exported to India and other

countries including his own, the Maghrib, as well as to Yemen. Twenty years earlier, when he was in Damascus (727/1326) he witnessed an incident in the *sūḳ* when a slave-boy dropped his master's Chinese dish, *ṣaḥfa min al-fakhkhār al-ṣīnī*, and was advised that there was a *waḳf* for broken utensils, which would provide funds for a new one (*Riḥla*, i, 238, iv, 256, tr. Gibb, i, 149, iv, 889). The date corresponds to that of the very earliest blue-and-white, (see Pl. VI) and a number of whole or almost intact early dishes and bowls have been recorded from Syria during the past two decades. Another famous traveller, Marco Polo, was responsible for the introduction of the term *porcelain* into the European language: in French *porcelaine*, derived from the Italian *porcellana* "[*concha*] *porcellana*" in both Latin and Italian = "cowrie shell", and a cowrie shell was the closest Marco Polo could think of to characterise china. The cowrie shell was thus called because of its resemblance to the female vulva, Latin *porcus* or *porcella*, itself a calque from Greek χοῖρος ("pig" and "vulva").

From the earliest times, the secret of the composition and fabrication of Chinese stonewares and porcelain remained a mystery to Islamic potters (and indeed to most of the world until the 12th/18th century). This did not prevent the Islamic craftsmen from imitating the Chinese wares in humbler materials, such as the so-called "Sāmarrā'" pottery of the ʿAbbāsid period. From the 9th/15th century onwards, imitations of blue-and-white were made in Central Asia, Persia, Syria, Egypt and Turkey, often with Chinese-inspired designs; celadon was also replicated. Chinese designs also inspired a whole series of blue-and-white hexagonal tiles, examples of which occur in Syria, Egypt and Turkey; the craftsmen were originally from Tabrīz (see Pl. VII, 2). In Persia, in the Ṣafawid period, the influence of Chinese blue-and-white on the indigenous pottery was so marked that a legend arose that Chinese craftsmen actually worked in Persia. The influence of Chinese wares continued in Turkey until the 12th/18th century, and in Persia throughout the Ḳādjār period in the 13th/19th century.

At the same time, the influence of Mamlūk glass and inlaid metalwork can be clearly discerned in the shapes of Chinese blue-and-white, and even on occasion in its decoration as well, as for instance a porcelain stand in the British Museum (1966.12.15.1) (Pls. VII, 3 and IX, 7) with imitation Mamlūk ornament and a pseudo-Arabic inscription. Chinese porcelain made specifically for Muslim patrons in the early 10th/16th century, with Persian or Arabic inscriptions, and frequently with the mark of the Emperor Zhengde (912-28/1506-21), has been attributed to the period when the influence of Muslim eunuchs was particularly strong at the Chinese court (Pl. VIII, 4).

Nor should one underestimate the influence of Chinese blue-and-white on other decorative arts in the Islamic world. It frequently appears, with celadon (Pl. IX, 6), in Persian and Turkish miniature paintings, often in scenes of feasting and festivities. Individual Chinese motifs such as the lotus, and the cloud-scroll, became an integral part of the répertoire of decorative motifs throughout the Islamic world. It is evident that Muslim merchants and traders played a major part in the export of Chinese ceramics, both by sea and by land.

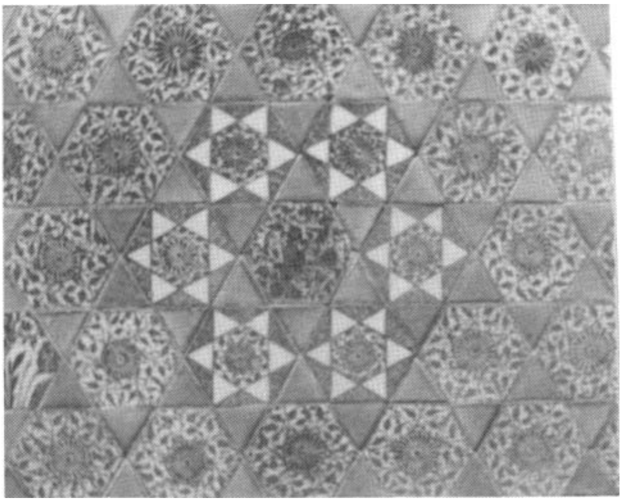
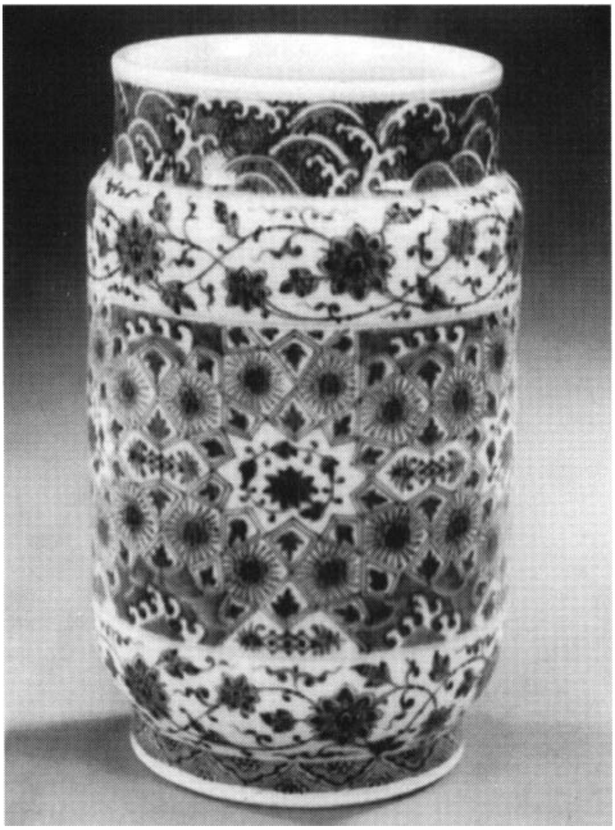
(J. Carswell)

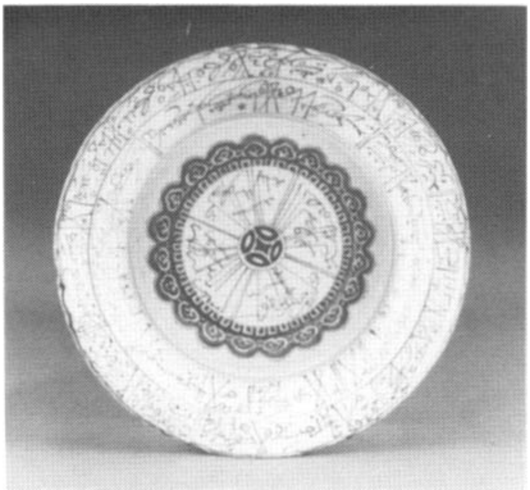


SINKIANG, Sin-Kiang (also spelt as Hsin-chiang in the Wade-Giles system), the largest province (area *ca.* 620,000 sq. miles) of the People's Republic of China.

It is situated in the north-west of the country, and is also known as "Chinese Central Asia", "Eastern Turkestan" or "Chinese Turkestan". Sin-kiang in Chinese means "new dominion" or "recently pacified territory". Geopolitically, it is important as it holds a pivotal position between China, Central Asia, Russia and India. Sin-kiang is divided by the T'ien-shan range into two main regions, the Tarim Basin in the south and Dzungharia in the north, and two lesser regions of economic importance, the Ili Valley and the Turfan Depression. The T'ien-shan range runs roughly eastwards from the Pamir massif, and forms a natural wall between Dzungharia and the Tarim Basin, making communication between the two regions difficult. The Ili Valley, isolated from the rest of the province, was cut off by the northern spur of the T'ien-shan, and is only accessible from the western fringes of the province, while the Turfan Depression is closely linked with Kansu province [*q.v.*] and China proper. Sin-kiang is a multi-national province whose population is composed of the following main ethnic groups: Uyghur, Kazakh, Kirghiz, Uzbek, Tatar, Tadjik, Mongol, Tongkan, Sibo, Manchu, Solon, Tafur, Han, Slavic and others. The total population of the province is approximately 12,500,000.



From the Han period (206 B.C.-220 A.D.) until the middle of the 17th century, Sin-kiang was always mentioned in Chinese sources as part of Hsi-yü (the Western Territory) referring to Central Asia, and was intermittently under Chinese control or sovereignty. By 60 B.C. after the Hsiung-nu (the Huns) had been expelled from Sin-kiang, the Han imperial court exerted its authority there by setting up *Hsi-yü T'u-hu Fu* ("The Commandery of the Western Territory"). Many city-states in the region thus became vassals of the Han Empire. Sin-kiang has been regarded as the



1. A broken Chinese blue-and-white porcelain dish, found in the *sūḳ* in Damascus. 7th/14th century. Private collection, Hong Kong.

2. Blue-and-white, and turquoise, Syrian pottery tiles. 9th/15th century. In the mausoleum of Ghars al-Dīn al-Tawrīzī (d. 826/1423), in Damascus.

3. A Chinese blue-and-white porcelain *albarello*. Early 9th/15th century. With Islamic-inspired motifs. Al-Sabah Collection, Kuwait.

4. A Chinese blue-and-white porcelain dish, with Ḳur'ānic inscriptions. 10th/16th century.
Topkapı Sarayı Museum, Istanbul, TKS 15/3168.

5. A Chinese blue-and-white porcelain flask. 7th/14th century.
Topkapı Sarayı Museum, Istanbul, TKS 15/1391.

6. A Chinese celadon dish, with unglazed red motifs. 7th/14th century. Topkapı Sarayı Museum, Istanbul, TKS 15/239.

7. A Chinese blue-and-white porcelain stand, of Mamlūk form, with pseudo-Arabic inscriptions. Early 9th/15th century. Found in Damascus; British Museum, London.

crossroads of Chinese and Central Asian cultures. Historical evidence proves that Buddhism from Central Asia travelled along the Silk Road and entered China via Sin-kiang during the Han period, and other religions subsequently. By the end of the Han dynasty, Chinese Han influence in this region had gradually died away. At the turn of the 7th and 8th centuries, Indian, Persian, Near Eastern and Tibetan influences prevailed. As a result, Zoroastrianism, Manichaeism, Nestorianism and Buddhism flourished in this region. These religious elements were carried to Tibet after the Tibetan invasion to Sin-kiang (*ca.* 670 A.D.), and contributed to shaping of the syncretic Lamaistic Buddhism.

During the T'ang period (618-906 A.D.), the political situation in Sin-kiang region was complicated by the movement of Turkish nomadic peoples, such as the Uyghurs, Ḳarluḳs, Ḳirghïz [*q.vv.*] and others, from the northern steppe fringe of Inner Asia and the southern edges of the Siberian forests into this region. These nomadic peoples competed with the Chinese and Tibetans for dominance over this region. Amongst them, the Uyghurs, who adopted Manichaeism as their state religion between 744 and 840, later became the new masters of Sin-kiang.

Although Islam might have entered Sin-kiang before the Arab invasion to the region of Ṭarāz [*q.v.*] (or Talas) around 750-1, it was not widely spread there until the establishment of the Ḳarakhānids [see ILEK KHĀNS] (382-607/992-1211). Muslim sources mentioned that Satūḳ Bughra Khān's devotion to Islam instigated mass conversion of the Ḳarakhānids to Islam. However, Ṣūfīs from Bukhārā may equally have played an important role in it. The earliest establishment of Islam as a state religion in Sin-kiang probably took place during the reign of Yūsuf Ḳadïr Khān (417-24/1026-32), and practice of Islam was most likely limited to the area of Kāshghar and to the Khotan area in south-west of Sin-kiang. The Ḳarakhānids survived until the beginning of the 7th/13th century, and control of Sin-kiang then fell into the hands of the Ḳara Khitay [*q.v.*] (the Western Liao dynasty in Chinese history). The Sinicised Khitans favoured the Confucian-Buddhist culture. Therefore, according to Muslim sources, the Ḳara Khitay rulers were hostile to Islam and to Arabo-Persian culture, so that the spread of Islam in Sin-kiang under their rule was probably slowed down.

After the great Mongol conquests in Asia, Sin-kiang was then under the authority of the Čaghatay Khānate (624-771/1227-1370 [*q.v.*]). Despite a good relationship between the Mongol rulers and their Muslim subjects, the practice of Islam in Sin-kiang was apparently not encouraged. Most of the Khāns inclined rather to their native religious practices and to their nomadic tradition and customs. Throughout the Čaghatayid period, compared with the Ḳarakhānid times, the process of conversion of Uyghur Turks to Islam in Sin-kiang is not clear, except during the reign of Tughluḳ Temür (760-4/1359-63). By the middle of the 14th century, the Čaghatay Khānate began to disintegrate. The eastern branch based on the Tarim Basin and the Turfan region survived under the protection of the Turkish Dughlat state based in Kāshghar until the late 17th century. By then, they had already become Islamicised. They paid homage to the Chinese Ming authority (1368-1644). However, Chinese influence was not exerted there, just as it had never been exerted under the Ming Chinese mandate. According to contemporary Muslim sources, Perso-Turkish Islamic rather than Chinese culture was flourishing in the region during the 16th century, possibly due to the Tīmūrids' influence in the region.

From the 17th century onwards, the history of Sin-kiang becomes more complicated. Various peoples such as the Uyghurs, Mongols, Tibetans and the Sino-Manchu were contending for dominance of the region. By the early 17th century, the surviving Čaghatay Khānate's authority was undermined by the rising Khʷādja family originating from the Naḳshbandiyya order of the *Silsilat al-Khʷādjagān* in Samarḳand. The Khʷādja family who were *de facto* Islamic missionaries, activated Islamisation in the region. In the second half of the 16th century, descendants of the family were involved in political strife and split up into two lines called Aḳtaghliḳs (people of the White Mountain) based in Kāshghar, and Ḳarataghliḳs (people of the Black Mountain) based in Yarkand respectively. They were called "White-cap Hui" and "Black-cap Hui" in Chinese sources. In 1678, with the help from the Kalmuck Mongols in Dzungharia, the Aḳtaghliḳ Khʷādja Ḥaḍrat Apak defeated his rival faction and reunited Kashgharia. An Islamic theocratic state was thus formed, but functioned as a protectorate of the Mongol Empire of the Dzunghars. This indirectly challenged the Sino-Manchu authority in the region, and caused serious conflicts between the two powers throughout the 18th and 19th centuries.

By the middle of the 17th century, Dzungharia was still under a Mongol khānate's domination. The Tarim Basin was then called Hui-p'u ("Islamic or Muslim region") by the Sino-Manchu government. In 1757 Dzungharia was annexed to the Chinese territory. In order to keep firm control, the Manchu government deliberately repopulated this region with various peoples of Altaic stock, including Muslims from the Tarim Basin, from Kansu province and from other parts of China proper. Two years later, Kashgharia was also annexed, and then the Hui-p'u and Dzungharia were renamed as Hui-chiang ("Muslim or Islamic dominion"). Throughout the 19th century, several Muslim rebellions against Manchu rule took place in Hui-chiang. In 1884, six years after the suppression of Yaʿḳūb Beg's [*q.v.*] rebellion (1864-77), the Manchu government re-organised the region by placing it under a form of Chinese provincial administration, and designated it Hsin-chiang. From then onwards, Eastern Turkestan became an official Chinese province.

During the Nationalist Republican period (1911-49), Sin-kiang continued to be a nominal province of China, but was in a chaotic state. The provincial governors acted in reality as independent warlords, conducting their own foreign relations with neighbouring countries. Chinese rule has always been regarded by the local Muslims as that of a foreign power. Nationalism amongst the Turkish Muslims grew strongly since the fall of Yaʿḳūb Beg's emirate, and eventually resulted in secession movements. In 1931 Khʷādja Niyāz Ḥādjdjī led a rebellion trying to liberate the country by establishing a "Turkish Islamic Republic of Eastern Turkestan". However, with Soviet intervention in support of the Chinese governor, the movement was put down in July 1934. A cruel campaign of massacres against the Muslims was launched. Nevertheless, these killings did not stop Muslims from taking up arms against Chinese rule and Russian pressure. In 1937, another rebellion broke out under the leadership of ʿAbd Allāh al-Niyāz, but again failed. In 1940 ʿUthmān Batūr led another rebellion, and succeeded in defeating the Russians. It lasted until 1943, but was eventually suppressed by the Chinese Nationalist Government armies.

Despite the failures of previous rebellions, Turkish nationalism and a secession movement continued to grow. In November 1944, another rebellion took place in the Ili Valley region, which led to the establishment of the "East Turkestan Republic" (*Sharḳī Türkistān Djumhūriyyati*), whose first president was an Uzbek *'ālim*, 'Alī Khān Türe. Although this movement was basically conducted by the Kazakhs and Uyghur population, it later gained considerable support from non-Muslims. According to the declaration of 5 January 1945, the main aim of the republic was to create a multinational democratic state with religious freedom. It seems that Islam was not adopted as the official religion, probably due to the failure of the fundamentalists to Islamicise the republic in the course of the movement. The nature of the movement was nevertheless in actuality Turko-Islamic, because Islam provided the basis for unity within the republic's three-fourths of Muslim population. The East Turkestan Republic lasted only three years and then collapsed due to various factors. Nevertheless, the spirit of Turkish nationalism which its promoters advocated continued, and continues at the present time.

In 1949 the Communist party took over from the Nationalist government. The situation of Muslims in Sin-kiang did not become any better. According to eyewitness reports, persecution of Muslim secessionists by the new régime was conducted in the 1950s. In 1966 all religions in China were banned. This was part of the Cultural Revolution's campaign of destroying the old traditions. There was no exception for Sin-kiang. Muslims suffered a great deal from it; Ḳur'āns and Islamic books were burned, mosques were devastated or closed, and religious leaders were persecuted by the Red Guards. As a result, thousands of Muslims were driven into exile in Muslim countries in Central Asia, Middle East and the Indian Subcontinent.

The Communist government adopted previous Sino-Manchu policy on national minorities. Mass waves of Han settlers were sent to the province from 1953 onwards in order to Sinicise the region and keep firm control of it. Before 1953, the population of the Han Chinese there was only 4.94% (the Uyghurs being 75.42%). However, according to the 1982 census, the Han population had increased to 41% (the Uyghurs down to 45.48%). This indirectly produced an effect of de-Islamisation in Sin-kiang. Possibly due to the central government's policy on birth control (the Han are allowed to have only one child, but the minorities two), the population of the Han Chinese by 1986 dropped to 39%, and the Uyghurs increased to 46% (Muslims of other races, 14%). In 1955, the Sin-kiang Uyghur Autonomous Region was set up under the guidelines of the 1949 constitution which provided that all the national minorities should have the right to use their native languages in daily life, to keep their traditions, and to have religious freedom. However, in the 1970s, by a constitutional amendment, minorities' rights for the preservation of their cultures and religious freedom were eliminated. In spite of this, Islam is still practised in Sin-kiang. Nowadays it is rather a matter of personal belief and practice. Under the policy of economic reform in early 1980s, mosques were re-opened, and Muslims have been allowed to run their own religious schools. As a result, Islamic revivalism has been growing gradually there.

SINNA, Senna [see sanandadj].

SINNĀR, a town in the modern Sudan Republic, often rendered as Sennar.

Modern Sinnār is now a modest Sudanese provincial town on the west bank of the Blue Nile about 170 miles above its confluence with the white Nile. During the 19th century it was a regional centre of commerce and administration under the Turco-Egyptian colonial régime and as such attracted the special wrath of the Mahdist movement [see al-mahdiyya], which destroyed the town in 1885 and transformed the demography of the surrounding district. For much of the period 1500-1821 Sinnār served as eponymous capital to the Islamic Nubian kingdom of the Fūndj [*q.v.*], which embraced much of the northern Nile-valley Sudan.

The early Fūndj kings, like their contemporary Ethiopian counterparts, kept a mobile court to distribute among the provinces the burden of the royal presence. Sinnār entered the historical record in 1523 as the fixed seat of the treasury of the first Fūndj sultan, and the site was later chosen as permanent capital when kings of the second quarter of the 17th century brought their roving court to rest. Foundations for a mosque were laid by Rubāṭ I (1025-54/1616-44) and the building was completed by Bādī II (1054-92/1644-81). These kings and their immediate successors Ūnsā II (1092-1103/1681-92) and Bādī III (1103-28/1692-1716) began to sponsor royal caravans that opened a flourishing trade with Egypt and the Red Sea; by 1700 Sinnār had become a large and cosmopolitan city.

Accounts of European visitors during the reign of Bādī III afford an image of Sinnār at its apogee. At the heart of the capital lay a broad plaza or *fāshir*, which served as a bazaar on market days, an occasional mustering-ground for soldiers, and a setting for periodic state ceremonies such as the delivery of tribute by the governors of the eight provinces. On one side of the *fāshir* was the mosque of fired brick, graced with bronze window gratings imported from India. On the other stood the royal gate, before it a bench where the king appeared on occasion to render justice to petitioners, and beyond a vast walled palace complex of adobe dominated by two lofty towers.

Those who lived within the palace were surrounded bv the finest luxuries known to the age, but were bound by a strict régime of conduct, not all of which may now be discerned. The palace housed the royal family, construed by Nubian custom in matrilineal

terms. The sons of a king lived there in captivity until their father died; the high courtiers then elected one his successor and executed the rest. A king throughout his life was answerable to his electors, and if repudiated should be executed by his maternal uncle, entitled *sīd al-ḳōm*. Princesses, the sole transmitters of noble status, were given in marriage to the far-flung Fūndj vassal lords; a king, in turn, accepted wives—normally several hundred—from among the female offspring of his noble subordinates. Male children of vassal lords also lived in the palace, serving as pages and as hostages for the good behaviour of their distant fathers. Each provincial governor was assigned quarters in the palace from which to conduct his affairs while in the capital. The palace also housed many other titled officials, some of them slaves, who supervised the assessment, collection, storage, and disbursement of tax-goods collected in kind, who organised the royal caravans and conducted exchanges with foreign merchants, and who arranged the stockpiling or manufacture of arms and munitions and commanded the royal slave corps of cavalry and infantry.

Surrounding the public edifices of the capital lay the homes of lesser courtiers, holy men and craftsmen enjoying royal patronage, and the residential quarters of traders from every province and many foreign lands, each answerable to a patron at court. Beyond the town inland lay cemeteries for Muslims and non-Muslims, and along the river royal gardens for rustic court outings and the cultivation of lemons and roses. Within a 40-mile radius of the town proper lay an unusually densely-populated district directly responsible to the palace and not part of any province. West of the river were estates assigned to members of the royal family such as the Queen Mother, and to prominent holy men with their followers. If the inhabitants of these estates resembled their counterparts at better-documented provincial capitals, in addition to farming they invested much labour in the weaving of long strips of white cotton cloth that provided customary garments and served as market place currency. East of the river lay widespread permanent village encampments of slave soldiers and their families; they preserved some of the culture of their native homes in the Nūba Mountains and the Ethiopian borderlands. When travellers of 1700 assessed the population of Sinnār at 100,000 souls, it is probable that the estimate also embraced this wide semi-rural conurbation.

As the 18th century advanced, the opening of Sinnār to influences from the Islamic heartlands eroded institutions vital to Fūndj government, notably matrilineal succession and state control over trade. With the collapse of Fūndj kinship discipline, the family hierarchy of landed nobility fragmented into bellicose patrilineages, while some twenty new towns arose as a rising middle class of private merchants defied royal prerogative. In 1762 a clique of base-born (*Hamadj*) warlords seized power, and at the death of their leader Muḥammad Abū Likaylik in 1775 the kingdom lapsed into half-a-century of civil strife that brought ruin to the capital. In 1202/1787-8 the *Hamadj* commander Nāṣir b. Muḥammad Abū Likaylik, having crushed an abortive royalist counter-coup, avenged himself by systematically firing the highly combustible city and its west-bank suburbs. In February 1804 factional fighting left the palace complex for two months in the hands of a provincial governor, who sacked it thoroughly; the capital was then abandoned and all factions fell back upon armed camps in the countryside. Of these, the slave settlements on the east bank were among the most important until they in turn were devastated by campaigns of the decade to follow. At the Turco-Egyptian conquest of 1821 the *fāshir*, surrounded by ruins, witnessed the ceremony of surrender that ended the sultanate of Sinnār.

SINNAWR (A.) (in rare instances *sunnār, sunār*) (pl. *sanānīr*), masculine substantive denoting the cat, and synonym of *hirr* (pl. *hirara, hirar*) and of *ḳiṭṭ* (pl. *ḳiṭāṭ, ḳiṭaṭa*) (cf. Latin *catus*). These three equivalent terms which have the feminine in *-a* for the female cat make no distinction between wild and domestic species. Among the former, at least four were known in the lands of Islam: (a) *Felis sylvestris lybica*, European wild cat, of the Libyan subspecies, with the names *ḳiṭṭ al-khalā, ḳiṭṭ al-barr, kadīs*, in Kabyle *amshīsh boudrar*; (b) *Felis margarita*, Sand cat, which has become quite rare in Morocco and the western Sahara and is known as *barrān, mushsh al-khalā*; (c) *Felis ocreata*, Fettered cat, its name, *ḍaywan*, also applicable to the two preceding species; (d) *Felis chaus*, Jungle cat, peculiar to Nubia and Egypt where it is known as *tufah, tuffa, tifā* and, in Morocco, *sabsab, zabzab*.

There are many species of Domestic cat (*Felis domestica*) produced by interbreeding; two varieties are typical in the Orient, *Felis maniculata* or Egyptian cat (*sinnawr miṣrī*) and *Felis angorensis* or Persian cat (*sinnawr shīrāzī*). The Arab lexicographers have supplied a copious list of names given to the cat, each evoking a particular feature of the diminutive feline; thus, in alphabetical order: *azram, bass, biss, dam, dimma, hars, haris, hārūn, harrūn, hizdj, ḳalaṭi, kayʿam, khaydaʿ, khayṭal, khizbāz, māʾiyya, mishsh, mukhaddish, mukhādish nuwwa, shabrama* and *shunārā*. The kitten is called *dirṣ* (pl. *adrāṣ, durūṣ*) and *shibriḳ* (pl. *shabāriḳ*). Alongside all these terms, which currently appear somewhat archaic, the cat was furthermore endowed with nicknames with *abū* or *umm* according to its sex, such as *abū ghazawān, abu ʾl-haytham, abū khaddāsh* and *abū shammākh*. In addition, the dialects peculiar to each Muslim region have their own names for the cat. Berber-speaking groups call it *emmashīsh, mushsh* (pl. *mushshiten*), fem. *tamushshit* (pl. *timushshītīn*), in Tamahaḳḳ *tikurash*. In Tunisia, the only term in use is *ḳaṭṭūs/gaṭṭūs* (pl. *ḳaṭāṭīs*) (Low Latin *cattus*) with the diminutives *ḳṭiyyet, ḳṭīṭes* for the kitten, while in Syria it is *busayn* and, in ʿIrāḳ, *bazzūn*; the Turkish *kedi* and Persian *gurba* are not related to Arabic. The sounds typically uttered by the cat, mewing, purring, wailing, are represented in Arabic, as in most other languages, by onomatopoeia; such words are derived from artificial verbal roots, usually triliteral. Thus mewing is denoted by the roots *m-ʾ-w* (*muwāʾ*), *ʾ-m-w* (*ʾumāʾ*), *m-ʿ-w* (*muʿāʾ*), *n-ʿ-w* (*nuʿāʾ*), *m-w-gh* (*muwāgh*), *n-w-w* (*tanwā*). According to al-Djāḥiẓ (*Ḥayawān*, iv, 22) the cat is capable of modulating its mewing in five different ways to express its moods and its needs (hunger, distress, appeals for attention, etc.). Purring, an utterance peculiar to felines and an expression of contentment, is imitated by the terms *khurūr, kharīr, kharkhara* and *harīr*. Finally, to drive a cat away, the appropriate cry is *ghiss*! or *ghasghas*!

It is through Egypt that the Arabs, like the Hebrews, seem to have become acquainted with the domestic cat. It had been venerated there since the Pharaonic period and enjoyed the privilege of being embalmed as a sacred animal (Herodotus, *History*, ii, 66). On the other hand, there is no mention of it either in the Bible or in the Ḳur'ān; it is only later that certain Muslim commentators invented the legend according to which a pair of cats was produced, on board Noah's Ark, by a sneeze of the lion, as a means of destroying rats and mice which swarmed there and were causing considerable damage to the provisions of the travellers (*Ḥayawān*, i, 146, v, 347-8).

Al-Dj̲āḥiẓ is the first, indeed the only, scholar to have spoken extensively and knowledgeably of the cat, in his valuable *Kitāb al-Ḥayawān*, and later naturalists such as al-Ḳazwīnī and al-Damīrī only repeated his statements. This remarkable polygraph mounts a vigorous refutation to the assertion of Zoroaster/Zarathustra (Zarādus̲h̲t) and of the Mazdaeans, who claimed that the cat is a diabolical animal, while they saw as divine creatures the mouse, the weasel and fishes (*Ḥayawān*, iv, 298, v, 319-20); a similar idea existed among the ancient Arabs, for whom a fanciful superstition held that the *ḳuṭrub* [*q.v.*] (pl. *ḳaṭārib*), one of the categories of demons, took on the form of the female cat (al-Mas'ūdī, *Murūdj̲*, iii, 320-1 = § 1204). Similarly, he castigates those who eat the flesh of the cat; they belong, he says, to two categories, one consisting of depraved youths, the other of keepers of doves who thus eliminated the predatory cats threatening dovecotes. He also denounces the ancient legend according to which eating the flesh of a black cat gives protection against spells and enchantments. In fact, Islamic law forbids the consumption of the flesh of the cat, a prohibition applying to every carnivore equipped with canine teeth. Also forbidden were the sale and purchase of cats, in deference to an opinion of the Prophet Muḥammad who was fond of these beasts; but some jurists reckoned that this applied only to the wild cat and that the domestic cat, in commercial terms, was of the same status as the ass, the mule and the dog (al-Damīrī, *Ḥayāt*, ii, 382). Al-Dj̲āḥiẓ (*Ḥayawān*, v, 339) describes a kind of aversion therapy by means of which cat owners weaned their pets from catching pigeons.

In the 4th/10th century, the "Brothers of Purity" (*Ik̲h̲wān al-Ṣafā'* [*q.v.*]), as a part of their indictment of the cat, proposed in one of their Epistles (*Rasā'il*, ii, 247), a curious, but very logical explanation of the domesticity of the cat and the dog, which attach themselves to mankind as a means of ensuring their subsistence. The phenomenon dates back to the time of the murder of Abel (Hābīl) by his brother Cain (Ḳābīl); this was followed by a fratricidal struggle between the two lines, and the descendents of Cain, gaining the upper hand, set about the systematic slaughter of all the livestock of the vanquished, sheep and cattle as well as camels and horses. For a long time they feasted on these beasts, and this resulted in an accumulation of carcases which attracted hordes of wild dogs and cats, competing over this abundant and easy source of food; henceforward, they remained close to men, whose discarded material was sufficient to satisfy their daily needs. This interpretation is not devoid of reason, since scholars of prehistoric times have shown that since the Neolithic period, there has been a symbiosis between man and certain species of animal, including the dog, which were soon domesticated, becoming accustomed to a reliable source of sustenance and to protection from their enemies.

Al-Dj̲āḥiẓ (*Ḥayawān*, *passim*, esp. v) describes the cat in glowing terms, admiring its instinctive cleanliness, its agility, its vigilance, its efficiency in the hunting of rodents, its attachment to the home of its master, its visual acuity in darkness and the affection which the female shows towards its offspring, sometimes inducing it, he says with a degree of exaggeration, to devour them. Furthermore, in spite of its small size, the cat, like other much larger felines, the lion, the tiger, the panther, has the ability, simply by showing itself, to strike fear into camels and elephants [see FĪL]; the latter, on seeing it, are seized by panic and this phenomenon gave rise, according to al-Mas'ūdī (*Murūdj̲*, iii, 13-16 = §§ 855-6), to a tactical stratagem employed by the kings of Persia, that of releasing cats in the path of the elephants forming the vanguard of an attacking army. The enemy, trusting in the invulnerability of these pachyderms, saw them suddenly turn and flee, charging in the opposite direction and causing panic in the ranks. This stratagem was used successfully by Hārūn b. Mūsā, valiant warrior of Islam and poet, against a king of India who used elephants when attacking him in his fortress of Multān, and the victor recounted the episode himself in a score of verses (*Ḥayawān*, vii, 76-8). This fear which the cat, like the larger felines, is capable of inspiring in the largest mammals, has given certain poets the notion of comparing it to the lion. On this theme there are a number of verses of Muḥammad b. Yasīr al-Riyās̲h̲ī, a contemporary of al-Dj̲āḥiẓ (*Ḥayawān*, i, 59, v, 272), and most worthy of note is a fine composition in eight verses by al-Ṣanawbarī [*q.v.*] (*al-Madj̲ānī al-ḥadīt̲h̲a*, iii, 222) in which he expresses (metre *k̲h̲afīf*, rhyme *-ābi*) his affectionate admiration for the cat, declaring "It is a veritable lion of the thicket both in body and in temperament!" He concludes with this magisterial declaration "What an agreeable companion, for, when in good mood, it is more loyal than all other friends!" In addition, al-Dj̲āḥiẓ relates that cats were the object of attentive care and petting on the part of women of the harems; they painted their paws with henna, adorned them with collars and jewels and were in the habit of kissing their muzzles.

The atavastic hostility of the cat in relation to the rats and mice on which it preys has, among all peoples, been a theme much exploited in fables and moralising tales; the "game of cat and mouse" has served as a metaphor for denouncing the law of the strongest and for opposing oppression and tyranny exercised over the weak, while drawing attention to the caution, the ingenuity and the guile which, often, the latter demonstrates in escaping and even getting the better of his persecutor. This is the theme of nights 900 and 901 in *The Thousand and One Nights* with the story of "the cat and the mouse" (*al-sinnawr wa 'l-fa'r*); the mistrustful mouse, besieged in his refuge by a cat, invokes the Most High and is saved by the unexpected arrival of a hunter whose dog loses no time in settling accounts with the feline. Similarly, in the Book of *Kalīla wa-Dimna* [*q.v.*], the philosopher Bidpāy illustrates for the king Dabs̲h̲alīm the theme of true and false friendship with the fable of "the rat and the cat" (*al-dj̲urad̲h̲ wa 'l-sinnawr*) in which the cat, trapped in the meshes of the hunter's net, implores the rat to free him by gnawing through the threads, with a thousand oaths and promises. The rat, very wisely, sets about the task, but without haste, and waits until the arrival of the hunter before severing the last thread; on seeing the man, the cat has no option other than rapid flight and the rat, rid of this false friend, disappears safe and unharmed into his burrow.

The predatory nature of the cat has given rise to a number of metaphorical adages; by comparison with the wild cat, it is said *adabb min ḍaywan*, "a more skilled stalker than a wild cat", and *aṣyad, anzā min ḍaywan* "more predatory, more agile than a wild cat". Among expressions relating to the domestic cat are *athkaf min sinnawr* "more lively than the cat" and *abarr min hirra* "more gentle to its little ones than a female cat". On the other hand, the origin of the expression *ka-anna-hu sinnawr ʿAbd Allāh* "he is like the cat of ʿAbd Allāh", used to say of somebody that, the older he becomes the less he is worth, is unknown; in this context, al-Djāḥiẓ indicates (*Ḥayawān*, v, 315) that in the illegal trade in cats, kittens commanded a much higher price than adults, respectively a *dirham* [*q.v.*] and only a *ḳīrāṭ*. Finally, a fairly widespread contemporary image defines the fool in these terms: *lā yaʿrifu hirr^an min birr* "he cannot tell a cat from a mouse".

The specific qualities attributed to the different bodily parts of the cat are as varied as they are fanciful. Al-Ḳazwīnī (7th/13th century) and al-Damīrī (8th/14th century) supply a list of them (*ʿAdjāʾib*, in the margins of *Ḥayāt*, ii, 232 and *Ḥayāt*, ii, 35, 251, 382). Thus the brain of a wild cat blended into a hot infusion of rocket (*djirdjir, Eruca sativa*) drunk on an empty stomach in the public baths, is beneficial for testicular ailments and the retention of urine. The two eyes of the cat, dried and burned for purposes of fumigation, ensure the success of any enterprise. To carry on one's person a cat's tooth suppresses all nocturnal fears, and carrying the heart of a cat in a bag made from the skin of this feline guarantees victory over any enemy. The gall of a cat mixed with an eyewash induces nyctalopia and, blended with half a dirham of oil of jasmine, cures buccal paralysis. The gall when dried, pulverised and mixed with kohl constitutes an eyewash which enables one to see the djinn and put them to one's service; mixed with salt and wild cumin (*kammūn kirmānī, Lagoecia cuminoides*) and applied to sores and ulcers, it is an efficacious ointment. The blood of the cat is drunk to cure scurf, and that of the black cat is a love-potion; applied to the sexual organs, it has an aphrodisiac effect. The spleen of a black cat attached to a woman suppresses menstruation. Finally, the excrement of the cat has a smell which dispels mice and in addition, when diluted in oil of myrtle (*duhn al-ās, Myrtus communis*) and used as an ointment, it cures any fever; pulverised in water, it alleviates the pains of gout when smeared on the affected areas.

In botany, a score of plant names refer to the cat. Thus the term *ḥashīshat al-sanānīr* "herb for cats" is applied to Balm (*Melissa officinalis*, labiate), the smell of which appeals to cats. Cat's foot (*Antennaria dioica*, composite) is called *ridjl al-ḳiṭṭ/al-hirr*, "cat's foot" and *ẓufr al-ḳiṭṭ* "cat's claw", while the Corn crowfoot (*Ranunculus arvensis*, ranuncular) and the Asiatic crowfoot (*R. asiaticus*) correspond to *kaff al-hirr* "cat's paw". The term *ʿayn al-ḳiṭṭ* "cat's eye" is applied to five plants, including three which belong to the family of compositae: (a) Corn camomile (*Anthemis arvensis*); (b) Camomile (*A. nobilis*); (c) Wild camomile (*Matricaria chamomilla*); (d) Water speedwell (*Veronica anagallis aquatica*, scrofular); and (e) Minor phalaris (*Phalaris minor*, graminaceous). The "cat's head" (*raʾs al-hirr*) is the Hemp nettle (*Galeopsis*, labiate), while the "cat's tail" (*dhanab al-ḳiṭṭ*) denotes both the Bugloss (*Anchusa italica*, boraginaceous) and the Goldylocks (*Chrysocoma*). As for the "long cat's tail" (*dhayl al-ḳiṭṭ*), this can be either Cat's tailgrass (*Phleum pratense*, graminaceous) or Alfagrass (*Lygeum spartum*, graminaceous). Among papilionaceous plants the genus Milk vetch (*Astralagus*) has borrowed three names referring to cats: (a) *zubb al-ḳiṭṭ* "cat's penis" for the variety *A. cahiricus*; (b) *khuzām al-ḳiṭṭ* "cat's mignonette" for the varieties *A. Forskallii* and *A. cruciatus*; and (c) *bayḍ al-ḳiṭṭ* "cat's testicles" for the variety *A. sieberi*.

It may be mentioned, in conclusion, that in zoology the term *sinnawr al-zabād* "civet cat" is also found, denoting the Civet cat (*Viverra civetta*) of the family of Viverridae, but in Arabic as in English, this small carnivore of Africa and Asia is more often known in the abbreviated form *zabād, sinnawr* being omitted.

(F. Viré)

SĪNŪB, Sinope, modern Turkish Sinop, a town and seaport on the north coast of Asia Minor, in the classical Paphlagonia, between the mouths of the Saḳarya [*q.v.*] and the Ḳîzîl Irmaḳ [*q.v.*] and about equidistant from the ports of Ṣamsūn and Ineboli, 120 km/75 miles to the north-east of Ḳasṭamūnī [*q.v.*] (lat. 42° 05' N., long. 35° 09' E.). It is the celebrated Σινώπη of the ancients and has retained this name. Muslim authors know it by the name of Sanūb (Abu ʾl-Fidāʾ, 392, and Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, ed. Quatremère, in *NE*, xiii, 361), Ṣanūb (Ibn Baṭṭūṭa, ii, 348), Sināb (Anon. Giese, 34; Urudj Beg, ed. Babinger, 73) or Sīnūb (ʿĀshîḳ-Pasha-zāde, and, following him, all the Turkish historians and other writers). The town lies on an isthmus running north-eastwards from the mainland, to which it joins the peninsula of Boz Tepe Adasî. This position gives the town two harbours, but only that on the south, the safer of the two, has remained in use since ancient times. The strip of coast behind Sīnūb is bounded by the great Pontic range which borders the Central Anatolian plateau, and is particularly difficult to cross directly south of the town.

1. Pre-Ottoman history.

The history of Sinope goes back to a remote period. It was already an important port for trade with caravans from Mesopotamia and Cilicia, before it became a Greek colony of Milesians, in the 8th century B.C. Herodotus, Xenophon and Strabo describe it, but in the time of the latter it was no longer the great

terminal port for continental trade (cf. Sir W. Ramsay, *Historical topography of Asia Minor*, London 1890, 27). The town however retained its importance; in the 2nd century B.C., it was the capital of Mithridates of Pontus and after its capture by Lucullus in 70 B.C., it knew several centuries of prosperity as a Roman colony under the name of Colonia Julia Felix. When, under the Byzantine empire, the interior of Asia Minor gradually lost its Hellenism, Sinope remained a commercial city of the first rank. The invasion of Asia Minor by the Saracens in 217/832 had as one result that Theophobos, commander of the "Persian" auxiliary troops of the emperor, was proclaimed king of Sinope for a brief period; this episode is related by the Byzantine sources Symeon Magister and Theophanes Continuatus.

As the conquest of Asia Minor by the Rūm Saldjūḳs was confined for the first century to the interior of the peninsula, Sinope remained Byzantine, but also served as a port for the merchants of the Saldjūḳ empire, who embarked there for the Crimea (Heyd, *Histoire du commerce du Levant*, i, 298). At the beginning of the 13th century the town passed into the hands of the empire of the Comnenoi of Trebizond. The Saldjūḳ sultan ʿIzz al-Dīn Kay Ḳubādh took the town from them. Ibn Bībī, who gives a detailed account of its capture (in *Recueil des historiens des Seldjoucides*, ed. Houtsma, iv, 54 ff.) gives as the date of the capture 26 Djumādā II 611, corresponding to 2 November 1214. The Saldjūḳ sultan had taken advantage of the discord between the two Greek empires, but the immediate pretext for attacking the town was the raids which the lord of Sinope (in Ibn Bībī and Barhebraeus, *Chronicon*, ed. Bedjan, 429, called Kīr Aleks, i.e. Kyr Alexis Comnenos, cf. Fallmerayer, *Gesch. des Kaisertums Trapezunt*, Munich 1827, 94) had made into Turkish territory. Abu 'l-Fidā' seems also to allude to this conquest (*Taʾrīkh*, Istanbul 1286, iii, 122 under 611/1214-15, cf. Fallmerayer, *op. cit.*, 96); in any case, Barhebraeus is wrong in saying that Alexis was killed by the Saldjūḳs. The Byzantine historians do not mention the taking of Sinope.

The town was given a Saldjūḳ garrison and the church turned into a mosque. Some time afterwards, the town was given as a hereditary fief to the celebrated vizier Muʿīn al-Dīn Sulaymān Parwāne [*q.v.*], who built a fine mosque there which is described by Ibn Baṭṭūṭa. It was about the same time that William of Rubruck passed through the town, which he calls Sinopolis, on his way to Russia. According to Münedjdjim Bashī, *Djāmiʿ al-duwal*, Tkish. tr., iii, 31, the Parwāne was succeeded at Sīnūb by his son Muʿīn al-Dīn Muḥammad (676-96/1277-97) then by his other son Muhadhdhib al-Dīn Masʿūd, on whose death in 700/1301 his lands passed to the lords of Ḳasṭamūnī. But another authority (ʿĀlī, *Künh al-akhbār*, v, 22, quoting Rūḥī) says that, after the deposition of the last Rūm Saldjūḳ (in 707/1307), the Il Khānid Ghazan Khān granted all the lands in the north and northwest of Asia Minor to Ghāzī Čelebi, son of the Saldjūḳ sultan Masʿūd. This Ghāzī Čelebi is well-known in history, especially for his bravery in his acts of piracy (for example, he dived under the water to destroy the keels of enemy vessels) which he committed against the Genoese and the Greeks of Trebizond, whose ally he had sometimes been. Ibn Baṭṭūṭa (*loc. cit.*) and probably Abu 'l-Fidā' (*Taḳwīm al-buldān*, ed. Reinaud and de Slane, 393), however, make Ghāzī Čelebi a descendant of the Parwāne. After his death, Sīnūb was taken by Shudjāʿ al-Dīn Sulaymān Pasha, lord of Ḳasṭamūnī [see ISFENDIYĀR OGHLU]; it was shortly after this event that Ibn Baṭṭūṭa visited the town (*ca.* 740/1340). During the 14th century, the town retained its importance as a commercial port, connected with the interior by a road to Iznīḳ and Bursa (Taeschner, *Das anatolische Wegenetz*, i, 196). Trade was mainly in the hands of the Genoese, who probably had a consulate there since 1351; there was also a Genoese colony (Heyd, *op. cit.*, i, 550). Sīnūb was the last refuge of the Isfendiyār Oghlu when the Ottoman sultan Bāyezīd I had attacked them, and in the end, they abandoned the town to him in 797/1394-5, according to the old Ottoman chroniclers (ʿĀshïḳ-Pasha-zāde, 72; Anon. Giese, 34). After the restoration of this dynasty by Tīmūr in 805/1402-3, Sīnūb again passed under their rule; it was the seaport by which the rebels against the Ottomans, like Shaykh Badr al-Dīn [*q.v.*] (cf. Babinger, in *Isl.*, xi, 60), were able to escape under the protection of the Isfendiyār Oghlu. It was, however, only in the year 862/1458 that Meḥemmed II definitely incorporated the town in his territory by a treaty with the Isfendiyār Oghlu Ismāʿīl Beg, who received in exchange fiefs in Rūm Ili. This event is recorded by all the Turkish historians and by the Byzantine Ducas and Chalcondylas; the latter mention the formidable defences that had been erected in the town.

2. The Ottoman and modern periods.

Sinop's importance in the reign of the Saldjūḳs and Isfendiyār-oghullarï, as well as in the Ottoman period, lay in its two harbours. In addition, the forests of northwestern Anatolia provided the timber needed for shipbuilding. In Ḳānūnī Süleymān's time, peasants from the surrounding countryside supplied the Ottoman navy's shipyard, which could build at least fifteen ships in a year, with timber in exchange for a tax rebate. At this period, activity in the shipyard appears to have been seasonal, and moreover, linked to the probability or otherwise of naval warfare. The high point of construction activity was apparently reached in 979/1571, when 25 galleys were built for the Cyprus war.

The first surviving Ottoman tax register dates from 892/1487. At this time, the town had a tax-paying population of 773 adult males, of whom 176 were Christians; the latter were excused from the payment of the *ispendje* [*q.v.*] and paid a standard sum of 34 *aḳčes* as *kharādj*. This means that with 5 people to a household, the town should have contained over 3,500 inhabitants. At the end of the 9th/15th century, Sinop was divided up into 13 Muslim and 6 Christian quarters; there was a single Friday mosque, probably the Ulu Djāmiʿ (Istanbul, Başbakanlık Arşivi, Tapu Tahrir 23 m, pp. 335-47).

A tax register from 937/1530 records Sinop as a *ḳaḍā* centre in the *sandjaḳ* of Ḳasṭamōnū. This source records a total of 21 town quarters, with two Friday mosques and a *medrese*, inhabited by 611 taxpaying households; 378 were Muslims and 233 Christians. A further register dated 968/1560-1, which records 1,003 taxpayers, gives a more detailed overview of the Sinop population (Tapu Tahrir 327, 454 ff.). Among the

fourteen Muslim town quarters, the most populous was that surrounding the mosque of Sulṭān ʿAlāʾ al-Dīn. Another mosque still in existence today, the Mesdjid-i Ulu Beg, also formed the centre of a small quarter (inscription dated 760/1358-9). The Christian population lived in seven quarters; all except the Tersāne (naval dockyards) and the ʿArabpînarî quarters had a church for a centre. The "Büyük kilīse" may have been the sanctuary of St. Phocas; but few people lived here, the largest Christian quarter being that of ʿArabpînarî.

The last extant *taḥrīr* documenting Sinop dates from the reign of Sultan Murād III (Ankara, Tapu ve Kadastro Genel Müdürlüğü, Kuyudu kadime 200, fol. 90b ff., 990/1582), and differs from its predecessor only in a few details. Among the Muslim inhabitants, we find 13 garrison soldiers recorded; but in a sense the entire population did guard duty. From the times of Meḥmed the Conqueror, they had been rewarded for this service by an exemption from many other dues and obligations. As confirmed by all sultans up to Murād III, the inhabitants of Sinop could not be called upon to work on fortress construction, nor could they be obliged to serve as rowers or imperial falconers. In addition, they could not be forced to move to any other location, that is, they were exempt from the deportations known as *sürgün*. In addition, the inhabitants of Sinop were excused payment of the *ʿawāriḍ-i dīwāniyye*. 1,677 adult males benefited from these exemptions, among whom 940 were recorded as single. Christians numbered 233 households and almost 300 bachelors. The total population should have numbered between 3,700 and 4,700.

At the end of the 10th/16th century, economic activity seems to have been modest; our tax register records a small dyehouse and fishing weirs (*dalyān*). Bidding for the farm of the Sinop customs in the second half of the 10th/16th century seems to have started at 27,000 *aḳčes*; these dues were earmarked for the pay of the garrison soldiers. Polish merchants occasionally passed through the town on their way to Aleppo, and slaves were imported from the northern shores of the Black Sea. By the next century, the town seems to have been in difficulty, partly due to the damage caused by Cossack attacks. In one instance, a band of raiders even occupied the town for a short while. An account dated 1049/1639-40 documents repairs to the fortifications: the foundations of the citadel were strengthened, the tower over the gate known as Orta Ḳapu was repaired. Quite possibly these repairs were undertaken to guard against another Cossack raid.

Two accounts of Sinop as in the mid-11th/17th century stem from Ewliyā Čelebi and Kātib Čelebi. According to Ewliyā, the town possessed 24 quarters and eight gates; one of the gates was located near the dockyards. After the Cossack raid, the fortress commander was obliged to remain in the town at all times. The Christians lived outside the walls; Ewliyā thought that they numbered 1,100 families, with one hundred of them assigned to the upkeep of the fortress.

Among public buildings, both Ewliyā and Kātib Čelebi noted the ʿAlāʾ al-Dīn mosque. According to the first, this building boasted a fine *miḥrāb* of carved marble, and he praised it highly, comparing it to the *miḥrāb* of the Ulu Djāmiʿ in Bursa; but it had disappeared by the 13th/19th century. Ewliyā also noted the existence of an Ayaṣofya mosque, known from 10th/16th century sources as "Küčük Ayaṣofya", and which he described as an "ancient building". There seems to have been a notable increase in the number of pious foundations, possibly in connection with the strengthening of the town's defences after the Cossack raid. The *medrese* of ʿAlāʾ al-Dīn (today the Sinop Museum) was functioning at the time, in addition to numerous Ḳurʾān schools.

Paul of Aleppo, who accompanied Patriarch Macarius on his travels to Russia, gives another fairly full description of Sinop in 1069/1658. This writer claims that the *pasha* of Ḳasṭamonu, in whose district Sinop was located, was not permitted entry into the town, and even *ḳapudjus* from the sultan's palace, bringing an order from the ruler, were only allowed in three to four at a time. The Christians, whose *djizya* served to pay the soldiers, still lived outside the walls, where they possessed seven churches. In the event of Cossack attacks they were allowed to seek shelter within the walls. As slaves were still being imported in large numbers, even the Christian inhabitants of the town owned them.

Later visitors paint a less optimistic picture. Joseph Pitton de Tournefort, who visited Sinop in 1112-13/1701, describes a much neglected fortress manned by a few Janissaries, while the Greek quarter *extra muros* was unprotected. Bernard Rottiers, who visited Sinop before 1829, noted that the naval shipyard at Sinop was small, but the ships turned out were of excellent quality, so that merchants sometimes purchased permission to have their own vessels constructed there. At this time, Sinop exported rice, fruit, skins and hides as well as timber.

According to the count of taxpayers undertaken in 1831, the district of Sinop, still a *ḳaḍā* in the *wilāyet* of Ḳasṭamōnū, was inhabited by 7,137 Muslim males. Since it was the aim of this count to assess military potential, Christians, women and presumably small children were not counted. Von Moltke passed by Sinop on his way to Samsun, and was favourably impressed by the durability of the houses and the activity of the naval arsenal. Collas and Texier, whose books were published in 1864 and 1862 respectively, mention the recently-instituted steamship connection to Istanbul; but both felt that Sinop was declining, According to Collas, this was due to the successful competition of İnebolu for the exportation of the region's principal products, namely nuts, skins and hides. However, the unwalled parts of Sinop had suffered severe damage in the Ottoman-Russian naval engagement 1853, which began the Crimean War.

Reconstruction must have followed fairly soon, for Cuinet, whose data concern the years around 1890, paints a much more hopeful picture. Sinop at this time contained a mere 1,790 houses, that is, only about 100 more than the number of households registered in 990/1582; this figure corresponded to a total population of 9,749, of which 5,041 were Muslims. However, he gained the impression that Sinop was small but active, growing not only by virtue of its expanding trade, but also because the summer season attracted holiday makers to the seashore. As to the agricultural hinterland, it produced mainly wheat, maize and tobacco.

Due to the relative isolation of Sinop, the town was first used as a place of banishment during the reign of Sultan ʿAbd al-Ḥamīd II, a tradition which was continued under the following governments. As a result, the town is frequently mentioned in short stories and memoirs dealing with the late Ottoman and Republican periods. Refīḳ Khālid (Karay [*q.v.*]) wrote a story (*Shaḳā*ʾ) set in this town in 1915, while the journalist Zekerya Sertel describes the atmosphere of

the middle 1920s in his *Hatırladıklarım* (Istanbul 1968). After the Republican government had transformed the inner fortress into a prison, the novelist and short story writer Sabahattin Ali [*q.v.*] spent several months there, reflected in the tragic short story *Duvar.*

Up to the present time, the district of Sinop has remained agricultural (82.5% of all economically active persons in 1980). Apart from grain agriculture, forestry is significant, while fishing is much less so. Some agricultural growth was achieved after 1950, when roads were constructed and Sinop became accessible not only by sea but also from the Anatolian mainland as well. The road connection to Samsun has come to be of economic importance, but the port of Sinop has not been able to keep up with that of its larger competitor only a short distance away.

Sinop is now the chef-lieu of an *il* or province of the same name. The population of the town in 1970 was 45,800, and that of the *il* 265,000.

(Suraiya Faroqhi)

SIPĀHĪ (p.), from the Persian *sipah, sipāh* "army", hence basically meaning soldier. It has given such European words as English *sepoy* (see below, 2.) and French *spahi* (see below, 3.).

1. In the Ottoman empire.

Here, *sipāhī* had the more specific meaning of "cavalryman" in the feudal forces of the empire, in contrast to the infantrymen of the professional corps of the Janissaries [see yeñi čeri]. Such feudal cavalrymen were supported by land grants (*dirlik* "living, means of livelihood") at different levels of income yield. Below the *khāṣṣ* [*q.v.*] lands granted to members of the higher echelons of the administrations and army, the mass of the *sipāhīs* were supported by *tīmārs* [*q.v.*] or, giving a superior income, *ziʿāmets* [*q.v.*], the revenues from such land grants being known in general as *māl-ı̊ muḳātele* "fighting money". As an encouragement to *sipāhīs* to perform their military duties properly, as well as the inducement of promotion from holder of a *tīmār* to one of a *ziʿāmet,* bonuses might be granted (*teraḳḳī* "advancement").

The *sipāhīs* of a province were under the supreme command of the provincial governor (*beylerbeyi* [see beglerbegi]), who called them to the colours when need for a campaign arose, although in later times, at least, it was possible to compound for absence by a financial payment. Conditions of service varied; some were always obliged to turn out (the *eshkindjis* "those who ride out to war"), whilst others turned out in rotation (*bi-newbet*). The lowest category of *tīmār*-holding *sipāhīs* merely served personally, with their mount, but those with higher incomes had to bring with them at least one fully-equipped and mounted man-at-arms (*djebeli* "dressed in a mailed coat"), up to a maximum of five; *ziʿāmet*-holding *sipāhīs* might have as many as eighteen men-at-arms in their train.

There was no formal system of training, as had been the case e.g. amongst the Mamlūks of Egypt [see furūsiyya; maydān], but since the land grants could only descend hereditarily to the sons or descendants of *sipāhīs* or *djebelis*, who had normally been brought up to the profession of arms and were capable of performing military service, a level of competence could be maintained. On a *sipāhī*'s death, his land grant usually passed to his son, although if the latter was still a minor, his required military service had to be performed by a *djebeli* substitute. If there was no heir at all or no capable heir, the grant reverted to the state, with its revenues collected *ad interim* by the *mewḳūfātčī* [*q.v.*], and it could then be granted out subsequently to some other deserving warrior.

There are no reliable figures for the total number of *sipāhīs* and their *djebelis* in the empire during its heyday, and neither the sultans nor the administration probably ever knew the exact number anyway; a possible figure is *ca.* 150,000, spread over both Anatolia and Rumelia. Before the Ottomans came up against trained, professional armies of the European powers, the feudal forces probably formed the most numerous and formidable part of the Ottoman army, since the élite force of the Janissaries was a numerically restricted one. But as with their mediaeval European counterparts, the feudal knights, there was always the disadvantage that land-grant holders might be reluctant to leave their sources of income and local power and go to fight on distant frontiers. To counter this, at a general call to arms, the Ottoman state allowed one in ten *sipāhīs* to remain at home, and if a summer campaign turned into a prolonged one requiring winter quarters in the field, some *sipāhīs* were allowed to return home and collect the revenues from the estates which supported the fighting forces.

When in later times the Ottomans had to face the European professional armies, their feudal forces were at an obvious disadvantage compared to troops paid to remain in the field as long as money could be found to support them. Hence by the early 19th century, the *sipāhīs* had become an obsolete element in the Ottoman forces, which were themselves from the times of Selīm III and Maḥmūd II [*q.vv.* and niẓām-i djedīd] beginning to evolve into a more modern, uniformed and professionally-trained army. Hence during the *Tanẓīmāt* [*q.v.*] period, in 1263/1847, all *tīmār* and *ziʿāmet* holders were required to exchange these for a monetary payment equivalent to half the income from the land grant.

The term *sipāhī* was also applied to one of the six cavalry divisions of the Ottoman standing army, whose creation may date back as far as the reigns of Murād I (761-91/1360-89 [*q.v.*]) or even Orkhan (724-61/1324-60 [*q.v.*]), and which took up the favoured position in battle on the sultan's right; the term was, indeed, applied in a general sense to the whole of the cavalry in the standing army.

(C.E. BOSWORTH)

2. In North Africa.

The term was used in late, pre-modern North Africa, in which, from the time of the Ottoman conquest (or, from the very beginning of the 17th century for Tunis), *Sbā'ihiyya* (sing. *Sibāhī*), denoted a corps of mounted gendarmerie. It was then used in the 19th and early 20th centuries for troopers of the corps of locally-raised cavalry organised by the French army there, with the term passing into French as *Spahi*.

A corps of 600 Moorish "Espahies" are already recorded at Tunis in 1614. Ḥammūda Bey (1631-59) is said to have created three other corps (*odjaks*) of Sipāhīs in the interior of the country, at Ḳayrawān, al-Kāf and Bādja. At the side of these *odjaks* of "Arab" Sipāhīs, recruited from the local people, there existed an *odjak* of Turkish Sipāhīs, recruited from amongst the Janissaries. Each Sipāhī *odjak* was commanded by an Agha. The Tunis *odjak* was the most important in the Regency, being commanded by a Bāsh Agha recruited from the leading commanders of the army, assisted by a lieutenant (*kātriya*) and a secretary (*khūdja*). This number of *odjaks* remained constant up to the 19th century, when under the government of Ahmad Bey, three new corps were raised in the Sāḥil, the Djarīd and the A'rāḍ (Ḳābis, Gabès). If, at the outset, the number of Sipāhīs was 600, *ca.* 1788 there were as many as 2,000 (Arab) ones, comprising one-tenth of the Beylical forces. From 1830 onwards, after the creation of a regular army, the Sipāhī *odjaks* lost some of their importance; *ca.* 1840 the *odjak* of the Turks disappeared, being incorporated into the regiment of cavalry.

Within the Regency of Tunis, the Sipāhīs' task included accompanying the Bey on his progresses and the maintenance of order in the interior of the country; some were permanently stationed at the Bardo (the Bey's palace), the rest resided in their own tribes. The Sipāhīs acted as escorts for the tax collectors, and in time of war, were required to mobilise and participate in the movements of the army encampments. They levied an annual honorarium, received their mount, allotments of fodder and forage, and benefited by exemptions from taxes and duties.

In the Regency of Algiers, the Sipāhī *odjaks* appear at around the same time as in Tunis; there were likewise Turkish ones recruited from the Janissaries, and indigenous ones from the local population. At the end of the 18th century, the Agha of Algiers could count on 700 Sipāhīs, not counting those of the Bey. Their duties were similar to those of their colleagues at Tunis.

In 1789, Venture de Paradis was struck by the importance of this corps in the social hierarchy at Algiers. The position of a Sipāhī was especially sought by rich persons; in order to have a chance of entering their ranks, the Bāsh Agha of the Sipāhīs who, as at Tunis, was recruited from amongst the Janissary officers, had to be bought over. The Sipāhīs in the Algiers Regency received neither honoraria nor salaries, and the cost of mounts and of fodder and forage was at their own charge. But in both Regencies, they could profit from handsome windfalls, pots of wine and allowances.

In Tripolitania, Sipāhī *odjaks* are recorded from 1580 on the occasion of their interference in the political affairs of that Regency, at a time when they were commanded by Ḥaydar Pasha (see Başvekalet Arşivi, Istanbul, Mühimme defteri no. 62, dated 12 Dhu 'l-Ḳa'da 990/8 December 1580). These troops had the same role and the same duties as the Sipāhīs in the other Regencies.

3. In India.

In India both the French and the British adopted the word, which seems to have reached them through the Portuguese, the former writing it *cipaye* or *cipai*, and the latter *sepoy, seapoi, seapoy, seapy, cephoy, sipoy*, etc., but there both nations have applied it since the beginning of the 18th century to natives of India trained, armed and clad after the European fashion as regular infantry soldiers. Regiments of sepoys were first raised and employed by the French. In 1748 Dupleix raised several battalions of Muslim infantry, armed in the European fashion, and in 1759 Lally wrote to the Governor of Pondicherry: "De quinze mille cipayes, dont l'armée est censée composée, j'en compte à peu près huit cens sur la route de Pondichéry". Stringer Lawrence soon imitated Dupleix in forming regular battalions of sepoys in Madras, and in 1757 a force of sepoys accompanied Lord Clive when he left Madras in order to recover Calcutta. The military establishment of Bengal had consisted of one company of artillery, four or five companies of European infantry, and a few hundred natives armed in their own fashion, but after the recovery of Calcutta from the Nawwāb Sirādj al-Dawla a force of Madras sepoys was used to form the nucleus of an army for Bengal, and 2,000 sepoys fought at the battle of Plassey in June, 1757. About the same time, sepoys were raised and employed in Bombay, and European adventurers in native states raised and drilled battalions of sepoys for their masters.

In 1795 the infantry of the three Presidency armies was organised in regiments of two battalions each, each battalion consisting of eight battalion and two grenadier companies. Of such regiments Bengal possessed twelve, Madras eleven, and Bombay four, with an additional marine battalion. Henceforward the three armies grew on divergent principles and with different organisations. The Sepoy Mutiny of 1857-8 shattered the old Bengal army and seriously affected that of Bombay, but both were reconstituted and remodelled. Early in the 20th century Lord Kitchener, then commander-in-chief in India, formed the three Presidency armies into one Indian army, which fought with distinction in the two World Wars until it was divided between Pakistan and India in 1947. The Native States within British India also had their own armies prior to 1947.

SIPAHSĀLĀR [see ispahsālār].

SIPIHR, "celestial sphere", nom-de-plume (*takhallus*) of the Persian historian and man of letters, Mīrzā Muḥammad Taḳī of Kāshān (d. Rabīʿ II 1297/March 1880). After a studious youth spent in his native town, he settled definitely in Tehran, where he found a patron in the poet-laureate (*malik al-shuʿarāʾ*) of Fatḥ ʿAlī Shāh. On his accession (1250/1834), Muḥammad Shāh appointed him his private panegyrist (*maddāḥ-i khāṣṣa*) and secretary and accountant in the treasury (*munshī wa-mustawfī-i dīwān*). The same Shāh entrusted him with the composition of a universal history. Nāṣir al-Dīn Shāh also encouraged him in this enterprise and in 1272/1853 conferred on him the title of *Lisān al-Mulk* ("Tongue of the State"). De Gobineau, who had known him, speaks of his "gravité docte et administrative" in contrast to the "façons légères et riantes" of his colleague Riḍā Ḳulī Khān Hidāyat.

The book entitled *Barāhīn al-ʿAdjam* finished by Sipihr in 1251/1835 deals with Persian prosody; it is illustrated by examples from the Persian classical poets. His own verses are cited in anthologies, e.g. the *Madjmaʿ al-fuṣaḥāʾ* of Riḍā Ḳulī Khān [*q.v.*], ii, 156-81; they show technical skill but lack originality and taste. Sipihr's universal history, pretentiously called the *Nāsikh al-tawārīkh* "Effacer of chronicles", was continued, for the early Islamic period, by his son ʿAbbās Ḳulī, and then Sipihr himself took up the history of his patrons the Ḳādjārs; this is the only part of the work of any originality and importance, and goes up to 1273/1857. It was much used by early chroniclers of the Bābī movement [see bābīs], such as de Gobineau, Kazimbek and Browne, with the latter paying tribute to Sipihr's candour and accuracy (most recent edition by M.B. Bihbūdī of the *Taʾrīkh-i Ḳādjāriyya*, 4 vols., Tehran 1385/1965).

(V. Minorsky*)

SIPIHRĪ, Suhrāb (1928-80), Iran's most famous 20th-century painter and a leading modernist Persian poet. Born in Kāshān, where he finished elementary and high school, Sipihrī received a college degree from the College of Fine Arts at Tehran University in 1953. His first exhibition of paintings took place that same year. His first book of poems had appeared in 1951. Other volumes of poetry followed, with his collected poems appearing in 1977 in *Hasht kitāb* ("Eight Books").

In 1957 Sipihrī made his first trip abroad, mainly to London and Paris, participating in a lithography course at l'Ecole des Beaux Arts. To subsequent trips to Tokyo, India, Europe, the United States, Greece and Egypt can be traced influences in his paintings. In the mid-1960s began a period of many Sipihrī exhibitions in Iran and abroad, which brought him to the forefront of Iranian painting. From that period also, Sipihrī's productivity as a poet established him as a leading modernist. Sipihrī never married and was a retiring, private and gentle person, much liked and loved by people who knew him well. He died of leukemia in April 1980 and was buried at a Muslim religious shrine in a village near Kāshān.

Simplicity is a quality of Sipihrī's art. His paintings, mostly inspired by nature, mainly landscape and some village scenes, exhibit splashes of hopeful colour in scenes of brown and other earth colours. The same simplicity in Sipihrī's poetry communicates appreciation of life's individual moments. Sipihrī is the Iranian nature poet *par excellence*. His work recalls that of European Romantics in its love of nature and sometimes child-like wonder, while its communication of belief in the unity of existence and the presence of divine creativity in nature seem rooted in Eastern gnosticism. Unlike other modernist Iranian poets, who are mostly secular-minded, anti-clerical with respect to Iran's Twelver Shīʿī heritage, and not inclined to find inspiration in Islamic imagery, Sipihrī uses images from religion, including allusions to the Ḳurʾān. Some readers consequently find his poetry neo-Ṣūfī. But these lines from his most famous poem, *Ṣidā-yi pāy-i āb* (1964), suggest a personal and individual poetic outlook and philosophy other than Ṣūfī religiosity: "I am a Muslim. My Mecca is a rose. My mosque is a spring. ... My Kaaba lies by the water."

(M.C. Hillmann)

ṢĪR BANĪ YĀS, Djazīrat ("the ultimate place of destination of the Banū Yās" [see yās, banū]), the name of an off-shore island in the western half of the embayment in the Gulf, between the Abū Ẓaby coast and Ḳaṭar [*q.v.*], belonging to Abū Ẓaby. The island is mentioned in 1580 as "Sirbeniast" by the Venetian traveller Gasparo Balbi (Slot, *The Arabs of the Gulf*, 37-9, 50). Some of the islands in this part of the Gulf, including Ṣīr Banī Yās, Ghāgha, al-Yāsāt and particularly Dalmā, were inhabited during the winter months by groups of the Banū Yās, while during the summer they became overcrowded by the influx of pearl fishermen coming usually from what are now the United Arab Emirates [see al-imārāt al-ʿarabiyya al-muttaḥida in Suppl.], Ḳaṭar and Baḥrayn, the majority of the inhabitants being acknowledged as belonging to Abū Ẓaby. The oil con-

cessions of the 1930s necessitated the precise demarcation of the frontiers, the ownership of some of the islands becoming a matter of dispute between Ḳaṭar and Abū Ẓaby. A decision was reached in 1961 and again in 1969. The islands of Ḥalūl, al-Asḥāt and Shirā'ūh were considered as belonging to Ḳaṭar, and those of Dayyīna and Ṣīr Banī Yās to Abū Ẓaby.

(E. van Donzel)

SÎR DARYĀ, conventional form Syr Darya, a river of Central Asia and the largest in that region. The Turkish element in the name, *sîr*, is not actually found before the 10th/16th century; in the following century, the Khīwan ruler and historian Abu 'l-Ghāzī Bahādur Khān [*q.v.*] calls the Aral Sea "the Sea of Sir" (Sîr Teñizi).

1. In the early and mediaeval periods.

The Sîr Daryā flows through the present republics of Kirgizia, Uzbekistan, Tajikistan and Kazakhstan down from the northwestern slopes of the Tien Shan Mountains to the Aral Sea [*q.v.*]. It is formed by the confluence in the eastern part of the Farghāna [*q.v.*] valley of the Narîn/Naryn and Tar or Ḳara Daryā rivers and has a length of 2,200 km/1,370 miles from that confluence and one of 2,900 km/1,800 miles from the source of the Naryn. Its water capacity is fed by melting snow in the Tien Shan and, to a lesser extent, by glaciers there and by rain. The lower reaches are frozen over from December to March/April. In the high-water period March/April to August/September it carries down vast quantities of silt, which used to push out its delta at the Aral Sea (before the present disastrous shrinkage and salinisation of that Sea) by a considerable amount each year (see 2. below). The river has numerous tributaries into its upper and middle reaches before it starts to skirt the northeastern fringe of the Ḳîzîl Ḳum desert, the last significant one being a right-bank affluent, the Arys.

The Sîr Daryā thus has its origin in that region of modern Kirgizia known in mediaeval Islamic times by the Turkish name Yeti Ṣu "[land of] the seven rivers", Russian Semirečye. The indigenous population in mediaeval times always regarded the Ḳara Daryā as the upper source of the Sîr Daryā. The district between the Narîn and the Ḳara Daryā has for long been known in Persian as Miyān rūdān and in Turkish as Iki ṣu arasî. Whether there were any significant irrigation canals led out from it in mediaeval times, as was certainly the case from the lower Āmū Daryā [*q.v.*] or Oxus, is unclear; al-Muḳaddasī's mention of a *khalīdj* or canal 140 farsakhs long between Khudjand in Farghāna and Usrūshana [*q.vv.*] (22 n. *m*, only in the Istanbul ms.) is unconfirmed by other sources.

In Western Europe, the Sîr Daryā is still frequently called by its old Greek name of Jaxartes; a Pahlavī form Yakhšārt is assumed and explained by J. Marquart (*Die Chronologie der alttürkischen Inschriften*, Leipzig 1898, 6) as *yakhsha arta* "true, genuine pearl". Against this explanation is the fact that in the numerous personal and geographical names compounded with *arta*, this component is always found at the beginning of the word. Yet the word *yakhsha* "pearl" seems actually to be contained in the name; the Chinese (*Čin-ču-ho*) and Old Turkish (*Yinčü ügüz*) names of the river have the same meaning. The Chinese transcription of the native name is given as *Yao-sha* (E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1888, i, 75), *Yau-sha* (F. Hirth, *Nachworte zur Inschrift des Tonjukuk*, 81, in W. Radloff, *Die alttürkischen Inschriften der Mongolei*, 2nd series, St. Petersburg 1899) or *Yo-sha* (E. Chavannes, *Documents sur les Toukiue* (*Turcs*) *occidentaux*, St. Petersburg 1903). In the Muslim period the initial *y* seems to have disappeared in the land itself; the Arabic (al-Bīrūnī, *al-Ḳanūn al-Mas'ūdī*, in A. Sprenger, *Post- und Reiserouten*, etc., Leipzig 1864, 32) and Persian (*Ḥudūd al-'ālam*, tr. Minorsky, 118) manuscripts have *Khashart*: this form and not as Marquart assumes (*Die Chronologie*, etc., 5), *Yakhshart* was probably in Ibn Khurradādhbih, 178, l. 2. Ibn Khurradādhbih, 178, l. 4, mentions the name *Kankar* which also appears in Chinese transcription (*K'ank't*) and was used probably on the central course of the river only: cf. *Daryā-i Gang* from Firdawsī, in *Gr. Ir. Ph.*, ii, 445. The Arabs introduced the name *Sayḥūn* for the Sîr Daryā like *Djayḥūn* for the Āmū Daryā (cf. the names Djayḥān and Ṣayḥān in the southeastern frontiers of Asia Minor). In the *Nuzhat al-ḳulūb* of Ḥamd Allāh Ḳazwīnī (ed. Le Strange, 217, 16, tr. and n., *ibid.*, ii, 210) appears the *Gul Ẓaryūn* which seems to occur nowhere else. Blochet explains this word (in Le Strange, *loc. cit.*) as the Mongol *gul serikūn* = "cold river", probably wrongly, as the order of words should be reversed. The river is usually called in Arabic and Persian sources after towns and districts on its banks, most frequently "river of Khudjand" (Khudjand is now the only town situated immediately on the bank of the Sîr Daryā). This name also was adopted by the Mongols (Bretschneider, *loc. cit.*, in Chinese transcriptions *Ho-shan-mu-lien*, for Mongol *müren* "river"). Also occasionally found, since the Ḳara Daryā flowed past the mediaeval town, important under the Ḳarakhanids [see ilek khāns], of Özkend [*q.v.*] or Uzkend, is the name "river of Özkend" (e.g. in *Ḥudūd al-'ālam*, tr. 72). Other names include: river of Banākat, or Fanākat (in Yāḳūt, *Mu'djam*, i, 740: Banākit), after the town on the right bank near the mouth of the Angren said to have been destroyed by Čingiz Khān (this destruction is not recorded by contemporaries); river of Shāhrukhiyya after the town built by Tīmūr in 794/1392 on the site of the destroyed Banākat (*Ẓafar-nāma*, Calcutta 1888, ii, 636); river of Akhsīkat (*ibid.*, i, 441) or Akhsīkath [*q.v.*]; and river of Čāč or Shāsh, after the great oasis of Čirčik.

There were many towns along the course of the Sîr Daryā, especially numerous in the fertile Farghāna valley. On the middle course lay such provinces as Usrūshana and Īlāḳ [*q.v.* in Suppl.], and the frontier towns of Utrār [*q.v.*] and Isfīdjāb [*q.v.* in Suppl.], for it was here that the river valley entered the lands of the pagan Turks. At the mouth of the river three towns are mentioned in the geographers of the 4th/10th century, including the Oghuz foundation of Yangi-kant (Ar. al-Ḳarya al-ḥadītha, Pers. Dih-i Naw; see C.E. Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, Edinburgh 1963, 212-13), Djand and Khuwāra [see on these, djand, in Suppl.].

In the 4th/10th century the Sîr Daryā is mentioned as a navigable river along with the Āmū-Daryā (al-Muḳaddasī, 323, 1); in "times of peace or of truce", food supplies were brought to Ḳaryat al-Ḥadītha by water (Ibn Ḥawḳal, tr. Kramers-Wiet, 489). Navigation is now interrupted by the rapids of Begovat which begin at the village of Ḳosh-Tegermen, 15 miles below Khudjand. These rapids seem to be nowhere mentioned in Muslim sources; Djuwaynī's story (*Ta'rīkh-i Djahān-gushā*, tr. Boyle, i, 92-4) of the siege of Khudjand by the Mongols in 1220, and the

adventurous flight of the commander Tīmūr Malik, presupposes an uninterrupted passage by water from Khudjand to the towns on the lower course of the Sīr Daryā (cf., e.g. d'Ohsson, *Histoire des Mongols*, i, 225-6). After the foundation of Russian rule on the lower course of the Sīr Daryā (since 1847) an attempt was made to introduce steam navigation on the river; the steamers of the Aral fleet went up the Sīr Daryā also and had their most important anchorage at the town of Kazalinsk founded by the Russians. After this service ceased in 1882, no further such attempts were made, although several times proposed; traffic on the Sīr Daryā was maintained solely by boats of native construction (*kayïk*).

(W. Barthold-[C.E. Bosworth])

2. The colonial and modern periods. With the submission of the Kazakh steppes in the 1830s, at a time when Anglo-Russian rivalry was becoming strong, the Tsarist armies formed a fortified line along the Sīr Daryā which allowed them to occupy without difficulty in 1864 the towns of Čimkent, Turkestan and Aulie Ata, and then Tashkent in 1865. The Russian government thus inherited the system of water distribution according to Ḳur'ānic law, to which was added the question of agricultural lands for the colonial interests. Despite some innovations, the area of irrigated land remained limited (35,000 ha in the Hunger Steppe) and dependent on the small and medium-sized water courses.

The installation of the Soviet régime was accompanied by a specific policy of irrigation involving the maximum use of the waters of the Āmū and Sīr Daryās, until then neglected in favour of lesser streams. Apart from the introduction of agricultural reform and a new irrigation water law between 1925 and 1929, the Five Year Plans of the Stalinist period gave a large part to the large-scale (numerous water barrages) and a spectacular increase in the network (more than 50 canals which were led off) between the years 1938-40. Because of this, the water flow of the Sīr Daryā progressively dried up as the surface of irrigated land increased (some 2,286,000 ha in 1965 and 4,109,000 in 1987). This process accelerated after the 1960s. It reduced almost to nothing the supply of water to the Aral Sea, whose decrease, already noted by 19th-century travellers (Meyendorff, 1826; Ujfalvy, 1872), has led to a present-day ecological disaster without precedent: wastage of water for intensively irrigated agriculture on the lower course, salinisation of the land and of the Sīr Daryā's waters (456 mg/l I 1912, 1844 g/l in 1985 at Kazalinsk), pollution of the Sea itself, unrestrained use of fertilisers and a deterioration of health conditions for the populace. The middle and lower courses formed, over the long scale of history, a line of political demarcation which also had, in the complex history of contacts between the Siberian and Middle Eastern worlds, an important cultural dimension. Thus in the 8th and 9th centuries A.D. the Sīr Daryā had marked the northern limit of Islam and the southern limit of the Turkicised domain (see 1. above). More generally, the middle reaches of the river, the most populated zone, was regarded as the frontier of urban civilisation and its learned culture vis-à-vis a nomadic civilisation based on orality.

The Sīr Daryā, like other great rivers of the world, ran through various states which, during the Russian and Soviet periods formed part of the same political unit. During 1924-9 its course watered a part of the autonomous Tajik republic (transformed into a federated republic in 1929), the Uzbek federated republic and the autonomous Kirghiz republic, which became the federated Kazakh republic in 1925. Today, these republics have, since the winter of 1991, become independent, but the economic and ecological crisis ravaging the region places the river in the position of a hostage in the fragile inter-ethnic and political equilibrium which is emerging there. The Farghāna valley, where the Islamic revival seems most marked, is at the intersection of a bundle of economic and social problems in which a strong hand on the utilisation of the river and the canals running off it will be decisive. The possible deflection of the river's waters in favour of some republic, region or population group is a weapon often used in history.

SĪRA (a.), a genre of early Islamic literature: *Sīra* means "way of going"; "way of acting", "conduct", "way of life" (in these meanings it is almost synonymous with *sunna* [*q.v.*]); also "memorable action" and "record of such an action". In *ḥadīth* collections and books on Islamic law, the plural *siyar* is also used for "rules of war and of dealings with non-Muslims" (which are sometimes headed elsewhere under *djihād*). Furthermore *sīra* means "epistle", "pamphlet", "manifesto", and last but not least: "biography", "the life and times of ...". Ibn al-Muḳaffaʿ (102-39/720-56 [*q.v.*]) translated a Pahlavi history of the Persian kings under the title *Siyar mulūk al-ʿadjam*. ʿAwāna b. al-Ḥakam (d. 147/764 [*q.v.*]) wrote a *Sīrat Muʿāwiya wa-banī Umayya*. Abān b. ʿAbd al-Ḥamīd al-Lāḥiḳī (d. *ca.* 200/815 [*q.v.*]) wrote *Sīrat Ardashīr* and *Sīrat Anūshirwān*. For later popularised biographies of kings and heroes, see sīra shaʿbiyya.

"The *sīra*", *sīrat rasūl allāh* or *al-sīra al-nabawiyya*, have been the most widely used names for the traditional account of Muḥammad's life and background. Martin Hinds (Maghāzī *and* Sīra, in *La vie du Prophète Mahomet*, 57-66; see also maghāzī) has argued that the biographical material on the Prophet was transmitted during the first two centuries of Islam exclusively under the name of *maghāzī*, whereas *sīra* was applied only since Ibn Hishām (d. 218/833 or 213/828 [*q.v.*]). This view has been challenged by Maher Jarrar (*Prophetenbiographie*, 1-59), who claims that *maghāzī* is only part of the *sīra*, the designation being used occasionally as a *pars pro toto*, and that the biography was already called *sīra* by al-Zuhrī (d. 124/742 [*q.v.*]), a central figure in the transmission of materials on the Prophet.

History of the *sīra*. In maghāzī, Hinds discussed not only the designation of the prophetic biography but wrote also its early history. For that stage

the present contribution has little to add. However, the most archaic layer of the biography, that of the stories of the *ḳuṣṣāṣ* [see ḲĀṢṢ; ḲIṢṢA. 1], deserves a little more emphasis. An early 3rd/9th century papyrus, whose *isnād*s go back to Wahb b. Munabbih (34-110/654-728 [*q.v.*]), contains a large *sīra* fragment of the early *ḳiṣṣa* type. Its narrative is lengthy, no less entertaining than edifying, more often interrupted by poetry than by *isnād*s; it has an outspoken pro-ʿAlī ring, and it contains a wealth of miracle stories (e.g. the Prophet practicing sorcery: Wahb 142, 20; Ibn Isḥāḳ, no. 426).

A renewed study of Ibn Isḥāḳ has been stimulated by the publication of part of Ibn Isḥāḳ's *maghāzī* in the *riwāya* of Yūnus b. Bukayr (d. 199/815; *GAS*, i, 289), which has been preserved in ms. Fās Ḳarawiyyīn 202, and in the *riwāya* of Muḥammad b. Salama al-Ḥarrānī (d. 191/807; Ibn Ḥadjar, *Tahdhīb* ix, 296) (Damascus Ẓāhiriyya madj. 110, fols. 158-174). These texts, which contain many fragments which were hitherto unknown or deviate from the familiar versions, shed new light on the transmission of Ibn Isḥāḳ's work. Comparisons of Yūnus' versions with those of al-Bakkāʾī (as preserved by Ibn Hishām), Muḥammad b. Salama and several others have led Sellheim, Samuk and Muranyi to the conclusion that there has hardly been any written standard text by Ibn Isḥāḳ himself and that we depend on his transmitters, whose texts should be studied synoptically, in all their variants.

Furthermore, Muranyi has pointed out that Yūnus b. Bukayr transmitted materials which do not go back to Ibn Isḥāḳ at all. Yūnus was a *sīra* compiler in his own right, whose *Ziyādāt al-maghāzī* was quoted by al-Bayhaḳī, Ibn Kathīr and several others.

After Ibn Isḥāḳ, a limited, but interesting *maghāzī* collection was composed by Maʿmar b. Rāshid (d. 154/770; *GAS*, i, 290-1), which is preserved in the *Muṣannaf* by ʿAbd al-Razzāḳ b. Hammām (d. 211/826; see AL-ṢANʿĀNĪ). Several other *ḥadīth* collections have a *maghāzī* section, e.g. Ibn Abī Shayba's *Muṣannaf* and al-Bukhārī's *Ṣaḥīḥ*.

The fame of Ibn Hishām, whose *sīra* is considered the most prominent, rests mainly on his selection from Ibn Isḥāḳ's work. The latter, by means of his *Mubtadaʾ* section, had placed Muḥammad in the tradition of the earlier prophets, and had indeed made him the pivot of world history by adding a history of the caliphs. Ibn Hishām, however, narrows the perspective down to Ancient Arabia. A chain of works with a limited focus on prehistory are al-Wāḳidī's (130-207/747-822 [*q.v.*]) *K. al-Maghāzī*, which concentrates on the life and times of the Prophet only and displays a great interest in the chronology; the *Ṭabaḳāt* of Ibn Saʿd (d. 230/845), in which the *sīra* section is preceded only by a brief survey of the prophets, and al-Balādhurī's (3rd/9th cent.) *Ansāb al-ashrāf*, which outlines Muḥammad's ancient Arabian origins. Al-Ṭabarī's (d. 310/922 [*q.v.*]) *Taʾrīkh* puts Muḥammad once again in the perspective of the history of the prophets and even the kings of Persia.

The numerous later *sīra* works are mainly commentaries or compilations, although they contain important material from early sources. Of the late authors, the most interesting are al-Suhaylī (d. 581/1185), who wrote a commentary on the *sīra* of Ibn Hishām, and his critic Mughulṭāy (d. 689/1290). Other compilers are Ibn Sayyid al-Nās (d. 734/1333); Ibn Kathīr (d. 774/1373; in *al-Bidāya wa 'l-nihāya*); Muḥammad b. Yūsuf al-Ṣāliḥī (d. 942/1536; Brockelmann, II, 304-5); and Nūr al-Dīn al-Ḥalabī (975-1044/1567-1635; see AL-ḤALABĪ).

For a survey of early *sīra* works, see *GAS*, i, 275-302; for late works see Kister, *The* sīrah *literature*, 366-7.

Characteristics of *sīra* texts. Be it under the heading *maghāzī* or *sīra*, in the prophetic biography very heterogeneous materials are brought together. Various intentions seem to prevail: to build up the image of Muḥammad in rivalry to the prophets of other communities, to depict him as a statesman of international stature, to elaborate on Ḳurʾānic texts and create a chronological framework for them, to record the deeds of the early Muslims, to continue the genre of *ayyām al-ʿarab* [*q.v.*] and to set standards for the new community. These intentions are striven after in a great variety of text types, of which the following survey is by no means exhaustive:

(1) Stories about the military expeditions of Muḥammad and his companions (*maghāzī* in the strictest sense). They form a continuation of the profane accounts of *ayyām al-ʿarab*, with raids, battles, challenges, examples of bravery, exchanges of poetry and single combats. Islamic elements are, e.g., the intervention of angels in battle and the (often merely ornamental) addition of Ḳurʾānic passages. In later centuries, the *maghāzī* were continued in their turn by would-be historical popular stories in which Muḥammad is venerated, while ʿAlī b. Abī Ṭālib develops into a military hero of supernatural stature. These popular stories, which were studied by Paret, can be reckoned with the *sīra shaʿbiyya*. The 7th/13th century author Abu 'l-Ḥasan al-Bakrī [see AL-BAKRĪ] played a central part in this genre, but he may well have had predecessors.

(2) Accounts of *faḍāʾil* and *mathālib*, which form the record of the merits and faults of clans and individual Companions of the Prophet, as well as their genealogies. Various lists are incorporated in the *sīra*: of the first converts, of the Emigrants, the fighters in various battles, representatives of the Anṣār, etc. A specific type of text, to which also monographs were dedicated, is that of the *awāʾil* [*q.v.*], in which is recorded who did something for the first time, e.g. Saʿd b. Abī Waḳḳāṣ was the first to shed blood in Islam (Ibn Isḥāḳ, no. 194). The deeds of the Companions also became recorded in separate works, such as the *Ṭabaḳāt* by Ibn Saʿd; *al-Istīʿāb fī maʿrifat al-aṣḥāb* by Ibn ʿAbd al-Barr (368-463/978-1070), *Usd al-ghāba* by Ibn al-Athīr (555-630/1160-1233) and *al-Iṣāba fī tamyīz al-ṣaḥāba* by Ibn Ḥadjar al-ʿAsḳalānī (773-852/1372-1449) [*q.vv.*]. These works show many overlaps with *sīra* texts and should be read in combination with them.

(3) Pieces of Ḳurʾānic inspiration: *tafsīr*, *asbāb al-nuzūl* and Midrash. Large parts of the *sīra* are inspired by the Kurʾān. They have been recently studied by J. Wansbrough.

Some texts merely paraphrase a Ḳurʾānic passage, e.g. sūra XCIII in Ibn Isḥāḳ, no. 166.

Typical for the *sīra* are the accounts of the occasion for the revelation of certain Ḳurʾānic passages (*asbāb al-nuzūl*). When the Prophet was mocked, for example, the verse "Apostles have been mocked before you ..." (VI, 10) was revealed (Ibn Hishām, 262; cf. *ibid.*, 272, and Ibn Isḥāḳ, no. 418).

Many *sīra* texts elaborate on a Ḳurʾānic passage, in the manner of a Jewish midrash. The episode of the Satanic verses (al-Ṭabarī, i, 1192-4), for example, was evoked and foreshadowed by XXII, 52: Satan casts something on the tongue of a prophet; God abrogates it and establishes His verses. In one version, this episode is presented as a *sabab al-nuzūl*.

The relationship between a Ḳurʾānic passage and the story which pivots upon it may be quite loose.

The long narrative of how Ḳuraysh conspired at the eve of Muḥammad's *hidjra*, and how Allāh outwitted them by making them unable to see him, is built on VIII, 30: "and when the unbelievers were plotting ... but God plots also, and God is the best of plotters", and elegantly incorporates XXXVI, 8: "... and We covered them, so that they could not see" (Ibn Hishām, 323-6; see also Wahb, 132-6). This story does not give the occasion for the revelation of the verses, but playfully talks about them together.

The verse which forms the inspiration of a story need not even be quoted. The story about the reception of Muslim emigrants by the Negus of Abyssinia is built on Ḳur'ān, III, 191, without any literal correspondence (cf. W. Raven in *JSS*, xxxiii [1988], 201).

(4) Prophetic legend. As the Ḳur'ān had done before, the *sīra* aims at establishing the place of Muḥammad among the prophets, and that of Islam among the other religions. The numerous stories which dwell upon the characteristics of prophethood react on the narrative repertoire of Judaism [see ISRĀ'ĪLIYYĀT], Christianity and Manichaeism.

Some examples: The twelve "leaders" (*nuḳabā'*) appointed by Muḥammad from the Anṣār at al-ʿAḳaba [*q.v.*] are put on a par with the disciples of Jesus or the representatives of the tribes of Israel during the Exodus (Ibn Hishām, 299; Wahb, 130).

In the Ascension story, the rank attributed to the prophets is reflected by their places in one of the seven heavens: Muḥammad finds Ibrāhīm in the highest heaven, but Mūsā and ʿĪsā in the lower ones (Ibn Hishām, 270).

Even the physiognomies of the various prophets were subjected to comparative descriptions (Ibn Hishām, 266, Ibn Saʿd, i/2, 125).

The *sīra* sometimes recapitulates prophetic characteristics in general statements, which are exemplified by Muḥammad: there is no prophet but has shepherded a flock (Ibn Hishām, 106); a prophet does not die without being given the choice (*ibid.*, 1008); no prophet dies but he is buried where he died (*ibid.*, 1019); the eyes of prophets sleep while their hearts are awake (*ibid.*, 266; Ibn Saʿd i/1, 113). In *ḥadīth* this generalising tendency becomes more frequent; cf. Wensinck, *Handbook*, 196-7.

The *sīra* contains stories about numerous miracles wrought by God through His Prophet, or by the Prophet himself, which served as the proofs of his prophethood, often with the intention of comparing him to the other prophets. From the 3rd/9th century onwards, these stories developed into the independent genre of *dalā'il* or *aʿlām* or *amārāt al-nubuwwa*. Well-known authors in this field are ʿAbd al-Djabbār al-Hamadhānī (d. 415/1025), Aḥmad b. al-Ḥusayn al-Bayhaḳī (d. 458/1066), Abū Nuʿaym al-Iṣfahānī (d. 430/1038), and al-Māwardī (d. 450/1058) [*q.vv.*]. For a longer enumeration of such works, see Kister, *The* sīrah *literature*, 355.

(5) Written documents, including:
- letters from the Prophet to foreign rulers, governors and to the Arabian tribes (e.g. Ibn Abī Shayba, *Muṣannaf*, xiv, 336-46);
- treaties, as for instance that of al-Ḥudaybiya [*q.v.*] (Ibn Hishām, 747-8);
- the "Document (*kitāb*; wrongly called 'Constitution') of Medina" (Ibn Hishām, 341-4; Abū ʿUbayd al-Ḳāsim b. Sallām, *K. al-Amwāl*, ed. M. ʿAmāra, Beirut 1989, 291-4) is a category in itself. It is an agreement between "Muḥammad the Prophet" and "the believers and Muslims of Ḳuraysh and Yathrib, and those who follow them, join them, and strive alongside them", including Jewish groups (see MUḤAMMAD, at vol. VII, 367b, and the updated bibliography here below);
- the lists which were mentioned above under *faḍā'il* and *mathālib* should in some cases be classified as documents. Lists of the first Emigrants, or of participants in certain battles, may have been taken over by the story-tellers from government registers.

(6) Speeches and sermons by the Prophet, e.g. his first addresses in Medina (Ibn Hishām, 340-1); his speech at the Farewell Pilgrimage (*ibid.*, 968-9).

(7) Poetry. Story-tellers often interspersed their *maghāzī* narratives with poetry. This has a function similar to that of speeches; it underlines a point or emphasises a dramatic moment by changing to another mode. Battling heroes exchange improvised poetry, as was the case in *ayyām al-ʿarab*. This poetry is generally of poor quality. Serious poetry occurs as well, e.g. by Kaʿb b. Zuhayr (his *Bānat Suʿād* is the only *ḳaṣīda* in the *sīra*) and Ḥassān b. Thābit [*q.vv.*]. A new kind of panegyric praises the Prophet, emphasising his mission, his spiritual qualities and those of his new religion. Certainly not all poetry ascribed to Ḥassān was composed by him, as Arafat has pointed out.

Ibn Hishām tends to place all occasional poetry on a certain event together, e.g. after his accounts of the battles of Badr, Uḥud and Ḥunayn, possibly because he took the narratives which he transmitted too seriously to contaminate them with doubtful verse.

The simple, sometimes banal character of the poetry in the *sīra*, as well as the often unlikely ascriptions may have led early critics to the verdict that much of it is "inauthentic", i.e. not composed by the poets it is ascribed to. Ibn Hishām expresses his doubts about authorship in many places. Ibn Sallām al-Djumaḥī [*q.v.*] censures Ibn Isḥāḳ's unfamiliarity with poetry and his uncritically taking over of whatever poetry he found, be it ascribed to men who had never said a line of verse, to women or even to ʿĀd and Thamūd (*Ṭabaḳāt fuḥūl al-shuʿarā'*, ed. M.M. Shākir, Cairo 1974, 7-8, 11). Ibn al-Nadīm accuses Ibn Isḥāḳ of having inserted poetry on request (*Fihrist* 92).

"Authenticity". The question of the authenticity of the poetry has also been discussed by modern scholars (Kister, Monroe, Arafat), although it seems less urgent if one does not start from the assumption that the surrounding prose texts date back to the time of the Prophet. There is indeed no reason why some *ḳāṣṣ* would not have included pieces of verse in his narrative, in order to comment on past events, or to make propaganda for certain factions of his own days. The poetry turns out to be easily interchangeable in different versions of a story.

The *sīra* materials as a whole are so heterogeneous that a coherent image of the Prophet cannot be obtained from it. Can any of them be used at all for a historically reliable biography of Muḥammad, or for the historiography of early Islam? Several arguments plead against it:

(1) Hardly any *sīra* text can be dated back to the first century of Islam.

(2) The various versions of a text often show discrepancies, both in chronology and in contents.

(3) The later the sources are, the more they claim to know about the time of the Prophet.

(4) Non-Islamic sources are often at variance with Islamic sources (see P. Crone and M. Cook, *Hagarism*).

(5) Most *sīra* fragments can be classed with one of the genres mentioned above. Pieces of salvation history and elaborations on Ḳur'ānic texts are unfit as sources for scientific historiography—except, of course,

for the historiography of the image of the Prophet in the belief and doctrine of his community.

The "Document of Medina" is generally considered authentic, i.e. dating back to the Prophet, but there is disagreement about the unity of the text and its attitude towards (certain groups of) Jews, because the well-known Jewish tribes of Medina are not mentioned.

Scholars, driven perhaps by a *horror vacui*, continue deriving historical facts from late sources. The last scholarly biography of Muḥammad is that by W. Montgomery Watt (*Muhammad at Mecca* and *Muhammad at Medina*, Oxford 1953, 1956), and a new one is unlikely to appear. G. Schoeler has recently published a monograph on the character and authenticity of Islamic tradition about the Prophet's life.

To Muslims, the *sīra*, which in the first centuries of Islam had been taken less seriously than *ḥadīth*, gradually became almost a holy writ, whose reliability was accepted almost without asking questions. In reaction to the rise of historical criticism in the west, which often struck a patronising, if not resentful, note towards Islamic beliefs, some Muslims have felt the need vigorously to defend the veracity of the *sīra*. *The Life of Muḥammad* by Muḥammad Ḥusayn Haykal (1935) is an example of an apologetic biography.

A striking illustration of the attitude of modern Muslims towards the *sīra* is the scandal around the British author Salman Rushdie, who in his novel *The Satanic verses* (London 1988) has alluded to both traditional and self-invented details from the life of the Prophet, and has been subsequently severely attacked and threatened all over the Muslim world, notably in Iran.

(W. RAVEN)

SĪRA SHAʿBIYYA (or "popular *sīra*"), the modern Arabic designation (coined by Arab folklorists in the 1950s) for a genre of lengthy Arabic heroic narratives that in western languages are called either "popular epics" or "popular romances" (*Volksroman*). These narratives, which in their manuscript corpus refer to themselves equally as either *sīra* or *ḳiṣṣa* [*q.vv.*], are works of adventure and romance primarily concerned with depicting the personal prowess and military exploits of their heroes. Pseudo-historical in tone and setting, they base many of their central characters on actual historical figures or events. Nevertheless, details of history are soon transcended by the imaginative improvements that fiction provides, with the result that history is usually reflected only along general levels of setting, atmosphere and tone.

The written versions of popular *sīras* are composed in rhymed prose (*sadj*ʿ [*q.v.*]) frequently interspersed with poetry, and they tend to be exceedingly long, often taking a year to narrate fully in oral form and with the longest manuscript and printed versions running to between two and six thousand pages, depending upon page and script size. Arabic literature produced a rich harvest of these popular epics that, taken together, cover almost the whole of recorded pre-Islamic and Islamic history. Early Persian history is represented by *Sīrat Fīrūz-Shāh*, whose protagonist is the son of the Achaemenid King Darius II; the Sāsānid dynasty figures in the *Story of Bahrām Gūr* [see BAHRĀM GŪR], and in between falls *Sīrat Iskandar* [see ISKANDAR], the *geste* of Alexander the Great. Pre-Islamic South Arabian history forms the backdrop for *Sīrat al-Malik Sayf ibn Dhi 'l-Yazan* [see SAYF B. DHĪ YAZAN] while pre-Islamic North Arabian history is dealt with in *Sīrat ʿAntar* [see ʿANTAR, SĪRAT], as well as in the story of *al-Zīr Sālim* and other accounts of the War of Basūs [*q.v.*] between the tribes of Bakr and Taghlib. Early Islamic history is broached with *Sīrat Amīr Ḥamza*, which narrates the adventures of Ḥamza b. ʿAbd al-Muṭṭalib [*q.v.*], uncle to the Prophet Muḥammad. *Dhāt al-Himma* [*q.v.*], *Ghazwat al-Arḳaṭ*, and *al-Badr-Nār* deal with the tribal feuds and holy wars (*al-djihād*) of the Umayyad and ʿAbbāsid caliphates; while Fāṭimid and Mamlūk history are treated in *Sīrat al-Ḥākim bi-Amr Allāh* [see AL-ḤĀKIM] and *Sīrat al-Mālik al-Ẓāhir Baybars* [see BAYBARS]. The protagonists of the cycles of *Aḥmad al-Danaf* and *ʿAlī Zaybak* are not martial heroes but rather *ʿayyārūn* (rogues [*q.v.*]), who rely on craft and guile to achieve their aims. Finally, there is *Sīrat Banī Hilāl*, along with *Sīrat ʿAntar* the most famous and beloved cycle of this genre, which gives a legendary account of the history of the tribe of the Banū Hilāl [*q.v.*] from their pre-Islamic days until their conquest of much of North Africa in the 5th/11th century.

Although the genre of Arabic popular epic probably began to develop in the early period of the Islamic empire, references to specific works occur only in the early 6th/12th century. The formulaic character of their rhymed prose, the episodic structure of their story-lines, their continual repetition of a limited number of narrative patterns and motifs, the lack of any identifiable authors and their great length all indicate that these narratives originated and developed within a flourishing tradition of oral compositional public storytelling. This tradition of oral composition (either with or without musical accompaniment) has diminished significantly in the last century in the face of competition from modern entertainment technology, although some transfer has been made and these stories now occasionally appear in the Arab world as radio dramas, television series, films, and in modernised book and storybook form. Despite their primary existence as an oral popular art form, *sīras* also have a substantial manuscript and printed tradition. The earliest manuscripts date from the early 9th/15th century, whilst in the last century printed versions of these manuscripts have been continually reproduced in various Arab countries.

There are significant differences in style, content, and historical origin among members of the genre. *Sīrat Fīrūz Shāh*, for example, is Persian in origin, while *Sīrat al-Zīr Sālim* is based on pre-Islamic *Ayyām al-ʿArab* [*q.v.*] sources. *Sīrat al-Malik Sayf ibn Dhi 'l-Yazan* is full of sorcery and demons, while *Sīrat ʿAntar* is practically devoid of magic. *Sīrat al-Mālik al-Ẓāhir Baybars* is cast mainly in unadorned prose, while other *sīras* use rhymed prose (*sadj*ʿ) and poetry. Nevertheless, these works form a cohesive genre by reason of their shared emphasis on heroes and heroic deeds of battle, their pseudo-historical tone and setting, and their indefatigable drive towards cyclic expansion; one event leads to another, one battle to another, one war to another, and so on for hundreds and thousands of pages.

Viewed from a wider cultural perspective, these popular epics are Arabic examples of a larger body of vibrant popular literature that existed in most parts of the Islamic world. Pre-modern Persian and Turkish literatures also developed strong traditions of popular epic, and there is convincing evidence that, despite their linguistic differences, neighbouring traditions of popular storytelling borrowed and translated from and mutually influenced one another. *Sīrat ʿAntar*, for example, exists in an Ottoman Turkish translation, and many of these epics exist in multiple versions across disparate linguistic borders. Renditions of *Sīrat Amīr Ḥamza*, for instance, exist in Arabic, Persian, Turkish, Georgian, Urdu and Malay, while versions of *Sīrat Iskandar* are even more widely disseminated.

Furthermore, Arabic and other Islamic popular epics constitute only one portion of a vast tradition of multilingual Islamic popular literatures that also encompasses non-epic pseudo-historical narratives (*maghāzī* [*q.v.*] and *futūḥ*), religious literature of various types (popular biographies of the Prophet Muḥammad and his companions, saints' legends, accounts of miracles, etc.), numerous genres of popular poetry, song, proverb and humour, and tales of wonder and fantasy, the best known being *Alf layla wa-layla* [*q.v.*]. The history and nature of this large corpus of literature is still largely uncharted, as are the ways in which different genres, whether within single linguistic traditions or across them, influenced or impacted one another. Nevertheless, no single example of these popular literatures should be considered without at least an awareness of the existence of this larger literary and social context.

(P. Heath)

SIRĀDJ (A.), lamp (synonyms *miṣbāḥ, ḳindīl*, etc., from Pers. *čirāgh* via Syriac *shrāgā* or *shrāghā*). In the Ḳurʾān, the word *sirādj* occurs four times, and *miṣbāḥ* three times, in the sense of lamp or beacon. In LXXI, 15/16, the sun is characterised as a *sirādj*, and XXXIII, 45/46, the Prophet is called a "shining lamp", *sirādj munīr*. The most famous reference is, however, in the "light verse", XXIV, 35, where God's light is compared with a niche in which is a lamp [see NŪR. 2.]. Later in Islam, Ibn ʿArabī [*q.v.*] interpreted the allegory of the Ḳurʾānic "fourfold light", expressed by *mishkāt, miṣbāḥ, zudjādja* and *zayt*, as referring to the Four Holy Books, sc. the Ḳurʾān, the Psalms, the Pentateuch and the Gospels.

The use of lamps in Arabian Islamic society was perhaps not widespread. Among the earliest references to lamps in the domestic life of Islamic society, we learn from a tradition narrated by ʿĀʾisha that there was no lamp in the Prophet's household in the early years of his life at Medina (cf. Malik b. Anas, *Muwaṭṭaʾ*, i, 106). In early Islamic society, there are indications that Abū Bakr and al-Zubayr b. al-ʿAwwām, among their contemporaries, owned lamps. In the social life of Medina, the introduction of a lamp (*ḳindīl*) in the life of the community was associated with the Prophet's Mosque, which was adjacent to Muḥammad's own house. The lighting of a lamp (*ḳindīl*) at the Prophet's mosque is said to have been the work of one of his disciples, namely, Tamīm al-Dārī [*q.v.*]. According to records, Tamīm, a wine merchant before his conversion to Islam, brought a *ḳindīl* with lamp oil and a wick from his native Syria to Medina. His lighting of a lamp in the mosque was an important social event which was not only approved but also commended by the Prophet who, allegedly, gave him the nickname of *sirādj*. Prior to the use of lamps, according to Ibn ʿAbd al-Barr, palm leaves (*saʿaf al-nakhl*) were burnt for lighting the interior of the mosque. After the event of lighting a lamp in the *Masdjid al-Nabawī*, the use of lamps at night in mosques became a universal practice among Muslims.

The growing popularity of lamps in Islamic society is reflected in the records of trade in lamps. By the time ʿUmar b. al-Khaṭṭāb assumed the caliphate and the Islamic conquests of older seats of civilisation such as Syria, ʿIrāḳ and Egypt were accomplished, the use of lamps became widespread among the Arabs. ʿUmar is portrayed as a pious and scrupulous head of state, who, it is said, once extinguished a state-owned lamp at the time of his supper and said, "I do not eat in the lighting of a lamp owned by the public (*sirādj al-ʿāmma*)." (al-Rāghib al-Iṣfahānī, *Muḥāḍarāt al-udabāʾ*, Beirut 1961, iv, 412).

During al-Walīd's reign (86-96/705-15), the Umayyad mosque was built in Damascus and the Prophet's mosque was enlarged at Medina. Chandeliers were hung from chains to illuminate these mosques (al-Samhūdī, *Wafāʾ al-wafā*, Beirut 1971, ii, 519). Al-Djahshiyārī portrays the ʿAbbāsid al-Manṣūr (nicknamed *Abu 'l-Dawāniḳ* "father of farthings" for his austere fiscal policy) as having instructed his servants not to keep lamps burning in his palace in daylight hours because it was an unnecessary waste of oil (*K. al-Wuzarāʾ*, Cairo 1938, 139).

Al-Djāḥiẓ records in his *K. al-Bukhalāʾ* that there were several types of lamps in use in his time, such as pottery lamps (*masāridj al-khazaf*) and stone lamps (*masāridj al-ḥadjar*) and glass lamps (*ḳindīl al-zudjādj*). The prototypes of such pottery and stone lamps are ancient, and have been found at Ur in ancient Mesopotamia in the Sumerian civilisation (cf. W.T. O'Dea, *The social history of lighting*, London 1958, 15). Al-Djāḥiẓ in his social satire on the misers portrays a certain Abū ʿAbd Allāh al-Marwazī who, one evening, paid a visit to the house of a Khurāsānian *shaykh* who had just lit a green pottery lamp in his house. Their subject of conversation turned to lamps and the most economic way of using them; it emerged that the glass lamps were cleaner and more economical than pottery lamps because those did not absorb oil (ed. Ḥādjirī, Cairo 1958, 17-21, tr. Pellat, Paris 1951, 27-31). In the social and domestic life of Arab society in early Islamic centuries, lamps were an essential tool for lighting in the life of average people, although the wealthy and notables could afford and showed a preference for candles and glass lamps. Al-Khaṭīb al-Baghdādī also took up the theme of the misers in his shorter version of the *Kitāb al-Bukhalāʾ*, echoing the belle-lettrist's social satire of a class which disregarded and made a mockery of the Arab social value of generosity (*sakhāʾ*). An ʿAbbāsid poet, Marwān b. Ḥafṣa, who received largesse from al-Mahdī (d. 169/785), was accused of being a miser because he did not spend money to buy a lamp for lighting his house (cf. *Taʾrīkh Baghdād*, xiii, 142-3).

We also find in Arabic and Persian travel accounts frequent references to the use of lighting at night in many parts of the mediaeval Islamic world. Lamps made of silver, brass and other materials, as well as wax candles, were widely used for lighting in centres of social and religious significance such as mosques, markets and tombs of holy personages. Nāṣir-i Khusraw (*ca.* 1045) reported a widespread use of lamps, made of brass and silver, in the holy places of Hebron, Bethlehem and Jerusalem. He further noted that the lamp oil, called *zayt ḥārr*, was derived from turnip

seed and radish seed. He also wrote that in the mosque of Fusṭāṭ there was a huge silver lampholder or chandelier with sixteen branches, which could hold as many as seven hundred odd lamps on holiday evenings. More than a hundred lamps were kindled in the Fusṭāṭ mosque every night. In Cairo, according to Nāṣir-i Khusraw again, there was also a Market of Glass Lamps (*Sūḳ al-Ḳanādīl*) which was on the north side of the mosque. Yāḳūt also mentions a *Zuḳāḳ al-Ḳanādīl* ("Lamps' lane") in Cairo. There are some rare instances of people who had the surname of *al-Miṣbāḥ* in Islamic society of the ʿAbbāsid and Fāṭimid periods. Al-Thaʿālibī noted that all places of worship, Zoroastrian temples, Christian churches and Jewish synagogues, had a means of burning fire or lamps for interior lighting (cf. al-Thaʿālibī, *Thimār al-ḳulūb*, 459-60). Although Ibn al-Ukhuwwa speaks of an Islamic prohibition of the use of vessels like lamps, and of candlesticks made of gold or silver, al-Samhūdī records the existence of lamps made of silver and gold given as gifts by Muslim kings and potentates for the Prophet's sacred house (*al-ḥudjra al-sharīfa*) (cf. *Wafāʾ al-wafā*, ii, 584-7).

In Cordova during the Arab period, according to some sources, there were not only household lamps but also street lamps. In his travels to the eastern Islamic lands, the Andalusian traveller Ibn Djubayr witnessed, among other things, candlebearing chandeliers of different styles. He saw lamps lighted, torches kindled and candles lit and censers burning fragrant aloes wood in the sacred mosque in Mecca in the blessed night of the middle of Shaʿbān in 579/1183. He also found the use of torches, glass lamps and thick candles in brass candlesticks burning near the tomb (*maḳām*) of Muḥammad in the Prophet's Mosque of Medina on the blessed night of 27 Ramaḍān 579/1184. Ibn Baṭṭūṭa makes some brief references to night lighting during his time. He once stayed as a guest in a Ṣūfī lodge (*khānḳāh* [*q.v.*]) in Cairo where the residents were given rations of soap, sugar, the cost of bathing in the *ḥammām*, and oil for their lamps. During his visit to Antalya in Asia Minor, he was invited to dine with a cobbler, who was also the *Shaykh* of the local *futuwwa* (*akhī*) movement in a hospice, which was handsomely decorated with Turkish rugs and an ʿIrāḳī glass lamp which radiated light at the hospice's dinner (*Riḥla*, i, 72, ii, 263, tr. Gibb, i, 44, ii, 420).

The use of lamps was more widespread than that of expensive candles, but both were used during feasts and festivals, depending on the user's economic circumstances. The relative merits of these two sources of light inspired Tādj al-Dīn ʿAbd al-Madjīd (d. 744/1343) to write a literary debate or *munāẓara* [*q.v.*] between the chandelier and the lamp, see *Zahr al-djinān fī 'l-mufākhara bayn al-ḳindīl wa 'l-shamʿa-dān*, *apud* al-Nuwayrī, *Nihāya*, i, 124-9.

In Islamic lore, knowledge was described as light (*al-nūr*) and the scholars as lamps. Scholars used lamps for studies at night, as it is illustrated in the biography of Ibn Sīnā and others, and al-Tanūkhī mentions that there were some Baghdādī residents who played chess for hours at night in a room lighted by a lamp (*sirādj*), see *Nishwār al-muḥāḍara*, Beirut 1971, ii, 270. In the literary world of Arabic folk lore, fiction and imagination, the *Arabian Nights* (*Alf Layla wa-Layla*) refer to lamps and candles incidentally, including the surreal story of a "wonder lamp" (or, Aladdin's lamp), with its genie.

The *muḥtasib*, as a municipal official [see ḤISBA], had amongst his functions supervision of the town's major mosques to see that the *muʾadhdhins* called the faithful to prayer on time, that mosque employees like attendants swept the floor of the mosque on Fridays, and that the mosque's lamps were thoroughly washed and cleaned at least twice a month and the wicks of the lamps were snuffed and cleaned every night.

SIRĀDJ AL-DAWLA, Mīrzā Maḥmūd b. Zayn al-Dīn Aḥmad, Nawwāb of Bengal, d. 1170/1757.

The Nawwāb Nāẓims of Bengal arose, like local ruling families of this time in Ḥaydarābād and Awadh (Oudh) [*q.vv.*], from provincial governorships of the declining Mughal empire of the first half of the 12th/18th century. Sirādj al-Dawla was the grandson and heir of ʿAlīwirdī Khān Mahābat Djang, *ṣūbadār* of Bengal, Bihar and Orissa for the Mughal emperor. On ʿAlīwirdī Khān's death in 1169/1756, he himself became governor of Bengal and Bihar, Orissa having fallen into the hand of the Marāṭhās [*q.v.*], against the opposition of his cousin Shawkat Djang.

At this same time, relations between Sirādj al-Dawla and the British East India Company in Bengal became strained, but these relations of the Company with the rulers in Bengal had been unstable for some thirty years; the Company sought long-term advantageous conditions for trading, but found the Nawwābs' behaviour unpredictable. The Company's representative in Calcutta, Drake, refused to dismantle the defences of Fort William and to surrender an offender against Sirādj al-Dawla. In spring 1756 the Nawwāb marched with his army, captured the Ḳāsim Bāzār factory and besieged Calcutta against stiff resistance from the small British garrison. Fort William and the town were occupied, and it was the prisoners taken there who were incarcerated in the notorious "Black Hole of Calcutta".

Sirādj al-Dawla's army had meanwhile fought off and killed Shawkat Khān, who had secured from the Mughal emperor a *farmān* for the governorship of Bengal, Bihar and Orissa. But Robert Clive and Admiral Charles Watson arrived from Madras with troop reinforcements, and their forces easily seized Hūglī (Hooghly). The Nawwāb opened negotiations, and a treaty of February 1757 confirmed for the Company all its trading privileges in the Mughal emperor's grant of 1717 plus the right to mint coins at Calcutta. Clive, however, plotted against Sirādj al-Dawla with the latter's ambitious commander Mīr Djaʿfar [*q.v.*], and warfare broke out. At the Battle of Plassey on 23 June 1757, Clive, with some 3,000 men and eight cannon, defeated a vastly superior but less trustworthy force of infantry, cavalry and an artillery battery under the French officer Saint-Frais. Sirādj al-Dawla fled the field, but was captured by the partisans of Mīr Djaʿfar and killed on 2 July 1757; he had made the mistake of taking on the British before assuring himself of the loyalty of his own subjects, alienating such elements as the Hindu bankers of Bengal. Mīr Djaʿfar now became Nawwāb of Bengal [see further DJAʿFAR, MĪR], and British involvement in North Indian politics henceforth became large-scale.

(I.H. Siddiqui, shortened by the Editors)

SIRĀDJ AL-ḲUṬRUB (A.), lit. "the werewolf's lamp", a name for the mandrake, i.e. the plant species of *Mandragora officinarum L.* (family *Solanaceae*) indigenous to the whole Mediterranean area.

Sirādj al-ḳuṭrub, a loan translation from Syriac *shrāgā dh-ḳanṭropos* (the latter term < λυκάνθρωπος), may refer to the whole plant, yet commonly and more specifically denotes its forked root which resembles the human form; synonyms include *mandrāghūras* (< μανδραγόρας, thence *mandragora*), *yabrūḥ* (< Aramaic *yabrūḥā*), *shadjarat al-ṣanam*, and *luffāḥ*. The turnip-shaped root is thickly covered with fibres and often consists of two parts which bear a clump of large, sinuate, egg-shaped leaves between which grow the axillary petiolated, bell-shaped, strong-smelling, whitish or purple flowers; the globular yellow fruits are about the size of cherries. The anthropomorphism of the root about the digging of which curious stories are told even by classical authors (Plinius, Flavius Josephus), gave rise to many superstitions. Thus the mandrake has been used from ancient times for medicinal, and in particular, for magical purposes, i.e. as an analgesic, anesthetic, hypnotic, cathartic and, most importantly, aphrodisiac. The mandrake was known in ancient Egypt, it seems to occur in the Old Testament (Gen. xxx, 14) under the name of דודאים lit. "the two lovers", and Dioscorides [see DIYUSḲURIDĪS] gives a detailed account of it. For the Arabs, it is the queen of the seven (!) mandragoras, the herb which Alexander the Great [see AL-ISKANDAR] held in his hand during his expeditions, and which according to Hermes [see HIRMIS] gave Solomon [see SULAYMĀN], who wore it under his signet, power over the *djinn* [*q.v.*]; therefore, the mandrake is regarded as particularly useful against all those diseases which are caused by evil spirits, like paralysis, spasms, epilepsy, loss of memory, *et al.*

AL-SĪRADJĀN, Sīradjān, one of the principal cities of mediaeval Persian Kirmān and that province's capital during the first three Islamic centuries. Only from Būyid times onwards (4th/10th century) did Bardasīr or Guwāshīr (perhaps originally a Sāsānid foundation, *Weh Ardashīr) become the administrative capital, known in the sources also as *shahr-i Kirmān* [see KIRMĀN, at vol. V, 150].

Sīradjān now exists as the name of a district in the western part of Kirmān province and as a name recently revived and given to the present town of Saʿīdābād on the Shīrāz-Kirmān City road (lat. 29° 28' N., long 55° 44' E.). The exact site of mediaeval Sīradjān seems to be the modern village of Tādjābād-i Ḳalʿa-yi Sang (the *ḳalʿa* being the citadel mentioned by authors like Ḥamd Allāh Mustawfī), 9 km/5 miles south-south-east of Saʿīdābād (cf. Le Strange, *The lands of the Eastern Caliphate*, 300, who based himself on P.M. Sykes' identification of a ruined urban site there, see the latter's *Ten thousand miles in Persia*, London 1902, 431). At all events, Sīradjān flourished in early Islamic times, and the Arabic geographers describe it as having houses built of mud brick, with a town wall pierced by eight gates, two markets and a water supply from *ḳanāts* built by the Ṣaffārids ʿAmr b. al-Layth and his grandson Ṭāhir (al-Muḳaddasī, 464). This same author characterises the people there as being in his time mainly Muʿtazilīs, although Ibn Ḥawḳal, ed. Kramers 312, tr. Kramers-Wiet 307, states that they were orthodox *ahl al-ḥadīth*.

Despite the Būyids' transfer of the capital elsewhere, Sīradjān continued to be populous and flourishing, and the resort of merchants. Yāḳūt makes it the second city of Kirmān province, and also says, without explanation, that it used to be called al-Ḳaṣrānⁱ "the two fortresses/palaces" (*Buldān*, ed. Beirut, iii, 295-6). During the following two centuries, it was important from its position not only on the Shīrāz-Kirmān route but also because it lay on the north-south route to Hormuz and the Gulf coast. In the early 6th/12th century, the Shabānkāraʾī chief Ḳuṭb al-Dīn Mubāriz [see SHABĀNKĀRA] managed to detach the Sīradjān district from Kirmān and attach it to his own principality in Fārs; only later was it recovered by the Ḳutlugh-Khānid [*q.v.*] governors of Kirmān, but possession of it remained a subject of dispute amongst various representatives of the Il-Khānids (see J. Aubin, *La question de Sīrgān au XIIIᵉ siècle*, in *St. Ir*, vi [1977], 285-90). In 744/1343 the city passed to the Muẓaffarids [*q.v.*] of Yazd and Kirmān. Later in the later 8th/14th century, the city maintained its allegiance to the Muẓaffarids and held out during a long siege against the armies of Tīmūr's son ʿUmar Shaykh; but it fell in 798/1396 and was devastated. Even so, it must have been rebuilt, for in 814/1411 it was again besieged and captured, this time by Iskandar b. ʿUmar Shaykh, Tīmūrid governor in Fārs, and it is often mentioned in accounts of the politics and campaigns of later in the century (see Aubin, *Deux Sayyids de Bam au XVᵉ siècle. Contribution à l'histoire de l'Iran timouride*, Wiesbaden 1956, 35 and index). Only in the Ṣafawid period does Sīradjān fade from mention.

(C.E. Bosworth)

SĪRĀF, a port of the Persian Gulf which flourished in the early Islamic centuries as one of the main commercial centres of the Gulf, rivalling Baṣra. It lay on the coast of Fārs, near the modern village of Ṭāhirī, some 200 km/125 miles to the southeast

of Bushire (Bū Shahr [*q.v.*]), in the *garmsīr* or hot region of the *sīf* or coastland.

Excavations carried out at the site of Sīrāf 1966-73 by a team sponsored by the British Institute of Persian Studies have shown that there was a Sāsānid port there, probably serving the inland centre of Ardashīr Khurra, the latter Islamic Gūr or Djūr [see FĪRŪZĀBĀD], to which it was connected by road, and protected by a massive fort which may have been built *ca.* 360 by Shāpūr II [see SHĀPŪR].

The early Islamic geographers expatiate on the prosperity of Sīrāf, "the merchants' haunt and the emporium of Pārs" (*Ḥudūd al-ʿālam*, tr. Minorsky, 127) and the splendour of its buildings. The Friday mosque was begun, according to archaeological investigation, in the 3rd/9th century. There were richly-decorated, multi-storey houses built from teak (*sādj* [*q.v.*]) imported from East Africa and from fired brick, although the town's situation suffered from earthquakes, with a particularly devastating one lasting seven days in 366 or 367/976-8. Provisions for the town had to be brought in from outside, as had also water, apart from one small *ḳanāt* of sweet water (al-Muḳaddasī, 326-7). The sources state that Sīrāf began to decline after the earthquake, and with the political enfeeblement of the Būyid dynasty in Fārs and the ascendancy there of the rapacious and violent Shabānkāra Kurds [*q.v.*], whilst pirates based on the island of Ḳays [*q.v.*] or Kīsh further down the Gulf caused ships to bypass Sīrāf and the other Sīf ports and go directly to Baṣra. But this decline can only have been relative, since we know that Sīrāf was in the early 6th/12th century the centre of operations, with ramifications stretching as far as China, of a great tycoon, the *nākhudā* or ship-owner Abu 'l-Ḳāsim Rāmisht (d. 534/1140) (see S.M. Stern, *Rāmisht of Sīrāf, a merchant millionaire of the twelfth century*, in *JRAS* [1967], 10-14).

Sīrāf was certainly partly ruinous in the early 7th/13th century when Yāḳūt was there, for he describes it as a small place (*bulayd*) inhabited by wretched people (*ṣaʿālīk*) and with only vestiges visible of its ancient fine buildings (*Buldān*, ed. Beirut, iii, 294-5; *Irshād*, ed. Beirut, viii, 145). It was by this time known as Shīlāw. However, the evidence of archaeology and an examination of later sources by Jean Aubin have demonstrated that Sīrāf was by no means commercially inactive, but enjoyed a modest, continuing trading life. It served as the outlet for the hinterland region of Khundj u Fāl and as a port of departure from this hinterland across the Gulf to Ḳaṭīf [*q.v.*] and Arabia. Shīlāw was known to Ibn Baṭṭūṭa, who may have visited it in 748/1347, crossing the Gulf in this fashion from "Khundju Pāl" (ii, 244, tr. Gibb, ii, 407-8). Shīlāw is still mentioned by European travellers of the 16th century, e.g. by António Tenreiro as Chilaão (1528) and Gasparo Balbi as Silaú (1590), but subsequent references are to a simple harbour only at the modern village.

(C.E. BOSWORTH)

AL-SĪRĀFĪ, the *nisba* of two mediaeval Arabic scholars.

1. ABŪ SAʿĪD AL-ḤASAN B. ʿABD ALLĀH B. AL-MARZUBĀN, judge and grammarian, b. at Sīrāf [*q.v.*] between 279/892 and 289/902, d. at Baghdād on 2 Radjab 368/3 February 979, according to some reports, at 84. In biographical literature, he appears as a scholar versed in all the traditional sciences and as a man of exemplary life style; today, he is best-known for two basic works on grammar and for his part in a public controversy over Arabic grammar and Aristotelian logic.

The oldest notice on him is in the *Fihrist*, 62, who derived information from al-Sīrāfī's son (see 2. below) and perhaps from al-Sīrāfī himself, whom Ibn al-Nadīm cites some twenty times and whom he calls on occasion *shaykhunā*. The other most original biographical notices are by al-Khaṭīb, *T. Baghdād*, vii, 341-2, and by Yāḳūt, *Irshād*, iii, 84-125. According to his son, al-Sīrāfī first studied in his home town and then in ʿUmān, where he studied law, then to al-ʿAskar for study with Abū ʿAbd Allāh Muḥammad al-Ṣaymarī. Finally, he ended up at Baghdād and perfected his studies with Ibn al-Sarrādj [*q.v.*] and Mabramān in grammar; Ḳurʾānic sciences with Abū Bakr b. Mudjāhid; and lexicography with Ibn Durayd [*q.v.*]. In one, sometimes two of the quarters of the city he acted as deputy for the judge Muḥammad b. Maʿrūf. Al-Khaṭīb is the first to mention that he had two *madjlis*: one in which he exercised the duties of a Ḥanafī judge and *muftī* and the other in which he taught the traditional sciences.

Later sources describe how al-Sīrāfī taught a wide range of subjects for fifty years, living entirely on the fruits of his own work, including the copying of ten or so manuscript leaves each day, which brought him ten dirhams for his living expenses. In his long, forty-page notice, Yāḳūt moves from traditional biography to a genre near to that of the literary séances, his main informant here being Abū Ḥayyān al-Tawḥīdī [*q.v.*]. He notes al-Sīrāfī's international reputation during his own lifetime, and that prominent persons frequently sent queries to him for answer (*masāʾil*), addressing him with prestigious titles (cf. Krenkow, *EI*¹ art.; Brockelmann, S I, 175). He also mentions (iii, 105) that certain *warrāḳūn* claimed that al-Sīrāfī falsely gave his name to manuscripts he had not really copied personally, these being sold for higher prices than would otherwise have obtained. Finally, Yāḳūt is the sole biographer to mention (iii, 105-25) the story given by al-Tawḥīdī in his *Muḳābasāt*, 68-86, cf. *Imtāʿ*, i, 107-33, about a controversy on logic and grammar, taking place in 320/932 when al-Sīrāfī was some forty years old, which has became famous in the West since Margoliouth translated this in his *The discussion between Abū Bishr Mattā and Abū Saʿīd al-Sīrāfī on the merits of logic and grammar*, in *JRAS* (1905), 79-129. It took place in the presence of many leading figures, and was convoked by the vizier Abu 'l-Fatḥ Ibn al-Furāt [*q.v.*], and was a response to Mattā's claims on the superiority of Aristotelian logic. The debate, as Versteegh has clearly shown, revolved essentially round two questions: are meanings and significations the same for all nations, the words alone differing according to languages, or are the meanings and significations closely linked to the words and the

language, hence different for each nation? Hence is a grammarian competent or not to pronounce on meanings and significations? The other question was that of the capacity of logic to judge between the true and the false, especially in regard to correct or incorrect speech. For Mattā, logic was independent of language, and the true and the false were universals; hence only the logician was competent to judge on meanings and significations, whilst the grammarian's task was simply to study the words and their function in a given language. Thus the logician has no need of grammar, but logic is indispensable for the grammarian. For al-Sīrāfī, however, meaning was intimately linked with words, and these differ for all languages, thus falling within the domain of grammar. Also, grammarians have rules for recognising correct (Arabic) language. In his view, there was no place for an independent discipline of logic. In combatting Mattā's position, he claimed that the latter could not comprehend all the subtleties of Arabic since he was of Syriac-speaking origin; moreover, Greek was a dead language, hence it was impossible to learn it correctly. The grammarian seems to have participated in further controversies, according to Yāḳūt, including with regard to the theses of the philosopher Abu 'l-Ḥasan al-ʿĀmirī [*q.v.* in Suppl.].

For specialists on Arabic grammar, al-Sīrāfī shares with his contemporary Abū ʿAlī al-Fārisī the fame and originality of work on Sībawayhi's *Kitāb* during the 4th/10th century.

1. His most famous work is his commentary on the *Kitāb* (ed. in progress at Cairo since 1986), a lengthy text in 6 vols., of which 5 are extant in a Cairo ms. According to Yāḳūt, al-Sīrāfī made the first copy himself in 3,000 leaves. Extracts from the commentary have often appeared previously in print, such as in the margins of early editions of the *Kitāb*, from the Calcutta 1887 one onwards, and Jahn, in his translation, studied and commented on these extracts. These may have come through the intermediacy of Abū ʿAlī al-Fārisī and the glosses of his personal copy of the *Kitāb* (see G. Humbert, *Les voies de la transmission du Kitāb de Sībawayhi*, 72-7). Yāḳūt says that al-Fārisī and his friends long tried to get a complete text of al-Sīrāfī's work in order to denounce and expose its alleged deficiencies. The commentary is certainly of prime interest for studying the history of Arabic grammar, showing amongst other things that the *Kitāb* was in actual use during the commentator's time.

2. A little work on the Baṣran school of grammarians, *Akhbār al-naḥwiyyīn* (*al-baṣriyyīn*), first ed. Krenkow, 1936, also Cairo 1955, one of the oldest works extant on the biographies of grammarians. Al-Sīrāfī was also, as noted above, a direct informant for the section of Ibn al-Nadīm's *Fihrist* on grammar.

The other works attributed to al-Sīrāfī are not extant:

3. A *Sharḥ abyāt/shawāhid Sībawayhi*, possibly recast by his son, from whom a work of this name has come down to us.

4. *K. al-Iḳnāʿ fi 'l-naḥw*, not mentioned in all mss. of the *Fihrist*, but whose existence is confirmed by Ibn Khayr's *Fahrasa* (312).

5. Yāḳūt (iii, 86-8) also mentions several times, in the field of grammar, the *Mudkhal ilā Kitāb Sībawayhi*.

6. In Ḳur'ānic philology, a *K. Alifāt al-waṣl wa 'l-kaṭʿ* is mentioned in the sources.

7. In lexicography, a *K. sharḥ Maḳṣūrat Ibn Durayd*.

8. In geography, a *K. Asmā' djibāl al-Tihāma wa-makānihā*, and 9. a *K. Djazīrat al-ʿArab*.

Other titles also lost but only rarely mentioned are: 10. *al-Waḳf wa 'l-ibtidā'*, and 11. *Ṣanʿat al-shiʿr wa 'l-balāgha*.

The biographers do not mention the commentaries on the verses in Ibn Durayd's *Djamhara fi 'l-lugha*, signed "al-Sīrāfī" in the 2nd and 3rd vols. of the Leiden ms. (discovered by Krenkow and edited by him in the margins of the Ḥaydarābād edition of the *Djamhara*, 1925-32). For other titles or anonymous texts possibly attributable to al-Sīrāfī, see Sezgin, *GAS*, ix, 99-100.

Bibliography (in addition to references in the article): The main modern studies on al-Sīrāfī's commentary and on his controversy with Mattā are listed in the bibl. of C. Versteegh's *Logique et grammaire au Xᵉ siècle*, in *HÉL*, ii (1980). See also Rescher, *Abriss*, ii, 161-3; Sh. Ḍayf, *al-Madāris al-naḥwiyya*, 145-50, 244; M.M.E. Hegazi, *Abū Saʿīd al-Sīrāfī, der Sībawaih-Kommentator als Grammatiker*, diss. Munich 1965, unpubl. On the controversy with Mattā, see Yaḥyā b. ʿAdī, *Maḳāla fī tabyīn al-faṣl bayn ṣināʿatay al-manṭiḳ al-falsafī wa 'l-naḥw al-ʿarabī*, ed. G. Endress, 141-93.

2. ABŪ MUḤAMMAD YŪSUF, son of the preceding, d. at Baghdād in 385/995 aged 55 years.

He studied with his father, and probably completed the latter's *K. al-Iḳnāʿ*. Whilst working as a *sammān*, he specialised in commenting on the verses cited by famous philologists and lexicographers. His works included: 1. The *Sharḥ abyāt/shawāhid Sībawayhi*, possibly begun by his father (ed. M.ʿA. Sulṭān, Damascus 1976). 2. A ms. copy of his *Sharḥ abyāt al-Iṣlāḥ*, commentary on the verses cited in Ibn al-Sikkīt's [*q.v.*] *Iṣlāḥ al-manṭiḳ* (ms. Köprülü 1296). 3. There are attributed to him a *Sharḥ abyāt al-Gharīb al-muṣannaf*, i.e. on those in the work of Abū ʿUbayd al-Ḳāsim b. Sallām [*q.v.*]; 4. a *Sharḥ abyāt al-Madjāz*, on those in the work of Abū ʿUbayda [*q.v.*]; and 5. a *Sharḥ abyāt Maʿānī al-Zadjdjādj* [*q.v.*].

Bibliography: Biographical notices in Ibn al-Djawzī, *Muntaẓam*, vii, 187; Ibn Khallikān, ed. ʿAbbās, vii, 82-4. Other more recent sources (e.g. al-Suyūṭī, *Bughya*, ii, 355), given in the ed. of the *Sharḥ abyāt Sībawayhi*, 11).

(GENEVIÈVE HUMBERT)

SIRĀIKĪ [see LAHNDĀ; SIND. Language].

SIRAḲŪSA, the mediaeval Arabic form of the name of the city of Syracuse in Sicily.

Founded by men of Corinth in 734 B.C., it was the most powerful of the Greek colonies until the Roman conquest. Belisarius captured it for Byzantium, and in 663 Constans II fixed his seat there. In Byzantine times, it was frequently raided by Arabs from Ifrīḳiya. The name of the city also appears in Arabic sources as Saraḳūsa, with vars. Sarḳūsa, Surḳūsa, etc. According to Amari, the Arabic transcription may be from an older form than the Greek Συράκουσαι used before Yāḳūt's time.

The most exact geographical description is that of al-Idrīsī in his *Nuzhat al-mushtāḳ*, in which he stresses the city's reputation as a resort of merchants and travellers, and he describes the islet of Ortigia, linked to the mainland by an isthmus, in mediaeval times the exclusively inhabited part of the city, mentioning its two ports, its buildings, gardens and fertility. This was the main source for al-Ḥimyarī's *Rawḍ al-miʿṭār*, with a passage also from al-Bakrī and other items of unknown provenance.

The story of the Arab conquest of Syracuse is essentially given by Yāḳūt, Ibn al-Athīr, Ibn ʿIdhārī, al-Nuwayrī and Ibn Khaldūn. In 212/827 Asad Ibn al-Furāt, sent by the Aghlabid Ziyādat Allāh to con-

quer Sicily, marched from Mazara del Vallo, on the northern coast of the island, as far as Syracuse and concluded a treaty with the city, in exchange for payment of the *d̲j̲izya*. According to Ibn al-At̲h̲īr, Asad expected resistance and besieged the city. But the besieged were supplied by sea from Venice, and Asad died of plague in 213/828. His successor Muḥammad b. Abi 'l-D̲j̲awārī was driven away with severe losses. Raids on the suburbs of Syracuse resumed in 248/862 and the following years, and there was a siege by K̲h̲afād̲j̲a b. Sufyān b. Sawādan in 259/872-3. In 263/877 the governor of Sicily D̲j̲aʿfar b. Muḥammad devastated the environs of the city, destroyed the port fortifications and besieged the inhabitants for 30 days. In the absence of aid from Byzantium, the city was about to surrender when the Arabs raised the siege. But they returned in the spring, and conquered it on 27 Ramaḍān 264/21 May 878. All the Christian soldiers were massacred, and the population carried off to Palermo as slaves, with an enormous plunder of precious metal weighing over 5,000 pounds. It was not till seven years later that the Byzantine Emperor was able to ransom the Syracusan captives.

Under Arab rule, Syracuse was the capital of the Val di Noto, one of the great territorial divisions of Sicily. In the 10th century, the Byzantines managed to recapture the city for three years, but lost it again. After the end of the Kalbids in 442/1050, local lords disputed power in Sicily. In 452/1060 one contender, Ibn al-T̲h̲umna, lord of Catania and Syracuse, called in the Normans to his aid, opening the way for the Norman conquest. After a naval battle, the Normans captured Syracuse in 479/1086, and the city became a county governed by Roger I's son, Jordan. Arabs and Jews continued to be able to practise their faiths and regulate their community affairs, in return for annual tribute, whence the survival of bi- or tri-lingual documents in the languages of the various communities, Latin, Greek and Arabic. After the death of Prince Tancred, Syracuse became a crown possession. There were serious earthquakes and a raid from Ifrīḳiya in retaliation for an expedition of Roger II. The succeeding Swabian domination pressed hard on the population, which tried fruitlessly to rebel. In the infancy of Frederick II (acceded to the throne in 1197), Pope Innocent III acted as regent. During this period, factional fighting was frequent, and Genoese and Pisans were at times in control of the city. Under Frederick, the city was eventually entrusted to the governorship of Gualdo Torenabene.

No monument from the Arab period survives at Syracuse. We have no proof that the Byzantine cathedral was ever transformed into a mosque, nor the temple of Apollo and Artemis on the islet of Ortigia, where some Arabic graffiti were discovered *ca.* 1624. But there are two Arabic gravestones in the Galleria Regionale of the Palazzo Bellome. The first is of marble with a Kūfic inscription dated by Amari to the end of the 3rd/9th or end of the 4th/10th century, which would make it one of the oldest Arabic inscriptions of Sicily. The second is a fragment of a slab with floriated Kūfic writing, the basmala and Ḳur'ān, LIV, 54-5. Workshops of potters, ironworkers and goldsmiths functioned at Syracuse until the first half of the 12th century and after. Fragments of pottery have been found, including a type of green ware in relief or with sgraffito with a decoration pressed on a thin bed of enamel. Much of the pottery has floral lines and motifs as decoration. Of bronzeware, there is a small ewer preserved in the Archaeological Museum, studied by P. Orsi and published by U. Scerrato in the volume *Gli Arabi in Italia*. There are also preserved in the same museum and in the Palazzo Bellome many glass jetons of Syracuse and 36 of other provenance, used in the first place as weights; P. Balog thinks that they were made *ca.* 950 as small money to fill the lack of copper coinage. There is a collection of some 600 coins in the Palazzo Bellomo, essentially from the Norman and Swabian periods, but a certain number, including the *taris* [*q.v.*], merit examination.

(Vincenza Grassi)

ṢIRĀṬ (a.), a religious term which has two quite distinct meanings. It is first of all a common noun "way", which is encountered 45 times in the Ḳur'ān. This metaphorical word is almost always introduced by the verb *hadā* "to guide" or by its *maṣdar hudā* "guidance", where God is the subject. Of the 45 Ḳur'ānic instances, *ṣirāṭ* is 33 times qualified by the word *mustaḳīm* "the/a right way", meaning the religion, or the Book, of Islam. Only once does *ṣirāṭ* denote an evil way, i.e. one which leads away from the will of God (XXXVII, 23). The word has a neutral and concrete meaning in VII, 86 (and XXXVI, 66 ?). The substantive *ṣirāṭ* derives ultimately from the Latin *strata*, via Greek and Aramaic, then Syriac (Jeffery, *Foreign vocabulary*, 195-6). This foreign origin was recognised at an early stage by scholars, including Muḥammad b. al-Ḥasan al-Naḳḳās̲h̲ (cf. al-Suyūṭī, *al-Itḳān fī ʿulūm al-Ḳur'ān, nawʿ* 38, Beirut 1407/1987, 437). On the other hand, the word is derived from the root *s-r-ṭ* according to some philologists, and this conclusion is accepted by Ibn Manẓūr (*LA*, vii, 313b, 340a).

The other meaning is the proper name of a bridge which dominates Hell, *al-Ṣirāṭ*, always with the definite article. The Ḳur'ān makes not the slightest allusion to it, and has nothing to say about this or any other bridge. On the other hand, this conception is attested in Prophetic traditions, whence the important *ḥadīt̲h̲* regarding the vision of God on the Day of Resurrection and the intercession of the Prophet, going back to Abū Hurayra—ʿAṭā' b. Yazīd—Ibn S̲h̲ihāb—Ibrāhīm b. Saʿd (al-Buk̲h̲ārī, *Ad̲h̲ān, bāb* 129, and *Tawḥīd, bāb* 24/4; Muslim, *Īmān*, no. 299).

According to this tradition, when God makes himself known to men as their Lord, they will follow him *wa-yuḍrabu 'l-Ṣirāṭ bayna ẓahray* (or *ẓahrānay*) *d̲j̲ahannam* "and the Ṣirāṭ will be erected above Gehenna". In al-Buk̲h̲ārī, *Riḳāḳ*, *bāb* 52, Ibn S̲h̲ihāb and Ibrāhīm are absent from the *isnād*, and the key-phrase has a different form: "and the Ṣirāṭ will be erected, the bridge of Gehenna".

Another well-known *ḥadīt̲h̲* on the same subject (but with a list of prophets asked in vain to intercede for men) goes back to Abū Saʿīd al-K̲h̲udrī—ʿAṭā' b. Yasār—Zayd b. Aslam (al-Buk̲h̲ārī, *Tawḥīd*, *bāb* 24/5; Muslim, *Īmān*, no. 302). The key-phrase here is: "Then they will bring (or, will erect) the bridge (*al-d̲j̲isr*)". The latter, bristling with hooks and thorns, is "narrower than a hair and sharper than a sword" (Muslim, *Īmān*, no. 302, *in fine*). The believers will cross it in the winking of an eye, with the speed of lightning. However, the wicked will fall into the fire of Gehenna.

Other traditions are attributed to different Companions and supplement the fundamental data: thus e.g. Muslim, *Tawḥīd*, nos. 316, 320, 329. They support the theses developed by authors such as al-G̲h̲azālī (in the "Book of the remembrance of death and of that which follows it", towards the end of the *Iḥyā'*).

This bridge of Muslim eschatology closely resembles that of Iranian religion, to such an extent that the two are definitely related. The bridge of Činwad, "traditionally thought to mean 'the bridge of the separator' but recently shown to be 'the bridge of the accumulator/collector' ... is mentioned already in the Gathas", then in a number of Middle Persian texts (Tafazzoli). For the virtuous, it is enlarged considerably. For the wicked, it becomes like the blade of a razor or the cutting-edge of a sword, and they fall into Hell. In its name, written as Činwat in Pahlavi, the Arabs recognised their word *ṣirāṭ* (but the utilisation to this effect of Ḳur'ān, XXXVI, 66, and XXXVII, 23, has no justification and is disregarded by the major Muslim commentators).

(G. Monnot)

SĪRAT ʿANTAR [see ʿANTAR].

ṢIRB, the Ottoman Turkish name for Serbia.

1. The Ottoman period to 1800 [see Suppl.].

2. The modern period.

The end of the 12th/18th century saw the first serious Ottoman attempts at improving the situation of the Serbian *reʿāyā* [see RAʿIYYA. 2]. After the treaty of Sistova (Zis̲h̲towa, 12 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1205/12 August 1791) between the Ottoman Empire and the Habsburg monarchy had secured a general amnesty even for the active supporters of the enemy (§ 1), Selīm III appointed Ebūbekir (Abū Bakr) Pas̲h̲a as governor of Belgrade (1793) to put an end to the oppressive régime of the local *yamaḳs*, i.e. self-appointed Janissary leaders outside the regular Ottoman hierarchy. In order to curb the financial power of the *yamaḳs* of Belgrade in particular, they were ordered to relinquish their landholdings in the province, while the Serbian *knezes* (lit. "princes"; in fact, local strongmen) were given the right to apportion and collect taxes and provisions in their districts. In spite of fierce opposition (kindled by Paswānog̲h̲lu ʿOt̲h̲mān of neighbouring Vidin [see PASWAN OG̲H̲LU]), the reforms continued, with additional privileges being granted to the Serbian *knezes* and their peasants by Ḥād̲j̲d̲j̲ī Muṣṭafā Pas̲h̲a, the new governor of Belgrade. To allow the country to be effectively defended against *yamaḳ* aggression, Muṣṭafā encouraged the *knezes* to recruit, arm and train a modern native Christian army, a move which aroused strong opposition among the *ʿulamā'*. Muṣṭafā Pas̲h̲a was killed late in 1216/1801 when the *yamaḳs* of Serbia succeeded in re-establishing their rule under the leadership of K̲h̲alīl Ag̲h̲a and four of their chiefs bearing the title of *daḥi* (derived from *dayi*, the title of the Janissary rulers of Algiers, Tunis and Tripoli in North Africa). Fearing that an Ottoman campaign led against them under the command of Ebūbekir Pas̲h̲a would encourage a general revolt of the population, the *daḥis* executed hundreds of Serb leaders. Serbian resistance against the *yamaḳs* now had to be organised largely from the hills and forests, in particular the district of Shumadija, where the scattered *hayduḳ* bands accepted the military leadership of Djordje Potrović, known as Karageorge (*ca.* 1768-1817). It was he who was to co-ordinate the First Serbian Uprising and to become the founder of the Karadjordjević dynasty of Serbian rulers. The details of the Serbian Revolution and the gradual emergence of a sovereign Serbian state cannot be retold here. Instead, an outline is given of the developments in Serbo-Ottoman relations in the period from 1804 until 1878, when Serbia gained full independence from the Ottoman Empire.

Until 7 May 1805, when an Imperial decree to lay down all arms and rely on the regular Ottoman troops alone for their protection against *yamaḳ* attacks was ignored by the Serbian leadership, the revolt, called on 14 February 1804, was not directed against the Ottoman sultan, but was aimed primarily at the restoration and enlargement of such privileges and internal autonomies as had been granted to the Serbs by Ebūbekir Pas̲h̲a and later governor-reformers of Belgrade. This is reflected in the early Serbo-Ottoman negotiations which took place at Zemlin around 10 May 1804, mediated by the Austrian governor of Slavonia. It is still reflected in the Serbian proposals of May 1805 for a modified régime of administrative and fiscal autonomy under a Grand Prince at Belgrade representing the people in all dealings with the Ottoman authorities, in particular the *muḥaṣṣil*, with all taxes to be collected by special agents of the *knezes* in the country's twelve districts. Fief-holders were to reside in Belgrade only and receive their revenues through the *muḥaṣṣil*. Security matters were to lie jointly in the hands of the Grand Prince and the *muḥaṣṣil*, each being allowed to maintain an army. *Yamaḳs* would no longer have the right to settle on Serbian soil. In all this, the payment of an annual tribute to the sultan was never disputed. Only when the Porte, represented by Ebūbekir Pas̲h̲a, refused to have a foreign power-guaranteed Ottoman fulfilment of the Serbian demands, and the Serbs refused to lay down their arms, did Serbo-Ottoman relations reach a turning point. Henceforth, the sultan considered the Serbs as rebels (*ʿāṣī*). The Serbs, on the other hand, intensified their links with enemy powers, above all Russia and Austria. Opposition against the concentration of power in the hands of the Serb leader and his centralising policies led to the establishment of a Legislative Council (1805) with Matija Nenadović as

its first president (L.F. Edwards (ed.), *The Memoirs of Prota Matija Nenadović*, Oxford 1969). In January 1811 Karageorge swore that he would rule in accord with the council, and in turn was recognised as the Supreme Leader. The formerly semi-autonomous districts were reduced in size and placed under increased centralised control, while leading opposition figures were exiled. When, because of the danger from Napoleon, Russia, the Serbs' main ally, concluded the Peace of Bucharest in 1812, the Treaty's provisions (§ 8) for an amnesty, for limited Serb autonomy under Ottoman rule and for the stationing of Ottoman forces in the country's fortresses (clauses the sultan was only reluctantly prepared to ratify), the Serbian leadership decided to continue fighting without Russian help, with disastrous consequences. By mid-October 1813 Serbia was under Ottoman control once again, and Karageorge had become an exile in Austria. It was left to Milosh Obrenović (1780-1860), military leader and rival of Karageorge (and the founder of the Obrenovići dynasty of Serbian rulers) to proclaim the beginning of the Second Serbian Uprising (on Palm Sunday 1815). On 6 November 1815 he reached a (verbal) agreement with Marʿashlī ʿAlī Pasha (confirmed by the Porte in the following year) about Serbian participation in the internal administration of the *pashalik* of Belgrade, under his leadership. His murder of Karageorge (25 July 1817) soon made Milosh the Serbian Supreme Leader (elected Hereditary Prince on 6 November 1817, but not finally confirmed by the Porte until 1830). In the convention of Aḳ Ḳermān (7 October 1826) between Russia and the Ottoman Empire, the Porte promised (§ 6) fulfilment of clause 8 of the Treaty of Bucharest; at the same time, the limited rights of autonomy enjoyed by the Serbs were specified in greater detail (additional *Note* to § 5 of the Convention). The peace treaty of Edirne (14 September 1829) demanded that the Ottoman government immediately implement the measures required by the Convention and hand back to Serbia all six districts outside the *pashalik* of Belgrade which had been liberated in the course of the First Uprising (provisions put into practice by the *khaṭṭ-i sherīf* of 30 September 1829). Negotiations with the Porte about Serbian autonomy commenced early in 1830, resulting in the *khaṭṭ-i sherīf* of August 1830 in which the autonomy rights for Serbia were laid down one by one, and in which Milosh Obrenović was officially confirmed as Hereditary Prince. Serbia had now developed into a principality under Ottoman suzerainty. Disturbances in Serbia during the spring of 1833 necessitated new comprehensive legislation. In November of the same year, a *khaṭṭ-i sherīf* defined the new borders of the country which now included the Six Districts (*ca.* 38,000 km^2 as opposed to *ca.* 24,000 previously), the amount of the annual tribute as a pay-off for all remaining fiscal and feudal obligations towards the Ottoman state and Muslim landowners (2.3 million piastres per annum), the modalities concerning the resettlement of Muslims from Serbia, and the stationing of Ottoman troops in the country. The *khaṭṭ-i sherīf* was read out in the National Assembly in Kragujevac on 13 February 1834. It marked the end of the Ottoman land régime in Serbia. The new constitution of 10 December 1838, which was to replace the liberal "Sretenjski ustav" of 1835 (which was modelled along French and Belgian lines), was worked out in Istanbul by a Serbian delegation and was promulgated in the shape of another *khaṭṭ-i sherīf* (hence "Turski ustav"). In 1862, after clashes between Serbs and Ottoman soldiers had led to the firing of Ottoman cannon into Belgrade, the Ottoman garrisons were restricted to fortifications along the Danube and Sava rivers (Belgrade, Šabac, Semendire and Gladova: Protocol of Istanbul of 8 September 1862). In April 1867 the sultan was forced to withdraw all troops from Serbian soil. Belgrade was handed over to the Serbs by ʿAlī Riḍā Pasha, its last *muḥāfiẓ*, on 18 April. The final end of Ottoman suzerainty over Serbia and the proclamation of Serbian independence was one of the results of the Congress of Berlin (13 June-13 July 1878).

In 1815 Serbia was divided into twelve *nāḥiyes*: (1) *Belgrade*, (2) Cuprija, (3) Jagodina, (4) Kragujevac, (5) Požarevac, (6) Požega, (7) Rudnik, (8) *Šabac*, (9) *Smederevo*, (10) *Soko*, (11) *Užice* and (12) Valjevo. The six additional districts added in 1833 were Krajina (Negotin), Crna Reka (Zaječar), Gornji Timok (Gurgosovac), Aleksinac with Kruševac, part of Stari Vlah (Ivanijica) and the Loznica region (only the italicised district capitals had town (*grad*) status before 1833). Population in 1804: *ca.* 478,000; in 1815: *ca.* 473,000 (war losses estimated at *ca.* 133,000); in 1834: *ca.* 678,192; in 1874: 1,353,890 (these and the following figures are from H. Sundhaussen, *Historische Statistik Serbiens*, Munich 1989). The first population census, still largely fiscal in character, was carried out in 1834 (in the Ottoman Empire, in 1830-1); for detailed figures see Sundhaussen, Tabelle 2a). The population of Serbia, although in its vast majority consisting of Serbs (86.85% in 1866), was largely immigrant (*ca.* 75,000 arrived 1820-34; *ca.* 150,000 1834-74). Only a small minority was autochthonous: *ca.* 20% in Valjevo district, less than 1% in Takovo and Shumadija. Literacy (1866): 4.2%. Characteristic of Serbian agriculture during most of the 19th century was the clearance of arable land by fire, extensive cultivation of corn and (from the late 1830s) wheat, large flocks of sheep being driven by Vlach herdsmen, and, for a (former) Ottoman possession, exceptionally large numbers of pigs (165 pigs per 100 inhabitants in 1859; main export article). The agricultural unit continued to be the "house" (*kuća* < *khāne*) with *ca.* 10-30 (in the earlier period), later (1863) *ca.* 5.5-8.3 inhabitants. The first survey of all agricultural lands (details in Sundhaussen, Tabelle 51) was carried out in 1834 (in the Ottoman Empire proper, the first *taḥrīr-i arāḍī* was begun in 1838). The woodlands of Serbia remained an important economic factor; the first decrees for their protection date from the 1820s. Urban crafts were initially largely restricted to Muslims and foreigners; their "Serbianisation" had long been under way by 1830, when there were 18 recognised *eṣnāf* in Belgrade. This figure rose to 40 in 1838 (detailed lists of *eṣnāf* in Branko Peruničić, *Uprava varoši Beograda 1820-1912*, Belgrade 1970, 133-4, 142-3, 428-68, 693-7). The Muslim pious foundations (*ewḳāf*) outside Belgrade were sold or transferred into property of the Orthodox Church within five years of the Law of 28 July 1839 which regulated the return of non-Serb held lands into Serbian possession, in accordance with the *khaṭṭ-i sherīf*s of 1830 and 1833 (for *waḳf* property supporting several Belgrade mosques as late as 1862, see Peruničić, *op. cit.*, 480-1). What immovables remained in Belgrade in the hands of individual Muslims until 1863 is shown in an official survey published by Peruničić (*op. cit.*, 540-59). The Ottoman tax régime remained in force for about 20 years until the comprehensive tax reform of 1835 ended the system of division into (1) payments to the Ottoman state or the sultan, (2) rents and services due to the Muslim landowners and (3) taxes for the benefit of the Serbian state. The reform introduced a single monetary tax

amounting to *ca.* 12 "Taler" (5 gold ducats) per taxpayer per annum. But as in the Ottoman period (see the account in Edwards, *Memoirs*, 28 ff.), the community leaders continued to fix each taxpayer's contribution by taking into account his ability to pay. The metric system of measurement was introduced in 1873, coinciding with similar Ottoman attempts under Midḥat Pas̲h̲a [*q.v.*].

Bibliography: Research on Ottoman Serbia, up to *ca.* 1970, is listed in H.-J. Kornrumpf (with Jutta Kornrumpf), *Osmanische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa*, Leiden-Köln 1973 (= *Handbuch der Orientalistik*). For a current bibl. on Serbia as part of the Ottoman Empire, see *Turkologischer Anzeiger* (Turkology Annual), Selbstverlag des Instituts für Orientalistik in Vienna. Basic reading on Serbia in the modern period includes the authoritative *Istorija srpskog naroda*, v/1-2, *Od prvog ustanka do Berlinskog kongresa, 1804-1878*, Belgrade 1981, as well as N. Konstandinovic, *Beogradski pašaluk* (*Severna Srbija pod Turcima*). *Teritorija, stanovništvo, proizvodne snage*, Belgrade 1970, and R. Ljušic, *Kneževina Srbija* (*1830-1839*), Belgrade 1986. The following is a selection of titles in Western languages: W.D. Behschnitt, *Nationalismus bei Serben und Kroaten 1830-1914*, Munich 1980; L.F. Edwards (ed. and tr.), The *memoirs of Prota Matija Nenadovic*, Oxford 1969; L. Hadrovics, *Le peuple serbe et son église sous la domination turque*, Paris 1947; F. Kanitz, *Das Königreich Serbien und das Serbenvolk*, 3 vols., Leipzig 1904-14, C. and B. Jelavich, *The establishment of the Balkan national states, 1804-1920*, Seattle-London 1977; M.B. Petrovich, *A history of modern Serbia, 1804-1918*, 2 vols., New York 1976; L. von Ranke, *Serbien und die Türkei im 19. Jahrhundert*, Leipzig 1879 (English tr. A. Kerr, London 1883); H. Sundhaussen, *Historische Statistik Serbiens 1834-1914. Mit europäischen Vergleichsdaten*, Munich 1989 (= *Südosteuropäische Arbeiten*, ed. M. Bernath and K. Nehring, 87); W.S. Vucinich (ed.), *The First Serbian Uprising, 1804-1813*, New York 1982; G. Yakschitch, *L'Europe et la résurrection de la Serbie, 1804-1834*, Paris 1907. Comprehensive Ottoman material dealing with the first Serbian uprising from the *ḳāḍīs*' court registers was published as early as 1916 by S. Kemura, *Prvi Srpski ustanak pod Karagjorgjem. Od godine 1219. po hidj. ili 1804. po i. do dobitka autonomije*, Sarajevo 1332/1914 (printed in fact in 1334/1916). (M.O.H. Ursinus)

SIRDĀR [see sardār].

SIRḤĀN (A. "wolf"), the name of a wadi in North Arabia, which runs southeastwards from the fortress of al-Azraḳ, at the southern end of Ḥawrān [*q.v.*], to the wells of Maybūʿ (see Musil, *Arabia Deserta*, 167). It has a length of about 140 km/187 miles and a breadth of 5 to 18 km/13 to 11 miles. Musil (*ibid.*, 120-1) calls it a depression and "a sandy, marshy lowland, above which protrude low hillocks". Al-Azraḳ is known for its large, permanent pond. Since ancient times, the wadi has been used as an important trade route. Already King Esarhaddon (699-680 B.C.) undertook a campaign against the Bazu and the K̲h̲azu (the Buz and the Hazo of the Bible, cf. Gen. xxii. 21-2, Job xxxii. 2 and Jer. xxv. 23), who were living in the wadi Sirḥān. The Muslims conquered the region after the battle of the Yarmūk [*q.v.*] in 13/634, and the wadi became the much-contested frontier between the Banu 'l-Ḳayn [*q.v.*] and the Banū Kalb [see kalb b. wabara], two tribal groups of the Ḳuḍāʿa [*q.v.*]. The wadi was also known as Baṭn al-Sirr (al-Muḳaddasī, 250; Yāḳūt, *Muʿdjam*, i, 666). It served as the natural route of communication between al-Ḥīra or al-Kūfa [*q.vv.*] and Syria. The area is inhabited by the Banū Ruwala [*q.v.*]. In 1926, the *amīr* Nūrī b. S̲h̲aʿlān (Musil, *op. cit.*, index) signed the Treaty of Ḥadda, by the terms of which al-D̲j̲awf [*q.v.*] and the greater part of the wadi Sirḥān were handed over to King ʿAbd al-ʿAzīz Āl Suʿūd [*q.v.*], the northeastern corner of the wādī being assigned to Transjordan.

Lancaster, *The Rwala Bedouin today*, Cambridge 1981; *Agreements with the Sultan of Nejd regarding certain questions relating to the Nejd-Trans-Jordan and Nejd-Iraq frontiers, White Paper Cmd. 2566*, London 1925, 2 ff.; see also the Bibl. to ruwala. (E. van Donzel)

SIRHIND, a town of India in the easternmost part of the Pand̲j̲āb, situated in lat. 30° 39' N. and long. 76° 28' E. and lying some 36 km/24 miles north of Patiāla city.

In the mediaeval Islamic Persian chronicles, the name is usually spelt *S.h.r.n.d*, and the popular derivation from *sar-Hind* "the head of India", from its strategic position, is obviously fanciful. The town must have had a pre-Islamic, Hindu past, but became important from G̲h̲ūrid times onwards and was developed by the Tug̲h̲luḳid sultan Fīrūz S̲h̲āh (III) at the behest of his spiritual mentor Sayyid D̲j̲alāl al-Dīn Buk̲h̲ārī. It was at Sirhind that Bahlūl Lōdī, the founder of his line of sultans [see lōdīs], assumed the crown in 855/1451. It flourished under the Mug̲h̲als, but during the period of Mug̲h̲al decline, in the 18th century, it was several times attacked by the Sikhs [*q.v.*]. It eventually passed under the control of the Mahārād̲j̲ās of Patiāla, and the region came under British protection in 1809 by a treaty with Rand̲j̲it Singh, remaining till 1947 within the Princely State of Patiāla. It is now in the Pand̲j̲āb State of the Indian Union.

Sirhind is also famous as the birthplace in 971/1564 of the religious revivalist and reformer S̲h̲ayk̲h̲ Aḥmad Sirhindī [*q.v.*].

SIRIUS [see al-s̲h̲iʿrā].

SIROZ, the Turkish form (Greek Sérrai, conventionally Serres), for a town of eastern Macedonia, now in Greece (lat. 41° 03' N., long. 23° 33' E.). In Ottoman times it was the capital of the *sand̲j̲aḳ* of Siroz and also the seat of a Greek Orthodox metropolitanate. It is situated on seven hills to the southeast of Mount Ménoikon, in the centre of a fertile plain and near to various mineral resources which supplied metal for the local mint.

In Classical antiquity it was called Siris (Herodotus) and Dirra, and in Byzantine times one finds Serrai and Ferrai in various forms and orthographies. It is mentioned in Justinian I's time as a fortified town of Macedonia Prima, and surviving parts of the citadel may date from before the 10th century. In 803 Nicephorus Phocas implanted a strong military garrison and rebuilt the town against Slav invasions. In 1204 it surrendered without a fight to Boniface of Monferrat, who abandoned it to the Bulghars in 1206, who destroyed it totally. But it revived in the course of the 13th century and became the capital of the theme of Serres.

Its citadel was rebuilt for the last time after Stephen Dušan captured the town in 1345, and he was crowned Emperor of the Serbs there. Retaken by Manuel Palaeologus in 1371, it fell temporarily to the Ottoman

Turks in 1371 and definitively in 1383. Ewliyā Čelebi alone of the Ottoman sources describes this definitive conquest by Ghāzī Ewrenos and Djandarli Kara Khalīl Khayr al-Dīn Pasha, although this is unmentioned by the Byzantine chroniclers. According to oral sources, the surrender terms allowed the Turks to install themselves outside the Byzantine enceinte and guaranteed to the Greeks their quarters and churches. The enceinte's walls must have been demolished at this time as a precaution against revolts. The town soon regained its old importance. Even before the arrival of the Ottomans, it had spread beyond the enceinte, to the west of the Phoros Gate, as the presence of some Byzantine churches shows. The Ottomans established new quarters, bearing the names of their military chiefs, for themselves further to the west and to the south. Nomads (*Yürüks*) were planted in the adjacent countryside, whilst the town received immigrants from Anatolia. At the end of the 15th century there arrived the first Jewish families from Sicily and Spain.

Notable events included Murād I's using it as a base for campaigns against the Serbs (1385). In 1412 the revolt of Sheykh Bedr al-Dīn [see BADR AL-DĪN] ended at Serres with his defeat and hanging there. In 1571 there was a Greek revolt there after the Ottoman naval defeat at Lepanto. At Serres was the tomb of the town's *ḳāḍī*, ʿAbd al-Raḥmān "Ḥibri" (d. 1676), author of a work, the *Enīs ül-müsāmirīn*, important for the history of Adrianople. The consolidation of Ottoman power was marked by the building of the Eski Camii, with a foundation inscription, now destroyed, by Djandarli Khayr al-Dīn Pasha in 787/1385, who also built the Eski Hammam; and Bāyezīd II's vizier Ḳodja Muṣṭafā Pasha built further public and charitable buildings. The Bezesten seems to date from 859/1454-5.

According to the 15th and 16th century registers, Serres had a population estimated at 6,200 in 859/1454-5 (see Table for later figures). The Muslim proportion grew steadily, doubtless through conversions. In the 15th century, according to the *Chronicle* of Synadinos, there were 25 Muslim quarters and 45 Christian ones, whose names indicate the various commercial and industrial activities carried on in this important town of the Empire's European provinces, as the presence of a Bezesten and of a mint show (earliest known coins from 816/1413-14).

Of numerous 17th century descriptions of the town, the most important are those of Ḥādjdjī Khalīfa, Ewliyā, Robert of Dreux and the rich cloth merchant Papa Synadinos, after 1642 a priest and author of a *Chronicle of Serres* covering the years 1598-1642. Ewliyā describes a flourishing town, with 10 Christian quarters with 2,000 fine houses in the old town, and 30 Muslim quarters in the new town, totalling 4,000 houses, 12 Friday mosques, 91 other mosques, 26 *medreses*, 2 *tekkes* and 5 *ḥammāms*. Its market was, with those of Salonica and Skopje, among the greatest of

the region, with 2,000 shops and 17 *khāns*. The area of the town increased vastly under the Ottomans, whilst at the same time, 31 churches remained by the mid-19th century, but most were lost in the fire of 1849, the worst of a whole series of conflagrations, which only ended with the 1913 one, which destroyed several quarters of the old Byzantine town and of the Turkish one, plus a large number of religious buildings. The reports of the French consuls give much information on commercial activity in the 18th and 19th centuries. Several of them, plus travellers, note the importance of the annual Kervan fair at Serres, part of a chain of great fairs all through Rumelia. By the 19th century, the town had 25-30,000 people and was, with Monastir and Salonica, the most important town of Macedonia; in Ḥilmī Pasha's 1905 census, 42,000 inhabitants were counted.

After 1870, the importance of the fairs diminished, with the development of railways and highways for the speedy transport of goods to the ports. Commerce declined at Serres, especially when steamship lines passed by the ports of Epirus and Albania, but the town recovered its importance when the Istanbul-Salonica railway line was opened in 1896. The cultivation of cotton there, formerly dominant, was now eclipsed by that of tobacco, which gave a new economic impetus to the region.

The Greek Colonel N. Schinas gave a precise description of Serres in 1886. It had 28,000 inhabitants (see Table), 26 churches, 22 mosques, 2 Greek schools and 6 Turkish ones, 24 spacious *khāns* and a fine market separate from the residential areas and closed by gates. At the same period (1881-93), Ottoman censuses give a figure of 83,499 for the *ḳaḍā* of Serres, including 31,000 Muslims, 31,000 Greek Christians, 19,500 Bulgarian Christians, 1,000 Jews, etc. In the First Balkan War, the town was occupied first by the Bulgarians, who fired the ancient Byzantine town and the Muslim quarters as far as the market when the Greeks advanced and took it (July 1913). It was definitively incorporated in Greece in 1918 and entirely reconstructed. By 1991 it had a population of 45,213, having received a large number of refugees in 1922 and after. Amongst the monuments still preserved, the Bezesten is now an Archaeological Museum, but the Ottoman monuments are reduced to a fine double *ḥammām* and three mosques, that of Meḥmed Bey being the oldest (898/1492-3) and also one of the largest in the Balkans, that of Muṣṭafā Bey (925/1519) and the Zincirli Camii (estimated date, 985/1577-8).

(ALEXANDRA YEROLYMPOS)

SIRR [see Suppl.].

ṢIRWĀḤ, the name of two pre-Islamic archaeological sites in northern Yemen.

1. Ṣirwāḥ Khawlān, an important Sabaean site 90 km/50 miles west of Mārib [*q.v.*], at lat. 15° 27' N., long. 45° 01' E., on a small plain at altitude just under 1,500 m/4,900 feet. The site preserves the name of the ancient town of the inscriptions, *Ṣrwḥ*, and near its ruins is now a modest little town, with a *sūḳ* and small number of inhabitants, the modern Ṣirwāḥ.

The site was discovered in 1843 by the French scholar Joseph Arnaud, and again explored in 1870 by Joseph Hálevy and Hayyim Habshūsh. E. Glaser had some inscriptions copied for him. Since the 1962 revolution in Yemen the site has become more accessible, and excavations have been undertaken since 1990 by the German Archaeological Institute in Ṣanʿāʾ. Though of modest size, and though we still do not possess a systematic description of the ruins, the quality of its monuments show that it was an important Sabaean centre. The main monument is the great temple, built, according to the inscription CIH 366, by the Sabaean *mukarrib* (literally, "unifier", a title borne by South Arabian princes of some eminence) Yadaʿʾīl Dhariḥ son of Sumhūʿalī, written in a style from the 7th-6th centuries B.C. Apparently, in later antiquity, it was transformed into a fortress. The temple was dedicated, according to its inscriptions, to the main god of the Sabaean pantheon, Almaḳah, with the temple apparently having the title of *ʾwʿl*, sc. Awʿāl (or Awʿalān) Ṣirwāḥ. There is also the monument of the Dār Bilḳīs, probably the palace of the *ḳayls* of the Banū Dhū-Ḥabāb, with one inscription mentioning a decree in their favour by the Sabaean king Nashaʾkarib (third quarter of the 3rd century A.D.). But there are large numbers of inscriptions from the whole site. The origins of this Ṣirwāḥ are certainly old, but the oldest inscriptions seem to date from the second half of the 8th century B.C. It ceased to play any notable role after Ḥimyar annexed Sabaʾ in *ca.* A.D. 275. It was clearly a royal site under the *mukarribs*, and probably directly under a king.

It subsequently became the centre of an homonymous tribal group, the $s^{2c}b^{n}$ *Ṣrwḥ* (the same process which we find in Nadjrān and several towns of the Djawf of Yemen), though the extent of the group's power is unknown. It was enlarged in the 3rd century A.D. by other groups such as the Khawlān [*q.v.*], known in Islamic times as Khawlān al-ʿĀliya, and the Haynān, the ensemble under the *ḳayls* of the Dhū-Ḥabāb. The inscriptions last mention the Ṣirwāḥ in the period 4th-6th centuries A.D., when, like other Sabaean tribes, it must have been supplanted by the Ḥimyar.

The town of Ṣirwāḥ seems, on onomastic evidence, to have early contained speakers of Arabic. Administratively, a *kabīr* is mentioned who was presumably the representative there of royal power. The region had in antiquity palm trees, now totally absent, probably from the decay of irrigation works.

The town played no role in Islamic times, but its site became a great mythic one for Islamic historians (cf. Grohmann, *EI*[1] art.), and al-Hamdānī mentions it regularly (*Iklīl*, viii, Ar. text 24, 45, 49, 75), also with frequent citations of poetry mentioning it. The historians regarded Dhū-Ṣirwāḥ (all knowledge of Dhū-Ḥabāb having been lost) as one of the eight most

noble lineages of ancient Yemen, the Mat̲h̲āmina [*q.v.*] (the *ad̲h̲wā'* being the landed aristocracy of the great oases of interior Yemen).

2. Ṣirwāḥ Arḥab, a Sabaean site of upland Yemen, 45 km/25 miles north of Ṣan'ā', at an altitude of 2,500 m/8,200 feet. Visited for the first time by Glaser in 1884, it was not until 1971 that another scholar, the Russian P. Gryaznevič, was able to visit it.

It is the site of an ancient town called Madar^{um} (Mdr^{m}), the name surviving in a nearby village, Madar. Inscriptions mention a temple Marbad̲ān of the town of Madar^{m}, which can be identified with the building with columns discovered by Glaser. Its lords towards the end of the 2nd century A.D. were the Banū G̲h̲aḍab^{um} and D̲h̲aramat. The Islamic antiquarians and geographers (al-Hamdānī and Yāḳūt) knew the site as Madar, with the name Ṣirwāḥ ("large building") being comparatively recent. The former author visited the site, and describes fourteen palaces there, some ruinous, some still inhabited (*Iklīl*, viii, 95, Eng. tr. 61); but it is hardly ever mentioned in poetry.

A third Ṣirwāḥ, amongst the Banū Bahlūl, to the southeast of Ṣan'ā', is mentioned by the modern author al-Had̲j̲rī, but this has now disappeared.

Berichte aus dem Yemen*, iv (1987), 195-201 (wrongful attribution of this temple; more probably to Ta'lab Riyām^{um}, master of Marbad̲ān). (Ch. Robin)

SIRWĀL (A.), trousers. Trousers are not originally an Arab garment but were introduced, probably from Persia. From quite early times, other people have copied the thing and the name from the Persians and it almost looks as if Persia were the original home of trousers (cf. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, 136, n. 3). The Greek σαράβαρα or σαράβαλλα, Latin *sarabala* (perhaps also Aramaic *sarbālīn*, Daniel, iii, 21; cf. Syriac *s̲h̲arbālīn*) and the Arabic *sirwāl* are all derived from old Persian *zārawāro*, the modern Persian *s̲h̲alwār* (which is explained as from *s̲h̲al* "thigh", with a suffix *-wār*); to *sirwāl* in turn may be traced the corresponding word among the Hungarians, Poles, Russians, Tartars, Siberian peoples and Kalmucks in the east and the Spanish and Portuguese in the west. The form *sirwāl* has probably been influenced by the word *sirbāl* meaning garment in general (explained as a development of the root *s-b-l* and an originally Semitic word). This occurs in the early Arabic poetry and in the Ḳur'ān, but not *sirwāl*.

The Arab grammarians retained a memory of the Persian origin of the word. As frequently with loanwords, *sirwāl* shows several formations in Arabic, sing. *sirwāl(a)*, *sirwal(a)*, *sirwīl*, dialectic *s̲h̲irwāl*, modern also *s̲h̲arwāl*, and the question is continually discussed whether it is triptote or diptote; pl. *sarāwīl* and double pl. *sarāwīlat* both also with *s̲h̲īn* and dialectic *sarāwīn*, diptote only but usually (like the word for trousers in many other languages) used with singular meaning and varying in sex between masc. and fem.; dimin. *surayyīl*, plur. *surayyīlāt*; *(ta)sarwala* has been formed as a denominative verb.

When the word entered Arabic and the garment was adopted by Muslims is not exactly known, but the Muslims must have become acquainted with trousers in the very early days of Islam, at the latest during the conquest of Persia. Tradition usually traces them to the Prophet Muḥammad, and even credits pre-Islamic prophets with wearing them. A *ḥadīt̲h̲* says, "the first to wear trousers was the prophet Abraham, wherefore he will be the first to be clothed on the day of judgment". Another *ḥadīt̲h̲* tells us that Moses was wearing trousers of wool on the day on which God spoke with him. It is related in one tradition of the Prophet Muḥammad that he bought trousers from the clothiers, but it is uncertain whether he actually wore them; on one occasion he replied to the question whether he wore them, "Yes, when travelling and at home, by day and night; I was commanded to cover myself and I know no covering really better than these". According to another *ḥadīt̲h̲*, he recommends the wearing of trousers in the words, "be different from the people of the book, who wear neither trousers nor *izār*". But other stories deny positively that he wore them, and it is also disputed whether the caliph 'Ut̲h̲mān wore them. The intermediate view is that it is permitted to wear trousers, *ubīḥa, lā ba'sa bihi*.

In contrast to men, to whom all that has been said so far applies, the wearing of trousers is recommended for women in all *ḥadīt̲h̲*s. It is said, for example, "Put on trousers, for they are the garments that cover one best, and protect your women with them when they go out", or "God has mercy upon the women who wear trousers" (*yarḥamu 'llāhu 'l-mutasarwilāti min al-nisā'*); or "a woman came past riding one day and fell off. The Prophet turned aside in order not to see her, and was only put at his ease when he was told that she was *mutasarwila*". Other *ḥadīt̲h̲*s fix the length of the trousers as being to the ankles, not longer; as a concession, as a protection against insects, they may be a little longer but must not trail on the ground.

The pilgrim who is *muḥrim* is forbidden to wear trousers (along with certain other garments). But even the *ṣalāt* in trousers was *makrūh* according to the strictest view, and must be repeated; trousers are also considered unfitting for the *mu'ad̲h̲d̲h̲in*.

In actual practice, little attention has been paid to all such restrictions, and numerous passages in historical and geographical literature, in books of travel and in *adab* literature, show that trousers have probably been worn in most Muslim lands since the early centuries of the Hid̲j̲ra. It is quite exceptional to find the statement that in one region a so-called *fūṭa* was worn in place of trousers (e.g. in India). The word *fūṭa* is of Indian origin, and means a simple cloth

with a seam, which was fastened in front and behind to the girdle. A *fūṭa* of this kind—those from the Yemen were particularly noted—was also worn in regions, where trousers were usually worn, by women in negligée in the house instead of trousers (cf. Ibn al-Ḥādjdj, *Kitāb al-Mudkhal,* Cairo 1320, i, 118).

Oriental trousers differ very much in different countries. They are of all possible widths, from wide pantaloons, which are only drawn together at the bottom over the feet, to close-fitting shapes which look more like drawers and indeed are so-called by European travellers. They are also of very different lengths, from knee-breeches, especially for soldiers, to long trousers coming to below the feet. Colours were dependent not only on fashion (at times, only natural colours were considered chic, and artificial colours not at all) but also on political considerations; the ʿAbbāsid colour, for example, was black and that of the Fāṭimids white. As regards material, a famous Persian speciality was silken trousers; in Egypt and the adjoining lands, the white Egyptian linen was popular, trousers of red leather are mentioned as the dress of the women in the market of lights at Cairo, and so one.

In contrast to the European fashion, trousers in the East are worn next to the bare body under the other garments (cf. al-Djāḥiẓ, *Kitāb al-Tādj*, ed. Zeki Pacha, 154 below; the shirt and the trousers are *shiʿār*, the other garments, *dithār*, are worn above) and are supported not by braces but by a special girdle tied round the body, called the *tikka* (modern *dikka*). Although the *tikak* were covered by the other garments and could not be seen, they were the objects of a particular extravagance, being adorned with inscriptions, usually of an erotic nature; the most famous and valuable were the *tikak* made in Armenia of Persian silk. The prohibition against wearing them issued by the *fuḳahāʾ* had scarcely any effect. A thousand pairs of trousers of brocade with a thousand trouser bands of silk from Armenia (*alf sarāwīl daybaḳīya bi-alf tikka ḥarīr armanī*) were, according to al-Maḳrīzī, *Khiṭaṭ*, ed. Būlāḳ, ii, 4, part of the estate of an Egyptian noble (cf. Ibn Khallikān, Būlāḳ 1299, i, 110); a thousand jewelled *tikkas* were given to the daughter of Khumārawayh b. Aḥmad b. Ṭūlūn [*q.v.*] on her wedding; the *tikka* was also used as a love-token sent by a lady to her admirer.

For practical reasons, trousers formed part of a soldier's dress. Al-Ṭabarī records that even the Umayyad soldiers already wore *sarāwīl* made of a coarse cloth called *misḥ*. Under the latter, they wore very short drawers called *tubbān,* which were made of hair. When Islam adopted the old Oriental custom of granting robes of honour (*khilaʿ*; see KHILʿA), trousers were included among them; indeed, they were sometimes regarded as the most valuable part of the gift. Originally the garments of honour given were not new, but had been worn by the donor; he ought to have worn them at least once.

As a kind of uniform and a garment of honour, the trousers play a very special part in the Muslim *futuwwa* [*q.v.*] organisations. In the ceremonial reception of a new member into the gild, an essential feature of the initiation ceremony (*shadd* [*q.v.*]) is the putting on of the *sarāwīl al-futuwwa*, often briefly called *futuwwa*. Here also stress is laid on the point that the *kabīr* or *shaykh* must have either previously worn them himself or at least gone into far enough to touch them with his knees. The *sarāwīl* had occasionally a similar importance for the *fityān*, as had the *khirḳa* [*q.v.*] for the Ṣūfīs. An oath was taken on the *sarāwīl* (this oath is, however, invalid according to Ibn Taymiyya); they could also be put on a coat of arms [see RANK] with a cup, *kaʾs*.

The putting on of the *sarāwīl al-futuwwa* acquired a certain political significance under the "reformer of the *futuwwa*", the ʿAbbāsid caliph al-Nāṣir (575-622/1180-1225 [*q.v.*]), about whose grants of *sarāwīl* a few stories have been preserved by the historians. He sent embassies to the petty dynasts of Syria, Persia and India with the demand that they and their nobles should put on the *sarāwīl al-futuwwa* for the caliph. This was done with solemn ceremonial and they thereby placed themselves under the protection of the caliph as overlord of the *fityān*. The same al-Nāṣir seems to have limited the right of investiture to a very few, and his successors also claimed the right for themselves. But others did it, for example the Mamlūk sultan al-Ashraf Nāṣir al-Dīn (764-78/1363-76) of Egypt two centuries after al-Nāṣir.

When the *futuwwa* gilds declined, other organisations with political or other aims adopted their external ceremonies, and laid special stress on the putting on of trousers; thus the gild of thieves in Baghdād, for example, under the caliph al-Muktafī, and a secret Sunnī association in Damascus called the Nabawiyya with anti-Shīʿa tendencies, mentioned by Ibn Djubayr. But with the disappearance of the *futuwwa*, the original significance of the *sarāwīl* as a badge of chivalry was no longer understood, and they became combined with the *khirḳa* of the Ṣūfīs into the *khirḳat al-futuwwa*.

For the expression *sarāwīl al-futuwwa* we also find *libās al-futuwwa* with the same meaning "trousers" and in Egyptian Arabic, *libās* (see Lane) acquired the general meaning of "drawers" (i.e. for men; for those of women there is a new foreign word, *shintiyān*, for which see Dozy, *Suppl.*, s.v.). This circumstance is a criterion for ascertaining the Egyptian texts in the 1001 Nights; they replace the word *sarāwīl* of the non-Egyptian texts without exception by *libās*.

In many expressions *sirwāl* is used metaphorically. Thus *musarwal* is a pigeon with feathered legs, a horse with white legs or a tree with branches down on the trunk. *Shirwāl al-ʿāʾiḳ* "rogue's trousers" and *sarāwīl al-ṭukūk* (cuckoo-trousers) (*linaria elatine*) are the names of plants (on the other hand, *sarwal* or *serwēl* or *serwīl* for "cypress" is formed from the well-known word *sarw* with the article after it and has nothing to do with *sirwāl*).

SĪS, a town of Cilicia in southern Anatolia, also called Sīsiyya (as in Yāḳūt, *Buldān*, ed. Beirut, iii, 297-8), mediaeval Latin Sisia and Sis; in mediaeval French sources the forms Assis and Oussis are also found. In later mediaeval times it became the capital of the Christian kingdom of Cilician Armenia, and subsequently, the Turkish town of Ḳozan, modern Kozan. It lies in lat. 37° 27' N. and long. 35° 47' E. at an altitude of 290 m/950 feet against an outlying mountain of the Taurus range, on a river which eventually flows into the Djayḥān [*q.v.*]/Ceyhan.

Before the Middle Ages, nothing is known about this town; the attempted identifications with antique localities (some have thought of Flavias, others of Pindenissus) are very doubtful.

In the Byzantine period we hear of the Arabs besieging in vain τὸ Σίσιον κάστρον in Cilicia, in the sixth year of the reign of the emperor Tiberius III Apsimarus = 703 (Theophanes, *Chronographia*, ed. de Boor, i, 372).

In ʿAbbāsid times however, Sīs belonged to the Islamic empire: it was reckoned among *al-thughūr al-Shāmiyya*. It was rebuilt during the reign of al-Mutawakkil, under the direction of ʿAlī b. Yaḥyā al-Armanī, but afterwards laid waste by the Byzantines (al-Balādhurī, *Futūḥ*, 170). There is also a tradition, going back to al-Wāḳidī, of an emigration of the inhabitants of Sīs to the *aʿlā al-Rūm* in the years 193 or 194/808-10, which event may be connected with the loss of the locality by the Greeks, in the interval between the times of Apsimarus and al-Mutawakkil (al-Balādhurī, *loc. cit.*; cf. Yāḳūt, *loc. cit.*, where the years erroneously are given as 94 or 93). A further mention of Sīs is found during the wars of the Ḥamdānid Sayf al-Dawla [*q.v.*] with the Byzantines. That prince, after rebuilding ʿAyn Zarba (Anazarba), sent his *ḥādjib* with an army, which ravaged the Byzantine territory; the Greeks, in revenge, then took the stronghold of Sīs (*ḥiṣn Sīsiyya*), in the year 351/962 (Ibn al-Athīr, viii, 404). It appears, then, that in the early Middle Ages Sīs has been a fortified frontier town.

The continuous history of Sīs begins about the end of the 12th century of the Christian era, when it had become the royal residence of the Armenian kings of Cilicia (the Rubenids and the Lusignans). But already before that time it is sometimes mentioned in the annals of the Cilician kingdom. It is numbered among the places conquered by the Armenian princes Thoros and Stephanos (*Chronicle* of Kirakos of Gandjak under 562 Armenian era = 1113-14); moreover, Sīs belonged to the towns which suffered from the earthquake of the year 1114 (Chronicle of Matthew of Edessa under 563 Armenian era). Nerses of Lambron, writing in the year 1177, complains that in the royal residence (*ishkhananist*) Sīs, there is no bishop, nor are there suitable churches. It is surprising to find the town mentioned as a royal residence as early as 1177, for it must have been Leo II (1187-1219), who transferred the royal residence, for strategic and political reasons, from Anazarba to Sīs. Since the time of this ruler, the kingdom of Cilicia is called, by Muslim authors, not only *bilād al-Arman* but also *bilād Sīs*; an Armenian geographer (13th century?) cited by Saint Martin, ii, 436-7, also identifies the names Cilicia and Sīs.

Leo II caused many new buildings to be erected in the town. In 1198 he was crowned king (he himself before, and the older Rubenids only wore the title of baron) and transferred, as stated above, the royal residence to Sīs. His coronation must have been at Tarsus (a later chronicler, Jehan Dardel, erroneously pretends that it was at Sīs), but the town of Sīs is already called the "metropolis" of Leo in a poem on the taking of Jerusalem by Ṣalāḥ al-Dīn, written by the Catholicos Grigor IV (d. 1189; in this poem the form Sisuan is to be noted: *Rec. des hist. des Croisades. Doc. arm.*, i, 301). In the year 1212 it was at Sīs that the coronation of Leo's grand-nephew and co-regent Ruben took place. This ceremony was witnessed by Wilbrand of Oldenburg, who in his *Peregrinatio* gives a short account of the town.

It is surprising that, according to this traveller, the town had no wall; it seems that the stronghold was deemed sufficient for defence. Still in 1375, when Sīs was taken by the Mamlūks, there was no town wall. The royal palace, together with some other buildings, were enclosed with a wall; it seems to be this complex which is called by Jehan Dardel the *bourg*, and it must be distinguished from the castle on the mountain.

The kings of Cilicia, moreover, had a summer-residence in the Taurus, to the north of Sīs, Barjirberd, which was also their treasure-house. Likewise, in modern times, the inhabitants of Sīs, during the summer, have tended to leave the unhealthy town, to take summer habitations (*yaylaḳ*) in the mountains.

The political history of Sīs is, of course, intimately connected with the general history of the Cilician-Armenian kingdom. The chief feature of that history consists in the struggle for existence which that kingdom had to carry on against the Mamlūk sultanate of Egypt; it is therefore not surprising that the chief events connected with the town are attacks of the Mamlūk armies and ravages wrought by them. Other foes were of minor consequence; an attack of a Turkoman chief in the year of the accession of Leo II (1187) was repelled by that prince, but the Turkomans, during the reign of the following kings, remained a menace to the Cilician kingdom. These nomads, whenever a strong government was lacking, availed themselves of the opportunity to seize pasture-grounds; we shall find them, under the Ḳozan-oghullarï (see below) in the actual possession of the territory of Sīs in the first half of the 19th century. On the occasion of the Egyptian attack of 1266, the town of Sīs, with its cathedral, was burnt down and the royal tombs were desecrated. Other Egyptian incursions in the district of Sīs occurred in the years 1275, 1276, 1298 and 1303; in the last-named year, the city itself was plundered by the enemy. In 1321 the environs again suffered from hostile attack; this time it was the Il Khānid Mongol governor of Rūm, Tīmūrtāsh, who, on the instigation, as it seems, of the Egyptian sultan al-Malik al-Nāṣir, carried out his ravages in the district of Sīs. A similar incursion was made by the then officiating governor of Aleppo, by order of the same sultan in the year 1340; the incursions from the *amīr* of Aleppo were repeated in 1359 and 1369; both times the town was taken. In the meantime, Sīs had suffered from the great epidemic, which in Europe, during that same time, is known under the name of the "Black Death" (1348).

However, the end of the Cilician kingdom was imminent. The last king, Leo VI (de Lusignan), was reduced to his capital, Sīs; after the retreat of the Egyptians, the Turkomans fell upon the land; then, in the years 1374 and 1375 came the catastrophe. The sieges of Sīs during these years by the Mamlūk army of al-Ashraf Shaʿbān II, and the final taking of the town, wherein the enemy was assisted by the treason of some nobles and of the Catholicos, are described in detail in the chronicle of Jehan Dardel, who had been chaplain to king Leo VI since 1377, Leo being then a prisoner at Cairo.

From the ecclesiastical history of Sīs during the time of the Cilician kingdom, only the following facts may be mentioned.

The patriarchs of the Cilician-Armenian kingdom fixed their seat at Sīs in 1292. On 29 June of that year, Rūm Ḳalʿesi [*q.v.*], which was the former seat of this patriarchate, had been taken by the Egyptians; so the new patriarch (Grigor VII) came to reside at Sīs. There his successors have remained even after the fall of the kingdom, and after the renovation of the patriarchal see of Echmiadzin in Transcaucasian Armenia (1441), which caused, of course, a schism in the Armenian church not healed until 1965. The chief relic preserved by the patriarchs of Sīs was the right hand of St. Grigor, the apostle of the Armenians, which, in 1292, was redeemed, with other relics, from the infidels by king Hethum II.

After the Mamlūk conquest, the patriarchs, at first, had no fixed residence; they came only to the town of Sīs to perform some ecclesiastical duties, e.g. the benediction of the sacred oil (*myron*). Under the rule of the Rubenids and Lusignans, the habitation of the patriarchs had been within the circumvallation of the royal dwellings. After the period of their wandering, the patriarchs obtained from the Mamlūk authorities permission to reside in the town. First, this residence of the patriarch was an ordinary house; in 1734, long after the Turkish conquest, a monastery was founded by the patriarch Lucas, which seems to have been the seat of the patriarchate until 1810, when the patriarch Kirakos founded another monastery, in which the patriarchate was established when V. Langlois visited Sīs (1853). A little before 1874, the patriarch was expelled from Sīs and migrated to ʿAyn Ṭāb, the present Gaziantep.

But if the ecclesiastical history of the town continued until modern times, politically Sīs soon became insignificant. Immediately after the Egyptian conquest, Sīs remained the capital of a new province, which included Ayās, Tarsus, Adana, Maṣṣīṣa and Ramaḍāniyya, the whole being dependent on Aleppo. In 893/1488 Sīs was taken by the Ottomans, during the war between Bāyezīd II and the Mamlūks. Afterwards, the town belonged to the realm of the Turkoman dynasty of the Ramaḍān Oghullarí [*q.v.*], whose members, however, since the time of the fifth prince, Khalīl b. Maḥmūd, were vassals to the Porte. Ḥādjdjī Khalīfa, in his *Djihān-nümā* contrasts the once flourishing condition of the district of Sīs with its uncultivated state in his time.

Under Ottoman administration, Sīs belonged to the *wilāyet* of Adana and the *sandjak* of Ḳozan. When Langlois visited the locality, he found it to be a village, consisting of *ca.* 200 houses, inhabitated by Turks and Armenians. There was a *masdjid* and a *bāzār*; the Turkoman beg of the Ḳozanoghlu tribe was virtually the ruler, for the *wālī* of Adana had no authority whatever in Sīs. The village, moreover, paid no tribute to the Porte. The mountain-stronghold of Sīs, built by Leo II (*Sīs Ḳalʿesi*) was in a tolerable state of preservation.

According to a statement of 1894 (Sāmī Bey Frasherī) Sīs then had *ca.* 3,500 inhabitants, 2 *masdjids*, 3 churches and 3 *medreses*. Its territory, though fertile, was insufficiently cultivated, but in its neighbourhood there were many gardens.

For further details on Sīs/Ḳozan in Ottoman and recent times, see the arts. ḲŌZĀN and ḲŌZĀN-OGHULLARÍ

(V.F. BÜCHNER*)

SISĀM, the Turkish name for Samos, an island in the south-eastern Aegean alongside the Turkish coast, from which only 1.8 km/1.2 miles separate it at the narrowest point of the Dar Boghaz/Stenon Samou.

With an area of 468 km^2, Samos is one of the larger islands in the Aegean, and today forms, with Ikaria and a few other islands, one of Greece's 52 *nomoi*. The capital and main port city is situated on the north-eastern coast inside the bay of Vathy, and was known by this name until outgrown by a suburb called Samos. The nearest important port on the Turkish coast is Kuşadası [see AYA SOLŪḲ], and there is frequent boat service between the two.

Samos was a Byzantine possession in the early Middle Ages. There were two raids by the Arabs of Crete in 889 and 911, and in 1090 it was incorporated in the short-lived maritime principality of the Saldjūḳ prince Čaḳa or Čaḳan (1089-92). In the first half of the 14th century, Aydín-oghlu Ümür Bey raided it, but in 1420 Börklüdje Muṣṭafā, the leader of a popular revolt with proto-socialist overtones on Urla peninsula, established friendly contacts with Orthodox prelates on Samos. Subsequently the Genoese of Chios gained control of the island, but soon abandoned it after having transferred some of its population to their chief possession. The first Ottoman occupation occurred under Meḥemmed II Fātiḥ in 884/1479, and an effort was made to repopulate the island; a fort was erected on the site of the ancient port of Tigani on the southern coast, but was abandoned under Bāyezīd II, and the island was left to its own devices. It was in that period that the Turkish mariner and corsair Pīrī Reʾīs [*q.v.*] recorded certain salient features of Samos: the sparsely populated island had splendid growths of tall trees which the Hospitallers of Rhodes [see RODOS] used to harvest as timber for their shipbuilding and for export; there were large herds of gazelles (*āhū*; perhaps deer) and boars, both of which the visitors hunted for consumption and sale.

By the time Pīrī Re'īs wrote the 1526 version of his portolan, Rhodes had fallen to the Ottomans, and the anchorage on Samos's southern coast served as a convenient stopover for Turkish warships sailing from Istanbul, providing shelter and drinking water for 200 ships.

In 969/1562 Ḳîlîdj ʿAlī Pas̲h̲a [see ʿULŪDJ ʿALĪ] re-established the Ottoman presence on Samos while holding it as his own revenue-bringing fief, and increasing its population through transfers from other places (chiefly from other islands and mainland Greece, but also from Albania; Turks or other Anatolians were seemingly excluded); upon his death in 1587, it became a *k̲h̲āṣṣa* property of the sultan, yielding 400,000 *ḳurūs̲h̲* annually; out of this amount, 101,000 *ḳurūs̲h̲* remained reserved as *waḳf* income supporting a mosque which the Pas̲h̲a had built at Tophane in Istanbul. From then on, and until the 1820s, the only visible tie with Istanbul was a civil servant called *ag̲h̲a* residing in Khora; he was seconded by a deputy called *nā'ib* who also supervised judicial matters as *ḳāḍī*; a metropolitan was the head of the Greek Orthodox population. There was no Turkish military garrison, a fact symptomatic of the islanders' loyalty or contentment, but whose price was defencelessness against frequent depredations by corsairs of all hues and faiths (fleeing to the island's wooded mountainous interior was the only recourse). The uneventfulness of this period was broken by Venetian invasions during the Habsburg-Ottoman war (1683-99) and by Russian occupation (1771-4) during the Russo-Turkish war.

A unique sequence of events occurred as a result of the Greek War of Independence (1821-9). The Samiots, who possessed a small merchant marine, not only joined the cause but sent an expedition to Chios exhorting that important island to rebel (for the consequence there, see ṢAḲÎZ). Samos, although invaded by a Turkish expeditionary force, emerged from the turbulence unharmed and thanks to the intervention of Britain, France and Russia, obtained an autonomy that surpassed that of Chios. From 1833 until 1913, it was governed by an Orthodox *wālī* (*hegemon* in Greek; "prince" in western renditions) and an assembly of 37 deputies, from among whom a committee of four was chosen as the island's government; the laws were those of mainland Greece, and Greece was the only country to maintain a full-fledged consulate on Samos. The *wālī* was appointed by the Porte, and from 1851 until 1913 he was always chosen from among the Phanariot Greeks of Istanbul. Samos, located on one of the busiest shipping lanes of the Aegean, had a thriving economy (above all, in the export of wine and olive oil), and its population was Greek Orthodox except for a garrison of 150 Turks. The ties with Turkey were definitively severed as a result of the Balkan War, and Greek sovereignty was ratified by the treaty of London (1913).

SĪSAR, a town of mediaeval Islamic Persian Kurdistān, in the region bounded by Hamadān, Dīnawar and Ād̲h̲arbāyd̲j̲ān. The Arab geographers place Sīsar on the Dīnawar-Marāg̲h̲a road 20-22 farsak̲h̲s (3 stages) north of Dīnawar (Ibn K̲h̲urradād̲h̲bih, 119-21; Ḳudāma, 212; al-Muḳaddasī, 382). According to al-Balād̲h̲urī, *Futūḥ*, 310, Sīsar occupied a depression (*ink̲h̲ifāḍ*) surrounded by 30 mounds, whence its Persian name "30 summits". For greater accuracy it was called Sīsar of Ṣadk̲h̲āniya (*wakāna Sīsar tudʿā Sīsar Ṣadk̲h̲āniya*), which al-Balād̲h̲urī correctly explains as Sīsar of the hundred springs. *K̲h̲ānī* in Persian (*kānī* in Kurd) does mean spring; on the other hand, the geographers (Ibn K̲h̲urradād̲h̲bih, 175; Ibn Rusta, 89) locate the sources of the Safīd Rūd (Ḳîzîl Üzen) "at the gate" or "in the ravine" (*bāb*) of Sīsar (al-Masʿūdī, *K. al-Tanbīh*, 62: in the *nāḥiya* of Sīsar). Finally, al-Masʿūdī (*ibid.*, 53), speaking of the Diyāla [*q.v.*], makes it come from the mountains of Armenia (?) and talks of Sīsar as belonging to Ād̲h̲arbāyd̲j̲ān.

These quotations show that the site of Sīsar lay near the watershed between the Ḳîzîl Üzen (southern arm) and the Gāwarūd (Diyāla) i.e. near the col of Kargābād, where numerous streams rise flowing in different directions. According to the ingenious hypothesis of G. Hoffmann, the name of the town of Sinna or Senna [see SANANDADJ] might be a contraction of the old form Ṣadk̲h̲āniya. There is not sufficient evidence, however, to show that the site of the modern Sinna/Sanandad̲j̲ is identical with that of the town of Sīsar.

In the district of Sīsar (al-Balād̲h̲urī, 130), there were at first only the grazing-grounds of the caliph al-Mahdī (158-69/775-85). This intermediate zone (*ḥadd*) between three great provinces soon became a refuge for outlaws (*al-ṣaʿālīk wa 'l-d̲h̲uʿʿār*) and the caliph ordered his superintendents to build a town. These lands formed a separate district (*kūra*) which was extended by the addition of the following cantons (*rustāḳ*): 1. Māypahrad̲j̲, detached from Dīnawar; 2. D̲j̲ūd̲h̲ama (?), detached from the *kūra* of Barza in Ād̲h̲arbāyd̲j̲ān; and 3. K̲h̲ānīd̲j̲ar (?). Hārūn al-Ras̲h̲īd stationed a garrison of 1,000 men at Sīsar. Sīsar was later the scene of battles between a certain Murra al-Rudaynī al-ʿId̲j̲lī and rebels and perhaps outlaws under ʿUt̲h̲mān al-Awdī (Yāḳūt, iii, 216). The caliph al-Ma'mūn made Humām b. Hāni' al-ʿAbdī governor of Sīsar, which became a crown domain.

In the 7th/13th century Yāḳūt was able to add very little to the information given by al-Balād̲h̲urī. In the 8th/14th century Ḥamd Allāh Mustawfī no longer mentions Sīsar. On the other hand, he talks of the "mountain of Sīnā" forming the boundary of Ād̲h̲arbāyd̲j̲ān and the "pass of Sīnā" in the mountains of Kurdistān in which was the source of the Tag̲h̲atū. The *D̲j̲ihān-nümā* of Ḥād̲j̲d̲j̲ī K̲h̲alīfa, while marking correctly on the map the exact site and correct name of Tag̲h̲atū, gives in the text the wrong reading *n-f-t-w* which Norberg in his translation (Lund 1818, i, 547) rendered by Neftu. Quatremère introduced the reading Nag̲h̲atū found in an edition of Mīrk̲h̲ʷānd. G. Hoffmann admitted the identity of this river with the K̲h̲ork̲h̲ora (a right bank tributary of the D̲j̲ag̲h̲atū). But there is no proof of the actual existence of the name Nag̲h̲atū, and the text of Mustawfī may simply indicate that in his day the frontier between Ād̲h̲arbāyd̲j̲ān and Sīnā was marked by the watershed between the Tag̲h̲atū [see SĀWDJ BULĀḲ] and Bāna. This last district had long been a dependency of Sinna. In this way since the 8th/14th century, the name Sīnā (Sinnā, Sīna) has become substituted for that of Sīsar and its later history will be found in the article SANANDADJ. As to the date of origin of this town, it may be noted that in 1039/1630

Khosrew Pasha [*q.v.*] destroyed Ḥasanābād which was the capital of the princes of Ardalān (von Hammer, *GOR*², iii, 87). Only forty years later, Tavernier (*Les six voyages*, Paris 1692, i, 197) speaks of his visits to Sulaymān Khān at *Sneirne* (= Senna).

SISḲA, the Ottoman Turkish form for the Croatian town of Sisak (lat. 45° 30' N., long. 16° 22' E.). It is situated in a wide plain at the confluence of the Odra, Kupa and Sava (Save) rivers some 50 km/30 miles southeast of Zagreb, hence in the 16th-18th centuries on the edge of Krajina, the "military frontier" of Austria, facing the Ottoman empire.

It was founded in the 4th century B.C. by the Scordisci, a people of Celtic origin established on the Save and Danube, where they mingled with the Illyrians, then passed under Roman domination (as Segestica, and then Sciscia), then under that of the Avars, Croats, Hungarians (as Sziszek), Austrians and Austro-Hungarians before being included (with Croatia as a whole) in 1918 in the kingdom of the Serbs, Croats and Slovenes, then becoming the kingdom of Yugoslavia. During the Second World War, Sisak came within the fascist Croat state of Ante Pavelić, then the Socialist Federal Republic of Yugoslavia, and finally, in the Croatian Republic. In the 19th and 20th centuries, Sisak has been best known as an important river port and an industrial centre (blast furnaces, heavy metal industries and petroleum refining).

In fact, the history of Sisak is only relevant for us during a brief period of four years, 1591-4. At the time of the Ottoman campaigns of the 10th/16th century, Sisak was a strategic point in the last line of defences for Zagreb, which is on the Kupa. Between 1544 and 1550, a solid, triangular fortress, comprising three fortified towers, was built, using the remains of the old Roman town, and this played a great role towards the end of the century, especially when the town was successively attacked by Ḥasan Pasha ("Predojević"), *beylerbeyi* of Bosnia, who first besieged it, in vain, in 1591. In the next year, Ḥasan conquered northwestern Bosnia, with the town of Bihać, after having taken the fortress of Petrinja (Yeñi Ḥiṣār) in Croatia, not far from Sisak, which he rebuilt. He again besieged Sisak, unsuccessfully in July 1592, devastated the vicinity and carried off many slaves. A year later, he came back for a third time, with an army which certain sources number at 25,000 men, and on 15 June 1593 began the siege once more. This ended a week later in the famous battle on the left bank of the Kupa, in a triangle formed with the Odra and Save, on 22 June 1593, in which the Turkish army suffered a terrible defeat. Most of its troops perished, either in battle or by drowning (as Ḥasan Pasha himself), with only a small part (2,500 is the often-cited figure) escaping.

This event unleashed the "Long War" between Turkey and Austria, which lasted until 1606 and the peace treaty of Zsitvatörök. Since the battle involved one of the first great victories of Christendom over the Ottomans in this part of Europe, it was hailed with great joy in the West (cf. the main references to pamphlets, articles and archival documents, in K.M. Setton, *Venice, Austria and the Turks in the seventeenth century*, Philadelphia 1991, 6-7), and also gave rise to a popular Croatian poetry celebrating the victory. Nevertheless, hardly two months later, on 24 August 1593, Sisak was taken by assault by the *beylerbeyi* of Greece and Thrace, Ḥasan, who installed a garrison in the fortress (where naturally, a mosque was now built) commanded by a certain Ibrāhīm Beg. But this conquest was in turn of brief duration, since in autumn 1594, faced by the advance of Christian troops, the Ottomans evacuated Sisak and its fortress definitively, so that it never subsequently came within the *Dār al-Islām*.

SĪSTĀN, the form usually found in Persian sources, early Arabic form Sidjistān, a region of eastern Persia lying to the south of Khurāsān and to the north of Balūčistān, now administratively divided between Persia and Afghanistan. In early Arabic historical and literary texts one finds as *nisbas* both Sidjistānī and Sidjzī, in Persian, Sīstānī.

1. Etymology.

The early Arabic form reflects the origin of the region's name in MP Sakastān "land of the Sakas", the Indo-European Scythian people who had dominated what is now Afghānistān and northwestern India towards the end of the first millennium B.C. and the first century or so A.D. Earlier designations of the region had been the Avestan one "land of the Haētumant", i.e. land of the Helmand river, appearing in the early Greek geographical sources as Erymandus; and the OP Zara(n)ka or Zra(n)ka of the Behistun inscription of Darius I and the Persepolis one of Xerxes, appearing in Herodotus as the land of the Sarangai, the Drangiana of the time of Alexander the Great and the Zarangianē of Isidore of Charax (probably 1st century A.D.). This latter form survived into early Islamic times as the name of the capital, Zarang [*q.v.*], current up to Saldjūḳ times. The oldest MP text with the form *Sakastān is the Naḳsh-i Rustam inscription of Shāpūr I (239 or 241 to 270 or 273 [see shāpūr], *Skstn*, indicating Sakastān or Sagastān.

But already in the *Shāh-nāma* of Firdawsī one finds the region also called Nīmrūz, lit. "midday", i.e. the land to the south of Khurāsān, "the eastern land", and this appears in the Ghaznawid sources (5th/11th century) detailing the component provinces of the empire of Sultan Masʿūd b. Maḥmūd. From Saldjūḳ times, it becomes frequent for the region, at the side of Sīstān, and the local rulers there were, from the 5th/11th century onwards, known as the Maliks of Nīmrūz; the geographical term Nīmrūz has been revived in Afghānistān during the 20th century (see below, 3. History). See on these topics C.E. Bosworth,

The history of the Saffarids of Sistan and the Maliks of Nimruz (247/861 to 949/1542-3), Costa Mesa, Calif. and New York 1994, 30-8.

2. Topography and climate.

Geographically, Sīstān forms a shallow basin at an average altitude of 482 m/1,580 feet above sea level, with its lowest point in the southernmost depression of the Gawd-i Zirih, some 12 m/40 feet lower. The highest elevation is the Kūh-i Khwādja, so-called after a local saint, which rises 120 m/400 feet above the level of the region between the Hāmūn-i Puzāk and the Gawd-i Zirih (see below), and in times of inundation rises out of the water as an island. There is a large, central sheet of water, fringed with marshes, which is only filled in May when rivers like the Helmand [*q.v.*] and the northern feeders like the Khwāsh Rūd and the Farāh Rūd bring in water from the melted snows of the mountains of Ghūr [*q.v.*] in central Afghānistān; the feeders from the west are insignificant. The lake may then cover over 140 sq. miles, and it straddles both of the modern countries of Persia and Afghānistān. The rising summer temperatures and the "wind of 120 days" (see below) reduce this sheet of water in summer to three separate, permanent sheets, the Hāmūn-i Sābarī and the Hāmūn-i Puzāk in the north and the Hāmūn-i Hilmand in the south. Only the last is completely within Persian territory, and forms the largest sheet of permanent water on the Persian plateau. When the water level is particularly high, the Hāmūn-i Hilmand discharges its surplus water into a channel, the Shēla or modern Shaylak Rūd, leading to the depression of the Gawd-i Zirih (the Aria palus of the classical geographers; it is also mentioned in the *Shāh-nāma*, in which Kay Khusraw sails across the Āb-i Zirih when pursuing Afrāsiyāb, the Helmand appearing there as the Hīrmand). Natural drainage into the Gawd-i Zirih helps to keep the waters of the central lake clear and fresh. Feeder waters like the Helmand bring down with their spring flooding vast quantities of silt, which seem to be redistributed around the basin by action of the winds, since the general level of the basin does not rise. Western travellers have noted one of the features of the climate of Sīstān, described by the Arabic geographers of a thousand years before, the notorious *bād-i ṣad u bīst rūz* "wind of 120 days", which blows from the northwest from May to October and may reach 120 k.p.h./70 m.p.h. The wind carries dust and sand particles, which have a powerful abrasive effect on the terrain, stripping vegetation and light soil covering away, eroding buildings and causing intense evaporation from the stretches of water. Hence whilst the winters can be cold, they are usually healthy, whereas the summers are hot, humid and febrile, with a host of noxious insects and snakes (in mediaeval Islamic times, Sīstān was known for its poisonous vipers, *afāʿī*).

The alluvial soil of Sīstān allows the cultivation of crops, the greater part of them being winter ones like wheat, barley and beans, with legumes, melons and fodder crops as summer ones. There are few trees—C.E. Yate noted only the decayed remains of date palms—except tamarisks along the banks of the watercourses and canals; Sir Percy Sykes described them as forming one of the few jungles he had seen in Persia.

The effects of climate and water-supply have meant that the topography of Sīstān has been constantly changing all through history. River channels have regularly changed their course, making the restoration of the historical geography of mediaeval Sīstān extremely difficult. Conservatism in building techniques and the almost universal use of sun-dried brick [see LABIN] as a construction material have meant that very few ancient buildings have survived the effects of the eroding winds; there are few inscriptions and there have been few coin finds, so that the buildings that remain are accordingly difficult to date. These processes of weathering have been aggravated by earthquakes; thus the Mīl-i Ḳāsimābād, an imposing, free-standing minaret or tower with Kūfic inscriptions describing its construction by a 6th/12th-century Malik of Nīmrūz Tādj al-Dīn Ḥarb b. Muḥammad (*r.* 564-610/1169-1213) was 23 m/75 feet high when the Seistan Boundary Commission was at work in the first decade of this century, but collapsed totally *ca.* 1955 in an earthquake. The effects of wind and of moving sands have meant that whole villages and tracts of agricultural land may disappear or, conversely, be revealed. All these factors have made the interpretation of the region's history, when written sources fail, arduous.

The population of Sīstān is substantially Tādjīk, with some Balūč and other outside peoples settled there by Persia rulers, such as Kurdish nomads brought thither by Nādir Shāh Afshār [*q.v.*], and some Balūč and Arab nomads who appear there from Ḳuhistān in the summer. An indigenous element noted by all the travellers in Sīstān is that of the *ṣayyāds* or hunters and fishers of the lakes and marshes, on which they travel in *tutins*, cigar-shaped rafts of reeds, making a living by fishing and shooting waterfowl; it has been speculated that they may represent the aboriginal inhabitants of the region. A class of cattle-raisers, *gāwdārs*, has also been noted. See on these topics, *EI*[1] art. *Sīstān* (V.F. Büchner); Admiralty Handbooks, *Persia*, London 1945, 116-18; *Camb. hist. of Iran*, i, 78-81.

3. History.

Sīstān had formed part of the Sāsānid empire after the disappearance of the Sakas and other earlier conquerors in the region. Under Shāpūr I, it became a province (*shahr*), with its full name given in the inscriptions as "Sakastān, Tūrestān (sc. Tūrān [*q.v.*] in what is now northern Balūčistān) and Hind, to the edges of the sea", and was often given as an appanage to sons of the emperors (see V.G. Lukonin, in *Camb. hist. Iran*, iii/2, 729-30, and map at 748-9). In the "quadrant" (*kust*) of the east, it comprised both the Achaemenid Zranka/Dragiana and Haraxwat/Arachosia, with Zarang as its administrative capital (C.J. Brunner, in *ibid.*, 773-4). The state church of Zoroastrianism was, naturally, firmly established there, as appears from what we know of the arrival of the Arabs in Sīstān in the 1st/7th century, when the incomers encountered a Mōbadh Mōbadhān [see MŌBADH] and a chief Hērbadh, whilst the important fire-temple of Kārkūya remained intact after the Muslims came (see Bosworth, *Sīstān under the Arabs, from the Islamic conquest to the rise of the Ṣaffārids (30-250/651-864)*, Rome 1968, 5-6). The Nestorian Church was, however, represented there also, with a bishop of Sīstān mentioned at the Synod of Dādīshōʿ in 424 and Christian congregations in Bust and Arachosia as well as in Sīstān proper; these Christians persisted into the Islamic period, and a bishop in Sīstān is mentioned for 767 (see *ibid.*, 6-10).

The Arabs first appeared in Sīstān in ʿUthmān's caliphate, pushing eastwards from Kirmān during the governorship in Khurāsān of ʿAbd Allāh b. ʿĀmir [*q.v.*]. Hence in 31/652-3 Zarang surrendered peacefully, although Bust resisted fiercely, and immediately after this, coins of Arab-Sāsānid pattern begin to be minted at Zarang. From a base in Sīstān, governors like Muʿāwiya's appointee ʿAbd al-Raḥmān b. Samura

undertook campaigns eastwards into al-Rukhkhadj (sc. the earlier Arachosia) and Zamīndāwar [*q.vv.*] against the local rulers, the Zunbīls, and towards Kābul against the Kābul Shāhs. Zoroastrianism was of course toppled from its position of primacy, the higher levels of the official hierarchy collapsed, but the sacred fires apparently remained; an item in a late 4th/10th-century survey of the revenues of Sīstān mentions the *māl-i ādharūy*, which may refer to some rent paid for fire-temple premises or land (see *ibid.*, 13 ff.; Bosworth, *The history of the Saffarids of Sistan*, 56, 294-5).

Arab governors were sent out during the Umayyad and early ʿAbbāsid periods, and continued to be involved in raiding into eastern Afghānistān, with the object of gathering plunder in the form of slaves and herds. But the Zunbīls and the Kābul Shāhs proved tenacious foes, and were not subdued till the Ṣaffārid period, after some two centuries' strenuous resistance (for a detailed account of one particular Arab débâcle, see Bosworth, *ʿUbaidallāh b. Abī Bakra and the "Army of Destruction" in Zābulistān (79/698)*, in *Isl.*, l [1973], 268-83). The Arab settlers in Sīstān were rent internally by the tribal feuds of Tamīm and Bakr b. Wā'il, carried over from those raging in Khurāsān, and there seems to have been a general resentment over the years on the part of the indigenous Iranian population against Arab financial exactions, which contributed to the strong growth, especially in the countryside of Sīstān, of support for the Khāridjites [*q.v.*] who had fled eastwards through Kirmān after defeats by the Umayyad governors. The Arabs of Bakr b. Wā'il also appear to have had sympathies for the Khāridjite Azāriḳa [*q.v.*]. Hence Sīstān was, with Khurāsān, one of the epicentres of the great, prolonged rebellion in the eastern Persian lands of Ḥamza b. Ādharak or ʿAbd Allāh (d. 213/828, himself a native of (?) Rūn u Djūl in southern Afghānistān. For some 30 years, Ḥamza defied the armies of the ʿAbbāsids, requiring the personal presence in Khurāsān of Hārūn al-Rashīd, who died however at Ṭūs in 193/809 before he could take up arms against Ḥamza. The Arab governors sent by the Ṭāhirids [*q.v.*] of Nīshāpūr were no more successful against the rebels. Khāridjism continued to be vigorous and militant in the small towns, villages and countrysides of Khurāsān and Afghānistān until the time of the Ṣaffārids (see below) and, in a more quiescent form, till the later 4th/10th century (see Bosworth, *Sīstān under the Arabs*, 33-107).

It was out of the bands of local enthusiasts for the defence of Sunnī orthodoxy in the towns of Sīstān and Bust, the *ʿayyār*s and the *mutaṭawwiʿ*s [*q.vv.*], who were exasperated at the inability of the Ṭāhirid governors to protect their towns from the Khāridjite attacks, that there arose *ʿayyār* leaders like Ṣāliḥ b. al-Naḍr or al-Naṣr and Dirham b. al-Naṣr. From their entourages, there soon attained power at Zarang, in 247/861, as *amīr* of Sīstān, the local commander Yaʿḳūb b. al-Layth, founder of the Ṣaffārid dynasty, most glorious of those who ruled Sīstān in pre-modern times (see Bosworth, *Sīstān under the Arabs*, 112-33; idem, *The history of the Saffarids of Sistan*, 67-83). Over the next 150 years, Sīstān was to become the centre of a vast military empire built up by Yaʿḳūb and his brother ʿAmr [*q.vv.*], and even when the Khurāsānian provinces were lost at the beginning of the 4th/10th century, the Ṣaffārids still had a century before them of not inglorious existence. This history can now be followed in detail in the art. ṢAFFĀRIDS, and see especially, Bosworth, *op. cit.*, 67-361. It should further be noted that it is from these times, sc. the later 3rd/9th and the 4th/10th centuries, that we possess detailed descriptions of Sīstān from the Arabic and Persian geographers (see Le Strange, *The lands of the Eastern Caliphate*, 334-45, to which should be added *Ḥudūd al-ʿālam*, tr. Minorsky, 110, comm. 344-5; W. Barthold, *An historical geography of Iran*, Princeton 1984, 65-73; Bosworth, *op. cit.*, 39 ff.).

Sīstān was in 393/1003 incorporated into the mighty Ghaznawid empire of Maḥmūd b. Sebüktigin [*q.v.*], and was then governed by nominees of the court in Ghazna. It was out of these last that there arose, in the person of Tādj al-Dīn (I) Abu 'l-Faḍl Naṣr (d. 465/1073), a line of local *amīrs* in Sīstān which became in effect autonomous, though at first under Ghaznawid, and then Saldjūḳ, suzerainty. These *amīrs* became in the last decades of their power caught up in the struggles over control of the eastern Iranian lands between the Ghūrids and Khwārazm Shāhs [*q.vv.*], until the appearance of the Mongols in Sīstān (Sack of Zarang in 619/1222) reduced the province to chaos and anarchy and brought about the end of their line. It is these rulers who figure in such sources as Djūzdjānī and the two local histories of the province, the anonymous *Ta'rīkh-i Sīstān* and Malik Shāh Ḥusayn's *Iḥyā' al-mulūk*, as the Maliks of Nīmrūz; the first line of the Maliks (421-622/1030-1225) may conveniently be called the Naṣrids (the so-called "third dynasty" of Ṣaffārids in Zambaur, *Manuel*, 200; but it must be emphasised that there is nothing to connect these Naṣrid Maliks, nor the succeeding Mihrabānid ones, with the Ṣaffārids, and the author of the *Ta'rīkh-i Sīstān* categorically states that the Ṣaffārid line ended with the deposition of Khalaf b. Aḥmad by Maḥmūd of Ghazna).

The Naṣrid Maliks flourished under the light suzerainty of the Saldjūḳs, and especially during the long reign of Tādj al-Dīn (II) Abu 'l-Faḍl Naṣr (499-559/1106-64), who was married to Sultan Sandjar's sister Ṣafiyya Khātūn. On various occasions, he supplied troop contingents for the Saldjūḳ army, including for Sandjar's expedition of 510/1116-17 against Ghazna with the aim of setting his protégé, Bahrām Shāh, on the throne there, and at the battle of the Ḳatwān steppe in Turkestan in 536/1141 against the Ḳara Khitay [*q.v.*]. Within the Naṣrid amīrate, the Maliks defended their lands against periodic incursions by the Ismāʿīlīs of Ḳuhistān (see Bosworth, *The Ismāʿīlīs of Quhistān and the Maliks of Nīmrūz or Sīstan*, in F. Daftary (ed.), *Essays in mediaeval Ismāʿīlī history and thought*, Cambridge 1995), but could not protect Sīstān against the Mongols. See on these Maliks, Bosworth, *The history of the Saffarids of Sistan*, 365-410.

After an interim of rule in Sīstān by the Khwārazmian *amīr* Tādj al-Dīn Inaltigin (622-32/1225-35), ended by a fresh Mongol onslaught on the province, there came to power the second and last line of Maliks of Nīmrūz, that of the Mihrabānids (633-mid-10th century/1236-mid-16th century), also from one of the local families of notables in Sīstān. For their history we depend almost wholly on the *Iḥyā' al-mulūk* and scattered references in the sources for Il-Khānid, Tīmūrid and early Ṣafawid history, plus very sparse information from coins. Sīstān was during these three centuries very much squeezed between the surrounding Turco-Mongol powers, as their satellite, and the Maliks also had to defend the frontiers of their realm against the rival local power of northern Afghānistān, the Kart dynasty [*q.v.*] of Harāt. Although the threats to the internal stability of the province from the Ismāʿīlīs had by now disappeared, these were replaced by the raids of virtually independent, freebooting Turco-Mongol marauding bands, such as the Ḳaraw-

nas and their component, but distinct, group of the Negüders or Nīkūdārīs. The land was devastated also by Tīmūr [*q.v.*] in 785/1383, when the Malik Ḳuṭb al-Dīn (II) b. ʿIzz al-Dīn was deposed, Zarang and Bust sacked (to such effect in the latter instance that the old city of Bust, whose site is marked by the modern Ḳalʿat-i Bist, had to be abandoned), and the Band-i Rustam, the weir or barrage across the Helmand river behind which water was stored for diversion into irrigation channels, destroyed. In the later 9th/15th century, internal disorder in Sīstān compelled the Maliks to withdraw for several years into the Sarḥadd [*q.v.*] or mountainous borderland of Sīstān and Makrān.

After the Özbeg Muḥammad Shībānī Khān had secured Harāt from the last Tīmūrids (913/1507), a Shībānid expedition against Sīstān followed, but three years later the Ṣafawid Shāh Ismāʿīl I [*q.v.*] crushed the Özbegs at Marw. The Mihrabānid Maliks rallied to Ismāʿīl's side, but Sīstān now acquired a permanent Ṣafawid military presence through the administrative oversight there (*wikālat*) of Ḳizilbash *amīrs*, and under Shāh Ṭahmāsp I [*q.v.*] it came under the governorship of Khurāsān exercised by his younger brothers such as Sām Mīrzā. The last Mihrabānids were increasingly drawn into the Ṣafawid administrative and military defence system of the east, as warfare with the Özbegs continued, and the last semi-independent Malik, Sulṭān Maḥmūd b. Niẓām al-Dīn Yaḥyā, had to introduce the Shīʿī *adhān* or call to prayer amongst his Sunnī subjects. After his death, Ṣafawid *wakīls* took over in Sīstān, although scions of the Mihrabānids (including the local historian Malik Shāh Ḥusayn, *flor.* early 11th/17th century) lived on there after his time. See on the Mihrabānids, Bosworth, *The history of the Saffarids of Sistan*, 411-77, to whose references should be added, Barbara Finster, *Sīstān zur Zeit tīmūridischer Herrschaft*, in *Archaeol. Mitteilungen aus Iran*, N.F., ix (1976), 207-15.

Without the *Iḥyāʾ al-mulūk*, the history of Sīstān towards modern times becomes even more obscure than before. G.P. Tate included a narrative of the events of these three centuries or so in his *Seistan, a memoir on the history, topography, ruins, and people of the country*, 3 parts, Calcutta 1910-12, 71-99, based on such sources as Iskandar Munshī's *Taʾrīkh ʿĀlam-ārā-yi ʿAbbāsī*, Mahdī Khān Astarābādī's *Taʾrīkh-i Djahān-gushāy-i Nādirī*, and a *Shadjarat al-mulūk* (?), but with very few hard dates. Local Maliks continued in Sīstān, but closely under Ṣafawid control, and Sīstān served, for instance, as the Ṣafawid base for the struggles with the Mughals over possession of Ḳandahār [*q.v.*]. The names of various 17th and 18th century Maliks are known, and in the early 18th century, when the Ṣafawid dynasty was in its death throes, Malik Maḥmūd b. Fatḥ ʿAlī Khān seems to have made himself a semi-independent power in Sīstān and Ḳuhistān, with a substantial military force at his disposal. In the complex fighting in Khurāsān involving the Ghalzay Afghān invaders, Nādir Beg Ḳulī Afshār and the last Ṣafawid, Ṭahmāsp II, Maḥmūd in 1135/1723 had himself crowned and secured such towns of Khurāsān as Mashhad and Nīshāpūr, until Nādir procured his death in *ca.* 1139/1727.

After the death in 1160/1747 of Nādir Shāh [*q.v.*], Sīstān came under the suzerainty of the Afghān chief Aḥmad Shāh Durrānī [*q.v.*], who married the daughter of the then Malik, Sulaymān b. Ḥusayn Khān. Sīstān fell into an anarchic state, with the last Malik to exercise any effective power being Djalāl al-Dīn b. Bahrām Khān, deposed in the later 1830s by local Sarbandī and Shahrakī chiefs. Both the ruling powers in Persia and Afghānistān, endeavoured to draw Sīstān into their orbits, until the Sarbandī chief ʿAlī Khān definitely acceded to the side of Persia, marrying a Ḳādjār princess in Tehran, until he was killed in 1858. Many of the notables of Sīstān inclined to the side of Afghānistān, but the struggles for power within the ruling family of Bārakzays meant that the *amīr* Shīr ʿAlī Khān could give no direct help in Sīstān from Kābul. In 1865 a Persian army invaded Sīstān and a Persia governor, with the title of Ḥashmat al-Mulk, and dependent on Ḳāʾin in Ḳuhistān, was placed over the province. It was this Ḥashmat al-Mulk whom Lt. Col. C.E. Yate met when he was travelling in Sīstān in 1894. Yate also gives information on the state of the province at this time. He found it dire: "What with their debts to the cattle-owners for hire of bullocks, and their debt to the Kadkhudas who advanced them grain, the cultivators and people of Sīstān generally were in a wretched state of poverty. I do not think I ever saw a more miserable-looking lot." All the land belonged to the state, and there were no private landowners. There was no regular trade, merely an annual caravan with skins and wool to Quetta in Balūčistān or to Bandar ʿAbbās on the Makrān coast which brought back items for consumption like tea and sugar. The revenue of the province amounted to 24,000 *khārwars*, each of 649 lbs. of grain, per annum; from this, 6,850 *khārwars* were retained for the salaries of officials and troops, and the rest was paid by Ḥashmat al-Mulk, as a fixed sum of 12,000 *tūmāns*, to the central government. In addition, there was a tax of 2,600 *tūmāns* levied in cash on sheep and cattle. (See Yate, *Khurasan and Sistan*, Edinburgh and London 1900, 75-113.)

Border disputes between Persia and Afghānistān had caused a fear of an outbreak of war between the two states, leading therefore to the Seistan Boundary Mission of 1872 presided over by General Sir Frederick J. Goldsmid. It awarded much of Sīstān proper to Persia, but required the Persian forces' evacuation of the right bank of the Helmand; naturally, neither side was satisfied. The boundary was not, however, definitively delimited till the second Seistan Boundary Commission of 1903-5 under Col. (later Sir) Arthur McMahon. The absence of clear natural dividing features, beyond that of the Helmand river, made the tasks of these Commissions difficult (see the Hon. G.N. Curzon, *Persia and the Persian question*, London 1892, i, 229 ff.; G.P. Tate, *The frontiers of Baluchistan. Travels on the borders of Persia and Afghanistan*, London 1909).

Persian Sīstān today falls within the province (*ustān*) of Balūčistān and Sīstān, with its administrative centre at Zāhidān [*q.v.*] (Zahedan); whilst Afghān Sīstān has, since the administrative re-organisation of 1964, formed the province (*wilāyat*) of Nīmrūz, thus reviving the old name, with its chef-lieu at Zarang, again reviving an old name, adjacent to Nād-i ʿAlī.

Bibliography: Comprehensive bibls. are given in the two works of Bosworth, *Sīstān under the Arabs*, and *The history of the Saffarids of Sistan*, and older bibl. is given in V.F. Büchner's *EI*[1] art. One may note additionally the following. For the older period, Pauly-Wissowa, new ed., arts *Sakai*, *Sakastane* (A. Herrman), *Drangai* (W. Tomaschek); Marquart, *Ērānšahr*, index, esp. 248 ff., 292 ff. On the present archaeological state of Sīstān, K. Fischer, D. Morgenstern and V. Thewalt, *Nimruz. SISTOVA [see ZISTOVA].

SITI BINTI SAAD (*ca.* 1880-1950), a singer famed throughout East Africa. Born at Fumba, Zanzibar, her father was an Mnyamwezi subsistence farmer and her mother an Mzigua potter. As a child she was known as *Mtumwa* (slave), in accord with the Swahili custom of giving children pejorative names. Brought up in the village, she had no formal education, and was illiterate. She disappointed her parents in failing to learn the skill of pot-making. She had an unsuccessful marriage, and occupied herself in carrying pots made by her mother for sale in the town. Eventually she moved to the town, where she fell in with a lute-player, who taught her to sing and also Arabic. When she was about thirty-one she fell in with a band of professional musicians, who played the lute, the mandoline and the tambourine. She adopted the name *Siti*, ambiguously meaning "lady", or fife or whistle. The band added other instruments to their répertoire, but her skill as a singer gave them wide popularity, and she was praised for the sweetness and delicacy of her singing. She was spoken of as if she were some incarnation of a spirit from the tales of the *Thousand and one nights*. It was in this tradition that she was sent for by the Sultan of Zanzibar, Khalīfa b. Kharūb, when she sang a song that had been specially composed in his honour. Behind this popularity lay a long tradition of at least two centuries of Swahili bards, who included many women such as the famous Mwana Kupona, the wife of Bwana Mataka, Shaykh of Siu [*q.v.*] in the mid-nineteenth century. In 1927 Siti came to the attention of the Colombia Record Company, which made gramophone records of her singing with her band in Bombay. Her recordings were immediately popular in India, and her reception when she returned to Zanzibar was as if she were a queen. She travelled and sang in Pemba, and on the mainland in Tanganyika, Kenya and Uganda. She was unspoilt by her success, and what, for those days, were the considerable sums that she earned. Shaaban Robert [*q.v.*], her biographer, first heard her sing in 1936, but only became acquainted with her in the last months of her life.

Hichens, Medstead 1934 (in Swahili and English); L. Harries, *Swahili poetry*, Oxford 1962; J.W.T. Allen, *Tendi*, London 1971, and information kindly supplied.

(G.S.P. FREEMAN-GRENVILLE)

SITR "veil", a curtain behind which the Fāṭimid caliph was concealed at the opening of the audience session (*madjlis*) and which was then removed by a special servant (*ṣāḥib/mutawallī al-sitr*) in order to unveil the enthroned ruler. The *sitr* corresponded to the *velum* of the Roman and Byzantine emperors. The holder of the function of *ṣāḥib al-sitr*, who also served as bearer of the caliph's sword (*ṣāḥib al-sitr wa 'l-sayf*), chamberlain and master of ceremonies, was mostly chosen from the Slav mamlūks (*ṣaḳāliba* [*q.v.*]); al-Maḳrīzī, *Itti'āẓ al-ḥunafā'*, ii, ed. M.Ḥ.M. Aḥmad, 30, 72, 106, 127.

Bibliography: Given in the article.

(H. HALM)

SITT AL-MULK, or SAYYIDAT AL-MULK, Fāṭimid princess, daughter of the fifth Fāṭimid caliph al-ʿAzīz [*q.v.*] and half-sister of al-Ḥākim [*q.v.*]. She was born in Dhu 'l-Ḳaʿda 359/September-October 970 at al-Manṣūriyya near al-Ḳayrawān to the prince Nizār (the future al-ʿAzīz) by an anonymous *umm walad* [*q.v.*], who is referred to in the sources as *al-Sayyida al-ʿAzīziyya* (al-Musabbiḥī, *Akhbār Miṣr*, ed. A.F. Sayyid, Cairo 1978, 94, 111; al-Maḳrīzī, *Itti'āẓ al-ḥunafā'*, ed. Dj. al-Shayyāl *et alii*, Cairo 1967 ff., i, 271, 292; Ibn Muyassar, *Akhbār Miṣr*, ed. A.F. Sayyid, Cairo 1981, 175). When her mother died in Cairo in Shawwāl 385/November 995, the daughter held a death-watch at her tomb for one month (al-Maḳrīzī, *op. cit.*, i, 288-9); she inherited her mother's slave girl Taḳarrub (d. 415/1025), who became her confidante and served her as a spy (al-Musabbiḥī, 111). Like the other daughters of Fāṭimid caliphs, Sitt al-Mulk never married, probably for dynastic reasons. Beloved by her father al-ʿAzīz, she was showered with gifts and provided with a lucrative appanage so that she was able to establish large charitable endowments, e.g. wells, reservoirs, baths, etc. (al-Maḳrīzī, *op. cit.*, ii, 33; Lev, *The Fatimid Princess*, 321).

When her father al-ʿAzīz died suddenly in Bilbays on 28 Ramaḍān 386/13 October 996, the princess, then 26 years old, accompanied by the *Ḳāḍī* Muḥammad b. al-Nuʿmān, the Bearer of the Parasol Raydān (or Zaydān) and other courtiers, hurried to Cairo with the palace guard (*al-ḳaṣriyya*) in order to occupy the palace; according to Ibn al-Ḳalānisī, ed. Amedroz, 44, she planned to take over and to hand the power to her cousin, a son of ʿAbd Allāh b. al-Muʿizz. But she was prevented from entering the palace and was brushed aside by the eunuch Bardjawān [*q.v.*], who placed her under house arrest and put her eleven-year old half-brother al-Manṣūr (al-Ḥākim) on the throne (al-Maḳrīzī, *op. cit.*, i, 291; Ibn Saʿīd al-Maghribī, *Mughrib*, i/2, 54).

After Bardjawān's assassination by Raydān, the Bearer of the Parasol, in 390/1000, the princess seems to have exercised some influence on her young half-brother, to whom she made precious gifts and who, on his part, bestowed on her *iḳṭāʿāt* [*q.v.*] whose annual income was 100,000 dīnārs (al-Maḳrīzī, *op. cit.*, ii, 15; 33). Ibn al-Ḳalānisī, 60, mentions the Christian administrative personnel of her Syrian estates. During the last years of al-Ḥākim's sole reign, she seems to have become alienated from him, perhaps as a result of al-Ḥākim's desiguation of his cousin ʿAbd al-Raḥīm b. Ilyās as heir-apparent in 404/1013. It was Sitt al-Mulk who thereupon took al-Ḥākim's *umm walad* Ruḳayya and her son—the future caliph al-Ẓāhir [*q.v.*]—to her palace in order to protect them; the young prince was brought up and educated in her household (Yaḥyā al-Anṭākī, ed. Cheikho *et alii*, 207, 235). In the following year, al-Ḥākim had his *ḳāḍī 'l-ḳuḍāt* Mālik b. Saʿīd put to death because he suspected him to be in tacit understanding with the princess (al-Maḳrīzī, *op. cit.*, 106-7).

Sitt al-Mulk's alleged involvement in the murder of al-Ḥākim in 411/1021 is dubious; the only source for it is the Baghdādī court chronicler Hilāl al-Ṣābī [*q.v.*], whose anti-Fāṭimid bias is well-known; his report, preserved by Sibṭ Ibn al-Djawzī, *Mir'āt al-zamān*, and Ibn Taghrībirdī, Cairo, iv, 185-90, is pure fiction.

Neither the Christian al-Anṭākī nor the Shāfiʿī jurist al-Ḳuḍāʿī [*q.v.*]—both contemporaries and sources of the event—casts any suspicion on the princess.

After al-Ḥākim's disappearance, Sitt al-Mulk was instrumental in securing the succession to the throne of her protégé al-Ẓāhir, whom she kept under her tutelage, apparently in competition with his mother Ruḳayya (al-Maḳrīzī, *op. cit.*, ii, 124-5). She had put to death the murderer of al-Ḥākim, Ibn Dawwās, a Kutāma [*q.v.*] chief (al-Ḳuḍāʿī, in Ibn Taghrībirdī, Cairo, iv, 191-2; al-Maḳrīzī, *op. cit.*, ii, 125-8), and eliminated al-Ḥākim's designated heir-apparent ʿAbd al-Raḥīm b. Ilyās, who was serving as governor of Damascus (al-Ḳuḍāʿī, in Ibn Taghrībirdī, Cairo, iv, 194; al-Anṭākī, 236). She held the reins of government for her nephew al-Ẓāhir; in the contemporary sources she is referred to as *al-Sayyida al-ʿamma*, "the Princess-aunt" (al-Musabbiḥī, 43, 96), *al-Sayyida al-sharīfa* (*ibid.*, 110-11), or *al-Sayyida al-ʿazīza* (al-Maḳrīzī, *op. cit.*, ii, 174; not to be confounded with her mother, *al-Sayyida al-ʿAzīziyya* who had died in 385/995; *ibid.*, i, 288-9). Sitt al-Mulk tried to restore order in state affairs following the mismanagement of al-Ḥākim's last years; she cancelled the *iḳṭāʿāt* and salaries which he had conferred on his favourites, and she re-imposed the illegal customs duties (*mukūs*) he had abolished (al-Anṭākī, 237). She died of dysentery, on 11 Dhu 'l-Ḳaʿda 413/5 February 1023 (al-Nuwayrī, *Nihāya*, xxviii, 205; Ibn al-Dawādārī, vi, 346; cf. Ibn ʿIdhārī, *Bayān*, ed. Colin and Lévi-Provençal, i, 271; al-Anṭākī, 243-4; Barhebraeus, *Taʾrīkh*, ed. Ṣāliḥānī, repr. Beirut 1958, 180). Hence al-Maḳrīzī's statement (*loc. cit.*) that she reigned five years and eight months after al-Ḥākim's death is due to an obvious mistake.

SIU, in some authors Siyu, is a small town 6 miles east-north-east of Pate [*q.v.*] on Pate Island. Its date of foundation is unknown. The Swahili *History of Pate* ascribes it to 903/1497; finds of Sāsānid-Islamic pottery suggest earlier occupation. The inhabitants claim Bajun origin, Bantu settlers from southern Somalia. There is a town wall, ascribed to 1843, but possibly earlier, and some houses believed by Kirkman to the 19th century. The Friday mosque has a minaret, a rarity in East Africa; the *minbar* has the earliest known inscription on wood in the region, 930/1523-4. It is no indication of the date of the mosque.

Siu is not mentioned in Arabic literature. The earliest account is that of Fra Gaspar de St. Bernardino's visit in 1606. Two Indian merchants accompanied him; they spoke the local language, presumably Swahili. They enabled him to have a conversation with the king about the Franciscan Order and the sights of the town, which the friar found had "nothing worthy of note." In 1589 Siu was attacked by the Ottoman Turks under Amīr ʿAlī Bey [see mombasa]. The king turned traitor against the Portuguese, who later imprisoned him, and destroyed 2,000 palm trees in reprisal.

Siu is not heard again until the 18th century. In 1187/1773 it was subject to Pate, but rebelled in 1190/1776. It was again subject in 1245/1829. The governor, Mataka, rebelled in 1249/1833 against Pate and against Sayyid Saʿīd of Zanzibar [see āl bū saʿīd]. He was defeated when he attacked with a force from Lamu, and again on a second attempt in 1259/1843. In 1263/1847 the erection of a fort was begun, which is known to have been occupied by Sayyid Madjīd's soldiers in 1857. Shortly, it seems, there was another rebellion, but from 1863 the town was independent, only to be recovered by Zanzibar in the mid-1860s. The fort still stands today.

Siu was not simply a fishing and agricultural community. There was a substantial material culture: cloth manufacture, embroidery, woodworking and furniture, silverware, leather-work, sandal-making, paper manufacture, book copying and binding. It was notable for its poets and poetesses, not least the celebrated Mwana Kupona, wife of Mataka. The ascription to Siu of a bound copy of portions of the Ḳurʾān in the Royal Asiatic Society's library, found at Witu, is based solely on the copyist's *nisba* of *al-Siwī*, an unwarrantable assumption.

SIVAS [see sīwās].

SĪWA, an oasis in northwestern Egypt.

"A jewel, the most fascinating of the Egyptian oases": thus Nancy McGrath (*Guide to Egypt*, ed. 1983-4, 403) describes the renowned oasis which, in early 1995, was the site of a sensational event, the discovery of the alleged tomb of Alexander the Great, some 25 km/16 miles from the temple of Zeus-Amon. Sīwa, Ammonium in ancient times, is indeed a large and pleasant oasis, the most westerly of the five Egyptian oases, situated only some 50 km/31 miles (as the crow flies) from the frontier of Libya. A road 300 km/186 miles in length, entirely asphalted since 1983, links it to Marsa-Matrouh, the ancient Paraetonium, situated to the north-east on the Mediterranean.

1. *The site*

Sīwa and the oases grouped under this name are located in a depression some 80 km/50 miles in length lying on a west-east axis, the base of which is some 20 m/65 feet below sea-level. From this a number of holms emerge, two of them sheltering the localities of Sīwa and Aghurmī, separated by a distance of 3 km/2 miles. It is at the latter site, on a rocky plateau, as well as a few hundred metres away at Umm ʿUbayda, that the remains of the temple of Amon have been found; this was constructed by the Pharaoh Amasis (26th dynasty) probably during the period which also saw the restoration of the oracular temple of Apollo at Delphi, accidentally destroyed by fire in 548 B.C., with the aid of an international fund to which the Pharaoh had contributed. The humble appearance of the temple of Amon today does not reflect the reverence in which its oracle was long held in ancient times.

The population of the oasis, which—an unusual phenomenon for Egypt—is Berber-speaking, may be estimated at between 8,000 and 10,000 inhabitants, this figure including the village of Gara, or Ḳāret Umm al-Ṣaghāʾir, some 100 km/62 miles to the east on the edge of the depression of Ḳaṭṭāra, which is in

fact the eastern extremity of the Berberophone region. This depression, 300 m/985 feet below sea-level, cannot be crossed without risk of being stranded, trapped in the soft sand. In June 1964, five young Germans, attempting to trace in reverse the course of Rommel's advance on El Alamein, died of thirst there.

A curiosity of Sīwa is the ancient citadel, today in ruins, called Shālī (*šal-i* = "my country", cf. Laoust, *Sīwa*, 301), a fortified village built on a hill overlooking the "modern" town. In an interesting short work by Bettina Léopoldo (cf. *Oasis*) ample descriptions will be found, not only of the traditional architecture but also of the economy, crafts and professions, religious and secular customs. Furthermore, it should be stressed that the article by E. Laoust in *EI*[1] is still, more than two-thirds of a century after its composition, a mine of information.

The wealth of Sīwa derives fundamentally from its dates, renowned since ancient times. In second place, but a considerable distance behind the 200,000 or so date-palms, the 40,000 olive-trees contribute extensively to the revenues of the Īsīwān (people of Sīwa).

As for the ambitious irrigation and drainage scheme called "New Valley", which was inaugurated in 1954 and involved the five major Egyptian oases, it seems to have been pursued with less energy in the case of Sīwa than in that of Khārga. In the past, agricultural work was for a long time the preserve of the *zaggāla*, unmarried labourers, not allowed to live within the walls, even reduced, it is said, to practising marriage between men, supposedly legal until the visit of King Fu'ād I in 1923.

Currently, while young men may leave the region to pursue their studies, women are still confined to the oasis. Their role in the family remains, however, primordial: in her home, the wife takes the decisions, holds the purse-strings and brings up her children as she sees fit. "If our children speak Sīwī (*žlan n isīwān*)," it was said in early September 85 by a deputy mayor, "it is to our womenfolk that they owe it". Six months later, television made its appearance. It is hardly likely that that there will be a great deal of broadcasting in the Berber Language, but it must be hoped that, at the end of this first decade, the damage will not prove to be too great. Determined efforts must be made to preserve this language which, at the time of Alexander's visit to the oasis in 331 B.C., had perhaps been spoken there for as many centuries as have passed since then, although it must be admitted that this hypothesis has no more corroboration than that of the presence of the tomb of the "Son of Amon" at Ammonium.

2. *The language*

Regarded over the past two centuries by European travellers as related to Berber, the language of Sīwa has been the object of many studies, varying considerably in terms of the scope and the rigour of the description. Two of them may be considered thorough and comprehensive. That of E. Laoust (*Sīwa*), appearing in 1931, has constituted and still constitutes a work of great value, for its grammatical and syntactical analysis as well as for its ethnographical information, with however one serious error in the verbal system. That of Werner Vycichl (*Sketch*), the manuscript of which the present author read in 1989-90, is absolutely remarkable in terms of the detail, the rigour and the thoroughness of its descriptions. The question of the pertinence of vocalic quantity and accentuation could usefully be the object of further and deeper verifications.

The personal visit (September 1985) on the part of the author of this article had as its primary object study of the use of the verbal system, in particular that of the theme of the resultative perfect, that Berber peculiarity, then the syntax of relatives and focalisation.

First of all, some remarks on phonology; the consonantal system presents few difficulties. The affricative pronunciation [*ǧ*] of the fricative *ž*, since noted by W. Vycichl and transcribed by him as *j* (*Sketch*, 44-5), did not register with this writer. As for the opposition of emphasis *r-ṛ* in *ajrā* "small bottle" ~ *ajṛā* "frog", it is possible, bearing in mind the notation *ažraū*, pl. *ižrawən* of Laoust (*Siwa* 245), that the emphaticisation of *ṛ* may be owed to the vowel/consonant *u/w*.

The opposition *ə-ă* or *ă* which K.-G. Prasse has established for Tuareg (*Manuel*, i-iii, 13), referring to its discovery by J. Lanfry (*Ghadamès*, p. xxxiv), was not observed at Sīwa. As for the vocalic quantity which in Tuareg opposes the perfect *iγra* "he studied, he read" to the resultative perfect *iγrā* "he has studied, he has read", this seems to have no relevance in Sīwī. This dialect indicates the resultative otherwise, and opposes *iγra* to *iγraya*, where the length of the first *a* is definitely phonetic but not distinctive. In a brief and excellent recapitulation of the characteristics of Sīwī, based on Laoust's study corrected by that of A. Basset (cf. *Problème*), Prasse does not mention the vocalic quantity. The present writer only became aware of this article (cf. *Isiwan*) several months after returning from Sīwa.

When, some four years later, this writer read the text of W. Vycichl, it was to find recorded there not only the length but also the accentuation, which poses a problem with regard to the notations of Basset and of Prasse, to the texts of Laoust and to this writer's own observations. In fact, the author distinguishes here between four cases: for example for *a* he differentiates long and accented *â* from long and unaccented *ā*, from short and accented *â* and from short and unaccented *a*. But it is puzzling to read that long and unaccented vowels "are effectively short", as in *ā* of *terwāwên* "children" (*Sketch*, 43). Still more disconcerting is the fact that *e*, even when accented, can disappear: thus *ifessên* "hands" is heard as *if=ss=n*, = being simply "a space between consonants" (*Sketch*, 48). Particularly to be noted is another novelty represented by the change in position of the accent after a preposition. As opposed to *isīwân* "the Sīwīs" we have *jlān n isîwān* "the language of the Sīwīs". As opposed to *terwāwên* we have *i terwâwēn* "to the children" (*Sketch*, 35, 81, 82).

Finally, most interesting seems to be the combination of a change of accent and of length, or of timbre, with the suffixing, to an adjective of an *a*, the meaning of which remains mysterious. In this writer's personal judgment, to the adjective *akways*, fem. *tkwayst* (cf. Egyptian Arabic *kwayəs*, fem. *kwaysa* "good, well") there should correspond a plural *kwaysina* which, alongside the Arabic *kwaysin*, could be considered analogous with the resultative perfect of a verb, e.g. *yuṭnina* "they are (fallen) ill", as opposed to the perfect *yuṭnən* "they fell ill".

Vycichl says that his informants differ over the sense of the *a* termination. For ʿAbd Allāh Baghī (who was also consulted by this writer), *akwayyis* means "good, in my opinion" and *akwayyis-a* "good, as everyone should know" (*Sketch*, 89). For others, it is a case only of variants, which recalls the analysis of verbal themes by Laoust when he says for example that "an *a* sound, enigmatic in sense, lengthens all forms" (*Sīwa*, 63) or that "the paradigm of the conjugation of the

perfect presents *certain variants* (our italics) in the 2nd and 3rd persons plural". For him, *iflīna* is merely a variant of *ifən* (*Sīwa*, 56, 57), whereas in fact what we have is the resultative perfect "they have passed", as opposed to the perfect "they passed". What exacerbates the difficulty is the assertion by Vycichl of the lengthening, indeed the super-lengthening of the last vowel of an interrogative term; this leads to the distinction of three lengths, for example, *é*, *ê* and *êe*... (*Sketch*, 89); it would be interesting to check the phonological pertinence of this phenomenon.

In any case, the difference of form [*i*...]a, is determinant for the opposition of two verbal themes, the perfect *ilsən ikəbrawən ənnsən trarən* "they put on their new clothes" and the resultative perfect *ilsina*... "they have put on..., they wear..." It is surprising that Laoust should have called "passive" a form furnished with this "augmentation" [*i*...]a or [*a*...]a, given that he has occasion to use it with a direct object (A. Leguil, *Notes*, 16). It was R. Basset who drew attention to Laoust's error in four articles dated 1935, 1936, 1937 and 1940 (cf. *Problème*); and, in contesting the analysis of this original form of Sīwī, he identified it with an important verbal theme exclusive to Tuareg, discovered by de Foucauld. In 1948 he called this theme "intensive preterite", and labelled as "intensive aorist" the so-called "habitual form", which, to his credit, he had integrated into the tense/aspect system in 1929 (*Verbe*, p. L). It is to L. Galand that we owe the terminology that best describes the functioning of the latter (*Système, Continuité*, n. 193).

As regards the special theme, Basset had in 1952 concluded that the formal differences between that of Tuareg and those of Sīwa and of Awdjīla "are a case of dialectal innovation" (*Langue*, 14). Here there is effectively an instance of aspectual dynamic (doubling of the perfect and/or of the imperfect) remarkably described by D. Cohen for the most diverse languages (*Phrase*, ch. 6; *Aspect*, ch. 4). Consequently, it is particularly noticeable that to the aorist-perfect opposition, analysed by Bentolila (*Grammaire*, 156, n. 140), there corresponds at Sīwa a perfect-resultative perfect relationship. Thus in

(1) *af-ənni ammʷa-t-sən iləḥq-in* (*nətnən*) *iwnina* (resultative perfect) *i adrar* "when their brother joined them, they had (already) set out to climb the hill", if we substitute... *iwnən* (perfect)... we would have "... they climbed...". The justification of the term *resultative* seems particularly apt if in

(2) *nətta yuṭina* (resultative perfect) *g ifəḍ-ənnəs, bead yuṭa* (perfect) (*fəll-as*) "he has hurt his knee, because he fell (down)", we substitute ... *yuṭaya* (resultative perfect) "... he has fallen (and he is still on the ground)".

Another peculiarity of Sīwī is its residual *injunctive*, comparable to that of Kabyle (Chaker, *Kabylie*, 206). In

(3) *ga-ṛṛuḥwət ga-nẓərwət wən n ğəbbant* "Let us go to see those of the cemetery (the dead)"—there is a combination of *wət*, the imperative suffix, with *ga-ṛṛuḥ* "we shall go" and *ga-nẓər* "we shall see", where *ṛuḥ* and *ẓər* are in the "non-real" mode (terminology of F. Bentolila, *Grammaire*, 146).

At variance with Morocco, but as in Kabylia and in Tuareg (Galand, *Continuité* 302; Prasse, *Manuel*, pp. vi-vii, 37-8), a succession of unreals serves to denote a continuous recurrent series:

(4) *ga-nnkər əsrah, ga-nšədd lkarro, ga-ṛṛuḥ i lγeṭ*... "We rise in the morning, we take the cart, we make our way to the fields..." (Leguil, *Notes*, 63).

While the Sīwī verbal system shows remarkable fidelity to its Berber identity, the syntax of relatives, for its part, is in a process of powerful "contamination" by Arabic structures. As early as 1925, at the time of Laoust's visit, it had lost the participial subject-marker which permits a distinction, e.g. in Kabyle between *iğr iḵrzn* "the field (which is) worked" from *iğr iḵrz* "the field is worked", and the state of annexation which distinguishes *iḵrz yiğr*, lit. "it is worked, the field" from *iḵrz iğr* "he has worked the field". In addition, there used to be three supportive relative pronouns: *wən*, *tən*, and *wiyən*. In 1985 this last had disappeared. And above all, there is now the obligatory presence of a pronoun of recall. Thus the phrase of Laoust (*Siwa*, 119):

(5) *rədd-i lgruš wiyən səllfy-aka*, lit "Give me the moneys that I have lent you" has become

(6) *rədd-i lgruš wən səllfy-ak-tina*, lit. "... that I have lent them to you" (Laoust, *Notes*, 69).

Laoust (*Sīwa*, 119) has also asserted the absence of the particle of prominence *a*(*d*), *ay*, *i*, such a typical feature of Berber. In fact, this is not the only signifier of focalisation, especially in the negative, where Sīwī clearly opposes the focalising statement (7) to the neutral statement (8):

(7) *qəči ənkənum ukərəm* "It is not you who has stolen".

(8) *l ukərəm* "You have not stolen".

3. *Myths and history*

Attention has already been drawn to the fact that the Berber language may already have been thousands of years old at the time of the visit of Alexander the Great to the temple of Amon. Alongside this astonishing antiquity, the existence in this remote oasis of a renowned oracle was another singularity. For Camps (in *Enc. berb.*, A196), whatever may be the origin of the Amon of Sīwa, it was through the Greeks of Cyrenaica that its reputation became supreme throughout the Mediterranean world under the name of Zeus-Amon, with a humanised effigy, showing the features of a bearded individual whose horns are barely visible in his curly hair. The cult enjoyed remarkable success in the Hellenistic world, especially after Alexander's sojourn in Sīwa; the coinage struck in honour of this effigy was to show it rendered divine with the ram's horns of Zeus-Amon and was perhaps to contribute, even a thousand years later, in the centuries following the Muslim conquest of the 640s, to bestowing upon the Macedonian "a sacred dimension from the moment that he is identified with Dhu 'l-Ḳarnayn (the bicorn, or man with two horns) "to whom the Ḳur'ān attributes the conquest of all inhabited lands", in the words of Ahmed Siraj in *L'histoire* (May 1995), 41. The same issue, which contains an excellent study of Alexander (22-41), also quotes P. Briant who, three months before, was still dubious regarding the sensational announcement by the Greek archeologist Liana Souvaltzi of the discovery at Sīwa of the tomb of Alexander, as saying that "the balloon was soon deflated, through the expertise brought to bear by specialists" (36).

What became of the oracle of Zeus-Amon after the Macedonian had himself recognised there as son of the god and proclaimed, as shortly before at Memphis, Pharaoh of Egypt, the first of the 32nd dynasty? According to Cl. Savary, having become Jupiter-Amon under the Romans, the oracle, although in decline, continued to be consulted at least until the 6th century A.D. (Leopoldo, *Oasis*, 17). The fact is, however, that with the edict of 391 the Emperor Theodosius ordered the closure of all pagan temples and prohibited sacrifices. According to Vycichl, local traditions show traces of a Christian past to which the ruins of Beld er-Rum, a Greek or Christian village,

bear witness; but he challenges the "extravagant stories" related notably by the so-called *Manuscript of Siwa* (*Sketch*, 21). It is by the name *Santariya*, probably of Greek origin, that two Arab authors, al-Bakrī (d. 486/1094) and al-Idrīsī (d. 561/1166) refer to Sīwa; and it is al-Maḳrīzī (d. 846/1442) who gives it this last name and calls its language Sīwī, associating it with the Zenata group described by Ibn Khaldūn (d. 809/1406).

In a very recent work, Salem Chaker reckons that "no historical fact later than the establishment of Pharaonic Egypt could explain the appearance of the Berbers and of their language in North Africa". In his estimation, on the basis of the common Hamito-Semitic stock, "Berber was constituted in the form of a distinct group between the 8th and the 7th millennium B.C." (*Ling. berb.*, 209).

In Vycichl's excellent work (*Sketch*, 26-34) will be found a thorough survey on the studies, of varying importance, contributed by a score of authors who have documented Sīwa and/or its language from Brown (1799) to Aḥmad Fakhrī (1973, cf. *Oases*). It seems that for centuries the oasis was independent, threatened only by Bedouins. In 1820, it was subjugated by Muḥammad ʿAlī, whose representative was however assassinated in 1838. Laoust (*Islam*) indicates that Muḥammad al-Sanūsī [*q.v.*] spent several months here and acquired disciples here. Some decades later, the chief of the Sanūsiyya [*q.v.*] engaged in conflict with the Anglo-Egyptians, using Sīwa as a base (1915-17). Finally, during the Second World War, Rommel, a fervent admirer of Alexander the Great, paid a visit to Siwa and was received there by Shaykh ʿAlī Ḥayda (Léopoldo, *Oasis*, 23-4). During the present writer's brief stay (1-4 September 1985), the oasis was occupied by a large force of Egyptian troops; there was suspicion of predatory intentions on the part of the Libyan "big brother". However, in March 1988, the frontier, closed since July 1977, was re-opened, as a result of the diplomatic efforts of Saudi Arabia, Sudan and Tunisia, although Gaddafi (Ḳadhdhāfī) has still refused any restoration of normal relations with Egypt.

(A. Leguil)

SIWĀK [see miswāk].

SĪWĀS, the form found in Islamic sources from the 6th/12th century onwards for the Turkish town of Sivas, a town of north-east central Anatolia, lying in the broad valley of the Kızıl Irmak [*q.v.*] at an altitude of 1,275 m/4,183 feet (lat. 39° 44' N., long. 37° 01' E.). It is now the chef-lieu of the *il* or province of the same name in the modern Turkish Republic.

There may well have been a Hittite settlement there, but the site only emerges into history as the Roman city of Sebasteia, the capital of Armenia Minor under Diocletian. It was a wealthy and flourishing city in Byzantine times. In 1021, the Armenian king Senekʿerim Hovhannes of Vaspurakan ceded his dominions to the Emperor Basil II, and he and his successors became the Byzantine viceroys of Sebasteia until the battle of Malāzgird [*q.v.*] in 1071. Thereafter, it became the capital of the main branch of the Türkmen Dānishmendids [*q.v.*] until it was taken by the Rūm Saldjūḳ Ḳilič Arslan II in 570/1174, becoming, with Konya, one of the Saldjūḳ capitals.

It then acquired an upper and a lower citadel, with the lower one completed in 621/1224, according to an inscription. There were also mosques and *medreses* from this century; the oldest building extant in the town today, the Ulu Djāmiʿ, may conceivably go back to Dānishmendid times, though its minaret has been assigned, on stylistic grounds, to the 7th/13th century. Only four of the numerous *medreses* survive today, the oldest being the hospital of Sultan Kay Kāwūs I, founded in 614/1217 and transformed into a *medrese* in Ottoman times; all the other three date from 670/1271, when the Saldjūḳs were vassals of the Il Khānids, including that of Muẓaffar Burūdjirdī or Ḥādjdjī Masʿūd, which now houses the Sivas Museum.

Sivas early became the centre of the Anatolian caravan trade, with merchants travelling northwards to Sinop, Samsun and the Crimea and east-westwards between Tabrīz and Constantinople. Genoese notaries occasionally functioned in the town, and in 700/1300 they established there a consul. The roads to the town crossed the Kızıl Irmak on important bridges, three of these still standing, including one built by Mubāriz al-Dīn Ertokush, Atabeg to one of the sons of ʿAlāʾ al-Dīn Kay Ḳubādh I, and there were numerous *khāns* along the roads to the town, several endowed by the Saldjūḳ-Il Khānid vizier, Muʿīn al-Dīn Parwāna [*q.v.*]

(cf. K. Erdmann, *Das anatolische Karavansaray des 13. Jahrhunderts*, Berlin 1961, i, 79-80).

With the decline of Il Khānid power in Anatolia during the 8th/14th century, local lines appeared in the Sivas region, of varying extent and durability. One of these was Eretna Beg (d. 753/1352 [*q.v.*]), whose capital was Sivas, and then in 783/1381, the *Ḳāḍī* Burhān al-Dīn Aḥmad [*q.v.*], formerly vizier and *nā'ib* of Eretna's grandson. Before this time, Ibn Baṭṭūṭa had visited Sivas, which he thought was the largest town of the Il Khānid dominions in Anatolia. The local *akhīs* [*q.v.*] were strong in the town, and may have played a role in the internecine struggles for the succession of Eretna Beg, able to take over power in the absence of a recognised ruler (*Riḥla*, ii, 289-92, tr. Gibb, ii, 434-6).

Sivas was plundered several times, but was able to recover. However, the end of the 8th/14th century brought a cataclysm. The town surrendered, after the death in battle in 800/1398 of *Ḳāḍī* Burhān al-Dīn, to the Ottoman Bāyezīd I Yïldïrïm, and thus became a prime target of Tīmūr's onslaught. It had to surrender in 803/1400; the garrison and many inhabitants were massacred, and the fortifications dismantled. Even in 859/1455, the date of the first Ottoman *taḥrīr* recording the tax-paying population of Sivas, it apparently lay largely in ruins. It had 560 tax-payers, 214 Muslims and 346 non-Muslims: at most, a total population of 3,000. Only a number of *zāwiyas* seem to have been active, possibly providing the core around which Sivas gradually revived.

The 10th/16th century was likewise troubled. During the war with Shāh Ismā'īl Ṣafawī, Selīm I killed large numbers of real or suspected Shī'ī sympathisers. During Süleymān's reign, in 933-4/1526-7, there was a rebellion of the rural population of the region, and even after its suppression, other outbreaks occurred, in one of which, it appears, the poet Pīr Sulṭān Abdāl was involved, leading to his death. In *ca.* 1008-9/1600, the town and its hinterland were ravaged by the Djelālī leader Ḳarayazïdjï [see DJALĀLĪ, in Suppl.].

In Ottoman times, Sivas was the administrative centre of the *eyālet* of Rūm, the core of which consisted of the *sandjaks* of Sīwās-Tōḳad, Niksār, Čorum, Amāsya, Djānīk (Samsun) and Ḳaraḥiṣār-ï Sharḳī. Apart from these *sandjaks*, sometimes known as Rūm-ï ḳadīm, there was a second division, known as Rūm-ï ḥadīth, which encompassed the *sandjaks* of Diwrigi, Kemākh, Bāybūrd and Malaṭya. In 982/1574-5, a *taḥrīr* of the city counted 3,386 taxpayers, of whom 1,987 were Christians. Only 311 unmarried men were listed, probably an undercount. If we make the conventional assumption that a household contained five members, the tax-paying population should have amounted to slightly over 15,000 persons. Even if we make a generous allowance for tax-exempt and therefore non-registered soldiers and officials—who were probably numerous, given the rank of Sivas as a provincial capital located in a troubled area—it is unlikely that total population was much higher than 20,000.

The text also mentioned a *ḳal'e-yi köhne*, presumably in contrast to the more recently constructed fortress (re)built by Meḥmed Fātiḥ in 861/1456-7, according to an inscription published in 1840 but since lost. At the end of the 10th/16th century, Sivas possessed a covered market and at least two tanneries, in addition to a dyehouse and a brewery for millet beer (*boza*); it also functioned as a market for the salt produced in the surrounding villages. Different mosques owned a total of 170 shops, and the 10th/16th century mosque of Ḥasan Pasha drew a yearly income of 12,400 *aḳčes* from the tenants of its 74 shops. As usual all over Anatolia, Sivas was surrounded by vegetable gardens; but that the latter could also be found within the old fortress may indicate the population losses which the town had suffered since its apogee in the Saldjūḳ and Mongol periods.

For the 11th/17th century, two major sources are the reports of Kātib Čelebi and Ewliyā Čelebi. Kātib Čelebi and his collaborators describe Sivas as constituting the centre (*pasha sandjaghï*) of the *wilāyet* of Rūm, which now consisted of Amāsya, Bozoḳ, Djānīk, Čorum, Diwrigi and 'Arabgīr. Ewliyā Čelebi's description is far more explicit: he distinguishes the town walls from the Ič Ḥiṣār, which consisted of two parts. The town walls, 10,500 paces in circumference, still showed traces of their former strength, but many sections lay in ruins, probably since Tīmūr's time. The upper fortress possessed a small garrison, but the cannons were out of order. This citadel was not much frequented, and mainly used for the storage of valuables. More lively was the lower fortress which Ewliyā also calls the Pasha ḥiṣārï, the administrative centre of the *wilāyet*, where the governor held his *dīwān* four times a week. Within the walls of the town, Ewliyā recorded 4,600 houses in "forty" *maḥalles* (possibly intended as a synonym for "many"), the Christians, both Greek and Armenian, living in two quarters close to the Kayseri gate. Among the mosques he mentions the Ulu Djāmi' and Ḳodja Ḥasan Pasha Djāmi'i, the latter with its associated shops, already known from the 10th/16th century *taḥrīrs*. Among the *medreses*, Ewliyā especially praises a structure which he calls the Ḳïzïl *medrese*. He also mentions the existence of 18 *khāns*, and the *bedestān*, probably with some exaggeration, is credited with a thousand shops. Apart from tanneries there were many shoemakers' workshops. A variety of cotton fabrics was manufactured. Not too long before Ewliyā's visit, a dignitary at the court of Sultan Murād IV had had the *sipāh bazārï* rebuilt in stone. Ewliyā noted that both Turkish and Kurdish were spoken in the town. Where agriculture was concerned, he commented that the cold weather prevented fruit from ripening, but that grains, lentils and chickpeas did very well.

Two authors of the same period provide information on the Christians of Sivas: the Polish Armenian Simeon, who travelled in Anatolia 1017-28/1608-19, and the Archdeacon Paul of Aleppo, describing the mid-11th/17th century travels of his father, the Patriarch Macarius. Simeon claimed that the Armenian population recently had declined from 2,000 to 600 households. Many of the surrounding villages were also deserted, probably due to the Djelālī rebellions. Paul of Aleppo also thought that the local Christian community was very small. This author mentions a new church with a high cupola, dedicated to St. George and built in the reign of Sultan Murād IV. An *āyāzma* commemorated the martyrs of Sebasteia, while the former church of St. Philasius was now in Turkish hands.

At the end of the 12th/18th century, Domenico Sestini experienced Sivas in the throes of a rebellion of both Turks and Armenians against the high taxes demanded by the local *mütesellim*. It is unlikely that he saw much of the town itself, but he thought that it held 15,000 inhabitants. In the 19th century, Sivas was visited by several European travellers. V. Fontanier mentions a register, according to which Sivas consisted of 8,000 houses, or 40,000 inhabitants, including about 3,000 Armenians. Among Armenian merchants

operating in Sivas, he encountered some who traded in nut galls from Mawṣil, tobacco from Malaṭya, and particularly, copper; apparently Sivas, Kayseri and Tarsus had taken over the copper trade from Tokat. Andreas Mordtmann, Sen., visited Sivas in the middle of the 19th century, but although he paints a rather pessimistic picture, he estimated the population at approximately 50,000.

For the late 19th century, Cuinet and Shems al-Dīn Sāmī provide fairly detailed information, which can be completed from the *sāl-nāmes* of this period. At this time, the *wilāyet* of Sīwās was much smaller than it had been in the 10th/16th century, and consisted merely of the *merkez sandjak* of Sīwās, in addition to Tokat, Amāsya and Ḳaraḥiṣār-i Sharḳī (modern Şebinkarahısar). Urban population consisted of about 43,000 persons, 32,500 of whom were Muslims. Quite a few crafts mentioned in older sources were still being practiced, such as the work of local gold- and silversmiths, while tanneries were active and the salt-pans of the *ḳaḍā* were also in productive use. High-quality rugs and carpets were being manufactured, in addition to the elaborately-adorned socks for which the area is still known today. However, agriculture produced exclusively for the local market, as transport over poor roads to the ports of the Black Sea was prohibitively expensive.

During the Turkish War of Independence, Sivas was the site of one of the major congresses of the Müdāfaʿa-yi Ḥuḳūḳ Djemʿiyyeti, which organised national resistance against the partition of Anatolia and Eastern Thrace. This congress met from 4 to 11 September 1919; apart from 31 provincial delegates, it was also attended by a number of civil and military authorities. The congress members announced their determination to defend Turkish territory by military force if necessary, and confirmed the election of Muṣṭafā Kemāl (Atatürk) as chairman of the executive committee of the national resistance movement (see E. Zürcher, *Turkey, a modern history*, London 1993, 156-7). However, even though Sivas had originally been selected as a meeting-site because it was considered one of the safest places in Turkey, in the end Ankara with its rail connections, became the seat of the National Assembly. In 1927, the first census conducted by the Republican government showed the lack of dynamism due to a decade of war; Sivas was still a modest town of about 30,000 inhabitants.

Public investment was soon to modify this picture. Between 1930 and 1936, Sivas became an important railway junction, as the city was linked to Kayseri, Samsun and Erzurum. The factory established in Sivas for the construction and repair of locomotives and waggons remains one of the major industrial enterprises of the province. A cement plant was also constructed, and by 1950, the town had acquired a population of over 50,000. According to the 1980 census, the population of Sivas had experienced an unprecedented growth spurt in the recent past, and now amounted to about 173,000 persons. But industrial investment has been insufficient, and local roads have remained underdeveloped to the present day, and continue to hamper the expansion of trade in agricultural produce, still the main wealth of the province.

Cultural life has drawn strength from a vigorous peasant culture, which expresses itself in village plays and games, kilims and, particularly, folk poetry and music. Beginning with a School of Medicine, a University began to function in the 1980s. But Sivas has not remained immune to the communal tensions of recent years, which culminated in the attack on a literary conference held in the city in 1993; amongst the 36 victims was the writer Asım Bezirci.

(Suraiya Faroqhi)

SIWRI ḤIṢĀR, also written Sifri Ḥiṣār, i.e. strong fortress (see Aḥmed Wefīḳ, *Lehdje-yi ʿOthmānī*, 459), the early Turkish and Ottoman name of two small towns in northwestern and western Anatolia respectively.

1. The more important one is the modern Turkish Sivrihisar, in the modern *il* or province of Eskişehir. It lies on the Eskişehir-Ankara road roughly equidistant from each, south of the course of the Porsuk river and north of the upper course of the Saḳarya [*q.v.*] (lat. 39° 29' N., long. 31° 32' E., altitude 1,050 m/3,440 feet). Siwri Ḥiṣār is on the northern slope of the Günesh Dagh; the citadel of the town was built on this mountain. The town does not date beyond the Saldjūḳ period, and has no remains of archaeological interest. But it was already known as a strong place to al-Ḳazwīnī (*Geography*, ed. Wüstenfeld, 359) and to Ḥamd Allāh Mustawfī (*Nuzha*, ed. Le Strange, 99). In the 9th/14th century it formed part of the possessions of the Ḳaramān-oghlu [see ḳaramān-oghullarî], who occupied it again after Tīmūr's conquest. The latter had his headquarters there for a time. But under Meḥemmed I, Siwri Ḥiṣār was annexed to the Ottoman dominions (see e.g. ʿĀshiḳ-Pasha-zāde, *Tewārīkh-i āl-i ʿOthmān*, ed. Giese; ʿĀlī, *Künh al-akhbār*, v, 177). In the 11th/17th century the town belonged to the *sandjak* of Khudāwendigār (Ḥādjdjī Khalīfa, *Djihān-nümā*, 656), but in the new system of administrative division, it became the capital of a *ḳaḍā* in the *sandjak* of Ankara. Towards the end of the 19th century it had about 11,000 inhabitants,

of whom 4,000 were Armenians (Sāmī). There is a mosque there attributed to the Saldjūḳ vizier Amīn al-Dīn Mīkā'īl, with a library of 1,500 volumes.

Near Siwri Ḥiṣār there are relics of important centres of classical and Byzantine times. These are the ruins of Pessinus, near the village of Bālā Ḥiṣār, to the south-east of Siwri Ḥiṣār (Texier, *Description de l'Asie Mineure*, ii, pl. lxii); and towards the south, on the other bank of the Saḳarya, near Ḥādjdjī Ḥamza, the remains of the Byzantine town of Amorium, known in early Arabic historical sources as ʿAmmūriya [*q.v.*].

After the First World War, Siwri Ḥiṣār was occupied by the Greek army from July 1921 to September 1922. In 1965 it had a population of 7,414.

2. The modern Turkish Seferi Hisar lies near the Sığacık bay shore of the Aegean, 30 km/18 miles south-west of Izmir and is in the *il* or province of Izmir, being the chef-lieu of an *ilce* or district of this last (lat. 38° 10' N., long. 26° 48' E.). In pre-Ottoman times, it came within the *beylik* or principality of the Aydîn-Oghullarî [*q.v.*]. Under Bāyezīd II, it was the refuge of the corsair Ḳara Ṭurmîsh (von Hammer, *GOR*, ii, 346). Ewliyā Čelebi passed through it in 1081/1670 (*Seyāḥat-nāme*, ix, 130-2). In the late 19th century, Sāmī gave its population as 3,640 (*Ḳāmūs al-aʿlām*, iv, 2582); in 1965 it was 5,259.

ṢIYĀGHA [see ṣāʾigh].

SIYĀH-ḲALEM, Central Asian, Turkman or Persian painter of the 15th century.

Sixty-five paintings and drawings in two albums (Topkapı Saray Libr., Istanbul, H2153 and H2160) are inscribed *Ustād Muḥammad Siyāh-Ḳalem* "Master Muḥammad Black Pen". Neither the wording nor the calligraphy of the inscriptions is uniform, and the works on which they appear vary significantly in style. As a result, scholars disagree on the identity of the artist, whether the inscriptions containing his name are signatures or later ascriptions, and the context in which the works attributed to him were produced.

The most thorough examination of Siyāh-ḳalem and the albums containing his works are the proceedings of a Percival David Foundation colloquy, *Between China and Iran. Paintings from four Istanbul albums* (London 1980). Although albums H2153 and H2160 contain no patron's name or date of compilation, they have many calligraphies by scribes from the court of the Aḳ Ḳoyunlu Turkmen Yaʿḳūb Beg (r. 883-96/1478-90) and bear the seal of the Ottoman Sultan Selīm I (r. 918-26/1512-20), found on the first and last folios of H2160. The latest calligraphies in H2160 and H2153 are dated 1512 and 1496, respectively. In addition to works inscribed *Siyāh-ḳalem*, the two albums contain 14th and 15th-century paintings and drawings in the style of Tabrīz, Harāt, Samarḳand and Baghdād, and Chinese paintings and European prints. Presumably, the albums were complete by 1512 and entered the Ottoman royal collection no later than 1520.

The works associated with Siyāh-ḳalem consist primarily of paintings of bare-chested demons and shamans, fully dressed, coarse-featured men and women, animals, and elegant princesses and angels. The most distinctive stylistic trait of these paintings is the treatment of drapery and bare flesh, which consists of wide, parallel bands of black or red with light pigment highlighting the creases of each fold. The large-scale and grotesque appearance of the figures and the unpainted ground diverge markedly from the court paintings of the major 15th-century schools of the Djalāyirids, Turkmens and Tīmūrids. While small-scale demons and grotesques are found in 15th-century manuscript illustrations, their visual impact and pictorial style bear little relation to the works attributed to Siyāh-ḳalem.

In addition to works inscribed with Siyāh-ḳalem's name, H2153 and H2160 contain 71 ascriptions to Shaykhī and three to Darwīsh Muḥammad, the two artists who added illustrations to a *Khamsa* (Topkapı Saray Libr. H762 and dispersed pages) for Yaʿḳūb Beg at Tabrīz in 886/1481. The imbalance in pictures assigned to one leading Turkmen painter and not the other has led B.W. Robinson to identify Muḥammad Siyāh-ḳalem with Darwīsh Muḥammad, on the assumption that Darwīsh Muḥammad was too important to be so under-represented in the Yaʿḳūb Beg albums. The teacher of Darwīsh Muḥammad, Shāh Muẓaffar, was known as Siyāh-ḳalem, and it is possible that the sobriquet passed from teacher to pupil.

While the subject-matter of the Siyāh-ḳalem paintings and drawings in the Istanbul albums is unconnected to that of Darwīsh Muḥammad's illustrations in the 886/1481 *Khamsa*, some of the Siyāh-ḳalem works share the intensity of palette, fineness of brushwork and wealth of detail of the illustrations. Yet the identification of Siyāh-ḳalem with Darwīsh Muḥammad presupposes the artist's ability and desire to work in markedly different styles, depicting a very broad range of subjects. Until more is learned of how Turkmen court artists worked and the circumstances under which the Siyāh-ḳalem works were produced, the identity of the artist will remain uncertain.

(Sheila R. Canby)

SIYĀḲAT (a.), Ottoman Turkish form of the Arabic original *siyāḳa* (from *sāḳa* "drive, urge on, herd"), a technical term of ʿAbbāsid financial administration, certainly in use by the 4th/10th century with the sense of "accounting practice", "revenue bookkeeping practice" (*ʿilm al-siyāḳa wa 'l-ḥisāb*), and hence by extension the particular form of Arabo-Persian script which came to be utilised by financial bureaucrats of Turco-Islamic polities, e.g. that of the Ottomans, for the writing of both *defter*s and single documents of a financial nature (including the so-called *tapu we taḥrīr defterleri* [see daftar-i khāḳānī]. In Ottoman practice, for which alone original documentary evidence is of a comprehensive nature, it was also used for certain elements in documents such as the so-called *ḥükm-i māliyye* (cf. J. Matuz, *Das Kanzleiwesen Sultan Süleymāns des Prächtigen*, Wiesbaden 1974, docs. 2, 6) or *tewdjīh fermānlarî* (cf. Matuz, doc. 16), and for financial calculations made on incoming *ʿarḍ-u-ḥāl*s which would be used in drafting imperial orders or *buyuruldus*. These exceptions apart, *siyāḳat* was not used in legal docu-

ments, or in other documents (*hükm, nāme*) deriving from the chanceries of the *Dīwān-i Hümāyūn* [*q.v.*].

A distinction has to be made between *siyāḳat* script, characterised by the prologation (alternately, the compression) of letter forms and by the virtual absence of diacritic points (cf. the examples given by A. Zajączkowski and J. Reychman, *Zarys dyplomatyki osmańsko-tureckiej*, Warsaw 1955, 68-9), and *siyāḳat* numerals. The latter, the so-called *dīwān raḳamlarï*, were in effect the "written out" shapes of the numerals in Arabic, reduced to a skeletal and schematised form (cf. the useful tables in Salahettin Elker, *Divan rakamları*, Ankara 1953; actual examples in L. Fekete, *Die Siyāqat-Schrift in der türkischen Finanzverwaltung*, 2 vols., Budapest 1955, i, 34-9 = ii, pls. i-iii). However, financial documents, the literary elements of which are written in *siyāḳat* script, frequently have the figures in whole or in part supplied in their normal "Arabic" forms. It is also perhaps worth mentioning that *siyāḳat* figures were used for the dating of Ilkhānid and late Saldjūḳ of Rūm coinage.

The *siyāḳat* script itself has been described as "squat and angular" (V.L. Ménage and M. Hinds, *Qasr Ibrīm in the Ottoman period. Turkish and further Arabic documents*, London 1991, 76), but the script in fact, in its best period, has a style and elegance which stands comparison with what are the commonly accepted more "aesthetic" forms of Perso-Arabic script (cf. the examples in Fekete, ii, *passim*). It has also been commonly regarded as difficult in the extreme to read, but in both indigenous Islamic and later western criticism there may be detected a certain amount of exaggeration. What should not be forgotten, however, is Fekete's observation (i, 9) that "no person, who is not competent to read *siyāḳat* script, is qualified to work on source-based research in [the field]".

The forms and ductus of *siyāḳat*, as used in the Ottoman financial bureaucracy, underwent a profound development from the 9th/15th to the 19th centuries. It reached its most elegant form early in the 10th/16th century; from the later 11th/17th century it becomes more stylised, with the distinction between "thick" and "thin" strokes greatly accentuated. By the era of the *Tanẓīmāt* [*q.v.*], Ottoman *siyāḳat* hands have in general become debased and, ultimately, before its abolition, decadent (see the later plates in Fekete, ii, *passim*). The standard manual on *siyāḳat* remains, after more than 40 years, the two-volume study by Fekete referred to above, which is unlikely ever to be superseded.

Bibliography: Given in the article.

(C.J. Heywood)

SIYĀLKŪT, conventional rendering Sialkot, a town in the Pandjāb situated in 32° 30' N. and 74° 32' E., the foundation of which is attributed by legend to Rādjā Sālā, the uncle of the Pāṇḍavas, and its restoration to Rādjā Sālivāhan, in the time of Vikramāditya. Sālivahān had two sons, Pūran, killed by the instrumentality of a wicked step-mother, and thrown into a well, still the resort of pilgrims, near the town, and Rasālu, the mythical hero of Pandjāb folk-tales, who is said to have reigned at Siyālkūt. In A.D. 790 the fort and city were destroyed by Rādjā Narawt with the help of the Ghandauris of the Yūsufzāī country, and the fort was not restored until it was rebuilt by the Ghūrid Muʿizz al-Dīn Muḥammad b. Sām to overawe the turbulent Khokars, who preferred the feeble rule of the later Ghaznawids to the more energetic domination of their conqueror. Under the Mughal emperor Akbar, Siyālkūt became the headquarters of a *sarkār* or fiscal district, and in the middle of the 11th/17th century it fell into the hands of the Rādjpūt princes of Djammū. The mound in the centre of the town, crowned with the ruins of a fort, is popularly supposed to mark the site of Sālivāhan's stronghold, but it is in fact all that is left of the fort of Muḥammad b. Sām. Siyālkūt also contains the shrine of Bābā Nānak, the first Sikh *guru*, where an annual fair is held.

In 1799, the Siyālkūt district, and also Lahore, was acquired by the great Sikh leader Randjīt Singh [see SIKHS], and the town was planned on a rectilineal pattern by the Italian general in his service, Avitabile. In 1849 it passed, with the rest of the Pandjāb, under British control, and the old fort, now dismantled, was defended by a handful of Europeans during the Sepoy Mutiny of 1857-8. Within British India, Siyālkūt was the site of a large military cantonment, and the town itself grew in size to a population of 58,000 in 1901.

At the Partition of India in 1947, Siyālkūt came within Pakistan, and is now the chef-lieu of an intensively-cultivated District of the same name in the Lahore Division of the Pandjāb. It is now a significant manufacturing centre, including of sports equipment and surgical instruments, and in 1972 had a population of 212,000. It also has the renown, in contemporary Pakistan, of having been the birthplace of a figure regarded as one of the country's founding fathers, Sir Muḥammad Iḳbāl [*q.v.*].

Bibliography: There are references in the historical sources, such as Djūzdjānī's *Ṭabaḳāt-i Nāṣirī* and in Abu 'l-Faḍl ʿAllāmī's *Āʾīn-i Akbarī*. See also J.R. Dunlop-Smith, *Sialkot District gazetteer*, 1894-5; *Imperial gazetteer of India*², xxii, 326-36.

(T.W. Haig-[C.E. Bosworth])

al-SIYĀLKŪTĪ, ʿAbd al-Ḥakīm b. Shams al-Dīn (d. 1067/1657), counsellor of the Mughal emperor Shāh Djahān (*regn.* 1037-68/1628-58 [*q.v.*]), versatile scholar and well-known writer of glosses (*ḥawāshī*, sg. *ḥāshiya*) on a number of popular textbooks. Many of them exist in old prints and lithographs, of which a fair number have recently been reprinted. In non-Indian prints, his name often appears distorted as al-Siyalkūtī or al-Silkūtī (intended vowels unknown).

Works on which he wrote *ḥawāshī* include: (1) the *Tafsīr* of al-Bayḍāwī (d. 685/1286 or later [*q.v.*]); (2) the commentary of al-Taftāzānī (d. 791/1389 or later) on the *ʿAḳāʾid* of Abū Ḥafṣ ʿUmar Nadjm al-Dīn al-Nasafī (d. 537/1142 [*q.v.*]); (3) *al-Sharḥ al-muṭawwal* of al-Taftāzānī on the *Talkhīṣ al-Miftāḥ* of al-Khaṭīb al-Ḳazwīnī (d. 739/1338 [*q.v.*]); (4) *R. fi 'l-Taṣawwurāt* of Djalāl al-Dīn al-Dawwānī (d. 907/1501 [*q.v.*]); (5) the gloss of ʿAbd al-Ghafūr al-Lārī (d. 912/1507) on *al-Fawāʾid al-ḍiyāʾiyya* of Djāmī (d. 898/1492 [*q.v.*]), a commentary on the *Kāfiya* of Ibn al-Ḥādjib [*q.v.*]; (6) the commentary of al-Kulunbāwī on *al-R. al-Shamsiyya* of al-Kātibī al-Ḳazwīnī on logic.

ṢIYĀM [see ṢAWM].

SIYĀSA (a.), verbal noun from the root *s-w-s* "to tend, manage", etymologically connected with Biblical Hebrew *sūs* "horse", originally used in Bedouin society for the tending and training of beasts, hence *sāʾis* "manager or trainer of horses, camels, etc." (this last appearing, via Hindi, in the Anglo-Indian word *syce* "groom", Fr. *çais*; see Yule-Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*², London 1903, 885-6).

1. In the sense of statecraft, the management of affairs of state and, eventually, that of politics and political policy.

Here, the sense of training and managing animals passed early into the context of Islamic rulership, the conduct of state affairs and the management of the subject people, the *ra'iyya* [*q.v.*], doubtless influenced by the ancient Near Eastern idea of the ruler as the shepherd and director of his human flock, and perhaps also with the idea of the "man on horseback" as a symbol of authority. The semantic process at work here would appear to be parallel to that in the term *furūsiyya* [*q.v.*] "equitation" > "chivalry, knightly conduct". Hence the meaning in early Islamic usage is primarily that of "statecraft, the successful conduct of public affairs". Bernard Lewis has described this usage, with copious examples, in his exhaustive study *Siyāsa*, in A.H. Green (ed.), *In quest of an Islamic humanism. Arabic and Islamic studies in memory of Mohamed al-Nowaihi*, Cairo 1984, 3-14. He adduces examples attributing use of the word *siyāsa* to the Caliph ʿUmar and the Umayyads, and (more authentically) to the ʿAbbāsids, as when al-Masʿūdī credited al-Manṣūr with superlative *ṣawāb al-tadbīr wa-ḥusn al-siyāsa* "good administration and sound statecraft" (*Murūdj*, vi, 221 = § 2431). From Ibn al-Muḳaffaʿ (d. *ca.* 140/757 [*q.v.*]) in his *Risāla fi 'l-ṣaḥāba* comes the germ of an important future extension of meaning, that *siyāsa* is the discretionary authority of the ruler and his officials, one which they exercise outside the framework of the *Sharīʿa*, the authority conferred on the caliph and his delegates by divine sanction. There further develops from this an additional sense of *siyāsa* in Arabic, and thence in Persian and Turkish usage, that of punishment, extending as far as capital punishment, the violence which the ruler has to use in order to preserve his authority. Specifically, it implies punishment beyond the *ḥadd* [*q.v.*] penalties prescribed by the Divine Law. Lewis again quotes Ibn al-Ṭiḳṭaḳā's [*q.v.*] celebrated work on statecraft and history, *al-Fakhrī*: "*Siyāsa* is the chief resource of the king, on which he relies to prevent bloodshed, defend chastity, prevent evil, subjugate evildoers and forestall misdeeds which lead to sedition and disturbance" (ed. Derenbourg, 30, Fr. tr. Amar, 37, Eng. tr. Whitting, 20) and the fact that, in Persian and Ottoman Turkish, *siyāsat-gāh* means "place of torture or execution". In Mamlūk times, this distinction between *Sharīʿa* penalties and *siyāsa* led, as reflected in such contemporary authors as al-Maḳrīzī, to a fantastic etymological connection of *siyāsa* with the Mongol tribal law, the *yasa* (a view which was embraced by such an early Western orientalist as Silvestre de Sacy, see Dozy, *Supplément*, i, 702). See further on this, 3. below, at the end.

In the more recent Arabic Middle East, sc. from the mid-19th century onwards, *siyāsa* and *siyāsī* became increasingly used in the sense of "politics, political"; the Egyptian traveller and translator Rifāʿa al-Ṭahṭāwī [*q.v.*] had used *siyāsa* as his translation for "loi, réglement" in his Arabic translation of the French constitution of 1830. Likewise, in Ottoman Turkish, whereas *siyāset* had been almost exclusively used in regard to physical punishment for offences against the state (as, e.g. in the *Ḳānūn-nāme* of Meḥemmed II), during the course of the 19th century it began to acquire the meaning of "politics", with Ottoman reformers of the mid-19th century now demanding *ḥuḳūḳ-i siyāsiyye*, so that the old sense of "punishment" rapidly disappeared.

2. In the context of political philosophy. Modern scholars such as Fauzi M. Najjar and Miriam Galston are agreed that such titles as al-Fārābī's *al-Siyāsa al-madaniyya* should be rendered in English as *The political régime*. Najjar considers *siyāsa* to be "the art of ruling or managing the city in accordance with a principle or an end". In the hands of a philosopher, such principles and ends were clearly underpinned by philosophy. And in a philosopher like al-Fārābī, the intimate links between metaphysics and politics, or political science, have been stated many times. This is immediately clear in the alternative title given to *al-Siyāsa al-madaniyya*, i.e. *Mabādi' al-mawdjūdāt* which Najjar renders as *The treatise on the principles of beings*. Not only was there that intimate link between philosophy and politics in al-Fārābī's writings but, whereas al-Ghazālī and Ibn Taymiyya subordinated *siyāsa* to *fiḳh*, the philosophers often elevated *siyāsa* above *sharīʿa* in importance. Furthermore Najjar stresses that "under the influence of classical philosophy, especially that of Plato and Aristotle, the *Falāsifa* regarded *siyāsa* as an important and *separate* branch of philosophy [my italics]. Accordingly, political life is susceptible to philosophical scrutiny, and its principles may be established by reason, independently of *fiqh* and *kalām*". It is al-Fārābī who is the arch-exponent of philosophical *siyāsa* in mediaeval Islam. In his *Kitāb Iḥṣā' al-ʿulūm* he devotes an important fifth chapter to *al-ʿIlm al-madanī* (which has been translated as both "political science" and "civil science") together with *Fiḳh* and *Scholastic theology* (*ʿilm al-kalām*). Al-Fārābī notes that *al-ʿIlm al-madanī* "makes enquiry into the kinds of actions and intentional ways of behaviour and natural dispositions and character and traits and the natures from which those actions and ways of behaviour derive" (*Iḥṣā' al-ʿulūm*, 91 (Arabic) tr. Netton, 100 n. 44). Given the links in al-Fārābī's thought between *al-Madīna al-fāḍila* and *al-Siyāsa al-madaniyya*, this definition of al-Fārābī's provides a useful philosophical substrate for the whole concept of *siyāsa*. In another work, his *K. al-Tanbīh ʿalā sabīl al-saʿāda*, which like the *Iḥṣā' al-ʿulūm* shows al-Fārābī's passion for division and sub-division, the author divides philosophy into the theoretical and the practical, and the latter is further sub-divided into ethics and *siyāsa*. It is thus no exaggeration to say, together with many other commentators, that *siyāsa* was an integral part of al-Fārābī's philosophical edifice, and, in particular, a distinctive and highly developed feature of his metaphysics.

3. In the sense of *siyāsa sharʿiyya*.

"Governance in accordance with the *sharīʿa*" is a Sunnī constitutional and legal doctrine emerging in late mediaeval times and calling for harmonisation between the law and procedures of Islamic jurisprudence (*fiḳh*) and the practical demands of governance (*siyāsa*). Most

responsible for crystallising the doctrine were the two Ḥanbalī scholars Ibn Taymiyya (d. 728/1328 [*q.v.*]) (particularly in his *al-Siyāsa al-sharʿiyya*, Beirut[?] 1966) and his student Ibn Ḳayyim al-Djawziyya (d. 751/1350 [*q.v.*]). Ibn Taymiyya's view in his treatise is that, if the divine law or *sharīʿa* is duly observed, *siyāsa* of rulers (*imām, sulṭān, amīr* or *wālī*) will not conflict with *fiḳh* [*q.v.*] as elaborated by scholars (*fuḳahāʾ*). Earlier authorities had conceded that rulers had the need and the right to deviate from *fiḳh* in order to attain effective *siyāsa*, but Ibn Taymiyya claimed that such "deviations" are imaginary. If conflict between them appears, it is either because the *fiḳh* is understood too narrowly, neglecting the rich resources of the *sharīʿa* for attaining the public good, or because rulers disregard the divine will and act unjustly (*siyāsa ẓālima*). Indeed, Ibn Ḳayyim al-Djawziyya claimed that true *siyāsa* (*siyāsa ʿādila*) is but part of the *sharīʿa* (*al-Ṭuruḳ al-ḥukmiyya fi ʾl-siyāsa al-sharʿiyya*, ed. A. al-ʿAsharī, Cairo 1961, 100; see also idem, *Iʿlām al-muwaḳḳiʿīn*, Cairo n.d., 373-4). If the rulers and the *ʿulamāʾ* (who, for Ibn Taymiyya (*al-Ḥisba*, ed. S. Ibn Abī Saʿd, Kuwait n.d., 117), collectively comprise the Ḳurʾānic *ulū ʾl-amr*, sūra IV, 59) uphold the revealed law not only in particular rulings but also in its general objectives or principles, they will lead mankind to good in the present world and the hereafter.

By this doctrine, Ibn Taymiyya advances both a more expansive vision for *fiḳh* (among other things, embracing disputed doctrines by which *fiḳh* draws on utility [see ʿĀDA; ISTIḤSĀN; ISTIṢLĀḤ; MAṢLAḤA; ʿURF]) and also a constitutional theory by which the excesses of rulers may be curtailed and *sharīʿa* legitimacy extended to actual states. In effect, his doctrine offers rulers *sharīʿa* legitimation in return for a greater share of power for *ʿulamāʾ*; it offers *ʿulamāʾ* greater *sharīʿa* efficacy at the cost of their being implicated further in affairs of state.

Ibn Taymiyya's view is only one understanding of the relationship between *fiḳh* and *siyāsa*, and between the roles of ruler and *ʿulamāʾ*, in upholding *sharīʿa*. Other formulations (by other names) appear in Islamic political and constitutional writings, some with greater historical influence. (They include some of the most thoughtful statements on state and religion in Islam: e.g. Ibn Khaldūn, *Muḳaddima*, Beirut 1415/1995, esp. 177-8; and see IMĀMA; KHALĪFA; MAHDĪ.) Indeed, Ibn Taymiyya's doctrine, and the context in which it arose, reflect only one stage in the course of Islamic constitutional history, a field demanding greater scholarly attention.

If we merely trace uses of the term *siyāsa*, we find that in early periods it appeared not as a technical term but as a common word for "governance" and "statecraft" (see 1. above), which was used in a manner betraying little sense of conflict with *fiḳh*. (*Ṣaḥīḥ Muslim, imāra*, 46; B. Lewis, *Siyāsa*, in *In quest of an Islamic humanism* (see for this, above, 1). Early *sharīʿa* legitimacy being grounded in the office of the caliph, his discretion in the *sharīʿa*'s application was axiomatic. The *Rāshidūn* caliphs exercised extremely broad legal authority, taking many far-reaching legal actions with little apparent concern for the interpretative techniques of later *fiḳh*. By the early ʿAbbāsid era, despite self-conscious adoption of *fiḳh* as state law, caliphs still enjoyed a legal authority supervening *fiḳh*, as reflected in works by Ibn al-Muḳaffaʿ (d. 140/757 [*q.v.*]) and Abū Yūsuf (d. 182/798 [*q.v.*]) in his *K. al-Kharādj* (ed. I. ʿAbbās, Beirut 1985). Abū Yūsuf often cedes to the caliph discretion in *fiḳh* matters and never mentions *siyāsa*. In the 10th and 11th centuries, the decline of the caliphate in favour of sovereign military-caste sultanates, and increased vitality and outreach in *fiḳh* and in *ʿulamāʾ* institutions, brought the two legitimacies of *fiḳh* and *siyāsa* into competition. Al-Māwardī's (d. 450/1058 [*q.v.*]) classic statement in the mid-11th century, *al-Aḥkām al-sulṭāniyya*, grants military and administrative officials, but not the learned *ḳāḍī*, powers under the *sharīʿa* to transgress particular *fiḳh* laws and procedures in their adjudications, as long as categorical rules are not offended (see particularly, discussions of *nāẓir al-maẓālim* "the enquirer into grievances," *Aḥkām*, Beirut 1410/1990, 148-70, e.g. *naẓar al-maẓālim lā yubīḥu min al-aḥkām mā ḥaẓarahu al-sharʿ*, *Aḥkām*, 160; and of the *wālī ʾl-djarāʾim* or criminal jurisdiction, *Aḥkām*, 361-3. See also MAẒĀLIM; SHURṬA; and cf. Ibn Taymiyya, *al-Ḥisba*, 15-16, countering al-Māwardī with a claim that distinctions between the *ḳāḍī* and other judicial authorities have no basis in *sharīʿa* but are only customary). Al-Māwardī's system, to our eyes, makes large concessions to political authority, but in historical context it seems a bold assertion of political vision in *fiḳh*. For, with al-Māwardī and public law after him, even the political sphere is to be judged by standards set by *ʿulamāʾ*, *siyāsa* being valid only where the latter admit it. With such a theory in place, it becomes far easier to criticise various rulers' actions as illegitimate. And with the decline and extinction of the caliphate, *fiḳh* indeed accepted rulers, and their acts, as legitimate only by way of necessity (A.K.S. Lambton, *State and government in medieval Islam*, Oxford 1981, 103-29). Against this background, Ibn Taymiyya's theory represents a reaction, an attempt to restore some form of Islamic legitimacy in political circumstances which were by then understood as not only tragic but also permanent. The compromise which he proposed was largely ignored in his lifetime, but appears to have had a strong influence on Mālikī (see e.g. Ibn Farḥūn (d. 799/1397 [*q.v.*]), *Tabṣirat al-ḥukkām*, Cairo 1884, i, 12-13, ii, 104-15, following Ibn Taymiyya and departing from the views of the Mālikī al-Ḳarāfī, d. 684/1285), and on late Ḥanafī and Ottoman law and practice (al-Ṭarābulusī, d. 844/1440, *Muʿīn al-ḥukkām*, Cairo 1973, and Dede Efendi (d. 972/ 1565?), both relying heavily on Ibn al-Taymiyya and Ibn al-Ḳayyim; see U. Heyd, *Studies in old Ottoman criminal law*, ed. V.L. Ménage, Oxford 1973, 198). In modern times, Ibn Taymiyya's views have been adopted by the Wahhābī movement (Ḥanbalī in *fiḳh*) as the constitution for all Saudi states since 1745. For this and other reasons, his views have exercised immense influence on modern Islamic constitutional thought.

Although mediaeval *fiḳh* writings on *siyāsa* are varied and profound, in modern times there is often distilled from them a single doctrine of *siyāsa sharʿiyya* broadly accepted (see e.g. A. Khallāf, *al-Siyāsa al-sharʿiyya*, Cairo 1350). This recognises, in the state, authority to take legal acts (including legislating to supplement the *sharīʿa* and creating new courts) as needed for the public good (*maṣlaḥa ʿāmma*), provided that the *sharīʿa* is not infringed thereby (or, in another formulation, as long as the *sharīʿa* has "no text", *lā naṣṣ*, on the matter). How the latter provisos are to be understood and applied is, however, disputed in practice. One view excludes acting whenever *fiḳh* possesses a ruling, even if this is based on *idjtihād* and open to dispute. A more permissive view limits contradiction to indisputable *sharīʿa* tenets (*naṣṣ ḳaṭʿī*), overlooking mere *idjtihād* and *ḳiyās*. A still more liberal view is concerned only with contradiction with the "spirit" of *sharīʿa* or with its "principles" (*mabādiʾ*).

Returning to mediaeval writings, since *siyāsa shar'iyya* and similar theories deal with the relationship between *fiḳh* and *siyāsa*, both sources of legitimation for state power, they have often been called upon to allocate authority between state institutions deriving from the two sources. In many areas, there was little competition, as in undisputed *fiḳh* authority over ritual and family law or clear *siyāsa* jurisdiction over governmental organisation and administration. Other areas, however, were rife with conflict, and we find *fiḳh* writings preoccupied with them. We give here three major examples.

One of these is adjudication generally. *Fiḳh* writings on *siyāsa* deal extensively with non-*ḳāḍī* jurisdictions, such as those of the *maẓālim*, the *shurṭa*, and that of the Mamlūk *ḥādjib*, that employ *siyāsa* procedurally and substantively, concerned that such tribunals are oblivious of *sharī'a* (Ibn Taymiyya, *Ḥisba*, 16; Ibn Khaldūn, 206). *Fiḳh* works endorsing *siyāsa shar'iyya* seem dedicated to persuading *ḳāḍīs* to use *siyāsa*'s flexible methods of proof and investigation, particularly in criminal law, presumably with the object of expanding *ḳāḍī* jurisdiction against *siyāsa* competitors (Ibn Taymiyya, *Madjmū' fatāwā*, ed. A. al-'Āṣimī, Riyāḍ 1382, xx, 388-93; Ibn al-Ḳayyim, *Ṭuruḳ*; Ibn Farḥūn, *Tabṣira*; al-Ṭarābulusī, *Mu'īn*).

As a second example, *fiḳh* writings on criminal law are preoccupied by *siyāsa*, since here *fiḳh* and *siyāsa* shared the field. First, apart from the small number of *ḥudūd* [*q.v.*] crimes extensively regulated by *fiḳh*, authors largely delegated substantive criminal law to the ruler's discretion under the heading of *ta'zīr* [*q.v.*]. Secondly, under a related concept, rulers claimed, and most *fuḳahā'* acknowledged, authority in certain circumstances to punish *siyāsat*[un], meaning that the ruler has authority to punish severely and peremptorily, without observing even the few general limits as to punishments and procedures imposed by *fiḳh* (Ibn Taymiyya, *Siyāsa*, 98-100). Thirdly, *siyāsa* was invoked to justify police practices of imprisoning and beating accused persons to encourage confessions, practices of which, as al-Māwardī states explicitly, *'ulamā'* disapprove but nonetheless uphold (*Aḥkām*, 219-21). Indeed, because of practices under these various heads, *siyāsa* became so closely associated with discretionary penalties (and particularly with harsh punishments and torture) that it became the very name for them. This usage appears in al-Djuwaynī (d. 478/1085) (*Ghiyāth al-umam*, Alexandria n.d., 150, 170) and even earlier, and by Ottoman times it is the term's most common meaning (Lewis; Dozy, *Suppl.*; Heyd, 192-207).

A third concern of *fiḳh* writings on *siyāsa* is legislation issued on the ruler's authority (see e.g. Ibn al-Ḳayyim, *I'lām*, iv, 372). This arose particularly after the advent of Mongol rule, when states adopted or imitated the Mongol practice of dynastic laws and customs called *yāsaḳ* or *yāsa* [*q.v.*], and often applied the term *siyāsa* to these rules. *'Ulamā'*, jealous of ruler's law as a potential competitor to *fiḳh*, portrayed respect for *yāsa* as a heretical placing of Čingiz Khān and his decrees alongside the Prophet Muḥammad and the *sharī'a* (al-Ba'lī, *al-Durar al-muḍiyya*, Beirut n.d., 394-5, citing Ibn Taymiyya). Al-Maḳrīzī went so far as to claim that "*siyāsa*" in Mamlūk military-class usage is not Arabic at all, but derives from *yāsa* (*Khiṭaṭ*, Cairo 1934, ii, 220; Ibn Taghrībirdī, *Nudjūm*, ed. Cairo, vii, 182-3; Ayalon, *The Great Yasa of Chingiz Khan*, in *SI*, xxxiii [1971], 1-15; J.S. Nielsen, *Secular justice in an Islamic State. Maẓālim under the Baḥrī Mamlūks*, Istanbul 1985, 104-9; D.O. Morgan, *The "Great Yasa of Chingiz Khan" and Mongol law in the Īlkhānate*, in *BSOAS*, xlix [1986], 163-76). In Ottoman practice, the institution of dynastic law overcame *'ulamā'* resistance to become a relatively ordered system of state legislation (called *ḳānūn* [*q.v.*] or *niẓām*) accepted as supplementary to the *sharī'a* and applied by the *ḳāḍī* courts.

SIYĀSAT-NĀMA [see naṣīḥat al-mulūk].

SIYĀWUSH, a Kayanid prince of Persian legendary history and national epic, whose murder by the order of Afrāsiyāb, the arch-king of Tūrān, deepened the deadly feud between Īrān and Tūrān and led eventually to the destruction of Afrāsiyāb and the devastation of his land.

Siyāwush is mentioned several times in the Avesta as a holy prince, whose blood was avenged by his illustrious son Kavi Haosrauuah (Pers. Kay Khusraw [*q.v.*]), who slew Afrāsiyāb and destroyed his kin (*Yashts* 9.18; 13.132; 19.71,77). The *Bundahishn*, a major Middle Persian work, contains a brief account of the legend and from the *Dēnkart* we learn that a lost section of the Avesta, the Sutkar Nask, referred to the avenging of Siyāwush's blood.

Arabic and Persian histories that treat of ancient Iranian history generally give an account of Siyāwush's legend. The fullest account, however, is provided by Firdawsī's epic, the *Shah-nāme*, which is by and large a rendering in verse, through more than one intermediary, of the Pahlavi *Khwadāy-nāmag* or "Book of Lords", compiled in late Sāsānid times. The legend constitutes the longest and also the most moving episode of the *Shāh-nāma*.

Briefly, according to this account (ed. Khāliḳī-Muṭlaḳ, ii, 202 ff.), Siyāwush, King Kāwūs's favourite son, is accused by his stepmother, Sūdāba, who has fallen in love with him, of amorous advances towards her, an accusation of which he clears himself through an ordeal of fire. Later, he seeks refuge in the land of the enemy as a consequence of the unreasonable demand of his petulant father to break an honorable peace he had made with Afrāsiyāb. He is welcome and honoured by Afrāsiyāb, who later, however, following accusations by his wicked brother Garsīwaz, has the prince murdered. Siyāwush's death is subsequently avenged by his son Kay Khusraw, who hunts down and kills Afrāsiyāb. There are some variants in the legend as retailed by other Islamic sources, such as al-Tha'ālibī's *Ghurar al-siyar*, 171-222, and al-Ṭabarī, i, 598-602, tr. M. Perlman, iv, 1-5. See Christensen, *Les Kayanides*, 111, for further variants, and on the tale in general, Yarshater, ch. *Iranian national history*, in *Camb. hist. Iran*, iii/1, 374-6.

The religious dimension of the legend of Siyāwush, whose cult continued at least in Transoxiana well into the 10th century, is evidenced by a report in Narshakhī's *Tārīkh-i Bukhārā*, ed. Raḍawī, 32-3, tr. Frye, 117, 122, according to which the people of Bukhārā had many laments (*nawḥa-hā*) on the slaying of Siyāwush, which the minstrels had made into chants called the "weeping of the Magi" (*girīstan-i mughān*).

He reports further that Siyāwush was believed to have been buried in Bukhārā, and each year, on New Year's day, every man sacrificed a cock and poured its blood on his grave (*ibid.*), a fact confirmed by Maḥmūd al-Kāshgharī (*Dīwān lughāt al-Turk*, ed. Kilisli Rif'at Bey, iii, s.v. *Ḳāz*, tr. Atalay, iii, 150). Reflections of this cult, which appears to have had pre-Zoroastrian origins, is found in a number of other sources (see Miskūb, 82-6, and Yarshater, 90-3, where it is argued that the *ta'ziya* or Persian passion plays have a precedent in the pre-Islamic mourning rites of the martyrdom of Siyāwush). Siyāwush's significance as a venerated figure with spiritual dimensions beyond an exalted prince can be gauged also from the *Mudjmal al-tawārikh*, 29, which says that Persians believed Siyāwush was an apostle of God, and by al-Bīrūnī's report, *al-Āthār al-bāḳiya*, tr. Sachau, 35, that the people of Khwārazm marked the beginning of their era with the entrance of Siyāwush in it, which occurred 92 years after the settlement (*'imāra*) of Khwārazm 980 years before Alexander. His myth seems to contain elements from the myth of the annual disappearance of a vegetation deity, current in ancient Mesopotamia and eastern Mediterranean world (Bahār, *Asāṭīr-i Īrān*, Tehran 1973, pp. l-lvii). It is said that when Siyāwush was killed, there sprang from his blood a plant, called *par-i siyāwushān* (see Pūrdāwūd, *Yasht-hā*, Bombay 1931, ii, 233, n. 2).

The Siyāwush episode in the *Shāh-nāma* represents the height of Firdawsī's poetic power, endowed as it is with rare psychological insights, apt characterisation, and careful structure. It has been ably translated into English verse by Dick Davis (*The legend of Seyavush*, Penguin Classics, Harmondsworth 1992), and has prompted a number of literary studies beside Miskūb's perceptive analysis (see *Bibl.*). Several historical figures in Persia and Armenia bear the name of the prince (see Justi, *Namenbuch*, 300, s.v. *Šiyāvaršan*).

(E. Yarshater)

SIYĀWUSH PASHA, the name of two Ottoman Grand Viziers.

1. Kanizheli (i.e. from Kanizhe, modern Nagykanizsa in Hungary), of Hungarian or Croatian descent, b. at an unknown date, d. 1010/1602.

He was educated in the Istanbul palace and steadily followed a career through the posts of *mīrākhur*, *silihdār*, Janissary *agha* and *beglerbegi* of Rumelia. Having attained the rank of vizier in 988/1580, he was married to Fāṭima Sulṭān, a sister of sultan Murād III [*q.v.*], by whom he had two sons and a daughter. Three times he attained the highest state office as Grand Vizier, which he occupied for a little over five years in all during the reign of the same sultan, but he does not seem to have been involved in decision-making of any historical impact. Neither is he known as a patron of the arts and sciences or as a creator of great charitable works. He is described by Ottoman biographers as "moderate", "gentle" and "incorruptible". Three times he had to yield the Grand Vizierial signet ring and give way to the more influential personalities of Özdemiroghlu 'Othmān Pasha [*q.v.*] (in 992/1584) and, twice, of Sinān Pasha [*q.v.*] during the serious military revolts of 997/1589 and 1001/1593. He had two public fountains built in the Ṭopkhāne quarter of Istanbul. He died in 1010/1602 and was buried in Eyüb (Eyyūb [*q.v.*]).

2. Abāzā, Köprülü Dāmādī (*ca.* 1037-88/*ca.* 1626-88), Ottoman Grand Vizier.

Of Abkhazian origins, he began his career as a slave of Köprülü [*q.v.*] Meḥmed Pasha (1578-1661), and remained a client of the Köprülü family. Set free, he was given an income as a *gedikli za'īm*, and married a daughter of his master. After the latter's death he became *ḳapidjilar kahyāsi* of Köprülü Fāḍil Aḥmed Pasha, participating in his campaigns against Uyvar (Nove Zamky) in 1073/1663, against Canea (Hanya) in 1076-80/1666-9, and against Kamenets Podolskiy (Ḳamaniče [*q.v.*]) in 1083/1672. Siyāwush Agha became acting *ḳapidjilar kahyāsi* of the sultan's court, and then, next year, *küčük mīr ākhūr* "Lesser Master of the Horse" of the sultan, but resigned to take part in the campaign against the Cossack stronghold of Čehrin in 1089/1677 led by the Grand Vizier Merzifonlu Ḳara Muṣṭafā Pasha [*q.v.*], another son-in-law of Köprülü Meḥmed Pasha. He was appointed commander of the *Silāḥdār* division of the "Sipahis of the Porte", the sultan's household cavalry, and served in the army before Vienna in 1094/1683 as *djebedji bashi*, i.e. commander of the Armoury troops of the Porte. Next year he was appointed commander of the *Sipāhī* division of the household cavalry, and two months later became vizier and *beglerbegi* of Diyār Bakr.

He continued serving in the army in Hungary, and successfully relieved the besieged fortress city of Buda (Budun [*q.v.*]). He was present at the defeat of the Ottoman army in the Second Battle of Mohacz (3 Shewwāl 1098/12 August 1687), and at the fighting around the famous bridge of Eszek as well as at the defeat at Siklös. After these events, the field army rebelled, proclaimed Siyāwush Pasha its commander and Grand Vizier and began its march back to Istanbul. At Nish [*q.v.*] he received the seal of office sent by the sultan upon the advice of the *Dīwān*. Meḥemmed IV [*q.v.*] was deposed, however, and succeeded by Süleymān II [*q.v.*] before Siyāwush Pasha arrived at Istanbul on 5 *Muḥarram* 1099/12 November 1687. Soon the Janissary and Sipāhī commanders rebelled again. The Grand Vizier failed to assert his authority; a mob of these soldiers besieged him in his residence, and he lost his life while defending his womenfolk (28 Rabī' II 1099/3 March 1688). His wife and daughter were grievously mutilated, and their female slaves were sold as booty. Siyāwush Pasha's grave lies in the Tūnus Bāghi section of the cemetery of Ḳaradja Aḥmed at Üsküdār. It is evident from the inscription that the vizier was spiritually affiliated to the Nakshbandiyya dervish order.

The afore-mentioned should not be confused with two of his predecessors carrying the same name. 1. Siyāwush Pasha, Kanizheli, Dāmād, (d. 1010-11/1602), was three times Grand Vizier: in the years 990-2/1582-4, 994-7/1586-9 and 1000-1/1592-3 (on him, see above, 1). 2. Siyāwush Pasha, Abāzā, Dāmād, (d. 2 Redjeb 1066/25 April 1656) was Grand Vizier under Sultan Meḥemmed IV in 1061/1651 and 1066/1656.

SŌBA, a town of the mediaeval Sūdān, situated on the right bank of the Blue Nile 22.5 km/14 miles above its confluence with the White Nile. While the city arose amidst the remains of older Meroitic or Napatan settlements, to the Islamic world Sōba was the capital of the mediaeval kingdom of Alodia [see ʿalwa]. Brief inscriptions in Old Nubian have been found in the area, while recent discoveries of texts in Greek, including a royal tombstone, suggest that this language also played an important role in the court culture of the very large and ethnically diverse Alodian realm. In A.D. 580 the Alodian monarch embraced Monophysite Christianity, and richly endowed ecclesiastical architecture graced Sōba when, no later than the 9th century, it became the Alodian capital.

Sōba at its 10th-century apogee was a sprawling city, its public buildings of red brick, set amidst a wide and fertile agricultural and pastoral hinterland. Its customs and usages were said to resemble those of Dongola [*q.v.*], which it exceeded in wealth and power, and its kings, through marriage diplomacy, sought with indifferent success to unite the two Nubian crowns. A large quarter of Sōba was inhabited by foreign Islamic merchants who supplied the court with imported luxuries, conspicuously glassware, in return for Sudanese products.

During the 12th century, Sōba began to decline as the authority of the Alodian monarch over his far-flung provinces faltered, yet the city remained a centre of regional power until its conquest by the Fundj [*q.v.*] at the close of the 15th century. Thereafter, Sōba enjoyed posthumous eminence as legendary ancestral home to the kings of Fāzūghlī [*q.v.*].

SOCOTRI [see suḳuṭra. 3].

SOFĀLA, Ar. Sufāla, a district and former town in Mozambique, in lat. 18° 13' S., long. 14° 20' E., 48 km south-south-east of Beira, was the principal port for the regional gold export trade at least from the 10th to the 17th century. Materials are not available to construct an orderly history, which is recorded only in scattered Arabic, Chinese, Persian and Portuguese sources.

The name is generally connected with the Arabic root *safala* "to be low-lying". Thus al-Masʿūdī (i, 331-2 = §§ 362-3) says that "whenever a mountain stretches some distance below the sea, in the Mediterranean it is given the name *al-sufāla*". Prescinding from "underwater mountains", the coast here is low-lying. Nevertheless, the term is also used for the ancient Indian port of Surpuraka, near Bombay, which is by no means low-lying. For this reason G. Ferrand considered that a Bantu root may be preferable, but there is no evidence to support this.

Al-Masʿūdī is the first author to name it (i, 233 = § 246). There is, however, some earlier archaeological evidence. Slight evidence exists of gold digging in the region, *ca.* A.D. 100 in some authors, *ca.* A.D. 300 in others, the earliest source being Mapungubwe in the present republic of Zimbabwe. A recent archaeological survey by G. Liesegang disclosed nothing of antiquity. Al-Djāḥiẓ (d. 255/868-9) attests a Muslim presence and an established slave trade in Zanzibar and Pemba, without mentioning gold. Nevertheless, there, and on Tumbatu Island, remains of mosques have been found datable to the 8th or 9th centuries A.D. Their size indicates that they were built not simply for agricultural settlements but for substantial trading towns. The gold trade of Sofāla could not have sprung "like Venus from the waves"; it seems logical to rely upon these indications. The answer to the problem will lie in systematic excavation.

Al-Masʿūdī says that Sofāla lies at the utmost end of the land of Zandj. It adjoins the Wāḳwāḳ country, the name of this being possibly an onomatopoeic word which suggests click-speakers [see further, wāḳwāḳ]. At iii, 6-8 = §§ 847-9, he says that the Zandj settled in Africa as far as Sofāla, which is the extreme limit of navigation for vessels coming from ʿUmān and Sīrāf. This incidental remark refers not only to an established trade route; it explains the undoubted Sīrāfī influence in the architecture of the *miḥrāb*s in the mosques mentioned above. The Zandj Sea, he continues, ends at the land of Sofāla and the Wāḳwāḳ, and produces gold and other marvels. The climate is warm and the soil fertile. The Zandj have their capital there. With evident hyperbole, their king commands 300,000 cavalrymen. There is a sophisticated religion and a developed constitution. The kings are called *waḳaleme*, sing, *mḳaleme*—the text has wrongly وقليمى, for وفليمى, *wafalme*, *mfalme*, the ordinary words for kings, king, in current Swahili today. Clearly by this time the Bantu had already penetrated to this part of Africa.

In his *Book of the wonders of India*, Buzurg b. Shahriyār of Rāmhurmuz relates how an ʿUmānī shipmaster, Ismāʿīlawayh, was twice driven by storms to Sofāla, first in 310/922, the second a little later. Here he mentions huge birds that can seize animals in their beaks, evidently the giant *rukhkh* [*q.v.*]; there was a lizard whose male had two *penes* and whose female two *vaginae*, and whose bite was incurable (perhaps the monitor lizard, which is as big as a labrador dog); there were also numerous snakes and vipers. In 334/945 the Wāḳwāḳ attacked Sofāla, and destroyed many towns and villages. In Sofāla district "men dig

for gold, and excavate galleries like ants", phraseology almost identical with that of Diogo de Alcaçova in a letter to the King of Portugal in 1606.

The *Ḥudūd al-ʿālam*, written in Persian in northern Afghānistān in 372/982, mentions three towns in Sofāla: M.LDJĀN, possibly a corruption of *al-Unguḏja*, the ancient name for Zanzibar still current in Swahili; SUFĀLA, the seat of the Zandj kings; and HWFL, a name which so far has defied identification. *Ca.* 421/1030 al-Bīrūnī, in his *India*, mentions an animal, of which a man who had visited Sofāla told him that its horns were used to make knife-handles, clearly a rhinoceros. More importantly, he says that Somnāth in Kathiawar [see SUMANĀT] has become celebrated because it is much frequented by sailors, and is the port from which voyages are made frequently between Sofāla of the Zandj and China. At Sayūna there are settled Indian traders, plausibly what the Portuguese called Sena on the Zambezi river, an important town trading in gold and other local products. It has not been excavated.

Al-Bīrūnī's reference to China makes it no surprise that the Sung Annals for 1071 and 1083 have detailed accounts of envoys from the Zandj coast, from a ruler called A-mei-lo A-mei-lan, which may reasonably be taken as Persian *amīr-i amīrān*, a ruler of rulers such as al-Masʿūdī had also described. He had also mentioned a brisk ivory trade, of such dimensions as to have caused a shortage of ivory in Islamic lands. The Sung Annals give a glowing picture of trade in many items, and also speak of gold, silver and copper currency as in use by the Zandj. Of gold currency we have no evidence of minting at Kilwa [*q.v.*, and see below] before the 14th century. Of both silver and copper currency there is already evidence in Zanzibar and Pemba by the 10th century; there is some possible evidence of silver currency in the Lamu archipelago by the 9th century. Nevertheless, there was no immediate source of silver in eastern Africa, although it could have been obtained from India. The recorded present to the envoys from the Zandj court to that of the Sung, amounting to 2,000 *lieng* of silver, would have been a very handsome one indeed.

Al-Idrīsī, a century later in 549/1154, speaks of the famous iron mines, and of the abundance of gold in Sofāla. He also names two towns, Djabasta and Dāghūṭa. The readings are uncertain, and they have not been identified. For the end of this century the *Crónica dos Reyes de Quiloa*, from a lost Arabic source which can be dated to *ca.* 1506, and translated by João de Barros and published in 1552, gives us some rather questionable information. It alleges that, up to *ca.* 1190, the Sofāla trade had been conducted by merchants from Mogadishu, and that then, because a Kilwa fisherman was driven out of his course down to Sofāla, he discovered the Mogadishu trade with Sofāla. Thereupon he reported to the sultan of Kilwa, who then sent a governor there. It is difficult to assess the truth, for the standing mediaeval buildings in Mogadishu, two mosques, both have 13th-century dedication inscriptions. This would seem to point away from an earlier date for the prosperity of Mogadishu. As to Kilwa, the *Crónica* shows that, prescinding from the myth of the fisherman, Kilwa did certainly send governors to Sofāla, and one such from Kilwa was found there when the Portuguese built their fort there in 1506.

Be that as it may, Yāḳūt (*Muʿdjam*, iii, 96) reports in the early 7th/13th century that Sofāla was the last known town of the Zandj, and that merchants traded with the inhabitants by the "silent trade", in the manner that Yāḳūt reports also in the Maghrib, and that Herodotus and later Cosmas Indicopleustes had reported centuries before in the Maghrib and in Ethiopia. A far more elaborate report was completed two years before in China, by Chao Ju-Kua in his *Chu-fan-chih*. He was commissioner for foreign trade in the Fukien province of China. Of Zanzibar (Ts'ong-pa) he says that the inhabitants are Muslim. It is an island of wooded hills and terraced rocks, a description more like Pemba, which is hilly, than Zanzibar, which is flat. "The products of the country consist of elephants' tusks, native gold, ambergris and yellow sandalwood." The Arabs send ships to this country with white cotton cloth, porcelain, copper, and red cotton. This gold could only have come from the Sofāla region, for other sources of gold far inland near Lake Victoria were not exploited before colonial times.

Ibn Saʿīd (7th/13th century) says that the names of the towns of Sofāla are not known but that the capital is Sayūna. Ferrand says that this is undoubtedly the Chiona of Barros (Decade ii, Bk. 1, ch. ii), which he locates between Malindi and Mombasa in lat. 2° 30' S., long. 99° E. Aḥmad b. Mādjid lists no such place on the eastern African coast, nor is there any philological connection with Sayūna apparent. As with al-Bīrūnī above, it would seem preferable to equate Sayūna with the market-town of Sena on the Zambezi. Ibn Saʿīd continues that Sayūna is the capital of the king of the Sofālians, a further pointer to the location. The Sofālians and the Zandj worship idols and wear panther-skins. (There are no panthers in Africa; presumably leopard or cheetah are meant.) Their principal resources are gold and iron. They have no horses, and only infantry. He speaks also of the straits of Ḳumr (Comoro Islands [see ḲUMR]), yet further confirming a southern location for Sayūna, as does the mention of the unidentified town of Dāghūṭa.

Al-Ḳazwīnī (*ca.* 600-82/*ca.* 1205-83) records Sofāla as the last town in the land of Zandj, which has gold mines, and practises the "silent trade". He mentions a bird called the *hawāy*, which "speaks better than a parrot". Presumably a mynah is meant (cf. A. Roberts, *Birds of South Africa*, 1940, pl. xlvii). Al-Ḳazwīnī mentions a similar bird in Sumatra, calling it *ḥawārī*, "smaller than a pigeon, with a white belly, black wings, red claws and a yellow beak". Sofāla, too, has white, red (or yellow) and green parrots (cf. Roberts, pl. xxii, but the white parrot would rather be a lourie). Men here eat flies, believing that this prevents ophthalmia, and he notes that they do not suffer from it.

Abu 'l-Fidāʾ (672-732/1273-1331) makes only the briefest mention of the location of Sofāla. Al-Dimashḳī (*ca.* 725/1325) mentions Sofāla three times, citing Aristotle for an "oil stone ... red with a bluish light; touched by oil, it is changed for the worse, the oil going right to the centre. It comes from Sofāla of Zandj. When it is rubbed over a garment stained with oil, it removes all traces immediately."

Ibn Baṭṭūṭa visited Kilwa briefly in 732/1331, after short stops at Zaylaʿ, Mogadishu and Mombasa. A merchant told him that Sofāla was half a month's march away. "Between Sofāla and Yufī in the country of the Līmīs is a month's march. Powdered gold is brought from Yufī to Sofāla." This is possibly a confused memory of Nupe in Nigeria, several thousand miles away, and unconnected by any known caravan route. Yufī and Līmīs have never been identified, nor is Līmīs recognisable as a Bantu root.

Ibn Baṭṭūṭa relates a long anecdote about the generosity of a sultan of Kilwa, al-Ḥasan b. Sulaymān,

known as Abu 'l-Mawāhib, and how he gave a beggar a present of his own clothes, together with slaves and ivory. Ibn Baṭṭūṭa comments with palpable acidity, as if his own hopes had been dashed: "In this country the majority of presents are of ivory: gold is very seldom given." This sultan, al-Ḥasan b. Sulaymān (*ca.* 1310-33) is known from the *Akhbar Kulwa* (see below), from an inscription in the Husuni (sc. Ar. *ḥiṣn*) Palace in Kilwa, from many copper coins, and from five gold pieces in his name, the only gold coins so far known to have been minted at Kilwa. They were reported to the British Museum only in 1990. It has thus become possible to interpret Ibn Baṭṭūṭa's *en passant* remark as referring to coin. Since much of Kilwa, and of other larger sites in eastern Africa, have not yet been fully excavated, the subject is one that must be treated with great caution. Nevertheless, this gold could only have come from Sofāla.

Ḥamd Allāh Mustawfī related that Sofāla of Zandj has a cavern measuring 500 parasangs in every direction. Because of shifting sands and the heat and aridity, the country is not thickly inhabited.

Ibn al-Wardī (*ca.* 740/1340) says that "golden Sofāla" adjoins the land of Zandj. The inhabitants work vast iron deposits, which are sold to Indians, who make it into steel swords and tools. Gold is found under the soil in great abundance, with numerous nuggets weighing as much as two or three *mithḳāls*. Nevertheless, the people of the country only wear copper ornaments, esteeming copper more than gold. The land of Sofāla adjoins the land of the Wāḳwāḳ.

Ibn Khaldūn is very laconic. Sofāla lies east (sc. south) of Maḳdashū (sc. Mogadishu), adjoining Wāḳwāḳ. Bākuwī speaks of the land of Zandj, famous for its gold mines. He speaks also of a bird called *ḥawārī*, like al-Ḳazwīnī above, that speaks better than a parrot. The *muʿallim* or shipmaster Sulaymān al-Mahrī (early 10th/16th century) locates Sofāla at about 18° S., a very accurate observation, since correctly it is 18° 13'.

About 1490 Sofāla was visited by Pedro da Covilhã. His journeys, starting from Portugal, and travelling along the coast of Arabia to eastern Africa, back to Cairo, whence to India, and then returning to Ethiopia, where he was detained, have been related and traced in detail by E. Axelson. Before proceeding to Ethiopia he encountered a Rabbi from Beja in Portugal, who carried back—so it seems—an account of the intelligence which Covilhã had gathered to the king of Portugal. Covilhã's report, if it were written down, has not survived; it was perhaps destroyed like much else when the Torre do Tombo, the archives of Portugal, succumbed to the Lisbon earthquake of 1755. Covilhã was never allowed to return to Portugal.

He was not the first European traveller to visit south-east Africa. Aḥmad b. Mādjid records in two verses of a nautical treatise dated 18 Dhu 'l-Ḥidjdja 866/13 September 1462: "It is said that in former days the ships of the Franks came to Madagascar and to the coast of Zandj and Western India, according to what the Franks say." Ferrand considered that the verses seemed to allude to the voyage of Pseudo-Brocardus, who is probably William Adam O.P., in the first half of the 14th century. He recorded *mercatores vero et homines fide digni passim ultra versus meridiem procedebant, usque ad loca ubi asserebant polum antarticum quinquaginta* (sc. *triginta*) *quatuor gradibus elevari.* (The question is treated s.v. ZANDJ.)

On his first voyage, Vasco da Gama bypassed Sofāla and Kilwa, seeking a pilot to take him to India, without success at Mombasa, and then finding one at Malindi. He had learnt, nevertheless, of the gold of Sofāla, and this was the object of Cabral's voyage in 1500-4. He first visited India, and the visit to Sofāla amounted to no more than a reconnaissance. The attempt to found a *feitoria*, commonly factory, that is to say, a trading agency, failed. Vasco da Gama's second voyage in 1502 had as its main object the humiliation of Calicut, with the tapping of the riches of Sofāla as a subsidiary aim. Gama himself proceeded to Kilwa, and subjected the ruler to the payment of tribute. On his return to Lisbon in September 1503 he went in procession, first, some say, to the cathedral, others to the royal palace. Damião de Goes relates how a page walked before him, carrying in a water bowl the 1,200 *mithḳāls* of the tribute of Kilwa. With them were the jewels that he had also taken from Kilwa, and supplemented by a further 800 *mithḳāls* of gold from Cananor and Cochin. That the page carried them in a water-bowl suggests plausibly that he carried coin and not unminted gold. At the king's orders, these provided materials for a *custódia* or monstrance for the Jerónimos monastery at Belém, from which Gama had set out for the *descobrimento* of India, and where he and the poet Camōs are buried. It is now the most splendid exhibit in the Museu Nacional de Arte Antiga in Lisbon. The inscription on the base states:

> O MVITO ALTO PRIČIPE E PODEROSO SEÑOR REI DÕ MANUEL I A M̃DOU FAZER DO OURO E DAS FARIAS DE QILVA AQUABOU E CCCCCVI
>
> "The most high Prince and mighty Lord King Dom Manuel I ordered the making from the gold and tribute of Kilwa. Completed in 1506"

Thus gold from Sofāla is exhibited today far-off in Europe. The account also attests, it seems, that Cananor and Cochin were outlets for the Sofāla gold.

In 1505 Francisco d'Almeida was commissioned to set out with a fleet to set up fortresses at Kilwa and at Sofāla. He set out in March or April, but the vessel whose crew was to occupy Sofāla sank in the Tagus. Eventually Pero d'Anhaya reached Kilwa with six ships, carrying materials for building a fort similar to São Jorge de Mina, now Elmina in Ghāna. After suffering a series of misfortunes, they crept up the river. They were received by the Shaykh Yūsuf, the governor, a member of the royal family of Kilwa, who was eighty years of age and blind. His house was richly furnished, with Indian silks and cloth, ivory and gold, filling the Portuguese with cupidity. By November a fort had been built of local materials and houses for the factor and his staff. Vessels also had been seized at sea, and prisoners slaughtered. At first trade prospered, but the atrocities committed by the Portuguese resulted in an attack on the fort. The locals were aided by fever among the Portuguese, whose numbers were halved. In December 1506 Nuño Vaz Pereira was sent to restore peace and normalise relations.

In the meantime, Diogo da Alcoçova had sent a favourable report to the king. The gold, he said, came from an inland kingdom, Vealanga, 30-36 days' journey from the coast. There the miners dig out the earth in tunnels. They cook the earth in pots, separating it from the gold. Barros (*Dec.* i, Bk. x, ch. i) says that the kingdom of Sofāla is over 650 leagues in circumference. It is so thickly populated that the elephants are leaving it. The locals say that every year four or five thousand die, which explains how they can send so great a quantity of ivory to India. The gold mines are at Manica, some fifty leagues west of Sofāla. The gold is gathered in dust or in

nuggets. There are also more distant mines in the kingdom of Butua. It has a fortress built of hewn stones, laid dry, without cement. It had an inscription over the gate which educated Muslim merchants did not know how to read. (No inscriptions have so far been found in the area.) There are other similar erections, which the local call *symbaoe*, sc. *zimbabwe*, house of stone.

At the beginning of the 16th century, Sofāla was highly prosperous. There was, however, no room for the Portuguese in the equity, and slowly the gold trade, and that in ivory, declined or moved northward to a series of small ports. *Ca.* 1517-18 Duarte Barbosa summarised the coastal trade. Cotton cloth, silk, beads were brought from Malindi and Mombasa, and bought in Sofāla, being "paid for in gold at such a price that those merchants departed well pleased, which gold they give by weight".

In the 1950s the Central African Archives initiated a series which was published in Portuguese and English, *Documents on the Portuguese in Mozambique and Central Africa, 1497-1840*. The first eight volumes reached 1589 only. There was then a hiatus in publication, until in 1989 a ninth volume appeared, taking the series up to 1615. This most valuable project was necessarily selective, containing as it does documents from Goa, Portugal, Rome and Spain. The first eight have very numerous references to local payments for salaries and goods in Sofāla, Mozambique and Kilwa. Mozambique superseded Sofāla as the main port of call in 1507. The ninth volume is more concerned with local affairs.

The payments are generally shown in gold *mithḳāls*, and even in half- or quarter-*mithḳāls*. One list of staff payments at Sofāla in 1508, expressed in *mithḳāls*, regrets the absence of *dinheiro* (ordinary coin) to discharge them. This would make one think that *mithḳāls* were still coined, but no pieces of this nature have so far been found other than those of al-Ḥasan b. Sulaymān mentioned above. Some payments are shown in two currencies, both *mithḳāls* and *reais* (commonly *reals*). One entry records a payment of 108 silver *mithḳāls*, of which no coined specimens have ever been reported. In 1513 gold was imported in square pieces from *Dalacca*. The toponym is unidentified, and it would be strange if the Dahlak Islands were meant. In 1515-16 a payment is recorded in *ouro por amoedar*, gold for coining, that is, in nuggets or uncoined gold. There are further references to uncoined gold, others where it is not specified whether the *mithḳāls* were minted or not. In 1536 Lisbon sent specially-made *mithḳāl* weights to Sofāla, which could suggest that a mint was established there. There is no mention of any such in the *Documentos*. The subject is veiled in mystery. It would seem strange that in the 17th century payment was made in *mithḳāls* if they were no longer minted, when the Portuguese were able to establish mints for Portuguese issues in Goa (1510), Malacca (1511), and Chaul, Diu and Bassein in the 17th century, of which the typology is well reported. A record of 1574, however, laments the decline of the Sofāla gold trade, stating that funds for the upkeep of Sofāla came from India.

Early Portuguese narratives, and some European scholars, have located at Sofāla the Biblical Ophir, from which the fleets of Solomon and of Hiram of Tyre brought back cargoes of gold, silver, ivory, apes and peacocks (I Kings x. 22; II Chronicles ix. 21). In a well-known passage of *Paradise lost* Milton speaks of "Mombaza, and Quiloa, and Melind,/ and Sofala thought Ophir ..." (xi, 399-400). Modern historians see no connection.

Ancient Sofāla was on an island, whereas the Portuguese fort was built on the mainland, with a village adjacent. In 1764 it was 252 fathoms long, and 60 broad; there were thirty-five houses, one of stone and lime, two of wood with tiled roofs, and thirty-two of wood with thatched roofs. The ancient site was visited and photographed by Professor Eric Axelson in 1958. All that was left was an islet a few metres long and wide, protruding from the sea. There was some débris of stone, but most of it had been taken to build Beira cathedral. It remains only as an adventurous opportunity for underwater archaeologists. In 1889 the authors of the *Elementos para un diccionario chorographico da provincia de Moçambique* wrote the melancholy words: "the district of Sofāla, so rich in historical memories, is now poverty-stricken and abandoned."

SOFIA [see ṣofya].

SOFTA (Greek Sukē; Armenian Siga, Sigui; Frankish Nessekin; Arabic Sukayn, a fortress (Softa Kalesi), on the border of Cilicia Tracheia with Pamphylia, in present-day southern Turkey, 16 km/10 miles east of Anamur [*q.v.*] near to the fishing-port of Bozyazı (ancient Nagidos), and the classical site of Arsinoē (Maraş Harabeleri). The fortress occupies the top of a conical feature about a mile from the Mediterranean Sea. The fortifications consist of an upper and lower bailey, enclosed by a single enceinte punctuated with round and square towers. The main entrance to the castle was via a gateway on the northern side of the upper bailey. The best-preserved features of the site are the keep in the highest part of the upper bailey, and the gateway and salients in the wall separating the two baileys. The latest of several distinct building programmes probably dates from the end of the 5th/11th century. The castle was in Byzantine hands from the end of the 2nd/8th century, when it was besieged by the Arabs, until the end of the 6th/12th century, after which there appears to have been at least one period of Armenian occupancy. Softa was probably one of several Pamphylian and Cilician castles which Ibn Bībī says were acquired in 621/1225 by the Rūm Sald̲j̲ūḳ atabeg of Antalya, Mubāriz al-Dīn Artuḳus̲h̲ Beg. In the 8th/15th century it was acquired by the Ḳaramānids with the help of the Venetians, who knew it as Sequin or Sechino. Thereafter it came under Ottoman control.

(D.W. Morray)

ṢOFTA (t., orthography *ṣ.w.f.t.h*), a name given to students of the theological, legal and other sciences in the *madrasa* [*q.v.*] system of Ottoman Turkey. A parallel form is *sūk̲h̲te*, in Persian literally "burnt, aflame (i.e. with the love of God or of learning)", which seems to be the earlier form; the relationship between the two words, if any, is unclear (see S̲h̲. Sāmī, *Ḳāmūs-i turkī*, Istanbul 1318/1900-1, ii, 839 col. 3; Redhouse, *Turkish and English dict.*, 1087, 1192). The term *ṣofta* was applied to students in the earlier stages of their education; when a student became qualified to act as a *mu'īd* or repétiteur [see mustamlī], he qualified as a *dānis̲h̲mend*.

Ṣoftas from the Istanbul *madrasas* are frequently mentioned in Ottoman history from the 10th/16th century onwards as an unruly mob element in the capital, provoking or participating in several uprisings there. Thus their role is mentioned in the Rad̲j̲ab 1011/January 1603 revolt of the former *S̲h̲ayk̲h̲ al-Islām* Ṣun' Allāh Efendi and the Sipāhīs [*q.v.*] against the Janissaries and Sultan Meḥemmed III [*q.v.*]; in the Rabī' I 1115/July 1703 one against the *S̲h̲ayk̲h̲ al-Islām* Feyḍ Allāh Efendi and Muṣṭafā III [*q.v.*]; in the Rabī' II 1293/May 1876 revolt against Sultan 'Abd al-'Azīz and the Grand Vizier Maḥmūd Nedīm Pas̲h̲a [*q.vv.*]; and the Rabī' I 1327/April 1909 counter-revolutionary mutiny of part of the army against the Committee of Union and Progress (the so-called *31. Mart waḳ'asî*) (see Mustafa Akdağ, *Türkiye tarihinde... medreseli isyanlari*, in *Ist. Üniv. Iktisat Fak. Mecm.*, xi [1949-50], 361-87; B. Lewis, *The emergence of modern Turkey*, London 1961, 156-, 21; S.J. and E.K. Shaw, *History of the Ottoman empire and modern Turkey*, Cambridge 1976-7, I, 133, ii, 162-3, 279-82).

(C.E. Bosworth)

ṢOFYA, the Ottoman form for Sofia, the present-day capital of Bulgaria [*q.v.*].

It is situated in the southern part of the Sofia plain at an altitude of 550 m/1,800 feet, at the foot of the mountains Vitoša and Ljulin; it has a temperate continental climate; a number of affluents of the river Iskăr run through the city; there are many mineral springs; and it lies on the main road between Central Europe and Istanbul, and that between Vidin on the Danube and Thessaloniki.

Its successive names were Serdnopolis (Thracian population); Serdica (Roman name), Ulpia Serdica (from the second quarter of the 2nd century A.D.); Triadica (Byzantine name); Sredec (Bulgarian name, from the 9th century); Atralissa (in al-Idrīsī); and Sofia (from the second half of the 14th century, after the name of the St. Sophia church).

It has been populated for seven millennia, and there are remnants dating from the Neolithic, Chalcolithic, and the Bronze Age. The Thracian tribe of the Serds fell under the rule of the Romans at the beginning of the first century A.D. The city was granted the rights of a municipality; it became the centre of a theme and was later included alternately in the provinces of Thrace and of Inner Dacia. Constantine the Great issued some of his edicts here. The Oecumenical Council of Serdica took place in 343. In 809 the city was conquered by Khan Krum (803-14) and incorporated in the Bulgarian state.

In 1385 (or 1382), following a siege, the city was captured by the Ottomans. Towards the middle of the 15th century, the Ottomans chose Sofia to become the centre of the Rumeli *beylerbeyilik*, which encom-

passed the majority of the Ottoman European possessions. At its head was the *beylerbeyi* (*mīrimīrān*, with the rank of a *pasha*; from the 16th century, a *wezīr*), assisted by his own *dīwān* which had judicial and administrative functions. Until the end of the 18th century, Sofia was the actual capital of the European territories of the Ottoman state, hence considered as such by both Ottomans and West Europeans at the time.

Sofia was the centre of a *ḳaḍāʾ*. The wide prerogatives of the *ḳāḍī* are made clear by the records in the *sidjills* preserved in the Oriental Department at the National Library of SS. Cyril and Methodius in Sofia (56 volumes dating from 1550 to the end of the 19th century).

Ewliyā Čelebi attributed special attention to the Ottoman functionaries residing in Sofia. First among them ranked the *sharīʿa* judge, a *molla* with 500 *aḳčes* daily payment, assisted by a *muḥḍirbashî*, scribes, a *muḥtesib* and a *pazarbashî*. Ewliyā also spoke of a *müftī*, a *naḳīb ül-eshrāf*, a *ketkhudā* of the *sipāhīs*, a *serdār* of the Janissaries and a *ketkhüdā* of the city. Over all these functionaries was the *Pasha*. Among the powerful Ottoman notables, the first *aʿyān* of Sofia come to the fore in the 17th century.

At the end of the 18th/beginning of the 19th centuries, the city suffered from the anarchy of internecine warfare and especially from the Kîrdjalî attacks of the horde of Ḳara Feyḍ. In the 18th century, Bitola became the usual place of residence of the Rumeli *beylerbeyi*, while Sofia was ruled by his *mütesellim*; from 1836 the seat of the *beylerbeyi* was moved to Bitola; after the Crimean War, 1853-6, the city decayed, and from 1864 was degraded to a *sandjaḳ* within the Danube *wilāyet*. Sofia was captured by the Russian troops on 23 December 1877/4 January 1878; on 22 March/3 April 1879 Sofia was chosen as the capital of the Principality of Bulgaria.

The varying fate of the thousand-year old city has laid its seal upon the composition of its population. The Romanised Thracian population was gradually replaced by a Bulghar one. After the Ottoman conquest, Muslims settled in the city for the first time: there was a garrison, Muslim religious functionaries and officials, as well as craftsmen and merchants. But according to Bertrand de la Broquière (1433), Sofia was still a Bulgarian town. The "Long Campaign" of John Hunyádi and Vladislav I, king of Hungary, in the autumn of 1443, brought real disaster to the local population. At their retreat, the Ottomans applied scorched earth tactics; at their recapture of the city, the population, and especially the Christian élite, suffered from severe punitive measures.

Tax registers from the 16th century recorded an already preponderant position for the Muslim population in Sofia, both in terms of numbers and in the economy of the city. This phenomenon was the result of a migration wave from the east and of Islamisation of local people. A clear tendency of population growth due to natural increase emerges with the Muslims gaining the numerical superiority. But the populous villages around Sofia remained largely Bulgarian. Until the 19th century, the correlation between the groups of the population in the entire region remained stable—the Muslims were 12%, but in the city they prevailed over the Christians. There appeared *Yürüks* in the region of Sofia (*Nadöken*). The economic and political decline of the city in the 19th century brought about a still further withdrawal of the Muslim population from the city. After the Russo-Ottoman War of 1877-8, virtually the entire Muslim population abandoned Sofia.

All travellers noted that in the 15th-18th centuries, Sofia was a well-populated city and they paid particular attention to the diversity in the ethnic and religious composition of its population. Apart from the Orthodox Bulgarians, they mention Greeks. The city was also inhabited by Jews, both Romaniot and Ashkenazim. Their numbers increased considerably in the 16th century after the influx of the Spanish Jews, the Sephardim. Sofia became then one of the cities with a significant Jewish community. There was a synagogue in the city from at least A.D. 967. The number of Monophysite Armenians in the city during Ottoman rule increased following several migrations of Armenians from Poland, Plovdiv, Nakhičevān, and other parts of the Ottoman Empire; in the 17th century there already existed a Georgian community. The sources identify also a small group of *ʿAdjem ṭayfe*, Armenians from the eastern provinces bordering on Persia, who were engaged in interregional trade within the Ottoman Empire. Sofia was one of the Balkan cities where, beginning with the 14th century, Ragusans settled. About the middle of the 15th century, they had a church and estates in the centre of the city, that is, something like a *maḥalle* of their own; towards the end of the 17th century, the community of the Catholic Ragusans declined. Gypsies, both Muslims and non-Muslims, are mentioned among the inhabitants of the city for the first time in the 16th century.

Following the established traditions in the Islamic and Ottoman town, all ethno-religious groups in Sofia lived in their separate *maḥalles* (at the end of the 16th century—25 Muslim and 14 non-Muslim *maḥalles*, 2 *zāwiyes* and 3 *djemāʿats*). Ottoman documentation shows, however, that from the 17th century onwards, the strict segregation of the population in separate *maḥalles* in Sofia was not infrequently violated. Muslim *maḥalles* were usually represented by the *imāms*, and from the 19th century by the *mukhtārs*. The functions of the *maḥalles* in Sofia were related to taxation, maintenance of the public security through mutual guarantees, observance of public and family morality, maintenance of the places of worship and the functionaries in them, and religious charities through the *maḥalle waḳīfs*.

The Orthodox Christians, Jews, Armenians and Catholics in Sofia were regarded by the authorities as internally independent autonomous communities grouped around their own religious leaders (an Orthodox bishop, subordinate to the Oecumenical Patriarch in Constantinople; a Catholic bishop, etc.), and they participated in taking decisions related to problems regarding the whole city.

Thus according to Ottoman *defters* from 930/1523-4, 915 Muslims (that is, ordinary tax-payers, low religious functionaries and some military men, bachelors and men with some form of disability) and 317 Christians had been registered in the city, which makes a total population of about 6,000; in 1544-5, 1,325 Muslims, 173 non-Muslims, as well as 88 Jews, that is, over 8,000 inhabitants; towards the end of the 16th century, 1,017 Muslims (without military men), 257 non-Muslims, 127 Jews and 37 Gypsies, that is, over 9,000 inhabitants. According to the Catholic Propaganda around 1580, there lived in Sofia about 150 Catholics, mainly Ragusans; in 1640 (according to Petăr Bogdan) there were 58. The same author indicated that there lived in the city 30,000 Muslims, 25,000 Orthodox Christians, 15,000 Jews, and 1,600 Armenians. A number of Western European observers point out that, in the 18th century, Sofia had about 70,000 inhabitants; at the beginning of the 19th century they were only 45-50,000. The *sālnāmes* of 1872-3 record 3,065 Mus-

lim households and 1,737 non-Muslim ones, that is, over 35,000 people. According to the first census of the Principality of Bulgaria in 1881, there lived in Sofia 20,501, including 535 Turks, 13,195 Bulgarians, 4,146 Jews, 1,061 Armenians and 778 Gypsies.

The high Sofia plain, surrounded by pastures and forests, is a densely populated agrarian countryside, with over 200 villages, where many categories of population with specific military and police duties, as well as production obligations, were represented—*woynuḳs*, *derwentčis*, *djelebs*, *ma'dendjis*. Agrarian production, cattle-breeding and metal production were directed mainly towards the big consuming and producing centre, Sofia, as well as towards the vast imperial markets and supplies for the army. The numerous population in the administrative and military centre and its position on the crossroad of two highways stimulated the economic development of the city, which was also stimulated by the emergence of a number of workshops during the Ottoman period.

At the beginning of the 16th century, Sofia was a *khāṣṣ* of the sultan. Local trade and production were regulated through the law of the *bādj* from the 16th century. Between the 15th and 17th centuries, Sofia was the largest import-export base for the caravan trade of Ragusa in Bulgaria. It was mainly crafts related to the processing of metals, wool and hides, that flourished. The famous red and yellow hides, called *kordovans* and *bugarins*, were produced here.

Craftsmen and merchants were a major element in the city. At the beginning of the 16th century, these were 294 Muslims and 78 non-Muslims; in the middle of the century, 347 and 130 respectively, and towards the end of the century, 474 Muslim craftsmen and 131 non-Muslims, belonging to 132 crafts. *Djelebs* had an important role in the city, too. The *eṣnāf* or trade guilds [see ṢINF] were established in the 16th century. Along with the representatives of the *'askerīs*, there were also *'ulemā'*: *mu'allims*, *khaṭībs*, *sheykhs* and dervishes from various *ṭarīḳats*, and, above all, *imāms* and *mü'edhdhins*. According to Ottoman registers, only in the course of the 16th century did their number increase from about 30 to over 110.

Sofia is one of the few living Late Antique cities. Some of the monuments of Late Antiquity have been preserved until today: the rotunda of St. George, the church of St. Sophia and parts of the fortress walls. After the city fell under Ottoman control, Sofia came under the influence of the Islamo-Levantine culture. The architecture of the city, however, preserved both the Antique and the Mediaeval heritage, which was enriched by another important element, the Islamic one.

Under the Ottomans, the city lost its fortification walls. The Ottoman city spread in width, the houses having large courtyards with lots of verdure, hiding the muddy mediaeval streets and plain houses. For a long time, however, the fortress wall marked the area and the established planning of Antiquity: the main streets were in fact the road-beds of the highways crossing Sofia in its centre, close to the mineral spring. Thus the ancient and mediaeval centre became the centre of Ottoman Sofia, too. It was locked between the imaginary triangle formed by the dome of the church of St. Nedelja, where the relics of the Serbian king Milutin are kept, the cupola of the synagogue, and the minaret of the monumental *Banābashī* mosque. These three sanctuaries symbolise the Levantine spirit of the Ottoman city in the Balkans, and delineate the Ottoman centre, which was only the new attire of the ancient and of the present centre of Sofia.

Being the centre of Rumeli in the 15th and 16th centuries, Sofia became the site of building activities of a number of high Ottoman officials and acquired the appearance of an Ottoman city. Most of the important religious buildings as well as of utilitarian premises, built by the Ottomans, were beyond the boundaries of old Sofia; they had become the nuclei of separate town parts, connected rather with the incoming and outgoing arteries.

In Ottoman Sofia, regular street planning was not followed; the domestic housing architecture was very poor. Considerable changes came about in the 17th century. Along with the more solid houses, and those with a more complicated structure, such as two-storeyed houses with tiled roofs, the number of the rich serails in Sofia grew, too. Ewliyā Čelebi mentions those of Ya'ḳūb Agha, Ḳodja Meḥmed Agha, Ḳodja Peltek Ya'ḳūb Čāwūsh, Ganat Efendi and Durganlî Agha; the splendour of the Pasha's *ḳonaḳ* (today part of the building of the National Art Gallery) is emphasised as well.

Following usual practice, the Ottomans converted some churches into mosques. It seems that the first was the church of St. Demetrius, converted into Fetḥi Djāmi' in the beginning of the 16th century; in the 16th century the church of St. Sophia was converted into the Siyāwush Pasha Djāmi'; and the church of St. George into the Gül Djāmi'. But the majority of the Muslim sanctuaries were the result of the activities of high Ottoman officials, local notables and zealous ordinary Muslims.

In the middle of the 15th century, Maḥmūd Pasha built the Büyük Djāmi' with 8 lead domes (today the National Archaeology Museum of Bulgaria). A century later, the great Ottoman architect Sinān [*q.v.*] planned the *'imāret* complex of Ṣofu Meḥmed Pasha, comprising a monumental stone mosque, the Black Mosque, with one of the largest domes in the Balkans (today the church of the Seven Saints), a *medrese* with 16 rooms, a library, a *ḥamām*, a caravanserai, a *mekteb* and a kitchen. According to Ottoman tax registers, towards the middle of the 16th century there were 4 Friday mosques and 31 *mesdjids* in Sofia, while towards the end of the century there were 8 Friday mosques and 37 *mesdjids*. The *sālnāmes* of the second half of the 19th century record 44 Muslim places of worship (mosques) in Sofia. There are data about 3 *waḳf* libraries in Sofia: of Ṣofu Meḥmed Pasha in the complex of the Black Mosque; one in the complex at the Banābashi Djāmi', belonging to Seyfullāh Efendi; and one more. Among the manuscripts from these libraries that are kept in the Oriental Department, the collections of the *müftī* Muṣṭafā b. Meḥmed and of 'Abd al-Fettāḥ stand out. In the middle of the 16th century, 8 *mu'allim-khānes* and 2 *medreses* were registered; according to the *sālnāmes* of the end of the 19th century, the *mektebs* were 20, while the *medreses*, the *mekteb-i rüshdiyye* and the *mekteb-i ṣabīyān* were 6 altogether. Official records provide information about four *türbes* and *zāwiyes* in the middle of the 16th century. Ewliyā Čelebi's travel account, however, contains detailed information about a number of other places of worship related to various *ṭarīḳats* situated in Sofia and its outskirts.

There were also places of worship of the non-Muslim population in the city. The churches were in the centre of the city and, according to Stefan Gerlach (16th century), were 12 in number; in the 19th century there were 8. The ring of small monasteries around Sofia (25) was praised as the Mount Athos of Sofia. The newly-built churches in the Ottoman period

were St. Kral and St. Nikola the Great; there is more information, however, on repaired and newly-painted churches. They had a modest appearance, small single-naved basilicas, an architectural type that was dominant even before the Ottoman conquest and which was very convenient in the conditions of limited financial resources of the Orthodox and of the *sharīʿa* restrictions. The lesser religious communities had their places of worship in the centre of the city as well: synagogues for the three Jewish communities from the beginning of the 16th century; the Armenian church of the Holy Virgin from the 17th century; and a Catholic church was established in the second half of the 15th century. The educational institutions of the non-Muslim communities functioned, too.

The Sofia bazaar, the heart of the city, was well-developed. The specialised *sūḳs* and markets formed a dense network in the central part of the city; in the course of time, it spread to the residential quarters as well and drew them into the common economic rhythm of the city in the modern times. The busiest among them were *Banābas̲h̲î čars̲h̲î*, where the Jewish one was situated too, the markets of the butchers, the cobblers, the saddlers, the goldsmiths, the S̲h̲eytān čars̲h̲î, the Yazîd̲j̲î one and the *Sungurlar* one; beginning from the 18th century, a Greek market is mentioned in the Ottoman documents. Specialised markets—the Salt Market, where salt from Wallachia was offered, the Honey Market, the Rice Market, the Horse Market, and others—also existed. According to Ottoman registers from towards the end of the 16th century, there were in the city about a thousand workshops, taverns and other industrial enterprises like a tannery, utilising the drainage from the hot mineral public bath, candleworks, the *waḳf* of El-Ḥād̲j̲d̲j̲ Bayram, water mills, a mint (from the middle of the 16th century to the middle of the 17th century, and, occasionally, until the first quarter of the 18th century), a workshop for the fermented drink *boza*, ice works and an establishment for roasting and grinding coffee for the use of retail dealers.

In 1506 the *beylerbeyi* Yaḥyā Pas̲h̲a built the largest *bezistān* in the Balkans (44 workshops inside and 101 outside it), and a magnificent mineral bath, which Hans Dernschwam compared to the Pantheon. The big caravanserais are also indicative of the economic prosperity of the city. Foreign travellers describe the enormous caravanserai of *Siyāwus̲h̲ Pas̲h̲a*, the caravanserai at the *ʿimāret* of *Ḳod̲j̲a Meḥmed Pas̲h̲a*, the caravanserais of *Ḥād̲j̲d̲j̲ī Boga*, of *K̲h̲iḍîr Čāwūs̲h̲*, of *Ilyās Bey* and of *Mewlānā Alāʾüddin*. The *ʿimāret*s of *Ḳod̲j̲a Meḥmed Pas̲h̲a*, of *Siyāwus̲h̲ Pas̲h̲a*, and others also had an important role in economic life. After the 17th century, the functions of caravanserais were overtaken by the private *k̲h̲āns*, which were among the most impressive buildings of the time: the *Čelebi k̲h̲ān*, *Sliwniški k̲h̲ān*, *Eski k̲h̲ān*, *Maḥmūd Pas̲h̲a k̲h̲ān*, *Küčük k̲h̲ān*, and *Čohad̲j̲î k̲h̲ān*, the largest civil building, with a mosque dating from the 18th century. The functions of the *bezistān* were assumed by private *mag̲h̲azas* (warehouses).

Even in Antiquity, Sofia had a very good water-supply and sanitation system. Water from the Vitosha mountain was taken into the city through a water-main, maintained in a very good condition by *waḳfs* throughout the Ottoman period. The famous mineral spring in the centre of the city was canalised in the 2nd century A.D. and the reservoir was used until 1912. On a large territory around it were built the city thermal baths, replaced by an impressive Turkish bath.

The construction and upkeep of all these religious and utilitarian premises, as well as those of education, culture, etc., were maintained through the *waḳfs* of both distinguished and ordinary citizens of Sofia.

Sofia declined in the 19th century. Terrible earthquakes in 1818, and especially in 1858, destroyed the city. Most of the houses, as well as mosques and caravanserais, were razed. Nearly all minarets fell down. Some reconstruction works were carried out under Rasin Pas̲h̲a and Esʿad Pas̲h̲a: new productions were started, the construction of the railway between Sofia and Plovdiv was begun, the minarets were raised again.

Eminent personalities related to life in Ottoman Sofia are the famous governors and *waḳf* founders Mesīḥ Voyvoda, Ḳod̲j̲a Meḥmed Pas̲h̲a, Ḳod̲j̲a Maḥmūd Pas̲h̲a, Siyāwus̲h̲ Pas̲h̲a, El-Ḥād̲j̲d̲j̲ Bayram Pas̲h̲a, K̲h̲üsrew Pas̲h̲a. The city toponyms have preserved the name of Mewlānā S̲h̲ud̲j̲āʿ, *ḳāḍī* of Sofia, and founder of a *waḳf*, of the Sofia *ḳāḍī* Seyfullāh Efendi, who founded a *medrese* in Sofia in 1570/71 next to the Banābas̲h̲i mosque built by him, too; of Ṣaruk̲h̲ān Bey, Ḳara Dānis̲h̲mend and Ḥād̲j̲d̲j̲ī Ḥamza. A number of Ottoman writers, poets and religious functionaries were born or lived in Sofia, thus turning it into one of the most important centres of Ottoman culture in the Balkans in the 16th century: Aḥmed Ḥād̲j̲d̲j̲ī; ʿAbdī Efendi; Ḥekīm-zāde Ṣubḥī, son of the *wezīr* Sinān. Distinguished figures of the 17th century were Ibrāhīm Efendi, a scholar and judge, born and buried in Sofia; Pas̲h̲a Meḥmed Efendi, a native of Gelibolu, who wrote studies in the field of law, was a poet and a translator of Persian poetry; and the poet Ṣofyawī Wāḥid Meḥmed Čelebi.

Among the religious functionaries connected with Sofia stands out Bālī Efendi. According to his *vita*, he was "a scholar and a saint, expert in the hidden and the manifest, with perfect disciples", one who "created wonderful works and various noble books, *risāles* and precious commentaries" among which a commentary on the treatise of Ibn ʿArabī and one on the basic principles of the K̲h̲alweti order; and poems with a didactic content. This Ṣūfī mystic and preacher was also an outstanding and extreme supporter of orthodoxy, closely related to the central authorities, struggling against the heterodox sects in Deli Orman, Dobrud̲j̲a and Thrace. The *vita* describes him as a saintly man; from other sources, we know that he died in 1553. On his grave near Sofia, which is still equally revered by Muslims and Christians, the *ḳāḍī* ʿAbd ül-Raḥmān b. ʿAbd ül-ʿAzīz constructed a mosque and a *zāwiye*, while the village which developed was named Bālī Efendi (now Knjaževo). Donors to the *waḳf* were the *mīrimīrān* of Buda, Muṣṭafā Pas̲h̲a, Mesīḥ Voyvoda and other distinguished Muslims from the city of Sofia. Bālī Efendi himself founded a *zāwiye* in Sofia.

After Sofia became the capital of the Principality of Bulgaria, almost its entire Muslim population left, and only a few monuments of Islamic architecture, like the *Banābas̲h̲î D̲j̲āmiʿ*, still functioning as a place of worship, were preserved. Sofia is the seat of the *Müftülük* in Bulgaria; at different times, there have functioned also some educational institutions like the Turkish primary school at the end of the 19th and beginning of the 20th century, and today, an Islamic Religious Institute. The majority of the Ottoman and Turkish newspapers in Bulgaria—about 25, including those of the religious institutions in the country—were published in Sofia; three private Turkish printing

houses functioned there. Today, the newspaper *Mjusjulmanin* is published here.

SOGHDIA [see AL-ṢUGHD].

SÖGÜD, modern Turkish SÖĞÜT, a small town of northwestern Anatolia, in the classical Bithynia, now in the modern Turkish *il* or province of Bilecik [see BILEDJIK] (lat. 40° 02' N., long. 30° 10' E., altitude 650 m/2,132 feet). In Ottoman times it came within the *wilāyet* of Khudāwendigār or Bursa [*q.vv.*]. It lies to the south of the Saḳarya river [*q.v.*] between Lefke and Eskişehir, and is a day's journey from each of these places (*Djihān-nümā*). Sögüd lies at the mouth of a mountain gorge, very deep and very narrow, and is built in an amphitheatre. The country round the town forms part of the fertile region which forms the transition between the central plain of Anatolia on the south and the lands on either side of the lower course of the Saḳarya to the north. It was the country of Sulṭān Öñü, and is famous in Ottoman history as having been the cradle of power of the Ottoman dynasty. According to the unanimous tradition of the Turkish historians, Ertoghrul, father of 'Othmān, received this district as a fief from the Saldjūḳ sultan 'Alā' al-Dīn; the mountains of Ṭumānīdj and Ermenī were the *yayla* of the tribe of Ertoghrul and Sögüd was their *yurt* ('Āshıḳ-Pasha-zāde, 4; Urudj Bey, ed. Babinger, 7, 83). The *türbe* of Ertoghrul is at Sögüd; this tomb has a little cupola and lies two leagues from the town, a little to the left of the road to Lefke. Tradition still tells that one of the brothers of 'Othmān, Sarıyati or Sawdjı, is buried beside his father; 'Othmān himself is also said to be buried in this *türbe* and not at Bursa (Ritter).

As regards the pre-Ottoman period, we find in the *Taḳwīm al-tawārīkh* of Ḥādjdjī Khalīfa the legend that the caliph Hārūn al-Rashīd conquered Sögüd in 181/797. The name Sögüd is pure Turkish and means "willow"; the oldest form seems to have been Sögüddjük or Sögütdjük (thus in the *Tewārīkh-i āl-i 'Othmān*, ed. Giese, Urudj Bey, and as late as the 18th century, Meḥmed Edīb, cf. also Taeschner, *Das anatolische Wegenetz*, i, 101).

One of the four *djāmi'*s of Sögüd is attributed to Ertoghrul and another to sultan Meḥemmed I. After the capture of Constantinople, the town was situated on the main route of pilgrimage to Mecca. It was never large; in the 17th century Ewliyā counted 700 Turkish houses there, and at the beginning of the 19th century the number had hardly risen (cf. the traveller's records in Ritter). Towards the end of this century, Sāmī gave 5,000 as the population. After the First World War, Sögüd was occupied by the Greek army from August 1921 to September 1922. In 1965, it had a population of 3,004.

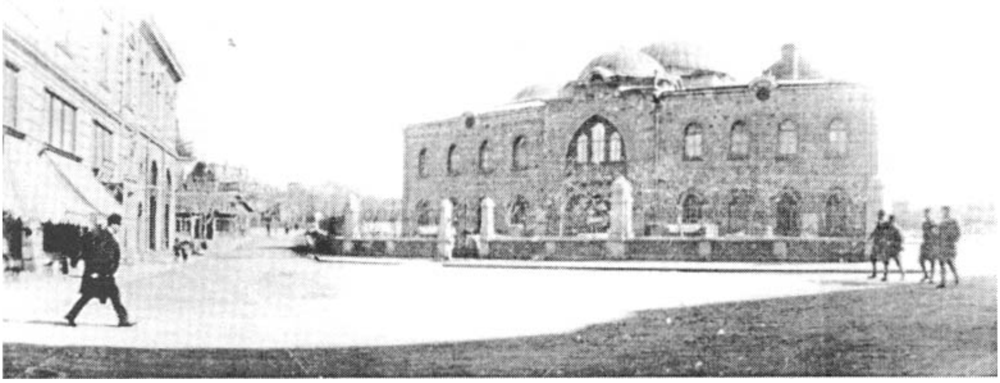
(J.H. KRAMERS*)

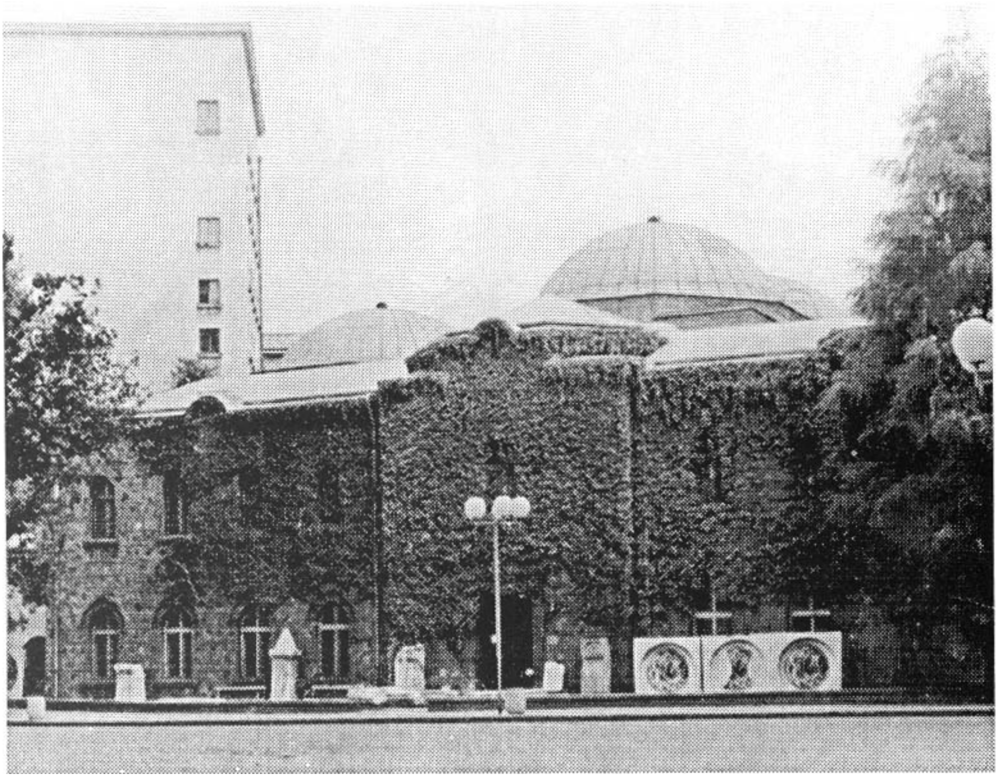
SÖKMEN [see ALP; ARTUḲIDS; SHĀH-I ARMAN].

SOḲOLLU MEḤMED PASHA, called Ṭawīl "the tall" (*ca.* 1505-79), one of the most famous Ottoman Grand Viziers and the only to have held this office uninterruptedly under three successive sultans, from 27 June 1565 to 12 October 1579.



He was born in Bosnia in the village of Sokolovići (< *sokol* "falcon") near the little town of Rudo in the *ḳaḍā'* of Višegrad into a Serbian family of minor rural nobility deriving its name from the village (sc. that of Sokolović > Tkish. Soḳollu). It had several branches, one of them supplying the second vizier Deli Khosrew Pasha (dismissed in 1544) through the *dewshirme* [*q.v.*]. The son of one Dimitriye who eventually converted to Islam, his baptismal name was Bayo, and he had three brothers according to Serbian tradition, two according to the Turkish one. He was educated in the Mileševa monastery where an uncle was a monk.

His career in Ottoman service and his conversion (adopting the name Mehmed) was through the *dewshirme*, he being recruited by Yeshildje Mehmed Beg at the relatively late age of 16 to 18, perhaps a sign that the recruiting officer attached special value to his recruitment. Details about Soḳollu's youth appear in the eulogistic *Djewāhir ül-menāḳib* and in various legends accruing *a posteriori* because of his spectacular career (see O. Ziroyević, *Mehmed Pascha Sokolli im Lichte jugoslavischer Quellen und Überlieferungen*, in *Osmanlı Araştırmaları*, iv [1984], 56-67). Brought to Sultan Süleymān at Edirne, early in the latter's reign, he was educated in the palace there. According to Muṣṭafā 'Ālī, he allegedly took part in the campaign to the two 'Irāḳs under the *defterdār* Iskender Čelebi (von Hammer, *Histoire*, v, 224-5, 494). Then he entered the Topkapı palace and worked in the "interior treasury" (*ič khazīne*), rising in the hierarchy towards the sultan's own person to become *rikābdār* or groom, *čuḳadār* or valet-de-chambre and *silāḥdār* or sword-bearer. Using the nepotism which he would make a corner-stone of his career, he already exercised this in favour of his own family, through the intermediacy of the *djizyedār* of Bosnia, Aḥmed Beg, he had a brother and nephew, this last under the guise of Soḳollu's younger brother, the future Muṣṭafā Pasha, brought to Istanbul and enrolled as pages in the Ghalaṭa palace, and then his father, converted to Islam as Djemāl ül-Dīn Sinān Beg, who became administrator of a *waḳf* in Bosnia.



Soḳollu became chief taster (*čashnegīr bashī*) in the palace and head door-keeper (*ḳapudjı bashı*), this last title given to him by the sultan at the time of the 1541 campaign. It seems to have been in this last function that he received the king of France's envoy before the sultan's return from Hungary. In 1546 he received his first nomination as successor to Khayr

Banābas̲h̲ī or Molla D̲j̲āmiʿ built by Seyfullāh Efendi 978/1570-1, at present the only Muslim place of worship in Sofia (Photo: 1980s).

Great mosque, built by Maḥmūd Pas̲h̲a, 9th/15th century (Photo: early 20th century).

Contemporary view of the same, now the National Archaeology Museum of Bulgaria.

al-Dīn Barbarossa [*q.v.*] as *kapudan pasha* with the rank of *sandjak beg*. His work with the naval forces was primarily as an administrator, the organisation of the fleet, recruitment of sailors, financial resources and the arsenal, rather than the actual conduct of operations, this being left to the corsair chief Torghud Re'īs [*q.v.*].

In 1549 he became *beglerbeg* of Rūmeli in succession to Semīdh 'Alī Pasha, and in this function in 1551 reasserted the sultan's sovereignty and the rights of his protégé John Sigismund, the minor son of the deceased king of Hungary John Zapolya, over Transylvania against the ambitions of the Habsburg Ferdinand, who had sent an army under J.-B. Castaldo and who was to obtain a cardinal's hat for the alleged betrayal of the country by the Regent George Utješenović, called Martinucci (see A. Huber, *Die Erwerbung Siebenbürgens durch Ferdinand I. im Jahre 1551 und Bruder Georgs End*, in *Archiv für Österr. Gesch.*, lxxv [1889], 481-545; idem, *Die Verhandlungen Ferdinands I. mit Isabella von Siebenbürgen 1551-1555*, in *ibid.*, lxxviii [1892], 1-39; L. Makkai, *Hist. de la Transylvanie*, Paris 1946; M. Berindei and G. Veinstein, *L'Empire ottoman et les pays roumains, 1544-1545*, Paris-Cambridge, Mass. 1987, 17-46; S.M. Džaja and G. Weiss, *Austro-Turcica 1541-1552*, Munich 1995, index s.v. Martinuzzi). Sokollu was appointed *serdār* of this expedition to Transylvania and the Banat, with not only his own forces but also troops from the *sandjaks* of Semendire and Nigbolu, Crimean and Dobrudja Tatars, contingents sent by the Voivodes of Moldavia and Wallachia and a force of 2,000 Janissaries. At Slankemen he was joined by the *akindjis* [*q.v.*] of Mīkhāl-oghlu 'Alī Beg [see MĪKHĀL-OGHLU] and the forces of the *beylerbeg* of Buda, Khādim 'Alī Pasha. The army crossed the Danube on 6 Ramaḍān 958/7 September 1551, then the Tisza, and entered Transylvania without resistance. During the campaign, at Csanád on the Maros and a dozen other fortresses, Sokollu benefited from the rallying to his side of local Serbian garrisons to whom he appealed by citing their common origin with him. At Lippa, the Habsburg garrison fled and the town surrendered, so that Sokollu could install a force of 5,000 *sipāhīs* [*q.v.*] and 200 Janissaries. He then besieged Stephen Losonczy in Temesvár [see TEMESHWAR], but with the approach of bad weather and of Castaldo's forces, retired to Belgrade for the winter, from where he sent letters to the three nations of Transylvania and the magistrates of leading towns there invoking their loyalty to the sultan. At the end of the year he was joined by the forces which had had to evacuate Lippa. At Belgrade he prepared the campaign of the following year. In February 1552, Michael Toth, with 5,000 hayduks, seized Szeged [*q.v.*], whose *sandjak-beg* Mīkhāl-oghlu Khiḍīr Beg was compelled to take refuge in the citadel, but this was recovered by the *beglerbeg* of Buda, 'Alī Pasha (see von Hammer, vi, 22-3). Given the seriousness of the situation, the campaign beginning April 1552 was given to a *serdār* of higher rank, the second vizier Kara Aḥmed Pasha, with Sokollu only in a subordinate role. The army captured Temesvár and other places in the Banat in July, but in the next months a new campaign was prepared against Persia, and Sokollu was ordered to cross with the troops of Rūmeli at Gallipoli and winter at Tokat.

The campaign was initially commanded by Rüstem Pasha [*q.v.*] but finally by the sultan himself, anxious to scotch rumours of his replacement by his rebellious son Muṣṭafā. This latter affair, ending with Muṣṭafā's execution, delayed events for a year, with Sokollu wintering at Tokat and the sultan at Aleppo. In June 1554, Sokollu's Rumelian troops, on the left wing, distinguished themselves on the march from Erzurum to Nakhčivān by the perfect state of their equipment, and Sokollu also took part in operations against fortresses in Georgia. On his return, Süleymān appointed him at Amasya third vizier, so that he became *ex officio* a member of the imperial *dīwān*.

His influence and high standing with the sultan could now only increase further. On returning to Istanbul, the sultan entrusted him in 1555 with the delicate matter of suppressing, with a force of 3,000 Janissaries sent in the direction of the Dobrudja, the revolt of a "false" (*düzme*) Muṣṭafā, who claimed to be the resuscitated executed prince; captured by the *sandjak-beg* of Nigbolu, the pretender was handed over to Sokollu for hanging. He was then closely involved in the aging sultan's measures to calm the situation of rivalry over the impending succession between the two *shehzādes*, Selīm and Bāyezīd, being sent in November 1558 to Selīm with messages from his father enjoining peace and harmony and their acceptance of the *sandjaks* offered to them. Sokollu succeeded here with Selīm (whose daughter he was to marry), whereas the fourth vizier Pertew Pasha [*q.v.*] failed to persuade Bāyezīd to exchange his governorate of Konya for that of Amasya. In the ensuing war between the two brothers begun by Bāyezīd, the sultan sent an army in support of Selīm into Anatolia, comprising 3,000 Janissaries and 40 pieces of cannon under Sokollu's command. In the battle on the plain of Konya on 21 Sha'bān 966/29 May 1559, Sokollu was the architect of Selīm's victory. Sokollu and Selīm then pursued the refugee Bāyezīd towards Persia, marching as far as Sivas, and with the prince's arrival in Persia, Sokollu was deputed to winter at Aleppo and watch for any moves by the rebellious prince, only returning to Istanbul in spring 1560 (S. Turan, *Kanuninin oğlu Şehzade Bayezid vak'ası*, Ankara 1961).

In the following year, on 10 July 1561, the Grand Vizier Rüstem Pasha's death brought about the promotion, by the strict rules of hierarchy, of the second vizier Semīdh 'Alī Pasha, with Sokollu in the latter's vacated place, in which his influence grew, even if still in a clandestine fashion. Then, on 'Alī's death on 27 June 1565, Sokollu succeeded naturally to the Grand Vizierate, thus crowning his career as a *dewshirme* convert.

During this period, the siege of Malta, begun by his predecessor, had received a severe check. The new Grand Vizier aimed at restoring Ottoman prestige in the eyes of the Austrians, using firmness against the new Imperial ambassador Hosszuthoty, on pretext of Austrian encroachments on several fortresses in Transylvania and non-payment of stipulated tribute. A campaign was decided upon, and Sokollu, with other persons activated more by religious than political considerations, insisted that the aged and sick sultan should participate; but since the latter had to travel in a carriage or even be borne on a litter, Sokollu was ultimately responsible for the conduct of operations. It was during the siege of Szigetvár [*q.v.*], begun on 5 August, one day before the fortress surrendered, that Süleymān died (7 September 1565). Sokollu now acted with a skill and mastery of the situation which later became proverbial. With the complicity of his secretary Ferīdūn, the *silāḥdār* Dja'fer Agha and the physician, the sultan's death had to be kept secret to avoid anarchy and the complete disarray of the army. The news of his father's death was sent secretly to Selīm at Kütahya, who then set out for Belgrade after securing his succession in Istanbul. In the army camp,

all sorts of stratagems were employed to perpetuate the idea of Süleymān's continuance in life, culminating in his setting off ostensibly in his coach. The news of his death was only revealed four stages out of Belgrade (detailed account of the campaign and the sultan's death in Selānikī; see also Ferīdūn Beg, *Nüzhet ül-akhbār*, Topkapı, Hazine ms. 1339; Āgāhī Manṣūr Čelebi, *Feth-nāme-yi ḳalʿe-yi Sigetwar*, Ist. Univ. ms. T 3884; ʿĀlī, *Heft medjlis*, Istanbul 1316/1898-9).

Selīm, under the influence of his favourites at Kütahya, refused to lend himself in Belgrade to a second investiture (*bayʿat*) before the troops and to award them the traditional accession gift (*djülūs bakhshīshi*). Soḳollu thought this attitude irresponsible, and was able to intervene when the new sultan's actions provoked the inevitable army revolt, persuading Selīm to give out some money. But a second revolt erupted when the army reached the Edirne Gate of Istanbul, on the grounds that it had not received the full amount demanded, and the alarmed sultan, whose access to his palace had been blocked by a hay cart, had to allow Soḳollu to concede everything.

Soḳollu now remained Grand Vizier all through Selīm's reign, making himself indispensable to the sultan, whose son-in-law he became in 969/1561-2 by his marriage to Esmakhan, a union for which he had to divorce his two previous wives, who had given him the two sons Ḥasan, the future Pasha, and Ḳurt Ḳāsim Beg, both present on the Szigetvár campaign, and Esmakhan was to give him various children, including a son Ibrāhīm Khān who became *ḳapudjï bashï* (see T. Gökbilgin, in *İA*, art. *Ibrahim Han*; genealogy of this son in J.-L. Bacqué-Grammont *et alii*, *Stelae turcicae. II. Cimetières de la mosquée de Sokollu Mehmed Paşa à Kadırga limanı...*, Istanbuler Mitteilungen, Beiheft XXXVI, Tübingen 1950). Under Selīm, Soḳollu reached the apogee of his authority as the true head of the empire and maintainer of its power and grandeur. Even so, his authority was not unaffected by the whims of an intemperate sovereign and the intrigues of his enemies and potential rivals like his kinsman Lala Muṣṭafā Pasha ([*q.v.*] and see S. Turan, in *Belleten*, xxii [1958], 551-93) or the Albanian Sinān Pasha ([*q.v.*] and see Turan, in *İA*, art. *Sinan Paşa, Koça*). Moreover, he was unable to dislodge certain of the sultan's favourites, such as the same Lala Muṣṭafā, whom Selīm appointed sixth vizier in Radjab 976/January 1569 without reference to Soḳollu, and Joseph Nasi, Duke of Naxos, the most famous of the great Jewish financiers established in Istanbul and main advocate of the conquest of Cyprus (see NAḲSHE; PARA, and their *Bibls.*, and also A. Galante, *Don Joseph Nassi, duc de Naxos, d'après de nouveaux documents*; idem, *Hist. des Juifs d'Istanbul*, Istanbul 1942; J. Reznik, *Le duc de Naxos...*, Paris 1936; P. Grunebaum-Balin, *Joseph Naci, duc de Naxos*, Paris-The Hague 1968).

Nevertheless, Soḳollu was not a solitary figure relying purely on his own powers and skills to remain in power, but very early in his career one sees forming round him a network of protégés, a family base, or at least a regional and ethnic one. He frequently received visitors from his family in the capital, without requiring that they should become Muslim (testimony of Stefan Gerlach in 1577). Many of his relations achieved high positions in Bosnia-Herzegovina and Hungary. His cousin Muṣṭafā Pasha became *beglerbeg* of Buda in the course of the Szigetvár campaign, and a young brother of Muṣṭafā, Meḥmed, was *sandjaḳ-beg* of Bosnia until in 1573 he became tutor to a royal prince, as Lala Meḥmed Pasha, and eventually Grand Vizier (see above). Another cousin, Ferhād Beg, became *sandjaḳ-beg* of Klis in 1570, and then that of Bosnia. Ḳara Sinān Beg, *sandjaḳ-beg* of Bosnia and then of Herzegovina, of the Boljanic family of Herzegovina, was Soḳollu's brother-in-law. His own two sons, Ḥasan Pasha and Ḳurt Beg, attained high office.

As well as these kinship connections, Soḳollu had several trusty confidants, such as his secretary Ferīdūn, who saved his life at the siege of Szigetvár, *müteferriḳa* under Süleymān and then later *reʾīs efendi* and *nishāndjï*, and Süleymān's last *silāḥdār*, who had helped conceal the sultan's death, married a daughter of Soḳollu and became Agha of the Janissaries.

One is tempted to discern in the re-establishment of the Patriarchate of Peć in 1557, when Soḳollu was third vizier, a manifestation of Serbian solidarity and even of nepotism, since the holder, Makariye, former Archimandrite of one of the Mount Athos monasteries, was a nephew (Marino Cavalli) or possibly even a brother (Gerlach) of the vizier. After Makariye's death in 1574, the post eventually went to two more Sokolovićs, until the death of Savatiye in 1586, so that the family had held the patriarchate for thirty years since its restoration. But one may also see an additional factor at work here, a wider policy of conciliating the Serbs to make them a support of Ottoman policy in the Balkans, a role which they had actually played in the 1551 Banat campaign (see M. Grujić, *Pravoslavna srpska crkva*, Belgrade 1920, 180-96; M. Mirković, *Pravni položaj i karakter srpske crkve pod turskom vlašću (1454-1766)*, Belgrade 1965, 212-21; Sr. Petković, *Zidno slikarstvo na području Pećke patrijaršije 1557-1614*, Novi Sad 1965).

Soḳollu did not exercise his power with warlike intentions, and ceased personally to exercise military command, in which he had always, as we have seen, been mostly concerned with questions of organisation, arms and logistics. Nevertheless, and in despite of his own preferences, some important campaigns took place during his tenure of office. An expedition to Yemen was necessary after the revolt there of the Zaydī Imām al-Muṭahhar, who had occupied Ṣanʿāʾ and thrown off Ottoman authority. Soḳollu took this opportunity to play off and to arbitrate between two of his main rivals, with Lala Muṣṭafā appointed as *serdār* of the expedition coming into conflict with the governor of Egypt, Sinān Pasha, who refused Lala Muṣṭafā resources for the campaign; in the end, the latter was disgraced, and Sinān made *serdār* in his place. On the question of Cyprus, Soḳollu did not wish for a rupture of the peace with Venice, foreseeing an alliance of the Republic with Spain and the Papacy and a strong naval threat to the Ottomans, as in fact happened when Pius V brought about the *Sacra Liga*, the war party under Piyāle Pasha [*q.v.*] and Lala Muṣṭafā and the avidity of Joseph Nasi having prevailed against his advice. His old ally, the *shaykh al-shuyūkh* Abu 'l-Suʿūd [*q.v.*], this time failed him, and gave a *fatwā* in favour of violating the treaty with Venice, although he repented of this and promised Soḳollu never to issue any decree against him in future (on the Cyprus campaign, see the refs. in the *Bibl.* to ḲUBRUṢ). Even then, Soḳollu never broke completely, during the crisis, with the Venetian *bailo* Marc-Antonio Barbaro, with whom he developed a remarkable affinity (M. Lesure, *Notes et documents sur les relations vénéto-ottomanes, 1570-1573*, in *Turcica*, iv [1972], 134-64, viii/1 [1975], 117-56). Finally, he was able to get the best advantage out of what he could not avoid; immediately after the naval defeat of Lepanto [see AYNABAKHTÏ], he used the immense resources of the empire, together with his old experience at the arsenal, to have 150 galleys and 8

mahones built in the winter of 1571-2, providing the *kapudan pasha* Ḳilič ʿAlī, some months only after the disaster, with a war fleet stronger than ever (idem, *La crise de l'Empire ottoman*, Paris 1972). Also, after Cyprus was conquered, the fiscal revenues of the island fell to the Grand Vizier before these *khāṣṣ* revenues passed to the *wālides*, mothers of the reigning sultans.

Standing apart personally from the combats which he did everything to avoid, Soḳollu was nevertheless very active in diplomatic affairs, negotiating incessantly through dragomans, notably the renegade from the Polish nobility, originally Joachym Strasz, now called Ibrāhīm Beg (cf. A. Zajączkowski, in *RO*, xii [1936], 91-118; A. Bombaci, in *ibid.*, xv [1939-49], 129-44). It is from diplomatic reports by foreigners having business with him, especially the Imperial ambassador Verantius (cf. *Monumenta Hungaria historica. Scriptores*, vi, docs. VI, XXI), and the Venetians Cavalli, Ragazzoni and Barbaro (cf. Albèri, *Le relazioni...*) that we possess the most precise and lively physical and psychological portraits of the Grand Vizier, the "magnificent Bassa" that all could not but admire and respect. He is depicted as tall, well-proportioned, handsome and well-groomed, with (in 1573) a long gray beard. He was a courteous speaker, but an astute adversary, always on guard, venting on the sultan or his rivals the most brutal decisions, and capable of being haughty and inflexible. All emphasise his avariciousness for exorbitant presents, from within and without the empire. Some authorities detected a streak of vanity in him, seen in his pretensions to stem from the line of despots of Serbia; but none of them knew of the physical courage which he had evinced at the siege of Szigetvár or in the great Istanbul fire of 1569.

His diplomatic policy aimed at assuaging conflicts with the Porte's potential enemies: with the Emperor (hence the renewal of the treaty with Maximilian in 1568 and then, under Murād III, with Rudolf, as well as the nomination of very reliable governors on the Hungarian and Croatian frontiers); with the Shāh of Persia Ṭahmāsp I (hence the sumptuous reception of the Shāh's envoy at Selīm's accession); with the Doge of Venice (with whom good relations were renewed in 1573); and subsequently, Tsar Ivan the Terrible of Russia. At the same time, he endeavoured to strengthen links with the Porte's natural allies: with France (capitulations of 1569, apparently the first, since those of 1536 had never been ratified, see IMTIYĀZĀT, and I. de Testa, *Recueil des traités de la Porte ottomane avec les puissances étrangères*, i, Paris 1854, 90-140), and with Poland. He intervened in the election of the successor to Sigismund Augustus, and after first envisaging the candidature of the Voivode of Transylvania, who was first to have married Marguerite de Valois (embassy to France of 1569), he rallied to the cause of the Duke of Anjou, and finally to that of Stephen Bathory, by now the new Voivode of Transylvania (see A. Refīḳ, *Soḳollu Meḥmed Pasha we Lehistān intikhābāti*, in *TOEM*, xxxv; de Testa, *op. cit.*, 113, 115; L. Szadecyk, *L'election d'Etienne Bathory au trône de Pologne*, Cracow 1935; letters of Soḳollu to Sigismund Augustus and Bathory in Z. Abrahamowicz, *Katalog dokumentów tureckich*, Warsaw 1959). When the demands of the sultan of Acheh [*q.v.*] in Sumatra became pressing, the Grand Vizier and the *dīwān* decided to send a squadron of 19 galleys under the *kapudan* of Alexandria, plus at the same time troops with supplies and pay for a year, weapons and artillery, from the resources of Egypt. These measures were held back by the Yemen campaign, but put into effect in 976/1568-9 (Ṣafwet, *Bir ʿothmānlī filosunun Sumatra seferi*, in *TOEM*, x [1912], 604-14, 678-83; A.J.S. Reid, *Sixteenth-century Turkish influence in Western Indonesia*, in S. Kartodjirdo (ed.), *Profiles of Malay culture*, Yogyakarta 1976, 107-25; D. Lombard, *L'Empire ottomane vu d'Insulinde*, in *Passé turcotatar, présent soviétique. Études offertes à Alexandre Bennigsen*, Louvain-Paris 1986, 157-64; five large cannons, at least four of them cast in Istanbul, are preserved in the Home for Retired Servicemen from the Army of the Indies at Bronbeek near Arnhem in the Netherlands).

Such Pan-Islamic projects contrasted with the usual realism of Soḳollu, and are seen also in the Astrakhān campaign of 1569. The southwards Russian advance had led to the extinguishing of the Muslim khānates of Kazan [*q.v.*] (1552) and Astrakhān [*q.v.*] (1556). Information from a Circassian *defterdār*, Ḳāsim Beg, led the Grand Vizier to envisage the possibility of a canal connecting the Don and Volga, thus facilitating an expedition to recover Astrakhān, and Ḳāsim Beg was appointed *serdār* of this campaign. The ostensible reason for this was to protect pilgrims from Central Asia en route for the Ḥidjāz being threatened by the infidels in Astrakhān, since the sultan was Protector of the Two Sanctuaries, but there were probably wider strategic aims envisaged: perhaps to halt Muscovite expansion southwards, to strengthen Ottoman suzerainty over Shīrwān, Georgia and Ḳarabāgh; and above all, to outflank Persia and open up a new route of attack thither. In fact, climatic conditions, Russian attacks on the workmen involved, as well as the Crimean Khān Dewlet Giray I's ill-will, brought the project to nought, and exposed Soḳollu to blame from the sultan downwards; but at least he managed to patch up the damaged Ottoman-Russian relations after this. Amongst an extensive literature on this project, see Aḥmed Refīḳ, in *TOEM*, xliii (1917), 1-14; H. İnalcık, *The origin of the Ottoman-Russian rivalry and the Don-Volga canal (1569)*, in *Ankara Univ. Annals*, i (1946-7), 47-110, expanded Tkish. version in *Belleten*, xii, no. 46 (1948), 342-402; A.N. Kurat, *The Turkish expedition to Astrakhan in 1569 and the problem of the Don-Volga canal*, in *The Slavonic and East European Review*, xl (Dec. 1961), 7-23; Bennigsen, *L'expédition turque contre Astrakhan en 1569 d'après des "Affaires importantes" des archives ottomanes*, in *Cahiers du monde russe et soviétique*, viii/3 (1967), 427-46; idem and M. Berindei, *Astrakhan et la politique des steppes nord-pontiques (1587-1588)*, in *Harvard Ukrainian Studies*, iii-iv (1979-80), 71-91; Gökbilgin, *L'expédition ottomane contre Astrakhan en 1569*, in *CMRS*, xi/1 (1970), 118-23; G. Veinstein, *Une lettre de Selim II au roi de Pologne Sigismond-Auguste sur la campagne d'Astrakhan de 1569*, in *WZKM*, lxxxii (1992), 397-420.

Soḳollu also wished to give help to the insurgent Moriscoes in Granada, and apparently even suggested to Selīm intervention in Spain rather than in Cyprus. He sent a *fermān* to the governor of Algiers in April 1570 instructing him to give all possible aid to the rebels and one to the Moriscoes themselves confirming the instructions to the *beglerbeg*. The two documents envisaged an expedition against Spain once the Cyprus campaign was over (A. Temimi, *Le gouvernement ottoman face au problème morisque*, in *Rev. d'Hist. Maghrébine*, xxiii-xxiv [1981], 258-9, text of the letter to the Andalusians at 260-2).

An enumeration of Soḳollu's military and diplomatic initiatives does not exhaust his work. He was at the same time, perhaps principally, a careful administrator concerned with the smooth functioning of existing Ottoman institutions. The historians say little about this more anonymous work, and it remains to be analysed in the light of the innumerable docu-

ments preserved in the Istanbul archives (reproductions of the grand Vizier in his council in the *Shehnāme-yi Selīm Khān* in the Topkapı Library, depicted in T. Artan, *The Kadırga palace shrouded by the mists of time*, in *Turcica*, xxvi [1994], 124). The most well known, as well as most durable, of his activities were those as builder. The Don-Volga canal and the dream of a Suez canal (cf. von Hammer, vi, 341) are in one sense the most visionary expressions of this activity. In Istanbul, he had built or rebuilt a sumptuous Grand Vizierial palace, partly occupying the site of the future Sultan Aḥmed mosque, but he had an even more magnificent palace at Üsküdar. It is now also clear that his patronage and the plans of Sinān [*q.v.*] were behind the Esma Sultan palace at Kadırga Limanı (see Artan, *op. cit.*, 55-124). In the same quarter, he entrusted to Sinān the building of the mosque which bears his name, to which a *medrese*, a fountain and a *zāwiye* were attached, and he also built so-called Azap kapı mosque. Finally, he likewise entrusted to Sinān the building of a small complex, completed in 976/1568-9, not far from the Eyüp mosque in the Camii Kebir Caddesi, including the Esma Sultan mosque, a *dār ul-ḳurrā'* and a mausoleum destined for his own remains (M. Cezar, *Le Külliye de Sokollu Mehmed Pasha à Eyüp*, in *Stelae turcicae*, ii, 29-41). But he established numerous pious benefactions all across the empire, especially in those regions particularly connected with his life and career: at Sokolović; in the Banat; at Belgrade, where his *waḳf* of 1566 comprised a vast caravanserai, covered market, etc., necessitating the destruction of three churches and some synagogues of the city (descriptions in Pigafetta, Gerlach and Ewliyā); at Edirne and Lüle Burgaz; and as far away as Aleppo and Medina. He was especially concerned with such utilitarian structures as caravanserais and bridges which would facilitate traffic and communications in Rūmeli, such as the bridge at Višegrad on the Drina and other lesser known ones, e.g. at Trebnišnjica in Herzegovina (Gökbilgin, *Edirne ve Paşa livası*, Istanbul 1952, 508-15; A. Bejtić, *Spomenici osmanlijske arhitekture u Bosni i Hercegovini*, in *Prilozi za orijentalnu filologiju*, iii-iv [1952-3], 229-87).

He seems to have had less renown as a patron of poets and painters, even if the poet Bāḳī [*q.v.*] praised him in his *ḳaṣīdes* and if, according to the historian Loḳmān, when an album of portraits of the sultans was being prepared, he ordered the painters at the palace led by Naḳḳāsh 'Othmān to study Western portraiture (N. Atasoy, *Nakkaş Osmanın padişah portreleri album*, in *Türkiyemiz*, vi [1972], 2-12). In 1578 he commissioned a portrait of Murād III from a painter of Verona in the Venetian embassy and is said to have asked for portraits of the first sultans to be sent from Venice. He also sponsored the *Münshe'āt ül-selāṭīn* of Ferīdūn Beg, admittedly, more a historical than genuinely literary work (von Hammer, vii, 19-20).

Selīm II's premature death on 1 Ramaḍān 982/15 December 1574 threatened, as in all succession crises, the stability of the empire. Immediately informed of the death by the sultana Nūr Bānū [*q.v.*], Soḳollu for a second time successfully coped with this critical situation, sending secretly to the successor, Murād III, at Manisa. On his arrival, the grateful Murād wished to kiss the Grand Vizier's hand, but was stopped by the latter (Selānikī applies to Soḳollu here the title of *atabeg*). Accession money was agreed for the troops; nevertheless, Soḳollu had to placate part of the cavalry.

Under the new reign, he continued his diplomatic and administrative policies on the same lines as in the past, notably showing disapproval, without being able to make his views prevail, of the renewal of war with Persia in 1577, envisaging the conquest of Transcaucasia; as with the earlier Yemen expedition, Soḳollu had his enemy Lala Muṣṭafā Pasha made *serdār* (B. Kütükoğlu, *Osmanlı-Iran siyasi münasebetleri, 1578-1590*, Istanbul 1962, 37; M.F. Kırzıoğlu, *Osmanlıların Kafkas ellerini fethi (1450-1590)*, Ankara 1976, 272, 276-9). He also favoured the first trade treaty with England in 1579 (İ.H. Uzunçarşılı, *Türk-Ingiliz münasebetlerine dair vesikalar*, in Belleten, no. 50; Kurat, *Türk-Ingiliz münasebetlerinin başlangıcı*, Ankara 1953; Susan A. Skilliter, *William Harborne and the trade with Turkey, 1578-1582*, London 1977).

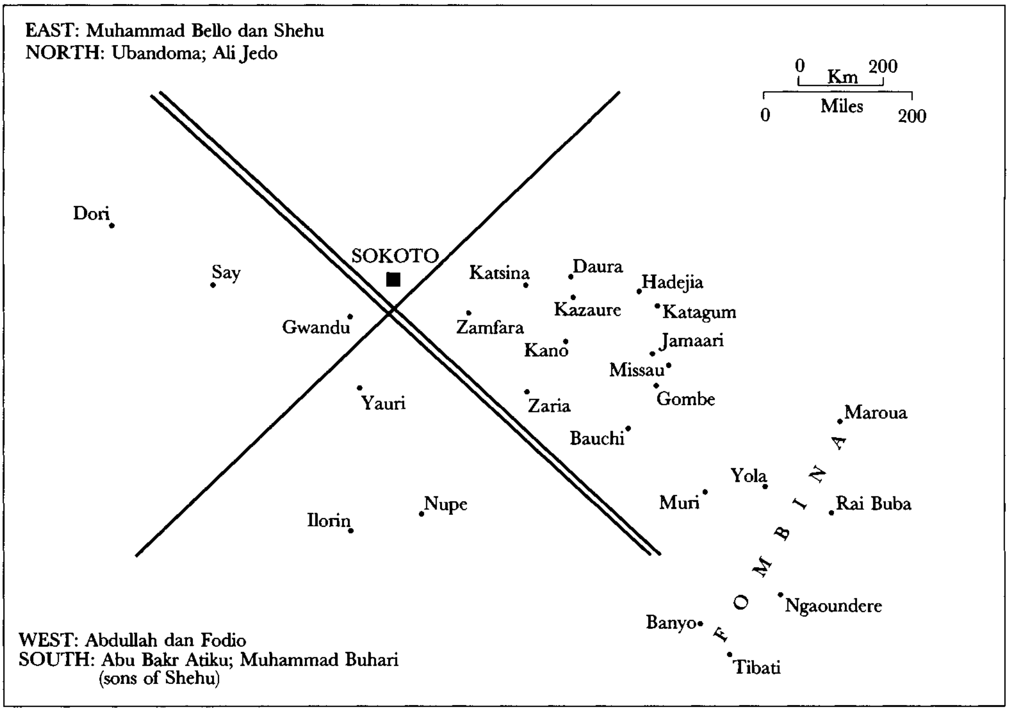
However, his power was gradually decreasing through its attrition, the disappearing of his main supports and the growing boldness of old and new enemies, these last including four favourites of the new sultan: Ḳara Üweys Čelebi, the sultan's *defterdār* at Manisa, his *khodja* Shems ül-Dīn, his spiritual guide Shaykh Shudjā' ul-Dīn and the sultan's companion and poet Shemsī Aḥmed Pasha. But there was equal opposition from the *ḳāḍī 'l-'asker* Ḳāḍīzāde, the chief of the white eunuchs, of Hungarian origin, Ghaḍanfer, and the harem women, sc. the *wālide* Nūr Bānū, the favourite Ṣafiyye [*q.v.*] and the superintendent of the harem, *kahya ḳadīn*, Djānfidā, this last and Ghaḍanfer being old allies of Lala Muṣṭafā Pasha.

Six months after Murād's accession, Soḳollu took the initiative in opening hostilities by ordering, in Shawwāl 982/February 1575, an enquiry into Ḳara Üweys's activities at Manisa (Gökbilgin, *Kara Üveys Paşa*, in *Tarih Dergisi*, ii [1952], 17-18), but Shemsī Pasha succeeded in rallying all the Grand Vizier's opponents, Ḳara Üweys was whitewashed and promoted third *defterdār*, and an extensive purge of Soḳollu's supporters followed. Thus Ferīdūn lost his place as *nishāndjī* and was exiled to the *sandjaḳ* of Belgrade, whilst his *ketkhudā*, and that of Soḳollu plus the latter's *ḳapudjī bashī*, were all executed, as was another of Soḳollu's favourites, Michael Cantacuzenus, called Sheyṭān-oghlu, "the devil's son", on the pretext of his exactions. On the pretext also of an explosion which had damaged the palace and arsenal at Buda, Soḳollu Muṣṭafā Pasha was executed and his property confiscated (October 1578), and replaced by Üweys himself, who now became Pasha. Soḳollu's position was further weakened by the deaths of two of his old supporters, the vizier Piyāle Pasha and the *muftī* Ḥamīd Efendi, now replaced by his enemy Ḳāḍīzāde. Finally, he came up against the sultan, who now wished to control all appointments personally, instead of delegating this task, as had done his predecessor.

Despite all these bad omens, Soḳollu carried on imperturbably when, on 20 Sha'bān/12 October 1579, a petitioner dressed as a dervish stabbed him in the heart whilst he was in his *ikindi dīwān* (P. Rycaut, *The Turkish history*, London 1687, 670-1). The assassin, of Bosnian origin, was aggrieved at the lowering of his *timār* [*q.v.*], but there are doubts over this. More recently, his action has been connected with the movements of the Bosnian Ḥamzawīs who wanted to avenge their master, Shaykh Ḥamza Balī, executed at Istanbul in 969/1561-2 after a *fatwā* from Abu 'l-Su'ūd (S. Başagić, *Znameniti Hrvati Bošnjaci i Hercegovci in Turskoj carvini*, Zagreb 1931, 48; M.T. Okić, *Quelques documents inédits sur les Hamzavites*, in *Trans. 20th Congress of Orientalists*, Istanbul 1951), Soḳollu was mourned as a martyr, and buried in the mausoleum he had built at Eyüp. He remains as the statesman who allowed Ottoman grandeur to throw out its last flashes of fire under the two unworthy successors of Süleymān the Magnificent.

Bibliography: The main Ottoman sources on his life and career are the chronicles of Selānikī, Pečewī and Gelibolulu Muṣṭafā ʿĀlī (of this last, especially his *Künh ül-akhbār*, whose analyses revealing the role of personal rivalries and the networks of clientage at this time are carefully rendered by C. Fleischer in his *Bureaucrat and intellectual in the Ottoman empire. The historian Mustafa Ali (1541-1600)*, Princeton 1986), Ḥādjdjī Khalīfa's *Tuḥfat ul-kibār*, and the panegyric from *ca.* 1570, the *Djewāhir ül-menāḳib* (Millet 1031) cf. ʿAbd ul-Raḥmān Sheref, *Soḳollï Meḥmed Pashanïñ ewāʾil-i aḥwāli we ʿāʾilesi ḥaḳḳinda baʿdī maʿlūmāt—Djewāhir ül-menākib*, in *TOEM*, xxix [1332/1914], 257-65). Amongst Western sources, as well as the travellers mentioned above, there are the Venetian *relazioni* (E. Albèri, *Le relazioni degli ambasciatori veneti durante il secolo decimosesto. Serie III. Le relazioni degli stati Ottomani al Senat*, i, Florence 1840, ii, 1844, iii, 1855); Gerlach's *Tagebuch, 1573-1578*, Frankfurt 1674; and the reports of the Imperial ambassadors; Marco-Antonio Pugafetta, *Itinerario*, London 1585, who was in the 1568 embassy of Vrancic and Teufenbach from Maximilian.

The biographies of Soḳollu include, apart from outdated ones, a study based on the Venetian documents, M. Brisch, *Geschichten aus dem Leben dreier Groswesire*, Gotha 1899, 3-70; and A. Refīḳ, *Soḳollï*, Constantinople 1924, but Von Hammer's history, with vols. vi and vii of the Fr. tr. by J.-J. Hellert covering the period in question, based on a wide span of Western and Oriental sources, remains the irreplaceable basic work, resumed by Kramers in his *EI*[1] art. and amplified for a number of points by the copious *İA* art. *Mehmed Paşa* of M.T. Gökbilgin, considerably used in this present article. The book of R. Samardžić, *Mehmed Sokolović*, Belgrade 1971, Fr. tr. M. Begić, *Mehmed Sokolovitch. Le destin d'un grand vizir*, Paris 1994, is the most substantial work on him at present, amplifying his biography by a use of unpublished documents from Ragusa, Venice and Vienna, but its aim is not wholly scientific, since the author envisages the educated reading public of his own land and includes some very Serbocentric explanations, moral reflections and pyschological extrapolations, and sometimes trips up over Ottoman realities (see the review by Veinstein, in *Turcica*, xxvii [1995], 304-10).



(G. Veinstein)

SOKOTO (Sakkwato in Hausa; Ṣakata in Arabic), a city in north-western Nigeria. It was established first as a camp in 1223/1808, then the following autumn as a *ribāṭ*, by Muḥammad Bello [*q.v.*], the son of the Shaykh ʿUthmān b. Fūdī [*q.v.*], in the fourth and final year of their *djihād* against Gobir. In 1230/1815, the Shaykh, now ill, moved to Sokoto from Sifawa. On his death in 1232/1817 and with the election of Muḥammad Bello as *Amīr al-Muʾminīn*, the city became the headquarters of the "Sokoto Caliphate". The Shaykh was buried in the garden of his house in Sokoto and his tomb became a place of pilgrimage (*ziyāra*); at the instigation of his daughter Asmāʾ, it became a focal point for organising pious women, who became known as *ʾyan taru*. Although the city remained the most important town in the area, Wurno, 20 miles to the northeast, was also used by several caliphs as a *ribāṭ* and capital instead of Sokoto; it is where Muḥammad Bello is buried.

The city of Sokoto stands high on a bluff overlooking the Sokoto river at its confluence with the Rima river. Nearby are springs, the discovery of which was one of the *karāmāt* of the Shaykh. The city was mud-walled, with eight gates (like Paradise, people said); the walls were extended *ca.* 1230/1815 towards the west so as to accommodate the Shaykh and his companions. The core of the city originally centred on Muḥammad Bello's house closing the eastern end of a wide ceremonial avenue; the palace therefore faced west in the traditional manner with, at the rear, an eastern doorway for slaves. The open space in front of the palace had the mosque on the south side and, further away to the north, the market place (and place of execution); Muḥammad Bello's officials—the vizier and the *magajin gari*—had their houses on his right (north), while the two others, the *galadima* and the *magajin rafi*, were on his left. The Shaykh had his own mosque beside his house in the new quarter on the west side of the town.

"Sokoto Caliphate" is the term used since *ca.* 1965 to denote the state set up by Shaykh ʿUthmān following the successful *djihād* of 1218-23/1804-8 which overthrew both Muslim rulers (who were accused of condoning non-Islamic practices) and some non-Muslim chiefs. The state was made up of a series of emirates, often separated by forested no-man's-land; it would have taken a 19th-century traveller four months to traverse the state west to east, and two months from north to south. It was the largest autonomous state in 19th-century sub-Saharan Africa and (by the second half of the century) home to a sophisticated commercial network that traded throughout western and northern Africa. In 1227/1812 the state, already large, was divided into four quadrants, the north and east coming under Muḥammad Bello, the west and south under the Shaykh's brother ʿAbd Allāh; under them, the Ubandoma and the army commander ʿAlī Jedo governed the northern segment, and Abubakar and Bukhari (both sons of the Shaykh) the southern segment. ʿAbd Allāh b. Fūdī and his descendants ruled their half of the state from the small city of Gwandu, some 60 miles southwest of Sokoto. The hinterlands of the two capitals abutted on each other, together forming the spiritual core of a far-flung Muslim community.

The city of Sokoto was surrounded by a closely settled hinterland only about 25 miles wide and 40 miles long; the whole territory was defended against raids by a line of *ribāṭ*s and frontier towns (*thaghr*). No taxes apart from *zakāt* were paid by residents of this hinterland; the population was supported by farmwork and herding carried out by slaves and by taxes sent in twice a year by the emirates. The area never specialised (as did the emirates of Kano or Zaria) in trade or craft production, nor was it noted for its military strength and captives for export (as was Adamawa). It was only after *ca.* 1850 that the *Amīr al-Muʾminīn* had a small standing army of his own. Instead, the area was famous for its scholarship and poetry; over three hundred books were written by the leaders of the *djihād*, while other *ʿulamāʾ* focused on the practice of Ṣūfism. The Ḳādiriyya was the official *ṭarīḳa*; the Tidjāniyya was introduced by al-Ḥādjdj ʿUmar al-Fūtī when he was in Sokoto (*ca.* 1246-54/1830-8), but only after *ca.* 1261/1845 did it win public acceptance in emirates outside Sokoto. Expectation that the end of the world was imminent, and that the Mahdī was soon to appear, was widespread throughout the hundred years of the caliphate's history; in the political and intellectual turbulence of the decade 1261-71/1845-55 many tried to migrate eastwards in anticipation; many more left at the end of the century as European imperialism put pressure on Muslim states, with the result that over a million

The administrative division into quadrants of the Sokoto Caliphate. (The division was made at Sifawa in 1812; the emirates shown were mostly founded after 1812.)

of their descendants ("Fellata") are today in the Sudan, many of them originally from the Sokoto area.

On 15 March 1903, Lt.-Col. Thomas Morland led a force of some 700 Hausa soldiers to open ground outside the southern walls of Sokoto and there defeated the army of the *Amīr al-Mu'minīn* Muḥammad al-Ṭāhir. The British colonial Commissioner, Frederick Lugard, then proclaimed British sovereignty over Sokoto and its emirates and appointed another Muḥammad al-Ṭāhir as the new "Sultan". Sokoto became just a provincial capital within colonial Nigeria, rather isolated with neither railway nor tarred road. In 1956, with the attainment of self-rule, and in 1960 with full independence, the Sardauna of Sokoto became Premier of the Northern Region of Nigeria. Under him, the notion of a modern "Sokoto Caliphate" was born; through it he and his party sought to foster both a sense of unity and the ideals of good government, based on a common Islamic morality yet tolerant and forward-looking. With his assassination on 15 January 1966, the dream of a revived "Sokoto Caliphate" faded, but under its long-serving Sultan Abubakar (1938-88), Sokoto remained a source of political and spiritual leadership out of all proportion to its economic role in the Nigerian state.

Bibliography: Dj̲unayd b. Muḥammad al-Buk̲h̲ārī, *Ḍabṭ al-multaḳaṭāt* and *Bug̲h̲yat al-rāg̲h̲ibīn bi-ziyādat is'āf al-zā'irīn*, Sokoto 1961; D. Murray Last, *The Sokoto Caliphate*, London 1967; Jean Boyd, *The Caliph's sister*, London 1989. (D.M. LAST)

SOḲOṬRA, SOḲOṬRĪ [see SUḲUṬRA].

ṢOLAḲ, the name of part of the sultan's bodyguard in the old Ottoman military organisation. It comprised four infantry companies or *ortas* of the Janissaries [see YEÑI ČERI], and these were originally archers (*ṣolaḳ* "left-handed", presumably because they carried their bows in the left hand); they comprised *ortas* 60-63. Each *orta* had 100 men and was commanded by a *ṣolaḳ bas̲h̲i̊*, assisted by two lieutenants (*rikāb ṣolag̲h̲i̊*). The *ṣolaḳs* were used exclusively as bodyguards, together with the smaller (150 men) *od̲j̲aḳ* of the *peyks* ("messengers") under the *peyk bas̲h̲i̊*. For their ceremonial role, the *ṣolaḳs* and *peyks* had splendid uniforms, including a special cap (*usḳuf*) with a long plume on top.

ṢOLAḲ-ZĀDE, Meḥmed Hemdemī (?-1068/1658), Ottoman historian and musical composer.

Very little is known about the life and career of Ṣolaḳ-zāde. Described as "old" at the time of his death, he was perhaps born sometime around the year 1000/1592. He died in Istanbul in 1068/1658. His father may have been a retired *ṣolaḳ-bas̲h̲i̊*, whose connections gave his son an early entrée into the Ottoman imperial household, with which he remained closely associated. The *mak̲h̲las* Hemdemī reflected his status as "constant companion" to Murād IV (1623-40) during at least the latter part of that sultan's reign (Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1314/1896-7, i,

509). According to Ewliyā Čelebi, Ṣolaḳ-zāde was a talented musician and an expert player on the *mīṣḳāl* (pan pipes). Fourteen of his compositions are documented (M.K. Özergin, *İA* art. *Ṣolaḳ-zāde, Mehmed Hemdemî Çelebî*, at x, 750).

He is known principally for his history of the Ottoman dynasty, untitled, known simply as *Taʾrīkh-i Ṣolaḳ-zāde* (1st ed., to reign of Bāyezīd I only, Istanbul 1271/1854; 2nd complete ed., Istanbul 1299/1881). Written in a fluent, but generally unrhetorical prose style, the History is a compilation acknowledging a range of earlier Ottoman sources but thought to depend mainly upon the *Tādj al-tewārīkh* of Khōdja Saʿd al-Dīn [*q.v.*] (up to the reign of Selīm I) and then upon the chronicle of Ḥasan Beg-zāde [*q.v.*], up to *ca.* 1623. The second edition includes only 32 pages (out of 773) on the reign of Murād IV, and concludes with events in the year 1053/1643. Ṣolaḳ-zāde gives little personal information or opinions in his work, except in the introduction where he acknowledges an obviously influential patron, the *khāṣṣ oda-bashî* Ḥasan Agha, who encouraged him to compile the work for presentation to Meḥemmed IV (*Tārīkh*, 2-3).

The second edition includes as preface a *ḳaṣīda* of 92 couplets entitled *Fihrist-i shāhān* ("Index of sultans"), a brief listing of the names and dates of the Ottoman sultans to Meḥemmed IV (1648-87) with their principal attributes and achievements. As a separate work, the *Fihrist* was extended by other writers.

Bibliography: Djemāl al-Dīn, *Āyīne-yi ẓurefāʾ*, Istanbul 1314/1896, 35-6; *GOW*, 203-4; *İA*, art. *Ṣolaḳ-zāde, Mehmed Hemdemî*, incl. further bibl.

1. Ethnography

The Somali people may be divided into two major socio-economic groups: nomadic pastoralists and sedentary agriculturalists; in addition to these are people who live and work in the towns. The sedentary agriculturalists live primarily along and between the two main rivers the Shabeelle and the Jubba whilst the nomadic pastoralists live in the surrounding areas, namely the northern, western and south-western regions. The pastoralists rear camels, sheep and goats and some raise cattle in certain suitable areas. Horses were also traditionally raised in certain areas, although with the advent of motorised transport their use is now more limited. The camel, sheep and goats constitute the mainstay of the pastoralist economy, being well suited to the semi-desert environment (particularly the camel) of much of the Somali territories, and the animals provide milk, meat and skins to their owners. The camel has also traditionally been the major unit of wealth to the pastoralists, a fact which is reflected often in poetry, in which a man who has no camels is regarded as having little wealth. Among the pastoralists, there is a division of labour for domestic duties with the men being responsible for the camels and the women and young children responsible for the sheep and goats and other domestic duties. The sedentary agriculturalists grow a variety of crops, particularly sorghum and maize but also sesame, beans, cotton and sugar cane, as well as fruits such as bananas and mangoes.

This difference in socio-economic activity is reflected in the way in which people identify themselves within the society. The whole of the Somali nation is divided into a number of clan groups, with the major division between the agriculturalist clan confederacies, the Digil and Rahanweyn, and the pastoralist clan groups, the Dir, Isaaq, Hawiye and Daarood. These major clan groups are divided into clans and subclans, etc., and all individuals know their place in this lineage system, being able to recite the line of their ancestors back to eponymous clan founders. People of the Dir clans live predominantly in the north-western regions of the Somali territories. The Isaaq people live in the central northern regions and the Hawiye live in the area around Maḳdishū [*q.v.*] and to the north east of that city as well as further south. The Daarood clans live in the north-eastern areas, in the western part of the territories and in the southern parts. The Digil and Rahanweyn clan groups live along and between the Shabeelle and Jubba rivers, the Rahanweyn to the north of the Digil. This picture is, of course, simplistic and, due to various movements of groups of people at different times in history, there are now pockets of clan groups in areas other than those just outlined, for example, the Biimaal, a Dir clan, live in a region along the coast south of Maḳdishu. In the towns and cities, increasing urbanisation means there is a mixture of people from different clans although the clan groups of the surrounding area of any town still predominate. In addition to these major lineages there are people belonging to other groups, including those who are regarded as of a lower status and who traditionally undertook occupations deemed degrading by the nomadic pastoralists such as hunting wild animals, leatherwork and ironwork. These include the Yibro (sg. Yibir), Tumaal and Midgo (sg. Midgaan), who in recent times seem to have become more a part of the wider Somali society. Other groups of people include those who are members of the minority language-speaking populations such as the Mushungulu and Oromo speakers (see 5. below). Of the many sub-clans of the main Somali clans some are specifically religious lineages, each male member of which is regarded, nominally, as a *wadaad* (see 4. below), the term *sheekhaash* or *sheekhaal* is sometimes used to denote these clans. A number of the Somali clan groups trace descent to noble Arabian ancestors, some suggesting close connection to the family of the Prophet himself. Historians regard these connections as more legendary than real, although this is not to dispute the fact that there has long been contact between the people of the Somali areas and Arabia.

Among the nomadic pastoralists one of the most important lineage levels is that of the *diya*-paying group (Ar. *diya* [*q.v.*] "blood money, wergild"), such a payment-being known in Somali as *mag* and paid, traditionally in livestock, when a member of another *diya*-paying group is injured or killed. It is the responsibility of the whole *diya*-paying group to pay the compensation on behalf of one of its members. This system of compensation is defined between different lineages in the oral system of Somali customary law, *xeer*,

(Ar. transcription, *ḥēr*), through which other contractual and "legal" aspects of life are also encoded. Marriage tended in the past to be outside the *diya*-paying group among the pastoralist nomads, and was used on occasions as the basis for establishing political ties between clans and/or sub-clans. In the southern agricultural communities, given that the Digil and Rahanweyn social groups are more confederacies than lineage structures and that the clan units are based less on lineage membership but more on common agricultural land, it is these territory-based groups of people which form the equivalent of *diya*-paying groups in these areas. This is connected with the way in which people may become adopted clients of these clans, which hold certain areas of land, part of which the incoming person is then able to farm. In the past, in addition to Somalis, these incomers have included people who are of a different ethno-linguistic background to the Somalis, such as people of Bantu language-speaking or Oromo-speaking origin. Over the course of time, these adopted clients become more or less assimilated into the clan, and marriage has always tended to be within these groups. In general, marriage among the Somalis as a whole is polygamous, with a man being able to marry a maximum of four wives according to Islamic practice. Marriage is contracted before a *sheekh* or *wadaad* and involves the giving of wealth on both sides. The groom's family gives the bride wealth, some of which may be returned as part of the dowry which, amongst the pastoralist nomads, normally consists of domestic items and burden camels to carry them as well as some livestock. Among the agriculturalists the house is normally provided by the husband's family. The central part of the whole marriage ceremony is the *meher* (Ar. *mahr* [*q.v.*]).

2. Geography

The Somali people live in a large area of the eastern Horn of Africa which includes the countries of Somalia, including the self-declared Republic of Somaliland (unilaterally declared an independent republic in 1991), eastern Ethiopia, the south-eastern part of the Republic of Djibouti [see ḎJIBŪTĪ] and eastern and north-eastern Kenya. Turning first to the geography of the northern regions, the coastal strip is a hot, dry region know as *guban* "burnt" in Somali, a reference to its great heat in the *xagaa* season. Just inland from this is a range of hills and uplands known as *oogo* and *golis* rising to some 9,000 feet in the west (near Harar [*q.v.*]) and 8,000 feet in the east. These hills are the continuation of the eastern branch of the rift valley hills which follow on from the Somali territories to the Chercher Hills of Ethiopia and the southern Ethiopian highlands of Arussi and Bale, from which descend the two major rivers of southern Somalia. Although of little use agriculturally, these hills are the main habitat of the incense trees and this area has been involved in that trade for many centuries. Inland from the *oogo* begins the plateau area, which is known as the *hawd* by the northern Somalis and is a vast area of scrub land which forms an important grazing area for camels. South of the *hawd*, the land gradually lowers towards the south-east to the coast of the Indian Ocean and is watered by the two main rivers the Shabeelle (literally "with leopards") and the Jubba. The Shabeelle is the more northerly river, rising in the northern half of the Arussi mountains and, after a brief northerly flow continues south-east to the town of Balead (Bal'ad) some twenty miles from the coast. Here it turns to the south-west and flows parallel to the coast before sinking in marshes near the town of Jilib and near the lowest reaches of the Jubba, which it may join if the water flow is great enough [see further, SHEBELLE]. The Jubba itself rises in the southern edge of the Bale Highlands and flows south east to the town of Luuq (Lūḳ), where it turns in a southerly direction straight to the Indian Ocean. Both of these rivers have a constant flow of water dependent almost entirely on the rain from the highlands, there being fewer and drier tributaries further downstream from the highlands. High floods take place twice each year according to the light and heavy rainy seasons in southern Ethiopia. This is favourable to the agriculturalists because Ethiopian heavy rains fall during the *jiilaal* season (mid-June to mid-September), which is the driest season further down-river in the Somali territories, so the high flood and sometimes the overflowing of the rivers can be utilised for growth of crops during this season.

This southern region inland from the eastern Indian Ocean coast is divided into four zones, which are found in the following order from the coast of the Indian Ocean to the interior: firstly the movable sandbanks (Somali: *bacad* (*ba'ad*)) on the shore; then the hills or short plains of white and hardly consolidated sand (Somali: *carro cad* (*'arro 'ad*) "white land"); next, the flinty red sand scrubland, vegetated in the most part by acacia trees (Somali: *carro guduud* (*'arro gudūd*) "red land"); then the alluvial ground along the rivers, known in Somali as *carro madow* (*'arro madow*) "black land", which is comparatively rich and fertile, hence the use of this land for agriculture.

There are four main seasons in the Somali territories, given here with their approximate month equivalents: *jiilaal* (*ḏjīlāl*) (December to March), *gu'* (April to June), *xagaa* (*ḥagā*) (July to August) and *dayr* (September to November). The weather during these seasons varies according to the area, *jiilaal* is the hottest season over most of the area, apart from the northern regions where the *xagaa* season is the hottest. Thus for most regions *jiilaal* is the toughest season for people to live through with no rain and the wind coming predominantly from the north-east (the north-east monsoon). The following season of *gu'* is the most attractive of the seasons, with rain falling in all areas providing pasture for the livestock and ripening crops for the agriculturalists. Given *gu'* as the "season of plenty", it is important socially as being the season when people tend to come together and when dances and celebrations take place. Among the pastoralists, young people, in particular, come together after having been separated, the young men returning with

the camels which have been taken to *jiilaal* grazing lands. The *xagaa* season, the first of the south-west monsoon cycle, is characterised by dry cool weather over most of the areas except in the northern regions, where it is very hot, especially in the north-west where the temperature may rise above 50° C. on the *guban* coast. During the *dayr* season there is also rainfall, which in the northern regions tends to be light.

(E. CERULLI-[M. ORWIN])

3. History

(a) To 1880

Somali legends may have Islamicised the history of the people by tracing their origin from ʿAḳīl b. Abī Ṭālib [*q.v.*], a cousin of the Prophet. Prescinding from the question whether Hamitic populations may have come into Africa from Asia, there is no doubt that the present Somali peoples occupied their present territory by various groups following and pushing on one another, with the African coast of the Gulf of Aden as the primary dispersal area. These groups, related to other groups in Ethiopia, later developed into what are denominated tribes. The dates of these movements are not known, and they are not likely to be, for they are the movements of cattle herdsmen. They did not enter an empty land, but pushed Bantu groups southward. Of these some pockets survive, and especially in the Bajun Islands. They cannot be antecedent to the general Bantu dispersal, which was not completed before A.D. 500. Subsequent groups have continued to push southwards, and even in the 1990s have caused friction between Ethiopia and Kenya.

The first literary reference to the coastal area is an observation of the sun in low altitudes mentioned by Agatharchides of Cnidus in the 2nd century B.C., but commercial contact with the Somali coast would have developed long before. In the ancient world religious rituals have employed frankincense and myrrh at least from the 3rd millennium B.C. In Somalia two species of frankincense and the greater number of species of myrrh are indigenous. The Ḥadramawt area in which they grow in southern Yemen is small (cf. map in L. Casson). Recently, S.C.J. Munro-Hay has reported frankincense trees near Aksum, in Ethiopia. Since these commodities grow nowhere else in the world, Somalia has long had a permanent place in world trade, from ancient times until the present. Neither the Ethiopians nor the Bajun Islanders among the Somalis are seamen, but never more than fishermen. They have consistently relied on Arab middlemen and transporters. The *Periplus of the Erythraean Sea*, mentions, *ca.* A.D. 50, a number of towns on the Somali coast which are identifiable: Avalites (probably not Zaylaʿ, but Assab); Malao (Berbera); Mundu (Heis); Mosyllon (possibly Bandar Kassim); Akannai (possibly Alula). In A.D. 79 Pliny likewise recorded the "spice port and promontory ... Barbaroi": it was Cape Guardafui, beyond which frankincense no longer grows. Archaeologically these places are unexplored, but H.N. Chittick's British-Somali Expedition of 1967, which was aborted by local misunderstanding, succeeded in identifying Roman pottery from Tunisia.

J.S. Trimingham has analysed the Arab geographers and travellers from al-K̲h̲ʷārazmī (232/847) onwards. Their interest lies rather in the *Bilād al-Zand̲j̲* and the sea route to Ḳanbalū (Pemba) and the gold land of Sofāla [*q.v.*]. Thus they say little of the *Bilād al-Barbara* or *al-Barābira*, the name for the northern and eastern coasts of Somalia. They depict a trading system based on ivory, gold and slaves, in that order; they ignore the trade in frankincense and myrrh in the same way that further south they ignore the trade in mangrove-wood from the coasts of Kenya and Tanzania, age-long in providing roofing timbers in southern Arabia and the Gulf.

A Chinese scholar, Tuam Ch'eng-Shih (d. 863) knows the Somali coast as Po-pa-li: it produces only ivory and ambergris. Much later Chao Ju-Kuan, trade commissioner on Ch'üan-chu-fu [Zaytūn; see AL-ṢĪN. 3] in Fukien province, speaks of Pi-pa-lo as having four departmental cities. He seems to have spoken from personal contact with traders, but also to have relied on a work by Chu Ch'ü-fei dated 1178. Says Chao, "they serve heaven and do not serve the Buddha", which J.J.L. Duyvendak interpreted to mean that the coastal folk were Muslims. (We do not know when Islam first penetrated to the Somali coast, but it was already present on the adjacent Kenya coast by the 8th century, at least in small pockets.) These people produce camels and sheep, dragon's saliva (a reference to the dragon's blood tree of Socotra rather than to ambergris?), elephant and rhinoceros ivory, much putchuk, liquid storax gum, myrrh and tortoiseshell. Chao knew also of ostriches, giraffe and zebra. Contemporary import records also include strings of pearls, aromatics and "incense."

There is no evidence that the Chinese visited Africa before the voyages of Ch'êng-Ho in the 15th century. Nevertheless, Duyvendak quoted Chu Ch'ü-fei in regard to Chung-li, which he identified as Berbera. The people of Chung-li, he says, go barefoot and bareheaded. Only ministers and the royal courtiers wear jackets and turbans as a mark of distinction—presumably conforming to Islamic custom. Among other commodities, he knows of the production of incense. Direct contact began only after 1431 with Chêng-Ho's voyages in the Indian Ocean, with a view, it seems, to promoting Ming trade. The fleet sailed down the African coast as far as Malindi and Mombasa. It visited Maḳdis̲h̲ū [*q.v.*] and a place which Duyvendak said was the "Arabic Habash, Abyssinia" called Ha-pu-ni. From its position on the Chinese map, it is followed by a clear reference to Socotra and then to Aden: could it not be Ras Hafun? Duyvendak also recorded the arrival in China of a giraffe from Bengal in 1414. The animal is not found in Bengal or India. He remarks that the Chinese name for it, *K'i-lin*, is the way that a Chinese would pronounce the Somali name for it, *girin*.

In 1934 A.T. Curle visited the ruins of twenty-one ruined towns and settlements in northern Somalia, making notes of surface finds which subsequently were identified in the British Museum. Finds near Zaylaʿ on Saʿd al-Dīn Island led him to believe that the site had been occupied for 2,000 years. It had for long been the principal port for Ethiopian exports, until

the French built the railway from Djibuti to Addis Ababa, thus diverting trade. Inland, a group of thirteen towns and settlements on the Ethiopian-Somali border disclosed groups of 20 to 200 houses and the remains of mosques. The settlements were all situated from 5,000 to 6,000 feet above sea level. Another group centred round Eil Humo and Eik, 120 miles inland south of Berbera. A fourth group was in Ethiopia. The houses were stone-built, and the mosques elaborately planned at all the sites. The cemeteries however, contained no tombs or inscriptions. There were sherds of Sung and Ming celadon from the 12th to 15th centuries, and blue-and-white Chinese wares of the 16th and 17th centuries. There were also some sherds believed to have an Egyptian connection.

Finds of local currency in billon and copper have already been reported [see MAḲDIS̲H̲Ū]. In the northern area no local currency has been reported. Two pieces of Ḳāyit Bay of Egypt (872-901/1468-96) have been recorded from Derbi Adad. There have been numerous reports of coins from Eik, but the only pieces recorded are two gold dīnārs of the Ottoman Selīm II (974-82/1566-74). A small number of Chinese cash have been reported from the eastern coast, but not in the profusion found in Zanzibar. Inscriptions on tombs and in mosques have been catalogued for the eastern coast by the writer and B.G. Martin [see MAḲDIS̲H̲Ū]. Two refer to individuals with a Persian *laḳab*, no strong argument, however, for a Persian connection.

Curle's survey has been supplemented by an all too brief survey of southern Somalia by H.N. Chittick and another by H. Sanseverino, and of related sites at different times by T.H. Wilson on the Kenya border and related sites in Kenya by M.C. Horton, as well as in Pemba, Tumbatu and Zanzibar. The surveys in southern Somalia were necessarily very cursory, having regard to local conditions. For Chittick nothing is acceptable earlier than the 14th century. This view is highly questionable, because T.H. Wilson and, independently M.C. Horton, have identified finds of Sāsānid-Islamic pottery at no less than twenty-six Kenya sites, at which the surface characteristics are similar to those of Somalia. It would be surpassing strange if the Somali sites will not prove to belong to a common trade pattern with neighbouring Kenya, common over several millennia.

Inland, for many centuries, as Curle noted, trade in the towns had been in the hands of Arab and Indian merchants. The Somalis were content to conduct camel transport, the brokerage of stock brought to market, and petty trading. In the interior from the early 15th century up to colonial times the history has been of intermittent conflict between Ethiopia and Somali tribesmen. Until 1950 the latter never coalesced to form a unitary state: thus their history is scattered about in articles in this encyclopaedia s.v. Adal, Balī, Berbera, the Dankāli tribe, Dawāro, Maḳdis̲h̲ū and S̲h̲ungwaya. In 1402 the Ethiopians took Zaylaʿ after a siege, but did not occupy it for long. Throughout the 15th century there was a constant series of raids and wars, Christian Ethiopia on one side, Muslim Harar [*q.v.*] and Zaylaʿ on the other. It was in the intervals of peace that the towns described by Curle would appear to have flourished. In 1503 Ludivico di Varthema visited Zaylaʿ "in Ethiopia" (*sic*). He described its commerce in glowing terms, with gold, iron and black slaves sold at low prices, for markets in Arabia, Persia, Cairo and Mecca. Early in his reign, the Negus Lebna Dengel (1508-40) sent merchants into Somali country, trading in gold, musk and slaves, and selling them in Aden. In 1516 the Portuguese burnt Zaylaʿ, shortly followed by the Ottoman Turks, who established a customs house and a small fleet. In 1527 Lebna Dengel invaded Adal. It provided a *casus belli* for Aḥmad Grañ [*q.v.*], who laid Ethiopia waste in 1544. A full account is given by S̲h̲ihāb al-Dīn Aḥmad b. ʿAbd al-Ḳādir *Futūḥ al-Ḥabas̲h̲a* [see AḤMAD GRAÑ]. The Muslims were finally defeated in 1575, and left only with the coastal towns. After their successful siege of Mombasa in 1696-8, the sultans of ʿUmān imposed a somewhat vague authority over the whole coast. It was effective only after Sayyid Saʿīd's [*q.v.*] move to Zanzibar in 1840, and never penetrated inland. Garrisons were set up at Maḳdis̲h̲ū, Marka and Barawā. This brief period ended when the sultan ceded areas to France and Britain in 1884, and to Italy in 1889. A curious survival of the Zanzibar period is the title of the Maḳdis̲h̲ū Museum, the *Garesa*. It had formerly been the residence of the ʿUmānī governor. The word stems from the Swahili *Gereza*, the earliest sultanic palace-fort in Zanzibar, its name being derived from the Portuguese word *yglesia* "church", the building from which it had been adapted.

(E. CERULLI-[G.S.P. FREEMAN-GRENVILLE])

(b) 1880-1960

The 1880s saw the establishment of British, French and Italian protectorates in various parts of the Somali territories as well as the expansion of the Ethiopian empire into Somali territory under the Emperor Menelik II (1889-1913). The British, who had had an interest in the northern regions of the Somali territories for some time as an area supplying food for their port at Aden, established the Somaliland Protectorate in 1887. This followed the departure in 1884 of Egypt from parts of the northern Somali coast and was also motivated by the British desire to stem French expansion in the region. In the same year, Léonce Lagarde had been appointed governor of Obock, on the northern coast of the Gulf of Tadjourah, and French Somaliland was declared a protectorate (this region was inhabited by ʿAfar people [see DANḲALĪ] in the north and west as well as Somalis in the southeast).

Disagreement with the British regarding the border between the two protectorates led to an Anglo-French agreement in 1888 defining the boundary, and

in 1892 Djibouti [see DJIBŪTĪ] became the capital of French Somaliland. In 1889 Italy acquired Somali areas on the north-east and south-east coast, including Maḳdishū, and in 1892 the Sultan of Zanzibar ceded some important ports to the Italians for 25 years. In 1889 Italy, whose interests were now wider than just the southern ports and their hinterlands signed the treaty of Ucciali (Wəč'ale in Amharic) with Ethiopia which, following the taking of Harar [*q.v.*] in 1887, had moved into the Somali territories to the east and south-east of that town. The Amharic and Italian interpretations of this treaty differed, the Italians seeing Ethiopia as essentially an Italian protectorate whereas to the Ethiopians, communicating with other countries through Italy was optional. It was in this light that Italy entered into negotiations with the British, signing a protocol in 1894 that defined British and Italian spheres of interest. Following the Battle of Adwa (Adowa) in 1896, however, at which the Italians were defeated by the Ethiopians, the British began to talk directly with Menelik II, signing a treaty with him in 1897 which allowed Somali pastoralists to use grazing land on either side of the border between the British Protectorate and Ethiopia. Thus it was that by the end of the 19th century the boundaries in the Somali territories were essentially set and the Somali people were divided between the British, French, Italian and Ethiopian spheres of influence. This division, in fact, split not only the Somali people as a whole but individual clans, for example, in the north-west the Ciise (ʿĪse) clan inhabited parts of British Somaliland, French Somaliland and Ethiopia, and are still divided by the boundaries between the corresponding modern states of today.

Although a number of treaties had been signed with various Somali clans by the European powers, there was little Somali influence in the developments which had taken place. This was to change during the next 20 years with the rise of Sayyid Muḥammad ʿAbd Allāh Ḥassān [*q.v.*] and his Dervish movement. This movement rose against the British, Ethiopians and Italians, and it was only in 1920 that it concluded, with the expulsion of the Sayyid and his remaining followers to Ethiopia and the subsequent death of the Sayyid (see MUḤAMMAD ʿABD ALLĀH ḤASSĀN for further details of this campaign). Given the fact that missionary activity was one of the factors which led the Sayyid to start the campaign, the British authorities prohibited all such activity in British Somaliland, a regulation which was strictly adhered to. French Somaliland was little affected by the campaign, however, and in 1917 the rail link between Addis Ababa and Djibouti was completed, gradually eclipsing the importance of Zaylac (Zaylaʿ [*q.v.*]) as a port. This helped the development of the town of Djibouti as a cosmopolitan centre, whose main sources of income were the duties and earnings from trade via the railway and through the port; apart from livestock, salt was the only natural resource available in the territory and was exported primarily to Ethiopia. Following the opening of the railway, a road was built in British Somaliland from Berbera [*q.v.*] to Hargeisa [*q.v.*] and on to the Ethiopian border to help trade through the port of Berbera. In 1921 the British introduced direct taxation on livestock, which met with much resistance and resulted in the death of the Burco (Burʿo) district commissioner in a riot following which the tax was revoked. The governor from 1925 to 1931, Harold Kittermaster, however, tried to provide some development assistance to the nomadic population as well as to farmers, who over the previous few years in the west of British Somaliland, had developed plough cultivation, particularly of sorghum, under the influence of Ṣūfī brotherhood agricultural communities and other farming communities in neighbouring areas of Ethiopia. Later, in the 1920s a serious drought led to some further development in the area of water resources. The British, however, were unsure of what to do with Somaliland, and after ruling out a number of other possibilities decided to retrench. In Italian Somalia, on the other hand, one of the main factors was the advent in Italy of a Fascist government under Mussolini in 1922. The first Fascist governor, Cesare de Vecchi, subsequently intended to bring the whole Italian region under direct rule (some of the inland and northern parts, such as the Sultanate of Hobyo, were virtually independent despite nominal Italian rule) and, despite Somali resistance, the territory was brought together and divided into seven provinces. The Italians set up many agricultural projects producing sugar, bananas and cotton, for which forced recruitment of labour was common and, in addition, embarked on road building.

The later 1930s were marked in the whole region by Italy's ambitions to create an East African Empire which was to include Ethiopia. A gradual encroachment was made into the Ethiopian-ruled Somali territories, and by 1934 plans had been instituted for the Empire. The catalyst for the opening of the real advance of Italy was the Walwal incident of 1934. This incident occurred when the Ethiopian-British boundary commission was to inspect grazing facilities for British-protected Somali clans over the border from British Somaliland in Ethiopia. The Ethiopian escort arrived at Walwal ahead of the commission to clash with Italian-led troops. This clash became the pretext for the invasion of Ethiopia by Italy. In the Ethiopian Somali territories, the invasion was led from Italian Somalia by General Graziani and, despite Ethiopian resistance, the invasion of that country was virtually complete by 1936 with the taking of Addis Ababa. Italian Somalia now included the Somali territories which had been part of Ethiopia, and so all these Somali territories were administered as a whole by Italy. During the time of the Italian East African Empire, the Somalis were subjected to Fascist discriminatory laws and had no power in the government of the region; in addition, trade was controlled by the Italian authorities. Increased urbanisation was another feature of this period, which in turn led to a political consciousness of a modern nationalist tenor which was suppressed by the Italian authorities. At the same time, nationalist feeling was developing in British Somaliland where various political organisations were set up. With the beginning of the Second World War, the Italians further expanded their empire with the capture of British Somaliland in 1940, if only for a brief seven months, after which it was retaken by the allies whose assault started from Kenya in the south in January 1941 and was supplemented by an expedition from Aden in the March. French Somaliland, whose governor supported the Vichy régime, continued to pose a threat to the British, but following capitulation of the régime, which now declared for Free France, a short-term agreement was signed.

After the restoration of Emperor Haile Sellasie in Ethiopia in 1941, there followed negotiations on how to deal with the ex-Italian colonies. In 1942 the British Military Administration of the region came to an agreement recognising Ethiopian independence which was revised in 1944, although even after this second

agreement Britain still administered the Somali-inhabited regions of Ethiopia. Following the redevelopment of agriculture and trade, one of the important moves during this time of British administration was the furtherance of political organisations which had been suppressed under the Fascist régime. These included Italian and, increasingly, Somali organisations, one of the most important of which was the Somali Youth Club, founded in May 1943, which developed rapidly and changed its name to the Somali Youth League (SYL) in 1947, when it had branches in all the British-administered Somali territories. Another important political organisation was the Hizbia Digil-Mirifle Somali (HDMS), formed in 1947 out of the Patriotic Benefit Union, with its power base among the sedentary agricultural population of the central regions. In January 1948 the Four Power Commission dealing with the ex-Italian colonies, made up of the United Kingdom, the United States, the Soviet Union and France, arrived in Maḳdishū and discussed the situation with the various interested parties, including the SYL, the HDMS as well as the Italian societies. The four powers, however, failed to agree among themselves, handing the final decision of what to do to the General Assembly of the United Nations, who, in November 1949, placed what had been Italian Somalia prior to the invasion of Ethiopia under United Nations trusteeship for ten years, to be administered during that time by Italy, following which the country would gain independence. It was in 1948 also that most of the Ogaadeen (Ogādēn [*q.v.*]) area (leaving aside the northern and north-eastern region known as the Haud and the Reserved Area) was handed back to Ethiopia, despite strong resistance on the part of the majority of the Somali inhabitants and the reluctance of the British, who had supported a plan proposed by the British Foreign Minister, Ernest Bevin, for the creation of a Trusteeship of the Union of Somali territories. It was later in 1954 that the Haud and the Reserved Area came under Ethiopian rule, and it was this move in particular which sparked a greater political consciousness in the British Protectorate and also led to the organisation of another political party, the National United Front (NUF). In 1960 the NUF, along with the SYL, the Somali National League (SNL) and the new United Somali Party (USP) contested an election and later that year, on 26 June, the Protectorate became fully independent. In Italian-administered Somalia, given the ten-year term of the Trusteeship, moves were more quickly made towards eventual independence, including a general election to a legislative assembly in 1956 in which the SYL won most of the votes, with the HDMS finding itself as the main opposition. Somalia became an independent state five days after British Somaliland, and six days following that, on 7 July 1960, the two newly-independent states united after having undertaken negotiations towards this end for some time. During the early 1960s, the matter of the other Somali-inhabited territory, the eastern part of the Northern Frontier District of Kenya, was a major concern to the newly-independent state of Somalia. In French Somaliland, following an election in 1958, the country remained an overseas territory of France, finally gaining full independence in 1977.

(M. Orwin)

(c) After 1960

In April 1960, the British government decided to terminate its authority over Somaliland, allowing time for possible unification with Italian Somalia, the independence of which had just then been scheduled by the United Nations for July 1960. That same month, representatives of the two territories met in Mogadishu and agreed on the unification of the two Somalias into a single democratic and parliamentary state, to be led by an elected president responsible to a parliament, also to be elected but initially composed of members of the two existing territorial assemblies.

On 26 June, British Somaliland became independent and was united with Somalia, to form, on 1 July 1960, the Republic of Somalia. This was a deviation from the inviolable principle of the intangibility of colonial frontiers, in the name of ethnic unity.

ʿAbd al-Rashīd ʿAlī Shirmake, the leader of the Somali Youth League (SYL), originally dominated by Darod (Daarood) and Hawiye (Hawiyye), which since 1947 had campaigned for the unification of lands inhabited by Somalis ("Greater Somalia") and for independence, was summoned to form a coalition government. This coalition combined, besides his own party, two northern parties unrepresented in the South: the Somaliland National League (SNL) with Muḥammad Ḥādjdjī Ibrāhīm Igal and the United Somali Party (USP), representing respectively the Isaq (Isaaq), and the Dir and Darod. The choice by the Assembly of Adan ʿAbdulle ʿIsmān as President of the Republic was confirmed in 1961 by a conference.

Problems of unification

Concluded in a spirit of patriotic enthusiasm, unification of the British and Italian colonies was bound to raise serious problems. Although both populated by Somalis, they had hitherto experienced few mutual contacts. Everything separated them: the usage of English or of Italian, administrative traditions, judicial systems, etc.

Their fusion altered the situation of each group. The Isaq of the SNL, the majority party in Somaliland, became an insignificant group in the context of a unified state such as Somalia. They were naturally drawn towards accommodation with the southern opposition party, the Greater Somali League (GSL) of Ḥādjdjī Muḥammad Ḥusayn, pro-Arab and pan-Somali. The Darod of the USP, on the other hand, found themselves in tune with their fellow-tribespeople of the SYL. As for the Dir, they were torn between their Isaq neighbours and their Hawiye traditional allies. The difference in importance between the two territorial entities also led the administrative classes of former Somalia to expect that they would naturally monopolise all decision-making functions, not only at the national but also at the regional level.

The results of the first popular consultation—the referendum on the Constitution—of June 1961 clearly illustrated these divisions: adopted with a large majority by the electorate of former Somalia, the text was approved by less than 50% of the electors of former Somaliland. Discontent erupted more overtly when in December of that year a group of British-trained police officers mutinied in protest against the appointment to senior posts of Italian-trained police officers brought in from the south.

After 1962, the political landscape changed, reflecting the difficulties of unity but also demonstrating the desire of all to maintain it. At the beginning of the year, the attempt by Ḥād̲j̲d̲j̲ī Muḥammad Ḥusayn to exploit the discontent of the north by launching a new party, the Somali Democratic Union, consisting of the GSL and elements of the SNL hostile to the participation of their organisation in central government, ended in failure. On the other hand, two SNL ministers, including Igal, resigning in May, succeeded in attracting to themselves, besides members of their own movement, a Hawiye faction of the SYL and creating a new organisation, the Somali National Congress (SNC).

Somali nationalism was pan-Somali. It stressed as the first objective of its programme the aspiration to gather within a single political entity all Somali people, those who had been placed by colonial politics under the authority of the British in Somaliland or in Kenya (Northern Frontier District, NFD) of the Italians in Somalia, of the French in Djibouti (French Coast of the Somalis, which was to become in 1967 the French Territory of the Afars and Issas, then in 1977 the Republic of Djibouti) or of the Ethiopians in Ogaden (Ogaadeen), five regions symbolised by the five points of the white star (on a blue background) of the Republic's flag. The Constitution of 1961 recorded this aspiration in its preamble: "the Republic of Somalia seeks to promote the union of Somali territories by lawful and peaceful means". Somali governments, caught in the snare of nationalism, would henceforward be obliged to make constant demands for self-determination on behalf of their Somali brothers inhabiting other territories, on pain of being accused of "treason". They would also incite them to achieve the objective themselves, especially in radio broadcasts. On numerous occasions, this irredentism was to lead to violent conflict and serious repercussions.

In 1961, in the course of negotiations in London over Kenya, the representatives of the NFD demanded, with the support of the Oromo of this territory, the right to secede from Kenya. The British proposal—a federal Kenya—was never implemented and the Somalis of Kenya remained an aggrieved and dissident community for years thereafter.

Relations with Ethiopia were still more difficult. Somalia challenged the Anglo-Ethiopian treaties defining the frontiers of Somaliland and the Ethiopian province of Hararge (capital Harar) which encompassed the Ogaden [*q.v.*], an area with a majority Somali population. The last of these treaties, concluded as recently as 1954, definitively placed the pastures of the Haud (Hawd) in Ethiopia. It was in this region that there took place, six months after Independence, the first disturbance involving Ethiopian police and disgruntled nomads, a skirmish which Somalia chose to interpret as repression of the aspirations of the Somalis of Ethiopia. In February 1964, more serious border incidents occurred, culminating in the invasion of Somali air-space by Ethiopian aircraft. Mediation by Sudan, in April, under the auspices of the OAU brought about a provisional resolution to the conflict, but Ethiopia took the precaution, the same year, to ally itself with Kenya by means of a mutual defence pact.

Somalia's determination to amend existing frontiers isolated it internationally. Although Somali leaders tended to be relatively well disposed towards the Western bloc, relations between Somalia and the countries belonging to this bloc were unfriendly for political reasons: Somalia would not forgive the United Kingdom for its policy relating to the Kenyan NFD and the Haud, France for its occupation of Djibouti and the USA for its active support of Ethiopia. The exception was Italy, whose nationals retained a decisive economic role in the land. In pursuit of allies, Somali leaders found themselves obliged to turn towards the USSR and China. In 1962 the Russians, intent on exerting dominant influence in the Red Sea region, agreed to lend money, to equip and train the armed forces and to assist with the implementation of all kinds of development projects. From 1969 onwards, the Chinese in their turn supplied substantial civil assistance.

The SYL had an overall victory in the municipal elections of 1963, also in the legislative elections of 1964. With the aim of revitalising internal politics, President ʿIsmān chose a new Prime Minister, ʿAbd al-Razzāḳ Ḥād̲j̲d̲j̲ī Ḥusayn. Concerned with efficiency, the latter chose his ministers without regard for tribal and regional balance. Discontented, members of his own party formed an opposition movement under the leadership of the former Prime Minister S̲h̲irmake. Though sincere pan-Somalis, ʿIsmān and Ḥusayn favoured giving priority to internal problems and issues. Furthermore, Ḥusayn obtained the confidence of the Assembly with great difficulty, only succeeding with the aid of supporters outside the SYL.

On the occasion of the presidential elections of 1967, President ʿIsmān paid the price of his errors: S̲h̲irmake, who had led the country in the period of militant nationalism, was elected. The new President chose as Prime Minister Igal, who had returned to the SYL after 1964. A man of the north, an Isaq, the new Prime Minister hoped to put Somalia's relations with its neighbours on an amicable basis and to concentrate on problems of economic and social development. By acting in this way, he too risked discrediting the one ideal capable of inducing the Somalis to forget their tribal divisions: irredentism. In the municipal and legislative elections of 1969, the electoral system, a series of defections and the game of post-electoral coalition-making, guaranteed his party 120 seats out of 123.

But this was a hollow victory, since the state was running out of control. Corruption and nepotism were rampant, and the Assembly no longer even pretended to be a forum for the exercise of the traditional Somali virtues of conciliation and dialogue. Lack of direction, widespread intrigue, insecurity and government ineffectiveness aroused discontent which was particularly intense among intellectuals and the military, a discontent which aggravated further the resentment felt by those, the majority, who believed that in improving relations with Kenya and Ethiopia, the government had betrayed its mission. Rumours of a *coup d'état* began to circulate.

The Somali Revolution

An unexpected event hastened the resolution of this looming crisis. On 15 October 1969, while the Prime Minister Igal was on an overseas visit, President S̲h̲irmake was assassinated by one of his bodyguards. Igal

hurriedly returned to organise the election of a new President. On 20 October, the party chose as its candidate Ḥādjdjī Mūsē Boqor, one of his close associates. He was thereby assured of retaining his post as Prime Minister.

The following day, the Army took control of Mogadishu and a Supreme Revolutionary Council (SRC) was immediately established, taking the measures which were normal in these circumstances: detention of members of the former ruling clique, suspension of the Constitution (it was to be officially abrogated in February 1970), suppression of the Supreme Court, closure of the Assembly and prohibition of political parties. The Supreme Council announced its intention to combat tribal nepotism and corruption and to promote a just society where all would be guaranteed access to social and economic progress. In foreign policy, Somalia, renamed the "Democratic Republic of Somalia", would honour its commitments and support peoples fighting colonialism. On 1 November, the list of members of the Supreme Council was made public: comprising 25 officers, it was presided over by General Muḥammad Siyad (Siyaad) Barre, commander of the Army since 1965.

The military caucus which had overturned the democratic régime subsequently defined its action as a Marxist revolution. But despite the presence of Soviet advisers in the Army (in implementation of the Somali-Soviet military accord of 1963), there is no evidence that there was Soviet backing for the coup, and Soviet-trained junior officers received no preferential treatment. In October 1970, to mark the anniversary of the coup, Siyad Barre, who in spite of the corporate power supposedly wielded by the Supreme Council was very much "the strong man", announced the adoption of scientific socialism (in Somali: *hanti-wadaagga cilmi ku dhisan*) as the ideology of the state. This ideology sought to integrate the tribal element into the theory of class-struggle, and acknowledged Marx, Lenin and Mao Tse Tung as well as Mussolini and the Ḳur'ān. Declaring himself a pragmatist, Siyad Barre remained fairly flexible on the ideology of his movement, which he reckoned was compatible with Islam. This view was not shared by all.

The Supreme Council discharged certain responsibilities formerly allotted to the President, the Council of Ministers or the National Assembly, and was assisted by a Council of Secretaries of State mainly composed of civilians. Siyad Barre monopolised the most important functions and encouraged the development of a personality cult. Officers were placed in charge of the major public organisations in order to assure the state's control over the economy, finance, commerce, transport, etc. Regional and local administration was also taken over by the military, civilian functionaries being "re-educated" or dismissed. Administrative sub-divisions were re-arranged in order to nullify the influence of tribal assemblies. In 1976, the single party proclaimed in 1971 came into existence under the title of the Somali Revolutionary Socialist Party (SRSP) and the Supreme Council was transformed into its central committee. Theoretically, this was a return to civilian rule, but in fact power remained in the hands of the same group of officers.

An important measure in the nationalist and pan-Somali policy of the revolutionary government was the adoption of a system for the writing of the Somali language. In 1971, the Supreme Council revived the Committee for the Somali Language which in 1962 had proposed the adoption of the Latin alphabet, and entrusted to it the task of preparing a grammar, a dictionary, texts and a programme of adult education. But it was only in 1972 that the Council announced that Latin transcription had been adopted and would be applied throughout Somalia from 1 January 1973. The hopes of those who wanted Arabic to be the official language were dashed. An impressive campaign aimed at improving literacy was then launched.

The economy was nationalised and shaped according to the Soviet model with the aid of Russian advisers. New agricultural initiatives were developed in the south with the aid of Arab investment, while in the north and in the region between the great rivers state collective farms were established. Stock-breeders were "invited" to settle in southern areas where irrigation was promised. The drought of 1974-5 was exploited by the revolutionaries to expedite this process. Nomads were thus directed towards state-owned farms and 300,000 (?) of them were transferred from north to south, with Soviet assistance and installed in "co-operative" villages. This assault on traditional ancestral life-styles was also intended to undermine the tribal system. Although itself based on an inter-Darod alliance of the clans of Marehan (Mareexaan) and Ogaden (Siyad Barre's power-base) with the Dulbahante (Dulbaaxante) clan, the revolutionary government vigorously denounced tribalism and numerous activities and customs defined as "tribal" were punished under the law. But the social and economic disorders created by scientific socialism had the paradoxical effect of making tribalism the last refuge of Somalis. The events which were to follow the fall of Siyad Barre were to prove this clearly.

After fifteen years of socialist experiment, the Somali economy was in a disastrous state, exporting, at the very most, only cattle to Saudi Arabia and bananas to Italy. With a GDP of 260 dollars per inhabitant per year the Somalis (55% stock-breeders, 22% arable farmers in 1986) counted among the least developed peoples of the world. Aware of the parlous condition of the economy, the government decided on a limited programme of liberalisation which did not have time to bear fruit.

The only successes of the régime were those which it had recorded in the development of education, with the writing of the Somali language, and in the improvement of the status of women. But these secular achievements found no favour in religious circles, the younger members of which were influenced by fundamentalism.

Somalis hostile to the policies of Siyad Barre, described as "counter-revolutionaries", were watched, hunted, tried and in some cases executed. Since the inception of his régime, in April 1970 and in May 1971, Siyad Barre had been denouncing conspiracies against himself hatched by members of the Supreme Council.

Foreign policy was closely linked to internal policy. In 1974, as a means of tempering his dependence on the Soviet Union, Siyad Barre took his country—as a purely political move—into the Arab League, whose richest members supplied him with aid and offered him new markets. For reasons of nationalism, he supported the Somali guerrillas in the Ethiopian Ogaden, and for reasons of self-interest the separatist struggle of the Eritreans, both these campaigns being directed against Addis Ababa.

Ethiopia had been much weakened by the collapse of the régime of Haile Selassie in 1974-5. Siyad Barre waited for the opportunity to exploit this situation and avenge the humiliation of 1964. In the summer of 1977, Somali troops crossed the frontier and advanced as far as the gates of Harar. But in a spectacular reversal of policy, the Soviets changed the rules

of the game. In a region where South Yemen was already within their sphere of influence, it was in their interest to support Ethiopia rather than Somalia, which was proving itself unstable and unpredictable, and accordingly they changed sides. Crippled, Siyad Barre appealed for the support of the Americans, who showed no inclination to intervene. Henceforward the Somali offensive became a rout. The country was swollen by refugees (a quarter [?] of the population in 1980) whom the economy, destroyed by droughts and "scientific socialism", was incapable of feeding. Siyad Barre was seen as incompetent and as a traitor.

After the fiasco of the Somali offensive and the expulsion of Soviet advisers which ensued, political instability worsened. Siyad Barre had a number of generals executed, scapegoats for the defeat, and in April 1978 he was confronted by a revolt on the part of officers (most of them belonging to the Majerteyn, a clan allied to the former régime), seventeen of whom were executed. The inhabitants of the Ogaden withdrew their support for the régime, and opposition movements, inaugurated in other countries, made their appearance, including the Somali Salvation Front (SSF) (with Majerteyn majority) which united in October 1981 with the Somali Workers Party (SWP) to form the Democratic Front for the Salvation of Somalia (DFSS). In April 1981, the Somali National Movement (SNM) was founded in London by members of the Isaq. This party advocated a mixed economy and a neutral international policy and some of its members favoured the secession of the north. The same year, the dismissal of the Minister of Defence, ʿAlī Samantar, caused discontent in the Army. The following year, the first acts of armed struggle on the part of the SMN unleashed ferocious repression in the north. Isaq and Majerteyn were excluded from all posts and privileges.

The drought of 1983-4 and the guerrilla war drove groups of nomads into shanty-towns in such numbers that for the first time in its history, Somalia saw its urban population exceed its nomadic population. Illicit trading of all kinds and the misappropriation of international aid, in which the most senior of statesmen were implicated, increasing nepotism, more-or-less systematic recourse to a politicised police force, etc., spoke eloquently of the corruption of power.

In May 1988, Italian mediation led to the signing of an Italo-Ethiopian treaty which made official the colonial frontier between the two countries but imposed on them the obligation to pursue the dissidents within their own territories. Feeling threatened, the SNM took pre-emptive action and seized major cities of the north: Hargeysa, Berbera and Burao. The artillery barrages with which Siyad Barre responded terrorised the population and increased the number of refugees. The Hawiye, influential in Mogadishu, withdrew their support from him. After the riots of the summer of 1989 which followed the detention of recalcitrant *imāms*, Siyad Barre began to lose control of entire regions in the south. The Army, the police and the administration, all of whom had grievances over irregularities in remuneration, become uncontrollable. In 1990, Siyad Barre believed he could retrieve the situation by installing a multi-party system and undermining the alliance which was then coming into existence between the now very active rebel movements (accord signed on 2 October 1990); but he acted too late.

At the end of January 1991, the partisans of the United Somali Congress (USC), a movement led by ʿAlī Mahdī Muḥammad and the general Muḥammad Faraḥ Aydid, both Hawiye but from different clans, took control of Mogadishu and compelled Siyad Barre to take refuge, first in the interior and later in Kenya. But from December 1991, conflict erupted between the partisans of ʿAlī Mahdī Muḥammad, unilaterally declared president of the interim government, and those of Muḥammad Faraḥ Aydid.

Violence spread rapidly among all factions seeking to establish themselves. The problem posed by refugees (one million [?] at the end of 1991), was aggravated. The nutritional situation deteriorated rapidly, and an international guilty conscience was aroused, alerted by the media, especially in the summer of 1992.

International intervention

In early 1992, a United Nations mission arrived to report on the situation on the ground. A few days after its return, the Security Council adopted Resolution 733 which imposed an embargo on the sale of arms to Somalia and called upon the General Secretary to increase the aid budget and to negotiate a cease-fire agreement. This agreement, obtained on 3 March, foresaw the dispatch of a security force to protect food-aid convoys and the deployment of 40 observers to monitor implementation: the UN operation in Somalia, known as UNOSOM, was launched.

During the two years that were to follow, in the name of the "duty of intervention" and the "duty of assistance", the UN was to pursue goals that were gradually defined in the course of time: guaranteeing the distribution of aid, implementing the cease-fire, promoting national reconciliation, assisting the return of refugees, reviving the economy and creating employment, reconstructing a state and, to make all this possible, disarming the "factions". The intervention achieved some success in the humanitarian effort but failed to establish civil peace, and stopped short of engaging in full-scale military action. For the first time in its history, the UN was intervening in the internal affairs of a member-state, in a coercive manner and with clearly humanitarian objectives, and this constituted an innovation. It is, however, legitimate to wonder why the UN and the USA took so much interest in Somalia while ignoring Liberia, then embroiled in an analogous situation.

The stages of the process were as follows. On 3 December 1992, confronted by the deterioration of the situation, the Security Council adopted Resolution 794 which, at the instigation of the USA, called for military intervention under American leadership. The task-force, comprising 40,800 soldiers from a score of different nationalities soon occupied 40% of Somali territory (operation "Provide Hope"). George Bush, due to concede the US presidency to Bill Clinton on 11 January 1993, wanted to conclude his term of office with a success. This not being forthcoming, he ordered an initial withdrawal of American troops. In March 1993, the representatives of fifteen Somali armed factions met in Addis Ababa to sign a cease-fire agreement. To ensure its application, the UN launched operation UNOSOM II (Resolution 814, adopted 26 March). Holding General Aydid responsible for cease-fire violations, United States forces tried in vain to capture him during the summer of 1993. But after the deaths of eighteen Rangers in an ambush, in October, President Clinton decided against any further action and announced that US forces would be withdrawn by 31 March 1994. Although deprived of direct American assistance, the UN continued to operate in the country until 31 March 1995.

The secession of the north

The anarchy which developed in the south from January 1991 onwards enabled the former Somaliland

to acquire *de facto* autonomy under the control of the SNM, the movement which had unleashed armed struggle in the northern provinces in 1982. An assembly of Elders, representing the leading families of Somaliland, was held in Burao six months later. There, the president of the SNM declared the abrogation of the Act of Union of 1 July 1960 and the independence of the "Republic of Somaliland". The dogma of pan-Somalism proved to be less potent than that of the intangibility of colonial frontiers. This event coincided, approximately, with recognition of the independence of Eritrea, another return to colonial frontiers. The secession of former Somaliland passed almost unnoticed however, international attention being concentrated on the situation in the south of the country.

The SNM comprised those whose primary objective was to depose Siyad Barre and others who had always envisaged secession of the north in response to the oppression and economic neglect (genuine but magnified in the public consciousness) suffered by this region since 1960. The Elders, who fulfilled a significant popular "representative" function, prevailed over those who, having continued to play a political or economic role in the south, would have been prepared to accept a federation. ʿAbd al-Raḥmān Aḥmad ʿAlī Tur became president of the new state. Since then, Somaliland has attempted to rebuild itself, without however escaping struggles between factions and clans.

Henceforward, Somalia needs not only to repair the damage caused by the headlong collapse of its traditional economic and social structures, by years of drought, famine and catastrophic crop-failure, by oppression, civil war and the ruin of its pan-Somali dream; it must also cope with the dire effects of a clumsy and ineffectual international intervention.

Bibliography: *Les Nouvelles de l'ARESAE*, scientific bulletin of the French Association for the Development of Scientific Research in East Africa, publishes several times a year the titles of publications relating to Somali studies. The Italian compilation *Studi somali*, founded in 1981, has now reached its 10th volume (1995). Volume iv is a bibliography: F. Carboni, *Bibliografia somala*, Rome, Ministero degli Affari Esteri, 1983. The bibliography on Somalia is considerable. Besides a few recent titles given below, reference should be made to the bibls. of works by E. Cerulli (G. Lusini, *Rassegna di Studi Etiopici*, xxxii [1988], publ. 1990, 2-44) and B.W. Andrzejezwski (G. Banti, *Rassegna di Studi Etiopici*, xxxvi [1992], publ. 1994, 152-60). All the works of M.M. Moreno on the Somalis have been collected in *Scritti. II. Scritti africanistici*, Rome, Istituto Italo-Africano, 1993. On modern Somalia, the prime source lies in the various works of I.M. Lewis. See also Aḥmad Yūsuf Faraḥ and I.M. 4. The role of Islam in Somali society

The Somalis are Sunni Muslims and follow the S͟hāfiʿī mad͟hhab. It is assumed that Islam first arrived in the Horn of Africa in the early years of the spread of the religion from the Arabian Peninsula. Along with the rest of the East African coast, the Somali coast had been part of the Indian Ocean trading region involving much movement of people and goods, particularly between the Arabian Peninsular and the Horn of Africa. Trading settlements along the coast, of which Zaylaʿ and Maḳdis͟hū were particularly important examples, must have become centres of Islamic activity early on. From the coast, the religion gradually made an impact inland, with Islamic centres being established, one of the most important in this part of Africa being the town of Harar [*q.v.*]. In its essentials, Islam among the Somalis is practised as elsewhere in the Islamic world, the people following the five pillars of the faith, and indeed Islam constitutes a very important aspect of Somali identity.

One of the particularly striking aspects of religious life is the widespread influence and role of the Ṣūfī *ṭarīḳa*s, of which the most widespread among the Somalis are the Ḳādiriyya [*q.v.*], the Aḥmadiyya (also known as Idrīsiyya [*q.v.*]), the Ṣāliḥiyya [*q.v.*] and, to a lesser extent, the Dandarāwiyya [*q.v.* in Suppl.] and Rifāʿiyya [*q.v.*]. Although not necessarily formal initiates to the *ṭarīḳa*s, many Somalis will profess adherence to one of them, and most prominent religious figures amongst the Somalis have played important roles as members of the orders. The oldest of the *ṭarīḳa*s, with many followers throughout the whole area, is the Ḳādiriyya, which is thought to have been brought to the Horn of Africa through contacts with other parts of the Islamic world; it is also said that it was introduced specifically into Harar by S͟harīf Abū Bakr b. ʿAbd Allāh al-ʿAydarūs in the 15th century. Among the many important leaders within this *ṭarīḳa*, two of the most famous are S͟hayk͟h ʿAbd al-Raḥmān al-Zaylaʿī (*ca.* 1235-6 to 99/1820-82) and S͟hayk͟h Uways Muḥammad (1263-4 to 1327/1847-1909), both of whom founded sub-branches of the main *ṭarīḳa*. The Aḥmadiyya and Ṣāliḥiyya *ṭarīḳa*s were both introduced into the Horn of Africa some time towards the end of the 19th century, the Aḥmadiyya probably some time earlier than the Ṣāliḥiyya. The Aḥmadiyya *ṭarīḳa* was introduced by S͟hayk͟h ʿAlī Maye Durogba (d. 1335/1917) from the town of Marka, and the Ṣāliḥiyya one introduced by S͟hayk͟h Muḥammad Gūlēd (d. 1918), who was from the Bantu language-speaking Shidle community. The best-known figure from both these two *ṭarīḳa*s is Sayyid Muḥammad ʿAbd Allāh Ḥassān (1250-1 to 1339/1864-1920 [*q.v.*], and see that article for alternative date of birth), who, having been initiated into the order by S͟hayk͟h b. Muḥammad Ṣāliḥ [see ṢĀLIḤIYYA] himself in Mecca, went on to lead the so-called Dervish movement against the foreign powers in the northern Somali ter-

ritories, particularly the British, from 1898-1920.

A regular feature of the religious calendar among the Somalis is the *siyaaro* (from Ar. *ziyāra*), celebrations of a saint's life through a pilgrimage to the saint's tomb and the holding of services there in his honour. This is bound up, particularly among the nomadic pastoralists, with the society's lineage system. The founders of lineage segments, such as the eponymous clan group founders Shaykh Daarood (Dārōd) or Shaykh Isaaq (Isāķ), are revered in their own right as saints and the *siyaaro* celebrations are held in their honour. Other saints are also revered who have become well known through their virtuous deeds (Ar. *manķaba* pl. *manāķib*) which are remembered in oral narratives as well as in written collections in Arabic, which, it is assumed, have been taken from oral narrative. These are to be found in manuscript form and some have also been published (see Bibl. for an example). In addition to these local saints the lives of founder saints of the *ṭarīķas*, such as ʿAbd al-Ķādir al-Djīlānī [*q.v.*], are also celebrated.

The role of saints as intermediaries, particularly the role of deceased saints, is an issue on which the *ṭarīķas* differ. The intercession of deceased saints as intermediaries between humans and God is rejected by the Aḥmadiyya and the related Ṣāliḥiyya, but is accepted by the Ķādiriyya. This was one of the main issues, which, along with others, led to animosity between the Ṣāliḥiyya and the Ķādiriyya at the beginning of this century. Muḥammad ʿAbd Allāh Ḥassān was the most prominent figure in this exchange on the Ṣāliḥiyya side and, on the side of the Ķādiriyyas, one of the most prominent was Shaykh ʿAbd Allāh b. Muʿallim Yūsuf al-Ķuṭbī who edited and co-authored *al-Djuzʾāni al-awwal wa 'l-thānī min al-madjmūʿa al-mubāraka al-mushtamila ʿalā kutub khamsa* ("The two parts, the first and the second from the blessed collection comprising five books") (Maķdishū n.d., printed in Cairo), which includes five treatises on *taṣawwuf* [*q.v.*], including polemics against the Ṣāliḥiyya *ṭarīķa*. Shaykh Uways also engaged in this with a bitter exchange of poetic invective taking place between him and Muḥammad ʿAbd Allāh Ḥassān during the first decade of the 20th century, which led eventually to followers of Muḥammad ʿAbd Allāh Ḥassān killing Shaykh Uways in 1909 at Biyooley where the latter had founded a settlement.

Religious ceremonies such as marriages and funerals are undertaken in Somali society by men of religion, who are known in Somali as *wadaads*. The title of *sheekh* (*shēkh*, in Arabic *shaykh*) is used in respect to *wadaads* when they have reached a certain level of respect as men of religion (N.B. the term Shēkh in Somali is used only in a religious sense; it is not used in a secular context as in Arabic for an elder, for which the term *oday* is used in Somali). The term *wadaad* is used in contrast to the term *waranle* ("warrior", literally: "spear bearer"), amongst which other Somali men are traditionally classed. Another important role played by *wadaads*, given the respect owed them as religious men, is that of mediator in disputes between lineages. They may also provide amulets and bless livestock and crops as well as pray for the ever-important rain. The education of *wadaads* may differ widely, with some having travelled to various centres of Islamic learning both within the Horn of Africa as well as abroad, gaining a deep and wide ranging education and, indeed, in some cases writing treatises on theological matters. Others have less education and may have just a rudimentary understanding of the Ķurʾān and *Ḥadīth*. As they are the men of learning, it is the *wadaads* who in turn are the religious teachers of the young and, for this purpose, they may be based in a particular town or village, pupils coming to them for learning. On the other hand, they may set up an itinerant college, moving from place to place with accompanying students, and carrying out religious duties in the places they arrive at. With regard to law, the customary law of the Somalis, known as *xeer* (*ḥēr*), continues to play an important role and exists alongside the *Sharīʿa* to which the Somalis, as Muslims, adhere also.

All the Ṣūfī orders in the Somali territories have set up agricultural communities in suitable areas known as *jamaacas* (from Ar. *djamāʿa*). Most of these are, naturally, in the agricultural areas between and along the two main rivers; such communities, however, have also, since the last century, been founded in the northern regions, particularly in the north-west, where the land and climate are more suitable. In the north-west, this has in turn led to the development of a certain amount of agriculture being practised by the general population growing, in particular, sorghum.

In addition to the general Muslim religious practices, there are a number of other spiritual aspects of life practised among the Somalis. One well-known example is the *saar* (*sār*) [see ZĀR] cult, in which a person is regarded as having been made ill by the presence of a spirit within them. The person is then relieved of the spirit through the performance of a ritual, often by a woman specialist known as *alaaqad*. This cult is regarded by some as a superstitious and un-Islamic practice, and is generally practised among women and among more disenfranchised groups of people on the margins of the society. It is a widespread phenomenon found in North Africa, the Arabian peninsula as well as Ethiopia, from where it is thought to have originated and to have spread during the late 18th and early 19th centuries.

In more recent decades, Islam has in different ways been a force within the politics of the Somali territories. Following the campaign of Sayyid Muḥammad ʿAbd Allāh Ḥassān, there was a certain amount of Islamic reformist activity under such leaders as Ḥādjdji Faraḥ ʿUmar, who was exiled to Aden by the colonial authorities and there set up the Somali Islamic Association. It has been suggested that this exile contributed to the lack of connection between the developing nationalist-oriented political organisations such as the Somali Youth League and the Islamic reformist movement. Later in the history of Somalia, the matter of Somali irredentism as an expression of Somali nationalism may have further lessened the impact of Islamic expressions of nationalism. Two Islamic organisations were established in 1969: *Djamāʿat Ahl al-Islām* and *Waḥdat Shabāb al-Islām*, with the aim of imparting more Islamic values, especially among the young, whom they regarded as moving away from these standards. During the régime of Maxamed Siyaad Barre (Muḥammad Siyād Barre) a religious opposition developed, particularly after January 1975 when a new Family Law was attacked by the religious establishment as being against the laws of Islam in terms of inheritance rights for women. Following subsequent opposition speeches, a number of religious leaders were arrested and some executed, leading to an increasing gulf between religious groups and the régime. During the fragmented political situation following the ousting of the Barre régime, Islamic groups have continued to play a role in the politics of the region, this role being particularly strong in certain areas; e.g., the area around the town of Luuq (Lūķ)

in south-west Somalia has been described as an "Islamic mini-state amidst surrounding chaos and anarchy" (Hussein, 219).

5. Language

Somali is a member of the Omo-Tana group of Lowland East Cushitic languages, Cushitic being a member of the Afroasiatic super-family. Other Omo-Tana languages include Rendille, Bayso, Dasenech and Elmolo spoken in the region of north-west Kenya and south-west Ethiopia; whilst two of the most important Lowland East Cushitic languages are ʿAfar and Oromo, which are spoken by the two major groups of people neighbouring the Somalis to the west in the Horn of Africa.

Somali itself, may be regarded not so much as a single language, but rather a collection of closely-related dialects. According to Lamberti (1986, 14-32), there are five major dialect groups of Somali: the Northern group of dialects spoken predominantly by the nomadic pastoralists; the May and Digil dialect groups spoken by the sedentary agriculturalists living between the two main rivers, the Jubba and the Shabeelle; the Benaadir dialects, spoken along the southern coast (and also in parts of southern-central Somalia) and Ashraaf, a dialect spoken just in Maḳdishū and in the region around and to the north of the town of Marka. There are a small number of other language-speaking minorities: dialects of Oromo are spoken in parts of the south-western regions and in the southern part of the Lower Jubba region and Af-Boon (also known as Aweera), an endangered Cushitic language, is spoken in an area between the town of Jilib and the coast (as well as in neighbouring parts of Kenya). There are also speakers of northern dialects of Swahili: Ki-Bajuni is spoken along part of the coastal strip in the region of the lower Jubba and especially in the town of Kismaayo and Chi-Mwiini (= a dialectical form of Standard Swahili *Kī-Mjini* "the language of the town") is spoken in the town of Baraawe (Brava) and along the adjacent coast and the Bajun Islands. A further Bantu language Af-Mushungulu is spoken along the banks of the Jubba in the vicinity of the town of Jamaame and is regarded as corresponding to the Shambaa language of Tanzania (according to W.I.G. Möhlig, as mentioned in Lamberti 1986, 33).

Somali has a rich verbal morphology which, aside from the inflectional suffixes, includes a number of derivational suffixes which alter the argument structure of the verb. These include a causative or transitivising suffix, *-i*, which may be affixed to a verbal root, and a middle voice suffix, *-o*, which often has an autobenefactive or an intransitivising meaning. Whereas the vast majority of verbs inflect by means of suffixes, a small number of verbs mark person by means of prefixes, mark tense by means of stem-internal vowel mutation and have a number marker suffix. In Standard Somali there are five such verbs: *yimi* "come", *yiqiin* "know", *yidhi* "say", *yiil* "be in a place (only with inanimate subjects)" and the idiosyncratic verb *yahay* "be". The nominal morphology is characterised by a number of deverbal and denominal derivational suffixes as well as defining, demonstrative and possessive suffixes. The status of adjectives in Somali is a matter of dispute among linguists, some seeing them as a separate part of speech which is used with the verb *yahay*, others regarding adjectives as a distinct verbal group. With regard to syntax, one prominent feature is the system of focus marking which has been shown to be syntactically cognate to cleft constructions used in some other Afroasiatic languages of the Horn of Africa. Prepositional expressions are also interesting from a syntactic point of view: it is possible to use a possessive construction to express such things as "under the table": *miiska hoostiisa*, literally "the table its underneath"; but most prepositional expressions are rendered using four preverbal prepositional particles, given here with approximate meanings: *u* (to, for), *ku* (in, at, instrumental), *ka* (from, about) and *la* (with). These preverbal prepositional particles are found in most of the other Omo-Tana languages but not in less closely-related Cushitic languages in which certain case markers and postpositions are cognate. Of phonological interest is the system of tonal accent or pitch accent, in which certain grammatical distinctions are made by the position of accent which is realised as a higher tone phonetically.

Despite the fact that Somali is essentially a cluster of dialects, Standard Somali (sometimes called Common Somali) has developed over the last few decades, based on the Northern dialect group. This dialect group has developed in this way because it was already being used to a certain extent as a lingua franca throughout the Somali-speaking areas and also because much oral poetry was, and still is, composed in it and this poetry, when good, often became well known over a very wide area, thus helping to disseminate a certain competence in the dialect. Standard Somali is now the language of written and broadcast media and it is this use, especially in radio, which over the last few decades has continued the development of this standard language and made it widely known to speakers of other dialect groups.

The widespread use of written Somali only began in 1972 when an official script was introduced by the government of the time. Prior to this, written communication was mostly carried out in other languages.

For a long time, Arabic was used in this way by those who knew it well enough and it continues to be used by some Somalis today as a written medium. In addition to the use of the Arabic language as such, the Arabic script was used by some people to write the Somali language itself, although this did not become very widespread. The European colonial languages, English, Italian and French, have also been used for written communication. In addition to the use of the Arabic script to write the Somali language, in the 20th century, a number of invented scripts gained a certain amount of usage. Two of the most famous of these are the Gadabursi script which was used in the north-west of the Somali territories and the Cismaaniya (ʿIsmāniya) script which gained a somewhat wider currency.

The selection of an official script for the Somali language was a matter fraught with problems and indecision for a long time. Three major proposals were considered, firstly the use of a version of the Arabic script which was argued for on the basis of Islam. This, though, faced the practical problem that a number of new characters were needed, especially for vowels; despite this people were aware that other languages had used the script such as Persian and Urdu and that it was at least generally more familiar to Somalis than other scripts. The second option was the use of an indigenous invented script, which was advocated on the basis that it would be an authentic Somali script. However, the invented scripts were to a certain extent associated with particular clans and thus were not regarded by all as being possible "pan-Somali" scripts; also, typewriters and printing presses would have needed to be built from scratch, which was considered by some as impractical and expensive. The third option was the use of a version of the Latin alphabet which, practically, was suited to the language but which was opposed by the groups who supported the other options. No decision was made by the civilian régimes of the 1960s and it was the former military régime of Maxamed Siyaad Barre which officially adopted the Latin script in 1972.

Somali is written more or less as the language is spoken. Each sound is represented by a letter of the alphabet or a digraph, most being similar to English apart from the following characters which are given here with their respective symbols in the International Phonetic Alphabet (IPA) and in Arabic transcription: "c" (Arabic: ʿ, IPA: ʕ), "x" (Arabic: ḥ, IPA: ħ), "dh" (not found in Arabic, IPA: ɖ) "j" (Arabic: d̲j̲, IPA: ʤ or in some speech IPA: ʧ), "kh" (Arabic: k̲h̲, IPA: χ, this sound is only found in Arabic loanwords), "q" (Arabic: ḳ, IPA: q), "sh" (Arabic s̲h̲, IPA: ʃ). Long vowels and geminate consonants are both written as digraphs.

Following the acceptance of this script, Somali was made the national language of the then Democratic Republic of Somalia and urban and rural literacy campaigns were implemented. Although following these the literacy rate may be assumed to have improved, at the present time, with civil war and great upheavals in the Horn of Africa, it is assumed to be very low (in 1985 the adult literacy rate in Somalia was 12% according to the African Development Report for 1991 published by the African Development Bank). Since 1972, much new vocabulary has been introduced into the language; some has been coined from existing Somali words by compounding or semantic shift, and some borrowed from Arabic (from which borrowing has taken place for a long time) or from the colonial European languages.

6. Literature

Prior to the writing of the language, Somali literature was, with some very few exceptions, composed, retained and performed solely in oral form. Poetry has always been the most important type of literary expression, but, from the 1940s onwards, theatre became important and, following the acceptance of an official Somali script in 1972, prose fiction also developed. The Somalis themselves distinguish between a large number of genres of poetry, ranging from children's songs through work songs and dance songs to poetry handling more serious themes, the latter being classified together as *maanso* (*mānso*) (sometimes referred to as "classical poetry" by English-speaking scholars), whereas the work songs, etc., are classified together as *hees*. Within these major groups there are genres of poems and songs which are distinguished by four major factors: the subjects they treat, the context in which they are recited, the metrical structure of the lines and the "tune" (in Somali, *luuq* (*lūḳ*)) to which they are traditionally performed. Somali poetry is alliterative, the alliterative sound being carried throughout the whole poem and there is a quantitative system of metrical structure (in Somali, syllable final consonants are not counted in the metre).

There are different songs associated with all the standard types of work among the rural Somalis such as watering camels and other livestock (each animal has its own song), driving livestock along, weaving mats, pounding grain, etc. Many of these songs are well known and the original composer anonymous, but people do also compose their own poetry in this context. This may sometimes be used by people to convey a message allusively to someone whom they would not normally be able to directly address on the matter in hand. The dance songs and poetry, of which there are many types such as *dhaanto* and *shirib*, are performed in specific contexts at celebrations and particularly when young people come together to dance at certain times of the year; again, many of these songs and poems are anonymous but may also be composed by individuals who then perform them in the dance.

Turning to the *maanso* type of poetry, this is all composed by named individuals, and before reciting a poem of this type the reciter must say who is the composer of the poem and must then recite the poem verbatim. There is no professional class of poets among the nomads; anyone who has the skill is able to compose poetry and those who are very good become well known and gain a great deal of prestige. Among the southern, mainly agriculturalist clans, the situation is different in that there are specific reciters of poetry, *laashin* (pl. *laashinno*), who often recite in an extemporised manner. Unfortunately, the work available to the academic community on this poetry is very sparse, and consequently what is to be said below on poetry pertains primarily to the pastoralist nomads

and the modern types of poems which have developed from that tradition.

Given the oral nature of the literature, the earliest examples of poems which are known are from the latter half of the 19th century. Some of these poems are those by Raage Ugaas Warfaa (Rāge Ugās Warfā) (*ca.* 1810-*ca.* 1880) which are still remembered with great respect, such as the poem he composed in response to the marriage of his fiancée to another, *Alleyl dumay* "At nightfall". Among the pastoralist nomads there is no history of epic poetry, although among the agriculturalists there are poems which are passed on from one generation to the next and which recount aspects of clan history. From the turn of the 20th century, many poems have been remembered, particularly those of the most famous and prestigious poets; and when the Somali language was first officially written in 1972 many of these poems were soon transcribed, thus keeping them for posterity, although those which have survived to the present time will only be a small proportion of the total amount of poems composed. One of the most important poets whose work is preserved in this way is that of Muḥammad ʿAbd Allāh Ḥassān [*q.v.*], whose work has been collected and published, as has also the work of his contemporaries. Looking at the work of more than one poet within a particular context is particularly important, as Somali poetry is very often composed to address a particular situation and a poem composed by one person may be replied to by another poet, as was often the case with the poetry during the Dervish campaign. At times, poems may be replied to and the replies themselves solicit a response; in such situations a *silsilad* (Ar. *silsila* "chain") may develop in which a whole chain of poems is composed, all alliterating in the same sound. Despite the fact that many poems comment specifically on issues, others handle general issues or may be in praise of a person or indeed a well-loved horse.

During the late 1940s and the 1950s, the new genres *belwo* and *heello* developed, which dealt more specifically with the theme of love but which developed into an important vehicle for the expression of developing nationalist, anti-colonial feeling. Of particular importance in this development was the poet and musician Cabdullaahi Qarshe (ʿAbd Allāh Ḳarshe), who was the first Somali to introduce musical instrumental accompaniment, the lute, to this poetry. It was during this time also that Somali theatre developed, with the composition of plays by playwrights who took theatrical forms from the European examples which they saw and developed them, using Somali poetic forms as the basis of the play text. This poetry was learnt verbatim by the actors, who then improvised the linking parts of the play in spoken prose under the guidance of the playwright. In addition to simple recitation of the poetic parts, some were sung with a musical accompaniment, and these songs often became very popular and were broadcast over the radio, as indeed were the whole plays. The plays themselves were generally initially performed in theatres in the major towns and were then taken on tour around the country.

At the present time, poetry continues to be of great importance in Somali culture, with poems addressing the contemporary situation avidly listened to by many people through radio broadcasts or via audio cassette tapes. Many modern popular poems are also often recorded with a musical accompaniment as songs. Three of the most prominent poets of the present time are Maxamed Ibrahiim Warsame "Hadraawi" (Muḥammad Ibrahīm Warsame Hadrāwi), Maxamed Xaashi Dhamac Gaarriye (Muḥammad Ḥāshi Dhamaʿ Gārriye) and Cabdi Aadan "Cabdi Qays" (ʿAbdi Ādan "ʿAbdi Ḳays"), all of whom have composed a wide variety of poems, including ones addressing the political situations they have lived through as well as love poems and poems on other themes.

Although most poetry which is widely known is composed by men, there are women also who compose poetry. Given the male-oriented system of memorisation used in the past, very few older poems by women are now known but from more modern times, due to the use of radio and audio cassettes, women's poetry is more widely known. For example, Mariam Xaaji Xasan (Maryam Ḥādji Ḥasan) composed poetry in opposition to the former régime of Maxamed Siyaad Barre (Muḥammad Siyād Barre) which was broadcast through an opposition radio station based in Ethiopia under the name of Carraweello Ararsame.

Religious poetry in praise of the Prophet or saints or dealing with didactic themes is composed in both Somali and Arabic. Of the Arabic poems, most are written and retained in manuscript form and some have also been published in book collections. Among the best known are those of Shaykh Uways and Shaykh ʿAbd al-Raḥmān al-Zaylaʿī (see above, 4.), some of whose poems have become very well known and may be recited at religious celebrations such as al-Zaylaʿī's poem popularly known as *al-ʿAyniyya* on account of the rhyme in *ʿayn* (see *Bibl.*). Religious poetry is also composed in Somali, with some early examples having been written in this language using a version of the Arabic script. A more modern, well known composer of religious poetry in Somali is Sheekh Caaqib Cabdulaahi Jaamac (Shaykh ʿĀḳib ʿAbd Allāh Djāmaʿ).

Prior to the introduction of the official script for Somali, prose literature was confined to oral narratives of folktales and to hagiographies of saints, some of these being written in Arabic. Prose literature in the form of novels and short stories in Somali is the product of the adoption of the official script (see above, 5.). Some of the earliest novels include those by Faarax Maxamed Jaamac Cawl (Fāraḥ Muḥammad Djāmaʿ ʿAwl) (1937-91) who wrote three novels, including *Aqoondarro waa u nacab jacayl* (Mogadishu 1974), which was translated into English as *Ignorance is the enemy of love* by B.W. Andrzejewski (London 1982). Another well known writer of prose fiction is Maxamed Daahir Afrax (Muḥammad Ṭāhir Afraḥ), whose novels were first published as serials in the newspaper *Xiddigta Oktoobar* ("The October Star"). The novels of Faarax M.J. Cawl concentrate on didactic themes in a more historical context, *Aqoondarro waa u nacab jacayl* taking the theme of illiteracy set in the context of a true story from the time of the Dervish movement. Those of Afrax, on the other hand, treat the urban life of Maḳdishū in the 1970s and the vulnerabilities of various people in that particular society under the régime of the time. Throughout the 1970s and 1980s, a number of other writers wrote novels and short novels which were published in Maḳdishū, but in more recent years, following the civil war and the destruction of many facilities, prose fiction publication has become very difficult, although there has been some, e.g. *Waddadii walbahaarka* ("The road of grief") by Xuseen Sheekh Biixi (Ḥusayn Shaykh Bīḥi), which was recently published in Addis Ababa (1994) and which addresses the embroiled situation among the Somalis during the early 1990s. As in other parts of Africa, there has also been some writing of fictional literature and poetry

in the colonial European languages, English, French and Italian. The best known of these writers is Nuuruddiin Faarax (Nūruddīn Fāraḥ; in his publications his name is spelt Nuruddin Farah), who has written a number of novels in English which are very well known in the Western world.

Cairo 1955 (includes *al-ʿAyniyya* and other religious poems in Arabic).

(M. Orwin)

ṢŌMĀY, a Kurdish district of Persia lying between the Turkish frontier (modern *il* or province of Hakkâri) and the western shore of Lake Urmiya, hence falling within the modern Persian *ustān* or province of West Ādharbāydjān.

In Kurdish, *sōmāy* means "view" (cf. in Persian *sūma* "terminus, finis, scopus", Vullers, ii, 352). To the north, Ṣōmāy is separated from the basin of the Zola Čay (Shepirān, Salmās [*q.v.*]) by the mountains of Bere-dī, Undjalīḳ and Aghwān; on the east the canton of Anzal separates it from Lake Urmiya; to the south-east lies the Shaykh Bāzīd range, to the south the canton of Brādōst; to the south-west the peak of Kotūl; towards the west the ravine of Bānegā runs into the interior of Turkish territory. Ṣōmāy is sometimes used to include the cantons of Shepirān and Anzal-i Bālā.

Ṣōmāy is watered by the northern tributaries of the Nāzlu Čay, several of which drain the main valley, and one (Ḥasanī, Berdūk) comes from the ravine of Bānegā. They unite east of Berdūk, flow towards Brādōst, where they are joined by the tributary from the valley of Bāžirgā and then, joining the Nāzlu Čay, enter the lake north-east of the plain of Urmiya [*q.v.*].

According to the *Sharaf-nāma* of Sharaf al-Dīn Khān Bidlīsī [*q.v.*], Ṣōmāy and Brādōst were at first governed by scions of the Kurd Ḥasanūya dynasty (Ḥasanwayhids) [see ḤASANWAYH] who had taken refuge in the north after the defeat which the Būyid Shams al-Dawla [*q.v.*] had inflicted in 405/1014 on Hilāl b. Badr. At the beginning of the 10th/16th century, the *Sharaf-nāma* mentions a member of the family, Ghāzī-ḳirān b. Sulṭān Aḥmad, who for his exploits was granted by Shāh Ismāʿīl Ṣafawī the cantons of Ṣōmāy, Tergavar and Dōl but later went over to the Ottoman sultan Selīm. His descendants, who were under the *wālī* of Wān, broke up into various branches. The last *mīr* of Ṣōmāy mentioned by the *Sharaf-nāma* is Awliyā Beg (from 985/1577).

When in 1065/1654 Ewliyā Čelebi [*q.v.*] visited the country between Wān and Urmiya, the strong castle of Ghāzī-ḳirān still stood on a cliff commanding the plain of Urmiya, while the western part of Ṣōmāy was occupied by the Pinyānish tribe (which now lives in Turkish territory). The lord of Berdūk was called Čolaḳ ("the one-armed") Mīr ʿAzīz; the strong castle stood some distance below (*ashaghiya*) Ḳalʿa-yi Pinyānish, which may be identified with Bānegā (3-4 miles above Berdūk).

It is not very clear whether the *mīrs* of Ṣōmāy who, shortly after the visit of Ewliyā Čelebi, erected several curious monuments, were of the same tribe of Pinyānish. At Berdūk is a mosque of white and black stone and a cemetery with the tomb of Naẓar Beg, son of Ghāzī Beg (d. 1071/1660). His son Sulṭān Taḳī Sulṭān, whose title shows that he had consolidated the power—for *sulṭānlïk* means a fief for which one has received investiture—built the very imposing and picturesque castle near Bānegā. A reconstruction of the old Ḳalʿa-yī Pinyānish probably also dates from his time (1078/1667). On a rock at the entrance to the tower can still be seen the remains of a rudely carved inscription *ṣāḥib mālik—Sulṭān Murād b. Sulṭān*—(?). Below the fort is an *ʿibādat khāna* built by a certain Zāl-i ʿĀdil (1103/1691?) and a mosque. The style of these buildings recalls that of the castle of Maḥmūdī (Khoshāb) east of Wān (cf. Binder, 126-8). In 1136/1736 the hereditary chief of the *sandjaḳ* of Ṣōmāy, Khātim Khān, as a reward for his services received from the Ottoman government the adjacent cantons of Salmās [*q.v.*], Kerdḳāzān (?), Ḳarabāgh and Anzal (cf. von Hammer, *GOR*², iv, 211).

In the 19th century the Shakāk [*q.v.*], encouraged by the Persians, gradually occupied Ṣōmāy. According to Derwīsh Pasha, Bānegā was destroyed by ʿAlī Āghā Shakāk (about 1257/1841).

In 1851 Čirikov was still able to speak of a "hereditary ruler of Ṣōmāy", Parraw Khān, who had also seized Brādōst. In 1893 the Shakāk killed at Gunbad the last representative of the family of *mīrs*, a certain Ḳïlïdj Khān.

Among the antiquities of Ṣōmāy may be mentioned: 1. the citadel of Zandjīr Ḳalʿa (between Ṣōmāy and Salmās) which must correspond to the "Shaddādī" building of Ḳarnî-yarïḳ, mentioned by Ewliyā Čelebi (iv, 281) the name of which (*alias* Farhād ḳapu) is found in Blau, in *Peterm. Mitt.* [1863], 201-10; 2. a chamber carved out of the rock on Mount Kotūl; 3. similar chambers where the Nāzlu Čay enters the plain of Urmiya. All these monuments must date from the Urartian period (cf. Minorsky, *Kelashin*, in *ZVOIRAO*, xxiv [1917], 190).

Ṣōmāy had a significant Nestorian Christian population, and Ṣōmāy-Brādōst was a Nestorian diocese under the archdiocese of Shamdīnān [*q.v.*]; see M. Chevalier, *Les montagnards chretiens du Hakkâri et du Kurdistan septentrional*, Paris 1985, 230, and see map 1.

(V. Minorsky*)

SOMNĀTH [see SŪMANĀT].

SONĀRGĀ'ON, Subarnagrāma in Sanskrit, a famous mediaeval capital city and trade centre in eastern Bengal at the juncture of the rivers Lakhkha, Brahmaputra and old Meghna, and about 14 miles south-east of Dhaka and 3 miles east of Narayanganj. Though the city existed in the early 13th century during the time of the Hindu dynasties of Sena and Deva in East Bengal, it started flourishing only during the time of Balbanī rulers in the region (681-746/1282-1345). The city was visited by the famous Moroccan traveller Ibn Baṭṭūṭa during 1345-6 in the reign of Fakhr al-Dīn Mubārak Shāh (739-50/1338-50), who found it very affluent. It continued thriving during later Islamic dynasties of Bengal, namely the Ilyās Shāhī (740-892/1339-1487) and Ḥusayn Shāhī (898-944/1493-1538) dynasties. Towards the end of the 10th/16th century, Sonārgā'on served as the capital for the independent Afghān chieftains—ʿĪsā Khān and later on his son Mūsā Khān—who resisted Mughal rule until 1611.

From the beginning of Muslim rule, Sonārgā'on was an important educational and cultural centre with a large number of mosques and *madrasas*. During the reign of Sultan Balban (664-86/1266-87), Shaykh Sharaf al-Dīn Abū Tawwāma established a prestigious *madrasa* in this city, where Shaykh Yaḥyā Manērī [see MAKHDŪM AL-MULK] of Bihār studied. Shaykh ʿAlā' al-Ḥaḳḳ—a famous Ṣūfī saint of Pandu'ā—lived in Sonārgā'on for two years towards the end of the 8th/14th century. His *khānkāh* attracted many pupils. Epigraphic evidence from the 9th/15th and 10th/16th centuries records the appellation of Ḥādjdjī for a number of personalities (such as Ḥādjdjī Bābā Ṣāliḥ and Ḥādjdjī Bhāgal Khān), indicating religious links of this region with Arabia (see Mohammad Yusuf Siddiq, *An epigraphical journey to an Eastern Islamic land*, in *Muqarnas*, v/7 [1990], 87-103).

Among its architectural remains is a mosque known as Mughrapara Shāhī Djāmiʿ Masdjid with an inscription dated 889/1484 (see idem, *Arabic and Persian texts of the Islamic inscriptions of Bengal*, Watertown, Mass. 1992, 107-8). Sonārgā'on was an important mint town since the beginning of the 8th/14th century, and was also famous for its fine cotton production known as Muslin. With the shift of Bengal's capital to Dhaka during the Mughal period in the early 11th/17th century, however, Sonārgā'on lost its glory.

(MUHAMMAD YUSUF SIDDIQ)

SONGHAY, or Songhai, Sonraï, Sonrhaï, (1) a West African language, (2) a people speaking that language, (3) a West African state in existence from *ca.* 1450 to *ca.* 1600.

1. Language. The Songhay language consists of a cluster of dialects spoken around the Middle Niger from the Inland Delta in the west to the borders of modern Nigeria, Niger and Bénin in the east, with isolated pockets in and around the Hombori mountains south of Timbuktu in the lands of the right bank of the Niger (*gurma*), and around In Gall to the south-west of the Aïr massif in Niger. Down to the late 19th century, a Songhay dialect called Emgedesi was also spoken in Agades. In the northern Saharan oasis of Tabalbala a language is spoken that is Songhay in structure, but largely Arabic and Berber in its lexicon. At the present time the two major dialects are Songhay itself, spoken upstream of Labbezanga and in Dendi, and Djerma or Zerma spoken downstream. Songhay proper is generally considered to have two principal dialects: western and eastern. The western is spoken in Timbuktu, Goundam and the northern Inland Delta, and has absorbed a higher proportion of lexical items of Arabic origin; the eastern is spoken along the banks of the Niger from Arnassey to Labbezanga. The Wogo dialect of Sinder, and Dendi spoken in the far south, are closely related to the eastern dialect. Zerma is spoken in the area between the modern capital of Niamey and Dosso on the borders of the Hausa-speaking lands, and in a broad zone to the north of Niamey. In between are dialects such as Kado and Kourtey.

Linguists have differed on the family affiliation of Songhay-Zerma. For long it defied classification. Then J. Greenberg (*The languages of Africa*, The Hague 1966) grouped it with Nilo-Saharan. More recently, Nicolai has proposed first that it belongs in the Mande family, and more recently still that it is a Tamacheq creole. The term Songhay to refer to the language was in use as early as the beginning of the 16th century, when Leo Africanus noted it as the language of Walāta, Timbuktu, Jenne and Gao (and, implausibly, Mali). But, except in Gao it was, at that time, little more than a language of administration resulting from the incorporation of those areas into an expanded Songhay state from the 1460s. Prior to the expansion of the Songhay state the language was mainly spoken along the banks of the Niger from Gao southwards, but for how long we have no way of telling. The origins of the isolated pockets of Songhay speech are likewise a matter of conjecture, but a plausible hypothesis is that the eastern ones, at any rate, resulted from the activities of Songhay-speaking merchants.

2. People. The name Songhay applied to a people does not appear in the literature until the late 15th century with the "Replies" of al-Maghīlī [*q.v.*]. The name Zerma (and a parallel form, Zaberma) appears even later; there is a single passing reference in an anonymous chronicle of the mid-17th century (see *Ta'rīkh al-Fattāsh*, "Deuxième Appendice", 334). Arab writers from the Mediterranean lands of Islam had known of Kawkaw/Gawgaw as the name of a town (Gao [*q.v.*]) and a people, and there is no reason to suppose that these people were not Songhay speakers ancestral to those who inhabited the area in the 16th century and still do today (but see Lange, *Les rois de Gao-Sané et les Almoravides*). A problem remains, however: there is no known etymology for the name Songhay, and the name is scarcely used by speakers of the language to designate themselves (see Olivier de Sardan, *Conceptes et conceptions songhay-zarma*, 340). The *Ta'rīkh al-Fattāsh* and the *Ta'rīkh al-Sūdān* (both mid-17th century) use the term to refer either to the ruling oligarchy (*ahl Sunghay*) or to the region of Gao, or occasionally to the empire as a whole. Although modern anthropological literature has used the term Songhay(-Zarma) in englobing fashion, the people themselves use more particularist terms such as *koyra-boro*—villagers; *gaabi* (or *gabibi*)—"black body", cultivators (in Timbuktu especially denoting ex-slaves); *sorko*—fisher folk, boatmen; *gow*—hunters; *Sohance*—descendants of Sunni ʿAlī; *Maamar haama*—descendants of Askiya Muḥammad; *arma*—descendants of the Saʿdian invaders of 1591; etc. The Zarma have traditions that would make them immigrants from Mali, but these probably refer only to groups that came from the Inland Delta and established themselves as local chiefs, perhaps at more than one time. In the

late 19th century, "Zabarma" adventurer carried out extensive slave-raiding among Grunshi populations in north-west Ghana, and under the leadership of Babatu established a short-lived political hegemony in the area that was ended by French and British colonial expansion (see N. Levtzion, *Muslims and chiefs in West Africa*, Oxford 1968, 151-60).

Pre-colonial Songhay society recognised three social statuses: free, servile and slave. The free were the chiefs and the mass of the cultivators and herders, and such slaves and servile people as had achieved free status. The highest status groups were the *Sohance*, the *Maamar haama* (also termed *meyga*), the *arma* and the *sirfay* (*shurafā'*, pl. of *sharīf* [*q.v.*]—descendants of the Prophet). Servile groups comprised people who were attached to, and performed certain services for, free men, in particular those of the chiefly class during the period of the Songhay empire. In some cases, they were probably remnants of earlier conquered peoples; in others they were artisans, musicians and griots (*gesere*) whose functional if not their physical origins go back to the Mali empire of the 13th-14th centuries (see Tal Tamari, *The development of caste systems in West Africa*, in *J. African Hist.*, xxxii [1991], 221-50). In theory, they were not slaves and hence could not escape their status by being emancipated, though in fact slaves may have been assimilated to them; Songhay rulers obliged them to observe endogamy (see Hunwick, *Studies in the* Ta'rīkh al-fattāsh, *II*). Songhay society recognised that slaves in the second generation (*horso*, in French "captifs de case") were on the road to freedom, and by the fourth generation they were assimilated into free society as *gabibi*.

Being strung out in a thin line around the river, the Songhay-Zarma were interpenetrated and hence culturally influenced by many groups: Arab, Tuareg, Fulbe, Manding and Hausa. Like these groups, they have been strongly affected by the religious culture of Islam (in the 11th century, al-Bakrī, *K. al-Masālik wa 'l-mamālik*, ed. de Slane, Paris 1857, 183, noted that none but a Muslim could rule at Kawkaw). In the early 17th century, Aḥmad Bābā al-Tinbuktī [*q.v.*] in his *Miʿrādj al-ṣuʿūd* (ms.) classified the Songhay as among the wholly Muslim peoples of *Bilād al-Sūdān*. However, indigenous religion, magic and possession cults have remained strong in Zarma country down to the present time (see Rouch, *Religion et magie*, and Stoller, *Fusion of the worlds*).

3. History. Songhay chroniclers recognise three dynasties: the Zā (or better Zuwa/Žuwa), the Sunni or Si/Shi, originally probably pronounced Soṅ-ñyi) and the Askiya dynasty. Of the first we really know no more than the list of rulers' names given in the local chronicles; royal tombstones discovered at Gao-Sané suggest a short-lived dynasty in relationship with the Almoravids of Spain and their Ṣanhādja cousins of the southern Sahara in the late 11th/early 12th century, but the relationship of these rulers to the Zās remains problematic. Some later inscriptions include the title *zuwā*. The Sunnis were probably originally vassals of the Malian rulers who conquered the Middle Niger in the later 13th century [see MALI]. The *Ta'rīkh al-Fattāsh* glosses the title with *koi banandi*/*khalīfat al-sulṭān*, indicating a subordinate relationship. By the mid-15th century, Mali had withdrawn from the area, and with the advent to power of Sunni ʿAlī in 869/1464, a period of Songhay expansion began. During his twenty-eight years' rule he conquered a broad swathe of territory around the Niger from the borders of Kebbi (Kabi) in the south-east to beyond Jenne in the south-west. His brutality towards certain of the scholars of Timbuktu during that city's conquest in 873/1468 stirred up animosities that were exacerbated by al-Maghīlī's judgement that he was an unbeliever (*kāfir*), and are reflected in the local chronicles.

On Sunni ʿAlī's death in 898/1492, his son Abū Bakr (Bukar Dāʿū) succeeded him, but he was soon overthrown by one of ʿAlī's generals, Muḥammad b. Abī Bakr [*q.v.*], of mixed Soninke-Songhay parentage, who took the dynastic title of *askiya* (*r.* 898-935/1493-1529). He expanded Songhay into a veritable empire, making lands as distant as Galam on the Senegal river in the west and the Aïr massif in the east his tributaries. Although his conquest of the Hausa states has been questioned, it is likely he tried to exercise hegemony over at least the important mercantile cities of Kano and Katsina, and by the same token to exclude Bornu, the other major power of the region. Some of these conquests were ephemeral, and his fifth successor, his son Askiya Dāwūd (*r.* 956-90/1549-82) again campaigned in many of the same areas. A brief but disastrous civil war in 996/1588 weakened Songhay, and it fell an easy prey to an expedition equipped with firearms sent by the Saʿdian sultan of Morocco Aḥmad al-Manṣūr [*q.v.*] under the leadership of the *Bāshā* Djawdār in 1000/1591. Songhay resistance continued from the southlands (Dendi) for some twenty years, but to no avail, while the conquerors abandoned Gao in favour of Timbuktu, where they set up an administration (generally called the *bāshālik*) and installed puppet *askiyas*.

Songhay was the largest of the mediaeval empires of West Africa, but both its size and its administrative style imperilled it. Succession under the *askiyas* generally passed to brothers, but in no fixed order; the strongest carried the day, especially if he was present at Gao on his predecessor's death. Regional governorships and other high offices were mainly distributed among the *askiya*'s sons, and sometimes his brothers, and competition was fierce. The state had a sound agricultural base in the fertile lands of the river Niger and in the Inland Delta, and slaves ran plantations to feed the royal household and its soldiers. A well-developed river transport system ferried foodstuffs, soldiers and officials, and the Sorko who manned the boats were the *askiya*'s "property" (*mamlūk lahu*). Trade with North Africa provided luxury items (European swords, cloth, paper, etc.) while gold and slaves were high value exports. Rock salt from the central Saharan mine at Taghāza was (and remained until recently) a lucrative item of trade, cut into ever smaller pieces and serving as a currency for smaller items, while gold dust was used for larger transactions. The *askiya* period also marked a high point in the fortunes of Islam, and especially of Timbuktu [*q.v.*] as a centre of Islamic scholarship. Askiya Muḥammad made the pilgrimage in 902/1497 and received a diploma of authority as a lawful *amīr* from the fainéant ʿAbbāsid caliph of Cairo. He established cordial relations with the men of religion, making them gifts and granting them privilege. During his reign and those of most of his successors, the moral authority of the scholars and holy men of Songhay served to mitigate the despotism of the rulers.

(J.O. Hunwick)

SONḲOR, Sunḳur (t.), one of the many words in Turkish denoting birds of prey. In the modern Turkic languages, and probably always, it means the gerfalcon, *falco gyrfalco* (Sir Gerard Clauson, *An etymological dict. of pre-thirteenth century Turkish*, Oxford 1972, 838a). Maḥmūd al-Kāshgharī says that it was a raptor smaller than the *toghrïl* (*Dīwān lughāt al-turk*, tr. Atalay, iii, 381).

The term became frequently used as a personal name in mediaeval Islamic times, both alone and in such combinations as Aḳ/Ḳara Sonḳor "White/Black Gerfalcon", cf. J. Sauvaget, *Noms et surnoms de Mamelouks*, in *JA*, ccxxxviii (1950), 37 no. 22, 52 no. 163.

SOUTH AFRICA, Islam in.

1. The community.

Although there is evidence that small groups of Arab or African Muslims reached its northernmost regions, Islam was established in the country during European colonial occupation. The first group of Muslims were brought to the Cape during Dutch rule, while the second group arrived during the British occupation of Natal in the 19th century.

The first group, inappropriately called Malays in South Africa, came from the range of South-East Asian islands, Bengal, Malabar and Madagascar. Beginning in 1658, they came as political prisoners, slaves and convicts. There were prominent religious scholars among them, like Abidin Tadia Tjoessoep of Makassar (d. 1699), known as Shaykh Yūsuf, and Imām Abdullah Kadi Abdus Salaam from Tidore (d. 1807), known as Tuan Guru. The graves of these and other contemporary religious figures are dotted throughout the Western Cape. Shaykh Yūsuf's tomb in Faure has become an identity symbol for the Muslim community, while the other tombs also play a prominent part in its mystical orientations.

The second group were Indian indentured workers and traders from Calcutta, Madras, Bombay and Gudjarāt. Traders played a prominent role in the establishment of institutions, the first mosque being built in 1884. These traders then invited religious functionaries, *imāms* and *ʿulamāʾ*, to serve them. Among the early Muslims from India there were also two mystics whose tombs have become sites of veneration in Durban. The first, Shaykh Aḥmad, is said to have come to Natal in 1860 as an indentured worker. *Madjdhūb* Badsha Peer ("enraptured saintly saint"), as he is popularly known, was released from his term of indenture, and then hawked fruit and vegetables in the Durban mosque market until his death in 1886. The second, Shāh Ghulām Muḥammad Ṣūfī Ṣiddīḳī, alias Soofie Saheb, established a more enduring tradition. Sent to South Africa by his Chishtī master Ḥabīb ʿAlī Shāh, Soofie Saheb arrived in this country in 1895. According to tradition, he discovered the grave of Badsha Peer and established the celebration of his death anniversary (*ʿurs*). Soofie Saheb also encouraged the development of other folk practices as symbols for distinguishing poor Indian Muslims from Hindus.

In addition to this Asian composition of Muslims, there were also smaller groups from Africa, partly consisting of migrants from African countries like Malawi in the north, and partly from a steady flow of converts from indigenous peoples. On a smaller scale, there have also been conversions, especially in the Cape, of Europeans to Islam. These diverse origins and different histories notwithstanding, Muslims in South Africa increasingly regard themselves as a national community.

Islam in South Africa is marked by a range of institutions established in the 19th century and continuing unabated. Mosques, *madrasas*, modern Islamic schools, colleges, welfare and youth organisations, are all the more remarkable considering that Muslims constituted only 1-2% of the estimated total population of 43 million. The institutionalisation of Islam began in the Cape at the beginning of the 19th century, when Tuan Guru established the first mosque after an 1804 ordinance allowed the free and public practice of religions other than the Dutch Reformed Church. Scholars in the Cape continued to establish mosques and schools wherein they played a leading role. In Cape society, they were also intellectuals for slaves and Free Blacks. Their valuable role shone through educational activities, and other important community services like name-giving ceremonies, marriage and death rites. Cape religious leaders also adopted the Arabic script to write religious texts in the Afrikaans of the Cape.

From the second half of the 19th century, an increasing number of these scholars studied at Arab

institutions, especially in Mecca, Cairo and Medina. Prominent scholars like Shaykh Ṣāliḥ Adams, Shaykh Mahdī Hendricks, Shaykh Aḥmad Behardien, and Shaykh Shākir Gamieldien, played a crucial role in religious life in the Cape. Cape religious leaders are organised in scholarly fraternities. The Moslem Judicial Council (est. 1945) is the largest, but the Majlis al-Shura al-Islami and the Islamic Council of South Africa also enjoy prominence. These groups serve the community, and thereby claim its allegiance, through the provision of education, community counselling and religious services.

The institutionalisation of Islam in the northern regions of South Africa has, however, been markedly different. Generally, mosques, schools and welfare organisations employ *imāms* and *ʿulamāʾ* in their capacity as religious specialists. In response, religious scholars in the northern regions have defined themselves in terms of Islamic legal and theological criteria. Most of them have studied at institutions in the Indo-Pakistan sub-continent, reflecting Islamic trends there. The Jamiatul Ulama Transvaal (est. 1932) and Jamiatul Ulama Natal (est. 1952) together with the small but vociferous Mujlisul Ulama in the Eastern Cape, have spread Deobandi doctrines in *madrasas*, mosques, and by means of monthly broadsheets. This approach is more text-centred, following the revivalist tradition in India. The Sunni Jamiyat-e-Ulama (est. 1978), and a few splinter groups, champion the cause of Bareilwi thought in popular festivals like the *Mīlād* (birthday of the Prophet), *ʿUrs* (death anniversaries of Ṣūfī saints), and *ʿĀshūrā* (martyrdom of Ḥusayn, the grandson of the Prophet). Bareilwism in South Africa, as in India, is more inclined towards the charismatic presence of the Prophet Muḥammad and Islamic saints.

The central role of the *ʿulamāʾ* and other influential leaders has begun to be shared in the present century by modern groups. In the Cape, the Cape Muslim Youth Movement (est. 1957) and Claremont Muslim Youth Association (est. 1958) represented the aspirations of youth who demanded a more modern understanding of Islam. They also insisted that Muslim communities and religious leaders should take a more unequivocal stance against racist apartheid legislation.

The anti-apartheid movement among Muslims in the Cape rallied around Imām Abdullah Haron in Claremont, Cape Town, until his death in police detention on 27 September 1995. Even though Imām Haron and his supporters did not always get the support of the entire Muslim community, they placed the anti-apartheid agenda within Islamic circles. As part of the larger non-white population, Muslims suffered the injustices of discriminatory legislation and forced removals. However, as Coloureds and Indians, they escaped its worst features such as influx control regulations and homelands marginalisation. Muslims, as a result, were ambivalent between an open rejection of apartheid and accommodation within its excesses.

Anti-apartheid activists among Muslims in Natal, like e.g. Ismail and Fatima Meer, threw in their lot with the Natal Indian Congress. Nevertheless, the more conservative Arabic Study Circle (est. 1950) in Durban was also a clearly modernist exponent of Islam, arguing for reading the Ḳurʾān in English translation, women's emancipation, and religious evolution. The Islamic Propagation Centre (est. 1957), led by Polemicist Aḥmad Deedat, launched a missionary drive on the basis of the rational, historical truth of Islam, first against Christianity and then also against Hinduism. Although his methods in recent times have been rejected by many Muslims, the call for conversion to Islam has been a feature of non-clerical groups since then.

From 1970 onwards, socio-political organisations wrestled with the particular approach to apartheid and with its religious meaning in South Africa. The nation-wide Muslim Youth Movement (est. 1970), influenced by the Muslim Brothers in Egypt and the Djamāʿat-i Islāmī in Pakistan, searched for a modern approach to Islam, but reflected the ambivalence of Muslims between the liberation movements and the apartheid state. On the other hand, the group Qiblah established in 1980 by anti-apartheid activist Achmat Cassiem, took a more direct anti-apartheid approach. Similarly, the Call of Islam, founded in 1983 by Farid Esack, joined the United Democratic Front to reject the tri-cameral parliamentary proposals of the South African government. By 1985, all these three groups launched a formidable anti-apartheid campaign within the Muslim community.

Muslims entered the most recent phase of South Africa as a very articulate and organised group. In spite of their small numbers, the Islamic presence is felt in all sections of South African society. The application of Muslim Personal Law, greater media coverage of Islamic events, and the sheer presence of Muslims at all levels of government, are signs that Muslims enjoy greater prominence in society than ever before.

Muslims are divided in terms of their political allegiance. No single party enjoys their undivided support, including the Islamic parties that were formed to contest the first democratic elections in 1994. A lively debate, which can sometimes be acrimonious, rages about the new state. Many *ʿulamāʾ* and activists like Achmat Cassiem argue that the Muslim community should vigorously maintain its independence and authority in the service of a pure Islamic order. Dissident voices from the Call of Islam and the Muslim Youth Movement respond that an Islamic ethos can be created through and within the development of a new South African nation. For the vast majority of Muslims, however, these debates do not restrain their political expressions within trade unions, professional organisations and trade organisation.

SOYŪRGHĀL, a term with the primitive meaning in Mongolian of "favour" or "reward granted by the ruler to someone, sometimes of a hereditary nature" (Doerfer, *Türkische und mongolische Elemente in Neupersischen*, i, 351 no. 228). *Soyūrghāl kardan* is used synonymously with *soyurghamish kardan* "to grant a favour". The plural (*soyūrghālāt*) is often associated with such words as *ʿawāṭif, tashrīfāt* and *inʿāmāt*, "favours", "presents" (see e.g. Muḥammad b. Hindūshāh Nakhdjiwānī, *Dastūr al-kātib*, ed. A.A. Alizade, Moscow, i, 1964, i/2, 1971, ii, 1976, index, and Niẓām al-Dīn Shāmī, *Ẓafar-nāma*, ed. F. Tauer, Prague 1937-56, i, 107). In the course of time, *soyūrghāl* came to be used to designate various grants formerly known as

iḳṭāʿ. There is, however, a certain lack of precision in the use of the term (see H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 97-111, for a discussion of it). The *soyūrg̲h̲āl* was invariably a personal grant.

It is not always easy to decide whether *soyūrg̲h̲āl* is being used in the sources for the Īlk̲h̲ānate and Tīmūrid periods in the sense of "favour" or more specifically as a provincial grant (see e.g. Öld̲j̲eytü's grant of Asadābād near Hamadān to Āy Dog̲h̲dī, *wilāyat-i Asadābād-rā bi Āy Dog̲h̲dī soyūrg̲h̲āl farmūd*, Ḥāfiẓ Abrū, *D̲h̲ayl-i d̲j̲āmiʿ al-tawārīk̲h̲-i ras̲h̲īdī*, ed. K̲h̲ān Bābā Bayānī, Tehran AHS 1350/1971, 95; and Abaḳa's grant of Fīrūzān and D̲j̲urbād̲h̲agān to Yūsuf S̲h̲āh, Atabeg of Luristān, *Fīrūzān wa D̲j̲urbād̲h̲agān-rā soyūrg̲h̲āl-i ū farmūd*, Muʿīn al-Dīn Naṭanzī, *Muntak̲h̲ab al-tawārīk̲h̲*, ed. J. Aubin, Tehran AHS 1336/1957, 45, and cf. *ibid.*, 206, 209. See also B. Spuler, *Mongolen*[4] Berlin 1985, 275).

In the 9th/15th and 10th/16th centuries, *soyūrg̲h̲āl* is sometimes found in conjunction with the term *hūdabarī* (see Doerfer, iv, nos. 396, 400-1). ʿAbd al-Razzāḳ Samarḳandī states that *soyūrg̲h̲āls* were renewed annually by Tīmūr's *dīwān* unless they were *hūdabarī* (*Maṭlaʿ al-saʿdayn*, ed. Muḥammad S̲h̲afīʿ, Lahore 1949, ii, 1037. See also Isfizārī, *Rawḍāt al-d̲j̲annāt*, ed. Muḥammad Kāẓim Imām, Tehran AHS 1339/1960, ii, 436, and Hosein Modarressi Tabataba'i, *Farmānhā-yi Turkumānān-i Ḳarā Ḳoyunlu wa Ak Koyunlu*, Ḳum AHS 1352/1973-4, 71, n. 1). The phrase *bi ḳarār-i hūdabarī* in a *farmān* dated 893/1488 in idem, 103, clearly has the sense "on a permanent basis".

Under the Tīmūrids, the *soyūrg̲h̲āl* in the sense of a provincial grant was not clearly distinguished from the *tuyūl* [*q.v.*]. Both were used to signify the grant of a district or provincial government or its taxes, with or without immunities. ʿAbd al-Razzāḳ records the grant of Ḥiṣār S̲h̲ādamān to Mīrzā Muḥammad D̲j̲ahāngīr in 812/1409-10 as a *soyūrg̲h̲āl* (*Maṭlaʿ al-saʿdayn*, i, 148) and the grant of Sīstān to Amīr K̲h̲alīl as a *soyūrg̲h̲āl* in 859/1455 (*ibid.*, ii, 1084). In either case, the phrase *bi-rasm-i soyūrg̲h̲āl* is used. This could simply mean "by way of a favour/gift", but it is more likely that the term *soyūrg̲h̲āl* is used here in the specific sense of a grant of a district rather than in the general sense of "favour" (cf. also Niẓām al-Dīn S̲h̲āmī's statement that Tīmūr granted the district (*mawḍiʿ*) of Gāwkūris̲h̲ to Mubas̲h̲s̲h̲ir Bahādur as a permanent *soyūrg̲h̲āl* (*soyūrg̲h̲āl-i abadī*) as a reward for his courage in battle in 786/1384-5 against Amīr Walī, the ruler of Māzandarān, *Ẓafar-nāma*, i, 95).

A document issued by D̲j̲ahāns̲h̲āh Ḳara Ḳoyunlu, dated 857/1453, informs the *kalāntars*, *kadk̲h̲udās* and subjects of D̲j̲ūlāh (Julfa) that their taxes (*māl wa mutawad̲j̲d̲j̲ihāt*) had been granted to S̲h̲ayk̲h̲ Darā'ī as a *soyūrg̲h̲āl* from the beginning of the Year of the Hen and instructs them to consider him as their governor (*ḥākim wa dārūg̲h̲a*). "He was to present himself (*ḥāḍir gardānad*) with equipment (*yarāḳ*) and followers (*nawkar*) at the royal camp on the issue of a royal order" (Busse, 149-50. The document is also published by Modarressi Tabataba'i in *Farmānhā-yi Turkamānān*, 25-6, with the reading *ḥāḍir gardānand*, which would mean that the *kalāntars*, etc. were to present themselves at the royal camp). A document issued by S̲h̲āh ʿAbbās, dated 1019/1611, would seem to confirm Busse's reading. It grants the *ulkā* of Dizmār and its dependencies to Burhān al-Dīn, the *k̲h̲alīfa* of the Ṣūfīs of Dizmār on the same terms as it had been held by his father Ilyās K̲h̲alīfa. The *kadk̲h̲udās* and peasants were to pay their taxes (*māl wa wud̲j̲ūhāt*) to him and to refer to him any disputes which might occur between them except cases of murder (*siwā-yi k̲h̲ūn*), and the Ṣūfīs of Dizmār and Uzumdil were to present themselves at his call when he undertook royal service, as had been the custom under his father. The *tuyūldārān* and officials (*ʿummāl*) of Ād̲h̲arbāyd̲j̲ān, especially in the *ulkā* of Dizmār, were not to interfere in his *soyūrg̲h̲āl* and *tuyūl* in any way, or to collect any dues from which, according to the decree of the late shah, the *soyūrg̲h̲āls* of the Ṣūfīs were exempt (Sarhang Bāyburdī, *Tārīk̲h̲-i Arasbārān*, Tehran AHS 1341/1962, 160). Another document dated 1113/1702 issued by S̲h̲āh Sulṭān Ḥusayn (first described by N. Khanikoff, in *Mélanges Asiatiques*, iii/1, St. Petersburg 1857, 70-4) is quoted by Minorsky. It confirms the transfer, as requested by Bāyandur Sulṭān, of a *soyūrg̲h̲āl* consisting of a sum on the revenue of the Dizmār district to his son Muḥammad Ḳāsim Beg on the same conditions as it had been held by Maḥmūd Sulṭān, Bāyandur Sulṭān's father, namely that he should provide seven men at the shah's call (*A Soyūrg̲h̲āl of Qāsim b. Jahāngīr Aq-qoyunlu (903/1498)*, in *BSOS*, ix/4 [1938], 959). Such grants were normally called *tuyūls* under the Ṣafawids (cf. the *tuyūl* granted to Lāčīn Sulṭān in 1110/1698, see Lambton, *Landlord and peasant*, 109-10).

Under the White Sheep Turkomans, the grant of districts with immunities was still known as a *soyūrg̲h̲āl*. An example of this is Ḳāsim Beg's grant to Isfandiyār Beg, dated 903/1497-8, for the *ulkā* of Egil, which was his home-ground (*ūd̲j̲āḳ*), and the villages of Bāg̲h̲īn and Hīnī as a "permanent *soyūrg̲h̲āl* and permanent gift" with immunity from the entry of government officials (*dar basta*) and from a great variety of dues (Modarressi Tabataba'i, *Farmānhā-yi turkamānān*, 113-16; see also Minorsky, *op. cit.*). Increasingly under the White Sheep and the Ṣafawids, the term *soyūrg̲h̲āl* appears to have been applied to pensions, either in the form of a money grant on the taxes or a grant of immunity from the interference of government officials in land belonging to the beneficiary, who was frequently a member of the religious classes. It is not clear how they differed from the grants of immunity known as *muʿāfī* and *musallamī* unless it was that the latter were temporary (but renewable) grants while *soyūrg̲h̲āls* were life grants or hereditary grants. They were essentially grants of "grace", retaining the original sense of "favour" or "gift" and phrases such as *soyūrg̲h̲āl-i abadī wa iḥsān-i sarmadī* occur in the documents (cf. the documents, dated 1067/1656 and 1115/1704, quoted by Lambton, *Two Ṣafavid soyūrghāls*, in *BSOAS* xiv/1 [1952], 44-54). In the *farmān* issued by Yaʿḳūb Beg in 893/1488 granting immunity from land taxes to the *wakfī* lands of the Manṣūriyya *madrasa* in S̲h̲īrāz, the founder G̲h̲iyāt̲h̲ al-Dīn Manṣūr is given as a *soyūrg̲h̲āl* 3 *tūmāns*, made up of 9,000 dīnārs in cash and 2 *tūmāns* and 1,000 dīnārs in kind (Modarressi Tabataba'i, *op. cit.*, 104).

A *soyūrg̲h̲āl* dated 875/1471 issued by Uzun Ḥasan in favour of the sayyid ʿAbd al-G̲h̲affār grants him permanent immunity from land and other taxes (*māl wa mutawad̲j̲d̲j̲ihāt-i dīwānī*) and dues in one of the districts of Rūdiḳāt belonging to Tabrīz (Busse, 151-3, also in Modarressi Tabataba'i, 74-6). It is described as an *inʿām-i abadī wa soyūrg̲h̲āl-i sarmadī* (152), the implication of "favour" or "gift" being thus retained. A *farmān* of Ṭahmāsp I, dated 966/1558-9 shows, if it is authentic, that *soyūrg̲h̲āls* were, or might be, hereditary. The grant is to the descendants of S̲h̲ayk̲h̲ Zāhid-i Gīlānī. It gives them the taxes of D̲j̲ūra, Mād̲j̲ūra and Ūranḳād in Mug̲h̲ānāt as a permanent

soyūrghāl (*soyūrghāl-i abadī wa iḥsān-i sarmadī*), thus implying, as in the case of the grant to ʿAbd al-Ghaffār, that the grant was a favour, and also that these districts had been held in hereditary succession by the Zāhīdī Sayyids. It also mentions that the grant had been reaffirmed in a document (*wathīka*) dated 888/1483-4 (Shaykh Ḥusayn Zāhīdī, *Silsilat al-nasab-i ṣafawī*, Iranshahr Publications No. 6, Berlin 1924-5, 103-5).

The *Tārīkh-i ʿālamārā-yi amīnī* of Faḍl Allāh Rūzbihān Khundjī Iṣfahānī throws some light on Aḳ Ḳoyunlu practice in ʿIrāḳ and Fārs in the years 894-6/1489-90. From this account it would seem that *soyūrghāls* were numerous and held mainly by the *ʿulamāʾ* and learned men. Ḳāḍī ʿĪsā, Yaʿḳūb Beg's *ṣadr*, as part of the reforms he had planned in order, at least nominally, to reimpose *sharʿī* government, determined to suspend *ḥashwī* and *khardjī soyūrghāls* pending a reassessment of the value of the grants and measurement of the land so held. *Khardjī soyūrghāls* were presumably granted for sustenance, and may have been simply money grants, while *ḥashwī soyūrghāls* may conceivably have been immunities on land which the beneficiaries owned or which had been granted to them. The *soyūrghāls* were to the tune of 1,000 *tūmāns* or more and held by *ʿulamāʾ*; some of whom were very poor. According to Faḍl Allāh, it was common for the beneficiaries to borrow money on the security of the *soyūrghāls* before they fell due. He alleges that the officials sent to Fārs to carry out Ḳāḍī ʿĪsā's plan committed many abuses and much tyranny, such that those whose *soyūrghāls* were suspended suffered great hardship. Suddenly events were interrupted by the death of Yaʿḳūb Beg from pestilence in 896/1490, and no more seems to have been heard of Ḳāḍī ʿĪsā's plans. He fell from power and was hanged (*Tārīkh-i ʿālamārā-yi amīnī. Persia in A.D. 1478-1490*, ed. J.E. Woods with the abridged tr. by Vladimir Minorsky, *Persia in A.D. 1478-1490, Turkmenica* 12, London 1992, and see also Minorsky, *The Aq-Qoyunlu and land reforms*, in *BSOAS*, xvii/3 [1995], 451-8). The precise details of these events are obscure, but there are indications that one of the reasons for Ḳāḍī ʿĪsā's attempted reform was the need to provide money for the army. If this is so, it would suggest that revenue from the land, which according to *sharʿī* law could be spent on the army, was being diverted into private hands.

Gradually, the terms *soyūrghāl* and *tuyūl* were differentiated. Generally speaking, the *tuyūl* was a temporary grant, probably on state lands, while the *soyūrghāl* was a life or hereditary grant, probably mainly on crown land but also on *waḳf* land and privately-owned land. But the distinction between them was by no means hard and fast in practice. Under the Ṣafawids and occasionally under the Ḳādjārs, the terms appear to have been used synonymously. A document issued by Ṭahmāsp I, dated 943/1528, granting immunities to Ḳarača Muḥammad, the royal *rikābdār*, states that he held the village of Raz in Mishkīn as his *tuyūl* and *soyūrghāl* (G. Hermann, *Ein Erlass Tahmāsps I. von 934/1528*, in *ZDMG*, cxxxix 1 [1989], 105). Hermann suggests that this may mean that the beneficiary received tax immunities as a *tuyūl* in return for services performed, and that the *soyūrghāl* meant that he would enjoy these privileges, not simply while he was performing the services demanded of him, but during his lifetime (108). This may be so, but in the case of Fatḥ ʿAlī Shāh's grant to Yūsuf Khān Gurdjī of his estates (*raḳabāt*) as a permanent *tuyūl* (*tuyūl-i abadī*) and permanent *soyūrghāl* (*soyūrghāl-i sarmadī*) in 1244/1828-9, the terms appear to be used synonymously (Mīrkhʷānd, *Rawḍat al-ṣafā*, Tehran AHS 1339/1960-1, ix, 704).

For the Ṣafawid period many *soyūrghāl* documents are available (see B.G. Fragner, *Repertorium persischer Urkunden*, Freiburg im Br. 1980). They are mostly grants of immunities to members of the religious classes. A typical example is the grant by Ismāʿīl I, dated 913/1507-8, confirming the *soyūrghāls* and immunities (*musallamāt wa mutaʿarrifāt*) on the properties belonging to Sayyid Amīr Naʿīmā and his brothers and nephews according to decrees issued by former sultans (*Rāhnamā-yi kitāb*, year 11, no. 6, [Shahrīvar 1347/September 1968], 324-5).

Several documents granting *soyūrghāls* on properties connected with the Ṣafawid shrine at Ardabīl in favour of officials and senators of the shrine have been published by B.G. Martin (*Seven Safawid documents*, in *Documents from Islamic chanceries*, ed. S.M. Stern, Oxford 1965). The first of these is a grant of 6,000 dīnārs by Ismāʿīl I on Kazadj in Khalkhāl as a permanent *soyūrghāl* to Kamāl al-Dīn Ḥusayn Ardabīlī, together with the villages of Awmāniḳ and Sulṭānābād, in the tax districts of Ardabīl, with immunities from taxes (*ibid.*, 180). Kazadj was one of the *raḳabāt* and exempted properties (*musallamiyyāt*) of the Ṣafawid shrine and was assessed at 45,000 Tabrīzī dīnārs. The *soyūrghāl* was thus a small proportion of the total revenue. Another document, dated 992/1584, issued by Muḥammad Khudābanda, states that the *bahradja* (i.e. the landlord's share of the crop) of Kazadj was the *soyūrghāl* of Mīr Sharīf, the chief servitor (*khādimbāshī*) of the shrine (*ibid.*, 193). A third document, dated 1000/1592, issued by Shāh ʿAbbās, states that Kazadj was the *soyūrghāl* of the descendants of Kamāl al-Dīn Ḥusayn Ardabīlī and that money had been wrongfully taken from the peasants of Kazadj by a certain Shāh Ḳulī Āḳā (*ibid.*, 196-7). A fourth document, dated 1016/1607, also issued by Shāh ʿAbbās, states that the *soyūrghāl* of the descendants of Kamāl al-Dīn amounted to 8 *tūmāns*, 8,390 dīnārs (*ibid.*, 201-2). This was a considerable increase on the sum originally granted to Kamāl al-Dīn. It appears from the document that the *soyūrghāls* of Ādharbāydjān had been suspended from the beginning of the year 1009/1600, but the descendants of Kamāl al-Dīn had requested the confirmation of their *soyūrghāl* and so it was restored. The reasons for the suspension of *soyūrghāls* in Ādharbāydjān is not mentioned, and the effectiveness of the measure is not known. Another instance of the suspension of *soyūrghāls* by Shāh ʿAbbās is recorded, when he ordered Allāhwirdī Khān, the *beglerbegī* of Fārs, to investigate the titles of those who held *soyūrghāls* and to resume those whose holders did not have a valid title (*Rāhnamā-yi kitāb*, iii, year 9, 349, quoted by Bāstānī Pārīzī, *Siyāsat wa iḳtiṣād-i ṣafawī*, Tehran AHS 1362/1983-4, 72).

Originally, under the Ṣafawids the grant of a *soyūrghāl* took the form of a *nishān*. Shāh ʿAbbās changed the procedure to a *parwānača* with the introductory formula *farmān-i humāyūn sharaf-i nafādh yāft* (K. Röhrborn, *Regierung und Verwaltung unter den Safawiden*, H der O, Abt. 1, 1 Bd. 6 Abschn, 5, Teil 1, Leiden-Köln 1979, 29. See also idem, *Staatskanzlei und Absolutismus im safawidischen Persien*, in *ZDMG*, cxxvii [1977], 311-43). The documents were sealed on the back with the royal (*humāyūn*) seal and the *sharaf-i nafādh* seal, while the *khatm* seal was placed in the margin at the end of the document (Ḳāʾim-Maḳāmī, *Muḳaddama-ī bar shinākht-i asnād-i tārīkhī*, Tehran AHS 1350/1971, 82), and the words *farmān-i humāyūn shud*, were inscribed in the form of a *ṭughrā* on the

document (*ibid.*, 194). *Soyūrghāls* were drafted by the *munshī al-mamālik* (*ibid.*, 254). Copies were kept in the royal registers (*dafātir-i khulūd*) in the royal secretariat (*ibid.*, 290; see also Minorsky, *Tadhkirat al-mulūk*, 71, 77).

A commission was paid by the beneficiary on receipt of a *soyūrghāl* to the *wakīl* of the supreme *dīwān* (*Tadhkirat al-mulūk*, 85) and to the *wazīr* of the supreme *dīwān* (*ibid.*, 86). The *ṣadr-i aʿẓam* received one-tenth (*ʿushr*) and one-twentieth of all *soyūrghāls*, i.e. 15% (*ibid.*, 86). It is not stated whether these commissions were once-only payments made at the time of issue or annual payments. The *nāẓir* of the royal secretariat and the keeper of the royal seal also received commissions (*ibid.*, 89) as did various other officials, presumably at the time of the issue of the grant.

It is not unlikely that in the disorders that occurred on the fall of the Ṣafawids, and from time to time thereafter in the 18th century, that many of those who held *soyūrghāls* converted them by usurpation into private property. However, under Nādir Shāh there seems to have been a tendency towards a resumption of *soyūrghāls* and *tuyūls* (Lambton, *Landlord and peasant in Persia*, 129). In the 19th century, the term *soyūrghāl* ceases to be widely used. Allowances and pensions continued to be granted, but they were no longer called *soyūrghāls*; where they involved grants of territory or immunities on landed property they were called *tuyūls*.

SPARTEL, a cape forming the extreme north-western point of Morocco and of Africa, 7 or 8 miles west of Tangier, the ancient Ampelusia Promontorium. Al-Idrīsī does not mention it; al-Bakrī knows of it as a hill jutting out into the sea, 30 miles from Arzila [see AṢĪLA] and 4 from Tangier, which has springs of fresh water and a mosque used as a *ribāṭ*. Opposite it on the coast of al-Andalus is the mountain of al-Agharr (= Ṭarf al-Agharr > Trafalgar). The name Ishbartāl (probably connected with the Latin *spartaria* = places overgrown with esparto) given it by al-Bakrī is not known to the natives.

ŚRI WIDJĀYA [see ZĀBADJ].

SRĪNAGAR, a historic city of Kashmīr and one of considerable antiquity (lat. 34° 08' N., long. 74° 50' E., altitude 1,600 m/5,250 ft), now the summer capital of the State of Jammu and Kashmir in the Indian Union (population 1981: 586,038, the great majority of them Muslims).

1. History.

According to the *Rādjatranginī*, the city was founded by Aśoka in 250 B.C. and became known as Srīnagarī, the city of Srī or Lakhshmī (the goddess of fortune). It stood at the site of the present village of Pandrethan, some 3 miles above Srīnagar on the road to Djammū. According to Kalhaṇa, the city contained lofty buildings reaching to the clouds. Srīnagar was the capital till about the middle of the 6th century A.D., when a new capital Pravarapura was founded, but Srīnagar continued to enjoy its existing position. Hiuen Tsang (Xuan-Zang), who visited Kashmīr in 631, mentions two capitals. Hindu rulers frequently transferred the capital from place to place (*Rādjatranginī*, Stein, 444-5). During Muslim rule, the city of Srīnagar was termed Kashmīr (Bernier, 397); Mīrzā Ḥaydar, Abu 'l-Faḍl and Djahāngīr, however, called it by its original name. The Muslim rulers founded a number of quarters in Srīnagar, known as *Rinčanpura*, *ʿAlāʾ al-Dīn pura*, *Ḳuṭb al-Dīn pura*, etc. In 1819 Srīnagar was conquered by Randjīt Singh, and the Sikh rulers restored its original name.

The Mughal rulers took a keen interest in the construction of buildings and the development of gardens in Srīnagar. Akbar reached Srīnagar on 21 Radjab 997/5 June 1589 for the first time. He ordered the construction of a bastioned stone wall enclosing the hill. During the time of Djahāngīr, there were about 800 gardens in the neighbourhood of the Dal lake (Stuart, *The gardens of the Great Moghul*, 153-79). Abu 'l-Faḍl remarks: "Srīnagar is a great city and has long been peopled ... Most of the houses are of wood, and some rise up to five storeys. On the roofs they plant tulips and other flowers, and in the spring these rival flower gardens" (*Akbar-nāma*, tr. iii, 827-8). Bernier refers to the valley as the "Paradise of the Indies". After the Mughals the Afghāns and the Sikhs ruled over Srīnagar. Moorcroft and Trebeck found Srīnagar "a confused mass of ill-favoured buildings" (*Travels*, ii, 127-8), where insanitary conditions and over-population often led to epidemics. Before the accession of the Māharādja Ranbīr Singh (*r.* 1856-85), Srīnagar had been destroyed by fire sixteen times. Urban improvement took place after 1886 when the first Municipality Act was passed.

In the Muslim religious life of the region, the following four developments are of special significance: (i) Rinčana, the first Muslim ruler of Kashmīr, built the first mosque in Srīnagar, known as *Bud.Masdjid*, on the site of a Buddhist temple. (ii) Sayyid ʿAlī Hamadānī, popularly known as *Shāh-i Hamadān* (d. 786/1385), established his mystical centre in Srīnagar, which became a focal point in the spread of Islam in Kashmīr. (iii) Sultan Sikandar b. Hindāl, called But-shikan (792-813/1390-1410 [*q.v.*]), built the Djāmiʿ Masdjid, and his son Zayn al-ʿĀbidīn built the *khānakāh* of Sayyid Muḥammad Madanī. (iv) In 1110/1699, the *mū-yi mubārak* (sacred hair of the Prophet) was brought to Srīnagar from Bidjāpur by a Kashmīrī merchant Khʷādja Nūr al-Dīn Ishbarī, and was placed in a mosque, which became known as Ḥaḍratbāl mosque; thereafter the Ḥaḍratbāl assumed a central place in Muslim religious life in Srīnagar.

The geographical location of Srīnagar added to its importance as a centre of trade and industry. According to Stein, Srīnagar enjoyed facilities of communications which no other place in the region could offer. The river Djhelam has been the main artery of communication. Equidistant from Djammū, Rawalpindi, Leh and Gilgit, Srīnagar commanded the trade routes between India and Central Asia. Under Sultan Zayn al-ʿĀbidīn, many new arts and crafts, like stone-polishing, stone-cutting, glass blowing, gold and silver leaf-making, papier-mâché, the weaving of shawls, carpet weaving and calico printing, were introduced into Srīnagar. The shawl industry became particularly famous; according to M. Dauvergne, it dates back to the time of Bābur. The first shawl which reached Europe was brought from Egypt by Napoleon. The enamel and metal-working of Srīnagar were famed. Beautiful ceilings of pine-wood, known as *khatam-band*, decorate houses and shrines. Zayn al-ʿĀbidīn's patronage attracted to Srīnagar master-craftsmen from Samarḳand, Bukhārā and Persia.

2. Monuments and gardens.

i. General considerations: The city of Srīnagar (also called, in the Muslim sources, Kashmīr, like the valley) is built along both banks of the river Djhelam (in Kashmīr called Behat; Sanskrit Vitastā) and covers also the area between the river and the Dal lake, tranversed by a net of canals. Integrated into this urban landscape of an unstable topography are two hills, the fortified Harī Parbat and the Takht-i Sulaymān (for a map see best Stein; also Bates, 353). The residential areas on both sides of the Djhelam are linked by wooden bridges (*kadal*), introduced in the Muslim period; one of the earliest being the Zayna Kadal, ascribed to Zayn al-ʿĀbidīn (823-75/1420-70) (Ṭabāṭabā'ī, fol. 91a; Stein, 153). The residential architecture, too, is essentially in wood and characterised by its multi-storeyed constructions, reflecting an ancient local tradition, alluded to in the *Rādjataranginī* (Kalhaṇa, iii, v. 359), and continued by Muslim builders. Zayn al-ʿĀbidīn's wooden palace had, according to Mīrzā Ḥaydar Dughlāt (429, cf. 425), as many as twelve storeys. In the Mughal period, however, the royal buildings and those of the well-to-do were constructed in stone (ʿInāyat Khān, tr., 125), a local grey lime stone which takes polish like marble. Stone was continuously used for the religious architecture of Kashmīr, but Muslim religious buildings were more often constructed in the vernacular wooden style (Bernier, 398). Characteristically, they are composed of a cubical body surmounted with a stepped pyramidal roof, topped by a spire sitting on an open pillared element; the form is used for both tomb-shrines (*ziyārat*) and mosques (figs. 1,2). Roofs are typically covered with birch and turf, and planted with tulips or irises, producing stunning effects during the time of their bloom (Djahāngīr, tr. ii, 144-5; ʿInāyat Khaān, tr., 125). The wooden constructions were highly susceptible to fires, bringing about frequent reconstructions, which causes problems in dating [see also HIND. vii. Architecture. xi. Kashmīr; MASDJID. II. B. Kashmīr].

ii. Sultanate. The earliest surviving buildings of the Muslim period are largely built of stone and brick. The oldest are found in the quarters around the Harī Parbat. The complex of Mad(g)īn (also Madanī) Ṣāḥib, situated in Zadibal, consists of a gate, tomb and mosque. The mosque (dated 848/1444-5) follows the basic vernacular wooden type (delineated above but for its main body, which is built in masonry (fig. 1), integrating elements of the pre-Muslim style of temple architecture, such as a portal with trefoil arches and fluted columns (front view in Nichols, pl. 58). The gate is a 17th century Mughal brick addition, robbed since 1918 of most of its excellent tile decoration (dated by some authors wrongly to the 15th century), brought here—according to the stylistic evidence—from Lāhawr, the Mughal centre of tile production; part of the tiles are kept today in the Pratāp Singh Museum of Srīnagar (Hirananda Shastri, *Annual progress report of the Archaeological Department Jammu and Kashmir State for the Vikrama year 1974 (A.D. 1917-18)*, 3; cf. Nichols, 78-81). The (heavily restored) tomb of the mother of Zayn al-ʿĀbidīn, designated also as the tomb of Zayn al-ʿĀbidīn or "Bādshāh," below Zayna Kadal, follows an entirely different style, imported from Khurāsān or Central Asia (fig. 4). The octagonal structure with angular projections at four of its corners topped by turret-like domed kiosks surrounding the central dome, (the interior dome being supported by a transition zone of 16 arches), shows a brick exterior decorated with small blue glazed moulded joint plugs (for this type of wall-facing in Central Asia, see L. Golombek and D. Wilber, *The Timurid architecture of Iran and Turan*, Princeton 1988, cat. no. 18), testifying to the Tīmūrid inclinations of its patron (for which see Abu 'l-Faḍl, *Ā'īn*, ii, tr. 383). The conspicuous *Khānakāh* of Shāh Hamadān (died in 786/1384 according to the inscription over the doorway), on the right bank of the Djhelam, represents, as it stands today, an elaboration of the basic vernacular wooden building type (often illustrated, e.g. Kak, pl. 6). The Djāmiʿ Masdjid, founded in 795/1392-3 (according to Djahāngīr, tr. ii, 142) on the site of the old city temple, and rebuilt several times, after being destroyed by fires, the latest in 1085/1674, integrates vernacular units as prayer hall and gates into a large courtyard mosque on a four-*īwān* plan, formed of wings with tall wooden pillars. (fig. 2; good plans and elevations of both monuments in Nichols). The southern gate of the Djāmiʿ Masdjid has an epigraphical edict of Shāh Djahān (1037-68/1628-58) (S. Moosvi, *Administering Kashmir. An imperial edict of Shāhjahān*, in *Aligarh Jnal. of Oriental Studies*, iii/2 [1986], 141-52).

iii. Mughal period. Mughal building activities began soon after the final conquest in 1586, when Akbar built fortifications for a new city, called Naganagari (Djonarādja, 426-7) or Nagar Nagar (inscription dated 1006/1597-8 on Kathī Darwāza; tr., Kak, 89) around the Harī Parbat. The citadel on the hill (*dawlat khāna-yi Kashmīr*) was completed by Djahāngīr (1014-37/1605-27) (*Tūzuk*, tr., ii, 139, 150-1) but altered in the later periods (fig. 3). Today it consists of two oblong enclosures, set at an angle to each other, of which the upper one seems to be the site of a garden laid out by Akbar, refashioned in 1620 and renamed Bāgh-i Nūr Afzā by Djahāngīr (ii, 151, 161-2); a building with traces of painted wall decoration was still standing there in 1986. Also of Djahāngīr's period is the Patthar Masdjid or Naw Masdjid in the city (fig. 5; plan in Koch, fig. 91) (according to its inscription, rescued in 1207/1792-3 from being used as a granary), which is an early example of a distinct Mughal imperial mosque type, with an oblong, arched prayer hall formed of bays arranged on a grid pattern and covered by vaults, which express the elaborate netted patterns of the period in the local stone. The mosque of Akhnūn Mullā Shāh (1061/1651, ʿInāyat Khān, 458; plan in Soundara Rajan, fig. 5) on the southern side of the

Harī Parbat, between the outer wall and the citadel, also introduces Mughal mainstream traditions (fig. 6). Its compact five-bay prayer hall is integrated into a courtyard building composed of three more wings with only partly interconnecting rooms; the plan has a close precursor in the mosque of Shaykh ʿAbd al-Nabī at Dihlī (983/1575-6; *ASI, Memoir*, ix [1921], pl. 2). The Harī Parbat mosque formed part of a larger complex to which belonged also the *ḥammām* situated to its north east (dated 1059/1649; tr. of inscription, Kak, 91), created—like the terraced Parī Maḥall outside of the city (fig. 7) by the famous Ḳādirī *Shaykh* Mullā Shāh Badakhshānī (Akhnūn Mullā Shāh) and his imperial disciples, Dārā Shukōh and Djahānārā [*q.vv.*], the children of Shāh Djahān [*q.v.*] (Koch, 96, 117; Asher, 215-6).

The glory of Srīnagar is its Mughal gardens, about which we are best informed by the historians of Shāh Djahān, who name about seventeen in the vicinity of the city, on the banks of the river, and in and around the Dal lake (Lāhawrī, i/2, 24 ff.; ʿInāyat Khān, 125-7). The most famous are the Shālīmār (fig. 8), Nishāṭ and Čashma-i Shāhī [see BŪSTAN. II. Mughal Gardens; MUGHALS. 7. Architecture]. Architecturally planned gardens of note usually fell back after the death of their owners to the emperor, who either kept them for himself or bestowed them on members of his family or the nobility. The same garden would thus pass through a chain of owners, which led to repeated remodelling and renaming. The gardens of Srīnagar fell into disuse during the Afghān (1752-1819) and Sikh periods (1819-46); restorations were carried out under the Dōgrās, in particular by Māharādja Ranbīr Singh (1856-85) assisted by his governor Wazīr Pannū (R.C. Kak, *Annual report on the Archaeological Department Jammu and Kashmir State for 1976 [A.D. 1920]*, 1), with much arbitrary rebuilding and alterations; their original outline, architecture, and planting still await systematic reconstruction.

Bibliography (including references given above): To date there is no systematic documentation of the Islamic architecture of Srīnagar; the information about its buildings and gardens has to be pieced together from original sources; from secondary literature, much of which is, however, outdated; and from on-the-spot investigation.

1. Original sources (in chronological order). Kalhaṇa, *Rādjataraṅgiṇī. A chronicle of the kings of Kaśmīr*, 2 vols., tr., introd. commentary and appendices by M.A. Stein, Bombay 1900, repr. An inscription on the Dāl lake*, in *JASBB*, xxv, nos. 71-3 (1922), 26-75 (contains also epigraphical material related to Srīnagar).

2. Studies. For the topography of pre-Muslim Srīnagar, see M.A. Stein, *Memoir on maps illustrating the ancient geography of Kashmir*, in *JASB*, lxviii (1899) (Extra no. 2), section iii, 1-232, which also contains information about the Muslim periods; for indigenous maps see S. Gole, *Indian maps and plans from earliest times to the advent of European surveys*, New Delhi 1989, 116 ff. The most useful general treatment is still R.C. Kak, *Ancient monuments of Kashmir*, London 1933, repr. New Delhi 1971; see also C.E. Bates, *A gazetteer of Kashmir*, 1893?, repr. New Delhi 1980; M. Kaul, *Kashmir. Hindu, Buddhist and Muslim architecture*, New Delhi 1971. For the vernacular style, see P. Brown, *Indian architecture (Islamic period)*, London 1942, 1956, repr. Bombay 1981, 80-3; J.R. Nichols, *Muhammadan architecture*, in *Marg*, viii/2 (1955), 76-92; M. Mangat Rai, *Wooden mosques of Kashmir*, in *Oriental art*, N.S. xiii/4 (1967), 263-70; M.N. Ganju, *Srinagar au bord de l'eau (Cachemire). Architectures en Inde*, Milan-Paris 1985, 30-5. For individual buildings discussed above, see Soundara Rajan, *Islam builds in India*, Delhi 1983; Ebba Koch, *Mughal architecture*, Munich 1991; Catherine B. Asher, *Architecture of Mughal India*, Cambridge-New York-Oakleigh 1992. The literature on the gardens is cited under BUSTĀN. II. Mughal Gardens; MUGHALS. 7. Architecture; and, since then, A. Petruccioli, *I giardini moghul del Kashmir*, in *Il giardino islamico*, Milan 1994. (EBBA KOCH)

ŚRĪRANGAPAṬṬANAM, Europeanised form SERINGAPATAM, a town of South India (lat. 12° 25' N., long. 76° 42' E.). In British India, it came within the princely state of Mysore [see MAHISUR, MAYSŪR], and is now in the Mysore District, the southernmost one of the Karnataka State of the Indian Union. It is situated on an island in the Cauvery River to the north-north-east of Mysore city.

Named after its shrine to the Hindu god Śri Raṅga (Viṣṇu), it became in the 17th century the capital of the Hindu Rādjās of Mysore and then, after 1761, of the Muslim sultans Ḥaydar ʿAlī and Tīpū Sulṭān [*q.vv.*]. The latter's opposition to the British brought about an attack on Seringapatam by Lord Cornwallis in 1792, and then in May 1799 Tīpū's capital was finally stormed by combined British forces under General Harris, and Tīpū killed.

The town's significant Islamic monuments include Tīpū's Masdjid-i ʿĀlī and the Daryā Dawlat garden and palace; for details, see MAHISUR. 2. Monuments. In 1971 the town had a population of 14,153.

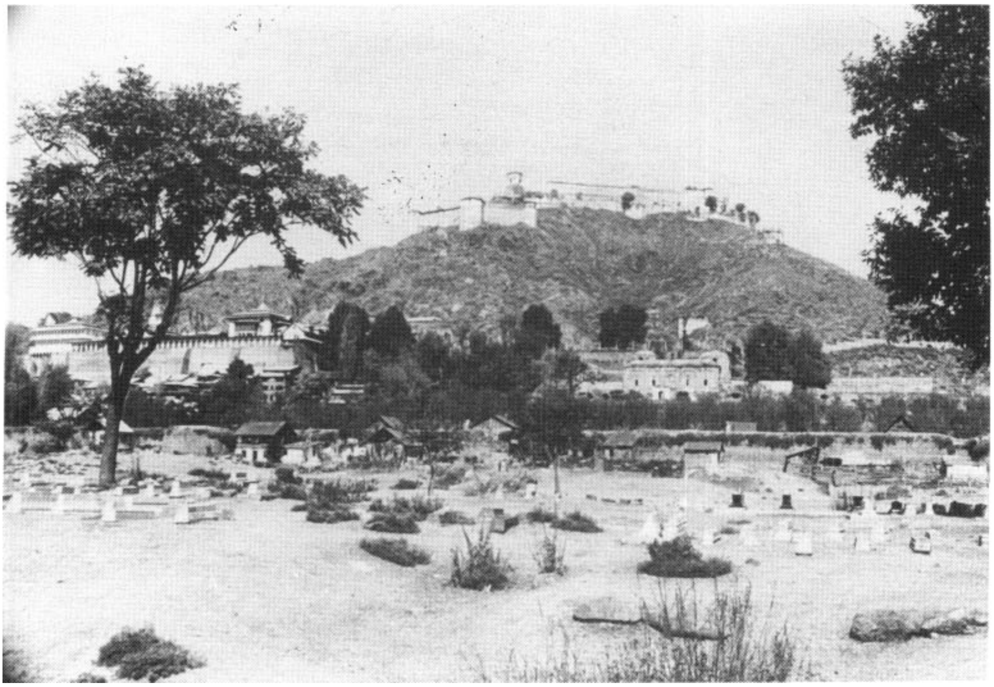
(C.E. BOSWORTH)

SU (T.), the common Turkish word for "water", originally *suv* (which explains the form *suy-* before vowel-initial possessive suffixes, e.g. *suyu* "his water"), the form still found in South-West Turkmen, in Ottoman orthography *ṣū*. The word is found frequently in the Orkhon inscriptions, often in the phrase *yer suv* = "territory", i.e. an area containing both land and water in the form of rivers, lakes, etc. (see Sir Gerald Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 783-4). In Central Asia and in the Turkicised northern tier of the Middle East, Su is a frequent component of hydronyms, e.g. Aḳ Ṣu, Ḳara Ṣu. (ED.)



ṢU BASHĪ (T.), an ancient title in Turkish tribal organisation meaning "commander of the army, troops". The first word was originally *sü*, with front vowel; no proof has as yet been adduced for

the suggestion that the word was originally a loan from Chinese (see Sir Gerard Clauson, *An etymological dict. of pre-thirteenth century Turkish*, Oxford 1972, 781).

Sü appears frequently in the Orkhon [*q.v.*] inscriptions and probably in the Yenisei ones also. In the former, we find the phrase *sü sülemek* "to make a military expedition", and the title *sü bashî* also occurs (see Talât Tekin, *A grammar of Orkhon Turkish*, Bloomington-The Hague 1968, index at 370). In Maḥmūd Kāshgharī [*q.v.*], *sü* is glossed as *djund* (*Dīwān lughāt al-turk*. Tkish. tr. Atalay, iii, 208-9, Eng. tr. R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-4, ii, 258), and in the Ḳîpčaḳ Turkish of the 8th/14th century, *sü bashî* is defined as *raʾs al-ʿaskar* (M.T. Houtsma, *Ein türkisch-arabisches Glossar*, Leiden 1894, Ar. text 14, 30). The spelling *ṣu* evolves later, apparently influenced by the quite separate word *ṣu(w)* "water" since we occasionally find at a later date the originally military title *sü bashî* for the official in charge of irrigation (i.e. the *mīr-āb*).

Some two centuries after the Orkhon Turkish usage, *sü bashî* is found amongst the Oghuz tribe in their pre-conversion-to-Islam days. In 309/922 the Arab traveller Ibn Faḍlān [*q.v.*] encountered in the steppes between thc Aral Sea and the Ural River the *ṣāḥib al-djaysh* of the Oghuz, clearly their *sü bashî*; he had under him subordinate military commanders, including the Ṭarkhān, the Yînāl and the Y.gh.l.z (A.Z.V. Togan, *Ibn Faḍlāns Reisebericht*, Leipzig 1929, §§ 34, 36, Ar. text 28-31, and Excursus § 34a, Ger. text 141-2). The late Sāmānid author al-Khʷārazmī [*q.v.*] likewise, in his *Mafātīḥ al-ʿulūm* defines *sü bashî* as *ṣāḥib al-djaysh* (C.E. Bosworth and Sir G. Clauson, *Al-Xwārazmī on the peoples of Central Asia*, in *JRAS* [1965], 11). Around this same period, according to Kāshgharī, the full title of Seldjük (*sic*) b. Duḳaḳ, eponymous ancestor of the Saldjūḳs, was Seldjük Sü Bashî (tr. Atalay, i, 478, tr. Dankoff and Kelly, i, 356).

Ṣu Bashî became a very well-known military and police title in the Ottoman empire, but it was found in Asia Minor as early as the time of the Saldjūḳs. In the 7th/13th century Ibn Bibi (ed. Houtsma, iv, 210) speaks of a *ṣu bashî* of the town of Kharpūt or Khartpert [*q.v.*] who was probably under the Rūm Saldjūḳ sultan of Ḳonya. Every town of any importance had a *ṣu bashî*; when ʿOthmān took possession of his first capital, Ḳaradja Ḥiṣār, one of his first acts was to appoint to the *ṣu bashîlîk* his cousin Alp Gündüz (*Tawārīkh-i āl-i ʿothmān*, ed. Giese, 7; Urudj Beg, ed. Babinger, 12).

As the Ottoman supremacy became confirmed, a differentiation of the functions and the position of the Ṣu Bashî in the provinces and in the capital was introduced. In the provinces, they obtained a position in the feudal organisation, which also proves the military origin of their functions. The Ṣu Bashîs had their own fiefs (*tîmār*), and they exercised police control over the other *sipāhīs* and the inhabitants of the district under their charge. Administratively, they were under the authority of an *ālāy beg*, who again was subject to the *sandjaḳ beg* [see SANDJAḲ]. These Ṣu Bashîs had many privileges, which varied according to the different provinces; they had the right to a certain amount of the imposts and the fines extorted from the people (see *Ḳānūn-nāme-yi āl-i ʿothmān*, ed. ʿĀrif Bey, Istanbul 1330, appendix to *TOEM*, xiii-xiv, 28).

In the capital, the Ṣu Bashî became one of the chief officers of police, who assisted the Čāwush Bashî, whose function is most like that of minister of Police. With the Muhzir (Muḥḍir) Agha and the ʿAses Bashî, he was responsible for the carrying out of all the judicial sentences and in general for obedience to the police regulations in the capital. Besides this, the title of Ṣu Bashî was used to designate a certain military rank in the cavalry corps of the ʿUlūfedjis.

(J.H. KRAMERS-[C.E. BOSWORTH])

SUʿĀWĪ, ʿALĪ (1839-78), journalist, controversial pamphleteer and political activist, born in Istanbul. His father Ḥüseyin Efendi is said to have instilled in him a dedication to social justice. Suʿāwī's early education was at a *rüshdiyye* (high school). He later studied the Islamic sciences at a *madrasa*. He held various administrative and teaching posts in Istanbul and Bursa. As a teacher in Plovdiv (now in Bulgaria), he was dismissed for allegedly fomenting civil disturbances.

Returning to Istanbul in 1866, he published articles in the newspaper *Mukhbir* ("The Reporter") and gained fame also as a fiery preacher (mainly at the Shehzāde Mosque). Because of his radical ideas, he was banished, in 1867, to Kastamonu, from where he escaped to Paris. With Nāmîḳ Kemāl [*q.v.*] and Ziyā (Ḍiyāʾ) (Pasha), he re-published *Mukhbir* in London as the official organ of the Young Ottoman Society. The following year, he fell out with Kemāl and Ziyā, and turned against the Young Ottomans. In 1869 he published, in Paris, a journal entitled *ʿUlūm* ("The Sciences"), which carried the subtitle "Encyclopaedic Turkish Journal". Later he went to Lyons, where he published a periodical called *Muwaḳḳaten* ("Temporarily").

Upon Murād V's accession to the throne (1876), ʿAlī Suʿāwī returned to Istanbul in 1876. After a short stint as Director of the Royal School of Galatasaray, he was dismissed in 1877 during the reign of ʿAbd ül-Ḥamīd II. On 20 May 1878, in an abortive attempt to bring Murād V back as sultan, he led a few hundred Balkan refugees in an assault against the Čirāghān Palace, where he was clubbed to death by Ḥasan Pasha, the police commandant for Beshiktash.

ʿAlī Suʿāwī's intellectual life, protean and full of paradoxes, failed to produce a synthesis. He oscillated between his loyalty to Islam (as faith and culture) and modernisation (as a civilising and secular process). He was at once a bold progressive and a strong reactionary. Like many of his contemporaries, he came under the influence of Enlightenment ideals, about which he was often critical. His Islamic orientation caused him to challenge European concepts of popular sovereignty and separation of powers. For the Ottoman state, he advocated a constitutional government and Turkish nationalism. Near the end of his life, he became enamored of Frederic LePlay's populist ideas and set up a *Semʿ u Ṭāʿat* ("Hearing and Obeying") Society dedicated to a counter-revolutionary programme.

One of the pioneers of Turkish nationalism and the Pan-Turkish ideology, ʿAlī Suʿāwī played a significant role in fostering patriotic pride in Central Asian Turkic culture and in the strengths of the Turkish language. He articulated these nationalistic views in several monographs, including *Khiwa en Mars* (1873). He also wrote dozens of pamphlets and books

(127, according to some sources), most of which remained unpublished and have been lost. *His Ḳāmūs ul-'ulūm we 'l-ma'ārif*, given with the journal *'Ulūm*, did not go beyond eighty pages; it is, however, considered one of the earliest attempts at an illustrated Ottoman encyclopaedia.

(Talat Sait Halman)

SU'AYR, preferably to be read as Sa'īr, although the former is more common, an idol of the pre-Islamic Arabian tribe of 'Anaza (Ibn al-Kalbī, 48-9), coming from *'.w.ṣ*, an Aramaean eponym denoting in the Bible (refs. in Gesenius-Buhl, 573) the land of Edom and the group of tribes living there (W. Robertson Smith, *Kinship and marriage in early Arabia*, 260-1; Nöldeke, in *ZDMG*, xl [1887], 183).

Sa'īr, which followed the same evolution as 'Awḍ, denotes in the Bible the land of Edom before its occupation by the sons of Esau. Gen. xxxvi.9 speaks of the hill country Se'ir, of the Horites, sons of Se'ir (v. 20), and of the land of Se'ir (v. 30). The names Yaḳdum and Yadhkur, the two sons of 'Anaza, whose descendants sacrificed to al-Sa'īr (Ibn al-Kalbī, 26), resemble in their formation those of Ya'ūsh and Ya'lam, two of the numerous sons of Esau (Gen. xxxvi.5, etc.). On this last, al-Layth says substantially that Esau ('Īṣū, Hebr. 'Ésāw), son of Isaac, son of Abraham, was buried in a small village called Sī'īr between Jerusalem and Hebron; he is the eponymous ancestor of the Rūm (*T'A*, iv, 414).

The 'Anaza and Bakr b. Wā'il (Ibn al-Kalbī, 25; *T'A*, iii, 276, v, 58) are said to have known and to have adopted this divinity in the course of their migrations as a guarantor of the pact uniting them. As a clan name, it appears in Liḥyanite as *s.'.r.* (see G. Ryckmans. *Noms propres*, i, 153). The text represented on camel-back at Palmyra, formerly read as *š.'.r(w)* (see D. Schlumberger, *La Palmyrène du Nord-Ouest*, Paris 1951, 154-5) is now, however, read as *š.'.d(w)* and related to Ar. *sa'd* "good fortune" (see D.R. Hillers and Eleonora Cussini, *Palmyrene Aramaic texts*, Baltimore 1996, 415).

ṢŪBA, traditionally but dubiously derived from Arabic *ṣawb*, lit. a patch or track, direction, pronounced *ṣūb* in India; whence the term *ṣūba* for province coined by the Mughal Emperor Akbar in 989/1580, when he created this territorial unit by putting a number of the existing *sarkārs* or territorial divisions under each *ṣūba*. Some of these *ṣūbas* like Bengal, Bihār or Gudjarāt represented historic, well-organised regions; others like Ilahabas (Allahābād) or Āgra were artificial creations. As Akbar extended his empire, the original twelve *ṣūbas* were augmented: Multān (with sub-*ṣūba* of Thaṭṭa), Kābul (with sub-*ṣūbas* of Kashmīr and Ḳandahār), Dāndesh (Khāndesh), Aḥmadnagar and Berār. Subsequent annexations under Shāh Djahān and Awrangzīb led to the creation of the *ṣūbas* of Bīdar, Bīdjāpur and Ḥaydarābād, while the *ṣūba* of Ḳandahār was lost to the Ṣafawids. Abu 'l-Faḍl's *Ā'īn-i Akbarī* (1003/1595) gives an extremely detailed account of the geography, resources, revenues, *zamīndār* castes, etc. of each *ṣūba*.

The administrative machinery of the *ṣūba* was designed by Akbar to have the writ of the central administration run most effectively. While the governor (*sipāhsālār, nāẓim*) was directly answerable to the Emperor, his colleagues, viz. the *dīwān* (head of revenue department), *bakhshī* (head of military administration and intelligence) and *ṣadr* (in charge of pious endowments) were not subordinate to him, but to the corresponding ministers at the centre. Moreover, during the heyday of the empire (late 10th and 11th century/late 16th and 17th century), the governors and other officers were frequently transferred from one *ṣūba* to another. Nor did the governor have full control over the assignment of *djāgīrs* [*q.v.*] to military commanders posted under him, which belonged to the jurisdiction of the central *Dīwān*. There was, at the same time, an element of flexibility in the *ṣūba* administration: The Deccan *ṣūbas* began to be grouped together under one *sipāhsālār* or viceroy from even Akbar's time onwards. This became ultimately the source of power of Niẓām al-Mulk Āṣaf Djāh [*q.v.*] in Ḥaydarābād during the 12th/18th century.

ṢŪBADĀR, the governor of a *ṣūba* [*q.v.*] or province in the Mughal empire, also known variously as *sipāhsālār, nāẓim* and *ṣāḥib ṣūba*. Though governors of large territories (e.g. Gudjarāt) were appointed before 989/1580, when Akbar organised the *ṣūbas* of his empire, a systematic form was given to the office only after this organisation. Depending upon the importance of the *ṣūba*, the office was one of great status, and only high nobles (*manṣabdārs* [see manṣab and manṣabdār]) were appointed to it. Akbar's experiment of appointing co-governors was soon abandoned. While the terms of office depended upon the Emperor's will, transfers were frequent; and until well into the 12th/18th century, the Mughal court did not allow provincial dynasts to develop out of its governors.

The *ṣūbadār* was not only appointed by an imperial *farmān*, but was directly subordinate to the Emperor. As *sipāhsālār*, he was the head of the army posted to the *ṣūba* and responsible for maintenance of law and order. He had a role, too, in administering criminal justice. But the financial and revenue administration, being in the hands of the *dīwān*, was outside his jurisdiction, since the *dīwān* of the *ṣūba* was directly subordinate to the ministry at the centre, the *dīwān-i a'lā*. So, too, was the maintenance of military contingents and the intelligence network, being under the *bakhshī* (responsible to the central *mīr bakhshī*). This limitation of authority was designed to prevent the *ṣūbadār* becoming too powerful. Djahāngīr abolished the *ṣūbadār*'s privilege of awarding capital punishment, and prohibited any observance that might smack of royal court ritual. Constraints on the *ṣūbadār*'s authority, however, began to disappear in the 12th/18th century after the death of Awrangzīb.

SUBAY' (or Sabay'), Banū, the name of a Bedouin tribe of al-'Āriḍ [*q.v.*], the central district of Nadjd [*q.v.*; see also al-kharj] in modern Saudi Arabia. They live in and around the oasis of al-Ḥā'ir,

also called Ḥāʾir Subayʿ or Ḥāʾir al-Aʿizza, a dominant section of the Banū Subayʿ. Al-Ḥāʾir lies south-south-east of al-Riyāḍ [*q.v.*], at the junction of Wādī Ḥanīfa [*q.v.*] and the valleys Luḥā (sometimes misspelled as al-Ḥā) and Buʾaydja' (the lower stretch of al-Awsaṭ). The valley of al-ʿAtk [*q.v.*] is regarded as lying within the range of the Banū Subayʿ and the Banū al-Suhul, while the sweet water wells of Ḥafar al-ʿAtk belong to the Khudrān, a group consisting of the al-Nabaṭa and the al-ʿUraynāt, both sections of the Banū Subayʿ. The latter are also found in the borderlands between al-Ḥidjāz and Nadjd [see the map in AL-ʿARAB, Djazīrat], while their western section regard the oasis of al-Khurma [*q.v.*] as their capital. They are mentioned among the opponents of the al-Dawāsir [*q.v.*].

AL-ṢUBAYBA, a large castle, popularly known as Ḳalʿat Namrūd, located on a mountain top near the western slopes of the Djawlān [*q.v.*], some 2 km to the east of the city of Bāniyās [*q.v.*].

It was traditionally believed by modern scholars that the castle was originally built by the Franks, during the years when they controlled Bāniyās (1130-2, 1140-64), but recent research has shown that it was first constructed by the minor Ayyūbid prince of the region, al-ʿAzīz ʿUthmān b. al-ʿĀdil b. Ayyūb, in 625/1288 (see the foundation inscription in *RCEA*, no. 3984, and the evidence provided by Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān*, viii, Ḥaydarābād 1951, 678). The first stage of the construction work is represented by the imposing keep on the eastern side of the present-day structure, and may well have been instigated by al-ʿAzīz's brother, the ruler of Damascus al-Muʿaẓẓam ʿĪsā [*q.v.*]. It has been convincingly suggested that the impetus for the establishment of the fort was the desire of al-Muʿaẓẓam, who was locked in a struggle with his brother al-Kāmil Muḥammad [*q.v.*] and likewise disturbed by reports of Frederick II's impending Crusade, to protect the approach to Damascus from the northern Palestinian coast (see R. Ellenblum, *Who built Qalʿat al-Ṣubayba?*, in *Dumbarton Oaks Papers*, xliii [1989], 103-12). Two years later, al-ʿAzīz ʿUthmān significantly enlarged the fort along the narrow ridge on which it is located, giving it its present-day elongated shape. In early 658/1260, the area came under the control of the Mongols, who destroyed part of the fortifications of al-Ṣubayba and looted the place (Abū Shāma, *Dhayl ʿalā ʾl-rawḍatayn*, Cairo 1947, 206). After the Mongol defeat at ʿAyn Djālūt [*q.v.*] later that year, the fortress and the surrounding region were incorporated into the Mamlūk Sultanate. Baybars (658-76/1260-77 [*q.v.*]) had the fort repaired, substantially enlarging the towers. Subsequently, it appears to have become the actual administrative centre for the *ʿamal* (region) of Bāniyās. With the eventual expulsion of the Crusaders from Syria and the ebbing of the Mongol threat, the fort lost much of its strategic importance. By the 9th/15th century, it appears to have been mainly used as a prison for high-ranking Mamlūk inmates. During the Ottoman period, the castle was repaired at least twice (1625, 1761), the first time by Fakhr al-Dīn Maʿn [*q.v.*], the second by a local potentate. The Ottoman governor of Damascus, however, soon had these latter repairs dismantled (A. al-Khālidī al-Ṣafadī, *Le Liban à l'epoque de Fahr-ed-Dīn ii*, ed. Rustum and Baoustany, Beirut 1936, 243; M. Breik, *Histoire du pays de Damas de 1720 à 1723*, ed. Constantin Bacha, Harissa 1930, 72). Important surveying work of the site was conducted by Deschamps in the 1930s, and in recent years extensive excavations and reconstruction work have been undertaken.

Amitai-Preiss, *An Arabic inscription at al-Ṣubayba (Qalʿat Namrūd) from the reign of Sultan Baybars*, forthcoming in *ʿAtiqot* which also discusses the history of the fort in the early Mamlūk period. (R. AMITAI-PREISS)

ṢUBAYḤĪ (as in "the Ṣubayḥī tribe") or Ṣubayḥa, the name of a tribal group inhabiting the area to the west and north-west of Aden [see ʿADAN] in the Yemen from Raʾs ʿImrān, a few kilometres to the west of Little Aden in the east, as far as Bāb al-Mandab in the west, and inland. They are divided into five main groups as follows: Khulayfī, ʿUṭirī, ʿĀṭifī, Muṣaffī and Buraymī. Their name is inherited from the ancient Dhū Aṣbaḥ of Ḥimyar. Writing in the 4th/10th century, al-Hamdānī, 53, says that Laḥdj has in it the Aṣābiḥ, the descendants of Aṣbaḥ b. ʿAmr b. Ḥārith Dhī Aṣbaḥ. He later, 97, notes that in his day the Ṣubayḥīs occupied an area more to the east and including Khanfar in Abyan [*q.v.*] which they shared with Banū Madjīd. Of the latter are the ʿAbādil, the ruling family of Laḥdj. In 1882 the Ṣubayḥī Engagement was ratified in Calcutta by the Viceroy and Governor-General himself, placing the ʿAbdalī sultan of Laḥdj in authority over the Ṣubayḥīs (text in Government of Bombay, *Arab tribes*, 161-3). In 1886, however, the Ṣubayḥīs were released from ʿAbdalī control after much hostility between the two (*ibid.*, 20), a hostility which was to continue, at least in the early years of the century. After the Protectorate treaties of the 1950s, the Ṣubayḥīs were placed nominally under the Laḥdj sultan, although they continued to show varying degrees of independence.

See also Government of Bombay, *Arab tribes in the vicinity of Aden*, Bombay 1909; ʿUmar Riḍā Kaḥḥāla, *Muʿdjam ḳabāʾil al-ʿArab*, ²Beirut 1982, ii, 632-3. (G.R. SMITH)

SUBAYTA, ISBAYTA, the Arabic name for a settlement in the Negev [see AL-NAKB] region of southern Palestine, which had the Nabataean name, rendered in Greek sources as Sobata (whence the Arabic one), Hebrew Shivta.

Its ruins lie 43 km/27 miles to the southwest of Beersheba at an altitude of some 350 m/1,150 feet. First described by E.H. Palmer in 1870, it has been extensively excavated since the 1930s. The town flourished in Late Nabataean, Late Roman and Byzantine times as an unwalled, essentially agricultural centre, it being away from the main trade routes. The exact date of the coming of the Muslim Arabs is unknown, but was probably in the later 630s. A mosque was built near the Southern Church, with care taken not to damage the adjacent basilica. Early Arab-Islamic coins have been found, but it seems that the town was abandoned in the 2nd/8th century or the 3rd/9th one at the latest.

Bibliography: A. Segal, *The Byzantine city of Shivta (Esbeita), Negev Desert, Israel*, Brit. Archaeol. Reports, Internat. Ser. 179, Oxford 1983; A. Negev, in E. Stern *et alii* (eds.), *The encyclopedia of archaeological excavations in the Holy Land*, New York 1993, iv, 1404-10. (C.E. Bosworth)

SUBAYṬILA, modern Tunisian Arabic pronunciation Sbīṭla, conventionally Sbeïtla, the Islamic and modern names of ancient Sufetula, a town of west-central Tunisia. Situated at over 450 m/1,500 feet above sea level, near abundant water resources and a wadi and surrounded by high plateaux, it is still today an important cross-roads between the north, west and south of the country.

From what is at present known, the ancient town (whose present successor only occupies some 20 ha, and this more than double that of the end of the 19th century) must have been closely linked with two other great cities: Cillium (Kasserine) and Ammaedra (Haydra), i.e. in the second half of the 1st century A.D. when the region, permanently involved in warfare against Berber tribes, was pacified by the Third Legion of Augustus under the Flavian emperors. The army was in large measure replaced by veterans who settled on parcels of land for colonisation, of which Subayṭila was probably part.

Like most of the great African cities, the town enjoyed under Septimius Severus (193-211), himself of African origin, a great urban and commercial development. In Christian times, Sufetula had, by 256 at the latest, a bishop who represented it at the Council of Carthage convoked by St. Cyprian. It was affected by persecutions, the most severe of which was that of Diocletian at the beginning of the 4th century and which gave rise to the Donatist movement, a schismatic movement which enlivened African Christianity all through the 4th century. Like many African towns, from this time onwards, Sufetula had two bishops, one Catholic and the other Donatist. Both parties in the town were represented at the council summoned by the Emperor Honorius at Carthage in 411 which condemned and isolated this schismatic movement.

With the Vandal invasion and occupation of 429, Sufetula formed part of the royal domain until the Byzantine reconquest in 533. From then onwards, it became a military centre under Justinian's policy of unifying the province and defending it against the more and more pressing threats from the Berber kingdoms. The Patricius Gregory, who succeeded Belisarius, the first Byzantine governor of Africa, chose Sufetula as his personal residence and as his military base. He speedily declared his independence of the emperor in Constantinople, and subsequently had to face the Muslim armies sent from Tripolitania and headed by ʿAbd Allāh b. al-Zubayr and then by ʿAbd Allāh Ibn Abī Sarḥ [*q.vv.*]. He was defeated at Sufetula in 26/647, thus opening a new page in the history of the region in particular and the whole land in general. It was only twenty years later that al-Ḳayrawān [*q.v.*], the first great Muslim foundation in the Maghrib, was created.

Subayṭila was not wholly abandoned in Islamic times, and life probably continued there until the 6th/12th century, as the large quantities of recently-discovered pottery fragments from this period shows.

Monuments. There are numerous classical remains, the most spectacular being the capitol with three separate temples, a monumental gate with the date 139 (reign of Antoninus Pius) and the public baths, restored, together with the theatre, in the 4th century. The monuments of Christian and Byzantine times are especially well preserved: an episcopal complex, with a church, cathedral, etc.; a second church built on a pagan temple, and two lesser ones; and a series of fortified houses to the south-east of the site, all from the 6th-7th centuries.

ṢUBḤ [see ṣalāt].

ṢUBḤ al-Bas̲h̲kunsiyya, so-called on account of her Basque origin, was a singing slave girl belonging to the second Umayyad caliph of al-Andalus, al-Ḥakam al-Mustanṣir (350-62/961-76 [*q.v.*]), who loved her dearly (calling her D̲j̲aʿfar) and to whom she bore two sons, thus becoming an *umm walad* and taking the title of *sayyida*. ʿAbd al-Raḥmān b. al-Ḥakam was born in 351/962; he was the first son of the caliph, who was already 46 years old at the time. Although ʿAbd al-Raḥmān died at an early age (359/969-70), his brother His̲h̲ām (born 354/965) guaranteed a successor to al-Mustanṣir, whose joy at the birth of this second son is recorded by the chroniclers, and illustrated by the pair of little ivory boxes made at Madīnat al-Zahrā' and dedicated in 355/966 to "the most beloved of fertile women", i.e. to Ṣubḥ.

In 356/966-7 she chose as administrator of her property and that of her children a young man who had been introduced to her by the *wazīr* D̲j̲aʿfar al-Muṣḥafī. This was the start of the impressive career of Ibn Abī ʿĀmir (al-Manṣūr) [*q.v.*], who succeeded in gaining the support of Ṣubḥ and of other women of the caliphal entourage. The relationship between Ṣubḥ and Ibn Abī ʿĀmir was the subject of malicious rumours, and satirical verse concerning them was widely circulated in Cordova. Public display of the lavish gifts offered to Ṣubḥ by Ibn Abī ʿĀmir contributed to the proliferation of these rumours, but the caliph continued to entrust to him official duties of the highest importance, while his love for Ṣubḥ and their son His̲h̲ām is acknowledged by all the Arabic sources. His̲h̲ām was proclaimed heir in 365/976, which reinforced his mother's position in the palace as well as that of Ibn Abī ʿĀmir. Ṣubḥ had other supporters, including her brother (Rā'iḳ or Fā'iḳ by name), who was a *mawlā* of the caliph and occupied posts in the civil and military administration (*ṣāḥib al-mak̲h̲zūn*, *ṣāḥib al-s̲h̲urṭa*, *ḳā'id*, etc.).

On the death of al-Ḥakam, however, the succession of His̲h̲ām, still a minor, was opposed by two senior palace officials, the *Ṣaḳāliba* [*q.v.*] Fā'iḳ and D̲j̲awd̲h̲ar. An alliance formed by Ṣubḥ, Ibn Abī ʿĀmir and al-Muṣḥafī guaranteed the succession of His̲h̲ām, which enabled them to exercise real power. According to some sources, it was Ṣubḥ who controlled affairs of state, through the intermediacy of Ibn Abī ʿĀmir, who conveyed her instructions to ministers and was the only one having access to the *sayyida*. But relations between them deteriorated when Ṣubḥ realised that Ibn Abī ʿĀmir had no intention of transferring power to His̲h̲ām on attainment of his majority. When Ibn Abī ʿĀmir fell sick, she took advantage of his absence and removed from the palace, with the aid of her brother, very substantial sums of money, intended no doubt to finance an armed *coup* against Ibn Abī ʿĀmir. But in this struggle for power, it was

the latter who emerged victorious. With the aid of his son ʿAbd al-Malik, he took control of the caliphal palace and the public treasury on 3 Djumādā I 386/24 May 996. ʿAbd al-Malik was unmoved by the abuse hurled at him by Ṣubḥ, who was forced to admit defeat. Hishām willingly acknowledged the authority of Ibn Abī ʿĀmir over the country, and in 387/997-8 he participated with his mother in a ceremony intended to renew his caliphal oath and the transfer of power into the hands of al-Manṣūr. Ṣubḥ died one year later, on 29 Dhu 'l-Hidjdja 389/11 December 999; it was al-Manṣūr who, bare-footed, led the funeral prayers.

(Manuela Marín)

ṢUBḤ-I AZAL, the sobriquet of Mīrzā Yaḥyā Nūrī (*ca.* 1830-1912), founder of the Azalī sect of Bābism [*q.v.*]. Yaḥyā's father was the calligrapher and civil servant, Mīrzā ʿAbbās Nūrī (d. 1839). In Yaḥyā's early childhood, Nūrī was dismissed from his governorship and dispossessed of much of his considerable wealth and property. Yaḥyā's mother died about 1844; by then he was living in Tehran under the tutelage of an older brother, Mīrzā Ḥusayn ʿAlī (Bahāʾ Allāh [*q.v.*]). In 1844, Ḥusayn ʿAlī and Yaḥyā, then about fourteen, were among the first converts to Bābism in the capital. Four years later, Yaḥyā tried unsuccessfully to join the Bābī insurgents at Shaykh Ṭabarsī in Māzandarān.

Between 1848 and 1852, Bābism underwent radical changes. The clerical leadership of the earliest period was largely eradicated in uprisings, and the Bāb himself was executed in 1850. Yaḥyā, variously known as Ṣubḥ-i Azal ("Morning of Eternity") and al-Thamar al-Azaliyya ("the Eternal Fruit"), was among the first of many lay claimants to revelation. He had been composing "inspired verses" for some time, and these had met the approval of the Bāb, who designated him his successor.

In 1852, he was involved in an abortive uprising in Tākur, planned to coincide with the unsuccessful attempt on the life of Nāṣir al-Dīn Shāh. Escaping to Baghdād, he established himself as head of the sect and drew large numbers of Bābīs to the region. His whereabouts were kept secret from all but a few, and he remained in contact with the Bābī community through intermediaries, in imitation of the seclusion of certain Shīʿī Imāms. During this period, numerous other claimants appeared, and Yaḥyā's policy of seclusion worked against him, particularly when the more-outgoing Ḥusayn ʿAlī emerged as the *de facto* leader of the Baghdād community and finally advanced his own claims to prophethood.

In 1863, most of the Baghdād Bābīs were removed by the Ottoman authorities to Edirne in western Turkey. Here, the breach between the brothers became overt and ended in a permanent schism between Azalī and Bahāʾī Bābīs. Disturbed by the open hostility between these groups, the authorities exiled them, sending Ḥusayn ʿAlī and his followers to Acre in Palestine and Yaḥyā to Cyprus.

Ṣubḥ-i Azal died in Famagusta on 29 April 1912. His appointed successor, Mīrzā Yaḥyā Dawlatābādī, chose the role of secular reformer over that of religious leader and before long Azalī Bābism became a spent force.

Yaḥyā wrote extensively, but few of his works have been published, and only a brief chronicle translated. Best known are the *Kitāb al-Nūr, al-Mustayḳiẓ* and the *Mutammim-i Bayān*, a continuation of the Bāb's unfinished Persian *Bayān*. These and other writings owe much to the obscure style of the Bāb, but add little to his thought.

Ṣubḥ-i Azal considered himself the conservator of primitive Bābism, with its minutely-observed legislation, metaphysical obfuscation and rejection of established political power. But, whereas the rival Bahāʾī faction held itself aloof from political and social involvement, several Azalī Bābīs came to play leading roles in the early reform movement in Persia. How far Ṣubḥ-i Azal may have encouraged or directed this development remains a matter for conjecture.

(D. MacEoin)

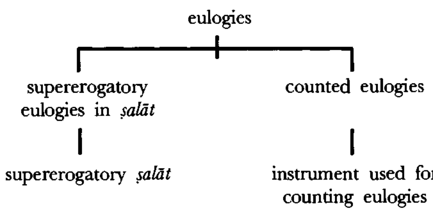
SUBḤA (a.), in Egyptian colloquial pronunciation *sibḥa*; in Persian and Muslim Indian usage, more often *tasbīḥ*, Ottoman Turkish *tesbīḥ*, modern *tespih*, rosary. It is used at present by nearly all classes of Muslims, except the Wahhābīs who disapprove of it as a *bidʿa* and who count the repetition of the sacred names on their hands. There is evidence for its having been used at first in Ṣūfī circles and among the lower classes (Goldziher, *Rosaire*, 296); opposition against it made itself heard as late as the 9th/15th century, when al-Suyūṭī composed an apology for it (Goldziher, *Vorlesungen über den Islam*, 1st ed. 165). At present, it is usually carried by the pilgrims (cf. Mez, *Die Renaissance des Islâms*, 441), by dervishes and by many ordinary believers. For its use by the Bektāshīs, see J.K. Birge, *The Bektashi order of dervishes*, London-Hartford 1937, 235 and plate 10.

The rosary consists of three groups of beads made of wood, bone, mother of pearl, etc. The groups are separated by two transversal beads of a larger size (*imām*), while a much larger piece serves as a kind of handle (*yad*; Snouck Hurgronje, in *Int. Arch. f.*

Ethnographie, i, 154 and plate xiv, no. 12). The number of beads within each group varies (e.g. 33 + 33 + 34 or 33 + 33 + 31); in the latter case, the *imāms* and the *yad* are reckoned as beads. The sum total of a hundred is in accordance with the number of God's 99 beautiful names [see AL-ASMĀʾ AL-ḤUSNĀ]. The rosary serves for the enumeration of these names; but it is also used for the counting of eulogies, *dhikr*s and the formulae at the end of the *ṣalāt*. Lane (*Manners and customs of the modern Egyptians*, chs. III, XXVIII) makes mention of a *subḥa* consisting of a thousand beads used in funeral ceremonies for the thrice one-thousand repetitions of the formula *lā ilāha illa 'llāh*.

Masābiḥ (pl. of *misbaḥa*) are mentioned as early as A.D. 800 (cf. Mez, *Die Renaissance des Islâms*, 318). Goldziher (*Vorlesungen*, 165) thought it certain that the rosary came from India and the Buddhist tradition to Western Asia. Still, Goldziher himself pointed to traditions mentioning the use of small stones, date-kernels, etc. for counting eulogies such as *takbīr, tahlīl, tasbīḥ*.

From such traditions the following may be mentioned: "on the authority of Saʿd b. Abī Waḳḳāṣ .... that he accompanied the Messenger of God, who went to visit a woman, who counted her eulogies by means of kernels or small stones lying before her. He said to her: Shall I tell you what is easier and more profitable? "Glory to God" according to the number of what he has created in the earth; "glory to God" according to what he has created in the heaven; "glory to God" according to the number of what is between these; "glory to God" according to what he will create. And in the same way *Allāh akbar, al-ḥamdu lillāhi* and "there is no might nor power except in God" (Abū Dāwūd, *Witr*, *bāb* 24; al-Tirmidhī, *Daʿawāt*, *bāb* 113).



The tendency of this tradition is elucidated by the following one: Ṣafiyya said: The Messenger of God entered while there were before me four thousand kernels which I used in reciting eulogies. I said: I use them in reciting eulogies. He answered: I will teach thee a still larger number. Say: "Glory to God" according to the number of what he has created (al-Tirmidhī, *Daʿawāt*, *bāb* 103).

To a different practice points the tradition according to which the Messenger of God "counted the *tasbīḥ*" (al-Nasāʾī, *Sahw*, *bāb* 97). The verb used here is *ʿaḳada*; its being translated by "to count" is based upon the fact that the lexicons give it this meaning among others (but *ʿaḳada* actually refers to finger-reckoning, in which certain positions of the fingers symbolise numbers). Probably, this is based in its turn upon traditions like the one just mentioned and like the following: "The Messenger of God said to us (the women of Medina): Practise *tasbīḥ, tahlīl* and *taḳdīs*, and count these eulogies on your fingers, for these will have to give account" (Abū Dāwūd, *Witr*, *bāb* 24; al-Tirmidhī, *Daʿawāt*, *bāb* 120). According to Goldziher, in these traditions the counting of eulogies on the fingers is contrasted with their being counted by means of stones, etc. There is, however, a tradition that makes it a matter of doubt whether *ʿaḳada* in connections like those mentioned has always the meaning of counting and not its proper sense of tying. One should take into account a tradition preserved by Ibn Saʿd (viii, 348), according to which Fāṭima bt. al-Ḥusayn used to say eulogies aided by threads in which she made knots (*bi-khuyūṭ maʿḳūd fīhā*).

Paralleling the Sunnī use of rosaries brought back from Mecca by the returning pilgrims, the Shīʿīs often use rosary beads made from the clay of Karbalāʾ [*q.v.*], where al-Ḥusayn was buried; these clay beads may on occasion be stained red in memory of the slain Imām's blood, or else green for his brother al-Ḥasan, whose body reputedly turned green after his alleged poisoning.

The term *subḥa* does not occur in classical Tradition in the meaning of rosary; it is often used in the sense of supererogatory *ṣalāt*, e.g. *subḥat al-ḍuḥā* (Muslim, *Musāfirūn*, trad. 81). Al-Nawawī explains the term by *nāfila* (commentary on Muslim's *Ṣaḥīḥ*, Cairo 1283, ii, 204). Ibn al-Athīr, *Nihāya*, s.v. asks how it is that the ideas of *nāfila* and *subḥa* coincide. He answers that eulogies (*subḥa*) are supererogatory additions to the obligatory *ṣalāt*s. So supererogatory *ṣalāt*s came to be called *subḥa*.

If Ibn al-Athīr's opinion is right, the semasiological evolution of *subḥa* took two directions:

(A.J. WENSINCK)

SUBḤĀN (A.), a term of Ḳurʾānic vocabulary, *maṣdar* from the root *s.b.ḥ.*, but recorded solely in the form of an exclamative (with inflection of the accusative case) and in a state of annexation, having as its complement *Allāh* (cf. Ḳurʾān, XII, 108; XXI, 22; XXIII, 91; XXVII, 8; etc.) or some substitute for *Allāh*: *rabb* (*subḥāna rabbī*, XVII, 93: *subḥāna rabbika*, XXXVII, 180; *subḥāna rabbinā*, XVII, 108), various periphrases (*subḥāna 'lladhī asrā bi- ʿabdihi laylan*, XVII, 1; *subḥāna 'lladhī bi-yadihi malakūtu kulli shayʾin*, XXXVI, 83), or pronouns of recollection (*subḥānaka*, II, 32, etc.; *subḥānahu*, II, 116, etc.). Most commonly, it is translated "Glory be to God!", but see below.

In regard to the meaning of the expression *subḥāna 'llāhi* and other related formulas, Islamic exegesis is unanimous: it is a case of exempting (*nazzaha*), purifying (*barraʾa*) and distancing (*baʿʿada*) God from any representation which could be made of Him and which does not conform to the absolute perfection which is His prerogative. It is "to exempt God from all that by which it is inappropriate to describe Him" (*tanzīhu 'llāhi taʿālā ʿan kulli mā lā yanbaghī lahu an yūṣafa bihi*) (*LʿA*, ed. Beirut, ii, 471a ll. 23-4; cf. Ibn Bābawayh, *K. al-Tawḥīd*, Nadjaf 1346/1387, 207 ll. 7-8), "to exempt Him from all imperfection" (Ibn Ḳutayba, *Gharīb al-Ḳurʾān*, Cairo 1378/1958, 8 ll. 2-4). The Prophet himself, according to some traditions, is said to have interpreted the formula *subḥāna 'llāhi* as meaning the act of exempting God from evil (*inzāhu/tanzīhu 'llāhi ʿani 'l-sūʾ*) or from all evil (*tanzīhu 'llāhi ʿan kulli sūʾ*); cf. al-Ṭabarī on Ḳurʾān, XVII, 1; ʿAbd al-Djabbār, *al-Mughnī*, XXb, 220 ll. 7-8; Abū Bakr al-Bayhaḳī, *K. al-Asmāʾ wa 'l-ṣifāt*, Cairo 1358/1939, 37 ll. 10-21).

This is clearly to be understood from the context in numerous instances in the Ḳurʾān, in particular when the expression *subḥāna 'llāhi* is followed by the

preposition *ʿan*, the sense then being that God is "high above", "far distant" from that which could be said of Him by "associators" and other disbelievers: *subḥāna 'llāhi ʿammā yaṣifūn* (XXIII, 91; XXXVII, 159), *subḥāna 'llāhi ʿammā yushrikūn* (LII, 43; LIX, 23). In this case *subḥān* appears to be a straightforward equivalent of *taʿālā*, with which it is furthermore occasionally associated (e.g. in the formula *subḥānahu wa-taʿālā ʿammā yushrikūn*, X, 18; XVI, 1; XXX, 40; XXXIX, 67). Almost always, when the question arises of attributing sons or daughters to God, or of accepting other divinities in addition to Him, the expression *subḥānahu!* appears, sometimes followed by *ʿan*, as an indignant exclamation, as if to "cleanse" God of a scandalous imputation (cf., e.g., II, 116; IV, 171; VI, 100; IX, 31; XVI, 57).

It may, however, be considered that such is not invariably the case. Thus in reference to the first verse of sūra XVII, *subḥāna 'lladhī asrā bi-ʿabdihi laylan* (and cf. also XXVII, 8; XXXVI, 36, 83; XLIII, 13), what could be seen here is a simple laudatory formula, a synonym of the expression *al-ḥamdu li-llāhi* "praise be to God"—a conclusion supported by the fact that *ḥamd* is often associated with the verb *sabbaḥa*, in formulae such as *sabbiḥ bi-ḥamdi rabbika* (XV, 98; XX, 130; XL, 55; etc.), *yusabbiḥūna bi-ḥamdi rabbihim* (XXXIX, 75; XL, 7; XLII, 5). Nevertheless, even in this case, the exegetes (al-Ṭabarī, al-Zamakhsharī, al-Rāzī, etc.) understand *subḥāna* in the sense of *tanzīh*. Thus on XVII, 1, al-Ṭabarī supplies the gloss *tanzīhan li-lladhī asrā bi-ʿabdihi wa-tabriʾatan lahu mimmā yaḳūlu fīhi 'l-mushrikūn*.

This presents a very difficult problem of translation. There can be no doubt, in view of what has said above, that formulae such as "Gloire à Dieu!" (Blachère), "Glory be to God!" (Arberry), "Gott sei gepriesen!" (Paret) as renderings of *subḥāna llāhi*, are not really adequate, even though they have the advantage of being clear and convenient. Hamidullah is closer to the truth in translating it by "Purity" (see his comment on II, 30), as indeed is Berque, who suggests "Transcendence". Unfortunately these two translations are alien-sounding, from a stylistic point of view, and are therefore not favoured. For his part, the writer of this article does not see a solution.

Bibliography: Given in the article; see also D. Gimaret, *Les noms divins en Islam*, Paris 1988, 202-3.

(D. Gimaret)

ṢUBḤĪ MEḤMED Efendi (d. 1182/1769), Ottoman historian, best known under his pseudonym Ṣubḥī. He came from an established family in state bureaucratic service. His father, Khalīl Fehmī Efendi, as *beylikdji* (head of the bureau of scribes of the Imperial Council) during the reign of Aḥmed III, saw to his son's training from an early age to join the ranks of the secretarial class. Throughout his adult life, Ṣubḥī held a series of high-ranking positions in the state bureaucracy and his experiences in office greatly influenced both the style and content of the history for whose composition he is chiefly remembered. In 1152/1739-40, upon his appointment as official court chronicler, Ṣubḥī retained his position as auditor in the Bureau of the Lesser *Awḳāf*. But his promotion (in Radjab 1156/late August-early September 1743) to his father's former post as *beylikdji*, with pressing demands on his time for the drafting of treaties and letters of commitment and intent (*temessük*) drawn up to consolidate the terms of agreements reached with foreign powers, made his relinquishment of the post of chronicler inevitable. He was succeeded in the latter office by ʿIzzī [*q.v.*].

The part of Ṣubḥī's history that corresponds to his own term as official court chronicler begins on folio 145b of the Istanbul edition of 1198/1783-4 (see *Bibl.*) with his account of the events of 1152/1739-40, while the last recorded events date from the period around the ʿĪd al-Fiṭr at the end of Ramaḍān 1156/early November 1743 (1198 edn., fols. 236b-238b). Ṣubḥī is greatly admired for the excellence and clarity of his prose style. As for the "original" part of his history covering the years 1152-5(6) [fols. 145b-212a (238b)] when Ṣubḥī was directly responsible for the recording of significant dynastic events, his history is a mine of information on a variety of topics. Of particular value (given his background and professional experience) are Ṣubḥī's remarks on the conduct of Ottoman diplomacy, and his accounts of the reception of foreign envoys in Istanbul. Ṣubḥī's history is an exceptionally detailed and reliable source for the complex diplomacy leading up to the conclusion of peace between Austria, Russia, and the Ottoman empire following the three-way war of 1736-9. It incorporates the full details of the articles of peace mutually agreed to on 14 Djumādā I 1152/18 September 1739 (1198 edn., fols. 163a-167a), but what gives his history a unique importance is the account he provides of ongoing negotiations, settlement of border disputes, and the monitoring and enforcement of the terms of peace after the Treaty of Belgrade. The verbatim transcripts (*süret*) of post-treaty commitments and undertakings provided in his history form a characteristic feature of Ṣubḥī's work (see the examples in *Bibl.*).

Ṣubḥī also reports on (and sometimes gives a verbatim record of) the content of the submissions of provincial governors received in Istanbul (cf. fol. 217a [year 1156]), *wurūd-i ḳāʾime-yi wālī-yi Baghdād Aḥmed Pasha*), and he carefully notes both the tenor of discussions in council and the nature of any responses sent back to the dispatcher (cf. fol. 222a-b). Another feature is his preoccupation with all aspects of state protocol (*teshrīfāt*), favouring in particular detailed description of receptions (many of which he personally attended) organised during the visits of foreign dignitaries to the capital. Thus he gives a full account of the mission to Istanbul of Nādir Shāh's envoy Ḥādjdjī Khān in 1154/1741 and provides an exhaustive list (cf. fols. 192b-193a) of the gifts brought from Persia for presentation to Sultan Maḥmūd I [*q.v.*]. In short, Ṣubḥī's history—published together with the histories of Samī and Shākir which relate the events of the first five years of Maḥmūd's reign—provides the most comprehensive and reliable account we possess of the formative years of Maḥmūd's rule.

Bibliography: *Taʾrīkh-i Samī we Shākir we Ṣubḥī*, Istanbul 1198/1784 (portion attributable to Ṣubḥī, fols. 72b-238b); Djemāl al-Dīn, *Āyīne-yi ẓurefāʾ*, Istanbul 1319/1901-2, 48-9; Meḥmed Thüreyyā, *SʿO*, iii, 220; *IA*, art. *Vekayiʿ nüvis* (B. Kütükoğlu). The following passages exemplify Ṣubḥī's use of diplomatic correspondence: fols. 167a-168b, year 1152, *süret-i mewādd-i temessük*; fols. 188a-189b, year 1153, *ṣinīrʾa dāʾir temessük süreti*; and fols. 237b and 237b-238a, year 1156, *mübādele-yi temessük bā-ketkhudā-yi Nemče* and *süret-i temessük-i mezbūr*.

(R. Murphey)

al-**SUBKĪ**, the *nisba* from the name of two small towns of Lower Egypt, in the mediaeval district of Manf [*q.v.*], now in the Manūfiyya *mudīriyya* or province, in the southwestern part of the Nile Delta. See ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda*, Būlāḳ 1305/1887-8, xii, 6-7; Muḥammad Ramzī, *al-Ḳāmūs al-djughrāfī li 'l-bilād al-miṣriyya*, Cairo 1953-68, ii/2, 217.

A. The mediaeval Subk known as Subk al-Ḍaḥḥāk (modern Subk al-Thalāth) was the place of origin of a celebrated family of Shāfiʿī *ʿulamāʾ* which flourished in Mamlūk times and of which the most outstanding figures were the *Shaykh al-Islām* Taḳī al-Dīn Abu ʾl-Ḥasan ʿAlī b. ʿAbd al-Kāfī (b. Ṣafar 683/April 1284, d. Djumādā II 756/June 1355) (no. 6 below) and his son the *Ḳāḍī ʾl-Ḳuḍāt* Tādj al-Dīn Abu ʾl-Naṣr ʿAbd al-Wahhāb (b. 727 or 728 or 729/1327-9, d. 7 Dhu ʾl-Ḥidjdja 771/2 July 1370) (no. 9 below). The significant members of the family are detailed below and appear in the genealogical table. For the family as a whole, see F. Wüstenfeld, *Die Academien der Araber und ihre Lehrer, nach Auszügen aus Ibn Schohba's Klassen der Schafeïten*, Göttingen 1837, 119, and the section on them in ʿAlī Mubārak, *op. cit.*, xii, 7-8.

1. Ṣadr al-Dīn Abū Zakariyyāʾ Yaḥyā b. Ḍiyāʾ al-Dīn ʿAlī, *Ḳāḍī* of al-Maḥalla [*q.v.*] and later *mudarris* at Cairo, died 725/1325 (Wüstenfeld, *Academien*, no. 183).

2. Taḳī al-Dīn Abu ʾl-Fatḥ Muḥammad b. ʿAbd al-Laṭīf, b. 704/1304-5, *mudarris* at Cairo and Damascus, d. 744/1344, author of a *Taʾrīkh*; his correspondence is in Ahlwardt, no. 8471, 24 (Wüstenfeld, *Academien*, no. 97; ʿAlī Mubārak, *Khiṭaṭ*, xii, 8).

3. Bahāʾ al-Dīn Abu ʾl-Baḳāʾ Muḥammad, b. 708, *mudarris*, *ḳāḍī* and *ḥākim* in Damascus and Cairo, *wakīl* of the sultan and *khaṭīb* of the Umayyad mosque in Damascus, d. 772/1370-1. He left three unfinished writings (Wüstenfeld, *Academien*, no. 52; ʿAlī Mubārak, *Khiṭaṭ*, xii, 8).

4. Walī al-Dīn Abū Dharr ʿAbd Allāh, b. 735/1334-5, *mudarris*, *ḳāḍī*, *khaṭīb* and financial officer in Damascus, d. 785/1383 (Wüstenfeld, *Academien*, no. 98).

5. Badr al-Dīn Abū ʿAbd Allāh Muḥammad, b. 741/1340-1, *mudarris*, *muftī* and *ḳāḍī* at Cairo, Damascus, etc., and *khaṭīb* at the Umayyad mosque. He became unpopular on account of the influence he allowed his son Djalāl al-Dīn to exercise over his affairs; d. 802 or 803/1399-1401 (Wüstenfeld, *Academien*, no. 53; ʿAli Mubārak, *Khiṭaṭ*, *loc. cit.*).

6. Taḳī al-Dīn Abu ʾl-Ḥasan ʿAlī studied in Cairo, then travelled to Damascus and performed the Pilgrimage, returning to become *mudarris* at the Manṣūriyya *madrasa* at the mosque of Ibn Ṭūlūn. He later became Chief *ḳāḍī* in Damascus and *khaṭīb* at the Umayyad Mosque, and taught at two *Dār al-Ḥadīths* there before returning to Egypt, where he eventually died. He was the author of some 150 works, of which those still extant are listed in Brockelmann, II², 106-7, S II, 102-4, and which covered such fields as law, a collection of *fatāwā, masāʾil wa-adjwiba*, poetry, etc. See on him the lengthy biography by his son Tādj al-Dīn in his *Ṭabaḳāt*, 1st ed. vi, 146-227, new ed. x, 139-338; Ibn al-ʿImād, *Shadharāt*, vi, 180-1; Ḥādjdjī Khalīfa, ed. Flügel, no. 8765; Wüstenfeld, *Academien*, no. 49; al-Ziriklī, *Aʿlām²*, v, 116; other sources in Brockelmann, S II, 102.

7. Bahāʾ al-Dīn Abū Ḥāmid Aḥmad b. Taḳī al-Dīn ʿAlī, b. 719/1319, *mudarris*, *muftī* and *ḳāḍī* in Cairo and Damascus, d. in Mecca 773/1371-2. He wrote (1) an unfinished commentary on *al-Ḥāwī* of al-Ḳazwīnī (cf. Brockelmann, I², 494); (2) a supplement to the unfinished commentary on the *Minhādj*-commentary of his father; (3) *Djamʿal-tanāḳid* or *al-Munāḳaḍāt* (Ḥādjdji Khalīfa, vi, 157); (4) *ʿArūs al-afrāḥ fī sharḥ talkhīṣ al-Miftāḥ* (cf. Brockelmann, I², 353-4; published in *Shurūḥ al-Talkhīṣ*); (5) an unfinished commentary on the *Mukhtaṣar* of the *Kāfiya* of Ibn al-Ḥādjib from al-Bayḍāwī (cf. Brockelmann, I², 370); (6) a *Ḳaṣīda* on the meaning of the word *ʿAyn* (Ahlwardt, no. 7065, 1 as also in 6973, 3 and in 7334); (7) a riddle-poem on the Nile (with the answer of Ṣalāḥ al-Dīn al-Ṣafadī thereupon; Ahlwardt, no. 7866, 1, also in 6111); (8) another poem by him; Ahlwardt, no. 8471, 28; (9) writings addressed to him by others; Ahlwardt, nos. 7869 and 8471, 24 (Wüstenfeld, *Academien*, no. 50; ʿAlī Mubārak, *Khiṭaṭ*, *loc. cit.*; Ḥādjdjī Khalīfa, no. 1899 al-Ziriklī, *Aʿlām²*, i, 171).

8. Djamāl al-Dīn Abu ʾl-Ṭayyib al-Ḥusayn b. Taḳī al-Dīn ʿAlī, b. 722/1322, *mudarris* in Cairo and Damascus, in the latter also deputy *ḳāḍī*; d. 755/1354, previously to his father. He wrote a book on people with the name of al-Ḥusayn b. ʿAli (Ḥādjdji Khalīfa, v, 159); his correspondence is listed in Ahlwardt, no. 8471, 24 (Wüstenfeld, *Academien*, no. 73; ʿAlī Mubārak, *Khiṭaṭ*, *loc. cit.*).

9. Tādj al-Dīn Abu ʾl-Naṣr b. Taḳī al-Dīn ʿAlī studied in Cairo and Damascus, and early became a *mudarris* in Damascus and *khaṭīb* at the Umayyad Mosque. In 756/1354 his father nominated him as *ḳāḍī*, the first of many spells of office thus. In 769/1368 he was imprisoned for 80 days on a charge of misappropriating the property of a minor, apparently unjustly, but released through the efforts of friends. He died soon afterwards of plague. The surviving ones of his many works are listed in Brockelmann, II², 108-10, S II, 105-7. See on him Ibn al-ʿImād, vi, 221-2; Ḥādjdjī Khalīfa, no. 8704; ʿAlī Mubārak, *Khiṭaṭ*, xii, 8; Wüstenfeld, *Academien*, 40; al-Ziriklī, iv, 385; other sources in Brockelmann, S II, 105.

Tādj al-Dīn al-Subkī's *magnum opus* in the eyes of Western scholars concerned with the religious and intellectual history of earlier Islam and, above all, the history and development of the Shāfiʿī law school [see SHĀFIʿIYYA], is his great biographical dictionary of Shāfiʿī scholars, the *Ṭabaḳāt al-shāfiʿiyya*, which exists in three versions of differing size, from the *kubrā* through the *wusṭā* down to the *ṣughrā* one (*kubrā* version first printed ed. Cairo 1323-4/1905-6, 6 vols., defective; new ed. Maḥmūd Muḥ. al-Ṭanāḥī and Muḥammad ʿAbd al-Fattāḥ al-Ḥilw, Cairo 1383-96/1964-76, 10 vols.). In a study of al-Subkī's underlying aims in compiling this work (which had been preceded by other *ṭabaḳāt* works on the scholars of this law school), George Makdisi has suggested that Tādj al-Dīn was especially following his predecessor of two centuries before in Damascus, Ibn ʿAsākir [*q.v.*], in the latter's *Tabyīn kadhib al-muftarī fī mā nusiba ilā ʾl-Imām Abi ʾl-Ḥasan al-Ashʿarī* in producing a work of Ashʿarī propaganda [see ASHʿARIYYA]. However, he continues, al-Subkī went further and was better qualified. He was defending al-Ashʿarī and the ideas attributed to him, with the Shāfiʿīs in general in his mind, as Ibn ʿAsākir was; he fully endorsed his predecessor's work, but, having superior qualifications as a *faḳīh* as well as a *muḥaddith*, he aimed at producing a work resting on broader foundations (explicitly describing his *Ṭabaḳāt* as concerned with history, *adab*, law and tradition). His work is thus indeed a treasury of literary and historical information as well as theologico-legal material. He hoped in this way to convince those Shāfiʿī adherents who were nevertheless hostile to the use of *kalām*, rational arguments in theology [see ʿILM AL-KALĀM], that Ashʿarī rationalism had a valid role, and that the ideal was a fusion in Shāfiʿism of traditionalism and rationalism which would then make it superior to all the other *madhhabs*; accordingly, al-Subkī's enemies here were such anthropomorphists as the Ḥanbalīs and also intransigent Shāfiʿī traditionalists who were blatantly anti-Ashʿarī. Although

  - Ṣadr al-Dīn Yaḥyā (1.)
    - 'Abd al-Laṭīf
      - Taḳī al-Dīn Muḥammad (2.)
    - Sadīd al-Dīn Abū Muhammad 'Abd al-Barr
      - Bahā' al-Dīn Muḥammad (3.)
        - Walī al-Dīn 'Abd Allāh (4.)
        - Badr al-Dīn Muḥammad (5.)
  - Zayn al-Dīn Abū Muhammad 'Abd al-Kāfī, d. 735/1334-5
    - Taḳī al-Dīn 'Alī (6.)
      - Bahā' al-Dīn Aḥmad (7.)
      - Djamāl al-Dīn al-Ḥusayn (8.)
      - Tādj al-Dīn 'Abd al-Wahhāb (9.)
      - Muḥammad (10.)

al-Subkī admits that *kalām* used wrongly can be dangerous, he asserts that the Imām Muḥammad al-Shāfi'ī [*q.v.*] himself used it, and that Shāfi'īsm and Ash'arism had always been inseparably linked. In his campaign against those purblind Shāfi'īs who refused to recognise this, he did not hesitate to discredit the attitudes of his own old teacher al-Dhahabī [*q.v.*]. See further, Makdisi, *Ash'arī and the Ash'arites in Islamic religious history*, in *SI*, xvii (1962), 37-80, xviii (1963), 19-39, esp. xvii, 57-79; on earlier *ṭabaḳāt* works, Shāfi'ī and others, see idem, *Ibn 'Aqīl et la resurgence de l'Islam traditionaliste au XI^e siècle*, Damascus 1963, 47-58.

That such a polemic on behalf of Ash'arism was still necessary in the 8th/14th century is, of course, an indication that Ash'arī rationalism had not, despite the passage of four centuries, secured a majority recognition amongst the adherents of Shāfi'ism; Tādj al-Dīn was apparently swimming against the tide. Such considerations as those discussed above need to be taken into account in any evaluation of the *Ṭabaḳāt al-shāfi'iyya*, as do others mentioned by Heinz Halm, that the compiler was concerned above all with scholars from the main centres of Shāfi'ī influence (Cairo, Damascus, Baghdād, Nīshāpūr and Marw), with little or no attention to other towns and regions where we know, e.g. from historical sources, that there were significant Shāfi'ī elements. Hence whole regions are either sketchily covered or not covered at all, such as Sīstān, Ādharbaydjān, pre-Ayyūbid Egypt and Yemen. See Halm, *Die Ausbreitung der šāfi'itischen Rechtsschule von den Anfängen bis zum 8./14. Jahrhundert*, Wiesbaden 1974, 11-14.

Another, slighter work of Tādj al-Dīn's which has been readily accessible to Western scholars has been his *Mu'īd al-ni'am wa-mubīd al-niḳam* (ed. D.W. Myhrman as *The restorer of favours and the restrainer of chastisements*, London 1908; ed. Muḥ. 'Alī al-Nadjdjār *et alii*, Cairo 1367/1948; slightly abbreviated German tr. O. Rescher, Constantinople 1925 = *Gesammelte Werke*, Abt. II, Bd. 2, 691-855) which treats of 113 (in the fullest ms.) trades, professions and offices of the author's own time, in the light of how their exponents should behave in order to recover God's favour and secure their own salvation after having lost this. It contains *en passant* a certain amount of historical information and throws light on contemporary customs and attitudes, seen e.g. in the author's disapproval of the practice of kissing the ground (*taḳbīl al-arḍ*) before sultans or great *amīrs*.

10. Muhammad b. Taḳī al-Dīn 'Alī, to whom his father addressed an admonitory *ḳaṣīda*.

Bibliography: Given in the article, but see also Myhrman on the Subkī family in the introd. to his *Mu'īd al-ni'am* edition, 8-35.

B. Shihāb al-Dīn or Sharaf al-Dīn Aḥmad b. Khalīl b. Ibrāhīm al-Subkī al-Miṣrī al-Shāfi'ī (d. Djumādā II 1032/April 1623, author of several works and commentaries, listed in 'Alī Mubārak, *Khiṭaṭ*, xii, 8-9, and *EI*¹ art. s.v.

C. Aḥmad Bey al-Subkī b. Aḥmad 'Udjayla, a personage in mid-19th century Egyptian life. Educated at the schools set up by Muḥammad 'Alī Pasha [*q.v.*], he was sent to Paris and stayed there two years, and later filled various official and military posts under the rulers of Egypt. See 'Alī Mubārak, *op. cit.*, xii, 9. (J. SCHACHT-[C.E. BOSWORTH])

AL-SUBKIYYŪN, the name given to members of a religious society, al-Djam'iyya al-Shar'iyya li 'l-'Āmilīn bi 'l-Kitāb wa 'l-Sunna al-Muḥammadiyya founded by the reformer Shaykh Maḥmūd b. Muḥammad al-Subkī (1274-1352/1858-1933), a native of Subk in the Manūfiyya district of Lower Egypt (also the home of the 8th/14th century author Tādj al-Dīn al-Subkī [*q.v.*]).

Shaykh Maḥmūd was first educated in Subk and later enrolled in al-Azhar. While studying at al-Azhar, he began to preach against current *bida'* [see BID'A], such as excessive grief at funerals, including the use of professional wailing women, as well as excessive celebrations at weddings. He also attacked the excesses of many of the Ṣūfī groups he encountered in Cairo, despite his involvement with Ṣūfism in the early part of his life. He then turned his attention to *bida'* in the *'ibādāt* which he encountered in al-Azhar itself, bolstering his arguments with *fatāwī* obtained from the senior *shaykhs* there, which he published under the title *Fatāwī a'immat al-Muslimīn*. He received his degree and *idjāza* to teach in 1313/1896. His increasing

popularity and strict message irked some Azharīs, who tried without success to curb his activities by complaining to the political authorities. His orthodoxy vindicated, the following years he continued to spread his views via Friday sermons and published tracts.

In Muḥarram 1331/December 1912 he established his society, with the aim of "spreading the true teachings of religion, to enlighten the minds and save the Muslims from corrupt beliefs and low *bidaʿ* and myths", embodying his ideals of strict adherence to the Sunna and open to all. The society would send its most able preachers to give the Friday sermons in mosques all over Egypt where they exhorted people to return to the basics of the Ḳur'ān and Sunna and abandon often deeply-ingrained popular practices. In time, the society established its own network of mosques and published regular journals including *Risālat al-Islām*, still published today. Members of the society used to be distinguished by their distinctive turbans. On Shaykh Maḥmūd's death, the leadership of the society went to his sons Amīn Khaṭṭāb and then Yūsuf Khaṭṭāb. When this line ended, the leadership went to ʿAbd al-Laṭīf Mushtahirī and then to Farḥat ʿAlī Ḥilwa. The society is currently headed by Dr. Muḥammad al-Aḥmadī Abu 'l-Nūr. It is estimated that the society has some 680 branches with over 64,000 members.

Among Shaykh Maḥmūd's publications are *al-Manhal al-ʿadhb*, Cairo 1351, which is seen as his major work; *Itḥāf al-kā'ināt bi-bayān madhhab al-salaf wa 'l-khalaf fi 'l-mutashabbihāt*, Cairo 1350; *al-Dīn al-ṣāliḥ*; etc. The introduction to *al-Manhal* lists 26 works in all.

Bibliography: The introd. to *al-Manhal al-ʿadhb*; ʿAbd al-Munʿim al-Ḥifnī, *Mawsūʿat al-firaḳ wa 'l-djamāʿāt al-Islāmiyya*, Cairo n.d.; ʿAbd al-Laṭīf Mushtahirī, *Hādhihi daʿwatuna*, Cairo n.d., which is an explanation of the movement and what it stands for. (MAHA AZZAM)

SŪDĀN, the Anglo-Egyptian Sudan and the modern Republic of Sudan.

1. History and political development.

The republic takes its name from the mediaeval Arab geographers' *bilād al-Sūdān*, a sub-Saharan belt of which eastern and Nilotic lands were conquered by Muḥammad ʿAlī [*q.v.*] of Egypt and his successors. This "Egyptian Sudan" came to comprise territory from the Red Sea to the western marches of Dār Fūr [*q.v.*], and from Nubia [see NŪBA] to the African Great Lakes. Thus although the present republic has an older political identity than most African states, like them it was born of foreign conquest.

In the European "Scramble for Africa", the Sudan was among the last prizes. Under Muḥammad Aḥmad al-Mahdī (d. 1885 [see AL-MAHDIYYA]) and his successor, the Khalīfa ʿAbd Allāh al-Taʿā'ishī, an independent state had been made of Egyptian possessions. But even in its origins, the Mahdist state was bound up in Great Power rivalry; the Mahdī's rise did not so much cause as coincide with collapse of Egyptian authority in the Sudan, and with political crises in Egypt itself that ended with British occupation in 1882. The fall of Khartoum in 1885 would equip imperialists with arguments for a British conquest that imperial strategy required anyway.

Britain's anomalous position in Egypt influenced the 20th-century political development of the Sudan. Despite British occupation, Egypt remained an Ottoman province under the Khedive and his ministers. In the light of this, and to deflect Great Power objections, invasion of the Sudan in 1896-8 was termed an Anglo-Egyptian "reconquest" of lost Egyptian provinces. Kitchener commanded a largely Egyptian (and Sudanese) army when he defeated the Khalīfa at Karārī on 2 September 1898. The flexibility of a "two-flag" policy was evident two weeks later at Fashoda, where a French expedition under Marchand was warned off by the British for trespassing on Egyptian rights.

In the wake of "reconquest" there was therefore no question of wholly separating the Sudan from Egypt. Instead, Lord Cromer, Agent and Consul-General in Cairo, devised a "hybrid form of government" in two Anglo-Egyptian conventions that in 1899 established a formal condominium. Sovereignty in the Sudan went unspecified. Power was concentrated in a Governor-General nominated by Britain and appointed by the Khedive; every Governor-General until independence in 1956 was British. The Capitulations, Mixed Courts and other apparatus of international control in Egypt, were excluded. Separate financial regulations further defined relations between the new régime and Egypt. In broad terms, the Condominium, at least until the 1920s and to a considerable extent thereafter, was controlled by Britain and financed by Egypt, staffed in its upper echelons by British officers and (increasingly) civilians, and in its lower by Egyptians, Syrians, other foreigners and (increasingly) by Sudanese.

But the land and its peoples were more important in determining the nature of the régime than were the war and diplomacy that created it. Defining the Sudan's borders began in the Condominium Agreement itself; the conquest of Dār Fūr in 1916 and long negotiations between Britain and France, the Congo, Italy and other powers completed it. A territory of about one million square miles resulted, with conditions varying from sand desert in the north, to savannah in a central belt and forest in the south. The population was very heterogeneous: what would soon be called the Northern Sudan comprised Nubians, Fur, Beja, and (mostly) Arabic-speaking Muslims claiming Arab descent; the South presented a mosaic of ethnic diversity without any linguistic or religious cement. Contact between the two regions had been characterised during the 19th century by the raiding and enslavement of southerners by northern Sudanese. The total population under Anglo-Egyptian rule may only be guessed; in its first decades even the existence of separate ethnic groups went largely unknown to their nominal governors.

That ignorance, and the régime's limited resources, were factors in the unequal development of the regions. Indeed, with Egyptian subventions the Sudan Government was better off than many colonial governments. But great distances and sparse population made communications difficult and transport expensive. Foreign officials' greater familiarity with the Arab-Muslim culture of the North almost invariably biased them in favour of that region. The result was considerable public investment in the northeastern quadrant of the country: Khartoum was rebuilt; a railway was extended from Wadi Halfa to Khartoum, the Gezira, al-Ubayd, and to Port Sudan, which was built to supersede Suakin [see SAWĀKIN] as the Sudan's principal harbour; a vast Gezira Scheme, financed by European loans to irrigate cotton in the region between the Blue and White Niles south of Khartoum, skewed the country's subsequent development. Social services were again relatively lavish in northern centres, while in rural areas and the South their provision was left up to the Army and Christian missionaries. Thus the relative backwardness of peripheral regions, most

obviously the South, was widened by Anglo-Egyptian bias and policy.

Much of that policy was set by or under the second Governor-General, Sir Reginald Wingate (1900-16). Upon succeeding Kitchener, Wingate had already spent sixteen years in the Egyptian Army, latterly in charge of Intelligence, and had formed definite views. With Cromer, his superior until 1907, Wingate devised structures and set a tone that would last as long as the Condominium.

Confrontation with Sudanese Mahdism had dominated Wingate's work in Egypt; in the Sudan a fear of "fanaticism" influenced otherwise disparate areas of policy. He suppressed not only Mahdism and its surviving notables, but also any sign of disruptive heterodoxy: individual *fikis* (Ar. *faḳīh*) were arrested, exiled and even executed; Ṣūfī *ṭuruḳ* were denied recognition, while co-operative *s̲h̲ayk̲h̲*s were loaded with privileges. Orthodox Islam was promoted: the *S̲h̲arīʿa*, as reformed, became a model; a Grand Qadi and Mufti of the Sudan were appointed, and *ʿulamāʾ*, never influential in the Sudan, were nonetheless given honours, pensions, and official status. In 1912 a *maʿhad al-ʿilmī*, with curriculum closely modelled on that of al-Azhar, was opened in Omdurman to train *ʿulamāʾ*. The Ḥanafī *mad̲h̲hab* of the Ottoman Empire, introduced at the Turco-Egyptian conquest, was reimposed; in personal law, Sudanese continued their adherence to the Mālikī rite. The government repaired and built mosques, encouraged the *ḥad̲j̲d̲j̲* (for long an important socio-economic phenomenon in a land adjacent to the Ḥid̲j̲āz and traversed by the "Sudan Road" of West African pilgrims), and subsidised religious education. Avoiding offence to Muslims, Christian missionaries were largely limited to the South.

Wingate's fear of Mahdism influenced economic policy. Although his own propaganda against the Mahdist state had decried a revival of slavery, Wingate and his lieutenants saw mass manumission as offensive to Muslims and thus as a focus for revolt; while for European audiences they championed repression of the slave trade, yet they turned a blind eye to it and intervened to prevent the manumission even of individuals. Similarly, taxes, especially in regard to lightly-administered nomadic tribes, were kept low, lest a spark be given to apprehended Mahdist tinder.

A turning-point in the history of the régime was the First World War. If the Ottoman sultan, still nominally sovereign in Egypt, should side with the Central Powers, the British feared repercussions not only in Egypt but also in the Sudan, as indeed in India and other Muslim lands. Wingate acted quickly to defuse a call to *d̲j̲ihād*. Adding to war-time security measures (censorship, propaganda, arrest of enemy aliens, and so forth), he altered his religious policy. By 1914 it was clear that the *ʿulamāʾ* had little influence: Sudanese continued to look, as they had for centuries, to individual holy men (*fikis*) and the Ṣūfī *ṭuruḳ* for guidance; while the government encouraged the *ḥad̲j̲d̲j̲* to Mecca, pilgrimage to the tombs of Sudanese saints was vastly more popular. Thus when the War broke out, the government's embrace of pliant *s̲h̲ayk̲h̲*s was widened to include the son of the Mahdī, Sayyid ʿAbd al-Raḥmān; restrictions were eased in return for support of the régime, a position in any case consistent with his father's *d̲j̲ihād* against "the Turks". This rehabilitation would have rapid and far-reaching political results.

Whether Wingate overreacted is debatable; the Sudan remained quiet throughout the War, and, indeed, became a base of operations against the Turks and their allies. In 1916 Wingate moved against ʿAlī Dīnār, sultan of Dār Fūr, who had assumed an anti-British tone and whose autonomy impeded the European position in the south-central Sahara; an Anglo-Egyptian force defeated the Fūr near al-Fas̲h̲īr, the sultan was later killed in a skirmish, and Dār Fūr came under the Sudan Government. Meanwhile in the east through personal efforts and proximity to the Ḥid̲j̲āz, Wingate assumed roles for himself and the Sudan in the revolt of the S̲h̲arīf of Mecca against the Ottomans.

After the War, the Sudan experienced political ferment and social dislocation. The growth of Egyptian nationalism had both paralleled and stimulated Sudanese feelings of national identity. Although limited to a tiny educated élite and tentatively expressed, these stirrings provoked an incommensurate British reaction. Fearing that Egyptian civilian cadres and army units would suborn the Sudanese, and that a potential existed for an unholy (and even unwitting) alliance of discontented townsmen and fanatical tribes, the British hardened their position. During 1924 demonstrations, by the White Flag League and others, condemned Britain and defended Egyptian rights in the Sudan. When in November the Governor-General, Sir Lee Stack, was assassinated in Cairo, the opportunity was taken both to bring down the Wafd government of Saʿd Zag̲h̲lūl [*q.v.*] and to expel Egyptian Army units and civilians from the Sudan. In Khartoum some Sudanese soldiers died resisting that evacuation, in an episode still commemorated.

There followed a period of repression. The seeming ease with which trouble had arisen in the towns convinced British authorities that a class of secularly-educated Sudanese, like its counterpart in Egypt, India and elsewhere, was dangerous. The reaction was reflected in social policy. Ordinances extended powers of tribal chiefs, circumventing the educated; traditional Ḳurʾānic schools (*k̲h̲alwas*) replaced as the focus of education policy the secular primary and elementary schools that had produced "effendis"; and the scope of the latter's employment was reduced and avenues for advance closed. These changes coincided with dramatic economic developments: the Gezira Scheme, inaugurated in 1925, for several years produced good returns on a huge investment; but insect infestation and the collapse of the cotton market during the Depression resulted in destitution for tenants and financial crisis for the Sudan Government. Post-1924 quiescence was thus misleading, and bought at a price.

Moreover, Britain's freedom of action in the Sudan was limited by its position in Egypt. Violent disturbances in 1919 had led to Egypt's nominal independence in 1922 and, in 1924, to the Wafd government of Saʿd Zag̲h̲lūl, who insisted on the unity of the Nile Valley. No subsequent Egyptian government would forswear the Sudan, the status of which became, with that of the Suez Canal Zone, the focus of Anglo-Egyptian relations. Negotiations after 1924 all collapsed over these issues. It was only a shared fear of Italian imperialism, and the Wafd's need for more than rhetorical results from its nationalist stance, that finally brought progress. In a 1936 treaty, Egypt won concessions over its international status, and a symbolic return of some troops to the Sudan, while Britain secured its position at the Canal; the sovereignty issue was deferred, the signatories merely expressing continuing concern for the welfare of the Sudanese. This reference, made without consulting them, ironically rekindled political interest among Sudanese, and gave to the Sudan question a triangular shape that it would

retain until independence. All parties recognised this; to pre-empt an increase in Egyptian political activity, the British authorities encouraged, in 1938, the founding of a Graduates' General Congress to co-opt the educated element they had suppressed.

While nationalist activity had subsided after 1924, changes in the relative importance of individuals and groups altered the dynamics of Sudanese politics. After his rehabilitation during the First World War, ʿAbd al-Raḥmān al-Mahdī had rapidly expanded his following and influence, especially in the west. As early as 1919, British officials expressed alarm; collaboration with the Sayyid remained controversial, and a rising led by ʿAbd Allāh al-Sihaynī in Dār Fūr in 1921 was blamed on ʿAbd al-Raḥmān's agents. But in 1924, when the régime felt threatened by Egyptian politicians and disgruntled townsmen, ʿAbd al-Raḥmān was foremost in condemning both, and he received a knighthood from the British Government. By the late 1920s, as a result of government concessions and the free labour of his followers, he was probably the richest Sudanese; by the mid-1930s, he openly vied with Sayyid ʿAlī al-Mīrghānī, whose Khatmiyya *ṭarīḳa*'s support for established authority and opposition to Mahdism pre-dated the Condominium, for a comparable political standing. Renewed political activity after the 1936 Anglo-Egyptian treaty both reflected and heightened that competition.

In the Second World War, unlike the first, the Sudan played a direct role. Despite a huge advantage in numbers and equipment, an Italian advance in 1940 ended in the ignominious Allied occupation of Italian East Africa in 1941. Units of the Sudan Defence Force (the Anglo-Sudanese army created in 1925), served in several African and Near Eastern theatres. Not until the German defeat at al-Alamein in November 1942 was the Axis threat to Britain's position in the Nile Valley removed. But what British officials saw as a defining crisis of world history, some Sudanese considered a clash of imperialisms; in their view, Sudanese political advance should be accelerated, not postponed. It was with this view that in April 1942 the Graduates' Congress asked for concessions, including Sudanese independence at the end of the war. They were rebuffed, and divisions within the Congress that had led to its demands now widened into overt political parties. In 1944 the *Ashikka* formed the nucleus of what would become (under various names) the Unionists, while in 1945 the *Umma* proclaimed "the Sudan for the Sudanese". But Union and Independence were watchwords; superficial polarisation obscured a wide spectrum of interests.

The politics of the Condominium's last decade are thus complicated in detail but susceptible to generalisation. Anglo-Egyptian relations worsened. In 1945, at Egypt's request, re-negotiation of the 1936 treaty began, but with irreconcilable positions over the Canal and the Sudan. To break the impasse the British government, in the so-called Ṣidḳī-Bevin Protocol of October 1946, recognised Egyptian sovereignty in the Sudan. A furious reaction in Britain, and among British officials in the Sudan, wrecked the agreement. But British willingness to compromise over sovereignty whetted Egyptian appetites, imbued the Sudan Government with permanent suspicion of a "sell-out", and disconcerted its Sudanese allies, to whom the end of strategic collaboration had always been seen as independence.

The development of Sudanese politics in the post-war period was thus inseparable from Anglo-Egyptian relations. The Unionists, led by the irrepressible Ismāʿīl al-Azharī, a mathematics teacher from a prominent religious family, condemned the British, withheld co-operation from successive consultative bodies, and demanded union with Egypt. To varying degrees, they saw this as a lever for moving the British; those wedded to the Unity of the Nile Valley were few, while many upheld "union" in order to preclude the Mahdist monarchy the British might impose in order to debar Egypt. For his part, ʿAbd al-Raḥmān al-Mahdī co-operated with the Sudan Government, and his Umma Party dominated its advisory bodies; the Egyptians were his family's historic enemies, and by collaborating he kept Egypt at bay while prodding the British towards negotiated departure. Many tribal and religious leaders, notably ʿAlī al-Mīrghānī, recoiled at a choice between Mahdist monarchy and Egyptian imperialism, and saw nominal "Union" as a way of foiling Sayyid ʿAbd al-Raḥmān, while disposing of his British patrons; Egyptians had after all been ejected before and could be again.

Central to the machinations of the period was therefore the rivalry between the *Sayyids*. The ebullient ʿAbd al-Raḥmān, whose influence derived from the revolutionary charisma of his father, was ironically the more worldly and modern; this routinisation of Mahdist ideology has been described as "neo-Mahdism", and been compared with the achievement of dynastic power in Libya and Morocco. ʿAlī al-Mīrghānī, on the contrary, would be king-maker rather than king, and embodied cautious reserve and oracular reticence; his support of Unionists was always qualified, rarely certain, and stemmed wholly from opposition to Mahdism.

The Anglo-Egyptian (and Sudanese sectarian) impasse was broken only after the Egyptian Revolution of 1952. The ruling junta, influenced by Muḥammad Nadjīb [*q.v.*], proclaimed a willingness to allow Sudanese self-determination. Since this had been the ostensible goal of the British, who by terms of the Ṣidḳī-Bevin Protocol had lost the confidence of their Sudanese allies, the Sudan Government was suddenly isolated and to a degree irrelevant; the Sudanese parties entered into direct negotiation with Egypt, and Anglo-Egyptian agreement over terms of self-determination was reached in 1953. This called for a transitional period during which Sudanisation of the administration, and elections to a national parliament would take place. These produced a parliamentary majority for al-Azharī's National Unionist Party; the Umma had campaigned ineptly and alienated non-Mahdists, while other groupings—hardly parties—were regional, extreme, or otherwise flawed.

It was ironical therefore that al-Azharī and the Unionists led the Sudan to independence. The events of 1954-5 are less significant than that result; through deft manoeuvring, favourable circumstance, rivals' mistakes, and the unlimited elasticity of "union", al-Azharī presided as Prime Minister when the Sudanese parliament dispensed with formalities and voted for independence at the end of 1955. An independent republic was declared on 1 January 1956.

Despite this formal break with a colonial past, evidence of continuity after 1955 is striking. In two areas, national politics and the affairs of the South, this would have lasting and disastrous consequences. Al-Azharī's triumph in 1955 had been personal and tactical; the two Sayyids were the true masters of the Sudan, and it was their mutual hostility that had allowed his success. In late 1955 they had reached a truce, and in July 1956 their parliamentary supporters duly ousted al-Azharī and elected the Umma leader, ʿAbd Allāh Khalīl, as Prime Minister in a coalition

of the Umma and a Unionist faction. This and subsequent manoeuvring discredited party politics. Beset by a faltering economy, and by rifts within the Unionists' ranks that threatened his own position, 'Abd Allāh Khalīl, a former officer, connived in 1958 in an army coup that swept away the parliamentary régime. A junta assumed supreme power, which it in turn delegated to the Commander-in-Chief, Ibrāhīm 'Abbūd.

An issue of particular concern to the military régime that ruled until 1964 was the South. Largely neglected by the British under a misapplied "Southern Policy", the region had ironically at the end of the Second World War became a last bastion of imperial control; British officials' demand for "safeguards" for the South in a self-governing Sudan was viewed by others as an attempt to delay independence or even to detach the region. In the first parliament, Southern representatives were overwhelmed by Northern politicians, and their votes for independence were bought with the easy promise of future considerations. Meanwhile, in August 1955, alarmed by precipitate Sudanisation—or as they saw it, Arabisation—of regional government, Southern army units rebelled. Hundreds of Northerners were killed. Neither al-Azharī's nor 'Abd Allāh Khalīl's administration took effective steps to deal with Southern grievances; 'Abbūd's régime worsened the problem. A programme of Arabisation and Islamisation was adopted, and Christian missionaries were harassed and finally expelled. Guerrilla activity sprang up among veterans of the 1955 mutiny and others. 'Abbūd's junta responded in kind, and by 1964 there was civil war.

The soldiers' military failure brought down a régime already discredited by ineptness and repression in other areas. In October 1964 street demonstrations in Omdurman and Khartoum gained momentum from the evident half-heartedness with which troops responded. Banned political parties resurfaced, but it was an alliance of professionals, trade unionists, students and others that directed and dominated mass action. With support from the ranks evaporating, 'Abbūd and his colleagues resigned, and a Transitional Government was formed to prepare a return to democratic rule.

The Transitional Government of 1964-5 has since been seen as one of missed opportunity. The cabinet, under Sirr al-Khātim al-Khalīfa, a civil servant, was dominated by members of the Professionals' Front, who favoured radical democratic and socialist solutions to the Sudan's problems. Opposed to them, and outnumbered, were leaders of the old parties. The former had ideas without mass support, the latter sectarian followings without ideas. In the end, ideas were discounted; under pressure from the politicians, new elections were held in April-May 1965, before the professionals could organise. A coalition of the Umma and NUP was formed, with the Umma's Muḥammad Aḥmad Maḥdjūb as Prime Minister; by a hastily-contrived constitutional amendment, Ismā'īl al-Azharī became President of the Supreme Council of State. The intellectual bankruptcy of the parties and cynicism of their leaders is evident from subsequent events.

The second parliamentary régime witnessed a return to the sterile sectarian and personal rivalries of the past and, because of this, a worsening situation in the South. No party or politician would risk the electoral consequences or a rival's jeers by suggesting a generous solution to what they persisted in calling the "Southern Problem". For their part, no leader of the disunited tribally-based rebels in the South had a following large enough to dominate the movement; successive groupings with ever-grander names reflected factionalisation. Southern politicians working within the Khartoum system had little influence, nor can it be said that any proposed constitutional "solution"—federalism, autonomy or independence for the South—had the support even of most Southerners. A multilateral conference held by the Transitional Government in March 1965 rehearsed old positions a month before parliamentary elections. Continuation of guerrilla war was expedient for weak politicians on both sides.

The base from which the second parliamentary régime began was thus as weak as its predecessor's. Debilitating inter- and intra-party rivalries both caused and fed off political and economic crisis. In 1966 Ṣādiḳ al-Mahdī, great-grandson of the Mahdī, having engineered the fall of the Umma Prime Minister and his own succession, embarked on a campaign of modest reform unacceptable to his uncle, al-Hādī, the *imām* of the *Anṣār*. Their disagreement was exploited by al-Azharī, who joined forces with al-Hādī to depose Ṣādiḳ. With the Umma split, a new coalition was formed of Unionists and followers of al-Hādī, with Muḥammad Aḥmad Maḥdjūb as Prime Minister. This coalition, dominated by al-Azharī's reunited Unionists, retained office after elections in 1968. That a government with a huge parliamentary majority could be so ineffectual is indicative of the continuing personal and sectarian nature of Sudanese politics and, indeed, of the growing irrelevance of electoral politics. The régime's true strength was revealed by the ease with which a group of young officers led by Dja'far Muḥammad Numayrī, overthrew it in May 1969.

Despite its revolutionary pronouncements, the long military régime of 1969-85 exhibits elements of continuity with previous régimes. These may be summarised as: a failure to create durable institutions; an attempt to Islamise—some would say Sudanise—the South, through peaceful assimilation or mass violence, a process seen as interrupted by British imperialism and unrealistically resisted by diehard Southerners; the dominant centre's struggle to maintain control of an impoverished and powerless periphery, not only in the South; the weakness of secular authority without sectarian support, and the concomitant failure of "new men", "professionals" and "technocrats" to assume political power; big-project economic development, an addiction induced by the Condominium's Gezira Scheme, with disastrous results; poverty; and international insignificance despite a natural position of influence as an Afro-Arab, multi-confessional, and strategically-located state. The identification of this second military régime with one man, Numayrī, is therefore convenient but inaccurate; Numayrī was adept at wringing personal advantage from a situation worsened by his survival in office, and is a notable but hardly revolutionary figure in post-Independence Sudanese political history.

Only the main events of this recent period may be described without reference to archival sources. Its plotters saw the May Revolution as successor to the radical movement of the Professionals' Front of 1964-5; Numayrī acted quickly to dispose of organised rivals on left and right. In 1971 the small but influential Communist Party was purged, and leading members executed after a failed coup; Numayrī followed up a narrow escape with a referendum confirming his presidency. In 1972 the army attacked the stronghold of the *Anṣār* at Aba Island; thousands were killed, including the Imām al-Hādī, while the movement went into disarray. Having failed like his predecessors to win a military victory in the South, Numayrī now shored

up his personal position by reaching an agreement with the Southern Sudan Liberation Movement, which had coalesced under Joseph Lagu; by the terms of the Addis Ababa Agreement of 1972, the South was granted a large measure of autonomy. But peace in the South was no substitute for mass support in the North; after a failed but bloody *Anṣār* coup attempt in 1976, Numayrī took steps to co-opt Ṣādiḳ al-Mahdī, the exiled Umma leader, who returned to the Sudan in 1977. Timebuying political gestures were by now a hallmark of the régime, which dispensed patronage through a Sudan Socialist Union, which a constitution promulgated in 1973 made the sole legal party. But the manifest failure of the régime's economic policies, and the consequent resort to unpopular prescriptions of the International Monetary Fund and donor countries, fuelled opposition in the late 1970s and early 1980s; a massive foreign debt was accumulated, with little to show for it but half-finished and inefficient projects, repeated devaluations, and the emergence of a parasitical class of newly-rich officers and cronies. By 1983 Numayrī evidently felt the need for another bold gesture: taking advantage of Southern politicians' incompetence and venality, he declared in June the "redivision" of the South into three "regions" corresponding to the old Anglo-Egyptian provinces; in September he declared the *Sharīʿa*, heretofore enforced only in the North, applicable to all. The cost of appeasing Northern opponents was soon evident in the South; a Sudan People's Liberation Movement and Army (SPLM/SPLA) were formed, and by 1985 full-scale civil war engulfed the region.

Economic collapse and civil war set the stage for Numayrī's downfall. By late 1984 he had successively allied with and opposed every political and religious grouping of significance, from the Communists to the Muslim Brothers; in January 1985 Maḥmūd Muḥammad Ṭāhā, the aged leader of the tiny Republican movement, was hanged on a charge of heresy after criticising the régime. Emboldened by his opponents' hand-wringing, Numayrī embarked on a foreign trip in April, even as demonstrations against the régime mounted. The army deposed him lest it go down with him, and opposition leaders now "called off the revolution". A military government assumed absolute but avowedly temporary power, while a cabinet of disparate elements prepared for new elections. The position of 1964-5 was soon replicated, as the old parties with sectarian backing pushed aside the ill-assorted elements that had brought down Numayrī. Indeed, the SPLM/SPLA, in clandestine radio messages, belittled "Numayrism without Numayrī" and continued to prosecute the war.

The history of the third parliamentary régime (1986-9) was dominated by the same two problems that had plagued its predecessors: inability to take strong measures in the face of enduring personal and sectarian rivalries, and the related problem of civil war, which involved fundamental questions about the nature of the Sudanese state. Under Ṣādiḳ al-Mahdī, Prime Minister in the coalition governments of the period, the inherited prestige of the Father of Independence proved an inadequate base for national consensus. Despite twenty years in the political wilderness, Ṣādiḳ in power maintained that basic issues—the role of Islam, the applicability of *Sharīʿa*, the rights of religious minorities—required further study. Negotiations with the SPLM/SPLA, which saw itself as nationalist and secularist, not separatist, therefore collapsed. At the national level, lack of direction reduced politics to the familiar search for tactical advantage, while the costs of war, and an ever-worsening economy, limited room to manoeuvre. Ironically the end of the régime came on the eve of an agreement which Ṣādiḳ had reached with the SPLM/SPLA to negotiate an end to the war.

In June 1989 a group of middle-rank officers took power in a bloodless coup. Their programme and even political orientation remained unclear for some time. It was eventually apparent that they had none, and the vacuum thus created was deftly occupied by the National Islamic Front. Descended from the Muslim Brothers, whose Sudanese roots reached back to the 1940s, that party had, like others, both collaborated with and been suppressed by Numayrī. Its leader, Ḥasan al-Turābī, had withstood criticism of his long support for the dictator; it was during Numayrī's rule that Turābī made of the NIF a small but cohesive party. After the 1986 elections, it was taken into government. Thus in 1989, the NIF was at first banned with the other parties, and Turābī was for a time formally under arrest. By midsummer 1995, Turābī, though widely acknowledged in—and even at times acknowledging—a leading role, still had no official position in the régime.

After 1989, therefore, the Sudan was governed by a military junta drawing inspiration from the ideology of Ḥasan al-Turābī. There were no national elections and political parties remained banned. The president, General Ḥasan al-Bas̲h̲īr, and his colleagues renewed the war against southern rebels, declaring this a *d̲j̲ihād*; active support of Arab and Muslim states was solicited and received. Epidemics, famine, even slavery, returned to the South, while the collapse of the Mengistu régime in Ethiopia deprived the SPLA of its main foreign bases and support, and the movement itself splintered. The war's financial burden contributed to a disastrous economic record. Opponents of the Sudanese régime were detained without charge and tortured; thousands went into what increasingly appeared permanent exile. Accused by western governments and by its neighbours of harbouring, training, and exporting terrorists, the régime became increasingly isolated; Egypt on several occasions seemed ready to take action against the Sudan.

After six years in power, this third Sudanese military régime showed signs of going the way of the previous two. Despite its ostensible Islamic character, and the many and costly steps it took to exhibit this, the régime never enjoyed the support of more than a small minority, even of Muslim Sudanese. But opposition, while widespread, was unconcerted, both within the country and between exiles and residents; alliances of the Anṣār and the SPLM, of Nūba Christians and exiled professionals, of aged Communists and Fūr nationalists, inspired in Khartoum more hope than fear. The Sudanese pattern in such cases is of mass action followed by a struggle between old parties and the partisans of change.

2. Languages.

The Sudan's 25.2 (1990) million inhabitants occupy an area of approximately one million sq. miles and speak some 134 languages. Obtaining precise and reliable statistics often proves difficult, however, due to the language vs. dialect problem. For example, many scholars treat Kakwa, spoken in Yei District, Equatoria Province (40,000 speakers [1978]) as a Bari dialect, even though Kakwa and Bari are better designated separate languages despite their 73% lexical similarity. Most of those 134 languages are not normally written, nor do they have an extensive body of written literature. The literacy rate for the entire country has been estimated at 20% (1991).

The Sudan's amazing range of diverse languages belongs to three distinct language phyla (out of a total of four for all of Africa, following the standard classification of Joseph H. Greenberg [1963]). They are: Afroasiatic (AA), also known as Hamito-Semitic; Nilo-Saharan (NS); and Niger-Congo (NC).

Approximately 51% of the population speak one of the many dialects of Sudanese Colloquial Arabic (SCA) as a native language. This means that the Semitic sub-branch of the AA phylum to which Arabic belongs represents the majority of the Sudanese population. (Tigré, a northern Ethiopian-Semitic language, also has some speakers in northern Sudan.) The only other major, autochthonous AA language spoken in the country is Beja, a member of the Cushitic sub-branch. The Muslim Beja [see BEDJA], also known as Bedauye or Bedawiye, have probably resided in their present locale for 6,000 years. They number about a million speakers in the Sudan, with at least 50,000 more in Ethiopia and Upper Egypt (1982). Its three major dialects are Hadendoa, Hadareb and Bisharin, while Bani-Amer is an ethnonym for some Beja. The Chadic sub-branch of AA is also represented in the Sudan by Hausa, Kajakse, and possibly also Kujargé, spoken around Jebel Marra and along the lower Wadis Salih and Azum rivers. The Hausa speakers, many of whom are ethnic Fulani who no longer speak Fulfulde (Fellata), emigrated over a long period (especially from Chad and Nigeria). Hausa is an important trade language, which may account for its remaining an important lingua franca, not only in the Sudan but also in the neighbouring countries.

Approximately 90 languages of the Sudan belong to the second phylum, NS. This is the most intricate language family in Africa, and the least investigated. Proto-NS may be divided into "Peripheral NS" and "Core NS". The former can be split into (1) Songhay, (2) Saharan and Kuliak, (3) Maba and Fur, and (4) Kunama and Berta, while the latter can be broken down into (1) East Sudanic (ES), (2) Central Sudanic, (3) Komuz, and (4) Kadugli-Krongo.

Neither the Songhay nor the Kuliak members of NS are found in the Sudan. Saharan's only Sudanese member is Zagawa, spoken in Waddai-Dārfūr (102,000 speakers [1982]). Similarly, the Maba(n) stock has only one Sudanese representative, Masaalit, with 145,000 speakers (1991).

The most studied language family in the Sudan is ES, which contains the largest number of languages of the entire phylum of NS. ES is subdivided into Nubian, Nara, Nyima, Tama, Surma, Jebel, Temein, Daju, and Nilotic. The eastern part of ES consists of the Nubian group, spoken in the Nile Valley up to the border with Egypt. Today, the group is comprised of Nobiin, Meidob (in Dārfūr), Kenuz-Dongola, and Hill Nubian. The latter, a language cluster of the Nūba Hills, still has no accepted classification. The Birked language, a separate ES branch which was formerly spoken in northern Dārfūr, east of Jebel Marra between Jebel Harayt and the Rizaykat country, is now extinct. One of the least-known branches of ES is the (Eastern) Jebel group, spoken in Blue Nile Province. Its main language is Tabi, also known as Gaam or Ingessana with 10,000 speakers (1972). Western ES is broken down into Daju, Nyima(ng), Tama and Temein. All together, these four languages have about a quarter of a million speakers. Many Daju today have been Arabicised and speak a Darfurian

SCA, similar in numerous respects to Chadian and Nigerian (S̲h̲uwa) Arabic.

Some information exists on the Sudanese Nilotic languages. North and Central Nilotic occur in the Sudan; however, South Nilotic does not. The principal languages of North Nilotic are: Shilluk, 175,000; Dinka, 2 million (Northeastern and Northwestern Dinka may be two separate languages); Nuer, 740,000; and Luwo (Dhe Luwo), 54,000 (all 1982); while Central Nilotic has Bari, 226,000 (1978); Lotuko, 185,000 (1982); and a few members of the Teso-Turkana group, such as Toposa with 95,000 (1982). The latter is mutually intelligible with Turkana, which has 260,000 speakers in Rift Valley Province, Kenya.

The classification of Surma is complicated. There are a minimum of ten branches, the two most important southern Sudanese members of which are Didinga with 58,000 speakers (1978) and Murle with 60,000 (1982). These two languages have 71% lexical similarity.

Central Sudanic consists of Moru-Madi, Mangbutu-Efe, Mangbetu, Kresh, Baledha (Lendu), Aja, Bagirmi, Yulu-Binga, Sinyar and Bongo. The internal classification of Central Sudanic remains problematic. It seems clear, however, that Moru-Madi with 88,000 speakers in Equatoria Province (1982) represents one grouping, while Kresh, spoken mainly in Raga, western Bahr el Ghazal Province, with 16,000 (1987), forms another. There are also Kresh communities in Khartoum, Wau and Boro.

NS can also possibly claim the ancient Meroitic language, written in a script coming from ancient Egyptian. The Meroitic Kingdom, extending from the third cataract in the north to the Soba area in the south, reached its height in the third and second centuries B.C. Another theory that classifies Meroitic as AA is far less probable.

NC represents two-thirds of Africa's languages. Proto NC separated into the Mande, Atlantic-Congo and Kordofanian sub-branches. The 32 Kordofanian languages are spoken in the Nūba Hills by several hundred thousand. Four groups have been postulated: Heiban, Talodi, Rashad and Katla, with the major languages Koalib, 30,000 (1989), spoken around Delami in southern Kordofān; Moro, 30,000; Tira, 40,000, around Otoro and Talodi; and Tagali, 80,000 (all 1982), in the Tagali Range and Rashad town and hills.

A major characteristic of many NC languages is the serial verb construction, in which what seems to be a single clause is expressed syntactically by juxtaposed verbs, all sharing the same subject or agent, without coordinating conjunctions of any kind. By way of contrast, there is little which gives NS a distinctive morphosyntactic unity, except that plural pronouns are often formed by singular pronouns with plural affixation. This process, however, does not occur in NC. Many NS languages, additionally, are agglutinative or inflectional in nature.

Since the official language of the country is Arabic, and whereas there have been numerous attempts at Arabicisation and Islamisation in the southern Sudan (resulting, in part, in the ongoing Sudanese Civil War), uncountable Arabic loanwords have found their way into various NS and NC languages. In addition, innumerable NS and NC speakers use SCA as a second or third language, or have learned a major lingua franca of the southern Sudan, Sudanese Pidgin Arabic (so-called Juba Arabic, in actuality both a pidgin and a creole, a variety not confined to the city of Juba). Speakers of NC Banda (10,000 [1982]), for instance, speak Pidgin Arabic with non-Banda speakers. African languages have also influenced, although to a lesser extent, via substratum, the Arabic pidgins and creoles of Equatoria, Bahr el Ghazal, and the Upper Nile regions.

(A.S. Kaye)

SŪDĀN, Bilād al-, literally "land of the blacks", the general name in pre-modern Arabic sources for the Saharo-Sahelian sector of Africa, that lying south of the Mag̲h̲rib, Libya and Egypt and stretching from the Atlantic Ocean in the west to the Red Sea in the east.

1. The eastern part of the Sūdān.

See for this, čad in Suppl.; dārfūr; kordofān; nūba; wādāy; and for the modern period, sūdān, the Anglo-Egyptian Sudan and the modern Republic of Sudan.

2. History of the Western Sūdān.

It is by the name *Bilād al-Sūdān al-G̲h̲arbī* (although the "western" qualification is not always clearly specified) that Muslim geographers, and historians in later times, referred to this part of the "land of the Negroes", contiguous with the Sahara, between the Atlantic Ocean and the loop of the Niger or the Aïr. From the 8th/14th century onward, at least, the term Takrūr, which initially in the 5th/11th century denoted a city of Middle Senegal, was widely used in the Orient to denote this western, Islamised sector of Sudano-Sahelian Africa, thus competing with, and then virtually replacing, the expression "Western Sudan".

The Sūdān of the Arabs—Black Africa dominated by Muslim civilisation—did not denote the entire Black continent, but only a corridor of varying breadth extending from one side of the continent to the other. Essentially, this general conception remained unchanged in the Middle Ages and has survived into the present day. In western Sudan, Islam was implanted at the point at which the caravans arrived and, in a millenium, with remarkable slowness, advanced only a few hundreds of kilometres. Besides this transverse band, and until the 20th century, the West Africa of the southern savannahs and the rain forests thus remained relatively untouched by the process.

In the early years of Islam, western Sudan represented for the Arabs the very extremity of the world. It was not zeal for proselytism but the attraction exerted by highly-valued merchandise (gold, ivory, slaves, precious wood, etc.) which in the first centuries of the Hid̲j̲ra brought Muslim merchants, Arab, Berber or Persian, to the gateways of Sudan and in particular, following the conquest of the Mag̲h̲rib, to its western sector. One of the first Arab texts dealing with the sub-Saharan world, that of the geographer al-Fazārī (second half of the 2nd/8th century) describes the "state of G̲h̲āna" (which is not present-day Ghana, but a mediaeval political formation bordering on Mauritania, Senegal and Mali) as "the land of gold" [see g̲h̲āna]. The image of western Sudan was thus founded on contradictions: it was simultaneously a "barbarous" and distant region, and a land of plenty.

With the exception of a few trans-Saharan explorations, the historical caliphates neither encompassed nor attempted to occupy any part of western Sudan. Even the Almoravids, themselves veiled Berbers originally from the South of the Mauritanian desert (5th/11th century), constructed their power-base in Morocco and, while attaching the highest importance to control of the western gold route, soon lost interest in sub-

Saharan political struggles. Their role in the Islamisation of the closest West African populations has always been a controversial issue.

This absence of the central caliphates, or of local emirates, no doubt partially explains the slow pace of cultural contact or interaction. In contrast to the situation in the lands of the Mediterranean basin, for a long time there did not exist here a power drawing its exclusive legitimacy from adherence to Islam and, as the single political entity, throwing all its weight behind the new religion. A badge of social status, of equal value to luxury goods imported from the north (horses, salt, fabrics, glass-ware, etc.), Islam took root gradually among African commercial agents, especially the Soninke (the dominant ethnic group of the "empire" of Ghana) and in the courts of the chieftains. But it was to be several centuries more before it was to pass from cities to the countryside, from élites to peasants, from groups inhabiting the fringes of the desert to groups in the interior.

Sudanese Islam was, for a long time, confined within urban enclaves (separate districts or entire towns). These Islamised enclaves were to take considerable time in converting the surrounding populations, either by peaceful means or, from the 11th/17th century onward, by armed *djihād*. Generally occupied by specialist traders, they adapted well enough to their insularity and to existing balances of power, rating commercial success above issues of religion. The Muslims who lived there offered their services to the local pagan chieftains, handling their correspondence or supplying them with highly valued talismanic texts. Even when the sovereigns of local empires were Muslim, relations with African religions were not substantially different. Until the 12th/18th century, the animist countryside encircled the partially Islamised urban settlements, and the sovereigns themselves, whose "indigenous" legitimacy was initially based on respect for ancestral customs and rights, were generally prepared to fulfil their obligations as African chieftains, performing the prescribed ceremonies and sacrifices.

Western Sudan thus presents a specific model of Islamisation, distinguished not so much by a somewhat limited number of peculiar heterodox practices, but determined more by its long accepted minority status. This was a case of an "extramural" Islam, which was nonetheless to consolidate, over the course of time, its identity and its adherence to the central Sunni norms.

Unlike in other regions of the continent, such as the current Republic of Sudan with its capital Khartoum [see SŪDĀN, Anglo-Egyptian Sudan and the modern Republic of Sudan. 1.], the Islamisation movement in western Sudan did not lead to a proliferation of the Arabic language, except in a few educated circles. Certain African languages, which have themselves accommodated borrowed Arabic words, in such areas as religion, days of the week, commerce and the names of persons, fulfil an intermediary function in oral preaching as in the written culture (using Arabic characters). Such is notably the case of Fulfulde, across the whole of West Africa, of Wolof in Senegal, of Malinke/Jula in Mali, in Guinea and in certain neighbouring countries [see FULBE], and most particularly, at the eastern extremity of western Sudanese territory, of Hausa [*q.v.*]. Separate treatment should be reserved for Mauritania, the population of which has, from the 5th/11th century onward, been gradually subjugated by Arab tribes descended from the Banū Hilāl, and almost totally Arabised [see MŪRĪTĀNIYĀ].

Initial contacts

From the direction of Morocco, there is mention of an expedition mounted by Ḥabīb b. Abī ʿUbayd al-Fihrī, grandson of ʿUḳba b. Nāfiʿ [*q.v.*], "in the Sūs and the land of the Sūdān" in 116/734. He achieved, according to Ibn ʿAbd al-Ḥakam, " a victory without equal and brought back gold in profusion". This reconnaissance was not, apparently, without long-term effect: his son ʿAbd al-Raḥmān, who was to become governor of Ifrīḳiya in 127/745, had three wells sunk on the desert routes leading towards western Sudan. The Arabo-Berber troops, who in twenty years had covered the distance from Gibraltar to Poitiers, thus remained, after these hesitant explorations, at the northern approaches to the desert.

The effective discovery of western Sudan was carried out by merchants, Berbers for the most part. Under the influence of the Arabo-Muslim conquest, which stimulated demand and created a commercial dynamism, towns and itineraries were established on both sides of the desert. To the west was Sidjilmāsa [*q.v.*] (south-east Morocco), which was in contact with Awdaghost [*q.v.*] (a Berber town of southern Mauritania) and with Ghāna, about twelve days journey from the former, for a long time the principal Black metropolis in this zone. In the centre, a ramified axis linked Tripoli, Ifrīḳiya and Wargla to Gao [*q.v.*] (Kaw-Kaw), one of the oldest Black African towns on the Niger, by way of Tādmakka/al-Sūḳ, another Saharan depot town. Throughout the Middle Ages, the principal axes were continually shifting from west to east, following, essentially, the movement of the northern powers: Umayyads of Cordova, Almoravids, Fāṭimids, then Ayyūbids and Egyptian Mamlūks. A parallel shifting of powers took place in the Sudanese region, from the West (Ghāna, 5th/11th century) to the east (Gao [*q.v.*], 9th/15th century), although it is impossible to compare accurately the role of the intrusions by trans-Saharan commerce with that of local political issues.

From the time of these first contacts, African groups were converting to Islam. In all the cases cited, it was the chiefs who embraced Islam and then imposed it on their subjects. Thus, according to al-Bakrī, Wāra Dyābi, king of Takrūr, "became a Muslim and installed Islamic law among his people. He persuaded them to conform, having enlightened them as to the truth. He died in 432/1040-1". Wāra Dyābi also achieved the conversion of a neighbouring town, that of Silla, which was dependent on Takrūr. Later, in 448/1056, his son Labī is known to have fought with Almoravid troops. Moving further east, the conversion of the king of Gao, Zā Kosoy, is said to have taken place even earlier: "he embraced Islam voluntarily and under no constraint" *ca.* 400/1009-10, according to the author of the *Taʾrīkh al-Sūdān*. But even earlier than this, al-Muhallabī (d. 380/990) had noted with reference to Gao: "The king of the land declares himself a Muslim before his subjects; many among them also declare themselves Muslims". Al-Bakrī, writing in 460/1068, even evokes a distant allegiance to the Umayyads of Cordova: "For the royal investiture, the sovereign is presented with a seal, a sword and a Ḳurʾān which are alleged, so they say, to be gifts presented by the *Amīr al-muʾminīn*. Their sovereign is a Muslim and only a Muslim can be invested with royalty". At the end of the 5th/11th century, a series of Muslim epitaphs came into existence in the cemetery of Gao-Sane, referring to dignitaries and royal figures who have yet to be positively identified. The oldest of these epitaphs of Gao dates from 481/1088: it bears the name of "Makkiyya (?), daughter of Ḥasan al-Ḥādjdj".

It is worth noting that this Islamic inscription is the oldest known in the whole of Black Africa. A few years later, the names of kings and queens appear on the same site: the three most ancient steles (494/1100, 502/1108, and 503/1110) which are made of marble, were imported from Almeria. The others are of local manufacture. With Gao, there is thus available a remarkable cluster of convergent sources, which render this town another major centre of Islamisation, undoubtedly older than the preceding.

Only Ghāna resisted these first conversions for a short time. It capitulated under the influence of the Almoravids, before the end of the century, in 479/1076. The 5th/11th century was thus the great century of the initiation into Islam of the royal courts situated at the termini of the trans-Saharan routes. The co-existence between Muslims and non-Muslims took a remarkable form, as was noted assiduously by the Arab authors of the period, in particular by al-Bakrī; the majority of sub-Saharan cities were divided, the "town of the merchants" being separated, sometimes by several kilometres, from the "royal town". This was notably the case of Ghāna and of Gao.

The Khāridjite pioneers

The Arab sources cited above are exclusively Sunnī. There is thus total silence regarding the religious conflict which for several centuries pitted the Sunnīs of the Maghrib against their Khāridjite adversaries, most of them Ibāḍīs [see IBĀḌIYYA]. For two centuries at least (*ca.* 130-340/750-950) the Khāridjite Berbers, masters of the power-centres of the southern Maghrib (Sidjilmāsa and Tāhart) and of the Saharan routes, were interposed between the central Muslim world and western and central Sudan. Ibāḍī sources of the 4th-6th/10th-12th centuries, at least those which have survived destruction, not to mention later sources, speak of Ibāḍī travellers from Tāhart, Wargla, Nafzāwa and Djabal Nafūsa, journeying into Tādmakkat, Gao, Ghāna and other regions of western Sudan. Al-Bakrī himself notes the presence of traders from Ibāḍī regions in Awdaghost, where they became very numerous until the conquest of the city and the Almoravid massacres of 446/1054-5. In fact, the hatred felt by the Almoravids, nomadic Ṣanhādja Berbers, for the sedentary Zanāta Berbers was augmented by the religious hostility of militant Sunnīs against Khāridjite heretics. Although their power was in a seriously weakened state in the 5th/11th century, the Khāridjites had hitherto exercised political and economic control of all the trans-Saharan routes. The Ṣufrī Khāridjites [see ṢUFRIYYA] of the independent city of Sidjilmāsa (founded 140/757) represented the principal western outlet. The Ibāḍī Rustamids [*q.v.*] of Tāhart [*q.v.*] (159-297/776-909) ruled over all the Saharan approaches, from central Algeria to Wargla, to southern Tunisia and Djabal Nafūsa. The Ibāḍī dynasty of the Banu 'l-Khaṭṭāb (306-568/918-1172), based at Zawīla, a place with a longstanding Khāridjite tradition in Fazzān, controlled, for its part, access to the Chad basin.

Some have concluded from this that the first form of sub-Saharan Islam must have been Khāridjite. The hypothesis is plausible but its proof more problematic. The only source which testifies to the adherence to Khāridjism of a Black African population is the *Kitāb al-Djughrāfiyya* of al-Zuhrī, probably written after 539/1133, which refers to a population situated, according to the context, between Ghāna and the loop of the Niger, at a time when Timbuktū [*q.v.*] barely existed. On travelling through the same zone, near the Niger, in 753/1352, Ibn Baṭṭūṭa notes the presence of "white" Ibāḍīs bearing the name of a Malinke family, that of Saghanughū. Thus, at the approaches to the Sahel in Tādmakkat [*q.v.*], vigorously Ibāḍī in the 2nd/8th century, an African population seems to have adopted the *madhhab* of its commercial associates and remained loyal to it until the Almoravid upheaval, and possibly after it. It is possible that there were other analogous cases, but Ibāḍism progressed no further in Black Africa, either in time or space.

A founding moment: the Almoravid movement

Speculations on the role of the Almoravids [see AL-MURĀBIṬŪN] in Black Africa are conditioned by the mediocrity of the sources. There can be no doubt that the activities of the Almoravids to the south of the Sahara have been under-estimated to the advantage of developments in the north, much better documented and more "central" for classical orientalism and European history. The Almoravid movement was, however, born on the fringes of Black Africa. The *ribāṭ* which gave it its name, if it existed, was perhaps situated on an island off the southern coast of Mauritania, or even in the Senegal river, and from the outset, contingents from Takrūr, a Senegalese kingdom, are observed giving the movement their support. But the poor quality of the available sources leaves the field open to mythologies of all kinds. For purposes of prestige, the Muslim historiography of these regions regularly seeks to trace its origins to a founding movement, or what is seen as such. Thus Leo Africanus [*q.v.*], in 1526, recorded claims which sought to link the empire of Mali [*q.v.*], born in the 7th/13th century, to Abū Bakr, the cousin of Yūsuf b. Tāshfīn, the Almoravid sovereign, but the chronological and geographical distance, as well as the knowledge which is available regarding the origins of Mali, are sufficient refutation of these pretensions. Similarly, traditions make Ndyadyan Ndyay, the legendary founder of the dynasty of Waalo, a Senegalese kingdom, a son of the same Abū Bakr, but more than two centuries separate the era of the former from that of the latter. The genealogy of Aḥmad Bābā [*q.v.*], the great scholar of Timbuktū (b. 953/1556), dating back through nineteen generations to Abū Bakr, is no more convincing.

Returning to the known facts: the movement of the *Murābiṭūn*, which led, for a century, to the constitution of a vast north-south empire, from Senegal to the Ebro, marked the rise, under the guidance of the Lamtūna tribe [*q.v.*], of the Ṣanhādja Berbers, veiled nomads of the Mauritanian desert, at the expense of their Zanāta rivals. In the economic sphere, this was reflected by seizure of exclusive control of access to West African gold: the map of the empire is shaped by the western south-north routes which transported the gold to North Africa. In the religious sphere, it marked the victory of the Maghribī Sunnī circles, from which it had emerged, over Khāridjite and Shīʿī dissidence, then active in the Maghrib and the Sahara.

Ibn Yāsīn, the stern visionary who, despite nomadic reservations, had determined the organisation and the doctrine of the *Murābiṭūn*, died in battle in 451/1059. The titular *amīr* of the Lamtūna henceforward took up the mantle, in the person of Abū Bakr b. ʿUmar, nominated as successor to Ibn Yāsīn and head of the community. It was after the foundation of Marrākush [*q.v.*], according to one of the available sources, that Abū Bakr chose to return to the desert to maintain order and unity in the cradle of the movement. He delegated his authority in the north to his first cousin Yūsuf b. Tāshfīn, destined for an illustrious future, and became until his death, in 480/1087 (with varia-

tions in date according to sources), the leader of the southern wing of the movement, establishing his capital at Azukkī, in the Mauritanian Adrār.

Developments at this time to the south of the Sahara are not so well known. As regards the inhabitants of Ghāna, al-Zuhrī relates that in 469/1076-7 "they became Muslims in the time of the Lamtūna and were distinctive in their Islam". While numerous generations of textbooks have given 1076 as the date of a conquest and a destruction of Ghāna by the Almoravids, contemporary commentators, although far from unanimous, tend to call into question both the conquest (the text of al-Zuhrī is indecisive) and the destruction (archaeology of the site of Kumbi-Saleh, the presumed site of ancient Ghāna, rather shows evidence of a revival in the town's prosperity until the 8th/14th century). The Soninke capital would thus have become Muslim under the Almoravids, and al-Zuhrī, some fifty years after the event (539/1133), confines himself to eulogising the fervent Islam of its population, which included *ʿulamāʾ*, *fuḳahāʾ* and sophisticated readers of the Ḳurʾān. Some years later, in 548/1154, al-Idrīsī described Ghāna as a prosperous city, entirely Muslim, with a sovereign claiming Sharīfian ancestry, through al-Ḥasan b. ʿAlī, and acknowledging the primacy of the ʿAbbāsid caliph. Al-Zuhrī also relates how the people of Ghāna appealed for the aid of the Almoravids, of Abū Bakr in fact, "seven years" after their own conversion to Islam, i.e. *ca.* 476/1083, in rendering "Muslim"—meaning, in this instance, Sunnī—the population of Tādmakkat and of another city in the region. Finally, Yāḳūt, who compiled his *Muʿdjam al-buldān* in 617/1220 on the basis of earlier sources, tells of a close and doubtless ancient alliance between Zāfūnu/Jafunu, another important Soninke kingdom, situated to the west of Ghāna, and the Almoravids, and notes the extreme deference shown by the latter towards their king on the occasion of a visit to Marrākush. These various items of evidence show that the Almoravids, far from playing on an insoluble rivalry between nomadic Whites and sedentary Blacks, were capable from the outset of benefiting by firm alliances in Black countries, more specifically in the various Soninke kingdoms which encircled the southern boundaries of its empire and admitted the Maghribī caravans. As the first Islamised ethnic group of the region, the Soninke subsequently became a seed-bed of Muslim traders and teachers who diffused Islam throughout the surrounding regions.

After the death of Abū Bakr, in 480/1087, Almoravid memories continued to nourish the genealogical claims of various local nomads who thus claimed descent from him or from the eminent *imām* al-Ḥaḍramī, the jurist of Azukkī (d. 489/1096). A distant prototype, although never claimed as such, of the West African *djihāds* of the 11th/17th and 13th/19th centuries, the Almoravid movement appears as a unifying, if not founding development, on the fringes of the Soninke world and in the neighbouring Sahelian regions. It has also taken on, as a result of its reverberations, the dimensions of a creation-myth, often repeated and always in demand.

The age of the great Sudanese empires

The western Sudanese empires—with the addition of that of Kanem-Borno, in the Chad region of central Sudan—which so fascinated the newly-independent African states in the 1960s, are much better documented. These empires had nothing at all of the centralisation which is normally associated with this type of formation. These were vast superstructures, operating within shifting frontiers, in a world where control of people rather than of land, was seen as crucial. It was a matter of great families, mounted warriors and commercial networks. The mass of the peasantry, socially stratified according to ancestry, essentially pursued its daily life under the authority of chieftains of villages or of cantons (the *kafu* of Mali), who had little contact with the central power. Mediaeval Sudanese empires were thus complex structures, combining numerous levels of culture and of power. This accounts for the fact that the families running the empires, all of them geared towards control of access to trans-Saharan commerce, were in most cases Islamised, while their subjects, whether close by or far-away, remained devoted in their daily lives to pagan cults.

In contrast to the situation in mediaeval Europe, where rulers drew their revenues from levies imposed on agricultural production, the Sudanese imperial formations earned their wealth from the profits of trans-Saharan trade, positioning themselves accordingly between the sources (gold, ivory, slaves, etc.) and the outlets. These courtiers were also predators. In order to augment the influx of costly merchandise of Maghribī, European or Oriental origin, which increased their prestige as well as supplying them with the instruments of power (horses and, later, fire-arms), the leading groups of these empires raided and pillaged, where possible, beyond the boundaries of their recognised tributaries, or at the expense of internal or external adversaries. In principle, adherence to Islam was protection against capture and reduction to slavery, but this was a fragile protection which counted for little when weighed against the interests of the powerful. In the *Miʿrādj al-suʿūd*, a work composed in Timbuktū in 1024/1615, Aḥmad Bābā replies to a merchant from Twāt [*q.v.*] who has consulted him about the legal status of slaves who are natives of various regions of Sudan. He recalls the obedience to Islam of a number of Sudanese states and, consequently, the illegality of enslaving Muslims originating from these empires, while deploring the frequency of such infractions of the *Sharīʿa*.

These empires conducted business dealings over vast spaces and contributed to the creation of new identities. The hierarchical and administrative models which they established left lasting traces; thus titulatures and functions initiated in Mali or in Borno radiated through all the neighbouring countries, and tributary states took them over for their own purposes, retaining them in their own political systems when they became independent of imperial rule. On the other hand, the effective protection afforded to medium and long-distance trade, noted by Arab observers, led to an urban development which is nowhere more perceptible than at the loop of the Niger, where a chain of ancient and modern towns is to be found, under the successive control of Mali and of Songhay: Ja (Dia), Djenne, Timbuktū, Gao, etc.

Being privileged partners of the Arabo-Muslim world, these empires merited numerous mentions in the Arabic sources of the time, which contributed to endowing them with an "Arabised" aspect. In most cases, Maghribī and Egyptian travellers were acquainted only with the capitals and the major cities and were only partially aware of the social realities. Local Arabic sources (*taʾrīkh*) help to diversify the information available, but it should not be forgotten that they emanated from urbanised families, with both scholarly and commercial interests, which themselves lived according to this openness to the Arab world, to such an extent that sometimes, as at Timbuktū, they were more Arabised than African. The Islam that was then

practised was an Islam of the court, of cities, of chieftains and merchants, still inadequately implanted and sometimes capable of offering only weak resistance to the "pagan" reactions of the 10th/16th and 11th/17th centuries. As long as this Islamisation of the higher echelons was not matched by popular Islamisation, the entire process remained limited in its effects, even if there was even a gradual vulgarisation of Islamic concepts, values and practices.

At the time that the ʿAbbāsid caliphate in Bag̲h̲dād came to a tragic end under the onslaught of the Mongols, the Islamised empires of West Africa, on the contrary, entered a phase of ascendancy. Following the collapse of G̲h̲āna which, as a limited regional hegemony (on the fringes of Mali and Mauritania), seems to have been dismembered during the Almoravid era (the capital city of G̲h̲āna remaining for its part, over a period of several centuries, a commercial centre of the highest importance), a new empire emerged from the local struggles, much further to the south, centred on the gold-mines of Bure, the fluvial axis of the Niger and the trade routes originating from the western and the central Sahara. The mythical founder of this empire, Sunjata/Soundjata Keita (early 7th/13th century), originating from a milieu of societies of hunters endowed with both physical and magical powers, is celebrated by a highly-structured epic tradition, the dating of which is still the object of controversy. His adherence to Islam, vigorously contested by some, appears probable, although purely formal, to others. The Keita dynasty was well known to Ibn K̲h̲aldūn, who gives a list of all the reigning sovereigns, from "Mārī D̲j̲ātā" (probably the Sunjata of the oral chronicle) to Mansa Mag̲h̲ā III, who came to power in 792/1390. Ibn K̲h̲aldūn, who was informed on these matters by a man who had been *ḳāḍī* in Gao, gives the duration of reigns and salient dates which make it possible to reconstruct the entire dynastic chain. The tradition of pilgrimage, which began with Mansa Ulī, son of Mārī D̲j̲ātā (after 659/1260), continued with Sākūra, a *mamlūk* of the family who acceded to power *ca.* 700/1300, and culminated in Mansa Kanku Mūsā (*Mansa* is the royal title, Kanku the Malinke name of his mother), whose journey in 724/1324, accompanied by a large retinue, attracted a great deal of attention, especially in Cairo where he was noted for his distribution of lavish gratuities to intermediaries and to local dignitaries [see MANSA MŪSĀ]. Mūsā's brother, Mansa Sulaymān (*ca.* 735-59/1335-58) performed the pilgrimage to the Holy Places in his turn. The arrival of books and of Arab scholars in larger numbers can be dated from this period. The name of Mali was henceforward well-known in the Mediterranean region, arousing the curiosity of visitors. It was in 735/1352, during the reign of Sulaymān, that Ibn Baṭṭūṭa arrived in Mali, visiting the capital of the empire, which he describes in considerable detail (although it is virtually impossible, on the basis of his account, to locate this capital), then visited Timbuḳtū and Gao, where he spent a short period of time, paying more attention to the Mag̲h̲ribī names of the residents whose hospitality he enjoyed.

The empire disappears from history with these sources, at the end of the 8th/14th century. It disintegrated at this time, giving way to multiple regional units. It was through one of these units, in the direction of Gambia, that the Portuguese, exploring the territory by stages from the 9th/15th century onward, became aware of the existence of a kingdom of the "Mandingas" (Manding/Malinke), henceforward located towards the Atlantic coast, and of a major city, situated far inland, which they called with numerous variants, Tambucutu (Timbuḳtū).

In the Sahel, another hegemony rose to prominence in the wake of Mali's decline. Nourished by long-distance trade, and marked by a drive towards urbanisation, the loop of the Niger, closer to the most active new axes of trans-Saharan traffic and direct beneficiary of the strengthening of ties with Egypt, became the new dynamic centre of the western Sudan. It fell to a local power, that of Gao, to unite all these regions in a "fluvial empire", first released from the control of Mali and then inheriting from the latter the majority of its former possessions. This empire, called Songhay [*q.v.*], from the name of the ethnic group which then constituted its nucleus, was founded by Sonni ʿAlī (869-98/1465-1492), a political and military chief whose religious commitment to Islam was probably minimal. In 898/1493, a provincial governor, Muḥammad Ture, supported by the urban élite of Timbuḳtū and the "Muslim party" of the region, deposed the son of Sonni ʿAlī and inaugurated a dynasty, that of the *Askiyā* (the meaning of this title is still unknown) which was to last for a century. Thus the Songhay empire had barely been constituted when it became the focus of a struggle between the educated and commercial élite of Timbuḳtū and the warrior power of Gao. Between the new and the old town, between the two systems of values, tensions, even under the *Askiyā*, were recurrent. The two *Taʾrīk̲h̲*s (*al-Sūdān* and *al-Fattās̲h̲*), which espoused the cause of Timbuḳtū, clearly reflect this mutal polarisation. In particular, the character of Sonni ʿAlī as it emerges from these prejudiced sources is that of "a debauched and impious tyrant". No doubt the Islam of the court, constrained to accept numerous compromises, was thus challenged by the new Arabised and Arabophile élites, who hoped for a pattern of government closer to their interests and their ideals. The *Askiyā* Muḥammad, who began his reign with performance of the pilgrimage (between 901/1496 and 904/1498) and appointed numerous *ʿulamāʾ* as his advisers (including the Algerian reformer from Tlemcen, al-Mag̲h̲īlī [*q.v.*]), corresponded well to the type of sultan whom they preferred. For the most part, Muḥammad's successors pursued the same policy. An Islamic framework was established in the central provinces of the empire: creation of mosques and schools, appointment of *ḳāḍīs*, of *imāms* and of teachers. In spite of political vicissitudes, the Songhay empire thus represents an important phase in the Islamisation of western Sudan.

The system of Sudanese empires came to an end, in western Africa, with the Moroccan conquest. Aḥmad al-Manṣūr [*q.v.*], ambitious sovereign of the new Saʿdian dynasty, in his efforts to ward off European attacks, sought to create a vast African empire which would enable him to exert direct control over sources of gold, salt and slaves. Songhay and Morocco were specifically at odds on the issue of the salt-mines of Tag̲h̲āza [*q.v.*], in the mid-Sahara. After an initial unsuccessful attempt, Moroccan troops led by a Spanish convert to Islam, the Pas̲h̲a D̲j̲ūdar, took control of Gao, then of Timbuḳtū, in 999/1591. Moroccan pas̲h̲as, increasingly detached from the mother-country, were to govern the principal towns of the loop of the Niger until 1249/1833. This marked the end of the prosperity of the region and of the power of its urban élites. Aḥmad Bābā himself spent fourteen years in detention in Morocco.

"Imperial Islam" had been dealt a mortal blow, and animist regional hegemonies were soon to be seen taking its place. But what Islam had lost at higher

levels, it recouped at the grass-roots ones. The discreet efforts of missionaries contributed to the development of new arrangements, more in tune with popular sensibilities. An Islam of popular saints began to emerge, prefiguring that of the Ṣūfī brotherhoods [see ṬARĪḲA] whose penetration, from the direction of Egypt and of the Maghrib, had at that time barely begun.

The birth of a West African Muslim culture

The Soninke networks were the first and principal vehicles of Arabo-Islamic education in western Sudan. Transmission subsequently took place in the direction of Mali and of the river Niger. Malinke tradition has retained the memory of this Soninke primacy in religious matters. One town, of Soninke foundation, embodied more than others this transmission of knowledge towards the riparian societies of the Niger: the city of Ja (Dia, Dja, Djaba, Djagha-ba/Djakha-ba, Zagha, are variant forms of the name) to the west of Māsina, situated in the interior delta of the central Niger). This town, the history of which has become somewhat mythic, seems to have been the place of origin or of reference of numerous West African scholarly dynasties. According to the *Ta'rīkh al-Fattāsh*, it had been a "city of jurists" (*madīnat al-fukahā'*) since the time of the empire of Mali. It enjoyed almost total autonomy within the empire and guaranteed immunity to criminals who found refuge there. Ibn Baṭṭūṭa, who visited the place in 753/1352, observed that "the people of Zāgha have a long history of adherence to Islam. They are religious and are zealous for *'ilm*". It is clearly evident that the religious centres of Jenne (which was nearby) and of Timbuktū, which began to flourish at a later stage, were the heirs to this hotbed of religious zeal. One of the major scholarly figures of Ja and of western Sudan was al-Ḥādjdj Sālim Suwārī, who can be placed in the 9th/15th century. A native of Ja, Suwārī emigrated to what was to become, under the same name, an annexe to the scholarly metropolis, that of Jakha (Diakha), on the Bafing, a tributary of the Senegal, in the gold-bearing region of Bambuk. Suwārī and Diakha were in their turn the points of reference for the foundation of the great religious and pacific lineage which during subsequent centuries was to spread its influence over the territories of Senegambia and bore the name of this colony of Ja: the Jakhanke. For his part, I. Wilks has studied, in Ghāna and in the Ivory Coast, a total of 34 Mālikī chains of transmission (*isnād*) of Malinke/Jula (or Dyula) *karamoko* (teachers) of this region which also originated with al-Ḥādjdj Sālim Suwārī. Thus through these multiple channels of transmission, Ja extended its influence over the totality of learned lineages in this part of West Africa.

Cultural and linguistic transfers were accomplished without any difficulty in these scholarly networks, which were themselves merged and blended, in the same families, even in the same individuals, with the commercial networks. A generic name, that of Wangara, which features in the Arabic sources, denotes these circles specialising in commerce. These Wangara were the precursors of the migrants and traders who were to be known at a later stage, in the world of the Malinke and in neighbouring countries, by the name of Jula. The Wangara did not belong to a single ethnic group: the term is generic and is applied to all those who shared the same way of life, but it is clear that the "hard core" was constituted by the Soninke and the Malinke, in other words by the inheritors of the first two empires, who were subsequently to be joined by some of the Songhay (the *Askiyā* Muḥammad was himself of Soninke origin). With their facility of movement, these Wangara radiated within the interior of these empires, then further and further afield in different directions, particularly towards the Hausa (currently northern Nigeria), the known history of which, in the context of central Sudan, comes into existence around the 14th century.

The scholarly city *par excellence* during this period was Timbuktū. Founded in the early 6th/12th century by Tuareg tribes, it rapidly became, on account of its position at the gateway to the desert and in proximity to the river Niger, a commercial outpost of the first importance. The known history of the Muslim community of Timbuktū dates from the 8th/14th century. In 753-4/1352-3, when Ibn Baṭṭūṭa visited the place (on two occasions), it was still a small town, principally inhabited by Masūfa Berbers of the desert. He noted, however, the tombs of two Muslim Arabs who had followed Mansa Mūsā after his return from the pilgrimage: a merchant of Alexandria, who died in 734/1334, and Abū Isḥāḳ al-Gharnāṭī al-Sāḥilī, an Andalusian who had begun his career as a notary in Granada, and, following his pilgrimage to the Holy Places, had accompanied Mansa Mūsā to Mali, becoming his confidential adviser and his architect. Al-Sāḥilī built a palace for the sovereign in the capital (reckoned to be Niani, on the upper Niger), and possibly the great mosque of Timbuktū, and is credited with having introduced the Sudanese style of architecture. He subsequently settled in Timbuktū, where he died in 747/1346. Passing under control of the Songhay, after the turbulent reign of Sonni 'Alī, Timbuktū reached its zenith under the *Askiyā*. Dominated by a few major families incorporating all the ethnic groups of the region (Berber and Negro), such as that of the Akīt, to which Aḥmad Bābā belonged, it became the principal centre of Islamic learning in this part of Africa.

A scholar of the *Mashriḳ* was serving then as an intermediary in this transmission of knowledge: the renowned Egyptian encyclopaedist Djalāl al-Dīn al-Suyūṭī (d. 911/1505 [*q.v.*]). Al-Suyūṭī did not visit Sudan, but he became the favoured spokesman for Sudanese persons passing through Cairo on the pilgrimage route or in search of education. Thus at the end of the 9th/15th century, he had welcomed the *Askiyā* Muḥammad, with whom he maintained a correspondence. It was he who was responsible for the very rapid diffusion of copies of the *Tafsīr al-Djalālayn* (commentary on the Ḳur'ān, completed in 870/1465), of which al-Suyūṭī himself was one of the co-authors, and which achieved classic status to the south of the Sahara. A judicial work of great importance also reached western Sudan, by way of Timbuktū, during the same period. This was the *Mukhtaṣar* of al-Khalīl b. Isḥāḳ [*q.v.*], a well-known summary of Mālikī jurisprudence. By the end of the 9th/15th century, a range of studies was thus firmly established in this town.

In the absence of *madrasas* as such, the education provided in Timbuktū was based on various initiatives, mosque-schools in particular, the best known being that of Sankore. This mosque attracted large numbers of students and teachers. It was directed by the *imām*, who was often also the *ḳāḍī* of the city. Two inter-related families, the Akīt and the Anda ag-Muḥammad, both of Tuareg origin, supplied Sankora with its principal teachers. The fact that the *Mukhtaṣar* (composed before 776/1374) was introduced so late underlines what had long been the provincial nature of Timbuktū, as a local centre. But once it was fully developed, the scholars of the town and of the loop of the Niger, who kept themselves informed by means of cross-desert traffic and seized every opportunity to

consult visiting intellectuals, had no doubt attained a very respectable level of competence by the standards of the period, which was that of a literature of textbooks accompanied by abundant glosses (*ḥawāshī*) and commentaries (*shurūḥ*).

Another cultural aspect of Islamisation which deserves mention is the aspiration of scholars and of royal dynasties towards noble, i.e. eastern, origins. The Islamised dynasty of Ghāna, as has been seen, declared its descent from al-Ḥasan b. ʿAlī; the Keita of Mali claimed descent from Bilāl, the Prophet's muezzin; and the Sefuwa of Kanem claimed Sayf b. Dhī Yazan [*q.v.*], a Yemeni hero, as their ancestor. Many other examples could be given. The *shurafāʾ* [*q.v.*] (pl. of *sharīf*), reputedly of the blood of the Prophet, were endowed for this reason with unequalled prestige. The *Taʾrīkh al-Fattāsh* relates how Mansa Mūsā made efforts to attract authentic *shurafāʾ* to his court, but succeeded in adding to his entourage only a few freedmen of the tribe of Ḳuraysh, while the *Askiyā* Muḥammad, for his part, was able to recruit a nephew of "the prince of Mecca", Mawlāy al-Saḳlī, who took up residence in Timbuḳtū in 925/1519. The history of these events is evidently apologetic, but it shows by what symbolic means the West African Islamic community was then seeking to take its place in the *umma* and to obtain titles of recognition and legitimacy which would be accepted in the central lands of the Arab world. The significance attached to these contacts with the East also illustrates the growing importance of Egypt in the African Islamic world. Until the 8th/14th century, the Maghrib, the first progenitor of western Sudan, held the advantage. From the time of the pilgrimage of Mansa Mūsā, Egypt, which since the Fāṭimids and the fall of the ʿAbbāsid caliphate had become the metropolis of Sunnism, occupied a central position, reinforced by its status as a necessary stage on the pilgrimage route. Islamised Western Sudan henceforward was following, more or less, the Egyptian model.

Ṣūfism and the brotherhoods

In the mediaeval period, the brotherhoods had not yet effectively penetrated the Sahelo-Sudanese realm, but saintly individuals and bearers of Ṣūfī ideas were beginning to make their appearance across the desert. The Ḳādiriyya [*q.v.*] was the first brotherhood to become widely diffused to the south of the Sahara. Claims or reconstructions contained in Ḳādirī sources have led some authors to adopt a fairly early chronology, for example making al-Maghīlī (*ca.* 900/1500), a vehicle of this *ṭarīḳa*. These interpretations are no longer considered valid. The history of the Ḳādiriyya in the Sahara and in western Sudan is closely linked to the destiny of the Kunta [*q.v.*], an Arabised nomadic group which made its adherence to this doctrine one of the foundations of its power. The Kunta probably emerged in the 9th/15th or 10th/16th century, in the western Sahara between Adrar and Sāḳiya al-Ḥamrāʾ. They considered themselves the descendants of Sīdī Aḥmad al-Bakkāy (d. 920/1514). Shortly after their formation, the Kunta split into two branches, one remaining in the west, the other migrating to the region north of the loop of the Niger in the early 12th/18th century. It was there, at the end of the same century, that Sīdī al-Mukhtār (1142-1226/1729-1811) became the first individual definitely known to have been associated with the Ḳādiriyya, serving as the brotherhood's *shaykh* and winning renown throughout the region. But Ṣūfī influences must have crossed the desert before the institutionalisation of the Ḳādiriyya. This period of "Ṣūfism without brotherhood" is one of the most obscure phases in the history of African Islam. A case investigated recently by H.T. Norris is that of a holy man of Aïr, arriving from the Mashriḳ *ca.* 900/1500, a semi-legendary figure known by the name of Sīdī Maḥmud al-Baghdādī, who was killed at some time during the first half of the 10th/16th century on the orders of the sultan of Agadès and the *fuḳahāʾ* of his court. Al-Baghdādī, whose teaching has been preserved by an oral tradition put into writing at a later stage, principally taught the recitation of the *dhikr* and the practice of *khalwa* (solitary retreat). He left a community and disciples, whose traces were to survive for some time. In any case, in 898/1493, thus even before the supposed arrival of the holy man, an educated Berber of the region informed al-Suyūṭī of the practice of *khalwa* in the region of Aïr and asked for his opinion on the subject. Al-Suyūṭī saw no cause for concern, but the innovation was sufficiently substantial to induce Aḥmad Bābā, a century later in 1024/1616, making explicit reference to the "heretics of al-Baghdādī", to denounce the excesses of the *dhikr* and to authorise the persecution of its practitioners. It also seems that the Kel al-Sūḳ, Tuareg scholars from the crossroads-town of Tādmakkat, who were dispersed between Niger and Aïr in the late 9th/15th century, were responsible for spreading Ṣūfī influence. But the time of the brotherhoods was yet to come, and these initial developments were confined to the world of Saharan scholars, Berbers for the most part.

Conclusion

The concept of western Sudan is applied especially, in history, to the mediaeval period. It is associated with the first penetration by Islam, with trans-Saharan trade and with the imperial political formations known as "Sudanese empires". This western Sudanese space was subsequently the setting for new political experiences: re-activation of non-Muslim political systems (Bambara, Mossi), then, from the 17th century onward, principally at the instigation of Fulbe scholars, outbreak of a series of localised *djihāds*, reformist movements which once again called into question the strategy of co-existence between Muslims and animist culture: 1138/1725-6, Futa Jalon, in Guinea; 1174/1760, Futa Toro (Middle Senegal); 1804, foundation of the caliphate of Sokoto, in northern Nigeria; 1818, Māsina, in Mali; 1852, al-Ḥādjdj ʿUmar, in Guinea-Mali-Senegal. Another period, other methods, another history. The term "Western Sudan", which derived its origin and its pertinence from the external Arab viewpoint on an earlier period, then became too generic and inappropriate to denote a space where political differences were constantly accentuated, in contrast with the European conquest (from the mid-19th century) which was arising.

3. Languages across the whole geographical Sūdān.

The Arabs brought Islam to *Bilād al-Sūdān* as traders in gold, ivory, and slaves. Already by the end of the 7th century A.D., many Arabic dialects were spoken in the great Sudanese markets. The varieties of Sudanese Colloquial Arabic (SCA) and Sudanic Arabic (SA) spoken today demonstrate that there are many affinities among them and those of the Ṣaʿīd [*q.v.*] or Upper Egypt, such as the preservation of Old Arabic /a/ in word-initial position for the /i/ of other dialects (cf. /al-/ "the", Cairene /il-/, or the genitival exponents *hinīn* or *allūl*). The term SCA refers to any non-pidgin/non-creole dialect of Arabic used in the Republic of Sudan, whereas the term SA is a much broader designation indicative of a macro-dialect of both sedentary and Bedouin types in the larger *Bilād al-Sūdān* context.

This article deals primarily with SCA within the larger SA framework. Also featured are several other major languages of *Bilād al-Sūdān*. Although grammars and vocabularies of these languages (including SA) have been produced, they vary in terms of (1) quality of transcription and (2) authenticity of data. Sigismund Koelle's *Polyglotta Africana* (1854) may serve as illustrative. Although a pioneering work, it is an example of the former, since his description of Chadian and Shuwa Arabic [see SHUWA. 2.], among other problems, fails to mark gemination consistently.

SCA is currently spoken as a first language by more than half of the Sudan's population of 25.2 million (1990), and as a second or third language by many more. There are also Arabic-based pidgins and creoles used in the southern Sudan (e.g. Juba Arabic) which can be characterised by (1) the loss of the pharyngeals and emphatic consonants, which happens in other SA dialects, and (2) the reduction of morphology.

SCA dialects are the least investigated ones in the entire Arab world due, in part, to the complicated history of the immigration of various Arab tribes and the Arabicisation and Islamicisation of the many ethnic groups which initially utilised Arabic as a lingua franca and then adapted it as a primary language. The aforementioned situation can be illustrated by taking the case of the multilingual inhabitants of the Nūba Hills, who are surrounded by SCA [see NŪBA. 3]. A shift has occurred from the autochthonous tribal language to SCA via contact with the superstratum. Moreover, when villagers, who have moved to the larger towns and cities thereby acquiring SCA, return home, their newly-acquired SCA skill seemed to contribute to a higher prestige, often associated with higher-paying jobs, which has, in turn, influenced others to shift to it.

The most thoroughly studied variety of SCA after the Khartoum-Omdurman dialect is that of the camel-breeding Shukriyya, who number between 150,000 and 300,000 and inhabit the Buṭāna between the Atbara and the Blue Nile. Although they trace their ancestry back to Arabia and Djaʿfar b. Abī Ṭālib, their dialect is not Arabian. SCA does have some common isoglosses with Arabian dialects, however, such as one of the genitival exponents in current use, *ḥagg* (another, *bitāʿ*, shows the close affinity with Egyptian Arabic).

Historically speaking, many Arabic-speaking tribes came to the Sudan from Egypt (e.g. the Djaʿaliyyīn) and the Ḥidjāz (e.g. the Djuhayna). Among the former, it is possible today to subgroup the Shaykiyya, Rubāṭāb, Mirāfāb, Djaʿaliyyīn, Kawāhla, and Rufāʿa; the latter can be divided among the Shukriyya, Djuhayna, Ḥassāniyya, Hawāwīr, Kabābish, Ḥamid, Salima, Hawāzma, Messiriyya, Ḥumr, Ḥamar, Rizaygāt, Habbāniyya, Taʿaysha, and Baggāra. Whether Arabian features date back to the inner-Arabian conditions or occurred later inside the Sudan itself under the influence of the Hilāl and Sulaym groups remains unclear. In terms of dialect geography, however, four basic zones can be distinguished: (1) Northern, including the Arabic-speaking parts of Dongola; (2) Central, including Khartoum-Omdurman, the Gezira, and the country east of the Blue Nile; (3) Western, including the White Nile territory, Kordofān, and Dārfūr (the Baggāra dialect constitutes a group by itself, however); and (4) Southern, including the aforementioned pidgins and creoles.

One of the most striking features of SCA dialects is the different vocabulary used. For instance, throughout the Sudan, one eats thin, round, flat bread called *kisra* or a thicker type thereof, *gurrāṣa*. These words are unknown in other parts of the Arab world unless the user is familiar with Sudanese cuisine. Typical other Sudanese lexemes include: *kadīs*, pl. *kadasa* ~ *kadāyis*, also *nyāwa* "cat"; *biriš* "straw mat"; *marfaʿīn* "wolf; hyena"; *baʿšōm* "fox; jackal"; *ʿangarēb* "bed"; *karkab* "wooden slippers"; *waṭā* ~ *waṭā* "earth"; *kadrūk* "pig"; *marīsa* "kind of alcoholic brew usually made of millet"; and *gannab* "sit". SCA *katīr* "many, much" is a particularly good illustration of the close connection with Upper Egyptian *katīr* (cf. Cairene *kitīr* but Moroccan *bezzāf* or Gulf Arabic *wādjid* ~ *wāyid*).

Turning to the verbal realm, most SCA dialects use the verb *maša, yamši* for "go", whereas Egyptian and other Eastern dialects use *rāḥ, yirūḥ* (Classical *ðahaba* survives only in Yemen). Although the verb *ʿāwiz* or *ʿāyiz* can be heard for "want" in the Sudan, this is probably best analysed as an Egyptianism. The authentic SCA active participle is *dāyir*, a metathesised form of Classical form IV, *ʾārāda* with aphaeresis.

Cf. SCA *dāyir šinu* "what do you want?" for Egyptian *ʿāwiz ee(h)*. It is Chadian and Nigerian Arabic *ta/idōr šinú* "what do you want?" which should be directly compared with the aforementioned SCA expression proving that these dialects are basically extensions of SA.

After Arabic, Hausa [*q.v.*] is the most important language of the *Bilād al-Sūdān*. With 22 million first-language speakers and another 10 million second language users (1991), this West Chadic (Afroasiatic) language has supplanted over the centuries many other Chadic languages with fewer speakers. It is written today mainly in Latin script; however, Ajami (i.e. Arabic) writing is still used, befitting the many Arabic loanwords.

Kanuri [*q.v.*] is the major language (Saharan sub-branch of Nilo-Saharan) of Borno State, Nigeria, with 3.5 million speakers (1987). Like Hausa, it has a tradition of being written in Ajami script. There are 100,000 speakers in Chad (1985); 56,500 in Cameroon (1982); and 50,000 in Niger (1991). It is used on radio and television, and has been able to supply loanwords to the languages of the area; e.g. Nigerian Arabic *dugó* "then, afterwards" has been borrowed from Kanuri *dugō* "first".

Fulfulde (Fula, Fulbe, Fulani [see FULBE]) is spoken by 8.6% of the Nigerian population (7.6 million, 1991). It has four major Nigerian dialects: (1) Adamawa, spoken in Gongola State; (2) Kano-Katsina; (3) Bororro, in Bornu State; and (4) Sokoto. This Atlantic (Niger-Congo) language is spoken over a vast area since the Fulani are found in many countries, e.g. Mali has one million (1991).

Songhay [see SONGHAY] (Nilo-Saharan) has 600,000 speakers in Mali; 390,000 in Niger; 122,700 in Burkino Faso (all 1991). It continues to serve as an important trade language and is also being used as the language of primary school instruction.

Another Nilo-Saharan language is Bagirmi [*q.v.*] (30,000 to 40,000 speakers, 1977), spoken in Chad and Nigeria. It was the language of the ancient Bagirmi Kingdom and has many second-language users.

Wolof (Atlantic sub-branch of Niger-Congo [see SENEGAL. 1]) is spoken by 36% of the population of Senegal (1976) and 14.6% of the population of Gambia (1983). Together, the Gambian and Senegalese dialects have 3 million speakers (1987). Another 3 million speak it as a second language (1991). It is also used in Mali and Mauritania.

Other important languages of this area include Tamasheq (Berber, Afroasiatic), Bambara and Mandinka (both Mande, Niger-Congo).

SUDAYF B. MAYMŪN, Arab poet of the 2nd/8th century.

Sudayf b. Mahrān b. Maymūn, *mawlā* of the Khuzāʿa, or of the Banu 'l-ʿAbbās, or of the Banū Hāshim, was born in Mecca during the final years of the Umayyad dynasty. From an early age he was a supporter of the Hāshimites against the latter and was even, according to al-Iṣfahānī, the leader of a sect, the Sudayfiyya, opposing a pro-Umayyad group organised by a certain Sayyāb. After the seizure of power by the ʿAbbāsids, Sudayf left Mecca for al-Ḥīra, where he approached the caliph al-Saffāḥ and tried without success to persuade him to slaughter certain remaining Umayyads. But following the revolt of Muḥammad b. ʿAbd Allāh b. al-Ḥasan b. ʿAlī [*q.v.*], known as al-Nafs al-Zakiyya, at Medina, and that of his brother Ibrāhīm at Baṣra, Sudayf openly sided with the ʿAlids against the ʿAbbāsids, supporting them with his poetry and with the money which he had previously accepted from the latter. However, after the failure of both these revolts Sudayf fled to Medina or to Mecca, appealing for pardon to the caliph al-Manṣūr. According to a source quoted by Ibn al-Muʿtazz, this pardon was granted, but another source, generally considered more reliable, insists that the caliph rejected his approaches, took a personal dislike to him, and instructed one of his uncles, ʿAbd al-Ṣamad b. ʿAlī or Dāwūd b. ʿAlī, then governors of Mecca and of Medina respectively, to assassinate him. One of them carried out this instruction in the year 147/764.

Of a *dīwān* of 30 folios, according to Ibn al-Nadīm, composed by Sudayf b. Maymūn, all that remains, or more accurately, all that Riḍwān Mahdī al-ʿAbbūd has succeeded in collecting, is 20 fragments comprising a total of 99 verses, gleaned from numerous and diverse sources of which the most important, among ancient sources are: Ibn al-Muʿtazz, *Ṭabaḳāt*, and al-Iṣfahānī, *Aghānī* (6 fragments), Ibn ʿAbd Rabbih, *ʿIḳd* (6 fragments) and Ibn Ḳutayba, *Shiʿr* (4 fragments), and among modern or contemporary sources: al-Ṣanʿānī, *Nasamat al-saḥar*, still in manuscript (5 fragments) and al-ʿĀmilī, *ʿAyān al-shīʿa* (13 fragments). As reconstructed, these 20 fragments are of unequal length. Only five can be regarded as *ḳaṣīda*s, the other fifteen comprising between one and six verses.

Sudayf employs eight metres. Foremost are *kāmil* and *khafīf* (5 fragments), followed by *basīṭ* (4 fragments), *ṭawīl* (2 fragments), and finally, *madīd*, *wāfir*, *ramal* and *mutaḳārib* (1 fragment). For rhyme, eight letters are used: *nūn* (5 times), *yāʾ* (3 times), *hamza*, *rāʾ* and *ḍād* (twice) and finally *bāʾ*, *ḥāʾ* and *dāl* (once).

Sudayf b. Maymūn addresses the principal themes of Arabic poetry. In fact, his *dīwān* includes three erotic fragments (nos. 7, 14 and 17) with a total length of 16 verses, a satirical fragment (no. 5, one verse), a laudatory fragment (no. 6, two verses) dedicated to a certain Djumaḥī, a dirge (no. 10, two verses) in which he laments over his "men", probably meaning the Shīʿīs, and finally and of the greatest importance, fifteen political fragments which could be placed under two major headings. Under the first heading are a number of fragments (no. 2, 18 verses, no. 11, 4 verses and no. 13, 2 verses) in which Sudayf attacks the Umayyads, whom he describes as unjust and misguided, reproaching them in particular over the killing of al-Ḥusayn b. ʿAlī and of Zayd b. al-Ḥusayn. The fragments of the second category may also be divided into two groups. On the one hand, Sudayf addresses eulogies to the ʿAbbāsids, noble guides and leaders, and especially to the caliph al-Saffāḥ (no. 20, 7 verses, and no. 6, 8 verses), whom he describes a "well-guided and supreme chief"; but on the other hand he attacks these same caliphs, especially after the revolt of al-Nafs al-Zakiyya, and condemns them as impious, proclaiming at the same time his allegiance to the ʿAlids, envisaging their recovery of the caliphate (no. 16, 9 verses). Finally, on account of his opposition to the Umayyads and his virulent satires against the ʿAbbāsids, whom he had previously praised, and his eulogies of the Hāshimites and ʿAlids in particular, Sudayf b. Maymūn is classed as a Shīʿī poet,

and consequently he was placed by Ibn Shahrāshūb (*Maʿālim al-ʿulamāʾ*, 151) among the *Shuʿarāʾ Ahl al-Bayt al-muktaṣidūn* and among the *Aʿyān al-shīʿa* by al-ʿĀmilī.

Bibliography: Among the works mentioned in the article, the most important are ʿĀmilī, *Aʿyān al-shīʿa*, xxxiv, 3-25; Riḍwān Mahdī al-ʿAbbūd, *Shiʿr Sudayf b. Maymūn*, Nadjaf 1974. See also S. Moscati, *Le massacre des Umayyades dans l'histoire et dans les fragments poétiques*, in *ArO*, xviii/4 (1950), 88-115, Prague 1950; Taieb El Acheche, *La poésie shiʿite*, thesis, Paris-Sorbonne 1988, unpubl.

(Taieb El Acheche)

SUDAYR [see SUDAYRĪ].

SUDAYRI (AL-SADĀRĀ), the name of one of the most prestigious clans of the al-Dawāsir [*q.v.*]. They derive their name from Sudayr (or Sadayr), a northernmost district of Nadjd, in modern Saudi Arabia, north of the valley of al-ʿAtk [*q.v.*]. Wādī Sudayr, known as Bāṭin al-Sudayr, runs northwest of al-Riyāḍ. In recent centuries they ruled in the oases of al-ʿAwda, Djalādjil, al-Madjmaʿa, al-Ghāṭ and Sudayra, the latter being the name of one of the sweet water wells of Ḥafar al-ʿAtk. Ever since the 13th/19th century, their name has been intimately associated with the Āl Suʿūd [*q.v.*].

(E. van Donzel)

AL-**SUDDĪ**, ISMĀʿĪL B. ʿABD AL-RAḤMĀN, a *mawlā* of Zaynab bt. Ḳays b. Makhrama, was a popular preacher in Kūfa, who is said to have died in 127/745. His reputation as a transmitter of prophetic traditions was a matter of dispute. The opinions of the *ridjāl* [*q.v.*] experts ranged all the way from neutral (*ṣāliḥ* [*q.v.*], *lā baʾs bihi*) to mendacious (*kadhdhāb*). His role in *isnāds* [*q.v.*] supporting canonical traditions is minimal anyway and entirely artificial, i.e. he cannot be held responsible for it. His political stance (*tashayyuʿ*) may be distilled from the accusation that he, at one time, had slighted the two *shaykhs* Abū Bakr and ʿUmar. His fame lay in his alleged expertise in Ḳurʾān exegesis, which seems to be reflected in his *nisba*-cum-*laḳab* al-Suddī. He acquired this name because he used to sit on the threshold (Ar. *sudda*) of the great mosque, where he is said to have gathered people around him. His contemporary al-Shaʿbī [*q.v.*] thought absolutely nothing of his exegetical expertise. Ibrāhīm al-Nakhaʿī [*q.v.*] described his exegesis as popular (*tafsīr al-ḳawm*). In al-Ṭabarī's *Tafsīr*, countless exegetical remarks ascribed to al-Suddī can be found and could conceivably be brought together in a volume. Whether such a compilation would allow conclusions as to a certain bias or predilection on his part, if any, has as yet to be established.

(G.H.A. Juynboll)

SŪDĪ, AḤMED (mod. Tkish. Ahmet, and sometimes referred to, incorrectly it seems, as Mehmet), also known as Sūdī-yi (or Aḥmed-i) Bosnawī, Ottoman scholar noted as a commentator on the *dīwān* of Ḥāfiẓ [*q.v.*], the *Gulistān* and *Bustān* of Saʿdī [*q.v.*], and other Persian works. He was born in Bosnia at Sudiči (whence his *nisba*), a village near the town of Foča which, being better known, some sources give as his birthplace. His birthdate is unknown, as are the names of his parents and other details of his family beyond the fact that he remained unmarried, a remark in his commentary on the *dīwān* of Ḥāfiẓ stating that, like Jesus, he never took a wife (Nazıf M. Hoca, *Sûdî. Hayatı, eserleri ve iki risâlesi'nin metni*, Istanbul 1980, 15). The date given for his death varies from 1000/1592-3 to after 1006/8 May 1598 (*op. cit.*, 16), but it is known that he was buried at the Yūsuf Pasha mosque in Aksaray, although the whereabouts of his tombstone is not known, it having been removed during the course of roadworks. Assumed to have adhered to the Ḥanafī law school, a charge that he suppressed from the Ḥāfiẓ corpus some poems of Shīʿī sympathy seems to have been disproved by lack of such poems in the earliest mss. [see ḤĀFIẒ].

Sūdī's early schooling is assumed to have been in Foča, while his commentary on the *Gulistān* includes a reference to study in Sarajevo, and he is thought to have continued his education in Istanbul, to which city (like others from Bosnia) he came during the ascendency of the Bosnian-born Ṣoḳullu Meḥmed Pasha [*q.v.*]. He visited Erzurum, and studied with Muṣliḥ al-Dīn al-Lārī [see AL-LĀRĪ] at Āmid in Diyarbekir before going to Damascus (where he read Saʿdī's *Gulistān* with the poet Ḥalīm-i Shirwānī), Baghdād, Nadjaf and Kūfa, and undertook the *Ḥadjdj*. He comments on the places he visited, complaining, e.g. about an ignorance of Persian and good Arabic among the people of Baghdād, and describing the mosques and tombs of Kūfa as in ruins. He did not visit Persia itself, but everywhere sought to widen his knowledge of Persian, not only through contact with scholars but, according to his own statements, discussing difficult passages from Ḥāfiẓ and Saʿdī with such people as Persian merchants who were men of both trade and learning.

Returning to Istanbul, he undertook further study before becoming a teacher to the *ghilmān-i khāṣṣa* in the household of Ibrāhīm Pasha (d. 942/1636) (on Ibrāhīm Pasha and the *ghulām* system, see GHULĀM. iv, at 1087a) one of whom, Mostarlî Derwīsh Pasha (d. 1012/1603 [see DERWĪSH PASHA]) was to mention Sūdī in the preface to his *Murād-nāme*.

Sūdī's recension of the *Dīwān* of Ḥāfiẓ (3 vols., Būlāḳ 1250/1834) is said to have been produced at the suggestion of Muḥammad b. Badr al-Dīn Muḥyī 'l-Dīn al-Munshī of Akhisar [see AḲ ḤIṢĀRĪ (b)]. Considered authoritative and outshining earlier works by Shemʿī and Sürūrī (see Ritter, in *IA* art. *Hâfiz*), it was used for editions by Persian scholars as well as for studies by Western orientalists. His *risāle*s on the second *bayt* of the first *ghazal* in the *dīwān* of Ḥāfiẓ and on one *bayt* of Saʿdī's *Gulistān* are included in the study by Nazif Hoca (see above). The former is shown by Rypka (*History of Iranian literature*, Dordrecht 1968, 103) as an exception to the usual approach of the old commentators, who stressed only the intellectual content of Persian poetry rather than its formal aspect, which they regarded as self-evident (see also Browne, *LHP*, iii, 299, 302).

Bibliography: For titles in addition to those mentioned in the article, see Hoca's work, on which this article draws broadly for biographical detail; and see also Mustafa Özkan, *Mahmûd b. Kâdî'i Manyâs Gülistan tercümesi. Giriş—inceleme—metin—sözlük*, Ankara 1992.

(Kathleen Burrill)

SUDJĀN RĀY BHANDĀRĪ, or Sudjān Singh Dhīr, Munshī (*flor.* in the second half of the 11th/17th century and the early part of the 12th/18th century

under the Mughal emperor Awrangzīb [*q.v.*]), Hindu chronicler of Muslim India and compiler of collections of *inshā'* [*q.v.*] literature. The name Sudjān (probably not to be taken as Sandjān, as in the *EI*[1] article) comes from a Hindi word meaning "well informed, wise, intelligent", according to Storey.

Very little is known of his life and career, apart from what he tells us in his books or what has been added to the manuscripts of them by their copyists. In the preface to his history (see 1. below), he states that he was by profession a *munshī* or secretary in the civil and financial administration of the Mughal empire, that he was born at Batāla (in the Gūrdāspūr District) in the Pandjāb and that he visited Kābul, probably Thaṭṭā and the Pindjawr Garden at the foot of the Himalayas.

He is the author of:

1. The *Khulāṣat al-tawārīkh*, completed in 1107/1695-6. It is a history of India from the earliest times to the accession of Awrangzīb in 1069/1659, with his narrative ending in 1068/1658. He based it on a number of historical works in Persian, which he enumerates. It claims only to be, as its title says, an "epitome of histories", but is of interest as being written by a Hindu. It also contains a valuable geographical section, with particular information about the Pandjāb. Much of the *Khulāṣa* was incorporated in the *Siyar al-muta'akhkhirīn* of Ghulām Ḥusayn Khān Ṭabāṭabā'ī [*q.v.*], written shortly afterwards, and in the *Akhbār-i Maḥabbat* of Nawwāb Maḥabbat Khān. A free Urdu adaptation of the earlier part of the *Khulāṣa*, on the geography of India and on the Hindu Rādjās of Dihlī, was made in 1219-20/1804-5 by the Urdu poet Mīr Shīr ʿAlī "Afsūs" [*q.v.*]. The *Khulāṣa* was edited by M. Ẓafar Ḥasan, lith. Dihlī 1918; sections are tr. in Elliot and Dowson, *History of India*, viii, 5-12, and by Jadunath Sarkar in *The India of Aurangzib* (*topography, statistics and roads*)..., Calcutta 1901. See on the *Khulāṣa*, H. Beveridge, *The Khalásat-at-Tawárikh, or Essence of History*, in *JRAS* (1894), 733-68 (1895), 211; Storey, i, 453-8.

2. The *Khulāṣat al-inshā'* and the *Khulāṣat al-makātīb*, two collections of *inshā'* or ornate official prose by Persian and Indo-Muslim authors, compiled in the 1690s and so far unpublished. See Storey, iii/2, E. *Ornate prose*, 318.

Bibliography: Given in the article.

(Mohammed Shafi-[C.E. Bosworth])

AL-**SUDJDJA**, apparently the name of an idol of the pre-Islamic Arabs.

In a marginal addition to Ibn al-Kalbī's *K. al-Aṣnām* (ed. Klinke-Rosenberger, 2), the following *ḥadīth* is given: "Fulfill your legal alms obligations, for God has freed you from al-Sudjdja and al-Badjdja" (missing from the *Concordance*). The commentator says that al-Sudjdja was an idol. As for al-Badjdja, this is the blood drawn from an incision (*faṣīd*) of a camel's vein, on which the Arabs used to feed in times of dearth. But according to *TʿA*, ii, 6, al-Badjdja was an idol too. In this case, the second part of the tradition would have the following meaning "... for God has freed you from al-Sudjdja and al-Badjdja" (in regard to whom you used to have to pay a tenth on herds or make sacrifices; in future, these should be made to God).

A variant of this *ḥadīth* (equally missing from the *Concordance*) mentions a third idol, al-Djabha, which denotes at the same time, in addition to the sense of "forehead", a pre-Islamic idol, a lunar mansion, the moon itself, horses (like *al-sudjdja*), humiliation, the leading men of a tribe and, finally, the persons responsible for levying money for a ransom or a debt (*TʿA*, ix, 383). The name of this idol is found in another tradition, together with two other names of deities, "No alms payment is due to al-Djabha, al-Nukhkha or al-Kusʿa" (*ibid.*, v, 484, ii, 285).

Bibliography: Given in the article; other refs. in T. Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 51-2. But see also W. Atallah, *De quelques prétendues idoles Baǧǧa, Suǧǧa, etc.*, in *Arabica*, xx (1973), 160-7, who questions whether these words refer to idols and interprets them as relating to stages of an animal sacrifice. (T. Fahd)

SUEZ [see al-suways].

SŪF (Ar. Wādī Sūf, *nisba* Sūfī, pl. Sawāfa, *vulgo* Suafa), a group of oases in south-eastern Algeria, termed by the French (since 1885) Annexe d'El Oued, after its chef-lieu al-Wād. With its nomadic periphery, it covers an area of *ca.* 80,000 km^2, stretching along the Tunisian border from the Djarīd to the approaches of Ghadāmes. Most of it is sand dunes forming part of the Great Oriental Erg, the remainder is flat, stony terrain (*ṣaḥn*, lit. "plate") and several salt marshes (*sabkha, shaṭṭ*). Villages and palm groves occupy only a fraction of the whole. Though of difficult access (hence its use as a refuge), it was never really isolated, thanks to its role as a link between Tunisia (Nafṭa) and pre-Saharan Algeria (Tuggurt, Tamāsīn, Biskra). The settled area comprises nine older villages (founded before the 17th century), divided in three groups: Ḳmār (vocalisation uncertain, Fr. spelling Guémar) and Taghzūt in the north-west; Kuinīn and Tiksabt in the south-west; Zkūm (spelling uncertain; Fr. spelling Zgoum), Bahīma, Dabīla and Sīdī ʿAwn in the north-east; and al-Wād in the centre. The number of their inhabitants ranges from 880 (Sīdī ʿAwn) to *ca.* 13,000 (al-Wād) (Nadler 1957, 24). There are a dozen newer villages, including the Amish group in the south and temporary camp sites (*naẓlāt*). The global population of the Sūf has soared from 17,629 (?) in 1883 to *ca.* 120,000 in 1966 (Kielstra 1987, 11). About one-third of these are nomads, but the distinction between them and the settlers is not clear-cut: most nomads own palm groves and spend there the harvest season, while many villagers raise flocks. Demographic pressure and poor harvests entail emigration, mostly to Tunisia (36,000 in 1955; Vanney 1960, 177).

Origins. The aborigines of the Sūf were presumably Berbers, but the main ethnic components in the Islamic period are the ʿAdwān and the nomadic Ṭrūd. According to the *Kitāb al-ʿAdwānī* (see *Bibl.*), the former claimed descent from a Makhzūmī who came with the first Islamic conquest, while the latter arrived near the end of the 14th century and considered themselves as part of Sulaym. After initial clashes between the two, a *modus vivendi* was reached though political opposition remained.

Economy. The basis of the Sūfī economy is the date palm. Its cultivation differs from that practised elsewhere [see nakhl and tamr] in two respects: (a) the tree is planted in a funnel-like excavation (*ghawṭ*, pl. *ghīṭān*) at a depth enabling its roots to reach the groundwater; hence no need of irrigation, but of sisyphean labour to keep the sand out; and (b) with the lowering of the water table, the tree, in order to survive, must be lowered too—an arduous and risky operation. The palm groves produce several varieties of dates, such as the famous *deglet nūr* (5.3% of the total, for export only) and the soft dates, *ghars* (78% of the total, the staple food of the Suafa). The total number of trees went up from 154,000 in 1883 to 441,000 in 1930 (Cauvet 1934, 93). Vegetables, too,

are grown in the *ghawṭs*, as well as snuff tobacco. Cereals must be imported. Livestock is raised mostly by the nomads. Textiles produced include burnuses, *ḥā'iks* and carpets. A supplement of income is provided by smuggling (notably of gunpowder). A closed chapter in the Sūfi economy is the black slave trade and slavery, which only stopped completely as late as 1922 (Leselle 1955, 20).

Islam in the Sūf. The Suafa are Mālikis. The Fāṭimid and Khāridjite heresies left no trace in the Sūf, and much the same applies to the 16th-century maraboutic Shābbiyya. Only the implantation of three major Ṣūfi orders, the Raḥmāniyya, the Tidjāniyya and the Ḳādiriyya [*q.vv.*] in the 19th century and the rivalry between the latter two, has made religion a prime factor in Sūfi life and politics. The Raḥmānīs were the first to found a lodge at al-Wād (1815). By 1858 they had some 10,000 members. Next came the Tidjānīs, who founded a lodge at Ḳmār, an extension of Tamalhat at Tamāsin in the Rīgh valley. Being staunch collaborators of the French, they enjoyed their trust and favour, but the two main lodges at ʿAyn Māḍī and Tamāsīn were long divided over the supreme headship of the order. The Ḳādiriyya became active in the Sūf thanks to two brothers from Nafṭa, al-Hāshimī and al-Imām, who built two lodges in the Amish area (1887, 1892). The Ḳādirīs were welcomed by the Raḥmānīs, but the Tidjānīs took an unfavourable view of the new competitor. Thus began a 30-year long rivalry (1895-1924), which divided the Sūf into two camps. To bolster his position, al-Hāshimī likewise offered his services to the French, who, though mistrustful, used him to expand their Saharan trade, check smuggling and obtain information on the Turks and the Sanūsīs. When he incited his followers against the French, he was banished to Tunisia (1918). After the demise of both his Tidjānī rival and his own one (1923), their successors made peace (1924), but the rise of the Orthodox Reform movement [see IṢLĀḤ. i. and SALAFIYYA] threatened the entire maraboutic establishment. By 1932, the Sūf was again divided into two blocs, for and against the Reformists. The Ḳādirī chief ʿAbd al-ʿAzīz denounced the marabouts and joined the AUMA (Algerian ʿUlamā' Assoc.) in 1937, which prompted Ibn Bādīs to spread the reformist gospel in the Sūf (Pigoreau 1954, 36). Despite their success, the membership of the three orders did not diminish: in 1945 it averaged 15,000 for each (Kielstra 1987, 14).

Religious differences were not the only ones to divide the Sūf. It was also plagued by tribal alliances based on enmity between neighbouring villages [see ṢAFF]. These factions became involved in regional rivalries: between Tuggurt and Tamāsīn, the Bū-ʿUkkāz and the Ben Gāna. From this involvement, the Sūf profited little and suffered much in terms of human losses and material damage. Its submission to the French (1854) was followed by 16 uneventful years, marred by exactions of French-appointed *ḳā'ids*. France's defeat at the hands of Prussia stimulated uprisings in the Constantinois (1871), including a bloody attack on Ḳmār by a religious agitator called Bū Shūsha. When the *pax gallica* was restored, France imposed direct rule on the Sūf (1877). Two former *khalīfas* of the Ṭrūd, Ḥammū Mūsā and Aḥmad ben Tuātī, were appointed *ḳā'ids*, but they no longer enjoyed the autonomy which tribal leaders had possessed before. There was a silent agreement between them and the Tidjānīs as to their respective spheres of influence, but after the Great War both religious and secular leadership lost their political basis. Only the old merchant families kept their status, and, by providing their sons with a modern education, qualified them as bureaucrats in independent Algeria (Kielstra 1987, 23).

(P. SHINAR)

ṢŪF (A.), the wool of sheep (*shā'*, *ḍa'n*). The hair sheared from other animals is named differently; *wabar* denotes camels' hair, *shaʿr* the wool of goats (*djubbat shiʿār*, a gown made from goats' hair, see al-Suyūṭī, *Ṭaylasān*, no. 114). The radical *ṣ-w-f* is known from pre-Talmudic Hebrew in the sense of "bundle of wool" (*Tosafta*). *Ṣūf* is mentioned in several pre-Islamic contexts, but in the Ḳur'ān only once in the plural form (*aṣwāf*), in XVI, 82/80.

Sheep breeding (*aṣwāf muʿbarāt al-ritāʿ*, the thick wool of sheep pasturing freely, in al-Ṭabarī, iii, 1848 l. 3; cf. Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, 30 l. 16; al-Djāḥiẓ, *Ḥayawān*, iii, 364 l. 3) and wool spinning (*ghazl al-nisā'*, *TA*, x, 315 l. 22) were ubiquitous among the Arab tribes during the Djāhiliyya and in the semi-arid zones in the Mediterranean countries during early Islam and later, these regions being unfit for intensive agriculture but suitable for the herds of the Bedouins which roamed in these lands. Thus sheep flocks were a symbol of richness. Nevertheless, with the development of Islamic civilisation, the nomads' tents were replaced by houses and palaces, and the use of luxury fabrics and furs (*farwa*) grew. It seems that due to this development, the use of wool acquired among the Muslims of the caliphal period an image of coarse cloth (*djibāb ahl al-bādiya*, in Ibn al-Djawzī, *Muntaẓam* viii, 84 l. 10).

Market demand stimulated commerce in wool and encouraged partnership between Bedouins and sedentary people (U. Heyd, *Ottoman documents on Palestine*, doc. 46) as well as long-distance land (al-Muḳaddasī, 145 ll. 13-14) and maritime trade in wool (Gil, *A history of Palestine 634-1099*, Cambridge 1992, 251 doc. 458 ll. 15-16) Documents from 15th-century Morocco deal with commerce between that country and Portugal (*Sources inédites de l'histoire du Maroc*, 1ère série, *Portugal*, i, 314, 581, iii, 260).

Wool was spun (*ghazala*) into raw material (R.B. Serjeant, *Islamic textiles*, Beirut 1972, 72, 92, 80; S.D. Goitein, *A Mediterranean society*, iv, 126-7). It was used in the manufacture of *baṭā'in al-riḥāl* (saddle linings), *raḥl min shaʿr wa-ṣūf* (camel's saddle made from goats' hair and wool) *ḥanbal* (rug made of coarse wool, in *Sources inédites de l'histoire du Maroc*, 1ère série, *Portugal*,

i, 44), carpets, *bisāt, farsh* (or *fursh*); and in the garment industries in a variety of woollen clothes (*thiyab al-ṣūf*): *aʿbiya* (woollen cloaks), *busht* (woollen wraps), *aksiya* (clothes; *kisāʾ min ṣūf* (in al-Baladhurī, *Ansāb*, iv/4, 86 l. 8), *athwāb* (woollen robes), *kilal* (veils), *djubba* (gown) and *zaʿbūt* (woollen garment); see further, LIBĀS.

In local markets different qualities of wool and felt (*lubūd* [*q.v.*]) were on sale; these were manufactured in a variety of colours (Ibn Bassām, *Nihāyat al-rutba fī ṭalab al-ḥisba*, 197).

Wool-makers or sellers (*ṣawwāf*; al-Ḳāsimī, *Dictionnaire des métiers damascains*, ii, 275) are mentioned in towns (Goitein, *op. cit.* i, 105, 419, nn. 37-9; Maya Shatzmiller, *Labour in the medieval islamic world*, Leiden 1994, 120, 123) as well as in the countryside, among sedentary people as well as pastoralists.

The assumption of E. Ashtor (*Les lainages dans l'Orient mediéval*, 1976, 673 ff., repr. in his *Studies on the Levantine trade*, London 1978) that the system of wool manufacturing in the Islamic Near East declined due to the dumping of European exports, remains to be proved. Thus, for example, one of the guilds in Ottoman Jerusalem, a backwater provincial town, is named *ṭāʾifat al-bushtiyya* or *al-ʿabawiyya*, the wool craftmen's association (M. ʿAṭāʾ Allāh, *Wathāʾiḳ al-ṭawāʾif al-ḥirfiyya*, ii, 47-61; for trade in woollen clothes in the European lands of the Ottoman empire, cf. S. Faroqhi, *Peasants, dervishes and traders*, Variorum edns., Aldershot).

Although wearing a woollen dress was a signal of poverty (*marḳaʿa min ṣūf* = woollen rags, in Ibn Iyās), of simplicity (al-Masʿūdī, *Murūdj*, § 2537) and even of asceticism (*djubbat ṣūf ḳubruṣiyya* = a long outer garment open in the front, in al-Muḳaddasī, 415 ll. 6-8; *thiyāb bīḍ ghilāẓ* = white, rough dress, in al-Masʿūdī, *op. cit.*, § 2727), and Goldziher, among others, suggested the hypothesis of the possible association of *ṣūf* and Ṣūfism, there is nevertheless evidence for the use of wool in luxurious contexts (*fawḳāniyya mulawwana min al-ṣūf al-nafīs* = a coloured robe made from expensive wool, al-Ḳalḳashandī, *Ṣubḥ*, iv, 40; Ashtor, *Histoire des prix et des salaires*, Paris 1969, 176, 344).

ṢUFFA [see AHL AL-ṢUFFA].

ṢŪFĪ [see TAṢAWWUF].

AL-**SŪFISṬĀʾIYYŪN** (A.), the Sophists, from the Greek word for a sophist, *sophistēs*. At the heart of the Arabic references and discussions lies the Greek text of Aristotle, *On sophistical refutations* (*Peri sophistikōn elenkhōn*). Here sophistical refutations are defined as those arguments which go under the guise of refutations but are, in fact, fallacious and should not be considered as refutations. A little further on in his text, Aristotle describes a sophist as one who capitalises financially on wisdom which is apparent rather than real. Arabic forms of the words "sophist", "sophistics" and "sophistry" do not appear in the Ḳurʾān, and the latter does not know the Arabic *mughālaṭa* ("fallacy") either. The translation history of Aristotle's *Sophistical refutations* into Arabic is problematic, as F.E. Peters has shown. Several versions clearly existed and the work was known, and commented upon, by early, scholars as diverse as al-Kindī and Yaḥyā b. ʿAdī. An abridgement is also known by Ibn Sīnā. The Syriac commentators, and more importantly, the Greek (Alexandrian) commentators on Aristotelian logic identified nine branches, and their division was adopted by the Arabs. Sophistics, whose basic text was the *Sophistical refutations*, and which was called in Arabic *al-Safsaṭa* or *al-Mughālaṭa*, appeared as number seven in the traditional list. This was its position, for example, in the encyclopaedic work of al-Khʷārazmī called *Mafātīḥ al-ʿulūm*. Here, under the rubric "Seventh section on Sophistics", the author briefly observes: "This Book is called *Sophistics*, a word meaning 'arbitrary action'. The Sophist (*al-sūfisṭāʾī*) is one who exercises arbitrary judgement. The Book reports the causes of fallacies and how to be on one's guard against them. The Sophists (*al-sūfisṭāʾiyyūn*) are those who do not establish the real facts of a matter". Al-Kindī, earlier, ranking the *Sophistical refutations* as the sixth, rather than the seventh, of the classical books of logic, similarly defined a sophist as "one who passes arbitrary judgement" (*al-mutaḥakkim*). The subject matter of the *Sophistical refutations* broadly dealt with fallacy in syllogistic discourse. The great philosopher al-Fārābī, whom Muhsin Mahdi has aptly characterised as "the *Imām* of logicians', spoke of sophistry in the same breath as dialectic (*djadal*). Deborah Black notes that "Fārābī sometimes links sophistry to widely-accepted premises, distinguishing it from dialectic on the grounds that dialectic takes premises that are in fact widely-accepted, whereas sophistry takes those that only appear or are presumed to be so" (*Logic and Aristotle*'s Rhetoric *and* Poetics, 96, n. 129). In sum, we can identify, from all these definitions, a broad agreement in mediaeval Islamic thought about the meaning of the word "sophist" and a general logical suspicion of those who engaged in sophistry. It is worth noting here, too, that several went further and added a religious dimension to their discussions. Ibn al-Djawzī, for example, in his *Talbīs Iblīs* examined the Sophists (here, not in the technical logical meaning, but merely "sceptics" in the epistemological sense, i.e. those who deny knowable essences; see on this, J. van Ess, *Scepticism in Islamic thought*, in *Al-Abḥāth*, xxi [1968], 1-18) as a source of heresy.

Bibliography (in addition to references in the article): The seminal work is, of course, Aristotle's *Peri sophistikōn elenkhōn*, also known under the Latin title of *De sophisticis elenchis*. See E.S. Forster (ed.), *Aristotle: On sophistical refutations* [and other works], The Loeb Classical Library, London-Cambridge, Mass repr. 1965, for dual Greek-English text. See also Soheil M. Afnan, *A philosophical lexicon in Persian and Arabic*, Beirut 1969, *s.vv.* *sūfisṭāʾī*, *sūfisṭīkā*; Deborah L. Rescher, *The development of Arabic logic*, Pittsburgh 1964; idem, *Studies in the history of Arabic logic*, Pittsburgh 1963.

(I.R. NETTON)

ṢŪFIYĀNA (P.), the term applied to the days of abstinence from eating meat introduced by the Mughal emperor of India, Akbar (963-1014/1556-1605 [*q.v.*]). His chronicler Abu 'l-Faḍl ʿAllāmī [*q.v.*] notes in his *Āʾīn-i Akbarī* (tr. H. Blochmann, i, 51-2, more accurately tr. in Shireen Moosvi, *Episodes in the life of Akbar. Contemporary records and reminiscences*, New Delhi 1994, 100-1) that Akbar abstained thus on Fridays and Sundays, and then on various other days of the year, including the first day of each solar month and the whole of the first month Farwardīn and the one in which he had been born, Ābān. His son Djahāngīr

(1014-37/1605-27 [*q.v.*]) continued the practice, with *ṣūfiyāna* meals on Sundays in his father's memory and on Thursdays to commemorate his own accession. It has been plausibly suggested that both Ṣūfī Muslim and Hindu and Jain influences played parts in determining Akbar's practice here.

Bibliography: See also Aziz Ahmad, *Studies in Islamic culture in the Indian environment*, Oxford 1964, 177; S.A.A. Rizvi, *Religious and intellectual history of the Muslims in Akbar's reign*, New Delhi 1975, 386-7.

(C.E. Bosworth)

ṢUFRIYYA, an early Islamic religious group defined by the heresiographers as the name of a Khāridjite sect arising out of the breakup of the Khāridjite community in Baṣra in the year 64/683-4.

The heresiographers commonly derive the name from a founder variously called ʿAbd Allāh b. al-Aṣfar, ʿAbd Allāh b. al-Ṣaffār al-Saʿdī al-Tamīmī, or Ziyād b. al-Aṣfar, who was active at the time of the breakup. This founder is almost certainly fictitious. The scholars of the Ṣufriyya themselves, according to al-Mubarrad, narrated that the Khāridjites, at the time of their original rebellion against ʿAlī, chose ʿAbd Allāh b. Wahb al-Rāsibī as their *imām*, rejecting Maʿdān b. Mālik al-Iyādī because he condemned those Khāridjites who would not join the revolt. The Ṣufriyya, therefore, dissociated themselves (*bariʾū*) from Maʿdān (Mubarrad, *Kāmil*, 528-9). This may well be a back-projection of the later conflict with the Azāriḳa [*q.v.*] into the time of the founders of the Khāridjite movement. It shows, however, that the foundation figure of Ibn al-Aṣfar was unknown to the Ṣufriyya. Some sources rather mention an otherwise unknown ʿUbayda b. Ḳabīs as the spokesman of the Ṣufriyya at the time of the breakup.

In reality the name Ṣufriyya was derived from the description of early Khāridjite worshippers, even before the breakup, as *ṣufr* (*al-wudjūh*) "yellow-faced" as a result of their constant ascetic devotions, and was initially applied to the Khāridjites in general. The early Baṣran Khāridjite leader Abū Bilāl Mirdās b. Udayya [*q.v.*] (killed in 61/680), who was famous for his pious devotion, is described as the *imām* of the Ṣufriyya in the account of al-Baghdādī (*Farḳ*, 72). Naṣr b. ʿĀṣim al-Laythī dissociated himself from the Baṣran Khāridjites, calling them *al-ṣufr al-ādhān* in two lines of poetry to be dated around 66-7/685-7. A mere jibe is the derivation of the name offered by al-Aṣmaʿī, who suggested that it should be read Ṣifriyya and explained that someone had addressed an imprisoned Khāridjite as "a zero (*ṣifr*) in religion" (*Lisān al-ʿArab*, s.v. *Ṣufriyya*).

1. In Arabia and the Islamic East.

When militant Khāridjite groups left the Baṣran community and rose in rebellion in 64/683-4, they were named after their leaders, while the name Ṣufriyya came to denote the moderates, those who remained "sitting" (*ḳaʿad* or *ḳaʿada*). Naṣr al-Laythī thus mentions the followers of Nadjda and Ibn al-Azraḳ (*al-ladhīna tazarraḳū*) separately from the Ṣufriyya. Only the Azāriḳa, however, broke radically with the moderates, declaring the *ḳaʿad* polytheists (*mushrikūn*), and are never counted among the Ṣufriyya. The Nadjadāt [*q.v.*] defended the conduct of the *ḳaʿad* and evidently maintained their ties with the Baṣran community. The heresiographers also date the schism between Ṣufriyya and the moderate Ibāḍiyya [*q.v.*] in 64/683-4. The Ibāḍiyya, however, at this stage appear to have constituted merely a current among the moderates. Their separate sectarian identity was definitely established only under the leadership of Abū ʿUbayda Muslim b. Abī Karīma beginning *ca.* 95/714. Some of the Ibāḍiyya thus backed the revolts of Ṣāliḥ b. Musarriḥ and Shabīb b. Yazīd in 76-7/695-7, although these were commonly counted as Ṣufrī leaders. Similarly the Bayhasiyya, followers of Abū Bayhas [*q.v.*], were initially a current within the Ṣufriyya and only later developed into a relatively radical, separate sect. At the time of the breakup in 64/683-4, Abū Bayhas is reported to have accused Ibn al-Azraḳ of extremism and ʿAbd Allāh b. Ibāḍ of short-coming (*taḳṣīr*) because of the latter's assertion that non-Khāridjite Muslims were not polytheists but merely rejectors of God's bounties (*kuffār bi ʾl-niʿam*). Abū Bayhas argued that these were *mushrikūn*, but that it was licit for the Khāridjites to live temporarily in peace with them while practicing religious dissimulation (*taḳiyya*), to intermarry with them and to inherit from them. This was in fact the common opinion of the Ṣufriyya.

After the death of Abū Bilāl in 61/680, the learned ascetic and poet ʿImrān b. Ḥiṭṭān [*q.v.*], according to al-Baghdādī (*Farḳ*, 71), became the *imām* of the Ṣufriyya. This is confirmed by al-Djāḥiẓ (*Bayān*, i, 47, 346), who describes ʿImrān as the chief of the *ḳaʿad* of the Ṣufriyya, their consultant in religious matters (*ṣāḥib futyāhum*), and their refuge when they disagreed. ʿImrān must have been active as leader in Baṣra until 75/694, when al-Ḥadjdjādj became governor of ʿIrāḳ and ʿImrān, persecuted by him, was compelled to leave the town and go into hiding. No supreme chief of the Baṣran Ṣufriyya is known thereafter. Al-Mubarrad (*Kāmil*, 595) mentions al-Ruhayn b. Sahm al-Murādī as a Ṣufrī leader, equally learned and gifted in poetry as ʿImrān, whose contemporary he appears to have been. Al-Djāḥiẓ names as scholars of the Ṣufriyya Shubayl b. ʿAzra al-Ḍubaʿī (d. 140/757), al-Ḳāsim b. ʿAbd al-Raḥmān b. Ṣudayḳa and Mulayl. Only the first of these is otherwise known as a transmitter of historical reports, poet and orator. According to al-Djāḥiẓ, he was during most of his life a radical Shīʿī before becoming a Ṣufrī. Closer to his own time, al-Djāḥiẓ describes the well-known Baṣran philologist and historian Abū ʿUbayda Maʿmar b. al-Muthannā (d. 209/824-5 [*q.v.*]) and the Kūfan historian al-Haytham b. ʿAdī (d. between 206/821 and 209/824 [*q.v.*]) as Ṣufrī Khāridjites. Neither of these men were sectarian activists. Abū ʿUbayda had at most sentimental Khāridjite sympathies; the case of al-Haytham is even more doubtful.

The first armed revolt of the Ṣufriyya was led by Ṣāliḥ b. Musarriḥ al-Tamīmī in northern Mesopotamia in 76/695, and was continued after his death by Shabīb b. Yazīd al-Shaybānī [*q.v.*]. The rebellion was evidently provoked by al-Ḥadjdjādj's persecution of ʿImrān b. Ḥiṭṭān and other leaders of the *ḳaʿad*. Ṣāliḥ was a pietist with ties to Khāridjites in Kūfa, and is said to have preached Khāridjite views in Dārā for twenty years before his move. His followers were mostly of the Banū Shaybān of Bakr and other Rabīʿa. He was later venerated as a martyr, and recitations from his collected sermons were performed at his tomb. Ṣufrī Khāridjism became entrenched among the Rabīʿa in northern Mesopotamia and numerous Khāridjite revolts erupted there. In 100-1/718-20 Shawdhab (Bisṭām) al-Yashkurī rose and was killed. In 119/737 Buhlūl b. Bishr rose near Mawṣil backed by the Banū Shaybān and Yashkur, and al-Ṣaḥārī, a son of Shabīb b. Yazīd, revolted at Djabbul among the Banū Taym al-Lāt b. Thaʿlaba. Both were killed in battle. On a much larger scale was the Ṣufrī rebellion which erupted after the murder of the caliph al-Walīd II in 126/744. It was at first led by Saʿīd b. Bahdal al-Shaybānī, who defeated a Bayhasī rival and

died as he moved against Kūfa. He was succeeded by al-Ḍaḥḥāk b. Ḳays al-Shaybānī [*q.v.*], who had long been recognised among the Khāridjites as a religious scholar with distinct views. His followers were sometimes counted a separate sect called al-Ḍaḥḥākiyya. In al-Shahrazūr, al-Ḍaḥḥāk was joined by large groups of Ṣufriyya, some of whom had previously taken possession of Armenia and Ādharbāydjān. Al-Ḍaḥḥāk seized Kūfa, and Wāsiṭ. The Umayyad governor of Kūfa, ʿUmar II's son ʿAbd Allāh, surrendered and pledged allegiance to al-Ḍaḥḥāk. There was general amazement that a Ḳurashī prince should pray behind a Khāridjite *imām* of Bakr b. Wāʾil. Al-Ḍaḥḥāk was then joined by another Umayyad prince, Sulaymān, son of the caliph Hishām. Al-Ḍaḥḥāk was killed fighting Marwān II at Kafartūthā in 128/746. His second successor, Shaybān b. ʿAbd al-ʿAzīz al-Yashkurī was driven out of Mawṣil by Marwān's army and moved with his followers to Fārs, where he backed the Djaʿfarid ʿAbd Allāh b. Muʿāwiya [*q.v.*]. Shaybān briefly occupied Zarandj, the capital of Sidjistān, but then left for ʿUmān, where he died in battle, fighting the Azdī chief al-Djulandā, who was backed by Ibāḍī Khāridjites, in 134/751-2.

Throughout the first two centuries of the ʿAbbāsid age, numerous Khāridjite rebellions erupted in northern Mesopotamia, and especially in the region of Mawṣil. Ibn al-Athīr and other sources report revolts in the years 133/750-1, 160-2/776-9, 168/784-5, 171/787-9, 176/792-3, 178-9/794, 180/796-7, 187/802-3, 190/805-6, 202/817-18, 214/829 (location uncertain), 231/845-6, 248/862-3, 252/865, 257/870-1, 267/880-1 and 317-18/929-31 (see Veccia Vaglieri, in *RSO*, xxiv, 39-40). Although these rebellions most often are qualified merely as Khāridjite, they may generally be counted as Ṣufrī. Yāsīn al-Tamīmī, who rose in 168/784-5, is described as inclining to the doctrine of Ṣāliḥ b. Musarriḥ. Hārūn b. ʿAbd Allāh al-Badjalī (killed in 283/896) is called a Ṣufrī. Most of the revolts, which at first involved chiefly the Banū Shaybān and Yashkur and later the Taghlib, Badjīla, and even Hamdān, were minor and quickly suppressed. They reflect the will to seek martyrdom as *shurāt* following the example of the early Khāridjites. More serious were the rebellions of al-Walīd b. Ṭarīf al-Taghlibī (178-9/794-6), which alarmed the caliph Hārūn al-Rashīd, and of Musāwir b. ʿAbd al-Ḥamīd al-Badjalī (252-63/866-77) and Hārūn b. ʿAbd Allāh al-Badjalī (267-83/880-96). The latter two seized control of extensive territories in northern Mesopotamia, where they collected taxes. Hārūn al-Badjalī at first had to defeat a rival, Muḥammad b. Khurzād, a popular Khāridjite worshipper, probably a Kurd, with a strong following in al-Shahrazūr. Among Hārūn's followers was the Kurd Ibrāhīm b. Shādhlūya, the father of Daysam (d. 346/957), a Khāridjite who rose in the military service of Yūsuf b. Abi ʾl-Sādj and, after the fall of the Sādjids, from 326/955-6 for some time held sway over Ādharbāydjān and Armenia, backed by Kurdish troops.

Ideologically, the Ṣufriyya were strongly attached to the memory of the early Khāridjites, whom they venerated and emulated as martyrs of their cause. They dissociated themselves from those Khāridjite groups who, in their eyes, deviated from the path of the pious ancestors like the Azāriḳa and the Ibāḍiyya. Unlike the latter they did not develop a theological and legal school doctrine of their own and did not participate in the debates of the *kalām* theologians in the 2nd/8th century. Since Ṣufriyya was initially a general name for Khāridjites, the heresiographers tended to view Khāridjite sects as factions of the Ṣufriyya. In fact, all Khāridjite sects except for the Azāriḳa have been described by one or the other heresiographer as derived from the Ṣufriyya. Specific doctrines ascribed to "the Ṣufriyya" evidently were not held by these in general but by some group otherwise viewed as a Ṣufrī sub-sect.

2. In North Africa.

By the mid-2nd/8th century, the label Ṣufriyya was regularly applied in the Maghrib to those Khāridjite Berber tribes with no Ibāḍī affiliation. Local tradition identifies the first Ṣufrī missionary in the West as ʿIkrima [*q.v.*] (the Berber client of Ibn ʿAbbās), from whom several notable Ṣufrī leaders in the first half of the 2nd/8th century are said to have acquired their knowledge of Khāridjite teachings. ʿIkrima's presence in Ḳayrawān, if in fact historical, would have to be placed at the end of the 1st/7th or the beginning of the 2nd/8th century. However, the account preserved in Ibāḍī sources (in which ʿIkrima is pictured arriving in Ifrīḳiya on the same camel as that of his Ibāḍī counterpart) does not bear much scrutiny, and is probably best seen in the context of later Ṣufrī-Ibāḍī rivalry, and the eventual absorption of the Ṣufriyya into the Ibāḍiyya (Abū Zakariyyāʾ, *Siyar*, 25-6; al-Dardjīnī, *Mashāyikh*, i, 11).

Whatever their beginnings, Ṣufrī teachings spread most quickly among the remote Berber tribes of the western Maghrib, where they served to promote active resistance to Arab domination at a time when the Ibāḍīs further east had yet to declare themselves openly in revolt. By 122/739-40, the Ṣufriyya in the region around Tangier were in open rebellion under the leadership of Maysara al-Maṭgharī [*q.v.*]. Maysara's tribal support was broad and heterogeneous, and included (besides the Maṭghara themselves) elements of the Miknāsa and the Barghawāṭa. Some of the latinised Berbers (*afāriḳa*) in Tangier may also have been involved, if we are to judge from Maysara's decision to appoint ʿAbd al-Aʿlā b. Djuraydj al-Ifrīḳī governor of Tangier after the Ṣufrī capture of the town.

Although Maysara was recognised as *khalīfa*, the title was always subject to revocation in Khāridjite circles, and in 123/740 Maysara was deposed and killed by his own followers and replaced by Khālid b. Ḥamīd/Ḥumayd al-Zanātī. A recent military defeat suffered by Maysara, as well as tribal rivalries within the Ṣufrī coalition, may also have played a part in Khālid's elevation to the "caliphate". While Maysara's coalition does not seem to have survived his death intact, the Ṣufriyya were nonetheless able to inflict serious damage on two Umayyad armies, the first in

123/740 at the so-called "Battle of the Nobles" (*ghazwat al-ashrāf*), and the second later that year at Nafdūra/Baḳdūra on the Subū river. With Ḳayrawān itself threatened, the governor of Egypt, Ḥanẓala b. Ṣafwān [*q.v.*], was sent by the caliph Hishām to pacify the west. Unable to crush the Ṣufriyya completely, he did at least prevent Ḳayrawān from falling into Khāridjite hands by defeating Ṣufrī armies at al-Ḳarn and al-Aṣnām in 124/742.

Despite these setbacks, the Ṣufriyya continued to threaten the stability of Arab rule in Ifrīḳiya. The Fihrid ruler at Ḳayrawān, ʿAbd al-Raḥmān b. Ḥabīb [*q.v.*], was forced to contend with Ṣufrī rebellions of the Ṣanhādja west of Tūnis around 130/748. These revolts increased in seriousness, with the ʿAbbāsids otherwise preoccupied and the Fihrids, after the death of ʿAbd al-Raḥmān b. Ḥabīb, weakened by internal division. It was in this context that Ḳayrawān itself was in 139/757 occupied by the Warfadjdjūma, one of the leading clans of the Nafzāwa [*q.v.*] Berbers. Modern scholarship, on the basis of the principal Sunnī sources, associates this occupation with a Ṣufrī conquest of the town and with excesses committed against Arabs and others. However, the relationship between the Warfadjdjūma and the Ṣufriyya is by no means clear, and there is no good evidence linking such excesses to Ṣufrī teachings. It is notable that the Ibāḍī sources do not regard the Warfadjdjūma as Ṣufrīs, even while making of their atrocities a pretext for the Ibāḍī conquest of Ḳayrawān in 141/758 (al-Shammākhī, *Siyar*, i, 115-17; Abū Zakariyyāʾ, *Siyar*, 38-9).

It is likely that the increasing strength of their Ṣufrī rivals is what pushed the Ibāḍīs to proclaim an Imāmate in 140/757. The Ibāḍī Imām Abu 'l-Khaṭṭāb's [*q.v.*] conquest of Ifrīḳiya in 141/758-9, followed shortly afterward by the consolidation of ʿAbbāsid power in Ifrīḳiya and the eastern Maghrib under Ibn al-Ashʿath, had the effect of pushing the centres of Ṣufrī power south and west, from Ifrīḳiya to the central Maghrib. At Tilimsān (Tlemcen), Abū Ḳurra was able to establish an independent Ṣufrī state based on the power of the Īfran and Maghīla [*q.vv.*] Berber tribes. Abū Ḳurra had long been a principal Ṣufrī leader in North Africa, particularly after the death of Khālid b. Ḥamīd/Ḥumayd al-Zanātī. In 124/741-2, when the Ṣufrī rebel ʿAbd al-Wāḥid b. Yazīd al-Hawwārī threatened Ḳayrawān, Abū Ḳurra had commanded the vanguard of his army. Two decades later, he was able to claim the Ṣufrī imāmate, his position strengthened by the westward migration of the main body of Īfranid tribesmen following Ibn al-Ashʿath's conquests in Ifrīḳiya and the eastern Maghrib.

Abū Ḳurra's dominion, which extended from the new town of Tilimsān as far east as Tāhart, came under immediate attack by an ʿAbbāsid army sent in 148/765. Unable to extinguish Ṣufrī power, and facing a generalised Khāridjite threat to Ḳayrawān, the new governor of Ifrīḳiya ʿAmr b. Ḥafṣ sought in 151/768 to fortify the town of Ṭubna, and found himself surrounded and badly outnumbered by a combined Ṣufrī-Ibāḍī force which included among its notable commanders Abū Ḳurra and the Ibāḍī leaders Abū Ḥātim al-Malzūzī [*q.v.*] and ʿAbd al-Raḥmān b. Rustam. Abū Ḳurra seems to have commanded by far the largest force, made up overwhelmingly of Īfranid tribesmen; elements of Ṣanhādja and Zanāta are also mentioned as participating in the siege. The sources generally attribute the failure of the attack to bribes paid by Ibn Ḥafṣ either to Abū Ḳurra or to his brother, although broader conflicts between the Ṣufrī and Ibāḍī elements of the besieging force may also have played a role in its disintegration.

The siege of Ṭubna marked the high-point of Ṣufrī power in Ifrīḳiya and the central Maghrib. Both the strengthened ʿAbbāsid presence after 155/772 and the spread of Idrīsid power in the far west came at the expense of Tilimsān, and those Berbers who continued to regard themselves as Ṣufrīs, migrated to the region of Tāfīlalt, now the principal Ṣufrī centre in North Africa. Ṣufrī teachings had been spread there by Abu 'l-Ḳāsim Samghū/Samdjū b. Wāsūl, one of the Miknāsa reported to have studied with ʿIkrima at Ḳayrawān and to have participated in the Ṣufrī uprising around Tangier in 122/739-40. At some point after that date he is said to have occupied himself as a shepherd and a teacher on the site of the future town of Sidjilmāsa [*q.v.*], and when the number of his followers reached 40 in 140/757, the group began to build permanent dwellings and recognised as leader a black named ʿĪsā b. Mazyad. Some 15 years later ʿĪsā was deposed, tortured, and executed, and replaced by Samghū. The sources offer in explanation only generalised accusations of misconduct by ʿĪsā, but it is possible to suppose from al-Bakrī's language (*Mughrib*, 149) that a growing presence of Miknāsa Berbers at the expense of blacks in the area around Sidjilmāsa may have led to the change. It is in any case from Samghū b. Wāsūl that the Ṣufrī Midrārid line of rulers would eventually issue [see MIDRĀR]. Whatever Ṣufrī identity the Midrārids maintained may have worked to preserve their independence from the neighbouring Ibāḍī Rustamid [see RUSTAMIDS] imāms, with whom they normally enjoyed friendly relations. (The succession conflict which raged in Sidjilmāsa between 221/835 and 224/838 suggests the importance which many attached to the state's maintaining a Khāridjite identity distinct from that of the Rustamids.) Their sectarian independence also allowed the Midrārids to sponsor non-Ibāḍī Khāridjite rebels elsewhere in the Maghrib. The Ṣufrī rebellion which a certain ʿAbd al-Razzāḳ led against the Idrīsids, and which reached the town of Fās (Fez) before being crushed in 292/904, appears to have been incited and supported by the Midrārids [see MIDYŪNA].

Ultimately, the Khāridjism which survived in North Africa was of the Ibāḍī, and not the Ṣufrī, variety. Just how quickly the Ṣufriyya died out or were absorbed into the Ibāḍiyya is impossible to tell. The final collapse of the Midrārid state in 366/976-7 must have hastened the process, although Ibn Ḥazm (d. 456/1065) was still able to observe that in his own day, the sole Khāridjite sects remaining were the Ibāḍiyya and the Ṣufriyya (*Fiṣal*, iv, 145).

(K. Lewinstein)

ṢUFRŪY (colloq. Moroccan Ar., *Ṣefrū: nisba Ṣefrīwī*, pl. *Ṣefrāwa*; in European languages, Sefrou), a large town of over 30,000 inhabitants in north-central Morocco, located at an altitude of 850 m/2,790 feet in the foothills of the Middle Atlas just above the Sāʾis plain only 30 km/18 miles south of Fās. It is situated in a green, picturesque setting surrounded by gardens and fruit (most notably cherry) orchards that give it an oasis-like aspect. The area is watered by several streams that branch out from the main watercourse, the Wādī Aggay (frequently referred to simply as Wādī Ṣefrū) which meanders through the heart of the town, and in the past it has caused considerable death and destruction in times of flooding, e.g. in 1888 and in 1950. The town today consists of several quarters: the old walled city which includes the *madīna*, which is subdivided into four principal quarters, and the *mellāḥ*; the new traditional neighbourhoods outside the walls, such as the Darb al-Mitr, Ḥabbūna, Slāwī, Sīdī Aḥmad Tadlī, and Habitant, and al-Ḳalʿa, a walled traditional quarter, on the hill to the west above the old *madīna*. There is also the French-built Ville Nouvelle or al-Balad al-Djadīda, immediately up the hill to the west and south of the original town. The population of Sefrou has been increasing rapidly since the 1960s. Many of the newcomers are Tamazight-speaking Berbers from the countryside.

Sefrou was a settlement predating the Islamic conquest. It was supposedly named after the Ahl Ṣufrū, a Berber tribe professing Judaism. The lower course of the Aggay River is still called Wādī 'l-Yahūdī ("The River of the Jew"). However, this name may have originally been due to the fact that this part of the river runs along one side of the *mellāḥ*, or Jewish quarter [see mallāḥ], and the etiological legend was created as a later explanation. Sefrou and its environs were subjugated and Islamised in the early 3rd/9th century by Idrīs II [*q.v.*]. By the 5th/11th century, Sefrou was an important walled town on the caravan route connecting Fās, the Tafilalet, and the western Sudan (al-Bakrī, *al-Mughrib fī dhikr bilād Ifrīkiya wa 'l-Maghrib*, ed. de Slane, Algiers 1857, 147). Al-Idrīsī mentions that it is the first day's stop on the thirteen-day journey from Fās to Sidjilmāsa and that "it is a small, civilised town with few markets, and most of its inhabitants are farmers, who grow many crops and have camels, cattle, and sheep" (*Opus geographicum, Maghrib*, 76).

In 455/1053, the Almoravid leader Yūsuf b. Tāshfīn conquered Fās and Sefrou, which had been in the hands of Wānūdīn al-Maghrāwī, the ruler of Sidjilmāsa, and killed all of Wānūdīn's family members there (Ibn Khaldūn, *Hist. des Berbères*, ii, 73). The city was captured and sacked again by the Almohad caliph ʿAbd al-Muʾmin on 5 Muḥarram 536/10 August 1141. Because of its location on the principal route across the Middle Atlas and on the border between the urban and agricultural *bilād al-makhzan* and the pastoral Berber *bilād al-sība*, Sefrou suffered from periodic attacks and devastation during periods of civil strife over the centuries. The city seems to have always recovered. Leo Africanus, who visited it in the 1540s, states that "Sofroi's [*sic*] inhabitants are wealthy, but they dress poorly and their clothes are always full of olive oil stains" (*Description de l'Afrique*, tr. Epaulard, Paris 1956, i, 310). During the 18th and 19th centuries, Sefrou frequently came under the domination of chieftains from the tribal hinterlands. The last of these was Ḳāʾid ʿUmar al-Yūsī, who was recognised by the Makhzan as *pasha* of the city until his assassination in 1904. It is a mark of the importance of Sefrou and the surrounding region that the first prime minister of independent Morocco was Sefrou's pasha Sī Mubārak Bakkāy, and the first minister of the interior was Ḳāʾid al-Ḥasan al-Yūsī, the chief of the area's principal Berber tribe, the Ayt Yūsī.

It was among the Ayt Yūsī that there arose the maraboutic leader and scholar al-Ḥasan b. Masʿūd, known as Sīdī Laḥsen Lyūsī (1040-1102/1631-91). His *zāwiya* is located to the southwest of the town and is a popular pilgrimage site for the Berbers, with an annual *mawsim*.

Sefrou is the home of several naturalist cults, the most important of which are those at the spring of Lalla Raḳiyya next to the *ḳubba* of Sīdī Bū ʿAlī Sarghīn and of the grotto known to the Muslims as *Kāf al-Yahūdī* ("the Cave of the Jew") and to Jews simply as *al-Kāf* or *al-Djabal al-Kabīr* ("the great mountain").

Until the mass exodus of Moroccan Jewry that began in the early 1950s, Sefrou boasted the seventh largest Jewish community in the French Protectorate, with close on 6,000 people, representing from one-third to two-fifths of the town's inhabitants. It was a centre of Jewish scholarship and claimed to be *Yerushalayim ha-qeṭana* ("the little Jerusalem") and *Yerushalayim shel Maroko* ("the Jerusalem of Morocco"). The Jewish community flourished in the 18th century. In addition to their prominence in commerce and scholarship, Sefrīwī Jews held patents from the Makhzan for the minting of coins. By 1715, the community was considered important enough to have its own *shaykh al-yahūd* (Hebr. *nagid*), or lay communal official recognised by the sultan. Muslim-Jewish relations in Sefrou were on the whole better than in neighbouring Fās, or indeed than in most Moroccan cities, a fact noted by the French explorer and spy Charles de Foucauld (*Reconnaissance au Maroc*, Paris, 1939, 166). The Jews of Sefrou spoke a very distinctive and unusual dialect of old urban Arabic.

(N.A. Stillman)

SUFTADJA (a.), a financial term referring to a negotiable instrument in the form of a written bill of credit which is similar to the modern drawing of a cheque.

The *suftadja*, like the *ḥawāla* [*q.v.*] and the *ṣakk*, was used in mediaeval Islam to facilitate the speedy transfer of money over distances or to expedite the exploitation of assignments of taxation, in an age when movements of actual cash were hazardous. For the general use of such financial instruments in mediaeval Islam, see R. Grasshoff, *Die Suftaǧa und Ḥawāla der Araber*, Göttingen 1899, and W.J. Fischel, *Jews in the economic and political life of mediaeval Islam*, London 1937, 3-35. The etymology of the term is allegedly from Persian *sufta* "pierced", because the folded or rolled financial instrument was pierced in order to enable a

cord to be passed through it, which was then sealed. The *suftadja* thus enabled money to be instantly available in another land through what was in effect a letter of credit. The *modus operandi* was that (A), normally a broker, issues a bill for (B) to collect his money somewhere else from (C) who is an agent for (A). The *suftadja* differs from the *ḥawāla* in that it refers only to the transfer of money, whereas the *ḥawāla* is used to refer to transfers of all kind of claims whether money or goods; moreover, with *ḥawāla*, the safety factor is not the prime concern. Although *suftadja* is seen by Islamic law as a form of loan, both its formation and objectives are different from those involved in loans. The objective of a loan is the acquisition of money, while the objective of the *suftadja* is the avoidance of risk in transport. For Schacht, the difference between *suftadja* and *ḥawāla* rests in the "creation" of an obligation. "The obligation in the case of *suftadja* is created on purpose" while the obligation in the *ḥawāla* is "supposed as already existing". This can be contested by the fact that the *suftadja* debt does not really exist between the broker (A) and his agent (C). This is due to the fact that (C), the agent, is only an extension of (A), in the same way as are the branches of a bank.

The Ḥanafī and Shāfiʿī schools consider the practice of the *suftadja* to be reprehensible because a debt should be repaid without any form of profit to the owner which results from the avoidance of risk (i.e. involved in an actual cash transfer). The Mālikīs only allow it on the grounds of necessity, while the Ḥanbalīs permit the practice so long as it is done without any material gain, such as commission, accruing to the person repaying the debt. Ibn Taymiyya and Ibn Ḳudāma permit the practice without reservation, since both the debtor and the indebted benefit. The term *ḥawāla maṣrafiyya* ("bank draft") seems to be replacing the term *suftadja* in many contemporary commercial transactions, although the main difference between a draft and a *suftadja* lies in the fact that the latter has a fixed value.

(M.Y. Izzi Dien)

SUFYĀN AL-ʿABDĪ, Abū ʿAbd Allāh Sufyān b. Muṣʿab al-ʿAbdī, of the ʿAbd al-Ḳays, an Arab poet of the 2nd/8th century. The date of his birth is not known and the date of his death is not generally agreed. On the one hand al-ʿĀmilī in his *Aʿyān al-Shīʿa* has him die in 120/739, whereas al-Amīnī in *al-Ghadīr* cites the date as 178/794.

He was probably born and spent most of his life in Kūfa. According to the sources he is said to have known the famous Shīʿī poet al-Sayyid al-Ḥimyarī (d. 173/789? [*q.v.*]), who is supposed to have said "were it not for al-ʿAbdī I would have been the greatest poet".

His relationship with the Imām Djaʿfar al-Ṣādiḳ (d. 148/765 [*q.v.*]) is most important. He is said to have esteemed him highly and, in view of their importance to the Shīʿīs, exhorted people to teach his poems to their children. Those poems previously mentioned do in fact relate essentially to Shīʿism. It was probably for this reason that they were not compiled. An attempt has been made to reconstitute the *dīwān* of Sufyān al-ʿAbdī and to study the poems and fragments attributed to him (see below, *Bibl.*). This present article has profited from this thesis and the main ideas in what follows stem from it.

The poetic works of al-ʿAbdī are at present composed of 33 poems and fragments, some of doubtful authenticity, grouped into 302 verses. They have been neglected by Sunnī authors and preserved only thanks to Shīʿī ones, in particular later writers such as Ibn Shahrāshūb (d. 588/1192) in his *Manāḳib*, al-ʿĀmilī in *Aʿyān al-Shīʿa*, xxxv, and al-Amīnī in *al-Ghadīr*, ii.

His œuvre is composed chiefly of short fragments, of which 22 consist of 5 or less verses, and they barely conform to the plan of the classical *ḳaṣīda*. On the other hand, al-ʿAbdī uses classical metres such as *basīṭ* (7 times), *ṭawīl* and *khafīf* (6 times), *kāmil* and *wāfir* (4 times). The most frequently used letters in the rhymes are *rāʾ* (7 times), *mīm* and *bāʾ* (5 times).

Using a narrative style and easy language free from learned words, and thus accessible to the masses, al-ʿAbdī develops political and religious themes across all three poetic and classical genres, elegy, threnody and satire. His work essentially relates to the People of the House, *Ahl al-Bayt*, and to their adversaries, or Umayyad enemies and even ʿAbbāsid enemies. Primarily, it is the merits of the *Ahl al-Bayt* in general, and of ʿAlī b. Abī Ṭālib in particular, that are highlighted, and they are even sometimes presented as superior to the Prophet himself.

Then there is the narration of the misfortunes of the Shīʿīs and the description of the dramas or tragedies they experienced, in particular, the drama of Karbalāʾ and the killing of al-Ḥusayn (61/680). The feelings of anxiety or sadness conveyed in this narration are characterised by a simplicity of expression, and denoted the sympathetic attitude of the poet and his deep attachment to the Prophet's family. In his invectives, Sufyān strongly expresses his hatred and rancour toward his enemies, the usurpers of power from the ʿAlids, scarcely sparing the caliphs Abū Bakr (13/634) and ʿUmar (23/643).

In conclusion, the poetic works of Sufyān al-ʿAbdī, in the light of how they have been restored, may now be seen as partisan poetry of a propagandist nature. The poems were written to be declaimed in order to arouse pity for the lot of the *Ahl al-Bayt* and to distract them from their enemies.

SUFYĀN AL-THAWRĪ, Sufyān b. Saʿīd b. Masrūḳ Abū ʿAbd Allāh al-Kūfī (97-161/716-78), prominent representative of early Islamic law, tradition, and Ḳurʾān interpretation, founder of the Thawriyya law school and important link in numerous *ḥadīth* transmissions of juridical, religious and dogmatic subjects on a broad literary scale, including the major *musnad* works.

Born 97/715-16 in Kūfa, Sufyān al-Thawrī soon belonged to the exclusive Kūfan law circles around Ḥammād b. Abī Sulaymān (d. 120/737), Abū Isḥāḳ al-Sabīʿī (128/745), Manṣūr b. al-Muʿtamir (132/749), and Sulaymān al-Aʿmash (148/764), and swiftly developed a profound reputation as a particularly *ḥadīth*-oriented legal scholar, thereby differing distinctly from the generally speculative ʿIrāḳī law system (that of *raʾy*), with Abū Ḥanīfa as its most effective exponent. Between 115/732 and 120/737 al-Thawrī started a major period of more than three decades of extensive travelling and *ḥadīth* transmitting in Khurāsān, Ḥidjāz, and especially Baṣra which—according to Ḥammād, as "a part of Syria"—developed a fast grow-

ing and most formative influence on al-Thawrī's intellectual curriculum.

Baṣran scholars like Ayyūb al-Sakhtiyānī (131/748) and, in particular, ʿAbd Allāh b. ʿAwn (151/767) averted him from a probable Shīʿī inclination, quite common among Kūfan lawyers of the 2nd/8th century, and initiated contacts with Syria, especially with the great al-Awzāʿī (157/773 [*q.v.*]), thereby starting a long-term pro-Umayyad influence in legal and political reasoning. Al-Thawrī's religious and dogmatic thinking assumed a clearly rational, independent orientation through frequent contacts to early Muʿtazilīs like Khālid al-Ḥadhdhā' (141/758), ʿAmr b. ʿUbayd (145/762), and Wāṣil b. ʿAṭā' (145/762), who excelled as a critic of the ʿAbbāsid caliphate. Consequently, al-Thawrī himself rejected the vacant post in Kūfa as *ḳāḍī*, tactically offered to him in 153/769, and evaded capture by escape to Ṣanʿā' where he continued a productive *ḥadīth* circle with Maʿmar b. Rāshid (153/769) and ʿAbd al-Razzāḳ al-Ṣanʿānī (211/826 [*q.v.*]), whose *muṣannaf* partly originated from this special interaction. Between 153/769 and 158/774 he seems to have left his Yemeni exile for various pilgrimages to Mecca and frequent visits to Syria, Lebanon and Palestine, where he repeatedly met with al-Awzāʿī and their common disciple Abū Isḥāḳ al-Fazārī (186/801), who later transmitted a selection of their legal statements in al-Ṭabarī's *Ikhtilāf al-fuḳahā'*.

During his pilgrimage of 158/774, al-Thawrī managed to elude the caliph al-Manṣūr's repeated attempts at his arrest by another escape back to Baṣra, where he continued *ḥadīth* transmission, mainly to Yaḥyā b. Saʿīd al-Ḳaṭṭān (198/813), ʿAbd al-Raḥmān b. Mahdī (198/813), and Abū Ḥudhayfa Mūsā b. Masʿūd al-Nahdī (220/835), who obtained parts of his Ḳur'ān commentary. Towards the end of his life, fatigued by constant pursuit, he agreed to an official reconciliation with the new authorities under al-Mahdī, but could not realise a planned meeting in Baghdād. At 64 he died in Shaʿbān 161/May 778 and was buried among renowned scholars of Baṣra like al-Ḥasan al-Baṣrī and Ayyūb al-Sakhtiyānī.

Al-Thawrī has to be counted certainly among the first literary generation in Islam. His works, partly perished, partly preserved, comprise 1. two (lost) *ḥadīth* collections (*al-Djāmiʿ al-kabīr, al-Djāmiʿ al-ṣaghīr*); 2. a compendium of inheritance law provisions (*Kitāb al-Farā'iḍ*, ed. and comm. Raddatz, in *WI*, xiii [1971]); 3. a fragmentary Ḳur'ān commentary (*Tafsīr al-Ḳur'ān al-kabīr*, ed. ʿArshī, Rampur 1965); 4. various religious treatises (*al-Iʿtiḳād*, rev. Ibn Taymiyya, Ẓāhiriyya, madjm. 139/14, *Risāla ilā ʿAbbād b. ʿAbbād al-Arsūfī*, *Ḥilya*, vi, 376, *Waṣiyya ilā ʿAlī al-Sulamī*, *Ḥilya* vii, 82); 5. occasional references to al-Thawrī's interests in natural sciences and "unusual subjects/*gharā'ib*" (al-Ishbīlī, *Kitāb al-ādāb* (lost), *Risāla kīmiyā'iyya*, Ketâbkhâne-yedâneshgâh-e-Tehrân, *Fihrist*, iii/4, 2265, ms. 1178, fols. 134b-135b, Ibn Abī Ḥātim, *Taḳdima*, 125) with very fragmentary literary traces only.

Considerable parts of his legal thought are preserved in al-Ṭabarī's *Ikhtilāf al-fuḳahā'* (ed. Schacht, Leiden 1933, on military law, and ed. Kern, Cairo 1902, on civil law), where his opinions on detailed questions of legal practice in the typically ʿIrāḳī form of speculative deduction are compared to other *madhāhib* (al-Awzāʿī, Abū Ḥanīfa, Mālik, al-Shāfiʿī). The immense variety of his being cited as an essential authority throughout the respective *ḥadīth*, *fiḳh*, and *ṭabaḳāt* literature, however, illustrates his formative position as a systematic *ḥadīth* developer—though methodologically criticised—within the Kūfan law school. Al-Thawrī's views and methods coalesce into an independent complex of legal and religious statements, frequently based on Companion or Successor and—more rarely—Prophetic traditions, thereby preparing, if not anticipating, a homogenously *ḥadīth*-oriented law system like al-Shāfiʿī's. His marked theoretical creativity and pronounced political, anti-ʿAbbāsid preferences secured a high degree of contemporary acceptance of his *madhhab* and contributed considerably to the peculiar expansion of the Thawriyya as far as Umayyad Cordova. Originating from Syrian-based disciples like Muḥammad b. Yūsuf al-Firyābī (212/827) and Abū Isḥāḳ al-Fazārī, the Thawriyya represented law as practiced in North Africa and Spain before Mālikī absorption in the 4th/9th century.

Al-Thawrī's religious and dogmatic statements, comprehensively rendered in Abū Nuʿaym's *Ḥilya* and Ibn Abī Ḥātim's *Taḳdima*, make up a basically orthodox, rationally-accentuated range of thought. Continuous recommendations of diligent religious studies (*ʿilm*), of efforts towards righteous intention (*niyya*) and action in daily practice (*ʿamal*), as well as trust in God's unfailing justice, based on a ceaseless awareness of God's predestining almightiness and eternal properties, place his theology in an intermediate position between the Khāridjites and the Ḳadariyya as well as the Ṣifātiyya, respectively. Positive affirmation of worldly life and its active design in preparation for the Last Judgement, combined with a pragmatic, *ḥadīth*-oriented legal codification, represent a clearly rational modification of the conservative *sunna* and a gradual anticipation of Muʿtazilī concepts without, however, the idea of God's absolute oneness and the resulting createdness of the Ḳur'ān, duly reflected in the fact that his moderately rational *tafsīr* is an important source for the orthodox al-Ṭabarī. While al-Thawrī's dogmatics may have had an influence on ascetics like al-Muḥāsibī and the Thawrī adherent al-Djunayd, many tendentious Ṣūfī claims may be set aside. The mystic postulation of complete renunciation of man's worldly endeavour and the negation of God's corresponding justice prove incompatible with al-Thawrī's constructive belief and conduct.

Thus his famous antagonism towards the ʿAbbāsid-inclined Murdji'a [*q.v.*] should be regarded as a result of not only his political, pro-Umayyad commitment but also of his active, though demanding, Last Judgement orientation. Occasional suspicion of his alleged sympathising with Shīʿī, including Zaydī, circles, possibly arisen for the same political reasons, points to an early, typically Kūfan *tashayyuʿ* without lasting effect on his tenets. Sufyān al-Thawrī appears today as a progressive element within the unfolding currents of the 2nd/8th century by his theoretical development and literary codification of *ḥadīth*-based law and reason-based *sunna* as stepping stones towards al-Shāfiʿī's jurisprudence and—to a more limited extent—the new Muʿtazilī rationalism, leaving very little justification for Shīʿī or Ṣūfī claims. The unusual aspect of his politico-religious pro-Umayyad, conservative attitude adds a historical facet to his intellectual independence, conditioning the major expansion of his *madhhab* into Spain.

(H.P. RADDATZ)

SUFYĀN B. ʿUYAYNA b. Maymūn al-Hilālī, a scholar of the Ḥidjāz, was born in Kūfa in 107/725. In his youth he moved to Mecca, where he died in 196/811. Although biographical sources also describe him as a Ḳur'ān commentator (*mufassir*) and a jurist (*faḳīh*), his fame is due mainly to his activity as a traditionist (*muḥaddith*). In his teens he studied with al-Zuhrī [*q.v.*], who remarked on his youthful intelligence, and he is considered one of the main transmitters of al-Zuhrī's *ḥadīth*s (examples in Ibn Ḥanbal, *Musnad*, ii, 238 ff.). Other well-known traditionists from whom Sufyān transmitted are ʿAmr b. Dīnār (d. 126/744) and ʿAbd Allāh b. Dīnār (d. 127/745). Those who transmitted traditions from him include Sulaymān b. al-Mihrān al-Aʿmash (d. 148/765), Shuʿba b. al-Ḥadjdjādj (d. 160/766 [*q.v.*]) and Sufyān al-Thawrī [*q.v.*]. His own tradition collection has not survived independently (see Sezgin, i, 96 for surviving fragments). He is said to have known over 7,000 traditions; as is the case with many traditionists, he is reported to have had a phenomenal memory and never to have written down anything he had not already memorised. He is also reported to have practiced *tadlīs*, that is, he transmitted traditions from people who had not actually heard the texts from the persons who preceded them in the *isnād*, and he himself transmitted traditions from persons whom he had not actually heard [see ḤADĪTH].

Sufyān's Ḳur'ān commentary has not survived, but is known from later references (see Sezgin, *loc. cit.*). There is no evidence for any writings of *fiḳh* [*q.v.*], but some of his legal opinions can be gleaned from a manuscript collection of the responses (*masā'il*) of Aḥmad b. Ḥanbal and Isḥāḳ b. Rāhawayh [*q.vv.*] compiled by the Ḥanbalī scholar Abū Yaʿḳūb al-Kawsadj al-Marwazī (d. 251/865), who, as a very young man, had heard Sufyān lecture in Mecca. Al-Kawsadj often frames a question by reporting an answer of Sufyān's and asking Ibn Ḥanbal and Ibn Rāhawayh their opinion of it (Ẓāhiriyya, *Fiḳh Ḥanbalī, 1* and *83*). Sometimes Sufyān's legal reasoning resembles that of his older contemporary Mālik b. Anas [*q.v.*], and sometimes that of his younger contemporary Muḥammad b. Idrīs al-Shāfiʿī [*q.v.*].

Despite his scholarly reputation and the large number of his teachers and students, little is actually known of Sufyān's life. He had eight or nine brothers, several of whom were also active as traditionists. Al-Shāfiʿī, who studied with Sufyān as well as with Mālik, is reported to have said: "Were it not for Mālik and Sufyān, knowledge would have departed from the Ḥidjāz."

Bibliography: For primary sources, see references in Sezgin, i, 96, and ʿUmar R. Kaḥḥāla, *Mu'allifīn*, Damascus 1957-61, iv, 235, and add Ibn Ḥanbal, *K. al-ʿIlal wa-maʿrifat al-ridjāl*, ed. Talât Koçyigit and Ismail Cerrahoğlu, Ankara 1963 (see index, *s.v.* Sufyān b. ʿUyayna and Ibn ʿUyayna). See also Sufyān b. ʿUyayna, in Wensinck, *Concordance*, viii, for a listing of traditions in which he figures prominently. Nabia Abbott, *Studies in Arabic literary papyri*, Chicago 1967, ii, discusses fully his role as a collector and transmitter of traditions.

(SUSAN A. SPECTORSKY)

AL-SUFYĀNĪ [see Suppl.].

SUFYĀNIDS, the branch of the Umayyad dynasty of Arab caliphs in early Islam who formed the first and shorter-lasting line of the dynasty, being predecessors of the Marwānids [*q.v.*]. The line took its name from Abū Sufyān b. Ḥarb [*q.v.*], whose son Muʿāwiya I became caliph in 41/61, to be followed briefly by his son Yazīd I and the latter's young son Muʿāwiya II, who died in 64/683. The succession was then taken up by the parallel branch of Marwān b. al-Ḥakam [*q.v.*].

For the general history of the Sufyānids, see UMAYYADS and the articles on the individual rulers, and for the post-132/750 eschatological figure of the Sufyānī, see AL-SUFYĀNĪ in Suppl. (ED.)

AL-ṢUGHD or AL-SUGHD, the name in early Islamic geographical and historical sources for the Soghdia of classical Greek authors, a region of Central Asia lying beyond the Oxus and extending across the modern Republics of Uzbekistan, Tajikistan and Kirghizia in its wider acceptation. The same name (Old. Pers. Sugudu, late Avestan Sughda, Greek Sogdioi or Sogdianoi (the people) and Sogdianē (the country) was applied in ancient times to a people of Iranian origin subject to the Persians (at least from the time of Darius I, 522-486 B.C.) whose lands stretched from the Oxus [see ĀMŪ DARYĀ] to the Jaxartes [see SĪR DARYĀ], according to the Greek sources. The language, and especially the terms relating to the calendar and festivals of the Soghdian Zoroastrians, are very fully dealt with in the Muslim period by al-Bīrūnī in his *al-Āthār al-bāḳiya*, ed. Sachau, Leipzig 1878, 46-7, 233 ff., tr. idem, London 1879, 56-7, 220 ff. From al-Bīrūnī's information, modern Iranists (notably F.C. Andreas and F.W.K. Müller) were able to identify as Soghdian the language of numerous fragments of manuscripts found in Chinese Turkestan (commercial documents, Buddhist, Manichaean and Christian texts).

As in classical times, the Soghdians still appear in al-Bīrūnī (*op. cit.*, 45, l. 21) along with the Khʷārazmians as an indigenous people with a Zoroastrian civilisation in the lands beyond the Oxus.

In both pre-Islamic and early Islamic times, Soghdian merchants were great travellers through Inner Asia, including along the Silk Route through eastern Turkestan to northern China, and references to Soghdian colonies in these remote regions are to be found not only in Chinese but also in Islamic sources. Thus the *Ḥudūd al-ʿālam* (*ca.* 370/980), tr. Minorsky, 99,

comm. 304, mentions the Soghdian colony in the lands of the Tukhsi Turks in the Semirečye called Bīglīligh ("home of the Beg's men") in Turkish and S.m.knā in Soghdian, and at tr. 95, comm. 274, five Soghdian villages belonging to a certain Beg-tigin in the Tarim basin, the land of the Toghuz Oghuz. Maḥmūd al-Kāshgharī [*q.v.*], *Dīwān lughāt al-turk*, tr. Atalay, i, 29, 471, tr. R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-4, i, 84, 352, mentions the Soghdaḳ (the form also found earlier in the Orkhon [*q.v.*] inscriptions) settlers in the region of Balāsāghūn [*q.v.*], i.e. in the Ču valley, who had adopted Turkish dress and manners. The fact proved by R. Gauthiot that the Uyghurs borrowed their alphabet from the Soghdians seems to have been known in Islamic times, cf. Fakhr al-Dīn Mubārak Shāh (beginning of the 7th/13th century) in E.D. Ross in *ʿAdjab nāma, a volume of oriental studies presented to E.G. Browne*, Cambridge 1922, 405. Turkish *kent* meaning "village, town" is already described as a Soghdian loan-word in the *K. al-Ḳand fī taʾrīkh Samarḳand* (text in W. Barthold, *Turkestan v epokhu mongolskago nashestviya*, i, *Tekstī*, St. Petersburg 1898, 48).

As the name of a country, Ṣughd had a much narrower application in the Islamic period than in antiquity. According to al-Iṣṭakhrī (316), Ṣughd proper comprised the lands east of Bukhārā from Dabūsiyya to Samarḳand; he also says that others also included Bukhārā, Kish and Nasaf in Ṣughd. Kish sometimes appears as the capital of Ṣughd, e.g. al-Yaʿḳūbī, *Buldān*, 299, 14; it is possible that the oldest Chinese name for the region of Kish, *Suhiai* (old pronunciation *Su-git*) is a reproduction of the name Ṣughd; it is so taken by J. Marquart, *Chronologie der alttürkischen Inschriften*, Leipzig 1898, 57. In another passage (293), al-Yaʿḳūbī describes Samarḳand as the capital of Ṣughd; Kish and Nasaf are included in Ṣughd but Bukhārā is separated. It is not known what geographical connotation Ṣughd had for al-Bīrūnī; whenever he associates a Soghdian festival with a particular district, it is always some village in the territory of Bukhārā.

Early Islamic al-Ṣughd thus comprised essentially the valley of the Zarafshān (lit. "gold spreader") river, which rose in the Buttamān mountains to the north of Čaghāniyān [*q.v.*] and Rasht, and flowed westwards through the oases of Samarḳand and Bukhārā [*q.vv.*] before losing itself in the deserts to the north of the middle Oxus. It is this river which is described by the mediaeval geographers as the Nahr al-Ṣughd (e.g. by Ibn Ḥawḳal, ed. Kramers, 486, tr. Kramers-Wiet, 466; al-Muḳaddasī, 19; the Nāmiḳ (?) in al-Yaʿḳūbī, *Buldān*, 293, tr. Wiet, 111, possibly echoing the ancient Iranian name of the river, Namik, Chinese transcription Na-mi); and by the *Ḥudūd al-ʿālam*, tr. 73, as the river of Bukhārā. The present name Zarafshān does not appear in historical sources before the 18th century, according to Barthold, *Turkestan down to the Mongol invasion*, 82.

The Arabs first crossed the Oxus in the reign of the caliph ʿUthmān, apparently in 33/653-4, and subsequently attacked such Soghdian city-states as Kish [*q.v.*], Bukhārā and Samarḳand. The securing of Arab political control over Soghdia was, however, a protracted process, and the course of Islamisation even slower; for details, see MĀ WARĀʾ AL-NAHR.

In his *Taʾrīkh-i Bukhārā*, Narshakhī, ed. Schefer, 47, tr. Frye, *The history of Bukhara*, 48, comm. 135-6, quotes a few expressions in Soghdian, cited as the local language of the city (see the discussion in Frye, *op. cit.*, 135-6), and according to al-Iṣṭakhrī, 314, Soghdian was spoken there. The Middle Iranian language of Soghdian undoubtedly survived well into the Islamic period, though not so long, it seems, as Khʷārazmian, but was eventually overwhelmed by standard New Persian or Tādjīk and by Turkish. Some of the surviving Soghdian texts could date from as late as the 11th or 12th centuries. As noted above, the Soghdians were great travellers, and left documents and inscriptions in many distant regions, e.g. across the Karakoram mountains, via such passes as the one taken by the modern Karakoram Highway, and into the extreme north of modern Pākistān and India, where hundreds of inscriptions and graffiti of Soghdian travellers (unfortunately undated) have been found in recent years. Soghdian survives today in Yaghnōbī, a Neo-Soghdian dialect spoken in an isolated valley of eastern Islamic Soghdia, now in Tajikistan. See on Soghdian and its dialects, *GIrPh*, i/2, 334-44; *HdOr*, IV, 1, *Iranistik*, 52-6, 105-8; *Compendium linguarum iranicarum*, Wiesbaden 1989; ĪRĀN. iii. Languages, in Suppl. In modern Central Asian topography, Ṣughd is only a part of the territory of Samarḳand and a distinction is made between "Half-Ṣughd" (Nīm Ṣughud) on the island between the two arms of the Zarafshān (Aḳ Daryā and Ḳara Daryā), and "Great Ṣughd" (Ṣughud-i Kalān) north of the Aḳ Daryā.

(W. BARTHOLD-[C.E. BOSWORTH])

SUGHDĀḲ (Sudak in Russian and Ukrainian; Σουγδαία or Σουγδία in Greek, Surozh in old Russian, Soldaia or Soldachia in mediaeval Italian), once a great seaport, now a small town on the coast of the Crimea (Ukraine) almost due north of the Anatolian port of Sinob [see SĪNŪB], and some 40 km to the south-west of Theodosia [see KEFE]. In the 12th and 13th centuries, it was the principal port for trade between Russia and the Islamic and Mediterranean worlds, while also attracting a portion of the silk and spice trade from South Asia and the Far East.

The origins of Sughdāḳ are less well documented than those of Theodosia; unlike the latter and other settlements on the Black Sea coast which were founded by Greek colonists in Antiquity, Sughdāḳ is believed to have sprung up as a Sogdian settlement (hence the name; see AL-ṢUGHD), possibly in the time of contacts between Central Asian Sogdians and the Byzantine Empire. The Byzantine Greek element asserted itself since the time of Justinian I (6th century), and received still more immigrants during the Iconoclastic Controversy (8th century); recent excavations have uncovered archaeological evidence beginning with the 6th century; eventually there was a bishop (archbishop from the 10th century) in the predominantly Orthodox city. At the same time, the growth of the Khazar [*q.v.*] Kaghanate led to intermittent control of the Crimea by it, with the *tudun* or governor residing in Sughdāḳ. The town became a thriving commercial port, despite occasional Byzantine-Khazar hostilities. Its exports were chiefly furs, wax and slaves from the Slavic hinterland, and they survived the subsequent irruptions of the Turkic Pečenegs [*q.v.*] and Polovtsians (Cumans). Sughdāḳ, like the rest of the

Crimean coastland, developed as a cosmopolitan place, with Greek, Russian, and Ḳîpčaḳ elements existing side-by-side, and was frequented by merchants from Anatolia, Syria, Egypt and Byzantium; these were joined by Venetian merchants after the foundation of the Latin kingdom of Constantinople in 1204, although political domination fell to the Greek empire of Trebizond or to the Ḳîpčaḳ k͟hāns of the adjacent steppe. Ibn al-At͟hīr, while mentioning the first Mongol sack in January 1223, describes *madīnat Sūdāḳ* as "a city of the Ḳîpčaḳ ... on the sea coast, frequented by ships bringing cloths, which the Ḳîpčaḳs buy from them and sell them slave girls and boys, *burṭāsī* beaver and squirrel skins, and other products of their land ..." (*al-Kāmil*, xii, 386).

A curious episode was the brief conquest (probably in 1225-7) of Sug͟hdāḳ by an expedition sent by the Sald͟jūḳid sultan Kayḳubād I [*q.v.*]; the ostensible reason was chastisement of the local leaders for mistreating the sultan's subjects, and an effort was made to turn the Christian town into a Muslim one. This episode was followed in 1238 by another sack by the Mongols, this time as part of their definitive conquest of southern Russia. Nevertheless, Sug͟hdāḳ continued to prosper as a port. William of Rubruck, the Franciscan envoy from St. Louis to the Mongols, landed there in 1253 after a fortnight-long voyage from Constantinople, as did in 1260 two brothers of the Polo family on the way to the court of Berke; Marco Polo the Elder owned a house in Sug͟hdāḳ, which in 1280 he willed to the local Franciscans. The end of the Latin kingdom in 1261 favoured Genoa over Venice, but for the time being it failed to affect Venice's position in Sug͟hdāḳ. At the same time, the growth of the Golden Horde as a member of the Mongol empire and suzerain of the Russian principalities, had a further stimulating effect on the trade passing through ports like Sug͟hdāḳ. A 1281 treaty between the emperor Michael Palaeologus and the Mamlūk sultan Ḳalāwūn [*q.v.*] illustrates the importance of Sug͟hdāḳ in that period. The treaty, whose Arabic version is quoted by al-Ḳalḳas͟handī (*Ṣubḥ al-aʿs͟hā*, xiv, 72-8), stipulates unhindered passage of merchants of both countries to and from Sug͟hdāḳ with such goods as slaves of both sexes.

Meanwhile, Genoa made a vigorous entry into the competitive Black Sea trade. Genoese merchants in Sug͟hdāḳ are first documented for 1274. By 1365 the republic, firmly installed in Kefe since 1314, conquered Sug͟hdāḳ, and in 1380 Genoese commercial presence on Crimea's southern coast was formalised through a treaty with the Tatars as the colony of Gazaria (a name echoing the extinct K͟hazar Kag͟hanate), possessing the coast from Kefe (Theodosia) to Cembalo (Balaklava) and tied to the Golden Horde only by tenuous bonds of vassaldom and tribute. This colony then prospered until its conquest by the Ottomans. In the course of their two centuries-long presence in Sug͟hdāḳ, the Genoese transformed the harbour town into a stronghold whose fortifications still bear witness to past glory; it was administered by a consul subordinated to the principal consul in Kefe. Genoese possession, however, also caused Sug͟hdāḳ's decline well before the Ottoman conquest; for the Republic, favouring Kefe as the capital of the colony, gradually restricted the volume of activities permitted in other ports such as Sug͟hdāḳ.

Sug͟hdāḳ fell to the Ottomans in July 1475. At the end of the siege, some of the inhabitants took refuge in a church which then, according to local tradition, became their tomb after its doors and windows had been walled over; doubts about the genuineness of the account were dispelled by excavations undertaken in 1928.

ṢUḤĀR, a mediaeval and modern town in ʿUmān conventionally Sohar (lat. 24° 23' N., long. 56° 45' E.).

It is situated in the middle of the flat and sandy bay which is found on the coast of Arabia between Masḳaṭ in the south-east and the peninsula of Musandam in the north-east. The site is of no particular use as a harbour, even though it has a broad opening on to the Gulf of ʿUmān. But the reasons for the development of the region are the long, fertile and well-irrigated coastal plain of the Bāṭina behind the site of the city, and also the east-west thoroughfare across the D͟jabal Ak͟hḍar which provides access to the Persian Gulf. Moreover, since ancient times, veins of copper have been exploited in the region; archaeological studies in metallurgy have shown that this ore has been mined in the region from the end of the 3rd millennium B.C. until the 11th A.D., and copper ingots which were found on the eastern coast of the island of Baḥrayn, south of the village of Zallāḥ, also came from this region which was then known by the name Magan or Makan (Makkan). Magan also supplied copper to Mesopotamia and Elam. Another mineral resource of the valleys of the D͟jabal Ak͟hḍar was olivine gabbro, a dark stone which becomes outstandingly fine after polishing. Among the statues made from this were those of Gudea, King of the ancient Sumerian city of Lagash.

Ṣuḥār is distinct from the other sites which at regular intervals mark out the coastline of the Bāṭina (Sīb, Barkā, Suwayḥ, K͟hābūra, Lawā and S͟hinās), for it forms a tell, which is 500-700 m in diameter and rises to a height of about 10 m above sea level. The circle of empty areas which surrounds the tell at the lower levels is a reminder of the greater extent of the town in the middle ages; it is further encircled by palm groves. Until 1980, when the modern reconstruction of the town was begun, there were dilapidated remains of houses and mosques from the 18th to the 19th centuries sporadically covering the site, but there was no archaeological evidence of any occupation from pre-Islamic times. But the soundings which were undertaken between 1982-6 have revealed stratified layers of occupation for the site which are uninterrupted from the beginning of the Christian era (at a depth of about 1.80 m above sea-level) until the premodern period (at the summit of the tell, some 8 m higher). From the time of its foundation, the town had commercial contacts with western India, as is attested by the presence of many fragments of polished red ceramics, an Indian imitation of Roman sigillated

pottery. In the higher levels, those corresponding to the Sāsānid period, there are fragments of Chinese glazed earthenware jars which provide the oldest evidence for maritime exchanges between ports on the Sea of ʿUmān and those in Southern China.

In the first centuries of the Christian era, Ṣuḥār was probably known as Omana, a toponym attested by Pliny the Elder as well as by the anonymous author of the *Periplus of the Erythraean Sea* (dated to the 1st century of this era), but that identification of the name remains uncertain. In the 4th century, the city was mentioned as a part of the Sāsānid empire under the name *Emporium Persarum* on the occasion of a mission carried out in Arabia by Theophilus the Indian. This bishop founded three churches in the peninsula, one of which was probably at Ṣuḥār. Consequently, the city and the region were designated by the Persian toponym Māzūn, which is preserved in Arab Islamic historiography, and also in certain Chinese texts, which continue to use it until the 17th century.

With the advent of Islam, the tribes of ʿUmān became divided regarding their support of the new faith and the representatives of the prestigious al-Djulandā family, who according to tradition received the messengers of the Prophet at Ṣuḥār in 8/629-30, had to take refuge in the mountains until the submission of the opponents of the Prophet in 12/633-4. The Persians, who controlled the Bāṭina and the stronghold of Rastāḳ in the interior, were driven out and this was about the time when the toponym Māzūn was replaced by that of Ṣuḥār. This was the name of a territory that had allegedly belonged to ʿĀd b. ʿŪṣ b. Iram b. Sām b. Nūḥ, and attempts were made to pass it off as an anthroponym, to create a pseudo-authentic bond between the city and a very ancient Arab founder. Ṣuḥār was the official place of residence for the governors appointed by the caliph during the 1st century A.H., and it was through Ṣuḥār, by mediation of the ʿUmānīs established at Baṣra, that the Ibāḍī doctrine [see IBĀḌIYYA] penetrated ʿUmān. The reign of the first Imām, al-Djulandā b. Masʿūd, had barely begun (in 132/750) when it was brutally interrupted by an attack from an ʿAbbāsid army sent to take back the country under the tutelage of the caliph. But ʿUmān kept its *de facto* independence under the successors of al-Djulandā b. Masʿūd, the Yaḥmad, another branch of the confederation of the Shanūʾa, who lived in Nazwā.

In the last quarter of the 3rd/9th century, under the Imāmate of al-Wārith b. Kaʿb al-Kharūṣī, Hārūn al-Rashīd tried again to subdue the country, but his general, ʿĪsā b. Djaʿfar b. Abi ʾl-Manṣūr, was defeated, imprisoned in the fort of Ṣuḥār and murdered there against the wishes of the Imām. In the last years of the same century, the rivalry between the "Yemenite" Ibāḍī tribes and the Sunnī Nizārī tribes degenerated into a civil war, in the course of which the orthodox Sunnīs called to their aid Muḥammad b. Nūr, the governor of Baḥrayn. He conducted a terrible repression in Nazwā and the whole surrounding area, causing the exodus of many Ṣuḥārīs to Shīrāz and Baṣra. When he departed, Muḥammad b. Nūr left behind a governor at Bahlā, who soon established himself at Ṣuḥār, for it seemed he favoured the commercial interests of the city. However, the Ḳarmaṭīs soon took control of ʿUmān and led raids against Baṣra from Ṣuḥār in 331/943 and 341/953, until in their turn they were conquered by the Būyids. After a mutiny by the Zandj and Daylamī contingents billeted at Ṣuḥār, which was severely put down by the Būyids, the town was devastated, and then again suffered through the Ghuzz invasion during its domination by the Saldjūḳs.

It seems that these events, though they were brutal, were also short-lived, and they did not deeply affect the prosperity of Ṣuḥār. The town had been established for centuries and had been reinforced at the beginnings of Islam by flourishing maritime trade links with India, East Africa and China. Commercial relations with these countries were obviously close, for Ṣuḥār was known as the "warehouse of China"; furthermore, Chinese chronicles recorded the name of a Ṣuḥārī, Shaykh ʿAbd Allāh (Xin-ya-tuo-luo), who was called the director of foreigners at Canton in the 5th/11th century. There were other traders originating from Ṣuḥār, from Ḳalʿāt or from the interior who became famous in China, such as Abū ʿAlī (Bu-ha-er), who became the minister of the province of Fujian in the 7th/13th century. During the excavations of 1982-6, some traces of the beautiful houses of burnt brick which had belonged to the merchants and shipowners of the metropolis of the Bāṭina were brought to light once again.

Arab historiography of the 3rd-4th/9th-10th centuries conjures up the splendour of the city in this period, in particular thanks to the testimony of the Palestinian geographer al-Muḳaddasī, who described it thus: "It is a flourishing place, well-populated, beautiful and pleasant to live in. There are elegant quarters lining the shore, and the houses are tall and stately, built of brick and teak wood. You can see the beautiful minaret of the Friday mosque rising close beside the sea, and inside the *miḥrāb* shimmers with reflections, now yellow, now green and red. But what delighted visitors above all was the *sūḳ* of Ṣuḥār, where commodities from the whole world could be found."

Archaeological excavations have clearly proved that the economic prosperity of Ṣuḥār came to an end in the course of the 7th/13th century. The series of events listed above probably played a large part, but there were also the incursions from Persia during the Mongol epoch (the arrival of Fakhr al-Dīn and of Shihāb al-Dīn in the second half of the century) which must have been the major cause, since these invasions are contemporary with the ruin of the city, as is evident from its archaeological stratigraphy. These incursions ended with the integration of Ṣuḥār into the empire of the princes of Hurmuz, and the building within the city of a fortress controlled by a Hurmuzī garrison. As a fortress, it was used to prevent the landing of cargoes in a port which had long been devoted to trade on the high seas, but rather to force them back towards Hurmuz, where the fiscal agents of the princes were awaiting them. Not one single piece of pottery imported from China has been found at Ṣuḥār in the levels corresponding to the period of the 8th-11th/14th-17th centuries.

The Portuguese, who conquered Ṣuḥār in 913/1507, pursued the same political ends as the princes of Hurmuz, and stationed their officers and garrison within the fortress; occasionally they made attempts to plunder the forbidden goods which flooded into the city for their own profit.

But the days of Portugese power in the region were numbered. Just at the time when they were chased from Hurmuz by the concerted action of the Ṣafawids and the English, Nāṣir b. Murshid al-Yaʿrubī was elected Imām. He and his successors, Sulṭān b. Sayf in particular, first chased the Portuguese and then the Persians from ʿUmān, and he set in motion an aggressive maritime and commercial policy involving vengeance against the former oppressors, where raids on

the Portuguese possessions of India were mingled with piracy and bargaining. When the Ṣafawids saw their maritime interests were suffering from these practices, they tried (without much success) to involve the European powers (England, Holland and France) against ʿUmān. In 1146/1738 they laid siege to Ṣuḥār, but the governor of the city, Aḥmad b. Saʿīd, opposed them with fierce resistance. This feat of arms was the original claim to prowess of the dynasty of the Āl Bū Saʿīd [*q.v.*], which is still in power in ʿUmān today.

At the end of the 18th and the beginning of the 19th century, Ṣuḥār still enjoyed a considerable amount of maritime activity. J.R. Wellsted described it as the second city of ʿUmān, with an annual revenue of 10,000 dollars from customs dues and with 9,000 inhabitants. Among them were about twenty Jewish families with a small synagogue, and still today there is a Jewish cemetery at Ṣuḥār which could date back to the 6th-7th/12th-13th centuries. On a number of the bricks used in the masonry of its tombs, as well as in the enigmatic wall which towers above them, are engraved Hebrew names in square characters.

The general economy of Ṣuḥār was run down because of the transfer of activity to Zanzibar and through the limitations imposed by the British authorities on the business which the ships of ʿUmān had been traditionally carrying out; the slave trade, in particular, was conducted specifically by the privateers of Sūr. Ṣuḥār was finally ruined by the attacks of pirates who, in the 19th century became established in the neighbouring fort of Shinās, and also by internal rivalries in the region, in which Wahhābī elements played a part.

(MONIQUE KERVRAN)

AL-SUHAYLĪ, ʿABD AL-RAḤMĀN [see Suppl.].

SUḤAYM, called ʿAbd Bani ʾl-Ḥasḥās, meaning the slave of the Banu ʾl-Ḥasḥās (Asad, the clan Nufāsa b. Saʿīd b. ʿAmr of the Banū Dūdān), a slave-poet of the *mukhaḍram* who lived in Medina during the reign of ʿUthmān b. ʿAffān. He is not to be confused with his namesake Suḥaym b. Wathīl al-Riyāḥī, a Tamīmī with a pure pedigree (as noted in the work of Ibn Shākir al-Kutubī, *Fawāt al-wafayāt*, Cairo 1951, i, 338).

The traditions concerning him are very contradictory and it is difficult to put together even an approximate biography of the poet. The only dateable event is his purchase by ʿAbd Allāh b. ʿUmar b. Abī Rabīʿa, to present him to the Caliph ʿUthmān because of his poetic talent. But the caliph declined the offer and is supposed to have said that negro slave-poets address *hidjāʾ* to their masters when they are hungry, but when they are full they write lewd songs (*yushabbibūna*) about their women (*Shuʿarāʾ*, 241; *Aghānī*, xxii, 305; *Khizāna*, ii, 104).

The slave went back to his former master Djandal b. Maʿbad of the Banu ʾl-Ḥasḥās (*Simṭ*, 720). The precise date of his relationship with ʿUmayra, the daughter of Djanbal who is evoked in the *yāʾiyya*, is unknown. However, a poem by Suḥaym tells of a sale that was planned but ended abruptly because of the imploring and pleas made by the slave (*Dīwān*, 56, rhyme *rāʾ*, metre *ṭawīl*). He went back to Djandal and had another affair with a young woman. News of this affair spread and his masters put him to death by beating him with red-hot iron bars. His death occurred in 37/657-8 (*al-Muntaẓam*, v, 142).

It is hard to date the other recorded episodes, and some of the scenes described in his *Dīwān* can be considered as poetic fiction, and as such they are without literary-biographical significance; see for example *Dīwān*, 15-16, 37-8.

The poetry of Suḥaym was collected by grammarians in the 3rd-4th/9th-10th centuries and has a pronounced linguistic character; see, in addition to the *riwāya* of Abu ʾl-ʿAbbās al-Aḥwal (died 259/873), those of Nifṭawayhi (died 323/935) and Ibn Djinnī (died 392/1002), which have all survived. Moreover, his verses seem to have found favour with the *nuḥāt* and with the lexicographers (Sībawayhi, *al-Kitāb*, Cairo 1403/1983, i, 350; iv, 225; Thaʿlab, *Madjālis*, Cairo 1948, 20, 2849; Ibn Durayd, *Waṣf al-maṭar wa ʾl-saḥāb*, Damascus 1382/1963, 70; ʿAlī b. Ḥamza al-Baṣrī, *al-Tanbīhāt*, Cairo 1967, 167; al-Zadjdjādjī, *Amālī*, Cairo 1382, 76-7, 130-1; Ibn Yaʿīsh, *Sharḥ al-mufaṣṣal*, Cairo n.d., i, 119-24; al-Suyūṭī, *Hamʿ al-hawāmiʿ*, Cairo 1327, i, 189; idem, *al-Muzhir*, Cairo n.d., ii, 195; Ibn Sīdah, *al-Mukhaṣṣaṣ*, Būlāḳ 1316, iv, 59, ix, 103, 108, x, 69, xii, 260; xiii, 232; *LʿA*, index of poets).

Only some 240 verses are still in existence, and they are divided between three major themes: tribal poetry, love poetry and poetry of rebellion. Five fragments totalling 31 verses constitute an altogether secondary side of his poetic talent, and in the poems of this genre Suḥaym certainly seems to play the role of

a commemorative poet, as he recalls the battles (*ayyām*) of Asad, such as Yawm al-Ras͟hā' (*Dīwān*, 49) and Yawm al-Liwā (*ibid.*, 38-9, with the death of ʿAbd Allāh b. al-Ṣimma and the flight of his brother Durayd, an episode which inspired one of the most famous threnodies of pre-Islamic poetry), as he praises the bravery of his "fellow-tribesmen", and as he frequently plays the role of the counsellor. The Banū G͟hadīra and the Naṣr b. Ḳuʿayn were given eulogies (*ibid.*, 49-50, 51, 52, 52-4).

But his main contribution was love poetry. There is not the slightest trace of *nasīb* in his work. On the contrary, his *yā'iyya* is a sensual hymn of praise to the complete woman. It is steeped in an atmosphere of licentiousness and his verses, which are knowingly obscene, portray a real woman to replace the ideally pure and somewhat conventional lady of the *nasīb* (*ibid.*, 16-33). However this hymn of passion delivers a serious blow to the woman's sense of self-respect, for he takes every opportunity to make disparaging remarks about his partner; G͟hāliya, Hind, Mayya, Asmā', Sulayma, Umm ʿAmr and their friends are all pictured scantily dressed and all exhibit an insatiable thirst for men. Nothing is left to the imagination; language which is certainly very crude verges on the obscene and gives explicit names to the sexual organs (*ibid.*, 34). The woman is very frequently presented as a sexual object and he never stops evoking details about positions and involuntary movements to express the carnal satisfaction of his partners in an atmosphere of sweat and scent. Terms that are visually vivid and convey fragrances play an essential role in his poetry. It is a poetry which is clearly anti-feminine and the virulence within it was hardly seen elsewhere during this period or even much later. Even in his most accomplished poems he finds an opportunity to take morbid pleasure in defiling women's bodies. Such novel motifs and new poetic tones provided an indispensable landmark for the emergence of the Ḥid͟jāzī school of poetry, and it could even be said that Suḥaym is one of the fathers of *tas͟hbīb*. The novelty of this poetry was astonishing. One perspicacious critic, Ibn S͟haraf al-Ḳayrawānī, could use only psychological means to explain the phenomenon, suggesting that such poetry was in itself a compensation for his ugliness and his state of servitude (*Rasā'il al-intiḳād*, 329-30, in Muḥammad Kurd ʿAlī, *Rasā'il al-bulag͟hā'*, Cairo 1365/1946).

To express his revulsion at his social condition (*Dīwān*, 54-5, 55, 56, 56-7, 57, 63-4, 65-6, 66-7) Suḥaym borrowed a unique, albeit well-known and predictable, motif. He affirms his right to take responsibility for his condition, proclaiming that there is a contradiction between outward appearances (i.e. his black colour) and spiritual superiority (his soul that was sparkling white). The same worn-out theme runs through the verses of ʿAntara or al-Ḥayḳutān, a negro poet contemporary with D͟jarīr (al-D͟jāḥiẓ, *Fak͟hr al-sūdān ʿalā al-bīḍān*, in *Rasā'il al-D͟jāḥiẓ*, Cairo 1384/1964, i, 183-5).

(A. Arazi)

SUHRAWARD, a town of mediaeval Islamic Persia in D͟jibāl [*q.v.*], the ancient Media. Nöldeke was the first to connect the name with Suhrāb, and Marquart followed him, so that one may assume older forms of the name to have been **Suxrāp-kart*, **Suhrāv-gerd*. Nöldeke thought that the eponym of the town was the Suhrāb who was a Persian governor of al-Ḥīra [*q.v.*]. Although this does not mean that the town was not founded till the time of this governor—it is only a hypothesis that he, and no other of the many known bearers of the name Suhrāb, is the one in question—one should perhaps be careful not to date the foundation of the town at too remote a period. The classical geographers do not seem to have known the town; at least, no ancient name is known which could be applied to the place later known as Suhraward.

The site of Suhraward cannot be located with absolute certainty. We have the statements of the Muslim geographers, according to which the town lay on the road from Hamad͟hān to Zand͟jān to the south of Sulṭāniyya. This road, 30 *farsak͟hs* long, was, according to al-Iṣṭak͟hrī, used in times of peace as the shortest route to Ād͟harbāyd͟jān; in troubled times the circuit via Ḳazwīn was taken. Ibn Ḥawḳal states exactly the reverse about the use of these two routes. In the 4th/10th century, the town was already in the hands of the Kurds; the inhabitants were mainly K͟hārid͟jites (*S͟hurāt*), who then emigrated, with the exception of those who stayed in their native town out of lack of courage or love of their home.

The town, which had been walled, was destroyed by the Mongols; Mustawfī describes it as a little village with many Mongol villages around it. On account of the cold in the Median highlands, little was grown here beyond corn and the smaller fruits.

(M. Plessner*)

AL-SUHRAWARDĪ, Abu 'l-Nadjīb ʿAbd al-Ḳāhir b. ʿAbd Allāh al-Bakrī, Ḍiyāʾ al-Dīn, a Sunnī mystic who flourished in the 6th/12th century.

Born about 490/1097 in Suhraward [*q.v.*], west of Sulṭāniyya, in the Djibāl region, Abu 'l-Nadjīb, genealogically linked with Abū Bakr, died in 563/1168 at Baghdād. Abu 'l-Nadjīb moved to Baghdād as a young man, probably in 507/1113, where he studied *ḥadīth*, Shāfiʿī law, Arabic grammar and belles-lettres. A paternal uncle of Abu 'l-Nadjīb, ʿUmar b. Muḥammad (d. 532/1137-8), head of a Ṣūfī convent in Baghdād, invested him with the Ṣūfī *khirḳa* [see ṬARĪḲA]. Probably before his arrival in Baghdād, Abu 'l-Nadjīb already studied *ḥadīth* in Iṣfahān. At about 25, in Baghdād, he abandoned his studies at the Niẓāmiyya [*q.v.*], a Saldjūḳ institution, in order to lead a solitary life of asceticism. He returned to Iṣfahān to join the illustrious Ṣūfī Aḥmad al-Ghazālī (d. 520/1126 [*q.v.*]). When he went back to Baghdād he became a disciple of Ḥammād al-Dabbās (d. 525/1130-1) who, albeit considered an illiterate, stands out as a teacher of ʿAbd al-Ḳādir al-Djīlānī [*q.v.*]. Abu 'l-Nadjīb is said to have earned a living for a number of years as a water-carrier. He began to preach Ṣūfism, and he founded a convent on the western bank of the Tigris. In 545/1150-1 Abu 'l-Nadjīb was appointed to teach *fiḳh* in the Niẓāmiyya. However, in 547/1152-3 he was dismissed from office, as a result of the power struggle between the caliph and the Saldjūḳ sultan. Both before and after his appointment at the Niẓāmiyya, Abu 'l-Nadjīb taught *fiḳh* and *ḥadīth* in his own *madrasa*, situated next to his *ribāṭ*, and he continued teaching Ṣūfism. In 557/1161-2 he left Baghdād for Jerusalem, but he could not travel beyond Damascus because Nūr al-Dīn Zangī [*q.v.*] and Baldwin had resumed their hostilities. After being received with honour in Damascus, Abu 'l-Nadjīb returned to Baghdād. Some years later he died and was buried in his *madrasa* there. His students were numerous and included, in *ḥadīth*, the historian Ibn ʿAsākir [*q.v.*] and the traditionist al-Samʿānī. His disciple ʿAmmār al-Bidlīsī (d. between 590/1194 and 604/1207) occupies an important place in the history of Ṣūfism as a teacher of Nadjm al-Dīn al-Kubrā [*q.v.*]. Abu 'l-Nadjīb had his most far-reaching influence, however, through his disciple and nephew, Abū Ḥafṣ ʿUmar al-Suhrawardī [*q.v.*], the famous author of the *ʿAwārif al-maʿārif*.

Abu 'l-Nadjīb was not a productive author. He wrote the *Gharīb al-maṣābīḥ*, a commentary on a popular *ḥadīth* collection, but his fame as a writer rests on his composition of the *Ādāb al-murīdīn*. However, the *Ādāb* became widely known only with the spread of the Suhrawardiyya order founded by his nephew ʿUmar after Abu 'l-Nadjīb's death. In the *Ādāb* Ṣūfism is viewed from the perspective of rules of conduct (*adab*). The book treats of, *inter alia*, common practices which did not conform to the strict etiquette required by Ṣūfī theory. By applying the traditional concept of *rukhṣa* ("dispensation", pl. *rukhaṣ*) in a novel way, Abu 'l-Nadjīb responds to the phenomenon of an affiliation of lay members to Ṣūfism. Whilst Abu 'l-Nadjīb also draws on various works of al-Sulamī, al-Sarrādj and al-Ḳushayrī [*q.vv.*], he betrays the closest dependence on Ibn Khafīf al-Shīrāzī [*q.v.*], whose *Kitāb al-Iḳtiṣād* he quotes throughout the *Ādāb*. However, he never identifies him when he excerpts from the *Iḳtiṣād*. The reason for this lies in the fact that Abu 'l-Nadjīb inverts Ibn Khafīf's fundamentally negative view of *rukhaṣ*: the very dispensations whose adoption by the "truthful novice" Ibn Khafīf interpreted as a failure to fulfill the requirements of *ṣidḳ* ("truthfulness"), are introduced in the *Ādāb* and vindicated by Abu 'l-Nadjīb. It may be argued that the *rukhaṣ* incorporated an element of instability into the Rule and that this heralded a decline from the "high ground" of the Ṣūfī spirituality of Abu 'l-Nadjīb's predecessors.

(F. Sobieroj)

AL-SUHRAWARDĪ, Shihāb al-Dīn Abū Ḥafṣ ʿUmar (539-632/1145-1234), one of the most important Ṣūfīs in Sunnī Islam. He was born and grew up in the town of Suhraward [*q.v.*], later destroyed by the Mongols, in the Persian province of Djibāl, to the west of Sulṭāniyya. He should not be confused with other persons carrying the *nisba* "al-Suhrawardī", in particular, not with his contemporary the mystic Shihāb al-Dīn Yaḥyā al-Suhrawardī al-Maḳtūl [*q.v.*], put to death in Aleppo in 587/1191 because of his heretical ideas in religious and political matters.

Abū Ḥafṣ ʿUmar al-Suhrawardī came in his youth to Baghdād, where his uncle Abu 'l-Nadjīb al-Suhrawardī [*q.v.*], himself a famous Ṣūfī, introduced him to the religious sciences and made him also familiar with the duties of a preacher. Abū Ḥafṣ followed his uncle's courses both in the Niẓāmiyya and in the latter's *ribāṭ* [*q.v.*] on the shore of the Tigris, a much-visited centre of the Ṣūfī way of life. He often mentions his uncle in his main work *ʿAwārif al-maʿārif* (e.g. ch. 30, section on humility). Another important teacher of Abū Ḥafṣ in Baghdād was the Ḥanbalī Ṣūfī and jurist *shaykh*, ʿAbd al-Ḳādir al-Djīlānī [*q.v.*]. The close relationship of the still quite young al-Suhrawardī with the famous *shaykh*, who was already approaching the end of his life, was significant for al-Suhrawardī's later attitude towards religio-dogmatic questions. ʿAbd al-Ḳādir is said to have dissuaded al-Suhrawardī from occupying himself with *kalām* [*q.v.*]

and to have warned him in particular against the use of *ḳiyās* (see Ibn Radjab, *Dhayl*, i, 296-7). In doing so, he is said to have mainly talked him out of reading al-Djuwaynī's *K. al-Shāmil* and al-Shahrastānī's *Nihāyat al-aḳdām*, both leading works of Ashʿarī theology. Al-Suhrawardī was not a Ḥanbalī, as ʿAbd al-Ḳādir was, but a traditionalistic Shāfiʿī, which was rather typical in Baghdād. With respect to al-Suhrawardī's spiritual career, it is important to note that his later violent attacks against the *mutakallimūn* corresponded to an initial personal interest in their doctrine (for other teachers of al-Suhrawardī, see Gramlich, *Gaben*, 6-13).

After his uncle's death in 563/1168, al-Suhrawardī followed "the path of seclusion". He preached and headed mystical meetings in Abu 'l-Nadjīb's *ribāṭ*, which soon extended to several other places in Baghdād. He was a trained orator, one of the most successful traditionalist preachers in the ʿAbbāsid metropolis. He put his audience into ecstasies, so that many cut their hair or were spiritually transported away from the world. His pulpit was made of clay, as prescribed by the ascetic way of life.

Al-Suhrawardī maintained friendly relations with Muʿīn al-Dīn al-Čishtī [*q.v.*], the founder of the Indian Čishtiyya order which, in its early period, orientated itself completely on al-Suhrawardī's *ʿAwārif*. He maintained a particularly close relation with Nadjm al-Dīn al-Rāzī, known as al-Dāya [*q.v.*], a *murīd* of Nadjm al-Dīn al-Kubrā [see KUBRĀ], whom he had met in 618/1221 in Malatya while the latter was on his way from Khwārazm to Asia Minor. Dāya submitted his *Mirṣād al-ʿibād* to al-Suhrawardī, who expressed his unrestricted approval and gave him a letter of recommendation for the Rūm Saldjūḳ Sultan ʿAlāʾ al-Dīn Kayḳubād I in Konya (see *Mirṣād*, 22-4).

Though referring to the doctrine of the "pious forefathers" [see AL-SALAF WA 'L-KHALAF], al-Suhrawardī in his mystical ideas went far beyond this, up to the point of even accepting, be it in a limited way, the *anā 'l-ḥaḳḳ* of al-Ḥallādj [*q.v.*]. Yet the freedom which al-Suhrawardī permitted himself in his judgement of the executed mystic did not bring him into agreement with the doctrines of contemporary "freethinkers". In strong words, he turned against the pantheism of his contemporary Ibn al-ʿArabī [*q.v.*]. According to al-Suhrawardī, the latter had started to establish a despicable connection between *taṣawwuf* [*q.v.*] and elements of Greek philosophy. The often-quoted story of the meeting in Baghdād between the very famous and controversial Andalusian mystic and al-Suhrawardī, his elder by about twenty years (see Ibn al-ʿImād, *Shadharāt*, v, 193-4), contains legendary elements (cf. Cl. Addas, *The quest for the Red Sulphur*, Cambridge 1993, 240-1, who discounts the story). His contacts with Rūzbihān al-Baḳlī [*q.v.*] (see Djāmī, *Nafaḥāt*, 418) also belong to the realm of legend. On the other hand, his meeting with Ibn al-Fāriḍ [*q.v.*], perhaps the most important mystical poet in the Arabic language, is historical. They met in the *ḥaram* of Mecca in 628/1231 during al-Suhrawardī's last pilgrimage (cf. al-Yāfiʿī, *Mirʾāt al-djanān*, iv, 77-8; Djāmī, *Nafaḥāt*, 542-3; *Dīwān Ibn al-Fāriḍ*, 147).

The interest shown by the ʿAbbāsid caliph al-Nāṣir [*q.v.*] in al-Suhrawardī's gatherings, and the ruler's first extraordinary marks of goodwill towards the *shaykh*, e.g. the foundation of the ribāṭ al-Marzubāniyya in 599/1202-3 (also known as ribāṭ al-Mustadjadd, situated on the shore of the Nahr ʿĪsā in West Baghdād) occurred in a period in which al-Nāṣir had intensively begun to promote the Ṣūfī branch of the *futuwwa* [*q.v.*] and to put it at the service of the caliphate. The development of a new *futuwwa*, led by the caliph as a *ḳibla*, was no less important to al-Nāṣir than it was to al-Suhrawardī. The caliph thus obtained a unique political instrument, while the *shaykh* in his turn saw his personal prestige spread far and wide outside Baghdād, as well amongst the circle of students which was gradually taking shape and from which the *ṭarīḳa al-Suhrawardiyya* [*q.v.*] later originated.

In his works, al-Suhrawardī supported the union of *futuwwa* and *taṣawwuf*. Interpreting the *futuwwa* as a part of the *taṣawwuf* (*Idāla*, fol. 89a-b), he created the conditions necessary for both supporting the caliphate through the *taṣawwuf* and for sanctioning Islamic mystics by means of the highest Islamic institution, the caliphate. In his *Idālat al-ʿiyān ʿalā 'l-burhān* (fol. 88a), al-Suhrawardī considers the relation of a Ṣūfī teacher (*shaykh*) to his novice (*murīd*) as being analogous to that of the caliph, who is the mediator (*wāsiṭa*) appointed by God between the absolute One (*Allāh*) and the people (*nās*). However, a reference to the idea of consensus (*idjmāʿ*) is missing in this context. Al-Suhrawardī developed a theory which co-ordinates the concepts of *futuwwa*, *taṣawwuf* and *khilāfa* in an upward relation: "The supreme caliphate is a booklet (*daftar*) of which the *taṣawwuf* is a part; *taṣawwuf* in its turn is also a booklet of which the *futuwwa* is a part. The *futuwwa* is specified by pure morals (*al-akhlāḳ al-zakiyya*); *taṣawwuf* also includes the pious actions and religious exercises (*awrād*); the supreme caliphate comprises the mystical states, the pious actions and the pure morals" (*Idāla*, fol. 89a-b). The comparison of the caliphate with a booklet, which contains *taṣawwuf* and *futuwwa* in a subordinate way, is reminiscent of the hierarchy of the concepts of *sharīʿa*, *ṭarīḳa* and *ḥaḳīḳa* found in al-Suhrawardī's *Risālat al-futuwwa* (*Aya* Sofya 3155, fol. 186b), which are also linked in gradations. Here the *Sharīʿa* is the higher concept, used on the same level as *khilāfa*. In relation to one another both concepts represent a unity.

The bilateral relation which, according to al-Suhrawardī, existed between the caliphate and Ṣūfism explains why the caliph sent the *shaykh* several times to the courts of rulers as his representative. To the best-known diplomatic missions belong al-Suhrawardī's visits to the Ayyūbids [*q.v.*]. In 604/1207-8, after al-Nāṣir had declared himself the mandatory *ḳibla* for all members (*fityān*) of the *futuwwa*, he sent al-Suhrawardī to the courts of al-Malik al-Ẓāhir in Aleppo (cf. Ibn Wāṣil, *Mufarridj*, iii, 180), of al-Malik al-ʿĀdil in Damascus (*op. cit.*, 181-2), and of al-Malik al-Kāmil in Cairo (*op. cit.*, 182; Ibn al-Sāʿī, *Djāmiʿ*, ix, 259). On his return to Baghdād, the *shaykh* was greeted by immense expressions of sympathy and processions in his honour, just as he had experienced during his journey. But al-Suhrawardī's new ostentatious pomp and his breach of the rules of a Ṣūfī way of life was not agreable to the caliph, who withdrew from him the direction of the *ribāṭ*s and banned him from preaching (cf. Sibṭ Ibn al-Djawzī, *Mirʾāt*, fol. 306b, which is lacking in the Ḥaydarābād edition; Ibn Kathīr, *Bidāya*, xiii, 51-2). The event caused quite a public stir in Baghdād. Only the *shaykh*'s inner repentance, his renouncing property and money, and his complete return to the ideal of a Ṣūfī way of life brought about the lifting of the measures taken against him and reconciliation with the caliph. Never again was a cloud cast upon their friendship.

Ten years later, when the ʿAbbāsid caliphate, through the politics of the Khwārazm Shāh [see KHWĀRAZM SHĀHS], found itself in a difficult position,

both militarily and constitutionally, al-Suhrawardī was entrusted with a second important diplomatic mission. In order to defend the caliphate, al-Nāṣir sent him in 614/1217-8 to Hamadān, where the Ḵẖʷārazm Sẖāh ʿAlāʾ al-Dīn Muḥammad II, who was already marching against Bag̲h̲dād, gave him a chilly reception in his state tent. The Ḵẖʷārazm Sẖāh was not prepared to accept al-Nāṣir as caliph. On the decisive question, whether it was permitted to the caliph, by reason of the public interest, to keep members of the ʿAbbāsid dynasty, namely his own son and the latter's family, in prison, or whether the *ḥadīth* should be applied according to which no harm could be caused to descendants of al-ʿAbbās b. ʿAbd al-Muṭṭalib [*q.v.*], al-Suhrawardī did not reach agreement (cf. Sibṭ Ibn al-Djāwzī, *Mirʾāt*, viii, 582-3; Nasawī, *Sīra*, 51-2; Ibn Kathīr, *Bidāya*, xiii, 76); the mission failed.

On the other hand, al-Suhrawardī's mission in 618/1221 to the new Saldjūḳ sultan of Rūm, ʿAlāʾ al-Dīn Kayḳubād [see KAYḲUBĀD I], was successful. In the caliph's name the *shaykh* brought the sultan the tokens of rulership: the diploma with the titles and insignia of a sultan and of the delegated state power over the Islamic regions of Asia Minor, the ruler's robe of honour, the sword and the signet ring. Al-Suhrawardī was also successful in recruiting members for the caliph's *futuwwa*, which was joined in Konya by Kayḳubād and many officials and scholars. Al-Suhrawardī led the initiation ceremonies. The extraordinary friendly atmosphere is described by Ibn Bībī [*q.v.*] in his chronicle of the Saldjūḳs. According to Franz Taeschner, al-Suhrawardī's political and Ṣūfī activities in Asia Minor could be interpreted as a secession from the caliph's *futuwwa*. On the basis of linguistic peculiarities in one of al-Suhrawardī's Persian epistles (see *Risālat al-futuwwa*, Aya Sofya 3155, fols. 185a-190b), e.g. because he uses *akhī* instead of *futuwwatdār*, and because the usual classification into *sayfī* and *ḳawlī*, common in the organisation of the *akhīs* [*q.v.*], as well as the term *tarbiya* are used, Taeschner surmised that the *futuwwa* represented by al-Suhrawardī was not identical with that of the caliph, but that there had been close relations between the *akhīs* of Anatolia and Persia and even a *futuwwa* of al-Suhrawardī's own (Taeschner *Schrift*, 280). Cahen (*Pre-Ottoman Turkey*, 196 ff.) and Breebaart (*Turkish futūwah guilds*, 109-39), on the other hand, have shown that a consistent terminology was not yet common in Anatolia in the 7th/13th century. It can be assumed that there were strong rivalries within Ṣūfism, the *futuwwa* and the *akhīs* in Anatolia. Besides, the Anatolian *akhīs* did not form a definitely constituted professional organisation, as has been thought in the past; on the basis of their ethical principles they can rather be considered as a widely-spread *ṭarīḳa* (cf. Köprülü, *Ilk mutasavvıflar*, 212-13). A comparative study of al-Suhrawardī's terminology and that of other writers, including of anonymous contemporary authors, is still lacking.

Just as al-Suhrawardī spread the caliph's "purified *futuwwa*", he enjoyed support during his journeys by followers for his own Ṣūfī doctrine and his theological view of the world. He himself considered the latter as wisdom within the Prophet's inheritance, as a complete representation of all branches of religious knowledge and standards of behaviour. Yet there is also, especially in al-Suhrawardī's works of his last years, a mixture of traditionalist Ṣūfī concepts with heterogeneous thoughts which can be traced back to gnostic and Neo-Platonic elements. A conclusive investigation is still lacking. Al-Suhrawardī's numerous disciples and friends spread his doctrine mainly in Syria, Asia Minor, Persia and North India. His pupils—and not he himself as has been thought for a long time—founded the Suhrawardiyya, the famous order named after him. Next to the Čishtiyya, the Ḳalandariyya and the Naḳshbandiyya [*q.vv.*], the Suhrawardiyya became one of the leading Islamic orders in India, where it still exists. Among the most successful propagators of al-Suhrawardī's doctrine were his disciples ʿAlī b. Buzg̲h̲ush (d. 678/1279-80 in Sẖīrāz), Bahāʾ al-Dīn Zakariyyāʾ [*q.v.*], who founded the Suhrawardiyya in Sind and in the Pandjāb (cf. Djāmī, *Nafaḥāt*, 504) and Djalāl al-Dīn Tabrīzī [see TABRĪZĪ, DJALĀL AL-DĪN] who was active mainly in Bengal. According to a devotee of the orders of the 8th/14th century, the Suhrawardiyya was more subdivided than other orders, so that enumerating its establishments and members is not easy.

Works. Al-Suhrawardī left behind a sizeable number of writings, in which all traditions of classical Islamic mysticism and religious sciences are represented.

1. *ʿAwārif al-maʿārif* is the title of his main work. It is a famous and comprehensive handbook (*vade-mecum*) for Ṣūfīs, which has influenced permanently the thoughts of millions of believers and which is still used today. In this work were incorporated the older Ṣūfī literature, the *tafsīr* of Sahl al-Tustarī [*q.v.*], the *Ḥaḳāʾiḳ al-tafsīr* of Abū ʿAbd al-Raḥmān al-Sulamī [see AL-SULAMĪ], and the handbooks of Abū Naṣr al-Sarrādj [see AL-SARRĀDJ], of Abū Ṭālib al-Makkī [*q.v.*], of Abū Bakr al-Kalābādhī [see AL-KALĀBĀDHĪ], and of Abū 'l-Ḳāsim al-Ḳushayrī [see AL-ḲUSHAYRĪ] and other Ṣūfī *ṭabaḳāt* literature and commentaries on the Ḳurʾān. The themes treated comprise in 63 chapters the whole of Ṣūfī way of life, the relation of the novice to the *shaykh*, the latter's tasks, a human being's self-knowledge, the revelations of the Ṣūfīs on this point and the explanation of what happens when one is in the mystical "state" (*ḥāl*) and when in the "station" (*maḳām*). It is not known when the *ʿAwārif* was composed, but the *terminus ad quem* is 612/1215-16 (cf. Hartmann, *Bemerkungen*, 124-5), and thus it is certain that al-Suhrawardī wrote his work at a period in which his theoretical epistles on *futuwwa* also came into being. Persian translations and commentaries of the *ʿAwārif* were already made during the author's lifetime. The most important basis for the continuation of al-Suhrawardī's thoughts in the Persian-speaking world was the *Miṣbāḥ al-hidāya wa-miftāḥ al-kifāya* by ʿIzz al-Dīn Maḥmūd b. ʿAlī-i Kāshānī (d. 735/1334-5). This work contains most of the doctrines of the *ʿAwārif*, but adds personal ideas (Eng. tr. by H. Wilberforce Clarke, printed as a supplement to his translation of the *Dīwān* of Ḥāfiẓ, Calcutta 1891). There still is no critical edition of the *ʿAwārif*. The best-known editions are those of Cairo 1358/1939 (printed in the margin of al-Ghazālī's *Iḥyāʾ ʿulūm al-dīn*) and of Beirut 1966, but both are defective. The partial edition of Cairo 1971 contains only chs. 1-21 and is based on later manuscripts. In his German translation (*Die Gaben der Erkenntnisse*, Wiesbaden 1978), Richard Gramlich has corrected the mistakes of the existing editions by adducing better variants, thus providing for the first time a reliable basis for the text. There are several Turkish translations, the last one being Istanbul 1990.

2. *Rashf al-naṣāʾiḥ al-īmāniyya wa-kashf al-faḍāʾiḥ al-yūnāniyya* (Reisülküttab 465, Köprülü 728) is a polemic against the arguments of the apologetic-dialectical theology (*kalām*), against Islamic philosophy and its ancient origins. In this work, composed in

621/1224, the author, already aged and almost blind, reveals to what extent his theological-mystical thinking had developed. The *'Awārif al-ma'ārif* was still completely grounded in the Shāfi'ī-Ash'arī orthodoxy, but the works of his old age, especially the *Rashf al-naṣā'iḥ*, show concepts and borrowings from the tradition of his intellectual adversaries, e.g. from the *falāsifa* on one hand, and from the refutation of the latter derived from the (crypto-) Ismā'īlī viewpoint of the heresiographer Muḥammad b. 'Abd al-Karīm al-Shahrastānī [*q.v.*] on the other. In the *Rashf*, al-Shahrastānī's theology has become the basis of a peculiar concept of creation and of anthropology. This doctrine can be followed far back in Islamic gnosis, e.g. the myth of the cosmic marriage between spirit and soul as the starting-point of the origin of the universe, the participation of earthly man in the universal spirit and the universal soul, the world as macranthropos, man as a microcosmos, the classification of the strata of the earth in *djism* and *djirm*. Al-Suhrawardī adopts other ideas which he believed he was refuting: he draws up a hierarchical series of creatures which emanate from the primordial creature with the help of God's command (*amr*). This creature he calls "the mighty spirit" (*al-rūḥ al-a'ẓam*). It is identical with the *prima causa* of the philosophers, and it is "One" (*wāḥid*), just like God. While God is above existence (*mūdjid*), His first and most beloved creature has the tasks of a *necessitator* (*mūdjib*). The first to originate from it is "the intellect of the primordial quality" of the human being (*'akl fiṭrī*, i.e. the intellect of the prophets), the second is the soul, while "the intellect of the creational quality" (*'akl khalkī*, i.e. the intellect of the philosophers) comes only in the third place. Then follow the spheres, down to the sphere of the moon. Al-Suhrawardī unites these concepts with the Ash'arī doctrine of *sabab* and with popular mythologumena into an innovative conception of theological thinking.

The work is dedicated to the caliph al-Nāṣir, whom al-Suhrawardī quotes as an authority on *ḥadīth*. The political and religious aim of this work consists in the fact that the author unites contradictory dogmatic trends into an—in his eyes—purified traditionalism, in order to strengthen the 'Abbāsid caliphate by using *ḥadīth* as a tool and by involving *taṣawwuf* to reform the intellectual education. The work offers a politico-religious middle course (*wasaṭ*, *tawassuṭ*), from which were only excluded those who challenge the unicity of God (*waḥdāniyya*). These are, in al-Suhrawardī's opinion, the philosophers with their doctrine of the *prima causa* and their analogies, by which they have committed polytheism (*shirk*). That is why he calls them the enemies of the *umma*, while the Shī'īs, including the Ismā'īlīs, are not attacked.

There exist recensions of the *Rashf* with and without its Neo-Platonic adaptations. The work was translated into Persian by Mu'īn al-Dīn al-Yazdī (d. 789/1387) [*q.v.*], the historian of the Muẓaffarids [*q.v.*] and provided with borrowings from Ibn al-'Arabī's theosophy (ed. Tehran 1365/1986). The Persian historiographer Muḥammad al-Īdjī [*q.v.*], who wrote *ca.* 781/1380, based the methodological part of his history of religions and cultures *Tuḥfat al-fakīr ilā ṣāḥib al-sarīr* (Turhan Valide Sultan 231), partly word-for-word on al-Suhrawardī's argumentation. In the 7th/13th century, a refutation of the *Rashf* was composed under the title *Kashf al-asrār al-īmāniyya wa-hatk al-astār al-ḥuṭāmiyya*. The author, Ḍiyā' al-Dīn Mas'ūd b. Maḥmūd (d. 655/1257-8), was a scholar from Shīrāz and a disciple and friend of Fakhr al-Dīn al-Rāzī [*q.v.*].

3. *Idālat al-'iyān 'alā 'l-burhān* (Bursa, Ulu Cami, Tas. 1597), also a refutation of philosophy. This work was finished after the *Rashf*, between 622/1226 and 632/1234, and contains the same underlying ideas, but the linguistic style is more precise. Quotations from authorities and mythological themes are less frequently brought up. Instead, al-Suhrawardī develops an independent theory of the state in which caliphate, *futuwwa* and Ṣūfism, as described above, are linked together. In the third section, al-Nāṣir's grandson, al-Mustanṣir [*q.v.*] is mentioned as patron of the *futuwwa*.

4. *I'lām al-hudā wa-'akīdat arbāb al-tukā* (Aşır Ef. 416/10), composed in 632/1234, is a treatise on religion, in which the author tries to explain to the conservative Ḥanbalīs in Baghdād the theological arguments of the Ash'arīs concerning God and the theodicy. The author's aim is to promote the unity of the Muslim community in the face of the Mongol danger.

5. *Nughbat al-bayān fī tafsīr al-Kur'ān* (Hacı Beşir Ağa/Eyüp 24, dated 610/1214) is a commentary on the Ḳur'ān, which should be situated in the tradition of Ḳur'ān exegesis as practised by the Ṣūfīs al-Tustarī and al-Sulamī.

6. Al-Suhrawardī carried on an extensive correspondence, from which have survived, among others, letters to the theologian Fakhr al-Dīn al-Rāzī [*q.v.*].

7. For his disciples, al-Suhrawardī wrote spiritual testaments (*waṣiyya*, pl. *waṣāyā*), in which he admonishes them to observe the duties of a Ṣūfī on the basis of the sciences approved by Ḳur'ān and *sunna*. Also in the *waṣāyā*, al-Suhrawardī speaks of the close connection between *futuwwa* and *taṣawwuf*. Further writings and collections of sayings of al-Suhrawardī, as well as their manuscripts, are mentioned in the publications of H. Ritter, A. Hartmann and R. Gramlich (see *Bibl.*).

Al-Suhrawardī died in Baghdād at the age of 90 in Muḥarram 632/November-December 1234 and was buried in a *turba* in the *makbarat al-wardiyya*, the cemetery of the Ṣūfīs (cf. Ibn al-Fuwaṭī, *Ḥawādith*, 74; Sibṭ Ibn al-Djawzī, *Mir'āt*, fol. 359b). His tomb has been venerated as a sanctuary since the 8th/14th century. After Baghdād had been conquered by the Ottoman sultan Murād IV, the tomb, which had become dilapidated, was in 1638 restored, together with the tombs of Abū Ḥanīfa and 'Abd al-Ḳādir al-Djīlānī.

(Angelika Hartmann)

AL-SUHRAWARDĪ, Shihāb al-Dīn Yaḥyā b. Ḥabash b. Amīrak, Abu 'l-Futūḥ, well known Persian innovative philosopher-scientist, and founder of an independent, non-Aristotelian philosophical school named "the Philosophy of Illumination" (*Ḥikmat al-Ishrāḳ*), which is also the eponymous title of his most widely-known text; he is thus commonly referred to as the "Master of Illumination" (*Shaykh al-Ishrāḳ*). He was born in the small town of Suhraward in northwestern Persia 549/1154, and met a violent death by execution in Aleppo in 587/1191, so ordered by the Ayyūbid sultan Ṣalāḥ al-Dīn. Recent studies have demonstrated that al-Suhrawardī's execution was directly linked to his involvement in politics, whereby he sought to implement the "Illuminationist political doctrine" which he had taught to several late 6th/12th century rulers, among them the prince ʿAlāʾ al-Dīn Kay Ḳubād; the Saldjūḳ Sulaymān Shāh, who commissioned the *Partaw-nāma*; the ruler of Kharpūt, Malik ʿImād al-Dīn Artuḳ, who commissioned the *Alwāḥ-i ʿImādī*; and, lastly, to the Ayyūbid Ṣalāḥ al-Dīn's young son, the prince al-Malik al-Ẓāhir Ghāzī, governor of Aleppo (see Ziai, *The source and nature of authority*).

Al-Suhrawardī first studied philosophy and theology with Madjd al-Dīn al-Djīlī in Marāgha, then travelled to Iṣfahān to study with Fakhr al-Dīn al-Māridīnī (d. 594/1198), who is said to have predicted his student's death (Yāḳūt, *Irshād*, vi, 269; Ibn Abī Uṣaybiʿa, *Ṭabaḳāt*, i, 299-301). It is also known that Ẓahīr al-Fārisī, a logician, introduced al-Suhrawardī to the *Observations* (*al-Baṣāʾir*) of the non-Aristotelian Persian logician ʿUmar b. Sahlān al-Sāwadjī (*fl.* 540/1145) (see *Ḥikmat al-ishrāḳ*, 146, 278, 352). Sāwadjī's novel ideas concerning the reconstruction of the Aristotelian nine-book logical corpus of the *Organon* into more logically consistent divisions of semantics, formal logic and material logic had a major impact on al-Suhrawardī's writings on logic.

Works

In his short 36 years of life, al-Suhrawardī is reported to have composed some 50 works, many of which remain unpublished. The published texts are also incomplete in that they do not include major sections on logic and physics. The most important texts in the philosophy of illumination are al-Suhrawardī's four major Arabic philosophical works: the *Intimations* (*al-Talwīḥāt*), the *Apposites* (*al-Muḳāwamāt*), the *Paths and havens* (*al-Mashāriʿ wa 'l-muṭāraḥāt*) (see H. Corbin (ed.), *Opera metaphysica et mystica I*), and the *Philosophy of illumination* (*Ḥikmat al-ishrāḳ*) (see idem, *Opera metaphysica et mystica II*). The four texts constitute an integral corpus and also define the "syllabus" for the study of the philosophy of illumination (see Ziai, *Knowledge and illumination*, 9-15). Other texts, especially the *ʿImādian tablets* (*al-Alwāḥ al-ʿimādiyya*) and *Temples of light* (*Hayākil al-nūr*)—both of which were composed in Arabic *and* Persian—plus the Persian *Epistle on emanation* (*Partaw-Nāma*) (see Corbin and S.H. Nasr (eds.), *Opera metaphysica et mystica III*) are of lesser theoretical significance, but are to be included in this category of Illuminationist reconstructions.

Next in order of significance are al-Suhrawardī's Arabic and Persian philosophical allegories: "A tale of the occidental exile" (*Ḳiṣṣat al-ghurba al-gharbiyya*); "The treatise of the birds" (*Risālat al-ṭayr*); "The sound of Gabriel's Wing" (*Āvāz-i par-i Djibrāʾīl*); "The red intellect" (*ʿAḳl-i surkh*); "A day with a group of Ṣūfis" (*Rūzī bā djamāʿat-i Ṣūfiyān*); "On the state of childhood" (*Fī ḥālat al-ṭufūliyya*); "On the reality of love" (*Fī ḥaḳīḳat al-ʿishḳ*); "The language of ants" (*Lughat-i mūrān*); and "The simurgh's shrill cry" (*Ṣafīr-i sīmurgh*) (see Corbin, *ibid.*; W.M. Thackston (tr.), *The mystical and visionary treatises of Shihabuddin Yahya Suhrawardi*; and O. Spies (tr.), *Three treatises on mysticism by Shihabuddin Suhrawardī Maqtul*).

The next group of works by al-Suhrawardī consists of devotional prayers and invocations, aphorisms and other short statements (see Shahrazūrī, *Nuzhat al-arwāḥ*, ii, 136-43). Of specific interest are two prayers and invocations composed in an especially rich allegorical and literary style, where al-Suhrawardī addresses "the great Heavenly Sun, Hūrakhsh," and invokes the authority of "the Great Luminous Being" (*al-nayyir al-aʿẓam*), praying to it for knowledge and salvation (published by M. Moin, in *Madjalla-yi Āmūzish wa Parwarish*; and one reprinted in M. Ḥabībī, *Si risāla az Shaykh-i Ishrāḳ*).

His Illuminationist philosophy

With a few exceptions, most notably Max Horten, Orientalist studies on al-Suhrawardī's Arabic and Persian texts have failed to recognise the systematic philosophical side of Illuminationist logic, physics and metaphysics. Al-Suhrawardī's own oft-repeated aim to compose a novel scientific system has been inadequately described by the use of such non-technical philosophical terms as "theosophy", "sagesse orientale", "transcendental theosophy", "Sophia perennis", and the like. Suhrawardī was a well-trained scientist-philosopher, whose works on logic, foundations of mathematics, cosmic continuum theories, unified epistemological laws, etc. all demonstrate his intention which may be summed as a rational attempt to, among other things, harmonise intuitive knowledge (*al-ḥikma al-dhawḳiyya*), with deductive knowledge (*al-ḥikma al-baḥthiyya*) (see al-Shahrazūrī, *Sharḥ Ḥikmat al-ishrāḳ*, 1-9).

Al-Suhrawardī's principal novel philosophical approach is founded on his critique of the universal validity of Aristotelian scientific methodology. He is one of the first philosophers to elaborate on an old tradition, whose roots are to be found in Plato's idea of sudden inspiration put forth in light imagery in the *Seventh letter* (341C, 344B), later discussed by Speusippus, who introduced the term ἐπιστημονικὴ αἴσθησις (see Merlan, 64, n*), and the subject of an entire treatise by St. Augustine (see R. Allers, *St. Augustine's doctrine on Illumination*). The favourite Platonic metaphor of light and vision of the *Republic*, V-VIII, is repeated in almost all Illuminationist texts, but incorporated in the Illuminationist unified epistemological theory named "Knowledge by presence" (*al-ʿilm al-ḥuḍūrī*).

Al-Suhrawardī expresses his concern with ambigu-

ities and inconsistencies which he discovered in the Arabic Aristotelianism of his time. They cover every domain of philosophy, e.g. in logic, concerning predication and the Law of Identity; in physics, concerning the discrete and numbered separate Intellects; but especially in early passages of the *Posterior analytics*, I.2:71b.20-72a.25. The latter concern the foundations of Aristotelian scientific method, summed up as: science rests on necessary, true, primary, and most prior premises, which are known not through syllogistic deduction, but by immediate, intuitive knowledge, 'Ανάγκη τὴν ἀποδεικτικὴν ἐπιστήμην ἐξ ἀληθῶν τ' εἶναι καὶ γνωριμωτέρων καὶ προτέρων καὶ αἰτίων τοῦ συμπεράσματος. Aristotle does not systematically present what is the intuitive mode, nor does he discuss an epistemological process that could describe primary intuition nor immediate knowledge. Science is defined as a deductive theory (an axiomatic system), based on ὅροι, ἀξιώματα, θεωρεῖν, where the latter may be known through primary ὑποθέσεις or αἴτημα or, ὁρισμός; this view is then further refined and expanded in the *Metaphysics* E.1, 1025b ff., when Aristotle defines kinds of theoretical sciences; and in *Metaphysics* M.10, 1086b. 5 ff., he examines the two ways the term *science* is said, and emphasises that scientific knowledge is universal (the same as in *De anima*, II.5, 417b). Al-Suhrawardī's main scientific aim was to construct a unified epistemological theory that describes intuitive knowledge in a "scientific" way. For example, "I intuitively know I exist/I think, that is the same", then generalised as "every self-apprehending being is the same as its substantial existence" (cf. the *Philosophy of Illumination, Part Two*, I.5, § 114 ff.). (Illuminationist philosophy also recovers Stoic sources, e.g. relating to reduction of categories, continuum theories, etc. See Ziai, *Knowledge and Illumination*, chs. I, II.)

Al-Suhrawardī's novel system is a scientific philosophical one intended to refine the scientific methods of the time, and closely parallels the ideals of Kant's "Critical philosophy" and Fichte's "Theory of scientific knowledge". The most widespread impact of Illuminationist philosophy has in fact been in the area of epistemology. Al-Suhrawardī argues against the validity of the Aristotelian *horos* and *horismos* in the foundations of philosophy, and considers ambiguous Aristotle's use of "intuition" as a starting-point of knowledge, because the Stagirite is not clear as to whether intuitive, immediate knowledge is opinion, δόξα, valid by *common acceptance*, ἔνδοξος, or something known ἐπιστητόν as scientific knowledge. Al-Suhrawardī's main claim is that in his reconstructed system, the Philosophy of Illumination, by which a new and more consistent scientific method, the "science of lights" (*ʿilm al-anwār*) is defined, the ambiguity is resolved. He constructs a unified epistemological theory, knowledge-by-presence, hailed since the 7th/13th century by such creative thinkers as al-Shahrazūrī and Ibn Kammūna, and up to the present, as one of Islamic philosophy's greatest achievements and the most valid process of obtaining and describing scientific knowledge of a wider range of things in every sector of the continuum Whole, e.g. the phenomenal and the noumenal (see M. Ha'iri Yazdi, *The principles of epistemology in Islamic philosophy*). Unlike Aristotle, the theory unequivocally posits primacy to a temporal, pre-inference and immediate mode of knowledge, which, in contemporary terms, is non-propositional intuitive knowledge prior to dyadic differentiation of subject-object.

The Illuminationist ontological position, called "primacy of quiddity", is a long-standing problem that distinguishes philosophical schools in the development of Islamic philosophy in Persia up to the present day. It is also a matter of considerable controversy. Those who believe in the primacy of being or of existence (*wudjūd*) consider essence (*māhiyya*) to be a derived, mental concept (*amr iʿtibārī*, a term of "secondary intention"); while those who believe in the primacy of quiddity consider existence to be a derived, mental concept. The Illuminationist position is this: should existence be real outside the mind (*mutaḥaḳḳaḳ fī khāridj al-dhihn*), then the real must consist of two things—the principle of the reality of existence, and the being of existence, which requires a referent outside the mind. And its referent outside the mind must also consist of two things, which are subdivided, and so on *ad infinitum*. This is clearly absurd. Therefore existence must be considered as an abstract, derived, mental concept (cf. William of Ockham, *Summa logicæ, Pars prima*, 15: "That the general term is not a thing outside the mind". The same is said in *the Philosophy of Illumination. Part One*, I.5: "On the [principle] that the general term does not exist outside the mind").

In sum, Illuminationist philosophy contests the Aristotelian position that the laws of science formulated as A-propositions are both necessary and always true, and that they are universal. Through an elaborate process of arguments, starting in logic in the four major texts mentioned, al-Suhrawardī establishes future contingency (*al-imkān al-mustaḳbal*) as a scientific principle. Using this principle and others, he further argues that, contrary to the Aristotelian position, laws of science cannot be universal.

Finally, Illuminationist philosophy is quintessentially different from philosophical "text books" composed by Muslim dialectical theologians and cannot be reduced to a state-sponsored "handmaiden of theology." Al-Suhrawardī's concepts such as *idrāk* ("apperception or "apprehension" similar to modern philosophy's replacing *noein* with *Vernehmen*); *al-iḍāfa al-ishrāḳiyya*, (comparable to non-predicative knowledge; *idrāk al-anā'iyya* (self-awareness, *Selbstgefühl*); *mushāhada ishrāḳiyya* (cf. *Selbstgefühl*, as well as *Ichheit*, as acts *Bewusstsein* of the cognitive intuitive mode, and *Anschauung*, meaning "seeing," applied to a "seeing subject," whose act of sight is identified as *Wesensschau*); and many other technical terms, are also not to be confused with their subjective use in Ṣūfism.

Bibliography: 1. Sources. The major biographical sources on Suhrawardī, which include references to Illuminationist philosophy, are Ibn Abī Uṣaybiʿa, ed. Müller, i, 168; the ed. by N. Riḍā, Beirut 1968, 641-6, differs in part from Müller's; Yāḳūt, *Irshād*, ed. Margoliouth, vi, 269; Ḳifṭī, *Ḥukamā'*, ed. Bahman Dārā'ī, Tehran 1347, 345; Ibn Khallikān, ed. I. 'Abbās, vi, 268-74; Shams al-Dīn Muḥammad al-Shahrazūrī, *Nuzhat al-arwāḥ wa-rawḍat al-afrāḥ fī ta'rīkh al-ḥukamā' wa'l-falāsifa*, ed. S. Khurshīd Aḥmad, Ḥaydarābād 1976, ii, 119-43; the 17th-century Persian tr. of *Nuzhat al-arwāḥ* by Maḳṣūd 'Alī Tabrīzī has recently been published by M.T. Dānish-Pazhūh and M.S. Mawlā'ī, Tehran 1986; it differs (considerably at times) from the Arabic text. Part of the notice on Suhrawardī in this text has been tr. into English by W.M. Thackston, Jr., in *The mystical and visionary treatises of Shihabuddin Yahya Suhrawardi*, London 1982, 1-4. Thackston's tr. is based on the partial ed. of S.H. Nasr, in *Shihaboddin Yahya Sohrawardi. Oeuvres philosophiques et mystiques. Opera metaphysica et mystica III*, repr. Tehran 1976, 13-30. This ed. includes the Arabic text as well as the version of the Persian translation of Tabrīzī.

(HOSSEIN ZIAI)

SUHRAWARDIYYA, an order of Ṣūfīs of 'Irāḳī origin which flourished particularly in India; devoid of a centralised organisation, the *ṭarīḳa* [*q.v.*] split into numerous branches.

1. *The order in 'Irāḳ and Persia.* The Suhrawardiyya traces its origin back to Abu 'l-Nadjīb Suhrawardī [*q.v.*], the disciple of Aḥmad Ghazālī [*q.v.*]. Through two of his students who became masters of Nadjm al-Dīn Kubrā [*q.v.*] (Djāmī, *Nafaḥāt*, 417-18), also the *silsila* of the Kubrawiyya goes back to Abu 'l-Nadjīb. Some of Kubrā's major students, such as Nadjm al-Dīn Rāzī (d. 654/1256) and Yaḥyā Bākharzī (d. 736/1335-6), were either linked with Abu 'l-Nadjīb's nephew Shihāb al-Dīn Abū Ḥafṣ 'Umar Suhrawardī [*q.v.*] or they were active in the propagation of the latter's work. Abu 'l-Nadjīb is also at the origin of the line of the mystic poet Awḥad al-Dīn Kirmānī (d. probably 635/1237-8; R. Gramlich, *Derwischorden*, i, 9; H. Ritter, *Meer*, 473-6; see *Bibl.* below).

However, it is Shihāb al-Dīn 'Umar Suhrawardī, trained in his uncle's *ribāṭ* in Baghdād, who deserves to be regarded as the actual founder of the order. On account of his close relationship with the 'Abbāsid caliph al-Nāṣir li-Dīn Allāh [*q.v.*], for whom Shihāb al-Dīn acted as a court theologian and special emissary, he obtained the privileged position of a *Shaykh al-shuyūkh* within the Ṣūfiyya of Baghdād. The caliph had a lodge built for Shihāb al-Dīn, the Ribāṭ al-Mustadjadd, and he designated him as a patron of his knightly *futuwwa*. Shihāb al-Dīn prepared the propagation of his order through an extensive correspondence. He visited Ṣūfī lodges and received many distinguished visitors, upon whom he conferred the *khirḳa*, including, e.g., the poet Sa'dī [*q.v.*] and the historian Ibn al-Nadjdjār [*q.v.*]. In Baghdād, Shihāb al-Dīn was succeeded by his son 'Imād al-Dīn Muḥammad Suhrawardī (d. 655/1257) as custodian of the Ribāṭ al-Ma'mūniyya (Ibn al-Fuwaṭī, *Ḥawādith*, 323). Other disciples, on Shihāb al-Dīn's orders, returned to their homelands or settled in new areas where they founded daughter lodges.

The spreading of Shihāb al-Dīn's *'Awārif al-ma'ārif*, used by him as a teaching manual, became the prime concern for his disciples. Both in the propagation of his *magnum opus* and in the dissemination of the order, Ṣūfīs of Shīrāz, in general, and the line of Nadjīb al-Dīn 'Alī b. Buzghush (d. 678/1280), in particular, seem to have played a leading rôle: The latter's son Ẓahīr al-Dīn 'Abd al-Raḥmān (d. 716/1216) translated the *'Awārif* into Persian, and a great-grandson of Ibn Buzghush wrote a commentary on his grandfather's translation. Apart from these renditions, the *'Awārif* were propagated in the Persian langnage through the compilations of Bākharzī and Maḥmud Kāshānī (d. 735/1334-5). The latter received the transmission of the *'Awārif* from two disciples of Ibn Buzghush, of whom 'Abd al-Ṣamad Naṭanzī may be mentioned here (Djāmī, *op. cit.*, 481; Gramlich, *Gaben*, 14; see

Bibl.). Naṭanzī left his mark as the master of ʿAbd al-Razzāḳ Kāshī (d. 736/1335), who is noted for the correspondence he had with ʿAlāʾ al-Dawla Simnānī [*q.v.*] in which he vindicated Ibn ʿArabī's [*q.v.*] philosophy of *waḥdat al-wudjūd* ("unity of being"; Djāmī, *op. cit.*, 483-91). Zayn al-Dīn Khʷāfī (d. 838/1435 at Harāt [*q.v.*]), initiated into the Suhrawardiyya order by Nūr al-Dīn Miṣrī, in Egypt, was equally linked with Shihāb al-Dīn through Naṭanzī. However, Khʷāfī established his own chain, the Zayniyya, which spread into the Ottoman Empire (Trimingham, *Sufi orders*, 78). Although Khʷāfī has originally been portrayed as orthodox, he came to be associated with the Ḥurūfiyya and Bektāshiyya ([*q.v.*]; H. Norris, *Mirʾāt al-ṭālibīn*, 59).

2. *The order in India.* In the Indian Subcontinent, the Suhrawardiyya has been one of the four major orders, besides the Čishtiyya, Ḳādiriyya—which has now widely overtaken the Suhrawardiyya in popularity—and the Naḳshbandiyya. The brotherhood was introduced to India from the beginning of the Dihlī Sultanate (13th-16th centuries) by three disciples of Shihāb al-Dīn, who each founded a regional branch: Ḥamīd al-Dīn Nāgawrī (d. 673/1274) in the area of Dihlī, Abu 'l-Ḳāsim Djalāl al-Dīn Tabrīzī (d. 641-2/1244) in Bangāla, and Bahāʾ al-Dīn Zakariyyāʾ Multānī (d. 661/1262 [*q.v.*]) in Multān. Bahāʾ al-Dīn, a man of Ḳuraysh descent who joined Shihāb al-Dīn in Baghdād after having studied in Bukhārā, was the most successful propagator of the order, and his line became its centre in India. Among the contemporaries of Shihāb al-Dīn, Muʿīn al-Dīn Čishtī [*q.v.*] of Sīstān also entered India. He settled in Adjmēr, where he founded the Čishtiyya order [*q.v.*]. The Čishtiyya used the *ʿAwārif* as their manual of instruction. The Shaṭṭāriyya order [*q.v.*], whose chain also links with the Suhrawardiyya, was introduced to India at the end of the 9th/15th century.

The continuous history of the order can be traced best through the successors, *khalīfas*, of Bahāʾ al-Dīn. Among his disciples, Sayyid Djalāl Bukhārī (d. 690/1291), called Djalāl Surkh, migrated from Bukhārā to Uččh [*q.v.*], where he founded the Djalālī branch of the order. Djalāl Surkh was the grandfather and namesake of Djalāl al-Dīn Bukhārī [*q.v.*], the so-called Makhdūm-i Djahāniyān (d. 785/1384). The Shīʿī dervish order of the Khāksār is almost certainly to be seen as a Persian development of this Djalālī-branch (Gramlich, *Derwischorden*, i, 71).

Bahāʾ al-Dīn's most famous disciple was the Ṣūfī and poet Fakhr al-Dīn Ibrāhīm ʿIrāḳī [*q.v.*], who originated from the area of Hamadān (Djāmī, *op. cit.*, 605-6). After a stay of 25 years in Multān with Bahāʾ al-Dīn, he was appointed one of his *khalīfas*; however, after Bahāʾ al-Dīn's death he left Multān. A hereditary principle became established within the line of Bahāʾ al-Dīn with the appointment of Ṣadr al-Dīn Muḥammad ʿĀrif (d. 684/1286) as his father's successor (Djāmī, 504).

Among Ṣadr al-Dīn's disciples, the most learned was Amīr Ḥusayn Ḥusaynī (d. after 720/1320; Rizvi, *History*, i, 206; see *Bibl.*) who exchanged letters with the mystic of Tabrīz, Maḥmūd Shabistarī (d. 720/1320; Djāmī, 605). The successor of Ṣadr al-Dīn, however, was his son Rukn al-Dīn Abu 'l-Fatḥ (d. 735/1334-5). The latter was succeeded, according to the hagiographers, by a nephew, according to Ibn Baṭṭūṭa (*Riḥla*, 475-7) by his grandson *shaykh* Hūd. Although the sultan decided the ensuing dispute in favour of Hūd, he had the *shaykh* executed as a result of accusations of embezzlement against Hūd. With this episode, the fortune of Bahāʾ al-Dīn's splendid *khānaḳāh* in Multān came to an end. The order thereafter started to flourish in the areas of Uččh, Gudjarāt, the Pandjāb, Kashmīr and in Dihlī.

In Uččh, Djalāl al-Dīn Bukhārī, "Makhdūm-i Djahāniyān" infused the *ṭarīḳa* with new life. Makhdūm was also initiated, by Čirāgh-i Dihlī [*q.v.*], into the Čishtiyya order. Despite Bahāʾ al-Dīn's insistence that his Ṣūfīs should join one order only, from the 8th/14th century, Indian Ṣūfīs often became affiliated with both the Čishtiyya and Suhrawardiyya orders. Makhdūm, noted for his puritanism, opposed religious customs followed by some Muslims which were specifically Indian; he also disapproved of invoking God by names in Hindi (Schimmel 33; see *Bibl.*). His brother and successor Ṣadr al-Dīn Rādjū (d. after 800/1400) earned the *shuhra* "Ḳattāl" on account of his religious militancy. The order of the Bukhārī Sayyids spread further through the sons and grandsons of Makhdūm and Sayyid Ḳattāl.

Whereas various disciples and descendants of the Makhdūm established themselves in the provincial kingdoms of Kalpī [*q.v.*] and also Gudjarāt, the centre in Dihlī was founded by *shaykh* Samāʿ al-Dīn (d. 901-2/1496), a second generation disciple of Rādjū Ḳattāl. Samāʿ al-Dīn is noted as an author who wrote under the influence of *waḥdat al-wudjūd* and ʿIrāḳī's *Lamaʿāt*. The leading figure among Samāʿ al-Dīn's disciples was Ḥāmid b. Djamālī Dihlawī (d. 942/1536 [*q.v.*]), a widely-known poet and great traveller. In Harāt, Djamālī had discussions with Djāmī [*q.v.*], whose belief that the *Lamaʿāt* were inspired through Ḳūnawī [see ṢADR AL-DĪN] he disputed.

The Indian Suhrawardiyya had the greatest impact, however, in Kashmīr [*q.v.*]. This was partly due to the support they received from migrant Ṣūfīs of the Kubrawiyya order. Rinchana, the king of Kashmīr and former Buddhist chief from Ladakh who embraced Islam in the 8th/14th century, is said to have been converted by Sayyid Sharaf al-Dīn [see BULBUL SHĀH in *Suppl.*], a disciple of one of Shihāb al-Dīn's *khalīfas* in Turkestan. In the 9th/15th century, various Suhrawardī *shaykhs*, mainly of the branch of the Makhdūm-i Djahāniyān, kept Kashmīrī Ṣūfism alive. There were clashes between Suhrawardīs and Shīʿīs in the 10th/16th century under the Čāk [*q.v.* in Suppl.] dynasty which patronised Shīʿism.

(a) Relations with the rulers. In the Sultanate of Dihlī, the Suhrawardiyya was an aristocratic order which justified the possession of wealth and enjoyed state patronage. Bahāʾ al-Dīn, like his master Shihāb al-Dīn, willingly cooperated with the government, trying to influence it in turn; Iltutmish, of the line of "Slave Kings", moved his troops against the governor of Uččh apparently under Bahāʾ al-Dīn's influence. Thereafter, the sultan conferred upon Bahāʾ al-Dīn the title of the *Shaykh al-Islām* for Sind and Pandjāb. Bahāʾ al-Dīn's successors also maintained close relations with the rulers. The sultans of Gudjarāt were devoted to the Suhrawardī *shaykhs*, and high government officials attached themselves to Ṣūfism under their influence. Samāʿ al-Dīn of Dihlī blessed the sultan Sikandar Lōdī during his coronation, and his disciple Djamālī accompanied the crown prince Humāyūn [*q.v.*] on his campaigns. Djamālī's son ʿAbd al-Raḥmān Gadāʾī assumed the powerful post of *Ṣadr al-ṣudūr* [see ṢADR. 5] under emperor Akbar [*q.v.*] and his *samāʿ* assemblies were attended by the emperor.

(b) Attitude to Hinduism. The Suhrawardīs supported the enforced conversion of Hindus. Djalāl al-Dīn Tabrīzī was active in converting Hindus and

Buddhists to Islam, which occasionally involved the destruction of a temple and its replacement by a *k̲h̲ānaḳāh*. The brotherhood demanded formal conversion to Islam as a pre-requisite to initiation in mysticism. In the main, however, it seems that the Suhrawardiyya only succeeded in converting Hindus of high caste (Rizvi, *op. cit.*, ii, 398).

(c) Some traits of Suhrawardī spirituality. The order played an important part in the preservation of the Prophetic tradition, on which their *s̲h̲ayk̲h̲s* wrote numerous works. Suhrawardī mysticism, orientated more towards classical Ṣūfī doctrine than to Ibn ʿArabī's philosophy, was fully orthodox. Relatively uninterested in austerities, the Suhrawardīs emphasised canonical prayer, *d̲h̲ikr* [*q.v.*] and fasting in Ramaḍān. Modifications of the form of *d̲h̲ikr* exercises as a result of encounters with Yogis may be observed for the Čis̲h̲tiyya, but not for the Suhrawardīs. The practice of prostration before the *s̲h̲ayk̲h̲* (*zamīn-būs*) adopted by the Čis̲h̲tiyya was rejected by the Suhrawardīs.

Regarding *samāʿ* [*q.v.*], the Suhrawardiyya were little inclined towards the appreciation of poetry or music. Already S̲h̲ihāb al-Dīn had taken a reserved stance against audition parties (*ʿAwārif*, chs. 22-5). S̲h̲ihāb al-Dīn also criticised (D̲j̲āmī, 589) Awḥad al-Dīn Kirmānī, a typical representative of the *s̲h̲āhid* theory, for his contemplation of beauty in sensible objects (Ritter, *op. cit.*, 473), which often formed part of *samāʿ* assemblies. Notwithstanding this, ʿIrāḳī, the poet and—like Kirmānī—advocate of *s̲h̲āhid-bāzī*, followed Bahāʾ al-Dīn as his spiritual preceptor. Under the inspiration of the *s̲h̲ayk̲h̲s* of the Čis̲h̲tiyya, some of Rukn al-Dīn's disciples propounded the licitness of *samāʿ*. The Suhrawardī *s̲h̲ayk̲h̲* Amīr Ḥusaynī viewed *samāʿ* as the exclusive domain of the spiritual élite—a notion which is echoed in D̲j̲āmī's story (602) about Bahāʾ al-Dīn's vindication of ʿIrāḳī against his disciples' reproaches. Thus, on the whole, the order did not succeed in enforcing a total rejection of *samāʿ*.

3. *Some modern developments.* While in recent times the Suhrawardiyya has largely disappeared from some Middle Eastern countries such as Syria, in ʿIrāḳ the order still continued to recruit adherents. The *s̲h̲ayk̲h̲s* of the contemporary Suhrawardiyya in ʿIrāḳ traditionally belong to the family of the Bayt Ṣāliḥ al-K̲h̲aṭīb. Some of them served as professors at the Madrasat S̲h̲ihāb al-Dīn Suhrawardī and as *k̲h̲aṭībs* at the mosque attached to it. One Suhrawardī *s̲h̲ayk̲h̲* mentioned in Muḥammad Ṣāliḥ Suhrawardī's *Lubb al-albāb* (Bag̲h̲dād 1933, ii, 463-5; cf. F. de Jong, *Les confréries mystiques*, 230) is said to have served as the *imām* of the army of the ʿIrāḳī government.

SŪḲ (a.), pl. *aswāḳ*, market.

1. In the traditional Arab world.
2. In the Muslim West.
3. In Cairo under the Mamlūks and Ottomans.
4. In Syria.
   (a) Damascus under the Ottomans.
   (b) Aleppo.
5. In ʿIrāḳ [see Suppl.].
6. In Persia.
7. In Ottoman Anatolia and the Balkans.
8. In Muslim India.

1. In the traditional Arab world.

Sūḳ, market, is a loanword from Aramaic *s̲h̲ūḳā* with the same meaning. Like the French term *marché* and the English *market*, the Arabic word *sūḳ* has acquired a double meaning: it denotes both the commercial exchange of goods or services and the place in which this exchange is normally conducted. Analysis of the *sūḳ* is thus of interest to the economic and social historian as well as to the archaeologist and the urban topographer. The substantial textual documentation which is available has as yet been analysed only very partially and the phenomenon of the market, fundamental to the understanding of mediaeval Arab culture, has not, to the present writers' knowledge, been subjected to a thorough and comprehensive conceptual study.

Since the beginnings of urban civilisation in Mesopotamia and in Syria, from the third millennium onwards, the Middle East had seen the development of commercial activities, local and long distance. On the contributions of the mercantile tradition to Islamic civilisation, the reader is referred to a perceptive and useful monograph by Maxime Rodinson which appears as a preface to P. Chalmeta's important work *El Señor del zoco* (Madrid 1973). For M. Rodinson, the Arabic *sūḳ* could be associated with an ancient Semitic term, the Akkadian *sūḳu*, from a root evoking tightness (if *sūḳu* < *ṣūḳu*) and, in early Hebrew texts, with the term *s̲h̲ūḳ*, denoting streets and squares and used to translate the Greek ἀγορά and the Latin *forum*. Intermediate Jewish sources between the 3rd and 6th-7th centuries A.D. refer to various functionaries supervising the market in the Talmudic era. The function of market inspector had been inaugurated in Mesopotamia, and the Greek term had passed into the Aramaic language of the Jews of Babylon and of Palestine where

the Jewish authorities appointed agoranomes entitled to impose their own prices on the market.

The prominent role played by the market and its physical centrality in the Hellenistic and Roman world induced the state to take a keen interest in its workings. Thus attention may be drawn to the appearance, in Athens and elsewhere, of colleges of agoranomes, entrusted with supervision of the maintenance and good order of the agora, but above all responsible for checking the regularity of the transactions conducted there. The function of agoranome seems to have disappeared from Greek institutions 300 years before the Arab conquest (Foster, *Agoranomos and muḥtasib*, in *JESHO*, xiii [1970], 128-44). However, if a solution based on chronological continuity is to be rejected, the *ʿāmil ʿalā al-sūḳ*, or *walī al-sūḳ*, or *ṣāḥib al-sūḳ*, who appeared from the outset of Islam, in the time of Muḥammad, may be associated with the agoranomes of Palmyra of the 3rd century, who had a more exalted municipal function than simple market-policing and whom a bilingual inscription also calls *rabb sūḳ*. While agoranomy disappeared after the 3rd century, market inspectors continued, however, to operate in the adjacent world of Arabia. Regarding the five centuries which followed the Muslim conquest, there was a dispute between Claude Cahen and Eliyahu Ashtor over the question of the permanence of urban institutions, including control of the markets, in the Arab Orient.

It is also important to recall the importance of commercial activity for pre-Islamic and Islamic civilisation. The socio-economic structures of pre-Islamic Arabia are still inadequately known and have given rise to divergent interpretations, but the importance accorded there to the transport and exchange of merchandise seems clear. According to Rodinson, several maritime *emporia* were in existence (Aden, ʿUmān, Ubulla), as well as temporary markets or fairs distributed throughout the year, *aswāḳ al-ʿArab*, although it is not known whether there was anything resembling a unified or regional organisation of such phenomena. M.A. Shaban followed Rodinson in writing: "It is impossible to think of Makka in terms other than trade; its only *raison d'être* was commerce" (*Islamic history*, Cambridge 1971, i, 3). However, Patricia Crone has recently disputed the excessive importance attributed to Mecca as regulator of trade between Yemen and Syria. Excavations in the Arabian Peninsula have revealed conurbations including a group of three linked buildings: sanctuary, seat of power and market (ʿAbd al-Raḥmān al-Ṭayyib al-Anṣārī, *Ḳaryat al-Fāw*, 1981). Muslim tradition holds that Mecca was inhabited and controlled by merchants when the Prophet Muḥammad received there the revelation of the Ḳurʾān; the latter contains allusions to the coming and going of caravans and to the fairs which were held twice a year, close to the city.

On numerous occasions, it is evident that concepts deployed in the Ḳurʾān—which was initially addressed to the population of Mecca, a town occupied essentially by traders—assumed the existence of a "market" economy, especially in references to the relations between God and human beings, established in terms "of reckonings, of just and precise equivalences, of selling and buying" (Chalmeta, *El Señor del zoco*, 53); thus God has "bought from the believers their selves and their goods in exchange for Paradise" (Ḳurʾān, IX, 112). The Prophet himself disconcerted the Ḳurays̲h̲ with his preaching in markets (XXV, 8). After the seizure of Mecca, Muḥammad is said to have appointed in this place Saʿīd b. Saʿīd b. al-ʿĀṣ to serve as *ʿāmil ʿalā al-sūḳ*. There were also numerous *sūḳ*s in Medina when the Prophet established himself there; their style of organisation remains entirely unknown, but the names of some of them have been preserved, in particular those belonging to the Banū Ḳaynuḳāʿ [*q.v.*]. In the time of Muḥammad, women exercised the function of *ʿāmila ʿalā al-sūḳ*, possibly because the majority of shoppers were also women. An incident in the life of the Prophet involves the arrival of Banū Sulaym nomads from the neighbourhood, bringing butter and livestock for trade. It is known furthermore that Muḥammad designated an open space as a *sūḳ*, forbade any building work on this site, and even had tents erected there.

The obligations imposed by God on his creatures, as well as the relations which God requires human beings to uphold among themselves—marriage, repudiation, inheritance, exchange of goods or services, recognition of the power of a political leader—are presented according to a general pattern comparable to that of commercial contracts, clearly committing the two parties, according to strictly codified formulae. The mechanisms of the "market", taken in the broadest sense of the term, thus play a fundamental role. "Ideology attributes to the market a supreme dominance over life on this earth," Rodinson writes, quoting al-G̲h̲azālī, who compares a spiritual with a material market: "Let the *sūḳ* of this world below do no injury to the *sūḳ* of the Hereafter, and the *sūḳ*s of the Hereafter are the mosques". This enables him to conclude: "The Muslim economy is essentially a market economy. It celebrates the triumph of the market, extending for the first time over a substantial area of the earth's surface". The Arabs created the first "common market" covering an enormous space, stretching from the shores of the Atlantic to the frontiers of China, from the estuaries of the Volga to the Sahara, constructed on a unity which was initially political, then cultural, creating an institutional identity from one end to the other of the *Dār al-Islām*.

It is reasonable to speculate on the extent to which the pro-commercial ideology of the new conquerors directly influenced their urban policy in captured or newly-established towns. Chalmeta (*Señor del zoco*, 141 ff.) stresses the importance of the building of *sūḳ*s at the orders of His̲h̲ām b. ʿAbd al-Malik: according to him, it was this period which saw clear evolution towards what is now recognisable as the *sūḳ*, and its ultimate transformation into the constructed *sūḳ*, an enclosure with gates, with permanent shops (*ḥānūt*), a base for the levying of taxes. H. Kennedy (*The impact of Muslim rule on the pattern of rural settlement in Syria*, in *La Syrie de Byzance à l'Islam*, Damascus 1992, 296-7) relies on the results of the excavation of a presumed Umayyad *sūḳ* at Palmyra in proposing the notion that the steppe region became, with the Arab conquest, a place of revived commercial activity after a late Byzantine phase of stagnation.

The desert was henceforward an active space, bordered by points which could be animated, among other activities, by commerce. An obvious point of reference here is the work of O. Grabar, *City in the desert*, Harvard 1978. The article by Roll and Ayalon, *The market street at Apollonia-Arsuf*, in *BASOR*, (1987), 61-76 describes a town of regional importance, the only harbour serving a quite extensive hinterland, where the elements of a *sūḳ* have been established: a narrow commercial street 2.5 m wide by 65 m in length, within the fortified town, which was apparently in use from the late 7th/early 8th century, where Umayyad coins have been found. In sum, however,

in the absence of publications in sufficient number on the Umayyad period and of firmly-established chronologies, questions remain unanswered, especially for major cities such as Aleppo and Damascus where the transformation of the large central avenues into a *sūḳ* follows a chronology which, since the work of Sauvaget (*Esquisse d'une histoire de la ville de Damas*, in *REI*, viii [1934]) is still far from clarified (on the functioning of *sūḳs* in towns created by the Arabs, see A.J. Naji and Y. Ali, *The Suqs of Basrah. Commercial organisation and activity in medieval Islamic society*, in *JESHO*, xxiv [1981], 298-309).

These urban transformations have an undeniable religious, social and judicial dimension. In the Arabo-Muslim world of the first five centuries, one of the most respected functions was that of the merchant/disseminator of *ḥadīth*, who enabled all the inhabitants of this region to acquire the same access both to the commodities of material culture and to the fundamental elements of religious culture. In mediaeval Arabic literature, religious as well as secular, the travelling merchant plays a predominant role: he transports the goods which he buys or sells from one market to another, between the time of the dawn prayer and the time of the midday prayer. Similarly, he memorises or diffuses prophetic traditions, from one mosque to another, between the afternoon prayer and the final prayer. The *ḥisba* [*q.v.*], a branch of Islamic legislation precisely defining the functions of the *muḥtasib*, a civilian official appointed by the *ḳāḍī* to uphold Islamic order in the town and, in particular, to supervise the markets, is well understood, since numerous texts concerning it, often very concrete and practical, have been preserved. As will be seen especially with regard to the towns of the Muslim West, these documents make it possible to follow the daily functioning of the *sūḳ*.

Whether it was a case of ancient cities captured by the Arabs or newly-founded ones, all maintained certain similar, essential functions. The pattern of organisation of these large urban areas is well known: in the centre of the city, the *djāmiʿ*-mosque and the governor's palace, *dār al-imāra*, constituted a local outpost of caliphal authority, communal prayer, upholding of Muslim order and levying of fiscal revenues. These buildings/institutions symbolised the town, a space for mediation between Arab tribes belonging to traditionally mutually hostile confederations, or between Arab Muslims and converted *mawālī*, or even between the various officially recognised religious communities, Muslims and *dhimmīs*. Immediately adjacent to the centre, along thoroughfares radiating from this nucleus and delimiting homogeneous areas, the *sūḳs* supplied the third function of these cities, being the provider of wealth, of the exchange of goods and services. These *sūḳs* comprised a series of broadly similar booths established on a segment of the road, deployed on one or on both sides of the latter according to the type of commercial activity and of product. These booths, of little depth, were fronted on the street by a bench: they could be overlooked by residential areas or separated by a rearward wall from such zones. The latter could accommodate the family of the trader or the artisan, but in general there was no access between them and the shop and they were occupied by families unrelated to the user of the premises.

In general, each type of commerce was concentrated on both sides of one of the radial routes linking the central square to each of the gates, a sector to which it gave its name. Traditionally, close to the Great Mosque, in the heart of the city, were located the sellers of manuscripts and the copyists, *kutubī*; suppliers of perfumes, *ʿaṭṭār*, and of fine leather, slippers and furs; and trades associated with precious metals; changers, *ṣarrāf*, goldsmiths, jewellers, *ṣā'igh*, *djawharī*, trades often practised by Christian or Jewish artisans. Large central markets sold quality fabrics and items of clothing. Closer to the gates were those practising noisier crafts: carpenters, joiners and manufacturers of copper or brass objects, the latter often being Jews or Christians. Close by the gates of the citadel were saddlers and the sellers of weapons, such as swords, sabres, lances, bows and quivers. In the section of the town easily accessible to Bedouins, there were sellers of felt or cloth for tents, ropes, fur-lined capes, utensils and all other essentials for living in the steppelands. Located outside the city were those businesses which required abundant space or easy access to running water, or those which were dirty and malodorous: fullers, dyers, tanners, potters, wholesalers of fruit and vegetables, *sūḳ al-biṭṭīkh*, traders in sheep, horses, donkeys, mules, camels (on the variety of craft and commercial activities in the Middle Ages, see the list compiled by Maya Shatzmiller, *Labour in the medieval Islamic world*, Leiden 1994, 255-323).

Besides these linear *sūḳs*, there existed agglomerations located in the enclosed structures of a continuous wall, breached by an easily-controlled monumental gate, structures of one or two storeys, surrounding a space open to the sky. Often of considerable size these buildings were denoted by various terms: *ḳaysāriyya* [*q.v.*] (imperial establishment for the protection of stages on major commercial routes), *funduḳ* [*q.v.*] (hostel, *fondaco*, place for the lodging of visitors to the town), *khān* [*q.v.*], *wakāla* (meeting-place for commercial agents), *rabʿ* [*q.v.*] (facilities for temporary accommodation concentrated in a single building), *ḥawsh* (enclosed area, urban or suburban, of rural aspect, a yard of beaten earth, where cattle or poor immigrants could be accommodated) and when situated away from towns, isolated on commercial routes, *karawānsarāy* (from the Persian "caravan" and "palace", caravanserai).

Large in scale, supplied with lodgings, stables, sometimes with a mosque and a public bath, and comprising substantial warehouses, *makhzan*, *ḥāṣil*, the *ḳaysāriyyas* could maintain a high level of bulk trading, storage and processing by means of the workshops often located on the site. Situated either outside or within the city, close to a gate or linked to it by a well-proportioned street, these massive structures could be easily reached by heavily-laden dromedaries. The merchandise, resold semi-wholesale or retail, was distributed, outside these enclosed markets, through the narrow streets of the city, transported by donkeys or porters. These enclosures, set apart for a series of well-defined and restricted commercial or industrial activities, provided governments with an easy framework for operating fiscal levies [see MAKS], and the single gate, which could be locked, made it possible during the night to segregate transients from resident citizens. They were in fact the forerunners of customs offices. In Fusṭāṭ, from the Fāṭimid period onward, sales outlets specialising in the commerce of cheese, carpets, eggs or jewellery were leased on behalf of such a *dīwān* supplying the financial needs of Kutāmī Berber soldiers or other social groups (al-Musabbiḥī, *Akhbār Miṣr, al-ḳism al-ta'rīkhī*, Cairo 1978, index, 134, s.v. *dār*; Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, Damascus 1987, i, 209, n. 1, bibl. of Dār Mānik; idem, *Le fonctionnement des dīwāns financiers*

d'après al-Musabbiḥī, in *AI*, xxvi [1992], 47-61).

Foodstuffs harvested on the land adjacent to the towns, often processed in urban or suburban workshops, were introduced into networks of exchange covering a vast expanse between the Atlantic and Central Asia, while merchandise originating from other horizons was offered to local consumers. The *sūḳ*, like the *ḳaysāriyya*, was thus the indispensable link between the city, its neighbouring territory and the *Dār al-Islām*. What is not properly understood is the mode of interaction between these *sūḳ*s and other urban commercial institutions, and those market sites which were temporary, mostly rural and located outside the town (see, in this connection, the typology of Chalmeta, *El Señor del zoco*, 71-198). Mediaeval geographers often refer to the rural markets of the Maghrib; thus al-Idrīsī, describing the still very fragmentary structure of Meknès in the period prior to his own time, indicates that at a certain distance from the nuclei of population, in the process of transforming themselves into a town, there existed an ancient rural market site, still functioning, called *al-sūḳ al-ḳadīma*, "a flourishing market to which people come from near and far every Thursday and where all the tribes of the Banū Miknās are gathered". Still in the Maghrib, a hypothesis of "non-evolution" of the places of concentration of rural products into towns has been put forward by A. Adam, *L'Agadir berbère: une ville manquée?*, in *ROMM*, xxvi (2nd quarter 1978), 5-12.

Whatever may have been the importance of places of rural exchange (and it must again be stressed that very little is known on the subject), the Muslim travellers of the Middle Ages who describe the towns of the *Dār al-Islām* define them principally by the presence of a great mosque and of markets. In the eyes of the peasantry of the regions surrounding the town, it is also, apparently, the market which constitutes its most specific element. Thus—outside the Arab domain—P. Centlivres, *Un bazar de l'Asie centrale* (Wiesbaden 1972), notes that the country folk living in the villages situated in the environs of Tāshḳurghān, in Afghānistān, refer to the town itself, in its entirety, by the term *bāzār*, synonym of *sūḳ*. In certain towns of the Maghrib, merchants are forbidden to conclude, except within the confines of the market and during its times of functioning, any transaction with peasants from the neighbourhood of the town; this is for the economic protection of the producer against the malice of a buyer operating outside the normal framework of competition (Chalmeta, *El Señor del zoco*, 83-6, 123, 212-13).

According to their range of activity or the circles in which they operate, it is possible to distinguish between different types of merchants and of "markets": Chalmeta places in totally different categories the shopkeeper (*ḥawāntī*) and the major trader (*tādjir*), corresponding to two quite distinct economic circuits. In the *K. al-Ishāra ilā maḥāsin al-tidjāra*, the Fāṭimid-period author al-Dimashḳī identifies the *khazzān*, the sedentary merchant who, by means of stocking or destocking, plays on variations of price as influenced by space, time and the quantities of the commodities traded; the *rakkāḍ*, the itinerant trader who owes his profits to his knowledge of the differences in purchase and sale prices according to the places where the transactions take place; and the *mudjahhiz*, the purveyor, who supplies travellers with all that they need (Y. Essid, *A critique of the origins of Islamic thought*, Leiden 1995, 220-8). Thus I. Lapidus stresses, in Mamlūk Egypt, the independence of the local and long-distance commercial circuits, the latter continuing to prosper while the former declined. At the risk of over-simplification, it should be possible first to define the "shopkeeper", dealing in local products, living in a universe of limited intellectual and economic horizons. In ʿAbbāsid Baghdād, this class of shopkeepers, with its thoroughly practical daily concerns, seems often to have been inspired by Ḥanbalism. The larger traders, sedentary wholesalers or travelling merchants, capable of more complex economic calculations since they need to take into account the risks of long-distance transport were attracted by Shāfiʿism, Ashʿarism, or eventually Ismāʿīlism in the East, Mālikism or Khāridjism in the West. Major financiers close to the centres of power, juggling with substantial abstract sums, tended rather towards Ḥanafism or Twelver Shīʿism or even Ismāʿīlism.

2. In the Muslim West.

In the Occident as well, the geographers refer to the countless *sūḳ*s which constituted the commercial heart of Muslim towns in all western regions. The diversity of these *sūḳ*s is well illustrated, for example, by Ibn Ḥawḳal, in the description which he provides of the markets of Palermo in the 4th/10th century, for which he lists some twenty-five different specialities (traders in oil, corn, fish, meat and vegetables, smiths, apothecaries, money-changers, drysalters, cobblers, tanners, joiners, potters, embroiderers, polishers, etc.). Regarding the late Middle Ages, the index of Brunschvig's survey of Ḥafṣid Tunisia (*La Berbérie orientale sous les Ḥafṣides, des origines à la fin du XV^e^ siècle*, 2 vols., Paris 1940-1947) names some fifty different *sūḳ*s. It would seem to be appropriate to seek out, through detailed study of a town such as Fez on the eve of the colonial period, the still vibrant modern echo of these ancient structures (see Le Tourneau's classic work on *Fès avant le Protectorat*, Casablanca 1949). It is evident that cities of the western Mediterranean linked to the Muslim world were remodelled according to patterns emanating from the East, or were constructed according to the same principles in the case of new foundations.

As regards the Maghrib, it is however somewhat difficult to glean precise information on the topographical and economic organisation of *sūḳ*s in the Middle Ages. It is known that at al-Ḳayrawān, before the Fāṭimids transferred commercial activities to Ṣabra Manṣūriyya, the sector of the *sūḳ*s extended along the Simāṭ, a main street which, traversing the whole city from gate to gate, skirting the Great Mosque and fringed by two rows of shops, served as the city's principal thoroughfare. In 275/888-9, at the time of the "insurrection of the dirhams", following a monetary reform ordered by the Aghlabid Ibrāhīm II, the traders closed their shops and rose in revolt. Calm having been restored after a skirmish between the local militia and the Ḳayrawānīs, the *amīr* sent a vizier to parade along this *simāṭ* as a means of appeasing the inhabitants (al-Bakrī, 25-6/59; Ibn ʿIdhārī, *al-Bayān al-Mughrib*, ed. Colin/Lévi-Provençal and tr. Fagnan, i, 114/158). Also for the 3rd/9th century in Ifrīḳiyya, a very interesting source exists, the *Aḥkām al-sūḳ* of Yaḥyā b. ʿUmar, containing a wealth of detail regarding the daily life of the *sūḳ* (ed. Makkī in *RIEI*, iv [1956], 59-152 and tr. García Gómez, *Unas ordenanzas del zoco del siglo IX*, in *al-Andalus*, xii [1957], 253-316). But besides this compilation of judicial consultations relating to the *sūḳ*, Maghribī literature specifically concerning markets is rather meagre, and it would be necessary, for a clear understanding of

the market economy in the mediaeval Maghrib, to gather together a very dispersed and often allusive stock of documentation, since the sources currently available do not seem to allocate much importance to the "market".

In his synthesis of the politico-administrative institutions of the mediaeval Maghrib, Hopkins (*Medieval Muslim government in Barbary*, London 1958, 135-6) supplies very little information on the administration of the market. The paucity of references to the specific jurisdiction of the *ḥisba* even leads him to believe that it was in fact the *ḳāḍī* who directly assumed the function of *muḥtasib*. Sometimes, the latter would even have been the personal prerogative of the sovereign himself: twice a month, the Almohad caliph Abū Yaʿḳūb Yūsuf is supposed to have called together the *umanāʾ* (s. *amīn*) responsible for each of the professions to report to him on the state of the markets. The sources do, however, mention at about the same time a *muḥtasib* of Marrakesh. Atallāh Dhina, in his comprehensive survey of state institutions of the Muslim West in the 13th-15th centuries, supplies no additional information.

In his study of Zīrid Ifrīḳiya, Idris makes virtually no mention of magistrates being in charge of a single market, which in his opinion was the responsibility of a kind of secondary judge, distinct from the *ḳāḍī* and called *ḥākim*, probably exercising supervision over the *umanāʾ* responsible for the different professions, or a *nāẓir al-sūḳ*, mentioned in a document of 430/1038 (*Berbérie orientale sous les Zīrides*, 2 vols., Paris 1962, 549-51). Besides a fairly thorough nomenclature (names of *sūḳ*s, straightforward mention of the *sūḳ*s of such and such a locality), *sūḳ*s, as a concrete reality, appear hardly at all in Brunschvig's survey of Ḥafṣid Tunisia, although there is mention there of the creation of markets by sovereigns (30, 345), and details of the revenues levied by the state on the different markets in the mid-8th/14th century (239-40). But under the Ḥafṣids, the role of the *muḥtasib*, if indeed it existed, had little importance (149-50). Regarding the late Middle Ages, the *Risāla fi ʾl-ḥisba* of al-Djārsifī, which dates from *ca.* 700/1300, nevertheless gives an interesting insight into the life of the urban proletariat of the *sūḳ*s in the towns of the western Maghrib, if, as Chalmeta believes, the work was indeed written in Fez or in Tlemcen and not in the Naṣrid kingdom as has also been suggested.

The situation in al-Andalus is quite different from that of the Maghrib. There the *sūḳ*s are in fact one of the better understood aspects of the economic history of the country, illuminated as they are by numerous texts of *ḥisba*. This type of source appears to be an Andalusian speciality, taking account of the fact that Yaḥyā b. ʿUmar, cited above, was of Andalusian origin, considering also the doubts which remain over the geographical localisation of the work of al-Djārsifī. Information regarding Cordova is, however, not perhaps quite as precise, or abundant (in particular from a topographical and institutional point of view) as could be hoped. The description of the *sūḳ*s of the caliphal capital supplied by Lévi-Provençal (*Histoire de l'Espagne musulmane*, iii, 1967, 299-305) is very general and is based principally on his knowledge of the "traditional city" in western (Maghribī) Islam, and on data gleaned from manuals of *ḥisba* of which only one, the *Risāla* of Ibn ʿAbd al-Raʾūf, dates from the caliphal period (ed. Lévi-Provençal, *Trois traités hispaniques de ḥisba*, Cairo 1955; tr. R. Arié in *Hespéris-Tamuda*, i [1960], 5-38). A useful point emerging from this survey is the indication that the corporative system, which is thought to have operated in towns of the ʿAbbāsid East, did not exist in al-Andalus: there were no professional "corporations" as such, only *amīn*s or *ʿarīf*s recognised by the authorities and serving as responsible intermediaries between them and each profession (302). Chalmeta's fundamental work supplies much more abundant information.

Besides the information, perhaps rather theoretical, which may be drawn from it regarding the jurisdiction of the *ṣāḥib al-sūḳ/muḥtasib* of caliphal Cordova (relating to the supervision of prayer, marriages, etc.), the *Risāla fī adab al-ḥisba* by Ibn ʿAbd al-Raʾūf provides some interesting details concerning the regulation of the *sūḳ*s of Cordova in the 4th/10th century, weights and measures and the types of fraud likely to be committed by artisans and merchants. But the two most important texts for the study of the *sūḳ* in al-Andalus are: the *Risāla fi ʾl-ḳaḍāʾ wa ʾl-ḥisba* by Ibn ʿAbdūn, which contains a wealth of detail regarding control of the market of Seville *ca.* 1100 A.D. (published by Lévi-Provençal in the afore-mentioned *Trois traités* and translated by him in *Séville musulmane au début du XII^e siècle*, Paris 1947), and the *Kitāb fī adab al-ḥisba* by al-Saḳaṭī, which supplies similar information regarding Malaga of about a century later (ed. G.S. Colin and Lévi-Provençal, *Un manuel hispanique de ḥisba, traité d'Abū ʿAbd Allāh Muḥammad b. Abī Muḥammad as-Saḳaṭī de Malaga*, 1931; tr. P. Chalmeta in *Al-Andalus*, xxxii [1967], 125-62, 365-97, and xxxiii [1968], 143-95, 367-434). All of these texts, which cover norms of activity for those responsible for the market, the regulations which they are expected to apply and safeguards against the more blatant forms of fraud, are more concerned with the control of professions and the policing of the market, thus its functioning and practical reality, than with the broader function of the *ḥisba*.

This seems to be due to the specifics of this control of the market in al-Andalus, where the Umayyad tradition seems to have preserved, better than was the case in the ʿAbbāsid East, a post for the policing of commercial activities, the one responsible retaining the title of *walī al-sūḳ* or *ṣāḥib al-sūḳ*. There is no doubt of the existence of a particular magistrate entrusted with the *wilāyat al-sūḳ*, distinct from the *wilāyat al-madīna* since the time of ʿAbd al-Raḥman II (206-38/822-52). Information is available concerning numerous jurists who exercised this function, which was closely involved with the practical regulation of economic life, and constituted one of the echelons of a kind of *cursus honorum* of magistratures and senior official posts (Ibn ʿAbd al-Raʾūf, for example, seems to have been successively *ṣāḥib al-sūḳ*, *wālī al-madīna*, then *wazīr*). For P. Chalmeta, confusion with the *ḥisba* was a late and rather deliberate development in al-Andalus, and among the populace, the functionary entrusted with this role was still seen primarily as "controller of the market". The later treatise, that of al-Saḳaṭī, is also the more precise and more vivid in regard to the ingenuity of fraudulent practices, the composition and manufacture of products: it provides an exceptionally clear insight into the daily life of a *sūḳ* which seems principally devoted to the promotion of a multiplicity of small and highly specialised businesses.

The Andalusian treatises often paint a detailed and colourful picture of a world of impecunious small tradesmen and rogues, seeming to exist on the very edge of survival. They have little to say of higher-level commercial activities, and are almost silent on the subject of costly merchandise (where luxury products are mentioned, it is their manufacture which is

described, rather than their marketing: thus for example the brocades and silk fabrics cited by Ibn ʿAbd al-Raʾūf, p. 353 of R. Arié's translation). Chalmeta draws a firm distinction between the closed world of small artisans and merchants of the *sūḳ* as such, defined by him as *ḥawāntī*, and the much more open one of the major traders, *tudjdjār*, who were not, in his opinion, subject to the jurisdiction of the *ṣāḥib al-sūḳ*. He stresses the separation of the two commercial circuits, local and long distance, which in his view had very little in the way of coordination or interaction with each other, and even developed in divergent directions. In her study of commerce—and particularly large-scale commerce—in al-Andalus, O.R. Constable, while slightly modifying the notion of the non-intervention of the *ṣāḥib al-sūḳ* in long distance commerce (in areas such as the supervision of vessels and of ports), agrees that texts dealing with control of the Andalusian *sūḳ* leave aside almost entirely precious products, major commerce and major traders. She believes that others were entrusted with this charge, but concedes that the sources say virtually nothing on the subject (*Trade and traders in Muslim Spain*, Cambridge 1994). It would probably be necessary to distinguish between different types of town. For his part, H. Ferhat provides a picture of Ceuta, a town which could be considered as representing Andalusian civilisation, where, in the 13th-14th centuries, "all the in habitants were merchants, settlers, traders and mariners" (*Sabta des origines au XIV[e] siècle*, Rabat 1993, 308 and *passim*, in particular the whole of the very interesting chapter on commerce, 305-45).

It would be helpful to have a better knowledge of the precise geography of the places, in the city, where commercial activities were practised. The *sūḳ* in the strict sense, the *ḳaysāriyyas* (article by L. Torres Balbas on the *Alcaicerías* in *Al-Andalus*, xiv [1949], 431-55; detailed description of a surviving edifice, the current Corral del Carbón of Granada), *funduḳs*, open markets, certainly also played an important role, without counting the extramural and rural markets, which are often evoked but of which virtually nothing is known (cf. for example Brunschvig, ii, 235; Chalmeta, 75-102). A systematic analysis of texts of all kinds would perhaps facilitate a more accurate identification of the places where different types of commercial transaction were concluded. A passage from the *Tashawwuf* of al-Tādilī (singled out as representing a somewhat exceptional case by H. Ferhat, *Sabta*, 310) refers for example to a purchase of corn made some time in the mid-12th century at Azemmour, by an Andalusian merchant who intended to export it to Malaga; the deal was struck in the port and not in the *sūḳ* (ed. A. Tawfīḳ, 1404/1984, 190).

Reference has been made above to a list of the revenues of different sales locations in Tunis in the 14th century cited by Brunschvig: it emphasises the meagre revenue of *sūḳ*s as such in comparison with the receipts earned by markets in public places and by *funduḳ*s. A survey which is currently in progress of collections of *fatwā*s of the Muslim West will perhaps facilitate a better understanding of the organisation of the "market" in its entirety (V. Lagardère). A detailed study of the traffic in slaves at Cordova has been conducted by M. ʿAbd al-Wahhāb Khallāf in his *Ḳurṭuba al-Islāmiyya*, Tunis 1984, 113 ff., on the basis of the *fatwā*s of Ibn Sahl. But a more precise analysis of commercial activities as a whole and of the *sūḳ* as a physical commercial site often remains unattainable, in the absence of effective archives. Reference may be made for example to a judicial review conducted by a *wazīr ṣāḥib al-aḥkām wa 'l-sūḳ* of Cordova who, in 458/1066, intervened in a transaction involving a company consisting of two brothers, one based in Cordova and the other in Fez, who were in dispute with a third party to whom they had forwarded a number of dīnārs as payment for the manufacture on their behalf of ten pieces of silk, apparently for export (V. Lagardère, *Histoire et société en occident musulman au Moyen Age. Analyse du Miʿyār d'al-Wanšarīsī*, Madrid 1995, 355). This would seem to contradict the notion expressed above that long-distance trade was immune from the jurisdiction of the *ṣāḥib al-sūḳ*, but this is only one particular case among many others which should be cited.

3. In Cairo under the Mamlūks and Ottomans.

The installation of political and military power in the Citadel of Cairo, effected by Ṣalāḥ al-Dīn (Saladin), definitively opened up the Fāṭimid foundation of al-Ḳāhira [*q.v.*] to indigenous settlement and to economic activities which the privileged status of the city had not, however, greatly hindered: specialised markets are mentioned there from 364/975 onward, and al-Maḳrīzī has compiled a list, already long, of commercial centres dating back to the Fāṭimid period. But with the Ayyūbids the trend became more pronounced: the Andalusian traveller Ibn Saʿīd, who resided in Cairo between 638/1241 and 646/1249, then between 658/1260 and 675/1277, describes the stalls which invaded the square known as Between-the-two-palaces, *Bayn al-ḳaṣrayn*, robbing it of the dignity which it owed to the vision of the sultans who constructed it. The gradual decline of Fusṭāṭ [*q.v.*] contributed to this evolution.

It was in the Mamlūk period that the market quarter experienced the expansion which is described by the *Khiṭaṭ* of al-Maḳrīzī, with their list of *sūḳ*s and of caravanserais and the precise localisation which they make possible. Although this census is probably not exhaustive, and although it is located in a period of relative decline in Cairo, it may be considered to give a reasonably accurate impression of what the market sector used to be under the Mamlūks. The area devoted to economic activities extended on both sides of the great Fāṭimid avenue, the Ḳaṣaba, between Bāb al-Futūḥ and Bāb Zuwayla. In a space of some forty hectares, 48 markets were concentrated (out of the 87 located by al-Maḳrīzī in Cairo) and 44 caravanserais (out of a total of 58). This was the site for the most important mercantile activities of Cairo. Other specialised markets were located alongside several major roads leading towards the suburbs, while elsewhere markets tended to be non-specialised ("small markets", *suwayḳa*) supplying products required for daily consumption.

The markets, *sūḳ*s, were open structures, located along roads or at road intersections, the conglomeration of shops generally having no architectural distinction. In these markets, professional specialisation was the rule, each activity occupying a fixed sector of the city, as is well indicated by al-Maḳrīzī's description. Although the terms qualifying them are quite variable (al-Maḳrīzī uses, in different cases, the words *funduḳ*, *ḳaysāriyya*, *khān* and *wakāla*), the caravanserais served similar functions (major commerce, wholesale trade and accommodation for merchants) and maintained a fairly constant architectural structure. These square or rectangular buildings opened on the street by means of a single, covered, monumental gateway;

their central courtyard, open to the sky, gave access to shops on ground-level, above which were accommodation facilities for traders. They were sometimes surmounted by a *rab*ʿ [*q.v.*], a building available for rent, comprising a variable number of apartments. Such is the appearance of the few specimens which have survived, from what is admittedly a rather late period: two *wakālas* constructed by Ḳāʾit Bāy in the centre of Cairo (881/1477, class. no. 75) and near the Bāb al-Naṣr (885/1480, no. 9), al-G͟hūrī's *wakāla* (909/1504, no. 64), monuments of remarkable architectural quality, considering their utilitarian function.

The district of markets and caravanserais which occupied the centre of Cairo reflected the evolution of the city as a whole during the Mamlūk era, with a phase of expansion and prosperity in the first half of the 9th/15th century, a period of decline between 748/1348 and 802/1400, and finally a period of restoration under the reigns of the sultans Barsbāy, Ḳāʾit Bāy, and Ḳānṣūh al-G͟hūrī in particular. To the last-mentioned sovereign is owed the construction of the K͟hān al-K͟halīlī (917/1511), the design of which evokes the Ottoman *bedesten*: this major commercial centre was furthermore intended for the Turkish merchants whose swelling numbers in Cairo were like a presage of the Ottoman conquest. The increasing importance of the Mediterranean in the life of the Mamlūk empire was also reflected by the decline of Old Cairo and the expansion of Būlāḳ [*q.v.*], which had become Cairo's principal outer harbour.

The Ottoman period (923-1213/1517-1798) was marked by an overall expansion of the city of Cairo, the population of which increased from 150,000-200,000 inhabitants, in 1517, to 250,000 in 1798; no doubt the numbers were higher still *ca.* 1750, when the town was at its zenith. This development is explained by the economic progress which led to the integration into the Ottoman empire of Egypt and of other Arab provinces: Aleppo evolved in much the same way as Cairo. On the other hand, Egypt continued to be an active centre of oriental commerce, in particular with the growth of the trade in coffee, which reached its highest point of prosperity between 1650 and 1750.

The economic dynamism of Cairo was illustrated by a remarkable extension of the central business area, on both sides of the Ḳaṣaba, to cover an area which may be estimated at some sixty hectares. In this region were included 57 markets (out of a total of 144) and 228 caravanserais (out of a total of 348), figures which give an impression of the development of business in Cairo since the Mamlūk period. The principal centres were the K͟hān al-K͟halīlī, the Bunduḳāniyyīn, the G͟hūriyya and the region of al-Azhar, with important extensions in the region of the D͟jamāliyya (trade with Palestine and Syria) and of Amīr al-D͟juyūs͟h. This was the zone dominated by the trade in coffee (no fewer than 62 *wakālas*) and in fabrics. The expansion of the city had led to the establishment of secondary nuclei of commercial activity, situated closer to the outskirts of the city. The most important were those of Bāb al-S͟haʿriyya (8 markets and 14 caravanserais), of Bāb Zuwayla (15 and 16 respectively), of Sūḳ al-Silāḥ-Rumayla (11 and 17), and of Ibn Ṭūlūn (9 and 14). The remarkable prosperity of Būlāḳ, in particular in the 10th/16th century, testifies to the importance of commercial connections within the empire; 65 caravanserais are cited there in 1798.

Commercial structures had undergone few changes since the Mamlūk period. Markets, *sūḳ*, were normally groups of shops, *dukkān*, *ḥānūt*, of such simple structure and low cost that they could be constructed in large numbers, often in the framework of pious foundations, *waḳf*. But Cairo has preserved an example of a market of architectural quality, the "Riḍwān *ḳaṣaba*", built by the *amīr* Riḍwān Bāy *ca.* 1640, to the south of Bāb Zuwayla: this covered market, which extends over some 50 m, comprises a double row of shops, a *rab*ʿ and a *wakāla* (class. nos. 406, 408). The caravanserais, henceforward known as *wakāla* (the term *k͟hān* being employed only in a small number of cases), had retained the pattern of their Mamlūk models: warehouses, *ḥāṣil*, and tiered accommodation, *ṭabaḳa*, ranged around a courtyard. But although their price could be exorbitant (a million *paras*), these were purely functional buildings with decoration reduced to the minimum: a monumental doorway and windows, *mas͟hrabiyya*, projecting from exterior and interior façades. The D͟hu 'l-Fiḳār Katk͟hudā *wakāla* (1084/1673, no. 19) constitutes the relatively rare example of a monumental structure designed horizontally (covering an area of 2,625 m^2), perhaps as a result of Syrian influences. The Bazarʿa *wakāla* (end of the 11th/17th century, no. 398) is a monument of very traditional vertical structure (area: 1,125 m^2), surmounted by a *rab*ʿ. The largest caravanserais were built at Būlāḳ, in the 10th/16th century: the Ḥasan Pas͟ha *wakāla* (7,560 m^2) and K͟harnūb *wakāla* (3,840 m^2). These exceptional dimensions are accounted for by the dynamism of this outer harbour and by the wealth of the governors of Cairo who often financed such buildings at this time.

The impressive scale of this economic investment reflects the activity of the city of Cairo, whose decline, due to internal causes (political crisis after 1186/1773, famines and devastating epidemics after 1194/1780) and external factors (effects of western commercial competition, perceptible from 1750 onward), was not to become irreversible until the last two decades of the 12th/18th century.

4. In Syria.

(a) Damascus under the Ottomans.

When the Ottomans entered Damascus in 923/1517, the topographical separation of skilled and commercial activities had been in effect since the Mamlūk period. It is true that already in 803/1402, the city had been sacked by Tīmūr and the leading representatives of the urban professions deported, with their families, towards Samarḳand (Ibn Ḳāḍī S͟huhba, *Taʾrīk͟h*, iv, year 803 [1400-1]); numerous *sūḳs* had ceased to function and some crafts had disappeared at least temporarily, especially the artistic professions

which depended on the patronage of the Mamlūk *amīrs*. However, these activities were gradually revived and at the end of the 9th/15th century, 139 *sūḳs* and 117 professions were counted by Ibn al-Mabrad (*Nuzha*, supplemented by his *Iʿānāt* and *K. al-ḥisba*). Once mapped, this information makes it possible to locate within the city (Ṣāliḥiyya, a major suburb separated from Damascus by gardens, preserved its autonomy with its *sūḳs*, its *khāns* and its *muḥtasib*) three sectors combining the majority of economic activities: a central intramural sector and, outside the enclosure, starting from a large square "under the Citadel", two great perpendicular axes, the one to the north, *al-ṭarīḳ al-sulṭānī*, following the left bank of the Baradā towards the northern towns and the villages of the Ghūṭa, and the other leading towards the south, *al-ṭarīḳ al-ʿuẓmā*, in the direction of the Holy Places and of the Ḥawrān.

The central intramural sector which, in the 6th/12th century was firmly implanted to the east of the Great Mosque, was gradually transferred towards the west and the south-west; it was henceforward located (with the 40 or so *sūḳs* recorded by Ibn al-Mabrad) in a zone bounded to the east by the Umayyad Mosque, to the west by the "intersection" of Bāb al-Barīd, to the south by the Street called Straight, the western part of which developed in the first quarter of the 9th/15th century, after the ravages of the Mongols, with the foundation of the Djakmak *sūḳ*, where two *khāns* of the Mamlūk period, Djaḳmaḳ and Dikka (a site for the sale of slaves transferred in the Ottoman period to the al-Ḥaramayn *khān*, also called the *djiwār khān*) are still in existence today. This sector concentrated in a series of *sūḳs* and *ḳaysāriyyas*, situated on these two axes and the perpendicular streets linking them, with certain traditional crafts, the principal commercial activities of the city. These comprised wholesale and retail sale of luxury or quality products in the immediate proximity of the Great Mosque, of superior merchandise on the periphery (the Street called Straight): markets for fabrics (and clothing) of silk, cotton and wool, for furs, a *sūḳ* for spices and drugs, markets for gold, silver, jewellery, weapons, a small *sūḳ* of copyists and booksellers, leatherwork and the manufacture of high quality shoes, carders and rope-makers.

Outside the walls to the north and west, at the gates and on the two major perpendicular arteries skirting the walls, *sūḳs* requiring extensive space developed, along with noisy or malodorous crafts, combining production and sale aimed at both urban and rural consumers. To the North, on the esplanade called "Under the Citadel", were markets which were transferred thither at the beginning of the Mamlūk period from the interior of the town (Sauvaget, *Décrets mamelouks*) in the interest of space: every morning, markets for horses and pack-animals were held, and on Friday morning that for camels and cattle. Around this space, which was animated by a variegated crowd of shoppers and strollers who came to be amused by public entertainers, were installed specialised markets "more or less closely associated with military life and the raising of horses" (traders in clothing and items of equipment, craftsmen dealing in metal and in wood, saddlers, manufacturers of panniers and of sieves, straw merchants) which had followed the livestock markets when the latter were transferred, markets of poor quality fabrics, and markets of fruit and vegetables (Dār or Khān al-Biṭṭīkh).

Towards the east, as far as the gate of Bāb al-Farādīs, were markets tending to specialise in the manufacture and sale of various consumer goods, giving their names to each part of the area (shoes for peasants, wooden boxes, domestic utensils and tools of iron or copper, flea-markets, etc.). Tanneries, which required abundant water, and also on account of the nuisance and the pollution that they engendered had been concentrated since the Middle Ages to the east, in the proximity of the Baradā river between Bāb al-Salām and Bāb Tūmā—these remained there until the early 1950s, and for a long time constituted an obstacle to the expansion of the city in this sector. On both sides of the major perpendicular artery, leading southward from the esplanade to Bāb al-Djābiya, various businesses associated with foodstuffs (sellers of vegetables, fruits, pastries, cooked meats, etc.) catered for strollers and itinerant visitors, in the vicinity of the *sūḳs* of wood-turners and of basket-weavers.

Outside these three major sectors and beyond the Bāb al-Ṣaghīr, the southern gate, close to the gardens of the Ghūṭa, were located *sūḳs* of manufacturers of agricultural implements, wood-carvers, and the market for pigeons, the rearing of which was a popular pastime among Damascenes. Further to the south, in the suburb of Mīdān, were situated the markets for sheep and activities associated with the wholesale trade in vital consumer goods: transported from the Ḥawrān and also from the Biḳāʿ. Cereals were stored in open, unroofed spaces (*ʿaraṣāt*) in the Mamlūk period and, in the Ottoman period, warehoused in specially constructed closed buildings (*ḥāṣil* or *bāʾika*).

Manufacturing activities linked to the flourishing textile industry, in which numerous craftsmen were engaged, could not be gathered together in a single place; they were practised in shops or workshops dispersed throughout the city, some professions even being pursued in the home (Ḳāsimī, *Ḳāmūs*). Some concentrations may however be noted: the Bāb al-Sarīdja and Ḳabr ʿĀtika (Ṣabbāgh, *Wathīḳa*), *khāns* accommodated workshops of weavers who produced a fabric (*ʿātikī*) sufficiently renowned to be exhibited in the markets of Cairo in the 11th/17th century (Raymond, *Artisans et commerçants*, index); installed nearby were craftsmen who produced the equipment (combs, shuttles, etc.) necessary for this industry. Later, in the 13th/19th century, weaving-shops are mentioned in districts to the south of Mīdān (von Kremer, *Topographie*).

In the intramural *sūḳs*, sources of the Mamlūk period mention numerous *ḳaysāriyyas*. Edifices dedicated to specific forms of commerce, they had the form of a gallery closed at both ends by gates, with a groundfloor of shops; in the centre were a water basin and one or more *maḳʿads*, each provided with a coffer (*khizāna*); and on the upper floor were warehouses (*makhzan*) or lodgings (*ṭabaḳa*) reached by an external staircase (*Waḳfiyyat al-Umawī*, fol. 49a). In the Ottoman period, governors of the province and local dignitaries built a score of large caravanserais, including a *bazzāzistān* or *bedesten* [*q.v.*], a base for traders in luxury fabrics, and they also built *sūḳs* in this central sector. These *khāns*, taking the place of the *ḳaysāriyyas*, closed and guarded at night, were constructed of freestone on two levels around an open central courtyard and, in more specifically Ottoman style, covered entirely by cupolas, the best examples being the al-Djūkhiyya *khān* of the 10th/16th century or the Asʿad Bāshā one of the 12th/18th century; they provided warehouses on the groundfloor, sometimes hostelries on the upper level, and they supplied, like the *ḳaysāriyyas* before them and along with the *sūḳs*, a significant proportion of the revenues for *waḳfs*.

Outside the major sectors which had concentrations of specialised markets, each district of the city—as was asserted by J. Sauvaget and confirmed for the Mamlūk period by Ibn al-Mabrad and for the Ottoman period by an Ottoman census of 1827-8 (*Başbakanlık Arşivi*, no. 19450, from 1243/1227-8)—possessed its own small market, *suwayḳa*, where numerous local businesses were established (between 30 and 100 shops for traders in vegetables and fruit, charcoal and wood, for butchers, bakers, etc. according to the census of 1827), offering services to local residents or as in Mīdān, to the south of the city, to a clientèle of peasants and of nomads. These *suwayḳa*s represented, with the mosques and the *ḥammāms*, the indices of urban expansion. Thus, in the Mamlūk period, on the axis of the Bāb al-Sarīdja, leading to the villages of the Ghūṭa in the south-west and towards Palestine, there developed an important *sūḳ* known as Khān al-Sulṭān and, at its western extremity, a Sūḳ al-Masā' (mentioned in the *waḳf* of the Tayrūzī Mosque founded in the 9th/15th century and still functioning today), which testify clearly to the urbanisation of this sector.

The Ottomans were content in the early stages to retain and enforce some of the regulations formerly decreed by the Mamlūk sultan Ḳā'it Bāy (873-97/1468-92), under the general heading of *iḥtisāb*, which had taken the place of the term *ḥisba* [*q.v.*]. Essentially, the *iḥtisāb* collected duties and taxes imposed on shopkeepers, craftsmen and merchants (Bakhit, *Ottoman province*), excluding duties on foodstuffs (cereals, fruits and vegetables), livestock markets and the weighing-tax; it was in fact the second largest source of revenue for the province, after that constituted by the taxes levied on alkalis used in the manufacture of soap, and was of equal value to the tolls and taxes which the Treasury sought to levy on products transported by caravans on the Pilgrimage route. The *iḥtisāb* was an annual tax-farming contract (*muḳāṭaʿa*), and the appointment depended on the senior local judge who exercised exclusive jurisdiction in matters of *ḥisba*, a function extended to the inspection of morality in public places, and on the *daftardār* of the province for the collection of revenues.

In the Ottoman period, artisans were united by an institutionalised solidarity in the framework of professional corporations (*ṭawā'if al-ḥiraf* or *aṣnāf* [see ṢINF. 1.]). In Damascus, in the early 12th/18th century, more than sixty different corporations were recorded in the registers of local tribunals, and a similar number is given in the census of 1827; of course, the number of actual professions followed was considerably higher (al-Ḳāsimī, *Ḳāmūs*). Religious diversity within these groups seems to have been the norm, the faiths of all being respected. They exercised a virtual monopoly over the market: the quality of products was subject to internal control as well as to that of the state, and the conditions required for permission to practise a trade were particularly restrictive. Admission to a corporation and the promotion of the individual to different levels in the hierarchy, apprentice (*adjīr*), worker (*ṣāniʿ*), master (*muʿallim, usṭā*), were marked by an initiation ritual. Each professional corporation was headed by a *shaykh*, elected by its members; a *shaykh al-mashā'ikh* representing the artisans and a *shahbandar* [*q.v.*] for the merchants. Their precise role was unclear. But it was the senior judge of the city who confirmed the appointment of each *shaykh*, ruled on internal disputes within corporations and instituted legal proceedings between them and imposed punishments for professional misconduct.

Up to *ca.* 1860, the three major sectors experienced developments, the detailed history of which has yet to be studied (the division of markets, dating back as far as the Mamlūk period, displacements, disappearance of crafts and appearance of new ones) but which followed the gradual economic and demographic evolution of the city, which progressed from 50,000 inhabitants in the 16th century to approximately 140,000 at the end of the 19th (al-Ḳasāṭili, *al-Rawḍa al-ghannā'*, 8). As a result of the intensification of trade brought about by the incorporation of the city into the Ottoman empire, an increase in density is perceptible from the 16th century onward in the intramural commercial zone. *Sūḳ* and *khān* were built on residential sites in the centre; outside the walls, at Bāb al-Djābiya, the newly-founded Sūḳ al-Sināniyya, a broad complex of 74 shops (of unknown use and function) and 34 units (*ḥudjra*) on the upper level on both sides of the artery leading to Mīdān, represented an extension of the markets of the Street called Straight at the end of the 16th century. Separated from the other markets, the Sūḳ al-Sibāhiyya (later called Sūḳ al-Arwām), an enclosed market built in the 16th century in the neighbourhood of the Palace to the south of the Citadel and a site for brokers (*dallāl*) specialising in the purchase and sale of furniture and moveables belonging to the estates of the deceased, prefigured the progressive expansion of *sūḳ*s in this sector in centuries to come.

More significant and better-documented changes took place after 1860: greater openness to Europe led to an increase in the importation of manufactured goods, textiles especially, which began to invade the central *sūḳ*s, supplanting local products. In spite of resistance, the number of trades associated with textiles declined (al-Ḳasāṭilī, 123). On the other hand, the Crimean War, by halting the export of Russian corn to Europe, led to a demand for wheat from the Ḥawrān which was henceforward to be quoted on the London Stock Exchange. It is probably from this period that the multiplication of *bā'ika* constructions on the artery of Mīdān should be dated (the census of 1827 recorded 24, a survey conducted in 1994 showed about 60, but many have disappeared with the current modernisation of the city).

With the Ottoman Reform period, the desire for modernisation was seen in works of public utility and in urban projects which sought to change in a more decisive manner the landscape of the city: paving and enlargement of the major arteries and the streets of the *sūḳ*s by removing the benches (*maṣṭaba*) from the fronts of shops; these certainly constituted an obstruction but could be used in times of instability to construct barricades. There was the Excavation of new arteries, such as the western part of the Street called Straight or the section between the south-eastern corner of the Citadel and Bāb al-Barīd (1884-85), named Sūḳ al-Ḥamīdiyya in honour of the sultan, an operation followed by the filling-in of the ditches of the Citadel in order to create space for the extension of markets (western part of the Sūḳ al-Ḥamīdiyya) or the creation of new *sūḳ*s (Sūḳ al-Khūdja in 1905-6 on the site of the western ditch, and on Mardja Square, in 1878, a "closed market" (Sūḳ ʿAlī Bāshā al-djadīd). Changes in the use of buildings also occurred (the 16th century Darwīsh Bāshā *ḥammām*, in the centre of the major markets, became a *sūḳ* named al-Ḳīshānī, in reference to its earthenware decoration). Finally, the constitution of a new administrative nucleus around Mardja Square with the construction of the newly-created City Hall, the Court, police and postal headquarters and a proper hotel for travellers, attracted

professions (changers, clock-makers and seal-makers) which were previously located elsewhere in the city.

(SARAB ATASSI and J.P. PASCUAL)

(b) Aleppo.

Little is known of the history of the emergence of the *sūḳ*s of Aleppo, particularly in reference to the transformation of the ancient avenue into a *sūḳ*, which seems to have begun in the Byzantine period. The first precise information dates back to the 6th/12th century. Ibn Djubayr (quoted by Sauvaget, *Alep. Essai sur le développement d'une grande ville syrienne*, Paris 1941. 119-20), evokes on the one hand the principal *sūḳ*, "in all its length", evidently corresponding to the Ḳaṣaba and extending from the Antioch Gate to the Citadel, on the other, the Ḳaiṣāriyya "which enfolds the Great Mosque", which does not seem to have adopted a basilical form, but that of linear *sūḳ*s. Trading at that time was mainly confined to fabrics and second-hand goods.

The descriptions of Ibn al-Shaddād in the 7th/13th century are more detailed (Arabic text by D. Sourdel, Damascus 1953; see also the passages quoted by Ibn al-'Adjamī in Sauvaget, *Les trésors d'or de Sibṭ ibn al-'Ajami. Matériaux pour servir à l'histoire d'Alep*, Beirut 1950; analysis by Sourdel, in *Esquisse topographique d'Alep intramuros à l'époque ayyoubide*, in *Les Annales Archéologiques de Syrie*, ii [1951], 109-33). It appears that the *sūḳ*s and manufacturing activities were then located in a central zone broader and less exclusive than was the case in the Ottoman period: the economic activities mentioned, in the streets perpendicular to the Ḳaṣaba, especially to the south, such as the street of the falconers, of the dyers, of manufacturers of ovens, of traders in wood, animal fat, mats, the street of the smiths, the street of the glaziers, the *khān* of the bow-makers, etc., were almost all located in districts which are currently exclusively residential. Other concentrations of craft occupations in the districts to the north of the Great Mosque—soap-makers, stone-dressers, tanners, dyers—disappeared gradually or abruptly: the first century of Ottoman domination was marked in fact by a process of refinement of professions, a process which had perhaps begun earlier, and by the banishment to the suburbs of almost all manufacturing activities (A. Raymond, *Le déplacement des tanneries à Alep, au Caire et à Tunis a l'époque ottomane: un indicateur de croissance urbaine* in *Revue d'histoire maghrebine*, vii-viii [1977], 192-200).

Among the activities practised in the 13th century in the central *sūḳ*s, in the vicinity of the Great Mosque, very few are still to be found on their original site: fabrics and second-hand goods have been displaced, in particular, by rope- and shoe-making, against the *ḳibla* wall of the Great Mosque. Goldsmiths were then located further to the south, while traders in spices and drugs also seem to have been displaced, moving towards the central axis where they are currently situated. It is difficult to identify an immutable logic in these changing localisations, the classical concentration of goldsmiths and carpet and fabric sellers in the proximity of the Great Mosque having been gradually realised.

Other specialised or open-air markets have also been displaced and the most stable sites, up to the present day, are without doubt on the one hand the *sūḳ*s selling fresh foodstuffs, which have long been situated close to Bab al-Djinān and the *suwayḳa*s (small or specialised local *sūḳ*s), those of the Jews, of Ḥātim and of 'Alī, on the axis of Bāb al-Naṣr.

Another important change concerning the location of commercial activities is the concentration of the majority of the *khān*s close to the central *sūḳ*s and the Great Mosque, away from their former locations near the gates, or in relatively dispersed sites in outlying districts. This process was accentuated before the Ottoman period, especially with the construction of three monumental *khān*s and of numerous large and conventional *sūḳ*s in the late 15th and early 16th centuries. The Ottoman foundations are, however, a more prominent factor in the contemporary urban landscape, by their extensive size, their architectural quality and the diversity of occupations which they accommodate.

The most ancient *sūḳ*s were not covered by stone vaults but by timber frames and possibly by tiles, and were thus at risk from frequent fires. Their arrangement was doubtless less uniform than that of the great Mamlūk or Ottoman *sūḳ*s on account of their more spontaneous mode of production, with the exception of major foundations by sovereigns. They were also narrower, comprising tiny shops like those which are still to be seen in the current cordage *sūḳ* or in a very small *sūḳ* to the south of the goldsmiths' *sūḳ*. The large *sūḳ*s, with much bigger shops and a high roof constructed from mixed materials and stone arches doubtless supporting a timber frame or ceiling, seem to date back to the end of the Mamlūk period. Roofing in stonework became standard in the Ottoman period, with sets of cupolas, then cradle-vaults, or cradle-vaults or groined arches, alternating with cupolas.

The ancient system combined commercial sites with other public buildings, in a mixed environment, where residence was not entirely excluded. The campaign of concentration and selection which reached its highest point in the Ottoman period created a quite different system, excluding all forms of permanent residence, except for visitors, but establishing among the *sūḳ*s or

in close proximity to them a substantial range of services, old or new, including mosques, *madrasas*, *ḥammāms*, cafés, public conveniences, buildings designed for temporary lodging, for bulk trading and manufacturing activities, *k͟hāns* and *ḳaysāriyyas*. Uses of these spaces diversified, especially between the 17th and 19th centuries, with the presence of western trade missions and consulates, and the consequent appearance of convents, religious schools and chapels. Banks, hospitals and modern schools were also been established in this neighbourhood, constituting in the 19th century an embryo of the modern centre.

The old *sūḳs* remain a powerful model for the management of modern commercial space, albeit on other sites and in terms of practice rather than architectural forms.

5. In ʿIrāḳ [see Suppl.].

6. In Persia.

The Persian equivalent word for Arabic *sūḳ* is *bāzār*, attested in Middle Persian written texts (MP *wāzār*; Sogdian *w'crn*; and as a loanword in Armenian, *vačar*), all with the sense of "market".

When Nāṣir-i K͟husraw entered Iṣfahān in 444/1052, he saw one lane of the *bāzār* with 50 caravanserais and another one with 200 *ṣarrāfs* or money-changers/bankers. The term which he uses for "caravanserai" is *tīm* (see *Safar-nāma*, ed. Dabīr-Siyāḳī, Tehran 1335/1956, 123, Eng. tr. W.M. Thackston, Albany 1986, 98). This is still used in parts of the Iranian world, but has survived mainly in the diminutive form *tīmča* "a small *tīm* or caravanserai". This traveller's account seems to be the earliest description of a *sūḳ* or *bāzār* as the term came to be understood: a structural and functional ensemble of buildings for long-distance trade, for wholesale and retail trade and for banking.

There had existed in pre-Islamic times streets or lanes with workshops on each side, but the combination of streets or lanes hemmed in by shops, caravanserais and other buildings for commercial use behind these shops, seems to be product of Islamic civilisation before *ca.* A.D. 1000, at a time when long-distance trade within the Islamic lands was at a high level. Within this, the Persian economy had a central function, with diversification of function a key feature; hence it seems that it was the physical and functional shape of the *sūḳ/bāzār* which spread from it both eastwards and westwards.

In Persia, as everywhere else in the Islamic world, the main elements involved are lanes covered by wooden roofs, sheds made of canvas, reeds and straw, or vaults with shops (the Arabic *dukkān* being used here in New Persian). Behind such shops are *karwānsarāys* and *tīmčas*. The first of these are huge, usually two-storeyed buildings with a central courtyard and rooms and storerooms around this last (see further, K͟HĀN, the Arabic equivalent for caravanserai). Here in pre-modern times merchants came from far away and sold their goods; today, merchants have their offices and storerooms there. *Tīmčas* are small, courtyard structures or roofed galls with shops for retail sale around them. Functionally, they can be considered an extension of the *bāzār*. We find similar structures in the Arab East (e.g. at Aleppo), where they are called *ḳayṣariyya* [*q.v.*], a term which has differing meanings in the Arab West, the Arab East and Persia. Whereas in Syria, small structures bear this name, in the Arab West and in Persia the central parts of the *sūḳ/bāzār* are called *ḳayṣariyya*. Thus the *ḳayṣariyya* of the *bāzār* of Iṣfahān is a complex system of *bāzār* lanes, *karwānsarāys*, *tīmčas*, *čahārsūs* (= "four directions") or *čahārsūḳs* ("four *sūḳs*, these being domed crossings of *bāzār* lanes with shops around), the royal mint and a bath-house or *ḥammām*.

7. In Ottoman Anatolia and the Balkans.

The term *sūḳ* in Ottoman sources may be used in a very broad sense, as in statements that a given inheritance had been sold in the *sūḳ-i sulṭānī*. Here *sūḳ* encompasses both shops and markets, the entire business district of a town. But in other texts *sūḳ* is sometimes used in place of the more common term *čars͟hi*, which refers both to individual business locales and the covered markets (*bedestān*), which may encompass over a hundred shops. Here the term *čars͟hi* contrasts with that of *pāzār*, an open-air market held once or several times a week.

In Ottoman towns, the *sūḳ/čars͟hi* was clearly distinguished from the residential areas of a town. However, there was no absolute separation between the two. Some craftsmen practiced their craft at home, and had living-in apprentices, while certain shops, such as those of bakers and greengrocers, were located in the vicinity of the households which bought from them day by day. In 12th/18th century Aleppo, women apparently frequented shops in their own neighbourhoods; this was probably true of Anatolian and Rumelian towns as well. Yet in spite of well-attested commercial activity in residential quarters, the multitude of shops built and rented out by pious foundations reinforced the trend toward segregation of shops and dwellings. For *waḳf*-owned shops, well attested in the foundations' account books, were not normally accompanied by housing. Apart from widower masters or an occasional apprentice, the tenants of *waḳf*-owned shops needed to find residential space elsewhere.

Waḳf*s as builders of the* sūḳ/čars͟hi.

In 8th/14th and 9th/15th century Anatolia and Rumelia, both the Ottomans and other princely dynasties established shop complexes, *bedestāns* and *k͟hāns*, intended to supply revenues to a major mosque and/or *medrese*. This was presumably undertaken with the aim of re-animating urban life, especially in the sites chosen as temporary or permanent capitals, for many Anatolian towns had suffered greatly during the wars following upon the disintegration of the Rūm Seld͟jūḳ sultanate after the battle of Kösedag͟h (641/1243). The Ottoman sultans at first concentrated on Bursa. But Timurtās͟h Pas͟ha, a servitor of Bāyezīd I, and later his descendants Umūr Beg and (probably) Seld͟jūḳ Beg

b. Umūr Beg, established shops in Kütahya, Bergama and Sivrihisar as well. The monumental *ḥammām* founded by Sultan Meḥemmed I in Merzifon should be regarded in the same context. Among the other Anatolian dynasties, the Ḳaramān-oghullarî were active in Konya and Konya Ereğlisi, while the Dulḳadîr in the second half of the 9th/15th century built commercial structures in their capital Maraş.

On a much larger scale, the construction of a *sūḳ/čarshî* was sponsored in Istanbul by Sultan Meḥemmed II Fātiḥ. The two *bedestāns* which even today form the core of Istanbul's Ḳapalî čarshî were built during his reign. A *waḳf* deed of 877-8/1473 informs us that the Old Bedestan contained 124 shops, while on the outside of this building, 72 additional business locales had been accommodated (Halil İnalcık, *The hub of the city. The Bedestan of Istanbul*, in *Internat. Jnal. of Turkish Studies*, i [1980], 9). Here valuable goods, such as textiles, jewelry and spices were traded, and the slave dealers (*esīrdji*) equally did business from the Ḳapalî čarshî. Meḥemmed II's foundations were to provide revenue for his monumental foundation complex in Istanbul, which, apart from the mosque, included 16 *medreses*, a hospice, a hospital, a library and the mausoleum of the founder. The mosque of Sultan Bāyezīd II, equally located in the new Ottoman capital, was also endowed with rows of shops, and so was the Süleymāniyye (completed 964/1557). Among the founders of *sūḳ/čarshîs* who were not members of the Ottoman dynasty, the most notable personage was probably Maḥmūd Pasha (executed 879/1474). Not only did he sponsor the Ankara *bedestān*, he also contributed extensively to the *sūḳ/čarshî* of Istanbul, with the intent of generating revenue for his mosque located in the vicinity of the Istanbul *bedestāns*; the district housing the Ḳapalî Čarshî is named after him. But even in the 12th/18th century, the establishment of a *sūḳ/čarshî* by means of a *waḳf* was still practised; when in 1139/1726-7, Aḥmed III's Grand Vizier Dāmād Ibrāhīm Pasha elevated the central Anatolian village of Mushkara (today, Nevşehir) to the status of a town, he ordered the construction of both a *kerbānsarāyî* and a *khān*, both of which should have increased commercial traffic.

Markets and fairs.

Small and medium-sized towns possessed only a single *sūḳ/čarshî*, which usually included specialised open-air markets for the sale of bulky goods, such as grain, rice, sheep, yarn or firewood. Istanbul and Bursa in the 10th/16th and 11th/17th centuries also possessed special women's markets; in 11th/17th century Bursa, women could sell their work there without paying taxes (H. Gerber, *Social and economic position of women in an Ottoman city, Bursa 1600-1700*, in *IJMES*, xii [1980], 231-44). In certain Rumelian towns, a market known as an *ʿaraba pāzārî* was recorded; presumably this was located on the outskirts of the town or along a major road in order to facilitate the access of carts.

Markets were also found in villages, a necessary condition if the Ottoman taxation system was to work; for these markets allowed peasants to earn the cash they needed in order to pay their money dues, and *tîmār*-holders to rid themselves of extra supplies of grain in exchange for horses and other necessities. *Ḳānūn-nāmes* of the 10th/16th century therefore often required that the peasant bring the *sipāhī*'s grain to the nearest market, with the proviso that this market was not be more than a day's travel away (Ö.L. Barkan, *XV ve XVIıncı asırlarda Osmanlı imparatorluğunda ziraî ekonominin hukukî ve malî esasları*, i, *Kanunlar*, Istanbul 1943, 131, 175, 287, 321). These markets must have promoted the growth of originally rural district centres into towns.

In accordance with this political function of local markets, the early 10th/16th century *taḥrīrs* normally record merely one market per district (*ḳaḍā*), which was located in the district centre. But in the following decades, the number of village markets increased notably, and villages with no administrative function might acquire one. In addition to markets located in permanent settlements, we also find cases of markets held on summer pastures. The latter were often shared between several villages and nomadic groups, and therefore suitable for exchange. In front of rural *kerbānsarāyîs*, markets were also on record; presumably they functioned irregularly, namely, when caravans passed through. In the second half of the 11th/17th century, Ewliyā Čelebi noted that, in the coastal plain between Antalya and Alanya, at that time largely inhabited by nomads, a sizeable number of markets was in operation.

Fairs were of economic importance particularly in Thessaly and Thrace; often they had originally been established in connection with the feast of the saint to whom the local church was dedicated. But in the course of the 10th/16th century, these fairs became so profitable that Ottoman officials, including Ḳānūnī Süleymān's Grand Vizier Rüstem Pasha [*q.v.*], took them over, built installations to accommodate hundreds of merchants, and assigned the dues paid by the latter to a pious foundation of their choice. The Thessalian and Thracian fairs formed a chain, so that traders could visit them in turn. By contrast, the Anatolian fairs, among which those held in the Aegean town of Nazilli and in the Içel district of Gülnar were particularly notable, seem to have functioned more or less in isolation from one another. The word *panayîr*, normally employed to designate fairs, was not always used in the *taḥrīrs* in connection with gatherings that must have fallen into this category. But when a complex of 157 shops was built by Sinān Pasha, *sandjaḳ begi* of Menteshe, in the minuscule settlement of Seki (Menteshe), we must assume that it was not in permanent use, but accommodated some kind of fair (Suraiya Faroqhi, *Sixteenth-century periodic markets in various anatolian* sancaks, in *JESHO*, xxii [1979], 68). As observed in other parts of the world as well, the settlements where even the largest fairs were held, such as the Thessalian village of Mashḳolur, did not expand into towns.

The sūḳ/čarshî *within the town.*

In major cities, the main *sūḳ/čarshî*, located in the city centre, might be supplemented by smaller agglomerations of shops on the outskirts; in Bursa, masters unable to join the guild of their craft were known to set up shop in outlying town quarters (İnalcık, *Capital formation in the Ottoman empire*, in *Jnal. of Economic History*, xix [1969], 117). In Istanbul, the different sections of the city had their own *sūḳ/čarshîs*; apart from the enormous area between the Golden Horn and the Sultan Bāyezīd Mosque, which serviced Istanbul *intra muros*, there were the smaller business districts of Galata, complete with its own *bedestān*, and the pilgrimage centre of Eyüp. On the Anatolian side, Üsküdar built its own *bedestān* at the end of the 10th/16th century, while Yeniköy, halfway up the Bosphorus, by the 11th/17th century even had developed its own money market, whose rates of exchange differed slightly from those practiced in Istanbul (Halil Sahillioğlu, *XVII. asrın ilk yarısında İstanbul'da tedavüldeki sikkelerin râici*, in *Türk Tarihi Kurumu, Belgeler*, i/1-2 [1964], 233).

The distinctive feature of all business districts of any importance were the *khāns*. These often belonged to *wakfs* within or even outside the city, and tenants paid rent for the right to exercise their trades there. Frequently, the *wakf* awarded the *khān* to a principal tenant after an auction. Sometimes *khāns* were rented out to craftsmen from one or a few related guilds; thus in 12th/18th century Urfa, the shoemakers gave their name to the Ḳawāflar Khānī, property of the Riḍwāniyye *medrese*. In Istanbul before foreign embassies established permanent quarters in Pera/Beyoğlu, ambassadors were also assigned *khāns* in the *sūḳ/čarshī*, notably the Elçi Hanı (Semavi Eyice, *Elçi Hanı*, in *Tarih Dergisi*, xxiv [1970], 93-129). Foreign traders equally put up in *khāns*; in most Ottoman cities, only those traders intending a long-term stay rented private houses. *Khāns* as well as *bedestāns* were also used by tax collectors as safe places in which to store money; in such cases, alterations to the building fabric were sometimes undertaken in order to minimise the likelihood of theft. In some towns, special guards (*'ases*) were in charge of patrolling the *sūḳ/čarshī*. Transportation services could be found in the area; nomads and semi-nomads renting out camels were usually established in and around the *khāns*.

In the 12th/18th century, the Ottoman administration, by now in need of extra money, put increasing pressure for revenue on the *wakfs* which owned so many of the commercial buildings available, particularly in Istanbul. The *mütewellīs* attempted to increase the rents paid by craftsmen; in order to limit these increases, the artisans, apparently aided by sympathetic *ḳāḍīs*, developed the notion of *gedik*, which had not been entirely unknown in earlier times but came to be of major significance only during this period. In Istanbul, the *gedik* encompassed the workspace, tools and materials needed for the exercise of a given craft; these items could only be passed on to members of the relevant guild, thus limiting demand (Engin Akarlı, Gedik: *implements, mastership, shop usufruct and monopoly among Istanbul artisans, 1750-1850*, in *Wissenschaftskolleg—Jahrbuch* [1985-6], 223-32). In late 12th/18th century Bursa, however, the *gedik* apparently encompassed only the tools and materials and not the shop itself.

Collective workshops and streets named after crafts.

Related to the *khāns* tenanted by members of a single craft were the collective workspaces used by dyers (*boya-khāne*) or tanners (*debbāgh-khāne*). The latter were usually located on the outskirts of the town or city in question in order to minimise nuisances; when the town expanded, the *debbāgh-khāne* was moved, and the term *eski* (old) *debbāgh-khāne* came to denote a quarter like any other. In the case of the *boya-khāne* associated with the foundation supporting the library which Sultan Aḥmed III had built in the Topkapı Palace precincts, enough documentation survives to give us some idea of its functioning. The artisans in question had been granted a monopoly for the dyeing of certain fabrics, which was worded in a rather vague fashion so that the limits of the monopoly at times needed to be re-defined by recourse to the *ḳāḍī*. Only artisans possessing access to the *boya-khāne* were allowed to participate in the monopoly. Access was controlled by the dyers already in place, who formed a guild with their own *ketkhudā*. They could accept new members and also exclude people they considered undesirable, who thereby lost their access to the *boya-khāne*. In the latter case, the expelled dyer possessed the right to a money payment, presumably his investment plus a share of the accruing profits. *Boya-khāne* buildings were owned by one or even several *wakfs*, and while *wakf* administrators might decide to relocate the *boya-khāne* and concomitantly increase the rent, the dyers possessed no recourse against such a decision.

In most *sūḳ/čarshīs*, there were individual lanes, equally known as *čarshī*, which bore the names of the craftsmen who occupied or at least had occupied them at some time in the past. For 10th/16th century Anatolian towns, these lanes are documented in the *wakf* registers, as shops located in these specialised craft streets, which produced rent for a given pious foundation, are enumerated among the assets of the *wakf* in question. Textile crafts were the most widespread, including dyers, felt makers, dealers in woollens, cotton fabrics and silks, in addition to the ubiquitous skull-cap makers. In addition to *wakf*-owned shops, there must have been shops held as private property. But shop-lined streets containing no *wakf* property are not recorded in official registers. However, it is hard to say to what extent the separation by craft, implied in the very names of the lanes making up the *sūḳ/čarshī*, was actually applied "on the ground". *Wakf* records provide contradictory evidence. While in some cases we do find concentration by craft, in other instances shops were tenanted by craftsmen totally unrelated to the craft which was supposedly being practiced in the street in question. At least in the case of Istanbul, there survive a number of records concerning the collection of *iḥtisāb* dues, which enumerate the tenants of individual shops and thus enable us to reconstruct the composition of a given street. Where members of a single craft were concentrated in one neighbourhood, this enabled the masters to supervise one another. Not only could those who ignored official price regulations or did not conform to locally accepted standards of quality be easily detected, socially unacceptable behaviour such as the excessive beating of an apprentice could also rapidly be brought to the notice of the relevant guild authorities.

The physical appearance of Ottoman shops before the 13th/19th century is documented mainly through the miniatures of the two illustrated *sūr-nāmes*, which record circumcision festivities held in 990/1582 and 1132/1720. Here various craftsmen are shown at work, and the miniatures also document the insides of bakeries, *kebābdjis* or glassblowers' workshops. The *sūr-nāme* of 1132/1720 even contains a miniature of a *ḥammām* model, in which bath attendants served their customers. However, these models were meant for display, particularly of pantomime and craft skills, and therefore should not be regarded as completely accurate representations. In the second half of the 13th/19th century, European photographers and their Levantine colleagues made numerous photographs not only of shops but particularly of the *petits métiers* exercised on the street. However, here the aim was to show what a European clientèle regarded as picturesque, so that these photographs should not be viewed as authentic depictions of reality either; the photographer may well have arranged a scene in a manner similar to that of the miniature painter of earlier ages (G. Beauge and Engin Çizgen, *Images d'empire. Aux origines de la photographie en Turquie/Türkiye'de fotoğrafın öncüleri*, Istanbul n.d. [1992?], 146 ff.).

Mosques in the sūḳ/čarshī.

The *sūḳ/čarshī* district was normally located close to the town's Friday mosque. Markets held on a Friday were often more popular than their competitors convened on other days of the week, as peasants from the surrounding area appreciated the chance of attend-

ing Friday prayers before returning to their villages. In certain towns, there existed mosques specifically designated as the Čarshî Djāmiʿi. This close connection of mosque and *sūḳ/čarshî* was at times expressed architecturally as well; the Istanbul mosque of Rüstem Pasha (*wakf-nāme* dated 968/1561), located in the middle of Istanbul's *sūḳ/čarshî* district, was built on a terrace over an elaborate substructure housing shops, even though we do not know whether the latter were part of the original design. In addition, the *sūḳ/čarshî* might contain mosques named after one of the local guilds, and possibly built by one of their richer members; in Ankara, there exists a 8th-9th/14th-15th century mosque named the Ṣābūnī, presumably built or repaired by a soap maker or soap merchant (Gönül Öney, *Ankara'da Türk devri dini ve sosyal yapıları*, Ankara 1971, 38-9). In 12th/18th century Bursa, where money *wakfs* were documented more intensively than elsewhere, many guildsmen donated money to local mosques to supplement the *imām*'s salary, or to provide funds for matting and lighting. Only the more important among these foundations were administered by special *mütewellīs*; in most other cases, the *imām* was in charge of the money *wakfs* attached to his mosque. This meant that he needed to acquire information on the solvency or otherwise of prospective borrowers, and present accounts periodically to the *ḳāḍī*. This arrangement further strengthened the link between urban mosques and the commercial activity carried on around them.

Transformations during the 13th/19th century.

Ottoman urbanism of the 13th/19th century was directed mainly at public buildings, such as *ḥükūmet binālarî*, hospitals or barracks, in addition to a number of seaside palaces in Istanbul. However, this construction activity had direct repercussions on the *sūḳ/čarshî* as well. In Istanbul, the concentration of imperial palaces and the dwellings of high officials led to the growth of a new *sūḳ/čarshî* in Beşiktaş. This contained mainly bakers, grocers and greengrocers who delivered their wares to the *ḳonaḳs* in the vicinity; and since many of these shops received their supplies by sea, there were numerous boatmen and porters who waited for employment in the local coffee-houses (Hagop Mıntzuri, *İstanbul anıları (1896-1907)*, Istanbul 1993). In the old *sūḳ/čarshî* area of *intra muros* Istanbul, there was considerable rebuilding following the series of fires which swept the old city. The principle was to make the major streets accessible to carts and coaches, and do away with cul-de-sacs in order to allow fire brigades easy access everywhere. Building in stone was officially recommended, and Dīwān yolu was widened as far as the Ḳapalî Čarshî. Apart from these utilitarian concerns, there was also an interest in making the major monuments visible by clearing the space surrounding them. After the fire of 1281-2/1865, a square was thus opened up in the area near the Ḳapalî Čarshî, around the column of Constantine (Çemberlitaş), which involved the partial destruction of the Çemberlitaş *ḥammām* (compl. 991/1583) (Zeynep Çelik, *The remaking of Istanbul. Portrait of an Ottoman city in the nineteenth century*, Seattle and London 1986, 49-81). A number of new *khāns* was also built in Galata.

More importantly, the trade in luxury goods shifted from the Ḳapalî Čarshî to another new shop-lined street, known as the Grand' Rue de Péra (today, İstiklal caddesi). Along this street restaurants, coffee houses and pastry shops alternated with department stores and *modistes*. Among the shopkeepers and artisans, Ottoman non-Muslims were a prominent presence, but immigrants from France and Italy were equally in evidence. Many of them lived in the vicinity, for instance, in the district then known as Tatawla (today, Kurtuluş) or in the side streets of the Grand' Rue de Péra. While most restaurants were reserved for a male clientèle until well into the 20th century, women of the Ottoman upper class, whose families came to reside in the vicinity in growing numbers around 1900, could patronise the shops of the Grand' Rue. In the area of today's Bankalar Caddesi, the Jewish banking family of Camondo, whose main residence after 1285-6/1869 was located in Paris, sponsored the construction of a financial centre closely modelled on its Paris counterpart (Nora Seni, *The Camondos and their imprint on 19th century Istanbul*, in *IJMES*, xxvi [1994], 663-75).

Moreover, the shopping district of Pera/Beyoğlu doubled as a centre of entertainment. French and Italian troupes, not excluding Sarah Berhardt, performed before a public at first consisting of only the local Levantines, but young Muslims of the upper class soon patronised these theatres as well. Performances, at first limited to male audiences, became increasingly available to women as well, at first in the shape of separate matinées or of special boxes from which they could follow the proceedings without being seen. The installation of street lighting and a modern water supply further enhanced the attraction of this district.

The transformation of the *sūḳ/čarshî* area could also be observed in the major provincial towns. İzmir already possessed a tradition of *frenk-khāne*, buildings in a European style, intended to house European merchants during their more or less extended stays in the city. In the 12th/18th century, these buildings, often located by the sea and provided with storage spaces for goods, were rented out by *wakfs*, some of them in places as distant as Manisa. In the course of the 13th/19th century the "Frankish" street, now known as the "Kordon", became one of the city's important shopping districts. Theatrical entertainment was also available in this part of town; the first theatre was established in 1188-9/1775, and in 1257-8/1842, Bellini's *Norma* was performed in the Theâtre Euterpe (Rauf Beyru, *Social life in İzmir in the first half of the 19th century*, in *Three ages of İzmir, palimpsest of cultures*, tr. Virginia Taylor Saçlıoğlu, Istanbul 1993, 145-216, good illustrations). In Selanik as well, the modernisation of the quais around 1900 led to the transformation of the surrounding area, where hotels and shops were now concentrated. In Bursa, the straight street built by Aḥmed Wefīḳ Pasha equally attracted the more modern shops (Beatrice St. Laurent, *Un amateur de théâtre: Ahmet Vefik pacha et le remodelage de Bursa dans le dernier tiers du XIX^e siècle*, in P. Dumont and Fr. Georgeon (eds.), *Villes ottomanes à la fin de l'Empire*, Paris 1992, 94-114).

The style of the newly erected buildings was at first eclectic, with "Renaissance" features prominent, particularly in the banking houses. A miniature version of the famous "Spanish steps" of Rome connected the building which housed the urban administration of Istanbul's "Altîndjî Dāʾire" (Pera/Beyoğlu) with the shopping district on the hill. An interesting re-importation was the *pasazh*, a shop-lined covered street, which can be regarded as a 13th/19th century version of the *ārāsta*. Some of the examples surviving in modern Beyoğlu show traces both of the Paris or Brussels models and the local tradition. After 1900, features of Ottoman and Iranian palace architecture took the place of the previously popular "Renaissance" features, and were regarded as symbols of

national revival (Yıldırım Yavuz, *Mimar Kemalettin ve birinci ulusal mimarlık dönemi*, Ankara 1981, 147 ff.). However, the structure of these buildings reflected their resolutely modern functions: office buildings, banks, hotels and apartments.

8. In Muslim India.

In India, different terms have been in use for markets and market places, e.g. *sūḳ* (*Sīrat-i Fīrūz Shāhī*, ms. Bankipur, fol. 90), *čawk*, *bāzār*, *bāzār-i khāṣṣ*, *čakla*, *katra*, *mandī*, *darība*, *nakhkhās*, etc. Occasional or seasonal markets, which brought together commodities from far and near and established cultural and economic links, were called *peth* or *mela*. The *bāzār-i khāṣṣ* was the market on the principal streets of the city (e.g. *Čandnī čawk*, *Bāzār-i khānum*, *Čawk Saʿd Allāh Khān* in Mughal Dihlī). *Čawk*s were usually located at places where four roads met; *gandj* generally meant a grain market; *katra*s were usually known after the commodity sold there; *mandī* was the place where different commodities, particularly corn, were brought from outside and sold in bulk; and *darība* was a short lane or street, usually one where betel leaves were sold. At the *nakhkhās*, slaves as well as animals—elephants, horses, cows, etc.—were sold. In coastal areas, *bāzār*s were arranged according to the arrival and departure of ships. Some markets and fairs were held annually at places of religious importance.

The urban transformation which came in the wake of the establishment of Muslim rule in India led to the rise of new *sūḳ*s, with extended scope for the functioning of the market system. The flourishing condition of *sūḳ*s in India was referred to by a large number of geographers and travellers, from al-Idrīsī, Shihāb al-Dīn al-ʿUmarī and Ibn Baṭṭūṭa, to Finch, Bernier, and others.

The city of Dihlī had a number of gates (13 according to Amīr Khusraw; 12 according to Baranī; 28 according to Ibn Baṭṭūṭa; and 10 according to Tīmūr), some of which had become famous as market places for specific commodities (e.g. the Pālam Gate for slaves; the Badāʾūnī Gate for corn, etc.).

It appears that in India markets of special commodities arose very early. Djūzdjānī refers to a *bāzār-i bazzāzān* (market of cloth merchants) in Dihlī (tr. Raverty, i, 646). During the Mughal period, there were many markets named after different professions and goods (*katra*s like *katra-yi ḳaṣṣābān, katra-yi rūdgarān, katra-yi nīlgarān*, etc.; *mandī*s like *gul furūshōn kī mandī, sabzī mandī, mandī ṣābūn*, etc.; and *kuča*s like *čarkhay wālā, batāshāy wālā*, etc.; see Nizami, *Dilli tārīkh kay āʾīna main*, Delhi 1989, 85-8). These *katra*s and *mandī*s have survived to this day, though with changed character and patterns. According to Bernier (tr. Constable, 249), most of the markets in Dihlī were of mixed commodities, except the fruit market where fruits were brought from Persia, Balkh, Bukhārā and Samarḳand. According to Darga Ḳulī Khān (*Muraḳḳaʿ-i Dihlī*, ed. Anṣārī, Dihlī 1982), shops in the Čāndnī *čawk* were replete with unique objects procured from different parts of the world. Small shop keepers in Dihlī had their residential quarters on the roofs of their shops (Bernier, tr. 245). The *nakhkhās* in Agra, Patna and Lahore had covered buildings.

The nature of a market place depended largely on the requirements of people living in that locality. In the capital cities, the demands of aristocracy conditioned the nature and quality of goods brought and sold in the market; *ḳaṣba*s and small towns generally concentrated on supplying daily needs of the people. The village people got what they needed at *peth*s and *mela*s.

During the time of the Dihlī sultan Balban, there was an *amīr-i-bazāriyān* (officer of the market) (Baranī, *Tārīkh-i Fīrūz Shāhī*, ed. Bibl. Indica, Calcutta 1862, 34). The market control of ʿAlāʾ al-Dīn Khaldjī was regulated from the *sarāy-i ʿadl*, where the prices of commodities were fixed. An officer known as *shahna-i mandī* looked after the market. Abu ʾl-Faḍl refers to the appointment of several market inspectors to check oppression and irregularities in buying, selling, weighing, measuring and pricing the commodities in the Agra market (*Akbar-nāma*, ed. Bibl. Indica, Calcutta 1878-9, iii, 396). The *mutaṣaddī*s issued permits to merchants who brought their merchandise into the market for sale and issued passes for goods which were taken out of the city. He checked also the register of sale and purchase (*siyāha-yi kharīd u farūkht*).

Humāyūn devised a market on boats, *djahāz-i sūḳī*, where all sorts of articles were sold (Khwāndamīr, *Ḳānūn-i-Humāyūnī*, ed. Bibl. Indica, 1940, 61). During the Mughal period, *mīnā bāzār*s were arranged in the palace. These were in the nature of fêtes, in which the ladies of the nobles set up shops and the Emperor, along with his queens, made purchases in a convivial atmosphere (Nizami, *Dillī tārīkh kay āʾīna main*, 79-80).

(K.A. NIZAMI)

SŪḲ AL-SHUYŪKH, a small town in southern ʿIrāḳ, on the right bank of the Euphrates (lat. 30° 53' N., long. 46° 28' E.). It lies some 40 km/25 miles to the south-east of al-Nāṣiriyya [*q.v.*] and at the western end of the Khawr al-Ḥammār lake and marshlands region, about 160 km/100 miles as the crow flies from Baṣra. The town is surrounded by date-groves extending along the river bank, but the marshy country, that extends into Baṣra, makes the air very unhealthy.

Sūḳ al-Shuyūkh was founded in the first half of the 18th century as a market-place (*sūḳ*) of the confederation of the Muntafiḳ [*q.v.*] Arabs; 4 hours to the east there was formerly the residence of the chief Shaykh of the Muntafiḳ, called Kūt al-Shuyūkh; the plural *shuyūkh* designates the members of the clan of this chief. To the end of the 18th century, Sūḳ was a small town with a mosque and surrounded by earthen walls (Beauchamp), and at the beginning of the 19th century it is described as an extremely dirty town, inhabited by 6,000 families and having a lively commercial intercourse with Baṣra and even with Būshīr and Bombay. According to Fraser, the Muntafiḳ Shaykh disdained to live in the town, but in Petermann's time (1854) he had a house there; this last-mentioned traveller estimated the number of the population at 3,000. At the end of the 19th century the number 12,000 is given (Cuinet, Sāmī), of whom 2,250 were Sunnīs possessing two mosques (*djāmiʿ*), and 8,770 Shīʿīs with one sanctuary (*masdjid*). The population also included 280 Jews and 700 Mandaeans or Ṣubbā. The latter lived for the greater part in the suburb Ṣubbūye on the opposite bank of the Euphrates. Before 1853, the Mandaean population had numbered 260 families, but the oppression of the Muntafiḳ had caused 200 families to emigrate to ʿAmāra. The German orientalist Petermann in the year 1854 visited in Sūḳ al-Shuyūkh the high priest of the Mandaeans, Shaykh Yaḥyā. As elsewhere, these people are here silversmiths; they are also builders of a special type of boats.

Under Ottoman Turkish administration, Sūḳ al-Shuyūkh became the capital of a *kaḍāʾ* of the same name in the *sandjak* of Muntafiḳ. In post-Ottoman ʿIrāḳ, the town was involved in the 1920 tribal uprising and in the unrest of 1935-6. In Republican ʿIrāḳ,

it now comes within the governorate of Dhū Ḳār, and continues to be a centre for date-growing and for the cultivation of rice along the western and north-western fringes of the Khawr al-Ḥammār.

SUKAYNA bt. al-ḤUSAYN, the *laḳab* of a granddaughter of ʿAlī b. Abī Ṭālib. There are different versions of her name; she is called either Umayma (according to Muḥammad b. al-Sāyib al-Kalbī, *al-Fihrist*, Cairo, n.d. 140), or Amīna or Āmina (*Aghānī*[3], xvi, 139-41); there is a preference for the last of these names because of the *khabar* cited by al-Madāʾinī about the origins of the character differences between her and her eldest sister Fāṭima: *wa-(i)smuhā Āmina wa-hādhā huwa al-ṣaḥīḥ*, her authentic name is certainly Āmina (*K. al-Murdifāt min Ḳuraysh*, in *Nawādir al-makhṭūṭāt*, Cairo 1392/1972, i, 68; *Aghānī*, xvi, 139).

Her mother, al-Rabāb bt. Imriʾ al-Ḳays al-Kalbiyya, belonged to one of the most illustrious Kalbī clans. Her grandfather, ʿAdī b. Aws b. Djābir, and her father, Imruʾ al-Ḳays b. ʿAdī, were the undisputed military leaders of Kalb (Muḥammad b. Sāʾib al-Kalbī, *Nasab Maʿadd wa 'l-Yaman al-kabīr*, Beirut 1408/1988, ii, 583). In a very ancient tradition, al-Kalbī reported that the grandfather of Sukayna went to see ʿUmar b. al-Khaṭṭāb and swore an oath of allegiance to him. Although he was a Christian, the caliph made him chief of the armies of the Ḳuḍāʿa, who had been converted to Islam after the conquest of Syria by the Muslim armies. It is said that he also received the signal honour of marrying his three daughters into the family of ʿAlī b. Abī Ṭālib, one to himself and one each to his sons al-Ḥasan and al-Ḥusayn (*ibid.*, ii, 584).

When compared to that for other female figures of this period or even later, the biographical details which have been retained in the sources are very considerable, but it is naturally difficult to distinguish between what must have been entertaining and probably anecdotal stories and the historical facts. To trace her biography it is best to use the most ancient account (which is also the least tricky), that of *K. al-Murdifāt* composed less than a century after the death of our heroine. The lacunae that are attested in her *sīra* have been filled in with details borrowed from serious works which have nothing to do with the amusing *adab*. The *Aghānī* remains a valuable source for studying her cultural activities.

At the time of her father's martyrdom at Karbalāʾ in 61/680, Sukayna seems to have been a young child (al-Ṭabarī, *Taʾrīkh*, ii, 232). In this case the affirmation of al-Madāʾinī (*op. cit.*, 64) copied by Abu 'l-Faradj al-Iṣfahānī (*Aghānī*, xvi, 149) may be contested. According to him ʿAbd Allāh b. al-Ḥasan b. Abī Ṭālib, who also died at Karbalāʾ, had married her and had already consummated the marriage.

For a short time she was forced to stay at Damascus (Ibn ʿAsākir, *Taʾrīkh*, xix, fol. 442; al-Madjlisī, *Biḥār al-anwār*, xlv, 155, 169, 194). Then she returned again to Medina, where she was brought up by her mother, who passed on to her a pronounced taste for intellectual matters (Vadet, *Une personnalité féminine*, 268, who states that her mother al-Rabāb was a poet). In about 67/686, at the time of the revolt of her brother ʿAbd Allāh, she married Muṣʿab b. al-Zubayr, the governor of ʿIrāḳ, and was provided with an immense *mahr*. This inspired the epigrams and maxims of the intelligentsia of the day (al-Balādhurī, *Ansāb al-ashrāf*, v, Jerusalem 1936, 282-3; *Aghānī*, xvi, triplet of Anas b. Abī Unās or of ʿAbd Allāh b. Hammām). As a result of this marriage, al-Rabāb was born, but the union was brutally cut short at the time of the reconquest of ʿIrāḳ by the Umayyads in 72/691 by the violent death of Muṣʿab.

After this ʿIrāḳ interlude, she returned to Medina, where in great haste Ramla, her sister-in-law, organised a new marriage for her; it was to be with ʿAbd Allāh b. ʿUthmān b. ʿAbd Allāh b. Ḥakīm b. Ḥizām, a distinguished member of the aristocracy of Ḳuraysh in Medina and who was attached to the Zubayrids (al-Zubayrī, *Nasab Ḳuraysh*, Cairo 1953, 232-3). This haste seems to have been motivated by the justified concern of Ramla to keep her safe from a possible marriage with the caliph ʿAbd al-Malik b. Marwān. The new union seems to have developed peacefully and resulted in the birth of two boys and two girls. The date of the death of her second husband, ʿAbd Allāh, has not been established.

There now followed two strange episodes involving two damaged unions. The one was with al-Aṣbagh b. ʿAbd al-ʿAzīz b. Marwān, which took place before the 21 Rabīʿ II 86/April 706, the date of his premature death (al-Maḳrīzī, *K. al-Muḳaffā al-kabīr*, Beirut 1411/1991, ii, 213-4, § 793) provoked the opposition of ʿAbd al-Malik. The second was with Ibrāhīm b. ʿAbd Allāh b. ʿAwf, and it was a means of allaying the gossip of the people of Medina who were in a state of consternation at the long widowhood of this great lady (*al-Murdifāt*, 68, where Zayd should be replaced by ʿAbd Allāh).

Her third marriage (and effectively her last) was a union lasting for many long years between her and Zayd b. ʿUmar, the grandson of ʿUthmān b. ʿAffān; it lasted from 87/705 until his death (*Nasab Ḳuraysh*, 120). After this Sukayna faded into anonymity; all that is recorded of her is the date and place of her death, Thursday, 5 Rabīʿ I 117/23 March 736, at Medina.

The pious classes and the puritans of her generation, and later the authors of *adab* and *ṭabaḳāt*, were astonished, indeed even scandalised, by Sukayna. There is an ambivalence in the portrait of her drawn by the sources which can be explained by many factors; there was her very strong personality, her reputation for caustic repartee, her much flaunted and extreme feminism, her undisguised scorn for the masculine race who would fall prey to some outrageous tricks which she would constantly play on the traditionalists (Sulaymān b. Yasār was one such victim, *Aghānī*, xvi, 144), on the puritans (*ibid.*, xix, 157) and on important officials of the region (such as the chief of police in Medina, *ibid.*, xvi, 145). It was certainly known that she had an illustrious lineage; she was good-looking, deeply chaste (*ʿafīfa*) and did not lack generosity or courage; she is even said to have confronted those who would insult her grandfather in the mosques (*ibid.*, xviii, 143). It seems that she was something of a feminine counterpart to the Medinan *sayyid sharīf* of her day.

However, these same sources also strongly emphasise the dark side of the personality of the woman, as well as her negative behaviour, which was regarded as not altogether consistent with the conduct of a respectable woman. Despite her youth and beauty she was never veiled (she was *barza*) nor followed the rules of a confined life-style. Moreover, she exhibited culpable coquetry in the way that she showed off her beauty with a special hair-style, a style which was actually named after her as *al-ṭurra al-sukayniyya*, "Sukayna-style curls."

Another way in which she laid herself open to very sharp criticism was in her relations with the poets of the *tashbīb*. It is certainly known that ʿUmar b. Abī Rabīʿa [*q.v.*] made her the heroine of one of his pieces (*Sharḥ dīwān ʿUmar b. Abī Rabīʿa*, Beirut 1412/1992, 67), and perhaps also the same applies to al-ʿArdjī (*al-Murdifāt*, 69). Her marriages and love life are represented in a tendentious manner, more like the excesses of a less scrupulous woman, as if she were ready to marry anyone. But it is easy to forget that for a woman to have many husbands was a common occurrence in Ḳuraysh society. What is portrayed in her literary salon and her *madjlis* are the social gatherings of a bohemian with dissolute morals (Vadet, *L'esprit courtois*, 66-7). Apart from her profligacy, by her conduct and by her happy and ironic irrepressibility Sukayna seems to prefigure the libertines (*mudjdjān* [see MUDJŪN]) of the 2nd/8th century.

But Sukayna stood out from her companions, the ladies of the Ḥidjāzī aristocracy (as listed in Vadet, *op. cit.*, 68-72; for other names see *Murdifāt*, 60-80) because of her cultural involvement in the spheres of poetry and music.

The place of her residence in Medina attracted many poets, well-known singers and lovers of good music. All this activity was encouraged by the prevailing atmosphere of peace in the region after 79/698. Very often the great *ghazal* poets of the Ḥidjāzī school came to recite their poems, to listen to remarks, and to flaunt their talent. It is known that they broke with the traditional *nasīb* [*q.v.*] and introduced into ancient Arab poetry small narrative expositions, by using exchanges on the subject matter between the principal protagonists. Sitting beside ʿUmar b. Abī Rabīʿa they would quote al-Aḥwaṣ, Djamīl b. Maʿmar, Kuthayyir b. ʿAbd al-Raḥmān and their transmitters. Among those who went there when they were in the neighbourhood were Djarīr and, in particular, al-Farazdaḳ.

Several kinds of schemes were given approval there. It was Sukayna who would open the discussion thus: "Was it you who wrote the following verses?", she would enquire. The poet who replied in the affirmative would find himself rewarded with money. At other times, she would make remarks on the inadequate use of an expression, an overlapping of elements, or a motif that had appeared in the verses that were cited (*Aghānī*, xxii, 277, where she shrewdly points out the clumsy expression of the motif of the self-sacrifice of the lover in al-Namir b. Tawlab). Much less often she would embark on a comparison, citing the same motif as it had been used by someone else (*ibid.*, xvi, 161-3, the famous *madjlis* with Djarīr, al-Farazdaḳ, Kuthayyir, Djamīl and al-Aḥwaṣ). It is easy to imagine the scene; one can also speak of an embryonic literary discussion with fragmentary remarks on certain points of detail.

Sukayna's support revived the knowledge of elegiac poetry in her epoch. In this way, she encouraged the *ghazal* poets to continue in their style of poetry during the time when they were being censored by the higher spheres of society. Moreover, it is possible to detect within her a preference for what could be called natural composition (*maṭbūʿ*), which worked to the detriment of the poetry of effort. This was why in her eyes the poetry of Djarīr was superior to that of al-Farazdaḳ (*Aghānī*, xxi, 366-7), and the compositions of Djamīl surpassed those of his peers. Nevertheless, she esteemed truth more highly than any other quality, and this led her to condemn a triplet by al-ʿArdjī and a threnody dedicated by ʿUrwa b. Udhayna to the memory of his brother Bakr, because of the discrepancy between what was reality and the much-embellished portrait that had been drawn by the piece (*Aghānī*, xviii, 328, 334; Ibn ʿAsākir, fols. 444-5).

Sukayna had a lasting influence on music in the Ḥidjāz, and Ibn Suraydj [*q.v.*] considered himself her protégé. He would reserve for her the freshness of all his new creations, and more than once she would send him verses and ask him to set them to music for her. He is reported to have forsaken music after his conversion but he did not come any less frequently to her house; he came for three days at a time to sing with ʿAzza al-Maylāʾ (*Aghānī*, xvii, 46-7).

Gharīḍ was the slave of Sukayna, and it was she who discovered the musical talents he possessed, presided over his training and decided what his speciality should be. The *Aghānī* reports that Sukayna sent her slave, who was called ʿAbd al-Malik, to Ibn Suraydj and demanded that he teach him the funeral melodies (*niyāḥa*). On the death of Muḥammad b. al-Ḥanafiyya he was entrusted with the singing of the funeral songs. He excelled so much in this duty that the women cried out, "Lamentations like these are overwhelming (*gharīḍ*)!", which is why he was given the epithet Gharīḍ (*Aghānī*, i, 255).

(A. ARAZI)

SUKHF (A.), a word which the Arab lexicographers apply almost exclusively to the intellect (*ʿaḳl* [*q.v.*]), connecting it etymologically with the form X verb *istakhaffa*, and giving its root meaning as "thinness", "lack of substance". The adjectival form is *sakhīf*: a man is *sakhīf* "when he is shallow-minded (*nazik*) and frivolous (*khafīf*)" (Ibn Durayd, *Djamharat al-lugha*, Ḥaydarābād 1345/1926-7, s.v.). It is often used indiscriminately to designate "obscenity" (which is, more properly, *fuḥsh*), in which cases it frequently goes hand-in-hand with *mudjūn* [*q.v.*].

The mediaeval Arab literati appear not to have used *sukhf* as a designation of a poetic genre, preferring *mudjūn*. It is difficult to determine when *sukhf* and *sakhīf* mean "shallow-wittedness" and when they mean "obscene": see e.g. the opinion expressed by Ibn Sallām al-Djumaḥī (d. *ca.* 232/847 [*q.v.*]) concerning the pre-Islamic poet Zuhayr [*q.v.*], that he had the least tendency to *sukhf* (*Ṭabaḳāt fuḥūl al-shuʿarāʾ*, ed. M.M. Shākir, Cairo 1952, 53), "levity", or "foolishness", and its rebuttal by the poet-caliph Ibn al-Muʿtazz (d. 296/908 [*q.v.*]), who construes it as meaning "obscene", quoting two verses of a vulgar and abusive nature (al-Marzubānī, *Muwashshaḥ*, ed. by ʿA.M. al-Badjāwī, Cairo 1965, 59-60) (see further G.J. van Gelder, *The bad and the ugly*, Leiden 1988, 16); Ibn Dāwūd al-Iṣfahānī (d. 297/910 [*q.v.*]), in his *Kitāb al-Zahra*, ed. I. al-Samarrāʾī and N. al-Ḳaysī, Baghdād 1975, 169, connects it with *safah*, "folly"; a two-fold use of the root is found in the *Dīwān al-Maʿānī* of al-ʿAskarī (d. 395/1005 [*q.v.*]), Cairo 1352, i, 205 (*sakhīf* = shallow-witted, of some verses by Ibn al-Rūmī [*q.v.*]), and i, 211 (*sakhīf* = obscene, of poetry the transmission of which should not be neglected). In the *Maḳāma al-Ṣaymariyya* of Badīʿ al-Zamān al-Hamadhānī (d. 398/1008 [*q.v.*]), ed. M. ʿAbduh, Beirut 1973, 212, al-Ṣaymarī tells how on his peregrinations he amassed "the poems of the witty and the frivolities of the entertainers" (*ashʿār al-mutazarrifīn wa-sukhf al-mulhīn*); in his *Rasāʾil* "the *sakhīf* or exponent of *sukhf* is defined ... as 'the one who is heedless about the consequences to him of what he does, and the one whose crown of the head is unperturbed by a blow'" (C.E. Bosworth, *The mediaeval Islamic underworld*, Leiden 1975, i, 64), a definition similar to that offered of *mādjin* by Ibn Manẓūr, *LʿA*[1], s.v.

It is with the Būyids and with al-Ṣāḥib Ibn ʿAbbād [*q.v.*] and Ibn al-Ḥadjdjādj [*q.v.*], in particular, that *sukhf* meaning "obscenity" became a slogan of the age, characterised by a fascination with the more sordid aspects of life and society which centred around, and was fuelled by, the interests of Ibn ʿAbbād. His patronage and predilections gave such a fillip to the taste for the obscene that it became a literary vogue and a social accomplishment. Its emergence (connected with burgeoning sophistication and urban progress, as well as with literary phenomena, being, along with *mudjūn* poetry, a reaction-formation to the poetry of *madīḥ* and *zuhd* [*q.vv.*]) was a response to a change in the reading public, catering to the popular taste. Ibn al-Ḥadjdjādj's poetry, of both a traditional and an "underground" stamp, was hugely popular throughout the Islamic lands and brought him high rewards. It reflects the biparous nature of *sukhf* itself: many of his traditional panegyrics contain items of frivolity, while his "alternative", scabrous pieces defined a poetic type, imitated by subsequent centuries.

SUKKAR, from Pers. *shakar* or *shakkar*, from Skr. *carcarā*, Prakrit *sakkarā*, the sap crushed from the sugar-cane (*ḳaṣab al-sukkar*) and solid sugar.

The origin of sugar cane and its early domestication cannot be precisely determined, but it evidently derived from the family of large *Saccharum* grasses which grow in India and Southeast Asia. From India, cultivation of the plant spread westward. Clear references to cultivation in Persia belong to the period immediately following the Islamic conquest, but it was possibly known somewhat earlier; papyrus evidence indicates that sugar cane was grown in Egypt by the mid-2nd/8th century and diffusion across North Africa was steady although its entry into areas of the Iberian peninsula under Muslim domination may not have occurred until the 5th/11th century. From Crusader times, the eastern coast of the Mediterranean and later Cyprus, were important sources of supply for Christian Europe.

Plant terms in Arabic frequently varied from region to region and possibly over time as well. Supposed synonyms can further lead to confusion. The same is true of the by-products of the sugar-cane resulting from different stages of preparation and refinement, that is, pressing, filtering and decocting. For example, two common terms for types of sugar are (*sukkar*) *ṭabarzad* and *sukkar nabāt*. Maimonides states they are the same, the latter replacing the former in Egypt, while Ibn al-Ḳuff lists them separately as distinct varieties. The difference appears to be that *ṭabarzad* set hard in moulds (sugar loaf) while *nabāt* set on palm sticks placed in the recipient where it was being prepared; *nabāt* was also produced from other substances such as rose syrup or violet syrup. Al-Anṭākī, on the other hand, describes *ṭabarzad* as produced by adding to the sugar one-tenth of its bulk in milk while the mixture cooked (*Tadhkira*, i, 195). This, however, may only have reflected a practice in Syria. Another common type of sugar was called *fānīd*, made in elongated moulds and which "melted quickly in the mouth" (Ibn al-Ḳuff, 314); its highly refined state was produced by adding the oil of sweet almonds or finely-ground white flour to the process of decoction. Finally, a sugar called *sulaymānī*, was made from hardened "red sugar" (*sukkar aḥmar*) broken into pieces and further cooked to remove any impurities (*Tadhkira*, i, 194).

Sugar was one of several substances used as a "sweetening" agent in mediaeval cooking as well as medical preparations. Honey, molasses (*dibs*) and fruit sugars were also commonly used. At times, their purpose served as a preserving agent for certain foods. It is impossible to judge the relative popularity of one sweetener over another. One medical writer, al-Tamīmī (d. late 4th/10th century) wrote of sugar that although "not one of the manna fallen from the sky" it was the "full brother of honey, its equal and associate". Its benefits included aiding the performance of ingested drugs, both laxative and non-laxative varieties, because it broke up their bitterness, softened any coarseness in their mixtures and eased their acceptance by the body, "conducting them to the very depths of the bodily organs" (Marín and Waines, *Manuscripts*, 130). Sugar was described in Galenic terms as hot and moist. Despite its many benefits, sugar was nonetheless judged to be harmful to the stomach at times

when yellow bile prevailed in it; the *ṭabarzad* variety, however, because it was less warm and moist than other sugars, was therefore less likely to be transformed into yellow bile. A number of medical receipts employing sugar are preserved in Abu 'l-ʿAlāʾ Zuhr's *K. al-Mudjarrabāt*, although they are considerably outnumbered by those using honey.

On the other hand, in a late culinary manual, the *Kanz al-fawāʾid*, sugar appears more frequently in preparations than honey. Moreover, unlike medical receipts in which sugar and honey rarely occur together, this is often the case in dishes prepared in the domestic kitchen. Dishes containing meat and vegetables were broadly classified as either "sour" (or "acidic", *ḥāmiḍ*) or else "sweetened" by virtue of the presence of a sweetening agent which, in the case of sugar, could be added either during, or sprinkled on top of the dish at the end of the cooking process. The intention in other preparations was to produce a "sweet-sour" effect by combining vinegar with a sweetener. Sugar used in the household seems to have been purchased in a state which required it to be "crushed", "pounded", "powdered" (*madjrūsh, mahrūs, madķūķ*) in the kitchen itself; recipes instruct that the sugar used should be "pounded (in a mortar) and sieved". Sugar was used, therefore, in a wide variety of preparations including, naturally, sweetmeats such as the popular *kunāfa* and *sanbūsak*, pickle preparations and other condiments. Finally, it may be noted that sugar was also an ingredient in several kinds of "home remedies" such as the electuary (*maʿdjūn*), the stomachic (*djawarsh*) and medicinal powders (*safūf*) prepared in the household as aids for the maintenance of the general health and welfare of its members.

al-SUKKARĪ, Abū Saʿīd al-Ḥasan b. al-Ḥusayn b. ʿUbayd Allāh b. al-ʿAlāʾ b. Abī Ṣufra b. al-Muhallab, Arabic philologist from Baghdād, noted for his expertise in Arabic poetry, d. 275/888. His Muhallabid [*q.v.*] ancestry seems to be rather a link of clientage, as was the case with other scholars also (cf. Ibn al-Athīr, *al-Ansāb*, s.v. al-Muhallabī). Al-Sukkarī marks a milestone in the process of collection and composition, commenting and edition of poetic *dīwāns*. The exact dimensions of his personal contribution to the shape of materials which he received from his teachers or informants is hard to assess in detail, since old pieces of evidence are rare. We may perceive from what is preserved of his works, however, that he transmitted and edited collections, and also gathered and composed poetic *dīwāns* himself.

Born in 212/827-8, he cannot have met with the early authorities in this field, e.g. Abū ʿAmr al-Shaybānī, Abū ʿUbayda and al-Aṣmaʿī, as Yāķūt rightly points out (*Udabāʾ*). Even so, he often refers to them in his commentaries; much of the material seems to have come to him through Muḥammad b. Ḥabīb [see ibn ḥabīb], who is the most important of his teachers. Al-Sukkarī transmitted his *al-Muḥabbar*, *Naķāʾiḍ Djarīr wa 'l-Farazdaķ* and possibly *al-Mughtālīn* (*GAS*, ii, 179), and used Ibn Ḥabīb's collection of verses and commentaries as a starting-point for his editorial activity as editor-transmitter. In this manner, al-Sukkarī's redactions of the—preserved—*dīwāns* of Ḥassān b. Thābit (ed. W.N. ʿArafat, i, 11), ʿUbayd Allāh b. Ķays al-Ruķayyāt (ed. N. Rhodokanakis, p. iii), Imruʾ al-Ķays (ed. Ahlwardt, p. vi), al-Ḥuṭayʾa (ed. N.M.A. Ṭāhā, 13), al-Akhṭal (ed. A. Salhani, 3), Djarīr (ms., *GAS*, ix, 281), Surāķa b. Mirdās al-Aṣghar (ed. S.M. Husayn, in *JRAS* [1936]) are related to the authority of this teacher. A short version (*mukhtaṣar*) of Ibn al-Kalbī's *Djamharat al-nasab*, a work also transmitted by Ibn Ḥabīb, is attested as a redaction of al-Sukkarī as well (W. Caskel, *Ǧamharat an-nasab*, Leiden 1966, i, 100). This list can in no way lay claim to completeness, but may give an impression of the importance of the materials which he handed down to us.

Al-Sukkarī is also known for his "composition (*djamʿ*) of *dīwāns*" as al-Dhahabī expresses it (*Siyar*, xiii, 126), and most famous among his works of this kind is the edition and commentary of the tribal *dīwān* of the Hudhayl [*q.v.*]. Another tribal *dīwān* in his redaction was that of Taghlib as used by ʿAbd al-Ķādir al-Baghdādī (*Khizānat al-adab*, i, 304, 309; cf. *GAS*, ii, 2 338). Also, the poetry of individual poets was gathered together and edited by him, like that of Kaʿb b. Zuhayr (ed. T. Kowalski, 1) and many others. Ibn al-Nadīm has a long list of poets whose *dīwāns* al-Sukkarī gathered or transmitted (*Fihrist*, ed. Tadjaddud, 178). No manuscripts of his works on lexicology and poetry have, it seems, survived, but Ḥādjdjī Khalīfa (*Kashf al-ẓunūn*, ed. Flügel) testifies, apart from *dīwāns*, to a *Kitāb al-Wuḥūsh* and *al-Abyāt al-sāʾira*. Fragments of his editorial work in poetry, as well as narrative materials about poets, are to be found scattered in classical Arabic literature, mainly in the *Khizānat al-adab* and, of primary importance, the *Aghānī*; here, for instance, a collection of the poetry of Ghaylān b. Salma is quoted from a copy of al-Sukkarī's own handwriting (*Aghānī*[3], xiii, 231) and his famous *Akhbār al-luṣūṣ*, parts of which are also preserved with the *dīwān* of Ṭahmān b. ʿAmr al-Kilābī (ed. W. Wright, in his *Opuscula arabica*), are mentioned (*Aghānī*[3], xxiv, 169).

Bibliography: Brockelmann, I[2], 108-9, SI, 168; Sezgin, *GAS*, ii (poetry), viii (lexicography), ix (grammar), passim (see indices). For the *Aghānī*, see M. Fleischhammer, *Quellenuntersuchungen zum Kitāb al-Aġānī*, Halle/Saale 1965 (unpublished ms.), ch. 3, no. 36, and ch. 4, no. 42; in addition to the biographical literature mentioned in these reference works, see Dhahabī, *Siyar aʿlām al-nubalāʾ*, xiii, 126. (S. Leder)

SUKNĀ (a.), lit. "abode". This is a Ķurʾānic legal term referring to a women's right upon her husband to provide shelter for her (XL, 6). It also refers to her right to stay in the matrimonial house during her waiting period following divorce or death (XL, 1). A famous statement of Fāṭima bt. Ķays is recorded by al-Bukhārī and Muslim in their collections of *ḥadīth*, that *suknā* and *nafaķa* were not granted to her by the Prophet when she was irrevocably

divorced. Her statement lead to a disagreement among scholars. Ḥanafīs follow the view of ʿUmar and ʿĀʾis̲h̲a who rejected Fāṭima's statement on the ground of the strength of the opposing Ḳurʾānic verse and prophetic traditions. Other scholars, including ʿAlī, Ibn ʿAbbās and the Imāmī school of the S̲h̲īʿa, deny both *suknā* and *nafaḳa* on the grounds of Fāṭima's statement. These two rights are only given to a woman who has not been irrevocably divorced. The Ḥanbalī Ibn Ḳudāma extended the range of exclusions to include a woman divorced before the consummation of the marriage. The S̲h̲āfiʿī and Mālikī schools maintain that the right to *nafaḳa* would be lost following a final pronouncement of divorce, unlike the right to *suknā*, since it is specified by Ḳurʾān, LXV, 6. The Ḥanafī tendency unreservedly to give a divorcee both *nafaḳa* and *suknā* seems to be the tendency adopted by some modern Muslim Family laws, including the Pakistani Ordinance, 1961.

(M.Y. Izzi Dien)

SUḲRĀṬ, the Greek philosopher Socrates. There is no specific discussion of the teachings of Socrates on the part of the Arabo-Muslim authors who mention his name. This also applies to bibliographers such as Abū Sulaymān al-Sid̲j̲istānī (*Ṣiwān al-ḥikma*), Ibn al-Nadīm (*Fihrist*), Ibn al-Ḳifṭī (*Taʾrīk̲h̲ al-ḥukamāʾ*) and Ibn Abī Uṣaybiʿa (*ʿUyūn al-anbāʾ*). The small amount of information supplied by these diverse authors is, furthermore, repetitive. According to Abū Sulaymān, Socrates, Plato and Aristotle acquired Egyptian wisdom from Pythagoras. Ṣāʿid al-Andalusī (*Ṭabaḳāt al-umam*, tr. R. Blachère, Paris 1935) merely states that Socrates was a disciple of Pythagoras, adding that "He confined himself, in philosophy, to the study of the metaphysical sciences. He scorned the pleasures of this world and rejected them, and publicly proclaimed his disagreement with the Greeks over the worship of idols". According to Ṣāʿid, it was this opposition to idolatry which led to the condemnation of Socrates. He relates a legendary episode and concludes by attributing to Socrates "sublime counsels", remarkable "institutions" and memorable statements. "He possessed opinions similar to those of Pythagoras and of Empedocles on the divine attributes. Nevertheless, on the subject of the Afterlife, he professed unfounded notions, far removed from sound philosophy and verified doctrines" (61). It may be noted that Ṣāʿid al-Andalusī's analysis is influenced by his Muslim sensibilities. In particular, no doubt referring to Plato's *Phaedo*, he attacks a conception of the immortality of the soul which takes no account of the resurrection of the body. This treatise by Ṣāʿid inspired Ibn al-Ḳifṭī and Ibn Abī Uṣaybiʿa. Ibn al-Ḳifṭī numbers Socrates among the Five Sages, with Empedocles and Pythagoras, Plato and Aristotle. Only Ibn Abī Uṣaybiʿa refers specifically to one of Plato's writings, under the title of *Kitāb Iḥtid̲j̲ād̲j̲ Suḳrāṭ ʿalā ahl At̲h̲īniya*, which could be the *Apology*. But it seems certain that, for the *falāsifa*, there was no distinction between the thought of Socrates and that of Plato.

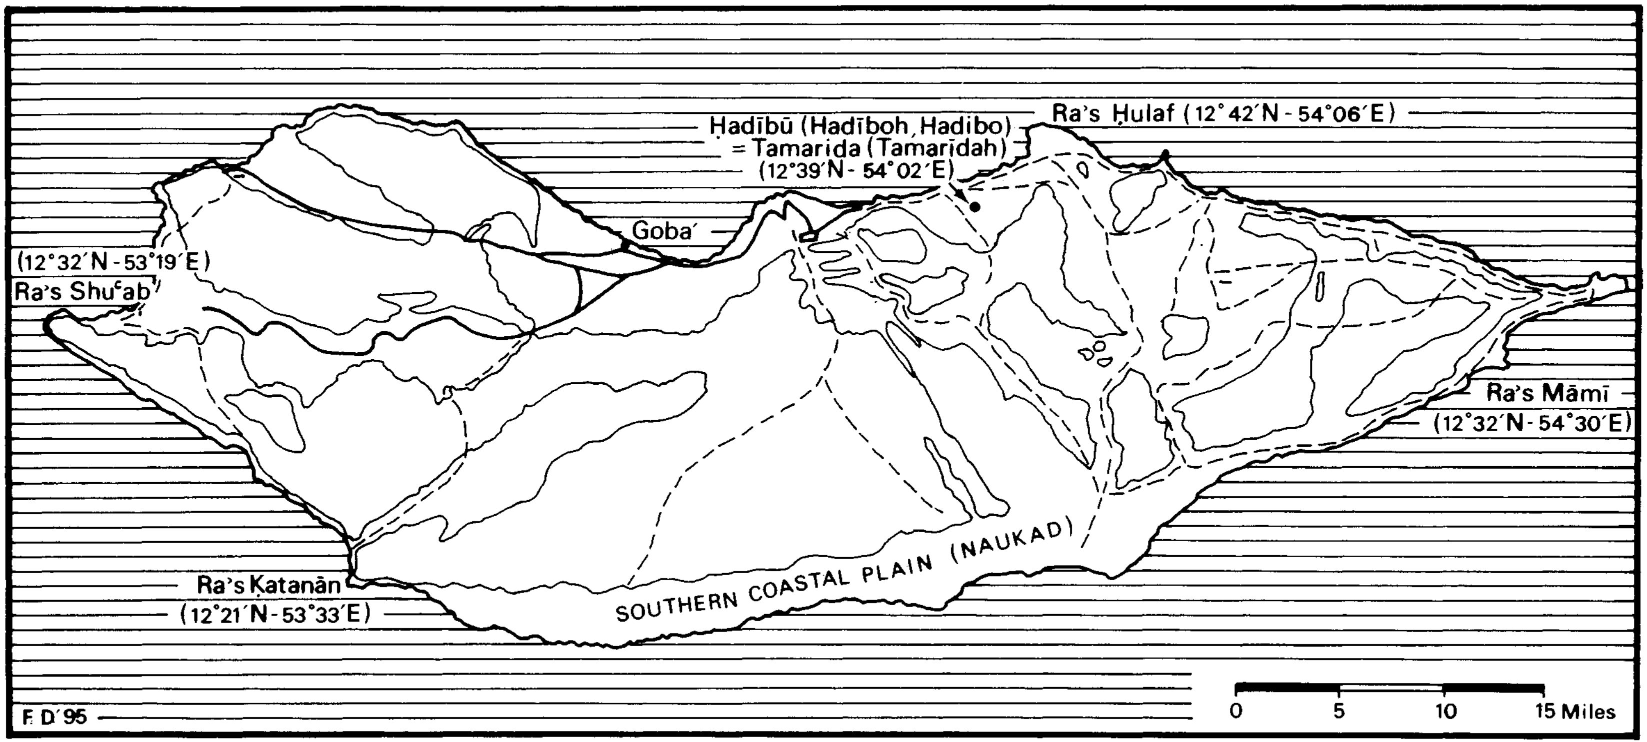
Bibliography: Given in the text; see also I. Alon, *Socrates in Medieval Arabic Literature*, Leiden 1991.

(R. Arnaldez)

SUKŪN. In philosophy and in grammar, [see al-ḥaraka wa 'l-sukūn].

SUKŪT (a.), lit. "silence", a term of Islamic law. Here, *sukūt* refers to an individual's action of not actively expressing an opinion when involved in an action or contract that requires acceptance or rejection. This "tacit" manifestation of will can only be clarified by circumstance. The concept is highlighted by the legal maxim that states "no statement can be ascribed to a silent person, but silence when a need arises is a manifestation of will". The application of this rule can be found in the silence of a landlord who demands an increase on the former rent. The continuation of tenancy is viewed as including positive acceptance of the old rent (*Mad̲j̲alla*, art. 438). In contrast to this is the silence of the owner who is asked to lend his property; this is considered to mean a negative answer (*Mad̲j̲alla*, art. 805). This appears to create a situation in new cases when the arbitrary decision of the judge is the only factor for deciding what needs manifestation and what does not.

The contrasting variation of the "value" of silence in Islamic law seems to place significant importance on the psychological "state" of individuals performing contracts. This is best represented in the *sukūt* that is taken as acceptance (*riḍā*) in wedding ceremonies when a virgin bride is asked, "do you take this man to be your husband?" This is based on the grounds that she is too embarrassed to say "yes". This contrasts with the previously married woman who is expected explicitly to declare her will.



Bibliography: Salīm Rustum Bāz al-Lubnānī, *S̲h̲arḥ al-Mad̲j̲alla*, repr. Beirut 1986, 344, 447, 244, 1180; A. Zaydān, *al-Madk̲h̲al li-dirāsat al-S̲h̲arīʿa al-Islāmiyya*, Bag̲h̲dād 1967, 94. (M.Y. Izzi Dien)

SUḲUṬRA (other transcriptions: Suḳuṭrā, Suqutra, Soqotra, Soḳoṭrā, Socotora and Socotra; in Arabic, the final letter may be an *alif maḳṣūra* or a *tāʾ marbūṭa*), is an island in the Indian Ocean, at a distance of approximately 300 km/186 miles from the coasts of Arabia (Ras Fartak) and 240 km/150 miles from Ras Asir (Cap Guardafui) in Africa. Its geographical coordinates are, from east to west, Raʾs Māmī (12° 32' N. 54° 30' E.) to Raʾs S̲h̲uʿab (12° 32' N. 53° 19' E.), and from north to south, Raʾs Ḥulaf (12° 42' N. 54° 06' E.) to Raʾs Ḳatanān (12° 21' N. 53° 33' E.).

The dimensions of the island change according to the sources:

Source	*Length*	*Breadth*	*Surface*
EI[1] (1934)	132 km	40 km	km² 3579.2
West Arabia (1946)	138 km (75 miles)	37 km (20 miles)	
Red Sea Pilot (1967)	129 km (70 miles)	37 km (20 miles)	km² 4801 (1,400 sq. miles)
D̲j̲ug̲h̲rāfiya (1971)	—	—	(1,400 sq. miles)
Les Yemen (1979)	130 km	40 km	

It is part of an archipelago which includes at least three other islands: ʿAbd al-Kūrī (12° 12' N., 52° 13' E.) and the "Brothers", that is, D̲j̲azīrat Samha (12° 09' N., 53° 03' E.) and D̲j̲azīrat Darsa or Darza (12° 06' N., 53° 16' E.). According to *EI*[1], the population was estimated at 13,000 "Moslems"; the editors of *West Arabia* (1946) calculated that it was between 6,000 and 8,000; according to the *D̲j̲ug̲h̲rāfiya*, its inhabitants are 1,500; and finally, Alain Rouaud states that in 1979 the population was around 20,000, to whom 200 inhabitants of ʿAbd al-Kūrī must be added.

SOUTHERN COASTAL PLAIN (NAUKAD)
F. D′95
0 5 10 15 Miles

SUKUṬRA

1. Topography and demography.

Situated near the track of vessels bound to and from the east, Suḳuṭra is generally sighted by vessels entering or leaving the Gulf of Aden; but being exposed to both monsoons and having no harbours in which vessels can at all times anchor with safety, it is but little visited. Jabal Haggier is the summit of the island, and attains an elevation of 1,419 m/4,654 feet.

The south-western part of the island is arid and barren, but much of the remainder is comparatively fertile, being well-watered by the monsoon rains of July and December. The southern coast preserves a nearly unbroken line, but the northern and western coasts are broken into a succession of small bays, generally with streams at their head, affording anchorage according to the seasons, but none of them is safe at all times of the year. Over a broad area, hills rise abruptly in vertical cliffs several hundred feet high, but at other places there are plains, which attain a breadth of as much as 9 km/5 miles between the base of the hills and the coast. On the southern side is the plain of Naukad, the largest plain, which, extending nearly the whole length of the island, is for miles covered with dunes of drift sand. On the northern side, these plains occur chiefly at the mouth of streams, and are the sites of the only places which may be called towns.

The internal part of the island may be roughly described as broad, undulating, and intersected by limestone plateaux, with an average elevation of about 300 m/984 feet, that flank westward, southward and eastward, a nucleus of granite peaks, which attain elevations of over 1,200 m/3,936 feet. These are seldom free from clouds, but when the weather is clear their appearance is broken and picturesque. The whole of this hilly region is deeply intersected by ravines and valleys, which, in the rainy seasons, are occupied by roaring torrents, but the majority are empty in the dry season. There are, however, many perennial streams.

The population has a composite character that struck the travellers of Antiquity: Arabs, Indians, Somalis, and Blacks, the descendants of mixed slaves.

Inland, they are nomad "Bedouins" and live in caves. They practise a rotation of the pasture land to feed their flocks of goats, sheep and camels. They also gather the resin of dragon's blood (Dracaena Cinnabari), incense and aloe, and make the most of some palm groves and tobacco plants. The southern coast is deserted. The habitants of the northern coastline are scattered in some twenty small villages: they practise fishing and exchange their surplus with the "Bedo" against meat and milk.

The language spoken in the island is Suḳuṭrī (Soqotri, Socotri, etc.); see below, 3.

2. History.

The long history of Suḳuṭra extends back into mythology. One suggested derivation of the name is from the Sanskrit, *Dvipa Sukhādhāra* according to *Western Arabia*, or *dvīpa sukhātara*, according to J. Tkatsch in *EI*[1], which are to be translated "Isle of the Abode of the Bliss" or "l'île heureuse". There is also a theory that this was corrupted into *Sūḳ al-Ḳaṭra* "market of the exudations", but this is apparently untenable on philological grounds.

Suḳuṭra has been identified with the Panchaia of Virgil, which is connected with the story of the Phoenix, which lies down to die in a perfumed nest of cinnamon and frankincense sprigs. A connection has also been suggested with Castor and Pollux, the Dioscuri, twin sons of Jupiter and Leda, whence possibly the Roman name Dioscoridis Insula. To this day, the Arabs call dragon's-blood *dam al-akhawayn* "the blood of the two brothers".

Iskuduru, one of a list of countries conquered by Darius (5th century B.C.), is believed to have been Suḳuṭra. The island was apparently visited, along with the Land of Punt, by the ancient Egyptians in order to obtain frankincense by the direct sea-route. The anonymous writer of the *Periplus* referred to Suḳuṭra as containing (1st century A.D.) a mixed Greek-speaking population, trading with Arabia and India, especially in turtle-shell of high quality; while Cosmas Indicopleustes, visiting it in the 6th century, thought that the Greek-speaking people had been placed in "Dioscorides" by the Ptolemies. Traders from Muza (the Arabian Red Sea coast) and Barygaza (the Gulf of Cambay) visited the island for turtle-shell. The island is mentioned in pre-Islamic inscriptions from Ḥaḍramawt, spelt in the *musnad* script *s³krd*, as an appanage of Ḥaḍramawt. In Islamic times, as far back as the 10th century it was a noted haunt of pirates from Cutch and Gudjarāt. Marco Polo, among other writers, described the harpooning of whales round its coasts for ambergris and sperm oil.

Several Arab geographers, among them Yāḳūt, al-Ḳazwīnī, al-Idrīsī, al-Baghdādī (d. 739/1338) and al-Ḥamdānī (d. 945/1539), mention Suḳuṭra in their descriptions. The information which they give is, however, limited to mentioning the gathering of aloes [see ṢABR] and dragon's blood, and they state that most of the inhabitants are "Christian Arabs". Al-Idrīsī adds that Alexander the Great had replaced the primitive inhabitants of the island with Greek immigrants on the advice of his tutor and friend Aristotle. In 1507, the Portuguese Afonso de Albuquerque conquered the island, but this occupation did not last long; it was, however, the first contact with expanding Europe.

The islands for long formed part of the domains of the Imām of Masḳaṭ and the Mahri Sultan of Ḳishn and Suḳuṭra. The island was occupied by a British force, following an agreement with the Sultan in 1834, for about five years while the Government of India was negotiating the purchase of the island as a coaling station. In 1886 the Sultan accepted a Protectorate Treaty. All the islands then became part of the Aden Protectorate, administered from India through the Resident at Aden, till the transfer of the Protectorate to the Colonial Office in London in 1937. The Sultan, whose capital was Hadibu, ruled with the help of his *wazīr* and of headmen appointed from the coastal settlements and the pastoral clans of the interior.

The first landing ground for aircraft was established on the Hadibu plain in 1940. This was replaced in 1942 by a larger landing-ground on the northern coastal plain, some 2 miles west of Kathub. According to Alain Rouaud, "the Soviet Union apparently used the same landing grounds for their planes operating in the Indian Ocean; they also established a base for their fleet of submarines and 30 other boats. The presence of these military bases explains the thick veil and the absence of information which the South Yemenis kept over the island, since camps for political prisoners were to be found there. Situated at the same distance from Mogadishu and Addis Ababa on the petroleum route that passes by the Cape of Good Hope, or on that going through the Suez Canal, Suḳuṭra is a particularly strategic centre in a zone of conflicts".

On 22 May 1990, the Arabic Republic of Yemen and the Popular Republic of Yemen joined to form

the new state of the Republic of Yemen, in which Suḳuṭra is now included.

Bibliography: Most of the bibliographies, even those dealing specifically with the Arabian Peninsula, ignore the existence of Suḳuṭra. Moreover, the scattered information already published is not recent or up-to-date. With reference to the historical part of the period before the appearance of Islam, the reader should refer to the *EI*[1] art., where detailed information can be found.

1. Geographical co-ordinates and place-names. *People's Democratic Republic of Yemen. Official standard names gazetteer*; United States Board on Geographic Names 1976, Washington D.C. (A list of *Soḳoṭrī* names was supplied by the *Permanent Committee on Geographical Names* (*U.K.*); they are the result of field work by the late Professor Tom Johnston of S.O.A.S., London.)

2. Description of the island. *EI*[1], art. *Soḳoṭrā* (1934); Naval Intelligence Division, *Western Arabia and the Red Sea*, London 1946, Appendix F, Socotra, 609-15; *Red Sea and Gulf of Aden pilot, comprising the Suez Canal, etc. Socotra and its adjacent islands*, 11th ed. London 1967 (contains a detailed description of the coasts and anchorages of the islands); *Djughrāfiya Djumhūriyyat al-Yaman al-dīmūḳrāṭiyya al-shaʿbiyya*, Cairo 1971; A. Mājid al-Najdī*, London 1971, index, s.vv. Socotra, ʿAbd al-Kūrī, Darza, Samḥa. (G. Oman)

3. Language.

The term Suḳuṭrī/Soḳoṭrī denotes both an inhabitant of the island of Suḳuṭrā and the language of the Yemeni islands of Suḳuṭrā and ʿAbd al-Kūrī and the nearby islet of Samḥa, situated in the Gulf of Aden off Cape Guardafui. Suḳuṭrī (S), realised as [sḳʌṭri], is one of the six languages of the group known as "Modern South Arabian Languages" (MSAL) currently spoken in Yemen and in ʿUmān and belonging to the southern branch of western Semitic, as do Arabic and the Semitic languages of Ethiopia. It should be stressed that there is no inter-comprehension between Arabic and the MSALs, nor between S and the other MSALs. The number of speakers is hard to reckon in the absence of recent official figures; the population of Suḳuṭrā may, however, be estimated at approximately 50,000 (Naumkin and Porkhomovskiy, 1981, 3), that of ʿAbd al-Kūrī at around 260 (Naumkin, 1993, 342, 359 n. 2), that of Samḥa at less than 50 (University of Aden, 1986, 9, Arabic section). S, not a written language, is the mother tongue of all the inhabitants of the islands; it is used in all facets of private life and in social intercourse, as well as in oral literature (songs, poetry, anecdotes, traditional tales); outside the islands, it is spoken within communities of expatriate islanders (especially in the Emirates). Arabic, the national language, is the second language of the islands in question, spoken in administrative contexts. It is taught in schools and through contact with Arabophones living on the northern coast of Suḳuṭrā, in particular in Ḥadībo or, for the fishermen of ʿAbd al-Kūrī, with Arabophones on the coast of Ḥaḍramawt. Many Bedouin women living in remote regions of the islands, born before the 1960s and never having had access to education, possess little or no knowledge of the national language. Arabic also serves as the language of communication with speakers of one other MSAL, Mahrī [*q.v.*], which for historical, geographical and economic reasons is the only MSAL having contact with S.

The first document regarding S dates back no further than 1835, when J.R. Wellsted compiled a list of 246 words and expressions in this language. At the end of the 19th century the Viennese scholar, D.H. Müller, in the context of the *Südarabische Expedition*, provided Semitic scholars with a veritable library of texts in S from Suḳuṭrā and ʿAbd al-Kūrī, studied and analysed by M. Bittner, W. Leslau and E. Wagner. Studies conducted since 1966, by T.M. Johnstone, V. Naumkin and the *Mission Française d'Enquête sur les Langues du Yemen* (A. Lonnet and M.-Cl. Simeone-Senelle) have revealed a rich dialectology and made it possible to complete and revise certain assertions which were formerly applied to only a small number of S dialects, the only ones studied in previous works.

Among the MSALs which, it may be recalled, present a number of traits original and internal to the southern group of western Semitic, S occupies a particular place; its geographical and historical isolation has definitely been the cause of an evolution different to that of the MSALs of the mainland, in permanent contact with one another.

In terms of phonology, as with the other MSALs, the consonantal system of S is characterised by the existence of ejective glottalised consonants: ṭ, ḳ, ṣ, ṣ́, ṣ̌ (these correspond to the Arabic series of emphatics, with the exception of ṣ̌, a supplementary phoneme peculiar to the MSALs), of two lateral fricatives (of which traces are found in the writing of ancient South Arabian languages, in Hebrew and in Geʿez) including ṣ́ (the Arabic homologue of which is the letter *ḍād* [*q.v.*], which seems to have exhibited a lateral articulation, cf. the *Kitāb* of Sībawayhi).

It should be stressed that, contrary to what has sometimes been stated, the velar fricatives x and ġ form part of the phonological system of S, although it is true that, in some dialects, there has been coalescence with the pharyngals: in Ḳalansiyya, xte "night" and ġayž "man" correspond to ḥte and ʕɛyž in Ḥadībo. On the other hand, within the MSALs, S is distinguished by a consonantal system lacking interdentals.

From the purely phonetic point of view, there are two traits typical of S which should be noted. One is the consequence of rules of accentuation: the existence of a so-called "parasitic" h which permits the prolongation of a syllable which has become short and unaccented (méṣ̌əher "stable", but in the dual məṣ̌éri; férhim "daughter"). The other is the pronunciation of certain consonants in a "whispered" form: the emission of the phoneme is such that the vocal cords are not fully engaged, and the auditive impression is that of a breath accompanying the consonant; it is transcribed as ^{h}: gém^{h}ɛl "camel", léš^{h}ən "tongue".

Other phenomena of phonetic combination, also existing to varying degrees in other MSALs, are present in S: the palatalisation of voiceless, glottalised and voiced velars: icœ́tab "he writes" (ktob "he has written"), mərbī́cəh "poisoned" (f.) (rībək "he has been poisoned"), diçáʕnəhən "scorpion", ʕɛyž "man", in certain dialects ʕḗg^y "man"; the fricative realisation [ź] of /l/: åź (for /al/, negative particle), ʔə́sʌź "he helped", åźźah "Allah".

The vocalic system of S differs from that of other

MSALs, in that certain dialects include ö and œ in addition to the i, e, ɛ, a, ɔ, o, u, ə, of the "basic" MSA system. The timbre and vocalic quantity are closely linked with accentuation and, as in Djibbālī [see SHIḤRĪ], contrast in vocalic duration seems to have no phonological relevance. The syllabic structure is of the Cv or CvC type. The accent, in comparison with the other MSALs, is "retracted" towards the beginning of the word; it applies to the penultimate, or antepenultimate syllable (except in certain conjugations) and under its effect, the vowel is often realised long (xɔ́məh "five"). Vowels play an important morphological role. In nouns, they contribute to distinction of gender: ṭáḥrər (masc.) and ṭáḥrer (fem.) "wild goat", kέrkam and kέrkim "yellow", śībœb "old man" and śībib "old woman" and to distinction of number: ʕāṭɔm (sing.) and ʕɛṭɔm (pl.) "big", náḥrər and náḥrur "nose/noses". They have a similar function in verbs where, in addition to gender and number, they indicate the person and the diathesis: tkœ́təb "you write" (m. sing.) and in the fem. tkḗtəb, tấ "he ate, they (fem.) ate" and tœ́ "they (masc.) ate", ḳɔ́rɔṣ̂ "he shaved" and ḳūrɔṣ̂ "he is shaved".

The noun is not supplied with case endings; it possesses two genders, masc. and fem., and three numbers, singular, dual and plural. In words where the fem. is indicated, it is by the suffix -əh, -ɛh, -ɔh, and -t in the dual: ʕɛ̄nɔh "year", ʕénīti "two years". The nominal dual is very active; it is marked by the suffix -i and, unlike in the other MSALs, it is not necessary followed by the numeral trœh (masc.), trih (fem.) "two". Nouns have both internal and external plurals and often several plurals for one singular.

As in the Mahrī spoken in the Yemen Republic, but different from the MSALs spoken in ʿUmān, there exists in S no definite article.

The morphology of autonomous and incorporated personal pronouns includes a form of the dual, including the first person; with all the persons (excepting the dual) there is distinction of gender. The verbal system does not differ from that of other MSALs; it comprises three simple forms: Cɔ́CɔC and CCɔC (active voice), CéCəC (middle voice) and CíCəC (passive voice), four derived forms (by internal modification, prefixation or infixation): Cɔ́CɔC (intensive-conative), ʔɔ́CCəC (factitive and "intermediate" value), šəCCəC and šəCéCəC (causative-reflexive), CɔtCəC and CɔtéCəC (reflexive). The verbal paradigms, as in Arabic, are arranged in prefixal and suffixal conjugations (corresponding to the imperfect and perfect aspect). In contrast to Arabic, S, with the MSALs, is distinguished by the existence of a dual in three persons. In the perfect state, the two first persons sing. and dual, as well as the second of the plur., have the ending -k; the third person fem. has the endings -əh, -ɔh: ʔəṣk "I have been afraid", ʔəṣki "the two of us have been afraid", ʔəṣɔh "she has been afraid", and -t when the verb is followed by a complementary pronoun: baʕárəh "she has spat" and baʕárət-š "she has spat it". The subjunctive differs from the indicative in its particular vocalic scheme and it includes a prefix l- added to the first persons sing. and dual, and to the third persons masc. sing., pl. A certain number of verbs, especially simple passive verbs, are conjugated in the inaccomplished aspect without the prefixed personal indicators y- and t-; however, the subjunctive has l- in all persons, except the first of the plural. Some derived forms have an imperfect tense with a supplementary -n. S is the only one of the MSALs to possess no specific form for the future. The jussive is expressed by the imperfect indicative, but the prohibitive is expressed by a negative particle followed by the subjunctive: zœ́ʕœm "you sit, sit!", ʕa lɔ́zʕam "do not sit!"

In syntax, two features clearly distinguish S from the other MSALs. The notion of possession is expressed by a prepositional syntagm (the preposition is followed by the independent or incorporated pronoun referring to the possessor) *preceding* the noun which refers to the thing possessed: dihoʰ bébe mey šem ʕali (of-me [independent pron.] father of-him [incorporated pron.] name ʿAlī) "my father, his name is ʿAlī". For the construction of negation, S is the only MSA language in which the negative particle is always anteposed to the element negated; furthermore, it differs (except in the dialect of ʿAbd al-Kūrī) in terms of the mode of the verb: ʔal with the indicative in assertive or interrogative phrases and ʕa (or ḥa) followed by the subjunctive in prohibitive phrases.

As regards the lexicon, in S numerous roots are encountered which belong to ancient Semitic lexical stock; but what is striking is the number of original words, original even in terms of the MSA lexicon, which cannot, in the present state of knowledge, be associated with any of the languages (African, Indian, European) which could have been in contact with S. It should only be noted that the dialect of ʿAbd al-Kūrī has been strongly influenced in its phonetics and its vocabulary by the Arabic dialect of the region of the Ḥaḍramawt, with which contact is regular and continuous.

Bibliography: References to the MSALs as a whole are to be found in T.M. Johnstone's art. MAHRĪ. All references to S by the scholars of the *Südarabische Expedition* of Vienna, D.H. Müller and M. Bittner, are to be found in W. Leslau, *Lexique soqotri*, Paris 1938. Numerous lexical terms are also present in Johnstone, *Mehri lexicon*, London 1987. For works subsequent to E. Wagner (*Syntax der Mehri-Sprache* ..., Berlin 1953) and not quoted by Johnstone (1986), see Johnstone, *The non-occurrence of a t- prefix in certain Socotri verbal forms*, in *BSOAS*, xxxi/3 (1968); A. (M.-Cl. Simeone-Senelle)

SULAḤFĀ, Sulaḥfāʾ, Sulaḥfāʰ, Sulaḥfiyya, pl. *salāḥif* (a.), feminine substantive denoting the tortoise or turtle in general, terrestrial as well as aquatic. The root *s.l.ḥ.f.* is drawn from an ancient and unidentified language, unrelated to Arabic. Besides this classical term and the synonyms *g̲h̲aylam* for the male and *ṭuwama* for the female, dialectal names are encountered according to regions: thus in the Mag̲h̲rib, *fakrūn, fakir, afkir*, pl. *fakāʾir, fakārin* derived from the Berber *īfakrūn*, pl. *īfkar, īfkaran*; in Syria and Lebanon, *kurkaʿa*.

I. Species. The order of Chelonians with a carapace, *sulaḥfiyyāt mudarraʿāt* (Greek χελώνη, Latin *testudo*), comprises three families:

A. *Terrestrial Chelonians, barriyyāt* or chersites, including, in Arab countries: (1) Hermann's tortoise (*Testudo Hermanni*); (2) The Greek or Moorish tortoise (*Testudo graeca, mauritanica*); (3) The Caspian emyde (*Mauremys caspica*); (4) The bordered tortoise (*Testudo marginata*); and (5) The Barbary tortoise (*Testudo ibera*).

B. *Marsh Chelonians, munkaʿiyyāt* or elodites, including the European cistude (*Emys orbicularis*).

C. *Marine Chelonians, baḥriyyāt*, including: (1) The lute turtle (*Dermochelys coriacea*), which can exceed 2 m in length and 500 kg in weight; (2) The caret or caouane turtle, *ḥanfāʾ, aṭūm* (*Caretta caretta*); (3) The green turtle or true chelon, *lad̲j̲ʾa k̲h̲aḍrāʾ* (*Chelonia mydas*); and (4) The imbricated chelon, *lad̲j̲ʾa sahfiyya* (*Chelonia imbricata*).

II. Utility. A. The shell of the tortoise, *d̲h̲abl*, has always been highly valued for the manufacture of combs and bracelets, *masak*.

B. The carapace, *bayt al-sulaḥfā*, of large marine turtles is used, especially among nomads, as a cradle for new-born infants. It is also employed in various domestic functions, serving, e.g. as a basket or a basin. It should not be forgotten that in ancient times, this carapace, fitted with vibrating strings, constituted the original lute, *ʿūd*, ancestor of the lyre which among the Greeks and the Romans was attributed to Hermes/Mercury.

C. The meat of certain turtles was a popular foodstuff, as were their eggs; consumption of these is permitted according to Ḳurʾānic law.

III. Specific Properties. In a place of ice and intense cold, if a living tortoise is laid on its back, feet in the air, the atmosphere immediately becomes clement. The blood of the tortoise is an effective ointment for all maladies of the joints. Carrying on one's person the tail of a tortoise supposedly favours sexual endeavours and finally, seeing a tortoise in a dream foretells an attractive bride, perfumed and finely adorned, or the acquisition of great wisdom.

IV. Astronomy. *Al-Sulaḥfāʰ* is one of several names for the nineteenth boreal constellation of the Lyre situated between Hercules and the Swan. The Arabic term has given rise, in ancient and mediaeval treatises, to the following renderings: *eçulhafe, açolhafe, açulhafe, acolhafe, açulafe, aculhaffech*.

V. Proverbial usage. Al-Damīrī cites the adage *ablad min sulaḥfāʰ* "more stupid than a tortoise", but it is not clear what aspect of the behaviour of this useful creature is supposed to justify such an assertion.

(F. Viré)

AL-SULAMĪ, Abū ʿAbd al-Raḥmān Muḥammad b. al-Ḥusayn al-Azdī al-Sulamī al-Naysābūrī, important Ṣūfī hagiographer and Ḳurʾān commentator. He was born at Nīs̲h̲āpūr (Naysābūr) in 325/937 or 330/942 and died in the same city in 412/1021. He belonged to the tribe of the Azd on his father's side and to that of the Sulaym on his mother's. When al-Sulamī's father left Nīs̲h̲āpūr to settle at Mecca, al-Sulamī's education was entrusted to his maternal grandfather, Abū ʿAmr Ismāʿīl b. Nud̲j̲ayd (d. 366/976-7), who was a disciple of Abū ʿUt̲h̲mān al-Ḥīrī (d. 298/910), a S̲h̲āfiʿī scholar of *ḥadīt̲h̲* and an adherent of the ascetic tradition of Nīs̲h̲āpūr. Al-Sulamī received a teaching certificate (*id̲j̲āza*) from the Ḥanafī Abū Sahl al-Ṣuʿlūkī (296-369/909-80) and, some time after 340/951, the Ṣūfī cloak (*k̲h̲irḳa*) from the S̲h̲āfiʿī Abu 'l-Ḳāsim al-Naṣrābād̲h̲ī (d. 367/977-8) who, some ten years before in 330/942, had become a Ṣūfī at the hands of Abū Bakr al-S̲h̲iblī [*q.v.*] at Bag̲h̲dād.

An avid student of *ḥadīt̲h̲*, al-Sulamī travelled widely throughout K̲h̲urāsān and ʿIrāḳ in search of knowledge, visiting Marw and Bag̲h̲dād for extended periods of time. He travelled as far as the Ḥid̲j̲āz, but apparently visited neither Syria nor Egypt. His travels climaxed in a pilgrimage to Mecca, performed in 366/976 in the company of al-Naṣrābād̲h̲ī, who died shortly after the Pilgrimage. When al-Sulamī returned to Nīs̲h̲āpūr about 368/977-8, his teacher Ismāʿīl b. Nud̲j̲ayd had passed away, leaving him his extensive library. This library became the centre of the small Ṣūfī lodge (*duwayra*) which al-Sulamī established in his quarter of the town, the *sikkat al-Nawand*. There he spent the remaining forty years of his life as a resident scholar, probably visiting Bag̲h̲dād on a number of occasions. By his later years, he had become highly respected throughout K̲h̲urāsān as a S̲h̲āfiʿī man of learning and an author of Ṣūfī manuals.

Al-Sulamī was a prolific author who eventually employed his future biographer, Abū Saʿīd Muḥammad b. ʿAlī al-K̲h̲as̲h̲s̲h̲āb (381-456/991-1064), as his attendant and scribe. He composed the long list of his works, amounting to more than a hundred titles, over a period of some fifty years from about 360/970 onwards. Some thirty of his works are known to be extant in manuscript; many have appeared in print. These writings may be divided into three main categories: Ṣūfī hagiographies, Ṣūfī commentaries on the Ḳurʾān, and treatises on Ṣūfī traditions and customs. Each of these categories appears to be represented by a major work.

The substantial *Taʾrīk̲h̲ al-Ṣūfiyya*, listing the biographies of a thousand Ṣūfīs, is known only through extracts incorporated in later sources. It was probably an amplified version of the *Taʾrīk̲h̲* of Abū Bakr Muḥammad b. ʿAbd Allāh al-Bad̲j̲alī, known as Ibn S̲h̲ād̲h̲ān al-Rāzī, who died in 376/986 at Nīs̲h̲āpūr. The *Ṭabaḳāt al-ṣūfiyya* (ed. J. Pedersen, Leiden 1960, and N. S̲h̲arība, Cairo 1969) is a shorter version, listing summary biographies of 105 Ṣūfīs with selections of their sayings. The writings of al-Sulamī on Ṣūfī traditions and customs, often referred to as *Sunan al-ṣūfiyya*, are lost today. Extracts of its contents were integrated into the major works of Abū Bakr Aḥmad b. al-Ḥusayn al-Bayhaḳī (d. 458/1066). Judging by these extracts, al-Sulamī's *Sunan* probably resembled

a variety of minor treatises on Ṣūfī practices. His principal commentary on the Ḳur'ān, *Ḥaḳā'iḳ al-tafsīr*, is a voluminous work which still awaits publication as a whole, although extracts of it have been published by Massignon and Nwyia. Some time after the completion of the *Ḥaḳā'iḳ al-tafsīr*, al-Sulamī wrote a separate Ḳur'ān commentary entitled *Ziyādāt ḥaḳā'iḳ al-tafsīr* (ed. G. Böwering, Beirut 1995), an appendix to the former extant in a unique manuscript. This work was compiled some time after 370/980, the date by which, in all probability, the *Ḥaḳā'iḳ al-tafsīr* had been completed. Significant portions of both Ḳur'ān commentaries were integrated into the *'Arā'is al-bayān fī ḥaḳā'iḳ al-Ḳur'ān* (2 vols., Cawnpore 1301/1884) of Abū Muḥammad Rūzbihān al-Baḳlī (d. 606/1209).

Bibliography: For al-Sulamī's life and work, see Sezgin, *GAS*, i, 671-4; the introds. to the editions of Sulamī, *Ṭabaḳāt al-ṣūfiyya*; S. Ateş, *Sülemî ve tasavvufî tefsiri*, Istanbul 1969; G. Böwering, *The Qur'ān commentary of Al-Sulamī*, in W.B. Hallaq and D.P. Little (eds.), *Islamic studies presented to Charles J. Adams*, Leiden 1991, 41-56; idem, *The minor Qur'ān commentary of Abū 'Abd ar-Raḥmān Muḥammad b. al-Ḥusayn as-Sulamī (d. 412/1021)*, Beirut 1995; idem, *The major sources of Sulamī's minor Qur'ān commentary*, in *Oriens* (1995). Extracts from Sulamī's *Ḥaḳā'iḳ al-tafsīr* were published by L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1922, ²1968, 359-412; P. Nwyia, *Le Tafsīr mystique attribué à Ǧa'far Ṣādiq*, in *MUSJ*, xliii (1968), 181-230, repr. in 'Alī Zay'ūr, *al-Tafsīr al-ṣūfī li 'l-Ḳur'ān 'ind al-Ṣādiḳ*, Beirut 1979, 125-212; P. Nwyia, *Sentences de Nūrī citées par Sulamī dans Ḥaqā'iq al-Tafsīr*, in *MUSJ*, xliv (1968), 145-7; idem, *Trois œuvres inédites de mystiques musulmans*, Beirut 1973, 23-182. The items of Ibn 'Aṭā''s Ḳur'ān commentary included in Sulamī's *Ḥaḳā'iḳ al-tafsīr* have been tr. into German with introd. by R. Gramlich, *Abu 'l-'Abbās b. 'Aṭā': Sufi und Koranausleger*, Stuttgart 1995. Minor works attributed to Sulamī known to have appeared in print: *Risālat al-malāmatiyya* (ed. Abu 'l-'Alā' al-'Afīfī, Cairo 1364/1945); *Kitāb al-Arba'īn fi 'l-taṣawwuf*, Ḥaydarābād 1369/1950; *Kitāb Ādāb al-ṣuḥba*, ed. M.J. Kister, Jerusalem 1954; ed. Pūrdjawādī, Tehran 1372; *Dhikr al-niswa al-muta'abbidāt al-ṣūfiyyāt*, ed. 'Irāḳī, Cairo 1413/1993. Many of these minor works of al-Sulamī are being reprinted collectively in N. Pūrdjawādī (ed.), *Madjmū'a-yi āthār-i Abū 'Abd al-Raḥmān Sulamī*, i, Tehran 1369; ii, Tehran 1372; iii, Tehran, forthcoming. (G. BÖWERING)

AL-**SULAMĪ**, 'IZZ AL-DĪN 'ABD AL-'AZĪZ b. 'Abd al-Salām b. Abi 'l-Ḳāsim b. al-Ḥasan al-Dimashḳī, Sulṭān al-'Ulamā', Abū Muḥammad, Shāfi'ī jurist who was born in Damascus in 577/1181-2 (or 578) and died in Cairo 10 Djumādā I 660/1 April 1262.

The scion of a modest family originally from North Africa (al-Isnawī, *Ṭabaḳāt al-shāfi'iyya*, Beirut 1987, ii, 84), 'Izz al-Dīn al-Sulamī "the Damascene" was the leading Shāfi'ī authority of his generation, the majority of biographers attributing to him the status of *mudjtahid*, a distinction not often awarded at this time (according to al-Suyūṭī, quoting Ibn Kathīr, at the end of his life al-Sulamī regarded himself as an "absolute" *mudjtahid* whose judicial opinions were no longer tied to any constituted school, see *Ḥusn al-muḥāḍara*, Cairo 1968, i, 315 and idem, *Kitāb al-Radd 'alā man akhlada ilā 'l-arḍ*, Beirut 1983, 76, 193).

In Damascus, in terms of law (*fiḳh* [*q.v.*]), his masters were Fakhr al-Dīn Ibn 'Asākir (d. 620/1223)—the Banū 'Asākir were one of the most prestigious scholarly families of Shāfi'ī and Ash'arī persuasion in Damascus—and the *ḳāḍī* Djamāl al-Dīn b. al-Ḥarastānī (d. 614/1217) while Sayf al-Dīn al-Āmidī (d. 631/1233) instructed him in the *uṣūl*, this meaning either the methodology of law (*uṣūl al-fiḳh* [*q.v.*]) or theology (*'ilm al-kalām* [*q.v.*]) or both (the term *uṣūl* can denote either of these two disciplines and al-Āmidī was an eminent exponent of both of them).

A Shāfi'ī jurist and Ash'arī theologian—this latter tendency caused serious tension between him and the Ayyūbid sovereign al-Ashraf Mūsā who was, if al-Subkī is to be believed, won over by the doctrines of the Damascus Ḥanbalīs (see *Ṭabaḳāt al-shāfi'iyya al-kubrā*, Cairo n.d., viii, 218-29) where his profession of faith is reproduced)—al-Sulamī also took a very close interest in Ṣūfism, becoming a convert to it under the influence of Shihāb al-Dīn al-Suhrawardī (d. 632/1234), author of *'Awārif al-ma'ārif*. In Egypt, where he spent the last twenty years of his life, 'Izz al-Dīn was a frequent visitor to Abu 'l-Ḥasan al-Shādhilī (d. 656/1258) and the latter's "successor" (*khalīfa*), Abu 'l-'Abbās al-Mursī (d. 685/1287), and he readily attended sessions of *samā'* [*q.v.*], organised by Ṣūfīs but denounced by most of the other jurists. The profound influence of Ṣūfism on the "juridico-spiritual" thought of al-Sulamī is furthermore illustrated, as al-Subkī acknowledges, in his master-work *al-Ḳawā'id al-kubrā* (published under the title *Ḳawā'id al-aḥkām fī maṣāliḥ al-anām*, 2 vols. in 1, Cairo 1934; another ed., Cairo 1968), in which, in particular, he considers "discourse on the detailed questions of Ṣūfism" (*al-kalām fī daḳā'iḳ al-taṣawwuf*) to be a "laudable innovation" (*bid'a mandūba*) (ed. Cairo 1934, ii, 173). Similarly, the identification of the notions of *iḥtiyāṭ*—the "prudence" in legal matters characteristic of the Shāfi'ī school—and of *wara'*—the "spirit of scruple" advocated in so-called "sober" Ṣūfism—practised by al-Sulamī in the same book (ii, 14) is an eloquent expression of the pertinence of Ṣūfī doctrines for judicial theory. His affirmation (ii, 199), according to which the genuinely spiritual mission of prophecy (*al-nubuwwa*) takes precedence over its legislative function (*al-irsāl*) betrays the same influence. This is in fact a fairly typical feature of a major trend in the legal thinking of the time, and al-Sulamī's work is just one of its representatives. His more strictly judicial thinking is centred around the notion of "the interest of the community" (*al-maṣāliḥ*) which is, likewise, scarcely original for its time.

His extensive reputation, his popularity during his lifetime and his posthumous renown, the "Sultan of the scholars" (*sulṭān al-ʿulamāʾ*), the nickname given to him by Ibn Daḳīḳ al-ʿĪd (d. 702/1302), his most eminent pupil—all of these owe less to the quality of his bibliography or to the originality of his thought than to his exemplary life, to his militancy placed exclusively at the service of the community, to his independence in dealing with political authorities—"he avoided praising kings, rather, he lectured them" (Ibn Ḳāḍī al-Dimashḳī, *Ṭabaḳāt al-shāfiʿiyya*, Beirut 1987, i, 441)—and the zeal with which he conformed to what he regarded as the most important mission of the scholar in society, sc. to command the good and to forbid the reprehensible (*al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*). It is definitely this image of the militant sage which accounts for the renewed popularity of ʿIzz al-Dīn al-Sulamī and of his works in the contemporary Arabo-Muslim world (in Damascus, Cairo and Beirut, editions of his texts have proliferated in recent years).

Thus the biographers pay particular attention to various episodes in the life of ʿIzz al-Dīn. In Damascus, while he was officially responsible for preaching the sermon (*al-khuṭba*) at the Friday mosque of the Umayyads, he abolished "numerous innovations introduced by preachers" (dressing in black, preaching in verse, etc.; Ibn Ḳāḍī al-Dimashḳī, *op. cit.*). When, in 638/1240, the Ayyūbid al-Ṣāliḥ Ismāʿīl, then ruler of Damascus, made an alliance with the Frankish invaders against the Ayyūbid ruler in Cairo, and ceded to them towns, fortresses and territories in exchange for their aid (see al-Makīn b. al-ʿAmīd, *Chronique des Ayyoubides*, Paris 1994, 71-3), in the course of one of his sermons ʿIzz al-Dīn expressed his courageous and public opposition to the policies of al-Ṣāliḥ, who had him imprisoned. It was on this occasion that ʿIzz al-Dīn, having been released (very quickly) from detention, decided to leave Syria and make his way to Egypt. He was accompanied by the eminent Mālikī jurist Djamāl al-Dīn ʿUthmān Ibn al-Ḥādjib (d. 646/1248) who had supported him in Damascus; both men settled permanently in Egypt.

It seems that he was well received by al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb (r. 637-47/1240-9). He was appointed preacher and *ḳāḍī* at the great mosque of ʿAmr b. al-ʿĀṣ in Fusṭāṭ, but before long his intransigence in dealings with the political authorities and especially with military élites of servile origin—apparently ʿIzz al-Dīn refused to recognise them as of free status (*aḥrār*) and for this reason would not validate any of their transactions (al-Subkī, *op. cit.*, viii, 216-17)—led him into difficulties. Feeling himself incapable of performing his functions correctly and independently, he preferred to resign voluntarily, and nobody pressed him to reconsider this decision.

ʿIzz al-Dīn then undertook a career as a teacher of Shāfiʿī law at the Ṣāliḥiyya, a college founded in the heart of Cairo by al-Malik al-Ṣāliḥ which had then barely been completed and which was, in Egypt, the first establishment providing instruction in the four rites (see K.A.C. Cresswell, in *BIFAO*, xxi, 33-4). The biographers indicate that he was the first to teach Ḳurʾānic commentary in Egypt (al-Suyūṭī, *op. cit.*, i, 315; he composed a brief *tafsīr* which has not survived). Furthermore, it was with his customary zeal—a little too much for the taste of al-Isnawī—that he continued, as *muftī*, to pursue his mission of the scholar closely involved in issues concerning the community. The biographers refer to two compilations of his judicial decisions: *al-Fatāwā al-mawṣiliyya* and *al-Fatāwā al-miṣriyya* (1987 Būlāḳ ed. of a work intitled *Fatāwā Sulṭān al-ʿulamāʾ al-ʿIzz b. ʿAbd al-Salām*).

Besides the above-mentioned *al-Ḳawāʿid al-kubrā*, in which he was largely inspired by the *Shuʿab al-īmān* of al-Bayhaḳī (d. 458/1066) and of which he composed a summary (*al-Fawāʾid fī ikhtiṣār al-maḳāṣid al-musammā bi 'l-Ḳawāʿid al-ṣughrā*, Cairo 1988), al-Sulamī is the author of a *Madjāz al-Ḳurʾān* which earned a certain notoriety (*K. al-Ishāra ilā 'l-īdjāz fī baʿḍ anwāʿ al-madjāz*, Cairo 1896) and which he also abridged. Other texts attributed to al-Sulamī have been published under titles which do not correspond to those mentioned by his early biographers (see for example al-Subkī, *op. cit.*, viii, 247-8).

One of al-Sulamī's sons, ʿAbd al-Laṭīf (d. 695/1296 in Cairo), was also a jurist (see al-Subkī, *op. cit.*, viii, 312) and seems to have composed a biography (*sīra*) of his father, claimed by al-Subkī as direct inspiration for the long article devoted to al-Sulamī in his *Ṭabaḳāt*.

Bibliography: A very characteristic member of the intellectual élite in post-classical Sunnī Islam, ʿIzz al-Dīn al-Sulamī definitely deserves the distinction of a separate monograph. In addition to works cited in the article, the following of his texts have been published: *Ḥall al-rumūz wa-mafātīḥ al-kunūz*, Cairo 1899; *al-Fawāʾid fī mushkil al-Ḳurʾān*, Kuwait 1967; *Masāʾil al-ṭarīḳa fī ʿilm al-ḥaḳīḳa*, Cairo 1904; *Nudjdj al-kalām fī nuṣḥ al-Imām*, Cairo 1991.

(E. CHAUMONT)

SULAWESI, formerly Celebes [*q.v.*], sometimes Selebessi, derived from *sula besi*, iron knife or *kris* (?), one of the four biggest islands in Indonesia, stretching from 4° N. to 7° S. and 118° to 126° E. The island consists of four major peninsulas, linked together by a central part. Administratively, it is divided into four provinces: South, Southeast, Central and North Sulawesi. Its population comprises a number of ethnically and linguistically quite different tribes. While the seven tribes of Minahasa (northern tip of the island) and the Toraja (northern part of South Sulawesi) predominantly, and the people of Central Sulawesi to a large extent, became Christians, Islam became the decisive religious factor in most of the other areas, except some parts of the interior where traditional religions still survive.

Makassar [*q.v.*], situated in South Sulawesi, was the most powerful sultanate on the island. The forceful Islamisation of the neighbouring Buginese kingdoms, which started immediately after the two Makassarese kingdoms Gowa and Tallo' united themselves after their Islamisation was completed in 1607, resulted in an enduring enmity with Bone, the greatest Buginese kingdom. In 1660, a member of the royal family of Bone who became famous as Arung Palakka (d. 1696), raised an abortive rebellion against the sultan of Makassar. After his defeat he fled with his followers to Java and asked the Dutch East Indies Company (VOC) for shelter. When the Dutch, on their part, launched their final attack against Makassar in 1667-9, Arung Palakka came to their help and brought Makassarese rule over the Buginese kingdoms to an end and likewise its suzerainty over other kingdoms in the region like Sumbawa [see SUNDA ISLANDS], Buton and Manado (in the north of Sulawesi). In 1672, Arung Palakka became king of Bone.

The expansionist zeal of Makassar after its Islamisation had strained relations with the sultanate of Ternate which, since its ruler had gone over to Islam in 1490, had established its own sphere of influence over most of the spice islands, including the southern Moluccas

with Amboina, and the eastern and southeastern parts of Sulawesi. There, on the island of Buton and its twin island Muna off the southern shores of Southeast Sulawesi, a small sultanate had emerged. In 1542 the sixth *rāḏjā* (king) of Buton, Sultan Murhum, was converted to Islam, influenced by an Arab teacher named ʿAbd al-Waḥīd from Gudjarāt. His dynasty had apparently assumed power at the beginning of the 15th century and had close relations with the Hindu-Javanese kingdom of Majapahit, from where Hinduism was introduced to Buton. When Majapahit was Islamised early in the 16th century, many Hindu noblemen and scholars sought refuge in Buton. This explains the heavy resistance by them and the native people against their forcible conversion to Islam. However, many pre-Islamic beliefs were continued after this conversion, and Islam itself was understood according to its Ṣūfī tradition. To this effect, relations must have been established with Aceh [see ATJÈH], the cradle of Malay *taṣawwuf* in the archipelago, and with Java [see DJĀWA, and also INDONESIA]. A constitution of the sultanate, promulgated during the reign of the fourth sultan La Elangi (1578-1615), with the help of a divine named Sharīf Muḥammad, was based on the notion of the "seven worlds", or "levels" (Mal. *martabat tujuh*). Politically, Buton had accepted the sultanate of Ternate as overlord, and it resented the aggressive expansion of Makassar. A Makassarese expedition in 1666 of roughly 15,000 men against Buton to protect their interests there against the Dutch, was destroyed by the VOC and their ally, Arung Palakka, and was thus one of the preludes to the final attack on Makassar itself. The sultanate of Buton was, like the other sultanates still existing (with the exception of Yogyakarta), abolished after the Republic of Indonesia was proclaimed.

After the defeat of Makassar, the VOC finally implemented rigorously its policy of a trade monopoly in the Eastern islands and ordered all clove trees to be cut down except those on Amboina. As a result, poverty spread among the people, and particularly the Makassarese merchants, additionally hit by Arung Palakka's raids, whilst Buginese sailors and traders lost their incomes and moved in great numbers to other areas or contributed decisively to a new tide of piracy. Many of them settled down in Gorontalo on the northern peninsula of Sulawesi and became active, too, in the promotion of Islam, which soon spread to the neighbouring principality of Bolaang-Mongondow.

In Manado, the Portuguese allies of Makassar were driven away, and the Spaniards withdrew to the Philippines. Thus Minahasa became an open field for Christian missions. Because of its relative secure situation, however, the Dutch used it also as place to resettle Muslim rebels from other islands, especially during the 19th century. Famous among them was Kyai Mojo, the spiritual adviser of Prince Diponegoro who initiated the "Java War" (1825-30). The Kyai and some of his followers were resettled near Tondano lake and founded there Kampung Jawa Tondano.

Later on, other exiled Muslims were added to their community which until now maintains its "Malay" Islamic identity. Prince Diponegoro himself was exiled to Makassar (Ujung Pandang), where he died in 1855; his tomb still attracts many pious visitors. Also, Imam Bonjol, one of the famous leaders of the Padri [*q.v.*] War in West Sumatra (1821-37) found himself exiled to a village at the outskirts of Manado where he, too, established a Muslim community which until now has preserved its Islamic character amidst a predominantly Christian neighbourhood.

After the independence of Indonesia was acknowledged by the Dutch in December 1949 and the Republican government under Soekarno began restructuring the state, South Sulawesi became the scene of one of the different Darul-Islam rebellions which shook Indonesia for many years. This one was led 1950-65 by Kahar Muzakkar, a Buginese who had received religious training in the Muʿallimin college of the Muhammadiyah, an Indonesian "modernist" Islamic organisation in the tradition of the Salafiyya, in Solo, and who had served in the Indonesian armed forces. In spite of the many atrocities committed during its campaigns against both Muslims and non-Muslims, this Darul-Islam movement needs careful analysis also in order to understand its real roots and the intentions of its leader against the background of the special character of Islam as maintained by the Buginese (see Barbara S. Harvey, 1989 in *Bibl.*).

ṢULAYB, the generic and proper name of a tribal group in the northern half of the Arabian peninsula and in the adjacent deserts to the north in what are now Jordan, Syria and ʿIrāḳ. Ṣulayb seems to be a diminutive form, as often, found with a contemptuous meaning, sing. Ṣulabī, colloquially Ṣlebī. They are one of the Ḥutaym tribes, often described as pariahs, as also such gypsy groups as the Nawār. For lists of their subsections, their living areas, etc. see Musil, *Arabia deserta*, 231; French Government in Syria, *Les tribus nomades et semi-nomades*, 71; von Oppenheim, *Die Beduinen*, iv, 150; *EI*[1] art. *Ṣulaib*.

The reasons for their low status centre around occupation, political independence and origin. Each affects the others and they are, to some degree, inter-dependent. The distinctions drawn between Ṣulayb and other Ḥutaym and Bedouin distance the two categories on the basis that the Bedouin provide their own security and are independent, while the Ḥutaym are not able to do this and buy security from the Bedouin. Different authorities, whether western scholars or Arab tribal experts, emphasise one area or another as the fundamental ground for seeing the Ṣulayb as distinct, sometimes to the extent that Ṣulayb are seen as non-Arab in origin. The more exotic behaviour and origins attributed to the Ṣulayb thus parallel their ascribed social position.

The Ṣulayb call themselves Awlād Ṣalībī or Awlād Ghānim; the Bedouin use Ṣulayb, Ṣulabba or Ṣulbān. Earlier derivations of the Ṣulayb from Sabaean or Christian (sometimes Crusader) origins have been refuted by Caskel (in von Oppenheim, *op. cit.*, 148), who sees Ṣulayb as a classificatory term for widely-spread groups of different origins; those of al-Ḥasā coming from southern Persia between the end of the 13th and the 15th century, while those of Syria and western Arabia may be the descendants of groups defeated by Wahhābīs, following a suggestion by Rousseau or by "fanatical Bedouin". Butler suggested they are aboriginal inhabitants.

Arab tribesmen see the Ṣulayb as without genealogy, and sometimes as probably unbelievers or Jews (Doughty, *Arabia Deserta*, i, 326), but usually as Arabs. Some Ṣulayb told Doughty that they did not know

their lineage, others that the name of their ancestor was Mʿaybī. At Medāʾin Ṣāliḥ, Doughty met a Ṣulayb family from Wadjh who said that they were formerly Bedouin with herds and villages who had become weak and, in order to live, had taken up smithing and hunting.

The Ṣulayb spread over the northern half of the Arabian peninsula, roughly from Medina to Riyāḍ and as far north as Aleppo and Mawṣil. Dickson, *The Arab of the desert*, 515, says that Ṣulayb had large settlements with their own headmen outside Kuwait town and Zubayr. The desert-dwelling Ṣulayb lived among the tribes on friendly terms.

Musil describes Ṣulayb social organisation, which has a subdivision into clans, called *āl*, like the Bedouin *benī*. The *ahl* is the vengeance group, while the *ʿāʾila* is the ensemble of man, woman and children living in one tent. Each Ṣulaybī *ahl* paid its Bedouin an agreed sum for protection, and the tribe appointed one or more "brothers" who compensated its Ṣulayb for property taken from them by other tribesmen. Musil, *op. cit.*, 231-3, gives a list of the "brothers" of the Ṣulayb in northern Arabia. Each Ṣulayb section had a chief, some of whom, according to Dickson, owned large flocks and herds of camels and were up to a point respected.

The distinction between Bedouin and Ḥutaym, including Ṣulayb, was epitomised in that no Bedouin would marry from the Ḥutaym, because the Ḥutaym bought protection, and therefore were not independent. They had honour, according to Musil, "as white as that of the Rwala, but were not held in esteem"; this was recently reiterated by a Rwelī. Ṣulayb would not marry a slave or a smith; they were free, whereas slaves and smiths were not.

The Ṣulayb have often been characterised (see Caskel, in *op. cit.*, 103-11) as following despised occupations, like other Ḥutaym, but in their case, as concentrating almost exclusively outside herding; as hunters, as wood, metal and leather workers, and as doctors of animals and people, as professional poets and musicians, as fortune tellers and makers of witchcraft potions, as scouts for pasture and hunting, and as noted breeders of donkeys sold in Baghdād and Damascus (Musil, *op. cit.*, 269). Some occupations were seasonal, and some geographically limited, like gazelle hunting in eastern Syria. Ṣulayb also herded camels, sheep, goats, just as Bedouin hunt, work in metal, wood and leather, compose poems and tell fortunes on occasions. The difference was that the Ṣulayb, in addition to supplying their own needs, worked for profit.

The Bedouin respected the Ṣulayb for their knowledge of the inner deserts, referring to them as people who could live in regions where the Bedouin with their camels cannot subsist in a particular year, but where the Ṣulayb can with their donkeys and goats. Doughty remarked the Ṣulayb were called *el-Khlûa* or "the desolate" because they lived apart from each other, and that the Bedouin used the same term of themselves when they camped on their own. The Ṣulayb were able to use the inner desert in the summers because of their knowledge of small wells and their hunting skills. Doughty quoted the Bedouin as saying that the Ṣulayb "are like herdsmen of the wild game". Musil reported that families of Ṣulayb owned particular valleys and slopes of the desert, and that the family of a young man gave a portion of their property to the father or brother of his bride, which was then hunted on only by his wife's father and brothers. This expert knowledge meant that Ṣulayb were hired by Bedouin as finders of pasture, as guides on long-distance raids, and for finding men lost on raids.

The Ṣulayb were unique in being outside the raiding economy of the Arabian peninsula; other Ḥutaym groups did raid. The Ṣulayb, because of their knowledge of the desert, provided rescue services, and were a protected neutral group, whose security was rarely contravened.

Many authors from Burckhardt to Musil and von Oppenheim, comment on the appearance and customs of the Ṣulayb, especially the wearing of gazelle-skin smocks and cloaks, on their gazelle-skin tents and dancing (Dickson, *op. cit.*, 518-20: Montagne, *Contes poètiques bédouins*, 98). Most Ṣulayb dances are common to those seen among other tribes; the dancing of men and women together, described by Dickson and said to be considered disgraceful, is not unknown.

Musil mentioned that the Ṣulayb "worship the enormous boulder of *al-Weli abu Ruzuma*" in the Syrian desert. Dickson reported that the Ṣulayb "are said to be Muslim, but few pray properly." Commonly assumed to be unbelievers, they suffered Wahhābī raids, with a notorious massacre in the Wādī ʿArʿar.

After the suppression of the Ikhwān rebellion by Ibn Suʿūd, the Ṣulayb were compensated. By 1937, the Ṣulayb could enrol in the ʿIrāḳī Army and Police, where they had a high reputation as trackers. By the Second World War, they were enrolling in the Kuwaiti Army and Police. With the diminution of game, the decline of camel-herding and increased participation by the Bedouin in national economies, the Ṣulayb have also changed their methods of livelihood. Some herd their own camels, sheep and goats; others work as shepherds for Bedouin owners or in the oil companies and service industries of the new towns along the pipe-lines. Some have urban properties and live from rents or other investments; while others are now employed as teachers, accountants, security personnel and other mainstream occupations. Some continue to practise particular types of traditional medicine. In *ca.* 1990, the term Ṣulayb was formally abandoned as a social category in Saudi Arabia; some assumed the identity of the tribes with whom their section had been associated, but many continue to call themselves Ṣulayb.

ṢULAYḤIDS, an Ismāʿīlī dynasty ruling over much of the southern highlands and Tihāma [*q.v.*] region of the Yemen between the years 439-532/1047-1138 approximately.

1. *History*. Firstly, a word should be said about sources. Ismāʿīlī sources have in the past always been difficult of access and we still suffer from their general policy of secrecy in this matter. Still a major source is ʿUmāra's *Taʾrīkh al-Yaman* (the author died in 569/1174) and the best edition of it remains Kay's (see *Bibl.* below). The work is scarcely ideal, however; the author, writing for the high officials of the Fāṭimid caliph in Cairo (see Kay, 1, and H. Derenbourg, *ʿOumara du Yémen, sa vie et son œuvre*, PELOV, IVᵉ série, x-xi, Paris 1897-1904, 92-3), produces a confused account in which dates in particular are often lacking. He also appears to have known little of the internal affairs of the Ismāʿīlī *daʿwa* in the Yemen (see M.L. Bates, *Notes on some Ismāʿīlī coins from Yemen*, in *ANS Museum Notes*, xviii [1972], 149-62, 150). We are fortunate, however, to have available al-Hamdānī's *al-Ṣulayḥiyyūn* (see *Bibl.*), for the author was able to draw on mediaeval Ismāʿīlī sources not available to other scholars.

The period of Ṣulayḥid history in the Yemen can be divided into two: the Ṣanʿāʾ years, 439-80/1047-87 approximately, and those of Dhū Djibla, 480-532/1087-1138. The founder of the dynasty, ʿAlī b. Muḥammad al-Ṣulayḥī, came from the mountainous region of Ḥarāz to the south-west of Ṣanʿāʾ and appears to have had an orthodox Shāfiʿī upbringing, but at a young age in the early years of the 5th/11th century, he was befriended by the Fāṭimid *dāʿī* in the Yemen, Sulaymān b. ʿAbd Allāh al-Zawāḥī. The latter, it seems, gradually taught his friend, ʿAlī b. Muḥammad, the doctrines of the Ismāʿīlī cause and eventually appointed him to the rank of *khalīfa* within the *daʿwa*. The sources differ concerning the date, but it was probably in 439/1047 that ʿAlī rose to arms on Djabal Maswar in his native Ḥarāz region. He marched on through the Ḥadūr area between Ḥarāz and Ṣanʿāʾ. In the latter he fought off Zaydī [see ZAYDIYYA] and Sunnī Nadjāḥid [see NADJĀḤIDS] armies. By 455/1063 he was in control of the whole of the south of the Yemen below Ṣanʿāʾ and the capital itself. He appointed governors in Tihāma, al-Djanad, near Taʿizz, and al-Taʿkar, a massive mountain fortress in the southern highlands near Ibb. Suddenly the sources fall silent. We are not even sure of the date of ʿAlī's death, 459/1066 or 473/1080. At any rate, he was murdered by the Nadjāḥid ruler Saʿīd al-Aḥwal in al-Mahdjam in northern Tihāma and his wife Asmāʾ was taken captive.

ʿAlī was succeeded by his son, al-Mukarram Aḥmad. Confident after their killing of ʿAlī and taking captive of his wife, the Nadjāḥids were able to recover much land previously controlled by them in Tihāma and they even pressed the Ṣulayḥids hard in their strongholds of Ḥarāz and al-Taʿkar. It is quite possible that at this time Ṣulayḥid territory was reduced to the Ṣanʿāʾ area. In 460/1068 al-Mukarram Aḥmad succeeded in rescuing his mother from the grasp of the Nadjāḥids, and his Ṣulayḥid armies began to fight back on all sides.

Once again we slip into a confused period of Ṣulayḥid history. In 461/1069 al-Mukarram Aḥmad married a lady who was to become renowned even outside the country, al-Sayyida Arwā bt. Aḥmad. In either 467/1074 or 479/1086 he handed over the affairs of state to his wife, who had borne him four children. Perhaps in 480/1087, Arwā renounced Ṣanʿāʾ as the capital of the Ṣulayḥid state and left for a small town, founded in 459/1066, which lay beneath the towering mountain of al-Taʿkar in the southern highlands. Thus begins a period of rule by the Ṣulayḥids from Dhū Djibla, a period of some brilliance, presided over by the famous Yemeni queen Arwā bt. Aḥmad, Bilḳīs al-Ṣughrā as she is known in Yemeni tradition.

The Dhū Djibla phase of the history of the Ṣulayḥids is very much the history of Arwā bt. Aḥmad herself and her henchmen. The town was only about twenty years old when she arrived with her followers, and we are told that she converted the original palace into a mosque. The *djāmiʿ* can still be seen to this day and the tomb of the queen is still preserved in it (see R. Lewcock and G.R. Smith, *Two early mosques in the Yemen: a preliminary report*, in *AARP*, iv [1973], 117-30). To replace the original palace Arwā built a new one, a grand building called Dār al-ʿIzz, which, if it is not the same construction as the present-day palace in the town, is probably on the same site and its original building materials provided those of the present structure.

The queen appointed three state officials. The first, Sabaʾ b. Aḥmad, was famed for his fierce hostility towards the Nadjāḥids, against whom he fought with great vigour. Although he married Arwā after the death of al-Mukarram Aḥmad, he never appears to have succeeded in persuading her to consummate the marriage.

The second, another strongly loyal supporter, was al-Mufaḍḍal b. Abi 'l-Barakāt, the lord of al-Taʿkar, the lofty stronghold to the south of Dhū Djibla to which reference has already been made. He had originally been appointed by al-Mukarram Aḥmad, and it appears to have been under his supervision that the Ṣulayḥid treasures were transferred to al-Taʿkar for reasons of security. Al-Mufaḍḍal also participated frequently in the wars against the Nadjāḥids in Tihāma.

The third official associated closely with Queen Arwā's rule centred in Dhū Djibla was Ibn Nadjīb al-Dawla. He entered the Yemen in 513/1119, despatched, it would seem, by the Fāṭimids in Cairo in an attempt to revive the flagging fortunes of the Ṣulayḥids in the Yemen. Operating from al-Djanad, he did much to pacify the southern areas and keep them within the Ṣulayḥid fold, as well as joining in the general effort to keep the Nadjāḥids at bay. In 519/1125, however, arguing that the queen's mind was no longer fit to rule over the territories of the dynasty, he attempted to overthrow her and lock her away in seclusion. But Arwā fought back and her supporters besieged Ibn Nadjīb al-Dawla in al-Djanad. He was brought, humiliated, to the queen in Dhū Djibla. Her judgment was that he be sent back to Egypt in a wooden cage, and that is how he left the Ṣulayḥid capital. He never reached Egypt, however, dying at sea. Our sources peter out; Arwā died at the ripe old age of 88 in 532/1138. There was no one of the dynasty to carry on.

2. *Mints and money*. The earliest coins struck by the Ṣulayḥids from 445/1053 so far published are the dīnārs of ʿAlī b. Muḥammad minted in Zabīd and described by P. Casanova (*Dinars inédits du Yémen*, in *Revue Numismatique* [1894], 200 ff.). N.M. Lowick (*Some unpublished dinars of the Ṣulayḥids and Ẓurayʿids*, in *Num.Chron.*, 7th series, iv [1964], 261-70) publishes other dīnārs minted in Dhū Djibla and Aden. It was the Ṣulayḥids, al-Mukarram to be precise, who in 479/1086 instituted a new variety of dīnār called the *malakī*. The date is given in ʿUmāra (Kay, 37) who also quotes the inscription. The *malakī* outlived the Ṣulayḥids and the Zurayʿids [*q.v.*] (473-569/1080-1173), originally their vassals, later the independent rulers of Aden. We know, for example, that they were used in Ayyūbid Aden (Ibn al-Mudjāwir, *Taʾrīkh al-Mustabṣir*, ed. O. Löfgren, Leiden 1951-4, 138).

(G.R. SMITH)

SULAYM, an Arabian tribe, a branch of the so-called Northern Arabian federation of Ḳays ʿAylān [*q.v.*]. Its genealogy is given as Sulaym b. Manṣūr b. ʿIkrima b. Khaṣafa b. Ḳays ʿAylān. The tribe's territory was in al-Ḥidjāz [*q.v.*]. The *ḥarra* or basalt desert [see ḤARRA. 1] that was once called *Ḥarrat Banī Sulaym*, and is now called *Ḥarrat Ruhāṭ*, is roughly located at the centre of their former territory. The *Ḥarra* was easy to defend because cavalry could not operate in it, and the *ḥimās* [*q.v.*] or protected pasturing areas of Sulaym were along its eastern and western slopes. The Baṣra and Kūfa pilgrim roads and the inland road between Mecca and Medina passed through Sulamī territory, which meant that both towns had to be on good terms with the Sulaym.

The Sulaym were divided into three subdivisions. The Imruʾ al-Ḳays, perhaps the strongest one, lived on the eastern slopes of the *Ḥarra* and included three tribal groups: the Khufāf b. Imriʾ al-Ḳays, which in turn contained ʿUṣayya, Nāṣira, ʿAmīra and Mālik. The most prominent family among the ʿUṣayya was the Sharīd. The Bahz b. Imriʾ al-Ḳays included Mecca's rich ally, al-Ḥadjdjādj b. ʿIlāṭ, who owned the gold mines in the land of Sulaym (M. Lecker, *The Banū Sulaym. A contribution to the study of early Islam*, Jerusalem 1989, 133-4; cf. P. Crone, *Meccan trade and the rise of Islam*, Princeton 1987, 93-4). The ʿAwf b. Imriʾ al-Ḳays were divided into the Mālik b. ʿAwf and the Sammāl b. ʿAwf. The Mālik b. ʿAwf included the following clans: Riʿl (led at the time of Muḥammad by al-ʿAbbās b. Anas), Maṭrūd and Ḳunfudh.

The Ḥārith subdivision generally inhabited the western slopes of the *Ḥarra*. It contained the following tribal groups: Muʿāwiya b. al-Ḥārith, the members of which settled in Medina before the arrival there of the Aws and Khazradj [*q.vv.*] and were in due course Judaised; Ẓafar b. al-Ḥārith, part of which was incorporated into the Aws; Rifāʿa b. al-Ḥārith; Kaʿb b. al-Ḥārith, a member of which was the last custodian of the idol Suwāʿ (Ḳurʾān, LXXI, 23) located in Ghurān; and ʿAbs b. Rifāʿa b. al-Ḥārith, which included the Djāriya family. One of the Djāriya, the poet and warrior al-ʿAbbās b. Mirdās [*q.v.*], worshipped before his conversion to Islam an idol called Ḍimār or Ḍamār. Al-ʿAbbās was put by Muḥammad in charge of levying the *ṣadaḳa* from the brother tribes Sulaym and Māzin. A member of the ʿAbs was the last custodian of the idol al-ʿUzzā [*q.v.*] located in the Ḥurāḍ valley which drains into Nakhla [*q.v.*] al-Shaʾmiyya.

The Thaʿlaba subdivision contained two tribal groups. The Mālik b. Thaʿlaba, also called Badjla after their mother, broke away from the Sulaym and became the "protected neighbours" of the ʿUḳayl [*q.v.*]. But far more important were the Dhakwān b. Thaʿlaba (also referred to as "Thaʿlaba") who on the eve of Islam were Mecca's closest Sulamī allies. Before they formed an alliance with Mecca, one of them, Muḥammad b. Khuzāʿī, was reportedly crowned by Abraha [*q.v.*] and put in command of a troop from Muḍar [see RABĪʿA and MUḌAR]. The Dhakwān married into some of the most important Ḳurashī families, and their member, al-Ḥakīm b. Umayya, in his capacity as *muḥtasib* in pre-Islamic Mecca, supervised law and order with the consent of all the clans of Ḳuraysh [*q.v.*]. The Prophet's Companion Ṣafwān b. al-Muʿaṭṭal ([*q.v.*] and Lecker, *op. cit.*, 91-2, 111), living in Medina, was an exception among the Dhakwān.

Sulaym's genealogy was of major political and military importance, as shown by the fact that their links with other Ḳays ʿAylān tribes, above all the Hawāzin [*q.v.*], were far closer than those with other tribes. Among Sulaym's pre-Islamic *ayyām* [see AYYĀM AL-ʿARAB], there were several long-range expeditions into the Yemen as well as battles against tribes living in southwestern Arabia on the road to the Yemen. For instance, in order to carry out a raid against the Zubayd and Ḳuḍāʿa [*q.v.*], al-ʿAbbās b. Mirdās recruited warriors from all the clans of Sulaym. In addition, a battle against Kinda took place near Ṣaʿda and the Ḳuḍāʿa killed, again near Ṣaʿda, a brother of al-ʿAbbās b. Mirdās. The Yemenī expeditions should possibly be linked to Sulaym's activity in escorting caravans. Abu 'l-Baḳāʾ Hibat Allāh mentions that the Sulaym and Hawāzin used to conclude pacts with the kings of al-Ḥīra [*q.v.*]. They would take the kings' merchandise and sell it for them in ʿUkāẓ and in other markets (see *al-Manāḳib al-mazyadiyya*, eds. Darādika and Khrīsāt, ʿAmmān 1404/1984, ii, 375). These pre-Islamic expeditions, which involved other Ḳaysī tribes as well, are relevant to the debate about the origin of the Ḳays—Yaman antagonism (cf. Crone, *Were the Qays and Yemen of the Umayyad period political parties?*, in *Isl.*, lxxi [1994], 1 ff.).

Many Sulamīs were agriculturalists, before Islam and in early Islamic times, a fact which may easily be overlooked because the bulk of our literary evidence relates to the military exploits of the tribe. The 3rd/9th century geographer ʿArrām al-Sulamī said about the Sulamī stronghold of al-Suwāriḳiyya that it belonged to the Sulaym alone and that each of them had a share in it. It included fields, dates and other kinds of fruit. The Sulamīs born in al-Suwāriḳiyya, he added, lived there while the others were nomadic (*bādiya*) and roamed around it, supplying food along the pilgrim roads.

The Sulaym had friendly relations with Medina. Sulamīs brought horses, camels, sheep and clarified butter to the markets of Medina. An idol called Khamīs was worshipped by both the Sulaym and the Khazradj. Before Islam, the Sulaym once intervened in the fighting between two clans of the Aws, and at the time of Muḥammad al-ʿAbbās b. Mirdās lamented the expulsion of the Jewish al-Naḍīr [*q.v.*] (Lecker, *op. cit.*, 99-100).

The Sulaym played an important role in the struggle between Muḥammad and Ḳuraysh. Under ʿĀmir b. al-Ṭufayl [*q.v.*] (who was not a Sulamī, but a member of the Djaʿfar b. Kilāb), several Sulamī clans carried out in Ṣafar 4/625 the attack at Biʾr Maʿūna [*q.v.*] (M.J. Kister, *O God, tighten Thy grip on Muḍar...*, in *JESHO*, xxiv [1981], 242-73, at 255-6; idem, *The expedition of Biʾr Maʿūna*, in *Arabic and Islamic Studies in honor of H.A.R. Gibb*, ed. G. Makdisi, Leiden 1965, 337-57). In the battle of Khandaḳ [*q.v.*] (5/627), the Sulaym under Sufyān b. ʿAbd Shams of the Dhakwān still co-operated with Ḳuraysh. However, when

Muḥammad set out to conquer Mecca in Sha'bān 8/January 630, the Sulaym or most of them were already on his side. Several weeks later, the Sulaym participated in the battle of Ḥunayn with the exception of Abu 'l-A'war (the son of Sufyān b. 'Abd Shams), who fought with the pagans.

At the time of Abū Bakr, several clans of the Sulaym apostatised [see RIDDA in Suppl.] and were crushed by forces loyal to Medina. The rebels included the 'Uṣayya, especially the Sharīd family, the 'Amīra (one of whom was the famous rebel al-Fudjā'a), the 'Awf b. Imri' al-Ḳays, the Djāriya family of the 'Abs and also perhaps the Dhakwān. Soon afterwards, we find the Sulaym among the forces heading to 'Irāḳ and Syria.

Although there were no doubt Sulamīs among 'Alī's supporters (cf. *MME,* iv [1989], 177), Sulaym's contribution to Mu'āwiya's success was fundamental. At this point, it should be observed that the evidence about Sulaym's history in the first decades of the Islamic era, and particularly during the time of Muḥammad, was probably influenced by their role in the 'Alī-Mu'āwiya conflict. This can be illustrated by the dispute regarding the Companion status of the aforementioned Abu 'l-A'war, who became one of Mu'āwiya's generals (Ibn Ḥadjar, *Iṣāba,* ed. al-Bidjāwī, Cairo 1392/1972, iv, 641).

Some Sulamīs appointed as governors in early Islam owed their nomination to pre-Islamic ties with Ḳuraysh.

1. The wealthy Companion 'Utba b. Farḳad (Rifā'a b. al-Ḥārith) was closely connected with Mecca and his mother was of Ḳuraysh. In 20/641 'Umar appointed him as the governor of al-Mawṣil [*q.v.*] and later he made him governor of Ādharbaydjān [*q.v.*].

2. Abu 'l-A'war (Dhakwān) was under Mu'āwiya the governor of al-Urdunn [*q.v.*]. His mother and grandmother were of Ḳuraysh (M.J. Kister, *On strangers and allies in Mecca,* in *JSAI,* xiii [1990], 113-54, at 134; Ibn 'Asākir, *Ta'rīkh madīnat Dimashḳ,* facs. ed. xiii, 463 ll. 10,20, 464 ll. 16,-6; cf. Ibn Ḥadjar, *Iṣāba,* iv, 641). The assumption that Abu 'l-A'war's mother was Christian [see ABU 'L-A'WAR] is based on a corrupt text (in Ibn Rusta, 213; cf. *Muḥabbar,* ed. I. Lichtenstädter, Ḥaydarābād 1361/1942, 305). 'Ubayda b. 'Abd al-Raḥmān (Dhakwān) was probably governor of Ādharbaydjān under 'Umar II. Under al-Walīd b. 'Abd al-Malik he was governor of al-Urdunn, and in 110/728 he was appointed by Hishām to Ifrīḳiyā [*q.v.*]. 'Ubayda was said to have been Abu 'l-A'war's nephew (Crone, *Slaves on horses. The evolution of the Islamic polity,* Cambridge 1980, 125) but his detailed pedigree (Ibn Ḥazm, *Ansāb,* 264 l. 2, where he is called 'Ubayd) shows that he was Abu 'l-A'war's great-grandson.

3. 'Ubayd Allāh, the son of Mecca's rich ally al-Ḥadjdjādj b. 'Ilāṭ (Bahz), was appointed by Mu'āwiya over the *arḍ* Ḥimṣ [*q.v.*].

4. Al-Ḥadjdjādj b. 'Ilāṭ's grandson, 'Ubayd Allāh b. Naṣr, was appointed to Mu'āwiya's *dīwāns.*

Sulaym supported 'Abd Allāh b. al-Zubayr [*q.v.*], and 600 of them were reportedly killed in the battle of Mardj Rāhiṭ (64/684 [*q.v.*]). In 73/692-3 the Sulaym under al-Djaḥḥāf b. Ḥakīm al-Dhakwānī fought against the Taghlib [*q.v.*] at al-Bishr [*q.v.*] in eastern Syria.

After the conquests, some Sulamīs settled in Kūfa, while others went to Baṣra and Khurāsān. Several governors are relevant here:

1. Mudjāshi' b. Mas'ūd (Sammāl) was under 'Umar in charge of the *ṣadaḳa* of Baṣra.

2. Ḳays b. al-Haytham (Sammāl), the governor of Khurāsān under Mu'āwiya, was appointed by 'Abd Allāh b. 'Āmir, whose mother was of the Sammāl.

3. 'Abd Allāh b. Khāzim (Sammāl), a relative of Ḳays b. al-Haytham, was already appointed to Khurāsān by 'Abd Allāh b. 'Āmir at the time of 'Uthmān. 'Abd Allāh, who under Mu'āwiya replaced Ḳays b. al-Haytham as governor of Khurāsān, was also its governor under Ibn al-Zubayr. He lost the governorship when he refused to accept 'Abd al-Malik's letter appointing him on Khurāsān.

4. Kathīr b. 'Abd Allāh ('Uṣayya) who was nicknamed Abu 'l-'Ādj "the tusked one" because of his long middle incisors, was briefly the governor of Baṣra under Hishām.

5. One of the governors of Khurāsān under Hishām was al-Ashras b. 'Abd Allāh (Ẓafar b. al-Ḥārith).

6. Also Manṣūr b. 'Umar b. Abi 'l-Kharḳā' (Ri'l) was governor of Khurāsān under Hishām.

However, most of the Sulamīs who left their Arabian territory emigrated to northern Syria and from there to the Djazīra. There is an intriguing case of continuity with regard to Sulamī governors in Armīniyā [*q.v.*]:

1. Usayd b. Zāfir (Ḳunfudh) was governor there under the Marwānids.

2. Usayd's son, Yazīd, was governor under al-Manṣūr [*q.v.*, at vol. VI, 427] and his son al-Mahdī [*q.v.*, at vol. VI, 1238].

3. Yazīd's son, Aḥmad, was later in the 'Abbāsid period governor of al-Mawṣil and Armīniyā.

Other Sulamīs remained in Arabia, as is shown by the Sulamī rebellion of 230/845. The Ḥarb [*q.v.*], who probably came from the Yemen and settled between Mecca and Medina towards the end of the 9th century, gradually absorbed the original inhabitants of that area, including the Sulaym. In the 5th/11th century, the descendants of Sulamīs and Hilālīs [see HILĀL] who had settled in Egypt left it and spread into the predominantly Berber North Africa [see AL-'ARAB. iv], conquering within a short period Barḳa [*q.v.*] and Tripolitania. At the end of the 12th century, the Sulaym invaded Tunisia [*q.v.*] and Morocco, making North Africa both Bedouin and Arab and pushing the Berber element to the background (Ibn Sa'īd al-Maghribī [*q.v.*] al-Andalusī, *Nashwat al-ṭarab bi-ta'rīkh djāhiliyyat al-'arab,* ed. 'Abd al-Raḥmān, 'Ammān 1982, ii, 519-23; Ibn Khaldūn, *'Ibar,* ii, 308-9; vi, 12 ff.; al-Ḳalḳashandī, *Ḳalā'id al-djumān fi 'l-ta'rīf bi-ḳabā'il 'arab al-zamān,* ed. al-Abyārī, Cairo 1383/1963, 123-4).

(M. LECKER)

SULAYM B. **ĶAYS** al-Hilālī al-'Āmirī, Abū Sā'ī, a Kūfan and, according to Shī'ī tradition (Ibn al-Nadīm, *Fihrist,* ed. Flügel, 119; al-Ḥillī, *Ridjāl,* Nadjaf 1963, 83), a contemporary of 'Alī, at least at the end of the latter's life, and one of his most fervent partisans.

He was pursued by the Umayyad governor al-Ḥadjdjādj b. Yūsuf [*q.v.*], who aimed at killing him, and found refuge with the Shī'ī traditionist Abān b. Abī 'Ayyāsh, who was then only 14 years old (Abū 'Alī, *Muntahā,* 151; al-Māmaḳānī, *Tanḳīḥ,* ii, 53). It was to him—again according to the Shī'ī tradition—that Sulaym, just before his death, entrusted his *K. al-Aṣl,*

which contained the "unpublished" traditions concerning ʿAlī and his descendants. In his turn, two months before his own death, Abān gave this work to another Shīʿī, ʿUmar b. Udhayna (d. before 169/785), and it is to this last that we owe the book, much venerated by the Shīʿa of all shades of belief. If this tradition is to be believed, Sulaym b. Ḳays must have lived during the 1st century A.H., spanning the 7th and early 8th centuries A.D. He is said to have then died during al-Ḥadjdjādj's life-time, i.e. before 95/714.

Nevertheless, the very existence of this man, and of his work, should be regarded with caution, since, apart from Ibn al-Nadīm, of the older biographers, only a few Shīʿīs mention him, and then only in a very terse and laconic fashion. Ibn al-Nadīm himself drew his information on Sulaym from a Shīʿī source, probably from the ʿAlid ʿAlī b. Aḥmad al-ʿAḳīḳ (d. after 298/911), whose information is also reproduced by later biographers, such as al-Ṭūsī (d. 460/1067), amongst others. Ibn Abi 'l-Ḥadīd, a scholar of rare erudition and one fully conversant with Shīʿī works, openly questioned the existence of Sulaym, by asserting that he had heard people say "that this man was nothing but pure invention of the imagination, no such writer having had any earthly existence and his alleged book being nothing but the apocryphal work of a forger" (*Sharḥ Nahdj al-balāgha*, Cairo 1965-7, xii, 216-17).

Ibn Abi 'l-Ḥadīd certainly did not mince his words. He probably alludes to certain Imāmī or Twelver scholars, such as Aḥmad b. ʿUbayda (d. 333/941) and Abū ʿAbd Allāh al-Ghaḍanfarī (d. 411/1020), who denied the authenticity of Sulaym's book on the following bases:

(1) One of the pieces of information in the work indicates that the Imāms numbered 13 contradicting the Shīʿī tradition limiting them to 12;

(2) A second piece of information states that Muḥammad b. Abī Bakr [*q.v.*] censured his dying father, whereas the son was at that time only 3 years old.

(3) It is alleged that the book was transmitted solely by Abān b. Abī ʿAyyāsh, when the latter was only some 14 years old.

Al-Ḥillī attacked this thesis (*Ridjāl, loc. cit.*), but without much success; his arguments were too unconvincing to sweep away such doubts. Other, later Shīʿī biographers were content to reproduce verbatim al-Ḥillī's words without adding anything. Moreover, Abān, the prime source for the work, was equally attacked. Thus Ibn Khallikān affirmed that certain traditionists of high authority, such as Shuʿba b. al-Ḥadjdjādj (d. 160/776 [*q.v.*]) taxed Abān with lying. This is why this traditionist was excluded from the two *Ṣaḥīḥs* of al-Bukhārī and Muslim. Hence one would seek in vain for his name amongst the *isnāds* of these two scholars (*Wafayāt*, ed. ʿAbbās, ii, 339). This information in Ibn Khallikān, added to that of Ibn Abi 'l-Ḥadīd, leads one to adopt a circumspect attitude towards the book as must be adopted towards its presumed author.

Whatever the truth, this *K. al-Aṣl* or *K. Sulaym* is considered by Shīʿī scholars as one of the oldest sources for Shīʿism and as being equal to the four master-works of Islamic tradition (sc. the two *Ṣaḥīḥs*, the *Musnad* of Ibn Ḥanbal and the *Muwaṭṭa'* of Mālik) (al-Khʷānsārī, *Rawḍāt*, 318). Others go so far as to say that "it is the alphabet of Shīʿism, which no Shīʿī can do without" (al-Māmaḳānī, ii, 54; Ṭihrānī, *Dharīʿa*, ii, 152). It is clear that this work was a collection of traditions about ʿAlī and his descendants. It is said that Sulaym allegedly gathered his information from the mouths of eminent men, beginning with ʿAlī himself, via Abū Dharr al-Ghifārī and Salmān al-Fārisī to al-Ḥasan b. ʿAlī and his brother al-Ḥusayn [*q.vv.*]. At all events, the work was a main source for Shīʿī writers, notably al-Kulīnī, who took from it a considerable number of traditions for his *Uṣūl al-kāfī* (i, 44, 46, 297-8, 529, ii, 391, *et passim*).

If Ṭihrānī (ii, 156-7) is to be believed, there exist at least five mss. of Sulaym's work preserved in the private libraries of certain Shīʿī scholars of Nadjaf, including those of Muḥammad al-Samāwī and Shaykh al-Hādī Kāshif al-Ghiṭā'. A third one exists at Tehran (Ibn-i Yūsuf, *Kitābkhāna*, v, 150). The book was published at Nadjaf in 1961.

SULAYMĀN, the name of a range of mountains running roughly south-north and to the west of the Indus river in modern Pākistān.

The Sulaymān rise from the low tract of the Dēradjāt [*q.v.*] which lie along the right bank of the Indus and run, in a series of long, sharp-backed ridges and jagged peaks, from the Bugtī and Marī districts of north-east Balūčistān in the south to the Gomal Pass [see gūmāl in Suppl.] and river in the north, thereafter continuing as the Wazīristān hills (i.e. they lie between latitudes 28° 50' and 32° 20' N.). It is at the northern end that the highest peak of the range, Takht-i Sulaymān, is situated (3,374 m/11,066 feet). The range can only be crossed through the defiles and chasms carved out by the few rivers running through it, and it has accordingly formed, all through history, a barrier to movement between the middle Indus valley and Afghānistān.

Bibliography: D. Dichter, *The North-West Frontier of West Pakistan, a study in regional geography*, Oxford 1967. (C.E. Bosworth)

SULAYMĀN, Mawlāy, Abu 'l-Rabīʿ b. Muḥammad, ʿAlawī sultan of Morocco who reigned from Radjab 1200/March 1792 to 13 Rabīʿ I 1238/28 November 1822. He was the son of Sīdī Muḥammad b. ʿAbd Allāh and his mother belonged originally to the tribe of the Aḥlāf. He spent his youth in Sidjilmāsa, and it was he who brought the *bayʿa* of the inhabitants of this region to his brother Mawlāy al-Yazīd in 1204/1790. On the death of the latter on 20 Djumādā II 1206/14 February 1792, several of his brothers competed for power, notably Mawlāy Hishām, recognised as sultan of the Sūs at Azammūr, and Mawlāy Muslama, proclaimed in the north-west of Morocco. A third brother also laid claim to the Sharīfian throne, and this was Mawlāy Sulaymān, who was declared sultan at Fās and at Miknās (Meknès) on 17 Radjab 1206/11 March 1792, and at Salé and Rabat a month later, 20 and 21 Shaʿbān/13 and 14 April.

This prince rapidly extended his authority over the north of the country, and an unavoidable struggle developed between him and his brother Mawlāy Hishām, now his only rival; in 1208-9/1794 the latter

retained control only of his capital at Marrākush. In addition, the previous year his brother Mawlāy ʿAbd al-Salām, who governed the province of Agadir and supported him hitherto, had entered into alliance with Mawlāy Sulaymān. Furthermore, the entire Moroccan fleet was controlled by this Sharīf, who had denounced as rebels the Pashas of the ports to the south of Rabat, who for their part recognised the authority of none of the claimants. A short-lived rebellion had erupted at Salé, where there were aspirations towards the formation of an independent republic.

By 1796, Mawlāy Sulaymān was effectively considered the undisputed sovereign of Morocco by the majority of European nations. In Radjab 1211/January 1797 he finally subdued the troublesome province of the Shāwiya, and then, recognised by the ʿAbda and Dukkāla, he succeeded in taking possession of Marrākush in early December of that year/late Djumādā II 1212. The unity of Morocco was realised, and the defeated claimant took refuge in the al-Sharābī *zāwiya*.

Taking advantage of the anarchy which had persisted for five years, the Algerians had occupied Wudjda. Having consolidated his authority, Mawlāy Sulaymān requested the withdrawal of Muḥammad Pasha from the town and the surrounding region, and the province was once again under Moroccan control (1211/1796-7).

Although the sultan had succeeded in regaining control of his eastern frontier, throughout his reign he was obliged to confront continual opposition on the part of the Berber tribes, especially those of the Middle Atlas where a certain *murābiṭ*, Sīdī Muḥammad U-Naṣīr Amhāush, exerted a major influence. Between 1213/1798 and 1235/1819-20 there was a series of expeditions against these tribes. During the fourth campaign against the Ayt U-Malū of the Fāzāz in 1234/1818-19, the son of the sultan, Mawlāy Ibrāhīm, was killed. There were three expeditions against the tribes of the Rīf, and against the Ayt Idrāsan, the Garwān, the Ayt ʿAtta, the tribes of the Sūs, of the Drāʿ and the Sahara, military interventions followed one another in rapid succession. All these movements of troops contributed to famine in the countryside, and there were serious outbreaks of plague, especially in 1233-5/1818-20. In 1220/1805, intervening on behalf of the people of Tlemcen in their conflict with the western Bey, Muḥammad Mukallash, Mawlāy Sulaymān came into collision with the powerful brotherhood of the Derkāwa.

Although the inhabitants of Fās had been supporters of the sultan at the beginning of his reign, towards the end they rebelled against their governor al-Ṣaffār, appealed to some of the Berber tribes for aid and chose another sultan, a certain Mawlāy Ibrāhīm b. Yazīd, to whom they offered their allegiance on 24 Muḥarram 1236/1 November 1920. The latter died shortly after this in Tiṭṭiwān (Tetouan) and was replaced by his brother Mawlāy Saʿīd b. Yazīd. Mawlāy Sulaymān was then obliged to leave Marrākush and to lay siege to Fās, which he captured in Radjab 1237/March-April 1822. In the same year, the sultan attacked the Sharrardiyya *zāwiya* near Marrākush. Not only was he defeated but he was actually taken prisoner for a short time, before being sent back to Marrākush, where he died on 13 Rabīʿ I 1238/28 November 1822 after designating as his successor his nephew Mawlāy ʿAbd al-Raḥmān b. Hishām.

Mawlāy Sulaymān was an energetic builder and a number of monuments are owed to him; in Fās, he was responsible for the construction of four great mosques, three gates and a bridge; he also had mosques built in Wazzān, Tiṭṭiwān and Salé, and he restored the palaces of Miknās and the great mosque of Marrākush.

DE LA VÉRONNE)

SULAYMĀN, SHĀH, Ṣafawid ruler, reigned 1076-1105/1666-94; oldest son and successor of Shāh ʿAbbās II born to a Circassian mother, Nikāḥat Khānum, in December 1647 or January 1648.

Originally named Ṣafī Mīrzā, Shāh Sulaymān was first crowned as Ṣafī II on 30 September 1666, an event preceded by a great deal of court intrigue.

Having spent his entire life in the confines of the harem, Ṣafī II was ill prepared for his task as ruler. Once crowned, he threw himself into a life of pleasure, also engaging in many acts of generosity, liberally granting favours and fiefs, and filling all vacant administrative positions, all of it at the expense of the treasury, which by 1668 was reportedly empty. The resulting impecuniousness, coinciding as it did with Özbeg and Cossack raids across the northern borders, earthquakes in Shīrwān and Tabrīz, and drought followed by famine, convinced some court astrologers that the Shāh's coronation had occurred at an inauspicious moment. Ṣafī II thus was re-crowned Sulaymān on 20 March 1667.

He now underwent a radical shift from liberality to frugality. The number of troops of the royal guard was drastically reduced, many posts were left vacant for long periods of time, and the military budget was curtailed. At the same time, royal revenue was increased through new and higher taxes. This policy not only exacerbated Persia's military weakness but also furthered the deterioration of the country's economic base, so that there were frequent merchant bankruptcies and the circulation of a great deal of debased money. Widespread poverty and food riots in Iṣfahān in the 1670s were the result.

Eyewitness observers lay much of the blame for this state of affairs on Shāh Sulaymān, portraying him as a lethargic and superstitious weakling and drunkard, with resultant irrational, cruel and violent behaviour. Modern scholarship has built on this image to dismiss his entire reign as a period of effeminate sloth and uneventfulness. Sulaymān has been especially criticised for refusing all overtures by Western powers to lure Persia into an anti-Ottoman alliance. A closer look at the sources, however, reveals that his pacifism was not a matter of principle or simply a question of cowardice. Under him, the Persian army set out to counter Özbeg raids and Balūčī aggression. The Shāh's decision to preserve peace with the Ottomans and not to enter an alliance with the European powers was rather based on strategic calculations of relative military strength and potential benefits. It is also not true that he did nothing to counteract economic prob-

lems or to remedy abuse. Most of his measures, however, were short-lived and rendered ineffective, such as a half-hearted currency reform of 1684. He made a judicious choice with his selection of Shaykh ʿAlī Khān, an official of integrity, who served him as Grand Vizier for almost twenty years. However, a lack of lasting royal support undercut Shaykh ʿAlī Khān's reform efforts and turned him into a timid servant rather than an effective counsellor.

Internal divisions grew as the Shāh increasingly relied on the inner palace and its residents. His institution of a privy council consisting of the principal palace eunuchs shifted most power to their ranks and marginalised the *dīwān* administration. In his later years, Sulaymān became increasingly more removed from the daily affairs of state. Following the advice of his astrologers, he often did not appear in public for weeks or even months, during which time the Queen-Mother and the court eunuchs were in control. In this period, the signs of crisis multiplied, with Özbeg raids in Khurāsān, rebellions in Georgia and Kurdistān, and Balūčī incursions in the Kirmān area. He died on 29 July 1694, and was succeeded by his eldest son, Sulṭān Ḥusayn [*q.v.*].

Bibliography: 1. Sources. No Persian court chronicles have yet come to light for his reign. The only available provincial chronicle is Mīr Muḥammad Saʿīd Mashīzī, *Tadhkira-yi Kirmān*, ed. M.I. Bāstānī-Pārīzī, Tehran 1369/1990. Primary Western-language sources. Anon., *A chronicle of the Carmelites*, 2 vols., London 1939; Petrus Bedik, *Cehil sutun, seu explicatio utriusque, celeberrimi, ac pretiosissimi theatri quadraginta columnarum in Perside orientis* ..., Vienna 1678; J. Chardin, *Voyages du chevalier Chardin en Perse, et autres lieux de l'Orient*, ed. L. Langlès, 10 vols. and atlas, Paris 1810-11; G.F.G. Careri, *Giro del mondo del Dottor D. Gio. Francesco Gemelli Careri*, 6 vols., Naples 1699; E. Kaempfer, *Am Hofe des persischen Grosskönigs, 1684-1685*, ed. and tr., W. Hinz [2]Tübingen 1971; Anne Kroell, *Nouvelles d'Ispahan 1665-1695*, Paris 1979; Père Sanson, *L'Estat de la Perse*, Paris 1694; F. Richard, *Raphaël du Mans, missionnaire en Perse au XVII[e] s.* 2 vols., Paris 1995.

SULAYMĀN b. **ʿABD** al-**MALIK**, seventh caliph of the Umayyad dynasty [*q.v.*], *r.* 96-9/715-17, born probably in Medina about 55/675, son of the subsequent caliph ʿAbd al-Malik b. Marwān [*q.v.*] and of Wallāda bt. al-ʿAbbās b. Djaz' from the Banū ʿAbs, a tribe considered part of the Northern Arabian confederation of the Ghaṭafān [*q.v.*].

There is almost no substantial information on the first three decades of Sulaymān's life. It is likely that he came to Syria during the initial stage of the Second Civil War (60-73/680-92) in the company of other members of the Marwānid branch [*q.v.*] of the Umayyads emigrating thither. In 81/701 he led the *ḥadjdj*. At the latest after the death of ʿAbd al-ʿAzīz b. Marwān [*q.v.*] (85/704), brother of the then ruling caliph ʿAbd al-Malik b. Marwān and his successor as designated by their father Marwān b. al-Ḥakam [*q.v.*], ʿAbd al-Malik nominated as successors his own sons al-Walīd [*q.v.*] and Sulaymān.

During the caliphate of al-Walīd b. ʿAbd al-Malik (86-96/705-15), Sulaymān acted as governor of the *djund* Filasṭīn [*q.v.*], where he was engaged in developing al-Ramla as the new capital of Palestine. Some time after 90/710, Sulaymān granted asylum to some clansmen of the Muhallabids [*q.v.*], who had been in disgrace with al-Ḥadjdjādj b. Yūsuf [*q.v.*], but had escaped from jail. Among these refugees was Yazīd b. al-Muhallab, who later became Sulaymān's governor of ʿIrāḳ and Khurāsān. Though the reasons are not known, the behaviour of Sulaymān points to a certain disagreement with al-Ḥadjdjādj and also with al-Walīd. The sources do not provide sound arguments whether there was a connection with the efforts to exclude Sulaymān from the succession in favour of ʿAbd al-ʿAzīz b. al-Walīd, which are said to have been supported by al-Ḥadjdjādj. In this respect, it should not be overlooked that al-Walīd, in his endeavour to designate his own son as his successor, acted in the same way as all his Umayyad predecessors. Notwithstanding all these circumstances, after the death of al-Walīd (13 Djumādā II 96/24 February 715), Sulaymān acceded to the throne unchallenged. Syrian sources prove that he obviously chose Jerusalem as his principal seat of government. In 97/716 he led the *ḥadjdj*, and it is likely that he soon afterwards moved to Dābiḳ [*q.v.*] in northern Syria, the supply centre for the campaign against the Byzantine empire of 97-100/716-18. It was at Dābiḳ that he died on 12 Ṣafar 99/24 September 717.

To form an appropriate picture of Sulaymān's reign is difficult because of his short term of office. Basically, the policy under Sulaymān seems to have been the same as under his predecessors, even though in probably every province of the empire new governors were appointed. The choice of governors does not give the impression of bias—e.g. towards favouring a certain tribal fraction—except that the appointments might have been aimed at having closer control over the empire by nominating loyal functionaries and by breaking with arbitrary conditions under long-established and powerful governors. Prominent cases of the latter are: Mūsā b. Nuṣayr [*q.v.*], the conqueror of Spain, and his sons; the clan of al-Ḥadjdjādj b. Yūsuf (who had himself already died in Ramaḍān 95/June 714); ʿUthmān b. Ḥayyān al-Murrī in Medina; Khālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*] in Mecca; and Ḳutayba b. Muslim [*q.v.*] in Khurāsān, who fell victim to an insurrection by Wakīʿ b. Abī Sūd (Dhu 'l-Ḥidjdja 96/August 715), subsequently self-appointed governor and soon dismissed by Yazīd b. al-Muhallab, governor of al-ʿIrāḳ, then additionally of Khurāsān.

The expansion of the Arabo-Islamic empire more or less came to a standstill—not least caused by the appearance of effective counterforces; only the conquests of Djurdjān and Ṭabaristān deserve mention. But that does not mean that the impulse of expansion and conquest slackened under the rule of Sulaymān. As proof of this may serve the huge campaign against Byzantium, which was launched by the end of 97/716 under the supreme command of Maslama b. ʿAbd al-Malik [*q.v.*] via land, and at the beginning of 98/716 via sea under the command of ʿUmar b. Hubayra al-Fazārī. This campaign culminated in an unsuccessful siege of Constantinople (early summer 98/717 summer 99/718).

With a hoped-for conquest of Constantinople and with the approaching year 100 of the *hiḏjra* came chiliastic expectations. The popularity and effectiveness of messianic ideas at that time and in those circumstances is as difficult to evaluate as the actual meaning and function of the relatively numerous references to Sulaymān as the expected Mahdī [*q.v.*], which appear in the panegyrics of Ḏjarīr and al-Farazdaḳ [*q.vv.*]. While the role of Sulaymān as the "rightly-guided one", who restores justice after oppression, has a more or less clear contemporary and authentic base, this can hardly be said about his appearances in the world of literary anecdotes and religious instructions. There he is depicted on the one hand as a glutton, a conceited and cruel voluptuary, well-versed in the use of Arabic, while on the other hand, he typifies the unjust ruler (*ẓālim*) who, contrite and humiliated, falls a victim to sermons by pious religious figures. In a similar way, Sulaymān figures in descriptions of his alleged relations with his successor ʿUmar II, the famous exception among the Umayyad caliphs, credited with the reputation of having been exemplarily pious.

In nominating a successor, Sulaymān most probably was not bound by the testament of ʿAbd al-Malik in favour of the two subsequent caliphs Yazīd II and Hishām [*q.vv.*], and so like all his Umayyad predecessors he designated his own son, Ayyūb, who, however, already died before his father (about the end of 98/717 or the beginning of 99/717). Ample space in the sources is given to accounts which attribute to Radjāʾ b. Ḥaywa [*q.v.*]—a somewhat enigmatic figure appearing as a kind of court theologian or spiritual counsellor in the period from ʿAbd al-Malik to ʿUmar b. ʿAbd al-ʿAzīz—the leading role in securing the nomination of and the *bayʿa* [*q.v.*] to ʿUmar II. Most of these traditions are connected more or less directly with Radjāʾ b. Ḥaywa himself, and it is very likely that his role during the events in Dābiḳ at the time of Sulaymān's death has been exaggerated. More reasonable seems a succession of ʿUmar II by means of traditional patterns, like seniority and well-founded claims; ʿAbd al-ʿAzīz b. Marwān had never denied the ones which he had.

Bibliography: 1. Sources. Arabic works of *taʾrīkh*, *adab*, poetry and "religious learning", dealing with early Islam, and quoting more or less explicitly hitherto lost earlier works, such as Khalīfa b. Khayyāṭ, *Taʾrīkh*, index; Ṭabarī, index; Balādhurī, *Futūḥ*, index; Balādhurī, *Ansāb* (relevant parts are to some extent still in ms.); Ibn Saʿd, index; Fasawī, *K. al-Maʿrifa*, ed. al-ʿUmarī, index; *Taʾrīkh al-khulafāʾ*, ed. Gryaznevič, index; Ibn ʿAsākir, *Taʾrīkh Dimashḳ* (provides several early source materials not quoted in other works; most of the relevant parts are still in ms.); *Aghānī*, index; Ibn ʿAbd Rabbihi, *ʿIḳd*, index. Besides these and other works of more general content, it is worth consulting local histories, and, furthermore, relevant Armenian, Byzantine, Latin and Syriac sources listed in the secondary literature.

2. Studies. Besides general studies of Umayyad history, such as J. Wellhausen, *Das Arabische Reich und sein Sturz*, Berlin 1902, 157-67, 273-80; M.A. Shaban, *The ʿAbbāsid revolution*, Cambridge 1970, 76-81; idem, *Islamic history. A new interpretation, I: A.D. 600-750*, Cambridge 1971, 127-31; G.R. Hawting, *The first dynasty of Islam: the Umayyad caliphate A.D. 661-750*, London-Sydney 1986, 72-6; see also the monograph of R. Eisener, *Zwischen Faktum und Fiktion. Eine Studie zum Umayyadenkalifen Sulaimān b. ʿAbdalmalik und seinem Bild in den Quellen*, Wiesbaden 1987 (provides further information on sources and secondary literature). (R. Eisener)

SULAYMĀN b. **ʿALĪ** b. **ʿABD ALLĀH**, early ʿAbbāsid prince and uncle of the first ʿAbbāsid caliphs al-Saffāḥ and al-Manṣūr [*q.vv.*], d. at Baṣra in Djumādā II 142/October 759 aged 59 (al-Ṭabarī, iii, 141).

He was appointed governor of Baṣra, including also eastern Arabia and western Persia, by al-Saffāḥ in 133/750-1 (*ibid.*, iii, 73), and remained in this important power base until forced out of the governorship in 139/756. As one of the *ʿumūma* or paternal uncles, whose position vis-à-vis their nephews the caliphs was ambiguous, Sulaymān sheltered for many years the failed rebel ʿAbd Allāh b. ʿAlī [*q.v.*], until ʿAbd Allāh was handed over to al-Manṣūr on a promise of *amān* or safety (promptly violated by the caliph), although al-Manṣūr did not encompass ʿAbd Allāh's death until after Sulaymān's own death.

Sulaymān and his family, including his sons Muḥammad and Djaʿfar, carried out extensive public works in order to develop the region of Baṣra, much enriching themselves in the process. Hārūn al-Rashīd eventually confiscated the wealth and property of Muḥammad b. Sulaymān, amounting to 60 million dirhams, on the latter's death in 173/789, as part of his policy of reducing the power of independent-minded members of the ʿAbbāsid family (al-Ṭabarī, iii, 607-8; al-Masʿūdī, *Murūdj*, vi, 289-92 = §§ 2496-7; etc.).

Bibliography: See the indices to Ch. Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, Paris 1953; J. Lassner, *The shaping of ʿAbbāsid rule*, Princeton 1980; H. Kennedy, *The early Abbasid caliphate, a political history*, London 1981. (C.E. Bosworth)

SULAYMĀN b. al-**ASHʿATH** [see abū dāʾūd al-sidjistānī].

SULAYMĀN b. **DĀWŪD**, the biblical King Solomon, is an outstanding personality in Islamic legends.

There were, as the Arab histories recount, four great world-rulers, two of whom were infidels, Nimrod and Nebuchadnezzar; and two of whom were believers, Alexander the Great and Solomon. Of these, the last was the most resplendent figure. Special emphasis was placed on his wonderful powers of magic and divination. The most puzzling riddles and the most abstruse subjects were within his ken. Perspicacity and discernment dwelt in his eyes; wisdom and justice were graven on his forehead. His knowledge was deeper than the Jordan Valley. In the Ḳurʾān itself he is frequently mentioned, and along with Alexander enjoys the distinction of being designated a true Apostle of God, a divine messenger and prototype of Muḥammad. The Ḳurʾānic passages tell how at an early age he even surpassed his father David [see dāwūd] in skilful administration of justice (XXI, 78, 79). When David died, Solomon was chosen from amongst the other sons as successor (XXVII, 16). He had admirable endowments. God had granted him esoteric knowledge. He was acquainted with the speech of birds and animals (XXVII, 16, 19), a tradition based on I Kings iv. 33. A strong wind was subjected to him (XXI, 81; XXXVIII, 36). It blew in the morning for a month, and in the evening for a month, while a fountain of molten brass was made to flow for his benefit (XXXIV, 12). At his command were legions of satans to do whatever he wished. They were employed, for example, in diving for pearls (XXI, 82; XXXVIII, 37). The *djinn* were forced to work his will. If they disobeyed they were threatened with the pains of hell (XXXIV, 12). They constructed for him

shrines and statues and costly vessels (*ibid.*, 13). His armies were recruited from men and *djinn* and birds. The hoopoe (*hudhud*) was the first to bring him tidings of the kingdom of Saba and of its illustrious queen, Bilḳīs [*q.v.*]. Solomon, as a prophet, corresponded with her and summoned her to Islam. And after an exhibition of his strength and wisdom, she submitted (XXVII, 20-44). The devils frequently sought to convict him of infidelity, but in vain (II, 101). On a certain occasion he failed in the observance of his religious duties, and that was when his admiration for his stud of horses led him to forget his prayers. In atonement he sacrificed them, cutting their legs and necks (XXXVIII, 31-3). For a time he seems to have lapsed into idolatry. As a punishment he lost his kingdom, his throne being occupied by some one in his own likeness. When he had asked forgiveness, he was restored to his place, and promised divine favour in Paradise (XXXVIII, 34, 35, 40). When he died he was resting on his staff, and no one knew of his death until a worm bored its way through the prop and the body collapsed. Then the *djinn* were released from their labours (XXXIV, 14).

Later legendary lore has magnified all this material, which is chiefly Rabbinic in origin. Solomon's control over the *djinn* and his use of them in his building operations are derived from the *Midrash* on Eccles., ii. 8. His kingdom is even made universal, perhaps after the analogy of that of the 40 (or 72) kings of the Pre-Adamite *djinn*, who were each named Solomon (Lane, *Arabian nights*, Introd., n. 21; d'Herbelot, *Bibliothèque orientale*, v. 372). His renowned wisdom included "the wisdom" for which Egypt was famous, i.e. occult science. Pythagoras is said to have received his knowledge from Solomon in Egypt (al-Suyūṭī, *Ḥusn al-muḥāḍara fī akhbār Miṣr*, i, 27). Solomon is said to have been the pupil of Mambres the Egyptian Theurgist (G.R.S. Mead, *Thrice-greatest Hermes*, iii, 283 n.). Hence his reputation in tales as a magician. This magic power of his was effected by means of a talismanic ring engraved with "the most great name" of God. Permission to use this was also vouchsafed to his *wazīr*, Āṣaf b. Barakhyā [*q.v.*], who transported the throne of Bilḳīs from Sheba to Jerusalem in the twinkling of an eye. Solomon was in the habit, when he performed his ablutions, of laying aside this ring from his finger, and entrusting it to one of his wives, Amīna. Ṣakhr, one of the Satanic spirits, assumed the form of the king, purloined the magic seal, and for forty days ruled, while Solomon was forced to wander as an outcast. The demon, however, lost the ring in the sea, whence Solomon recovered it when he cut open a fish which had swallowed it. Thus he regained his throne. It is said he was punished in this way because of the idolatry of the royal consort, Djarāda, the daughter of the king of Sidon. Some say the counterfeit body that occupied his throne was his son who died. The 13th of the month is regarded as unlucky because, on that day, Solomon was exiled by God. The Persian *Nawrūz* festival [*q.v.*] and its customs are said to date from the restoration of Solomon to his kingdom (al-Bīrūnī, *Chronology of ancient nations*, ed. Sachau, 199). Because he boasted that 1,000 wives would bear him 1,000 warrior sons, he had one son only who was misshapen, with one hand, one eye, one ear, and one foot. Then in humility he prayed to God, and his son was made whole. In his capacity of warrior, he conquered many kingdoms (al-Bayḍāwī, v, 19).

Some of the marvellous works of Solomon may be briefly mentioned. Shortly after his accession he was in a valley between Hebron and Jerusalem, when he received his authority over winds, water, demons and animals from the four guardian angels in charge of these spheres. Each one gave him a jewel which he placed in a ring composed partly of brass and iron. With the brass he sealed his orders for the good *djinn*, while with the iron he sealed his orders for the evil *djinn*. The seal is said to have held a mandrake (J.G. Frazer, *Folk-lore in the Old Testament*, ii, 390). Solomon's seal (*khātam Sulaymān*) is a common charm, in the form of a six-pointed star, often inscribed on drinking cups. The Table of Solomon (*mā'idat Sulaymān*) and other marvellous relics, according to legend, found their way to Spain, where they were discovered by Ṭāriḳ b. Ziyād at the capture of Toledo [see ṬULAYṬULA]. They had been taken from Jerusalem as booty (Ibn al-Athīr, *Annales du Maghreb*, ed. Fagnan, 37 ff.; al-Ṭabarī-Bal'amī, *Chronique*, ed. Zotenberg, iv, 183; Dozy, *Recherches*[3], i, 5). The Table was made of green beryl, had 360 legs, and was inlaid with pearls and rubies. There was also a magic mirror which revealed all places in the world (Carra de Vaux, *Abrégé des Merveilles*, 122).

The blocks of stone for the building of the Temple were hewn by means of the miraculous pebble Samur (*Shamir*) which the demon Ṣakhr procured from the sea-eagle. Solomon sheltered himself from the heat of the sun under a canopy composed of all the birds of the air. A magic carpet of green silk for aerial transportation was woven for him. On this he could leave Syria with all his equipment in the morning, and reach Afghānistān by evening. Untold wealth of precious stones and gold and silver was accumulated with the help of the servile djinn. They also assisted him in erecting palaces, fortresses, baths and reservoirs. Various relics of these operations are pointed out in Palestine, Arabia and elsewhere (see *Revue des traditions populaires*, ix, 190; Nāṣir-i Khusraw, *Safar-nāma*, ed. Schefer, 56, 76, 84, 85). He had 1,000 glass-roofed houses containing 300 couches and 700 wives (al-Tha'labī, *Ḳiṣaṣ*, 204). Besides the building of the Temple, during which he outwitted the djinn, the Farther Mosque is likewise claimed as his work (Mīrkhwānd, *Rawḍat al-Ṣafā*, ii/1, 76). He is even credited with founding a mosque in Alexandria (al-Suyūṭī, *op. cit.*, i, 37). Part of his leisure time was spent in acquiring the art of basket-weaving, that he might have some means of earning a livelihood if the need arose (Mīrkhwānd, *op. cit.*, 79). The tradition seems Rabbinic in character. His throne was constructed of pure gold. The whole natural world was so completely under his sway that, on one occasion, the sun stood still to enable him to say his evening prayers. The evil djinn he imprisoned in vessels of lead (cf. Zech., v. 8). 'Aydhāb, on the Red Sea, was assigned by him as a place of incarceration for the demons (Nāṣir-i Khusraw, *op. cit.*, 297). His knowledge of the speech of the animal world enabled him at times to display his clemency. Once he turned aside his armed hosts in order to avoid smashing the eggs of a bird; while on another occasion, he had compassion on a colony of ants (al-Bīrūnī, *op. cit.*, 199; sūra XXVII, 17, 18).

A claim is put forward that he invented the Arabic and Syriac scripts, and that he was the author of many Arabic treatises on magic. He is compared with Djamshīd, and there were, undoubtedly, Iranian influences at work in the Solomon saga. His personal appearance is variously given, e.g. as "a large-headed man riding on a horse" (Mīrkhwānd, ii/1, 83), and as being "fair, well-built, of lustrous beauty, with a plentiful supply of hair, and clothed in white garments" (al-Tha'labī, *op. cit.*, 254). When he died he

was aged 53, having reigned for forty years. The exact location of his tomb is uncertain. Some place it in Jerusalem, in the Ḳubbat al-Ṣakhra; others near the Sea of Tiberias. The Prophet said (according to al-Ṭabarī-Balʿamī, *Chronique*, i, 60) that it was "in the midst of the sea ... in a palace excavated in a rock. This palace contains a throne on which Solomon is placed with the royal ring on his finger appearing as though he were alive, protected by twelve guardians, night and day. No one hath arrived at his tomb except two persons, Affān and Buluḳiya" (Lane, *op. cit.*, xx, 96; see Mīrkhʷānd, 102-3). The tomb is placed also in the Andaman Islands (*Les Merveilles de l'Inde*, 134). Solomon has found his way into Malayan folklore. Fowlers use his name for snaring pigeons (Frazer, *The Golden Bough*, iii, 418; idem, *Folk-lore in the Old Testament*, ii, 476-7). Regarding Solomon and the Evil Eye, see W.B. Stevenson, in *Studia Semitica et Orientalia*, Glasgow 1920, 104-5, and the references therein. The Ethiopic legends of Solomon and Mākedā, Queen of ʿAzēb, may be found in C. Bezold, *Kebra Negast*, and in E.W. Wallis Budge, *The Queen of Sheba and her only son Menyelik* [see BILḲĪS]. Examples of the Solomonic riddles may be seen in al-Thaʿlabī, *op. cit.*, 202; Jacques de Vitry, in *PPTS*, 17.

Geburtstag*, Graz 1981, 305-24; H. Schwarzbaum, *Biblical and extra-biblical legends in Islamic folk-literature*, Walldorf 1982; D. König and H. Venzlaff, *Salomo und das Rätsel der Perle*, in *Isl.*, lxii (1985), 298-310; A.H. Johns, *Solomon and the Queen of Sheba. Fakhr al-Din al-Razi's treatment of the Quranic telling of the story*, in *Abr-Nahrain*, xxiv (1986), 58-82; S.S. Ali, *King Solomon's strategy of deception*, in *IQ*, xxiv (1990), 59-65; P. Soucek, *Solomon's throne/Solomon's bath: model or metaphor?*, in *Ars Orientalis*, xxiii (1993), 109-34.

Solomon figures prominently in manuals of practical magic, and likewise plays an important role in Islamic esotericism, notably in Ibn ʿArabī's *Fuṣūṣ al-ḥikam* (partial tr. T. Burckhardt, *La sagesse des prophètes*, Paris 1968; full tr. R. Austin, *The Bezels of Wisdom*, Ramsey, N.J. 1981) and the school of his commentators, in which he incarnates the "word of the mercy-bestowing wisdom".

(J. WALKER-[P. FENTON])

SULAYMĀN B. DJARĪR AL-RAḲḲĪ, Zaydī *kalām* theologian from al-Raḳḳa, active in the second half of the 2nd/8th century. Little is known about his life. He is said to have pledged allegiance to the ʿAlid pretender Yaḥyā b. ʿAbd Allāh b. al-Ḥasan and participated in debates with Hishām b. al-Ḥakam [*q.v.*], Ḍirār b. ʿAmr [*q.v.*], and the Ibāḍī ʿAbd Allāh b. Yazīd in the circle of the Barmakid Yaḥyā b. Khālid. In legendary reports he is accused of having poisoned the ʿAlid Idrīs b. ʿAbd Allāh in the Maghrib at the instigation of the caliph Hārūn al-Rashīd or of Yaḥyā b. Khālid. Although such reports were transmitted even by Zaydīs, their reliability is doubtful.

In his doctrine on the imāmate, Sulaymān stood near the Batriyya [*q.v.* in Suppl.], among whom he is sometimes included, although in some respects he came closer to the more radical Djārūdiyya [*q.v.*]. In agreement with the Batriyya, he denied that there had been a divinely-inspired appointment (*naṣṣ*) of ʿAlī by Muḥammad and held that the imām should be chosen by consultation (*shūrā*). ʿAlī was, however, entitled to the imāmate after Muḥammad because of his impeccability (*ʿiṣma*). In choosing the less excellent (*mafḍūl*), sc. Abū Bakr, the community had committed an error (*khaṭaʾ*), which did not, however, amount to a grave offence (*fisḳ*). Obedience to the "less excellent" imām, once properly chosen, was obligatory so long as he displayed sound knowledge and good conduct. ʿUthmān had lost legitimacy by his reprehensible acts. After ʿAlī, his and Fāṭima's descendants were entitled to the imāmate by *shūrā* because of their collective authority in religion.

In his theology Sulaymān espoused predestination, while attempting to avoid determinism. He thus held that God was from eternity angry at the infidels and pleased with the faithful, but, against the Sunnī traditionalist doctrine, God did not will acts of disobedience. Human ability to act (*istiṭāʿa*) exists before the act and is used up by it. Sulaymān was opposed to anthropomorphism and interpreted the Ḳurʾānic face (*wadjh*) of God as God's self. Against Muʿtazilī doctrine, however, he affirmed the reality of divine attributes of knowledge, power, will, etc., describing them as neither identical with Him nor other than Him. About the nature of the Ḳurʾān, he seems to have taught that whatever constituted divine knowledge in it was uncreated and whatever constituted command or prohibition was created.

After his death, Sulaymān's theological school prevailed in ʿĀnāt, but his followers there were converted to Muʿtazilism by Djaʿfar b. Mubashshir (d. 234/848-9). Later Zaydī tradition was generally hostile towards his teaching, and the Imām al-Hādī ilā 'l-Ḥaḳḳ wrote a refutation of his predestinarian views.

(W. MADELUNG)

SULAYMĀN B. ḤASAN (d. 1005/1597), the grandson of Yūsuf b. Sulaymān, the twenty-fourth *dāʿī muṭlaḳ* of the Mustaʿlī-Ṭayyibī Ismāʿīlīs, was a deputy of Dāwūd b. ʿAdjabshāh (d. 997/1589), the twenty-sixth *dāʿī*, in Mukhā [*q.v.*], the famous coffee port and a great trade centre on the Red Sea coast of Yaman. Three years after the succession of Dāwūd b. Ḳuṭbshāh as the twenty-seventh

dāʿī, Sulaymān claimed the succession for himself. The great majority of the community in India upheld the succession of Dāwūd b. Ḳuṭbs͟hāh, whereas a minority, mainly in Yaman, accepted Sulaymān's claim. Because of this schism the former became known as the Dāwūdīs while the latter as the Sulaymānīs [*q.v.*].

Contemporary Dāwūdī sources give a detailed account of this schism, which is corroborated by independent Mug͟hal sources in its main outlines. The Sulaymānī sources, on the other hand, are spotty and apologetic. According to these sources, two widows of the late Dāwūd b. ʿAd̲j̲abs͟hāh, their two sons, and a confidential scribe of the late *dāʿī*, were accused of embezzling money from the treasury. To counteract those charges, the accused schemed to challenge Dāwūd b. Ḳuṭbs͟hāh's authority by forging a document of succession in favour of Sulaymān by using the stolen seal of the late *dāʿī*, a plan in which their kinsman by marriage, Sulaymān, acquiesced. Sulaymān then announced his claim as the twenty-seventh *dāʿī*, but the plot was uncovered and Sulaymān was dismissed from his position. Unable to garner support in Muk͟hā, Sulaymān went to Ḥarāz, was rebuffed by the chief deputy of the *dāʿī* in Yaman and others, hence went to Nad̲j̲rān, inhabited by the influential Banū Yām [*q.v.*], a subdivision of the large and ancient tribe Hamdān who had embraced the Ismāʿīlī faith, and succeeded in winning their support. Soon he was imprisoned by the Turkish authorities, until after three years he managed to escape and fled to India. He arrived in Aḥmadābād in 1003/1595 and tried to assert his claim by resorting to litigation against Dāwūd b. Ḳuṭbs͟hāh at the court of the Mug͟hal emperor Akbar. But before the case was decided in favour of Dāwūd, Sulaymān died in Lahore on 25 Ramaḍān 1005/12 May 1597; his body was taken to Aḥmadābād and interred there.

He was an eloquent speaker and wrote several works on Ismāʿīlī doctrines, asserting his claim and refuting that of his opponents, but most of them are lost.

Bibliography: I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 242-4; Farhad Daftary, *The Ismāʿīlīs. Their history and doctrines*, Cambridge 1990, 304-5 (his statement that Dāwūd b. ʿAd̲j̲abs͟hāh died in 999/1591, or in 997/1589 according to the Sulaymānīs, is incorrect), 318; Ismāʿīld̲j̲ī Badripresswala (ed.), *Ak͟hbārud duʿātil akramīn* (in Gud̲j̲arātī), Rajkot 1356/1937, 110-68. (I. POONAWALA)

SULAYMĀN B. KAT͟HĪR al-K͟huzāʿī, Abū Muḥammad, *dāʿī* of the Hās͟himiyya in K͟hurāsān.

He figures as an authority on Yazīd b. al-Muhallab's campaign in D̲j̲urd̲j̲ān in 98/716-17, and it was perhaps as a member of Yazīd b. al-Muhallab's army that he left Kūfa for K͟hurāsān, where his brother D̲j̲ābir or Ḥārit͟ha b. Kat͟hīr campaigned against the Turks in 106/724-5, and where his father, Kat͟hīr b. Umayya, fell in battle against the Turks as an old man in 119/737 (al-Ṭabarī, ii, 1323, 1480, 1601 [wrongly Kat͟hīr Abū Umayya]). Sulaymān himself was *min ahl al-dīwān* in Marw when he was recruited for the Hās͟himī cause, allegedly in 100/718-19, by Bukayr b. Māhān, a *mawlā* who had himself participated in Yazīd b. al-Muhallab's campaign in D̲j̲urd̲j̲ān (*Ak͟hbār al-dawla al-ʿabbāsiyya*, ed. ʿA.-ʿA. al-Dūrī and ʿA.-D̲j̲. al-Muṭṭalibī, Beirut 1971, 191, 199). Sulaymān recruited his son, brothers, brothers-in-law and other K͟huzāʿīs, as well as some prominent non-K͟huzāʿīs, for the movement and rose to the position of *naḳīb* (*ibid.*, 202, 216, 219, 220, 271; al-Ṭabarī, ii, 1954, 1358; al-Balād͟hurī, *Ansāb*, iii, 115 [makes him a *mawlā* of K͟huzāʿa]). He was arrested in 117/735-6 along with other *dāʿīs*, but soon released (al-Ṭabarī, ii, 1586 ff.), and was the prime leader of the *daʿwa* until the arrival of Abū Muslim [*q.v.*], whose take-over he opposed and who liquidated both him and his son after the accession of Abu ʾl-ʿAbbās in 132/750 (al-Ṭabarī, ii, 1960 ff., iii, 61; *Ak͟hbār*, 271 ff., cf. 220; al-Balād͟hurī, *Ansāb*, iii, 168).

Bibliography: All the standard chronicles on the Umayyad and early ʿAbbāsid periods mention Sulaymān, but usually add little to the works cited in the article. The main secondary works are J. Wellhausen, *The Arab kingdom and its fall*, Calcutta 1927; F. Omar, *The ʿAbbāsid caliphate 132/750-170/786*, Bag͟hdād 1969; E.L. Daniel, *The political and social history of Khurasan under Abbasid rule, 747-820*, Minneapolis and Chicago 1979; M. Sharon, *Black banners from the East*, Jerusalem and Leiden 1983; idem, *Revolt, the social and military aspects of the ʿAbbāsid Revolution*, Jerusalem 1990.

(PATRICIA CRONE)

SULAYMĀN B. ḲUTULMÎS͟H b. Arslan Isrāʾīl, member of the Sald̲j̲ūḳ family and founder of the sultanate of Rūm (d. 479/1086).

His father was killed in 456/1064 during a succession struggle with his kinsman Alp Arslan [*q.v.*], and at least four of his sons appear to have escaped eventually to the west (see Cl. Cahen, *Qutlumush et ses fils avant l'Asie Mineure*, in *Isl.*, xxxix [1964], 14-27; on the form of the name Ḳutulmis͟h, see *ibid.*, 14 n. 1, and M.F. Köprülü, *Türk onomastique'i hakkında*, in *İstanbul Üniv. Edebiyat Fak. Tarih Dergisi*, i [1950], 227-30). Sulaymān, the most prominent of them, appears in 467/1074 as the chief of a large group of Türkmens in Anatolia (Sibṭ Ibn al-D̲j̲awzī [the most important source on his life], *Mirʾāt al-zamān*, ed. Ali Sevim, Ankara 1968, 174-5; cf. Cahen, *La première pénétration turque en Asie Mineure*, in *Byzantion*, xviii [1948], 5-67).

After an abortive attempt to intervene in Syrian affairs (see Sevim, *Suriye ve Filistin Selçuklulan tarihi*, Ankara 1983, 68-70), Sulaymān withdrew into Anatolia, and taking advantage of the confusion there and the collapse of the Byzantine defence system after Malāzgird [*q.v.*], he moved westwards with his Türkmen followers, and took possession of Nicaea and its environs, perhaps as early as 467/1075 (al-ʿAẓīmī, *Taʾrīk͟h*, ed. Ali Sevim, Ankara 1988, 16). Greek sources state that the Emperor Michael VII hired Sulaymān to help crush the rebellion of Nicephorus Botaniates, the general in command of Anatolia, but that Sulaymān in fact joined the latter, so that with Türkmen assistance, Botaniates achieved the throne in Constantinople in 1078. Sulaymān, meanwhile, from his base at Nicaea was able to overrun most of western and central Anatolia (see the Greek sources in S. Vryonis, *The decline of medieval Hellenism in Asia Minor*, Berkeley, etc. 1971, 105-6). An expedition sent against him by the Great Sald̲j̲ūḳ Sultan Malik S͟hāh under Bursuḳ [*q.vv.*] failed to bring Sulaymān to heel, although it killed his brother Manṣūr, and, since Alexius Comnenus had to withdraw troops from Anatolia for the Balkans, the Emperor concluded a treaty with Sulaymān acknowledging his suzerainty in the territories under his control (Anna Comnena, *The Alexiad*, tr. E.R.A. Sewter, Harmondsworth 1969, 198). Around this time, Greek sources refer to Sulaymān as "sultan"; unfortunately, no coins of his have come to light.

Sulaymān now turned his ambitions eastwards, possibly with the intention of challenging Malik S͟hāh

for control of the Saldjūḳ empire, and attacked Cilicia and northern Syria, capturing Anṭākiya (Antioch) in 477/1084 and turning the cathedral there into a mosque (Ibn al-Athīr, ed. Beirut, x, 138-9; Ibn al-ʿAdīm, *Zubda*, ed. Dahan, ii, 86-8; Ibn Shaddād, *al Aʿlāḳ al-khaṭīra*, tr. A.-M. Eddé Terrasse, *Description de la Syrie du Nord*, Damascus 1984, 243-5; Sevim, *op. cit.*, 107-12). Four years later he was able to kill the ʿUḳaylid ruler of Mawṣil and Aleppo, Muslim b. Ḳuraysh, but this provoked a powerful reaction from Tutush b. Alp Arslan [*q.v.*], ruler of Syria, and his commander Artuḳ defeated and killed Sulaymān in a battle near Aleppo in Ṣafar 479/June 1086, capturing Sulaymān's son Ḳilidj Arslan also (Sibṭ, 236-40; Ibn al-ʿAdīm, 97-9; Sevim, *op. cit.*, 119-26). The latter only succeeded in escaping to Anatolia after Sultan Malik Shāh's death in 485/1092.

Sulaymān emerges as a proto-typical Türkmen chief, operating independently on the frontiers of the Saldjūḳ empire; there is no evidence that it was Malik Shāh who originally sent him to conquer and rule Anatolia.

Bibliography (in addition to references in the article): Cahen, *Pre-Ottoman Turkey*, London 1968, 73-8; *IA*, art. *Süleyman-Şah* (O. Turan) (= actually, a history of Anatolia in the time of Sulaymān, repr. as ch. 2 of his *Selçuklular zamanında Türkiye*, Istanbul 1971, main points summarised in his ch. *Anatolia in the period of the Seljuks and the Beyliks*, in *Camb. hist. of Islam*, Cambridge 1970, i, 234-6); Sevim, *Anadolu fatihi Kutalmışoğlu Süleymanşah*, Ankara 1990, differing from Turan in several respects but without presenting specific evidence. (G. Leiser)

SULAYMĀN B. MIHRĀN [see AL-AʿMASH].

SULAYMĀN B. ṢURAD b. al-Djawn al-Khuzāʿī, Abu (ʾl-)Muṭarrif, leader of the pro-ʿAlid Tawwābūn ("penitents") movement [*q.v.*]. There is disagreement whether he was a *ṣaḥābī* or a *tābiʿī*. The former is the prevalent view; according to most biographical sources he was originally called Yasār, was given the name Sulaymān by the Prophet, and was 93 years old when he died. Lammens suggested that reports of Sulaymān's longevity were circulated in order to reinforce the claim that he was a Companion (*Le califat de Yazīd Ier*, Beirut 1921, 129, n. 3).

Sulaymān was among the early settlers of Kūfa, where he built a *dār* on land allotted to his tribe. Together with other *ḳurrāʾ* [*q.v.*], he protested against the land policy of Saʿīd b. al-ʿAṣ [*q.v.*]. A number of sources report that Sulaymān fought alongside ʿAlī at the Battle of the Camel; others maintain that he was not present and was rebuked by the caliph for his absence. There is general agreement that he participated in the Battle of Ṣiffīn. Sulaymān strongly objected to the arbitration agreement, was critical of al-Ḥasan for abdicating in favour of Muʿāwiya and, after al-Ḥasan's death, unsuccessfully attempted to prevail upon al-Ḥusayn to rise against the Umayyad caliph. After Muʿāwiya's death, Sulaymān was the first signatory of a letter in which the Kūfans urged al-Ḥusayn to come to Kūfa; he was also among those who did not come to al-Ḥusayn's aid.

Abū Mikhnaf (as cited by al-Ṭabarī) reports that after the Karbalāʾ massacre, five leaders of the Tawwābūn met at Sulaymān's home in al-Kūfa and nominated him as their commander (*amīr al-tawwābīn*). Sulaymān obtained messages of support from the Shīʿīs of al-Madāʾin and Baṣra, but the movement remained clandestine until the death of Yazīd (Rabīʿ I 64/November 683). At that point, the *ashrāf* of Kūfa expelled ʿAmr b. Ḥurayth al-Makhzūmī (ʿUbayd Allāh b. Ziyād's deputy in al-Kūfa) and recognised Ibn al-Zubayr as caliph. Ibn al-Zubayr appointed ʿAbd Allāh b. Yazīd al-Khaṭmī al-Anṣārī as governor of Kūfa. One week before Ibn Yazīd's arrival, al-Mukhtār b. Abī ʿUbayd [*q.v.*] entered the town. Al-Mukhtār called on the Shīʿīs of Kūfa to support him in seeking vengeance for al-Ḥusayn, and dismissed Sulaymān as a useless old man who had no experience of politics or warfare and who would only get himself and his followers killed. Al-Mukhtār won the support of some Shīʿīs, but most remained loyal to Sulaymān, whom they regarded as *shaykh al-shīʿa*, and Sulaymān made preparations to meet the Syrian army which had been dispatched to the Djazīra.

According to Abū Mikhnaf, Sulaymān and his party of horsemen left Kūfa on 1 Rabīʿ II 65/15 November 684 and camped at al-Nukhayla [*q.v.*]. Sulaymān checked the register (*dīwān*) of those who had given him the oath of allegiance and found that of 16,000 (or 12,000) who were listed there, only 4,000 had joined him. The party left al-Nukhayla three days later and proceeded to Aḳsās Mālik (on the bank of the Euphrates), where Sulaymān discovered that another thousand or so were missing. The following morning they arrived at al-Ḥusayn's tomb at Karbalāʾ, and then eventually reached Ḳarḳīsiyā [*q.v.*]. The town's ruler, the Ḳaysī Zufar b. al-Ḥārith, advised Sulaymān to get to ʿAyn al-Warda [see RAʾS AL-ʿAYN] before ʿUbayd Allāh b. Ziyād in order to gain control of its springs, and there to await the Syrians in fortified positions; Sulaymān followed this advice.

The first skirmishes between the two sides took place a few days after the Tawwābūn had reached ʿAyn al-Warda, with Sulaymān's men inflicting casualties on the Syrian army. Then ʿUbayd Allāh b. Ziyād dispatched al-Ḥuṣayn b. Numayr [*q.v.*] at the head of an army of 12,000 men. Fighting broke out on 22 Djumādā I 65/4 January 685. On the first day Sulaymān's men were successful, but very soon the Umayyads brought up reinforcements of about 10,000 men. In the ensuing battle, a large number of Syrians were killed or wounded, but Sulaymān was fatally wounded by an arrow (24 Djumādā I 65/6 January 685). In accordance with the instructions which Sulaymān gave in advance, al-Musayyab b. Nadjaba took command and fought on until he too was killed; the battle ended in complete defeat for the Tawwābūn.

From Abū Mikhnaf's account, it emerges that about six weeks passed between Sulaymān's departure from Kūfa and his death. This is contradicted by the information in al-Balādhurī. Here, too, the date of Sulaymān's departure from Kūfa is given as 1 Rabīʿ II 65/15 November 684; yet the first encounters between the Syrians and the Tawwābūn are said to have taken place some time after the death of Marwān five months later (*Ansāb al-ashrāf*, v, 204, 210, 298-9). If these reports are to be trusted, then Sulaymān's death may well have occurred in the spring or summer of 65/685, i.e. at least several months after the date given in al-Ṭabarī.

(E. KOHLBERG)

SULAYMĀN B. WAHB [see WAHB].

SULAYMĀN B. YAḤYĀ, nicknamed Ibn Abi 'l-Zawāʾid, minor Medinan poet of the period straddling the Umayyad and ʿAbbāsid dynasties. He was of Arab origin from the tribe of the Saʿd b. Bakr (Hawāzin) and seems to have owed his nickname to a malformation of the legs (fleshy excrescences showing on the legs); in *al-Aghānī* (xv, 34), the poet is nicknamed *dhu 'l-zawāʾid* ("he who has fleshy excrescences"). The ancient sources, with one exception only, are silent regarding him; *K. al-Waraḳa* and the *Ṭabaḳāt* of Ibn al-Muʿtazz, while mentioning numerous Baghdādī artisans of the same social level as Ibn Abi 'l-Zawāʾid, simply ignore all extra-ʿIrāḳi literary activity.

Biographical information concerning him is by no means negligible: the major part of his life was spent in Medina. In spite of his responsibilities as *imām* of the great mosque of the city, he led an active social life; he frequented the houses of *ḳaynas*, inns (*Aghānī*, xiv, 127) and the promenades of Medina (*ibid.*, 128-9), accompanied by *udabāʾ* (Ibn Daʾb), poets (Ibn Abi 'l-Saʿlāt) and members of the Medinan aristocracy (Thābit, al-Zubayr and Khubayb, great-grandson of ʿAbd Allāh b. al-Zubayr). During the reign of al-Mahdī (158-69/775-85) he made his way to Baghdād, but did not enjoy life there, as is shown by a poem in eight verses which he composed, bemoaning the irritations caused by the fleas of the great metropolis and expressing nostalgia for his natal town (*ibid.*, 126); the light-hearted tone is indistinguishable from that of verses evoking the same motif attested in the poetry of *al-ḥanīn ilā 'l-awṭān* from the 2nd/8th century onward (al-Djāḥiẓ, *K. al-Ḥayawān*, Cairo 1938-58, v, 385-92). The place and date of his death are both unknown.

The wife, the spouse, but also the mistress and the singing slave-girl, constitute the basic theme of what survives of his poetry; the spouse is evoked here as an old, hideous and decrepit woman, and the tone is extremely coarse (*Aghānī*, xiv, 123-5), in a manner reminiscent of the poems of the Kūfan Ismāʿīl b. ʿAmmār al-Asadī; the *ḳayna* poems reveal an ambivalent attitude: hatred and fear in relation to the sin of fornication (*ibid.*, xiv, 123), while on the other hand he sings the praises of Baṣaṣ, the *djāriya* of Ibn al-Nafīs, who has been bought by Ibrāhīm b. al-Mahdī. As for the mistress, here he displays a delicacy which is at odds with the other verses dedicated to the wife.

Bibliography: Sezgin, *GAS*, ii, 449; *al-Aghānī*[3], xv, 27, 34. (ED.)

SULAYMĀN B. YASĀR [see FUḲAHĀʾ AL-MADĪNA, in Suppl.].

SULAYMĀN AL-MAHRĪ, in full Sulaymān b. Aḥmad b. Sulaymān al-Mahrī, an Indian Ocean sea captain (*muʿallim al-baḥr*) of the 16th century A.D. Attributed to him are five treatises on navigation which were translated into Turkish by the author and admiral Sīdī ʿAlī Čelebi [*q.v.*] and included in his work *al-Muḥīṭ* written in 1554. According to Sīdī Čelebi, Sulaymān finished the treatise called *ʿUmda* in 917/1511. He was a native of Shiḥr [*q.v.*] and was dead by the time Sīdī Čelebi was writing. That is all that is known of him personally. However, he was probably a pupil of Aḥmad b. Mādjid [see IBN MĀDJID] in the late 1400s. He quotes Ibn Mādjid and builds the structure of his works on the form derived from the latter's work. The Arabic form of these treatises has survived, together with the earlier treatises of Ibn Mādjid in several manuscripts. Those which include the works of Sulaymān are four, (a) Paris, B.N. Arabe 2559 (dated 961/1554); (b) Leiden no. 8660 (2) (dated 1059/1649); (c) Yale Arab ms. 1480, 1535, 1536-7 (dated 1097/1686); while the fourth is in private possession in Bahrain (dated 1091/1680). The treatises are named (1) *al-ʿUmda al-Mahriyya fī ḍabṭ al-ʿilm al-baḥriyya*; (2) *al-Manhadj al-fākhir fī ʿilm al-baḥr al-zākhir*; (3) *Tuḥfat al-fuḥūl fī tamhīd al-uṣūl*; (4) *Sharḥ al-tuḥfa*; (5) *Ḳilādat al-shumūs wa'stikhrādj al-usus*.

The *ʿUmda al-Mahriyya* is the earliest of these works, and is quoted by both the *Tuḥfa* and the *Manhadj*. It quotes the *Ḥāwiya* of Ibn Mādjid, the plan of which is followed approximately by Sulaymān in his work. A skeletal plan is noticeable in all these navigational works, but the authors have great difficulty in keeping to the subject. The *ʿUmda*, however, is the work which keeps closest to a plan, although even here Sulaymān gets side-tracked easily. Unlike Ibn Mādjid, who had literary ambitions, Sulaymān's style is simple and straightforward. His aim was to produce a treatise which would be of practical use for a navigator sailing in the Indian Ocean. His intention was to take the main points of navigational science as chapter headings and then include everything relating to each point in the relevant chapter. This, as noted above, he finds difficult, but his final order of headings is Ch. 1, first principles, properties of the heavenly sphere, stars used by navigators as rhumbs

(*akhnān*) and as Pole Star altitude measurements (*ķiyās*), i.e. a chapter of general theory. Ch. II, use of stars as compass bearings. Ch. III, bearings between ports around the coasts of the Indian Ocean. Ch. IV, bearings around islands. Ch. V, list of values of Pole Star altitudes for ports of the world. Ch. VI, monsoon seasons for sailing out from various ports. Ch. VII, descriptions of routes throughout the Ocean.

This arrangement is not very logical, and lends itself to confusion. Sulaymān was not satisfied with the result. He began a second work, the *Tuḥfat al-fuḥūl*, in which he intended to write down only the theory of navigation, omitting the lists of Pole Star altitude results and tables of bearings which are found in the *ʿUmda*. This was a short treatise taking only six folios in the Paris ms. Its chapters are arranged in a logical sequence and it gives only the basic theory necessary for navigation. The order of chapters is 1. Generalities, 2. Compass bearings, 3. the *zām*, 4. Types of routes, 5. *ķiyās* theory, 6. Theory of *masāfāt* (distances measured along the line of latitude), 7. Theory of winds. Later, Sulaymān complemented this with a "commentary" (*sharḥ*) similar to the commentaries of classical writers written round the Ķurʾān or some legal work. Of this he seems to have been proud, and it was probably his last work. However, it does not help either the scholar or the Indian Ocean navigator who already has the original *Tuḥfa*. For although it was five times as long as the original work, it had little more to say. He states a sentence from the *Tuḥfa*, prefixing it with the word *ķultu* ("I have said"), and then after the word *aķūlu* ("now I say"), he expands it, stretching out phrases, sometimes to great length, attempting to explain something which was quite clear before. Rarely does he clear up any obscure point; occasionally he adds something which he has omitted in the *Tuḥfa* but which occurs in one of the other works. Therefore, with the other works in one's possession, the commentary to the *Tuḥfa* is completely unnecessary.

The list of results (latitudes, bearings etc.) which were in the *ʿUmda*, but which he omitted when completing the *Tuḥfa*, were reserved for the *Manhadj al-fākhir*. Although this work may contain corrections to actual values it is not as rewarding for the modern scholar as the *ʿUmda*. It loses that straightforward plan of theory plus results equals descriptions of set voyages, which the navigator would appreciate and perhaps Ibn Mādjid himself might have been aiming for but never actually achieved. The real value of the *Manhadj* is that corrected values give a more accurate picture of those parts of the Indian Ocean in the higher latitudes, i.e. around Djidda, Raʾs al-Ḥadd and Chittagong (Shātīdjām). It also gives distances along the line of latitude (*masāfāt*) not listed before except incompletely in Ibn Mādjid's *Ḥāwiya*. It also has a section on birds, seaweed, etc. (*ishārāt*) which was not given in the *ʿUmda*, but at this stage, Sulaymān has begun to lose his purpose again and a section on the revolutions of the sun and moon is irrelevant. This material is not strictly navigational, and introduces theory which has been avoided so far in the *Manhadj*. Theory of winds and cyclones is out of place here, although a list of specific types of wind would be relevant. What one might expect would be a list of sailing dates which depend on the monsoon winds. Sulaymān closes the *Manhadj* with a revised survey of the set voyages in South-East Asia and the Bay of Bengal, although not the rest of the Ocean. We have no universal series of sailing directions as we are given in the *ʿUmda*, and generally, the *Manhadj* is inferior when compared with the former work.

One other treatise remains. This is the *Ķilādat al-shumūs*, which gives calculations necessary for converting Muslim years to solar, Byzantine, Coptic and Persian years and vice-versa. As the seasons for sailing—in fact, all navigational dates—are given in days after the Persian (Yazdigirdian) Nawrūz, this treatise has a very practical advantage. It consists of just over two folios of important formulae, written clearly after the manner of the *ʿUmda* and it is possible that it comes from the same period as the latter work.

Bibliography: For his *EI*[1] art. on Sulaymān, G. Ferrand worked entirely from the Paris mss. A French version of this article appeared in *Annales de Geographie*, xxxii, 298-312, as *Les instructions nautiques de Sulaymān al-Mahrī*. The Arabic text of Sulaymān's work was published from the B.N. ms. by Ferrand as *Instructions nautiques et routiers arabes et portugais*, 3 vols., Paris 1921-8. A critical edition of the four ms. versions of the texts was prepared by Ibrahim Khoury, *Arab nautical sciences: navigational texts and their analysis* (*al-ʿUlūm al-baḥriyya ʿind al-ʿarab*), 4 vols., Damascus 1970-2. There are no complete translations of Sulaymān's works into European languages, only extracts in works on geography, navigation, etc. These are many, but the most detailed are probably in Ferrand, *Relations de voyages et textes géographiques arabes, persans et turks relatifs à l'Extrême-Orient*, 2 vols., Paris 1913-14; G.R. Tibbetts, *A study of the Arabic texts containing material on South-east Asia*, London 1979. The Turkish text of Sīdī Čelebi's *Muḥīṭ*, which includes what is virtually a translation of Sulaymān's five works, is not in print but only appears in partial translation in English by J. Hammer-Purgstall, *Extracts from the Moḥīṭ, that is the Ocean, a Turkish work on navigation in the Indian Seas*, in *JASB* (1834), 545-53, (1836), 441-68, (1837), 805-12, (1838), 767-80, (1839), 823-30, and in German by M. Bittner and W. Tomaschek, *Die topographischen Capitel des indischen Seespiegels, Moḥīṭ*, Vienna 1897. Detailed bibls. can be found in works on Arab Indian Ocean navigation in the 16th-17th centuries such as T. Shumovskiy, *Kniga pol'z ob osnovakh i pravilakh morskoy nauki*, Moscow 1985; G.R. Tibbetts, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1971, and in the work of I. Khoury mentioned above. Other works of interest are given in the bibliographies to the arts. IBN MĀDJID and MILĀḤA. Useful works in Arabic are A.I. al-Nashamī, *al-Milāḥa fi 'l-khalīdj al-ʿarabī*, Kuwait 1969 and Ḥasan Ṣāliḥ Shihāb, *Fann al-milāḥa ʿind al-ʿarab*, Ṣanʿāʾ 1982.

(G.R. Tibbetts)

SULAYMĀN PASHA, al-Faransawī (Sèves or Sève Pasha, 1788-1860), one of the French officers serving in Muḥammad ʿAlī Pasha's [*q.v.*] army.

Joseph Anthelme Sève was the son of a Lyons draper. When fifteen years old, he enlisted as a gunner in the French army, and later served in the Hussars. He fought in Napoleon's Prussian campaign (1806-7) and was promoted to the rank of adjutant, and during the "Hundred Days" (1814), he served on the staff of Marshal Grouchy. Dismissed by the royal government, he went to Egypt in 1815, and was eventually attached to the staff of Ibrāhīm Pasha [*q.v.*]. Sève became an instructor of the infantry, consisting of Albanian, Syrian and Maghribī "Arab" as well as "Turkish" Ottoman subjects. He established a training camp at Aswān [see USWĀN], where from 1823 onwards he was able to form six regiments of infantry, and was given the title of *Bey*. From 1824 to 1827,

he served under Ibrāhīm Pas̲h̲a in the Morea [see MORA] against the Hellenic insurgents. In 1831 he became a major-general. He served in the war against the Ottoman Sultan, and distinguished himself in the battle of Konya (1248/1832), upon which he became a *Pas̲h̲a*, afterwards successfully organising the retreat to Suez.

In his later years, he was relegated to minor tasks. In 1833 he supported the activities of the "Saint-Simoniens" led by "le Père" Enfantin in Alexandria, and in 1834 he assisted Linant de Bellefonds in the construction of dams in the Nile delta. He maintained a grand life style, including a harem in his palace in Cairo, where he received many prominent guests from France e.g. the painter Horace Vernet, Marshal Marmont, Gustave Flaubert and Maxime Du Camp. His conversion to Islam must have greatly benefited his relationship with his trainees. His principal consort, Sittī Maria, gave him a son, Iskandar Bey. His lasting reputation was evident from a statue and a street named after him in Cairo till 1956.

SULAYMĀNĪS, a branch of Mustaʿlī-Ṭayyibī Ismāʿīlīs, so called after Sulaymān b. Ḥasan [*q.v.*], who claimed the succession for himself after Dāwūd b. ʿAd̲j̲abs̲h̲āh as the twenty-seventh *dāʿī mutlaḳ*. They are predominantly to be found in Yaman, where their total number may currently be placed at more than 70,000, living mainly in the northern districts and on the northern border region between Yaman and Saudi Arabia. Besides being represented amongst the Banū Yām of Nad̲j̲rān, the Sulaymānīs are settled in Ḥarāz, D̲j̲abal Mag̲h̲āriba and in Hawzan, Lahāb and ʿAttāra, and in the district of Hamdān and in the vicinity of Yarīm. The Sulaymānīs of India, on the other hand, called the Sulaymānī Bohras, number a few thousand only and live mainly in Bombay, Baroda, Aḥmadābād and Ḥaydarābād Deccan. There are also some Sulaymānīs in Pakistan. Most recently, some families from the subcontinent have migrated to England, America and Canada.

Sulaymān was succeeded by his minor son D̲j̲aʿfar, hence the affairs of the *daʿwa* were run by Ṣafī al-Dīn Muḥammad b. Fahd al-Makramī (d. 1042/1633 [*q.v.*]), one of the earliest supporters of Sulaymān during the Dāwūdī-Sulaymānī succession dispute and originally from Ṭayba, a town northwest of Ṣanʿāʾ. After winning the confidence of the influential Banū Yām, settled in the Nad̲j̲rān region, he adopted Badr as his residence, and this subsequently became the capital of the Sulaymānī *daʿwa*. His son Ibrāhīm succeeded as the 30th *dāʿī* in 1088/1677. Since then the office has remained in the Makramī family except for a few interruptions. The Makramī *dāʿīs* not only ruled the Yām but, at the height of their power, their influence extended to the Mik̲h̲lāf al-Sulaymānī in the north and to Ḥaḍramawt in the east. In 1174/1764 they felt strong enough to invade Nad̲j̲d and inflicted a crushing defeat on the rising power of the Wahhābīs. However, they were unable to curb the subsequent Wahhābī encroachment against Nad̲j̲rān, as they had also to withstand the hostilities of the Zaydī Imāms in Yaman. Their rule over Nad̲j̲rān came to an end in 1934 when it was annexed to the Suʿūdī kingdom, and their 45th *dāʿī*, ʿAlī b. Muḥsin Āl S̲h̲ibām, was pensioned off by the Suʿūdī government. This marked the end of the political significance of the Makramī family of Sulaymānī *dāʿīs* and their followers in Yaman. Because of this close association of the Makārima (pl. of Makramī, see MAKRAMIDS) with the Sulaymānī *daʿwa*, the term Makārima itself is often used synonymously with that of Sulaymānīs in Yaman. The present *dāʿī*, al-S̲h̲arafī al-Ḥusayn b. al-Ḥasan al-Makramī, succeeded to the office in 1396/1976.

The Sulaymānīs continued the traditions of the post-Fāṭimid Yamanī Ṭayyibīs. The *dāʿīs* do not use honorific titles and are simply addressed as *Sayyidnā*, and are known in Yaman as the *dāʿīs* of the *ḳabāʾil Yām*. In India, the *dāʿī*'s chief representative, known as the *manṣūb*, resides in Baroda, and is assisted by a number of *ʿāmils* or *mullās* residing in various cities where the Sulaymānī Bohras live. The assistants conduct the communal prayers, perform religious ceremonies, and collect the dues for the *dāʿī*. In India the official language of the Sulaymānī *daʿwa* is Urdu, but Arabic is used in correspondence between them and their *dāʿī* in Yaman.

In Yaman, the Sulaymānīs have enjoyed a great degree of cohesion and have become an effective fighting force. In India, the Sulaymānī Bohras, in contrast to the Dāwūdīs, have developed closer ties with other Muslims in terms of language, dress and customs. They have also experienced a much greater degree of freedom from their *dāʿīs* and their *manṣūbs*. As a result, the small Sulaymānī community not only represents a progressive group, approving of social change and encouraging modern secular education, but has also produced, proportionately speaking, a significant number of prominent public figures. Asaf Ali Asghar Fyzee (1899-1981), an outstanding Islamicist and eminent scholar of Muslim law in the Indian subcontinent and India's ambassador to Egypt, belonged to the well-known Tyabji family of Sulaymānī Bohras of Bombay. Badr al-Dīn Tyabji, another member of this family, was the first Muslim president of the Indian National Congress in 1887.

SULAYMĀNIDS [see MAKKA. 2. ii].

SULAYMĀNIYYA, a town and district in southern Kurdistān, since the Ottoman reconquest of ʿIrāḳ from the Ṣafawids in the 11th/17th

century under nominal Ottoman suzerainty, and since the aftermath of the First World War in the kingdom and then republic of ʿIrāḳ. The town lies in lat. 35° 32' E. and long. 45° 27' N. at an altitude of 838 m/2,750 feet, and is 90 km/54 miles east of Kirkūk [*q.v.*], to which it is connected by road.

The historical region of Sulaymāniyya lies between what is now the ʿIrāḳ-Persia frontier, the Diyāla [*q.v.*] and its upper affluents the Tandjaru and Sīrwān, the region of Kirkūk and the upper basin of the Little Zāb. To the northeast of the basin of these affluents of the Tigris rise the ranges making up the Zagros massif and running northwest to southeast (see further on the geography of the region, KURDS, KURDISTĀN, D.).

1. History to 1920.

The district of Sulaymāniyya is known from the earliest times. Mount Niṣir (in Lullutu: Kiniba), where according to the Babylonian epic the ship of Gilgamesh rested during the Deluge, can only be Pīr-ʿUmar-Gudrūn. The region of Sulaymāniyya corresponds to the land of Zamua occupied by the Lullutu people, the southern frontier of which was on the col of Babite (the modern Bāziān). In 880 B.C., Assur-nāṣirpal conquered all the kings of Zamua. A stele found at Darband-i Gawr, north of Ḳara-dagh, seems to belong to a Lulltu king. Brzozowski mentions another ancient bas-relief at the entrance to the defile of Derbend through which the Little Zāb forces a passage, to the extreme northwest of the territory of Sulaymāniyya. Herzfeld (in *Isl.*, xi, 127) mentions ruins at Sītak in the canton of Sērōčik. In 745 B.C. Tiglat Pileser III transplanted to Mazamua (*Māt-Zamua*, Forrer, 43) Aramaeans who had lived in northern Mesopotamia. In the Sāsānid period we have in the extreme southwest of the territory of Sulaymāniyya the famous monument of Paikuli (cf. SHAHRIZŪR). In the history of the Syrian church the district of Sulaymāniyya formed part of the diocese of Bēth Garmai (Hoffmann, *Auszüge*, 253).

In the Islamic period, the history of the region was at first involved with that of Shahrizūr. Sulaymāniyya had a more or less autonomous existence from the end of the 11th/17th century to 1267/1850. The local dynasty was called Bābān. According to the *Sharaf-nāma* of Sharaf al-Dīn Khān Bidlīsī (i, 280-8), the first chief and the eponym of this family was Pīr Būdāḳ Babē (probably about 1500). The home of this tribe seems to have been to the west of Ḳandīl [see SĀWDJ-BULĀḲ]. The direct descendants of Babē were soon supplanted by their subordinates, but this second line disappeared also and about 1005/1596 the tribe had no recognised chief. A new line (of the clan Saḳir of the tribe of Bilbās; Rich, i, 270) came from the village of Darishmāna to the canton of Piždar; it had a legendary genealogy claiming descent from a young "Frank" woman called Kēghān, whom their ancestor had taken prisoner in a battle. The true founder of this third dynasty, Bābā Sulaymān, came to the front in 1088/1677, and in 1111/1699 took service at the Ottoman court. Rich (i, 381-5) gives a list of his descendants, who include 17 Bābān Pashas. The representatives of this local dynasty cleverly maintained their position between the two rival powers, Turkey and Persia, but they were really under the Pashas of Baghdād, who themselves held a very subordinate position with respect to the Sublime Porte. Maḥmūd Pasha, who received Rich on his memorable journey through Kurdistān and in whom Rich (i, 322) tried to arouse the Kurd national pride, finally submitted to the Persians. The latter invaded Sulaymāniyya in 1842 to re-establish Maḥmūd Pasha, but by the treaty of 1847 Persia withdrew all claims on the town and *sandjaḳ* of Sulaymāniyya in favour of the Turks. The last ruler of the family of Bābān, ʿAbd Allāh Pasha, was deposed by the Turks in 1267/1850 (Khurshīd Efendī, 209).

It may be mentioned that the Bābān family was simply a conquering and warrior caste. Alongside the Bābān and under their suzerainty lived several other warrior tribes (*ʿashīrat*), of which lists are given by Rich, i, 280, and Khurshīd Efendī, 217. The principal of these tribes was Djāf [see SANANDADJ and SHAHRIZŪR]. Later we often find mentioned the turbulent tribe of Ḥamāwand of Čamčamāl which claimed to have come from Persian Kurdistān (its name resembles those of the Lur tribes). The Hamāwand in the course of their razzias used to come down as far as the banks of the Tigris (Cholet, *Arménie, Kurdistan et Mésopotamie*, Paris 1892, 295-311).

Beside the clans which had kept their tribal organisation there were in Sulaymāniyya, as elsewhere in Kurdistān, the peasants (*gūrān, kelowspī* "white caps", according to Rich, i, 80).

At first the capital of the Bābāns was at Shara-Bažār (Shahr-i bāzār) in the first valley conquered by Pīr Būdāḳ Babē, but Ibrāhīm Pasha moved his residence to the canton of Sar-činār, where he founded about 1199/1784 (Rich, i, 387) the town of Sulaymāniyya on the site of the village of Malik Hindī (Malik Kendi?) built around an ancient mound which had to be cleared away on the occasion. The town was called after Büyük Süleymān Pasha (of the family of Georgian Mamlūks), governor of Baghdād in 1780-1802 (Cl. Huart, *Histoire de Baghdad*, Paris 1901, 159). Towards 1820, the town had 2,000 households of Muslims, 130 of Jews, 9 of Chaldaean Catholics (who had a little church) and 5 of Armenians, in all 10,000 souls. There were 5 mosques in Sulaymāniyya. In 1868 Lycklama estimated the population at 6,000 Kurds, 30 families of Chaldaeans and 15 of Jews.

Under Ottoman rule, Sulaymāniyya remained the nursery of an indefinite Kurdish movement. The local Kurds supplied Turkey with a large number of officials and, particularly, armed officers. Several Bābāns became distinguished in Istanbul like Ismāʿīl Ḥaḳḳī Pasha, Unionist minister and diplomat in 1909-14. After the deposition of the Bābāns, a great part in politics was played by the family of religious *Shaykhs* of the family of Barzandja, whose ancestor Ḥādjdjī Kaka Aḥmad enjoyed a great reputation for sanctity and is buried at Sulaymāniyya.

2. Since 1920.

There was provision in the Treaty of Sèvres of August 1920 for an Autonomous "Southern Kurdistan", but this topic became linked with the question whether the *wilāyet* of Mawṣil, of which Sulaymāniyya had been a *sandjak* under the Ottomans, should remain Turkish-controlled or whether it should become part of the new predominantly Arab state of ʿIrāḳ [see AL-MAWṢIL. 2.]. In the end, Sulaymāniyya was included in the territory awarded to ʿIrāḳ, though a League of Nations decision of December 1925 granted a certain amount of local autonomy to the Kurds there. Unrest had already broken out in Sulaymāniyya in 1919 under the Kurdish Shaykh Maḥmūd Barzandjī, and over the next five years, Barzandjī returned to Sulaymāniyya on three separate occasions until air raids in 1923-4 drove him back across the Persian frontier to a bandit existence.

Sulaymāniyya became almost depopulated through this fighting, but by the end of 1924, 20,000 of its people had returned. Yet it remained disturbed, including at the time of the 1929 ʿIraḳī election, and Maḥmūd Barzandjī again invaded the *liwāʾ* of Sulaymāniyya in 1930, until he again fled to Persia in the next year; he eventually made his peace with the ʿIrāḳī authorities and in 1938, when the Sulaymāniyya region was unusually quiet, his confiscated properties were restored to him. He returned to Sulaymāniyya from provincial exile in southern ʿIrāḳ in May 1941 during the Rashīd ʿAlī al-Gaylānī [*q.v.*] coup, ostensibly to raise forces "to support the British".

In the post-1945 period, Sulaymāniyya continued to be a centre of unrest, for Kurdish aspirations and for other elements aiming at the destabilisation of the Hāshimite monarchy in ʿIrāḳ, such as the underground Communist Party of National Liberation, which could from Sulaymāniyya make contact with other Communist forces across the Persian border. Hence a certain merging of Communist activities with Kurdish nationalism took place, and Sulaymāniyya was particularly disturbed in 1948.

The proclamation of the ʿIrāḳ Republic in July 1958 initially aroused Kurdish enthusiasm, but the history of the ensuing decades has been one of continuing disturbance in the Sulaymāniyya region. In March 1961 Muṣṭafā Barzandjī proclaimed an independent Kurdistān stretching through northern ʿIrāḳ as far east as Sulaymāniyya and the Persian border. During the succeeding phases of ʿIrāḳī-Kurdish conflict, possession of Sulaymāniyya was maintained by ʿIrāḳī government troops, with the surrounding countryside usually held by the Kurds, until in spring 1991 the Kurds briefly captured the town and then, in the summer, recaptured it more lastingly. Sulaymāniyya is now the chef-lieu of the autonomous Kurdish region of ʿIrāḳ, with the whole region having a population of 951,723 (1987 census), and has a Kurdish-language university of its own.

SULDUZ, SÜLDÜZ, a Mongol tribe which played a considerable role in mediaeval Islamic history of the Mongol and Il Khānid periods.

According to Berezin, the correct Mongol form would be Süldes (pl. of *sülde* "good fortune"; Vladimirtsov interpreted *sülde* as "le génie-protecteur habitant le drapeau"). L. Ligeti, *Die Herkunft des Volksnamens Kirgis*, in *Körösi Csoma Archivum*, i (1925), saw in the ending of Suld-uz, as in Ḳïrḳ-ïz, the remains of an ancient Turkish plural suffix (cf. *biz* "we", *siz* "you", etc.) and as a hypothetical singular quoted the name of a Ḳïrghïz clan Sult, Sultu. Rashīd al-Dīn classes the Sulduz amongst the *dürlükin* Mongols, i.e. of "common" origin, in contrast to the *nirun* "pure" ones, who were, however, descended from the *dürlükin* through Alan Goʾa, the miraculous grandmother of Čingiz (Činggis) Khān.

Sorḳan Shira Sulduz one day saved the life of Čingiz whilst the latter was fighting with the Tayičiʾüt, and this exploit gained the Sulduz great prestige with Čingiz Khān and his successors.

Malik
|
Čoban

The children of Sodo Noyon came to Persia with Hülegü, whose wife Yesündjin, the mother of Abaḳa, was a Sulduz. Malik is said to have overrun Persian Kurdistān. In 688/1289, under the Il Khān Arghun, an act of bravery brought to the front Čoban, son of Malik, and he afterwards distinguished himself in the reigns of Ghazan and Öldjeytü [*q.vv.*]. The *Taʾrīkh-i Üldjāytū* written by Abu 'l-Ḳāsim Ḳāshānī (ed. Māhīn Hambly, Tehran 1969), in a list of *amīrs* mentions Čoban (*amīr-i buzurg muḳaddam-i Tāzīk wa Turk*) in the second place next to Ḳutlugh Shāh Manḳut, but adds that in ability he is superior to them all. There is extant a letter from Pope John XXII, dated Avignon, 12 November 1321, addressed to "Zoban Begilay" (Čoban?). In spite of the Shīʿī leanings of Öldjeytü, Čoban remained a Sunnī. When the young Abū Saʿīd [*q.v.*] ascended the throne, Čoban became regent, and in 719/1319 married Sātī Beg, daughter of Öldjeytü. The detailed history of Čoban and his sons and grandsons over the next generation or so may now be followed in the article ČŪBĀNIDS.

After the murder of Čoban's grandson Ḥasan Küčik at Tabrīz in 744/1343 (see below), the Sulduz are only occasionally mentioned by the historians. Under 807/1404, Mīrkhwānd mentions the instructions given by Tīmūr to the Khaladj of Sāwa to reinforce the troops under Pīr ʿAlī Sulduz in Rayy. In the early 20th century, there was still a body of Sulduz in this region among the Shāh-seven [*q.v.*] of Sāwa.

Several women of the Čobanids had remarkable

careers. Besides Baghdād Khātūn, one may mention: (1) Sātī Beg, widow of Čoban, who was first the wife of the Il Khān Arpa and in 739/1338-9 was herself placed on the throne by the grandson of her first husband, Ḥasan Küčik. Finally, the latter married her to the new pretender Sulaymān, who reigned 740-4/1339-43. (2) Dilshād Khātūn, daughter of Dimashḳ Khʷādja, first of all married Abū Saʿīd (at the same time as her aunt Baghdād Khātūn) and then Ḥasan Buzurg Djalāʾir. (3) Malik ʿIzzat, wife of Ḥasan Küčik, whom she killed in an indescribable and atrociously cruel fashion. She was executed by her husband's relatives, who cut her into pieces which they then ate.

In Mongolia in the time of Čingiz, the encampments of the Sulduz seem to have been not far from the river Onon. But in the time of Rashīd al-Dīn, the *yurt* of the Sulduz was near the forests inhabited by the forest-dwelling Uryangḳit. The Chinese list of Mongol encampments published in 1867 (*Meng-gu-yu-mu-tsi*, Russ. tr. P. Popov, St. Petersburg 1895) no longer mentions the Sulduz. In Turkestan, the Sulduz, with their subdivisions (?) Nukuz and Tamadur, are mentioned among the troops of Shaybānī Khān [see SHAYBĀNIDS] at the beginning of the 10th/16th century. Later, the Sulduz rejoined Bābur (*Shaybānī-nāma*, ed. Melioranski, St. Petersburg 1908, 137, 176; cf. the *Scheibaniade* of N. Vambéry, Vienna 1885, 273, 350). According to A.Z.V. Togan, Özbeg genealogies (*shadjara*) mention the Sulduz among the 92 Özbeg clans; the people of the canton of Altîn-kul in Farghāna [*q.v.*] were in the early 20th century Sulduz, and there must be some in Khīwa (Khʷārazm) alongside of the Nukuz.

SULDŪZ, a small district of western Ādharbāydjān in Persia, to the south-west of Lake Urmiya, on the lower course of the Gādir-čay, which here receives on its right bank the Bāyzāwa and Mamad-shāh and flows into the Lake. To the west it is bordered by Ushnū, which lies on the upper course of the Gādir, from which it is separated by the Darband gorge through which the river runs; to the north it is bounded by the little district of Dōl (cf. Dōl-i Bārīk, in Sharaf al-Dīn Khān Bidlīsī, *Sharaf-nāma*, St. Petersburg 1860-2, i, 288) belonging to Urmiya; to the south and the east by the cantons of Paswa and Shāri-wērān which go with Sāwdj-Bulāḳ [*q.v.*].

Suldūz is a fertile plain producing much wheat. It is often flooded by the waters of the Gādir, which near its mouth forms marshes and salt beds (*kopi*). On the south side, Suldūz is bordered by the heights of Firangī, at the foot of which are numerous springs impregnated with lime. The crest Bahrāmlū separating Suldūz from Shāri-wērān is also of limestone formation.

We know that in 703/1303 the Il Khānid Ghazan distributed the land in fiefs. It is possible that it was at this time that the name of the tribe (Suldūz, in Kurdish: Sundūs) replaced the old name of the district now lost.

According to the *Sharaf-nāma*, in the time of the Turkoman dynasties (about the 15th century), i.e. long after the Čōbānīs [see ČŪBĀNIDS] had disappeared, the Mukrī Kurds occupied the district, the old inhabitants of which were probably reduced to servitude. The same authority (i, 280) in a sentence now mutilated in the ms., and undated, says that Pīr Budāḳ of the Kurd tribe of Bābān (Babē) took Suldūz from the Ḳîzîlbāsh, which may refer to one of these sudden outbursts of fighting on the frontier in the time of the Ṣafawids.

In 1828 the Ḳādjār prince ʿAbbās Mīrzā gave Suldūz as a fief to 800 families of the Ḳara-papakh [*q.v.*]. The newcomers were allowed to levy and collect the taxes (12,000 *tūmāns* a year), and in return had to maintain 400 horsemen at the disposal of the government. At this period, there were in Suldūz 4-5,000 families of Kurds and Muḳaddam Turks, but gradually the lands passed into the hands of new Shīʿī masters.

In the early 20th century there were 123 villages and small towns in Suldūz with 8,000 families. The chief settlement is Naghāda (Nahāda), with a thousand houses. This little town lies on the bank of the Bāyzāwa around an ancient artificial mound. Another important centre is Rāhdāna (Rah-dahna), where there is a good bridge over the Gādir, which provides communication between Urmiya and Sāwdj-Bulāḳ.

The south-east corner of the district is occupied by the canton of Mamad-shāh, the name of which is mentioned in the *Sharaf-nāma* (i, 290). The early 20th-century inhabitants were Shamsaddīnlu Turks. With their chief Māsī Beg, they came into Persia and received from ʿAbbās Mīrzā 3 villages with 100 families of Kurd peasants (*raʿiyyat*).

The Sunnī Kurds of the tribes of Mamash, Zarzā and Mukrī numbered in the early 20th century 2,000 families, or a quarter of the total of the population. They entirely occupied 10 villages (Ghilwān, Wazna, etc.), and 11 others (Čiāna, Naghāda, Mammiand, etc.) they shared with the Ḳara-papakh.

Suldūz, like Ushnū, is mentioned among the Nestorian bishoprics (Assemani, iv, 423; G. Hoffmann, *Auszüge aus syrischen Akten*, Leipzig 1880, 204: Saldus, Saldōs), but in 1914 there were only 80 Christian families left in Naghāda. The Jews were more numerous (120 families in Naghāda) and were probably the oldest element in the present population of the district; virtually all have now emigrated to Israel.

Under the Turkish occupation of 1908-12, the Shīʿī Ḳara-papakh suffered considerably, as the Turks regarded them as Persian agents. The Turks, without success, however, tried to destroy the tribal organisation and to emancipate the *raʿiyyats*. During the First World War, the village of Ḥaydarābād (on Lake Urmiya) became a Russian naval base, and a light railway was built through the district. Suldūz changed hands several times, but after the departure of the Russians and Turks it has since 1919 remained within Persia.

SÜLEYMĀN (926-74/1520-66), the tenth and most illustrious of the Ottoman sultans. There is a tradition of western origin, still current, according to which he was really Süleymān II, but that tradition has been based on an erroneous assumption that Süleymān Čelebi [*q.v.*] was to be recognised as a legitimate sultan; he was one of the sons of Bāyezīd I, who established himself at Adrianople after his defeat at Ankara. He received the epithet *Ḳānūnī* "the lawgiver" at an unspecified date; this is first mentioned at the beginning of the 18th century in the work of the historian Dimitri Kantemir (see C. Kafadar, in *Süleyman the Second and his time*, 41), while he was known in the west as Süleymān the Magnificent, the Great Turk, or the Great Lord.

Early years

He was born at Trebizond where his father, the future sultan Selīm I, had his residence as a *sandjak beg*. Three different dates have been suggested for his birth: 6 November 1494; 27 April 1495; and April or May 1496 (see Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, i). One tradition, apparently going back to Jovius (see A. Fisher, in *Süleymān the Second* 9, n. 20), has it that his mother Ḥafṣa, a Tatar, was the daughter of the Crimean *khān* Mengli Giray, or of a Turkish woman; a document relating to a mosque founded in her name at Manisa showing her to be a convert to Islam denies this legend (Ç. Uluçay, *Padişahlarin kadınları ve kızları* (1980) 27).

His childhood was spent at Trebizond, where he was taught by a certain Khayr ul-Dīn Efendi, who remained in his entourage and where, according to Ewliyā Čelebi, he learned how to be a goldsmith from a Greek master-craftsman. He first governed as prince (*shehzāde*) at Kefe [*q.v.*] (Caffa, Feodosiya) in the east of the Crimea. In 1513 Süleymān became *sandjak beg* of Manisa, a post which he occupied until his actual accession in 1520. In the interim, however, there were two separate occasions when Selīm appealed for his help during his absences. In 1514-15, during the campaign in Persia, he ensured that the lieutenancy for his father was maintained in Istanbul; and in 1516-18 he was put in charge of the defence of Adrianople in the campaign against the Mamlūks. He returned to Manisa on the premature death of his father (see Uluçay, in *Kanunî armağanı*, who publishes the registers of the transactions of the *shehzāde*).

His accession

Eight days later he had arrived in Istanbul, where his accession took place without any problems or unrest, for there were no brothers who were likely to dispute the claims of Süleymān to the throne. His reign began on 17 Shawwāl 926/15 September 1520 and was the longest in Ottoman history. It coincided with the zenith of empire, when power and prestige were at its height. Observers of Ottoman decline were in retrospect to see this as a golden age and an absolute reference point, which justifies considering it as a unit (cf. e.g. the *ʿadālet-nāme* of 1595 in Inalcik, *Adâletnâmeler*, in *Belgeler*, ii/3-4, 104-5). Nevertheless, there is an opinion that the period of his reign could be subdivided into two which is very old (Ḳoči Beg, for example, thought that the threat of Ottoman decline could be traced from the end of his great reign).

At the beginning, the new sovereign was scarcely known and he was overshadowed by the overwhelming power of his awesome father, but he was seen as a just and peace-loving young man (cf. for example the Venetian forecast in Sanudo, *Diarii*, 29, Venice 1890, col. 357). His first actions, even though they were always symbolic, clearly pointed in this direction. At the same time, the energy and pugnacity of the new master were glaringly apparent to the world. The *beglerbeg* of Syria and Palestine, Djānbardī al-Ghazālī, a former Mamlūk chief, thought that the time had come to start a rebellion, but he was quickly subdued by a punitive force. Above all, there began an impressive series of "imperial campaigns" (*seferi-i humāyūn*) from the spring of 1521 onwards, ten in Europe and three in Asia, in which the sovereign participated in person.

Military campaigns 1521-36

Momentarily forsaking the Persian scene in which his father had been involved, he turned to the West to seek his primary objectives, this time not only with an eye to their strategic value but once again also for their symbolic significance. Taking as a pretext the ill treatment inflicted on his emissary Behrām Čawush, Süleymān forced the surrender of Belgrade on 29 August 1521 after his armies had taken Sabacz and Semlin and had ravaged the countryside between the Save and the Drave. He was then able to go on and seize the "key to Hungary" and to succeed where his great-grandfather Meḥemmed II "The Conqueror" had failed in 1456.

His next target was the island of Rhodes, which was a fearsome stronghold held by the Knights of St. John of Jerusalem and a base for regular piracy in the Eastern Mediterranean [see RODOS]. Süleymān launched a fleet of some 235 vessels against Rhodes and mobilised about 200,000 men. The siege went on into the winter and the fleet took shelter in the Sea of Marmara. The Knights capitulated on 21 December 1522, but only after five months of ordeal. The Conqueror kept his promise which he had made to them, that they could leave the island in freedom, and this contributed to his reputation for reliability. After these two great feats, there followed a period of military inaction on the part of the sultan, and then he decided to embark on a new campaign, against Louis of Hungary, to whom a second emissary had been sent in 1524 but in vain.

Süleymān and his Grand Vizier Ibrāhīm Pasha [*q.v.*] set out on a march in April 1526, but because of the severity of the weather the army was only able to reach Belgrade in July. In the end, the Hungarian heavy cavalry was hewn to pieces by the fire of the Ottoman artillery, and Süleymān pursued them as far as Buda, which he entered on 11 September, without having met any opposition.

He occupied the Hungarian capital only for about ten days and then hastened to return to his own capital, constrained by news learned in the course of his retreat of the serious Turkoman revolts which had broken out in Cilicia and in Ḳaramān; these were not crushed until the summer of 1528. After his dazzling successes of 1526, Süleymān contented himself with annexing the two counties of the region south of the Danube, Szerém and Valko, as well as with the rich booty he had gathered from Buda.

The Voivode of Transylvania, Janós Szapolyai or John Zapolaya (1487-1540), took advantage of the fact the Ottomans had abandoned the centre of the kingdom and had himself elected as king by an assembly of nobles at Székesféhervár (11 November 1526). But the brother of Charles V, Ferdinand of Habsburg, Archduke of Austria, soon to become king of Bohemia in February 1528, was also being enthroned (by a more limited assembly, the Diet in Bratislava, 17 December 1526).

Süleymān was obliged to choose between these two rivals, each of whom sent him ambassadors. On the advice of Ibrāhīm and his favourite Aloïs Gritti, the natural son of the Doge, he quite logically opted for Szapolyai; he made him his vassal in February 1528 after negotiations in Istanbul with Hieronymus Laski, the palatin of Sieradz (December 1527-February 1528). But Ferdinand did not disarm, and his troops took possession of Buda. Therefore, despite the immense difficulties involved in these enterprises because of the distance and the problems of administration, a third Hungarian campaign was forced upon Süleymān.

The sultan left his capital on 10 May but did not reach Belgrade until 17 July. On 18 August, when again passing through Mohács, a place now symbolic to him, he gave an audience to János Szapolyai, who

did homage to him, and Süleymān confirmed him as king of Hungary. He retook Buda without any difficulty and then made for Vienna, which he did not reach until 27 September. Then there began the famous siege, which was to be lifted on 14 October after four vain attempts to attack before the rapid arrival of winter.

The Ottoman failure was obviously linked to problems of climate and insurmountable logistics, but it was deliberately masked by Ottoman propaganda. Süleymān confirmed his support of Szapolyai, to whom he restored the crown of St. Stephen. This allowed him in 1538 to have an inscription engraved in the citadel of Bender: "I am the Sultan who seized the crown and the throne of Hungary and restored them to a humble slave" (M. Guboglu, *Paleografia şi diplomatica turco-osmana*, Bucharest 1958, 167, facs. no. 7; idem, *L'inscription turque de Bender relative à l'expédition de Soliman le Magnifique en Moldavie (1538/945)*, in *Studia et Acta Orientalia*, i [Bucharest 1958], 175-87).

During this period, rivalry with the Habsburgs reached its height, Hungary being only one of the stakes of a profound antagonism which placed the Ottomans against the Habsburgs. Charles V, who had been elected as head of the Holy Roman Germanic Empire from 1519, had himself crowned by Pope Clement VII at Bologna in 1530; Ferdinand, who had been elected King of the Romans by the diet of Cologne in January 1531, subsequently had himself crowned as such at Aachen in January 1532.

Süleymān was master of the world, unique by nature, hence his refusal to acknowledge that the Habsburgs had any imperial title. Charles V was for him only "the king of Spain" (*Ispanya ḳirali*) and Ferdinand only "the king of Vienna" (*Beč ḳirali*) or "king of the Czechs" (*Čeh ḳirali*). Charles V, even more than Ferdinand, was to be the principal target of the fourth campaign of Süleymān in Europe, termed the "German campaign against the King of Spain" (Chr. Turetschek, *Die Türkenpolitik Ferdinands I. von 1529 bis 1532*, [Vienna 1968]). The triumphal arches, the exceptional pomp flaunted by the sovereign, the unusual tiara crafted at that time by a consortium of the Venetian goldsmiths, all served one purpose of clearly intimating to Christendom the claims of the Ottomans (O. Kurz, *A gold helmet made in Venice for Sultan Sulayman the Magnificent*, in *Gazette des beaux-arts*, lxxiv [1969] 249-58; for the interpretation of this object, see G. Necipoğlu-Kafadar, *Suleymân the Magnificent and the representation of power in the context of the Ottoman-Hapsburg-Papal rivalry* in *The Art Bulletin*, lxxi [1989]).

From a military point of view, the campaign was less brilliant, and was principally outstanding because of the laborious siege of the little town of Güns (Köseg) and the devastating raids into Styria, at the heart of the patrimonial possessions of the Habsburgs, and in Slavonia (*Tārīkh-i sefer-i-ẓāfer-i Alaman*, Istanbul, Süleymaniye, Kadi-zade Mehmed küt., no. 557; Feridūn Beg, i, 577 ff.; von Hammer, v, 158-75). However, the threat was sufficiently impressive to drive the Habsburgs to seek a truce. Süleymān granted this to them in July 1533 on the basis of the status quo in the dividing up of Hungary between Ferdinand and Szapolyai, who were both to become tributaries of the Sultan.

Until then, Süleymān had appeared more pragmatic than his father with regard to the Ṣafawids of Shīʿī Persia, who exerted their religious influence on the Turkoman *ḳizilbash* of Anatolia. It is true that the death of Shāh Ismāʿīl in 1524 had brought with it the long-standing minority of his successor Shāh Ṭahmāsp, thus weakening the Ṣafawid state. Since his accession, Süleymān had put an end to the commercial blockade against Persia and was content to address warnings (*tehdīd-nāme*) to the young Ṭahmāsp to renounce his Shīʿism.

However, the schemings of provincial governors on both sides were to give him the excuse to intervene. The first of these was in 1528 and concerned the offer to surrender of a Ṣafawid governor, Dhu 'l-Fiḳār Beg, who had seized Baghdād and had refused to acknowledge the authority of the Shāh. He was executed shortly afterwards, but he provided a pretext for Ottoman claims to Baghdād. Then in 1530-1 it was the turn of the Ṣafawid governor of Ādharbaydjān, Olame Takalu, to come and offer his services to Istanbul, where he began by obtaining the disgrace of his personal enemy, Sheref Beg, the *amīr* of Bitlis. The latter left to seek the aid of the Shāh, who unwisely took his part and thus triggered the Ottoman reprisal. *Fatwās* were issued which obliged the sultan to restore the *sharīʿa* and to root out heresy (*rafḍ u ilḥād*). At the end of 1533, Ibrāhīm Pasha, once again appointed *serʿasker*, was despatched at the head of a great army to recover Bitlis, which had reverted to the Ottomans before his intervention, and to prepare to take Baghdād and Arab ʿIrāḳ.

In the following spring, he embarked on the conquest of Persia and reached Tabrīz in mid-July. Shāh Ṭahmāsp had abandoned it to him, having resolved never to enter into combat with the Ottoman army. The sultan had left Istanbul with a reinforcement army in June 1554 and rejoined Ibrāhīm in Tabrīz on the 28th of the following September, after a journey through Erzindjan, Erzurum and the southern fringes of Lake Van. The Ottoman army then headed for ʿIrāḳ.

The sultan entered Baghdād on 30 November without meeting any opposition. In the winter which followed, he devoted himself to organising new conquests and marked his conquest of Baghdād with several acts of religious significance, including pilgrimages to Nadjaf and Karbalā, the building of a dome over the remains of the great lawyer Abū Ḥanīfa and the restoration of the tomb of the founder of the Ḳādiriyya, Shaykh ʿAbd al-Ḳādir al-Djīlānī. But on learning that the Persians were threatening to take Van, Süleymān brought his stay in Baghdād to an end to go to Tabrīz in pursuit of the Shah. But when, after a laborious journey across the Zagros, the sultan again reached the capital of Ādharbaydjān, Ṭahmāsp, true to his tactics of avoidance, had already abandoned it. In August, Süleymān gave the order to return to Istanbul, which he did not reach until the beginning of 1536. From this campaign, known as that of the "Two ʿIrāḳs", the empire retrieved Baghdād and the regions of Erzurum and Van, which would remain the long-term bastions of the eastern frontier.

Two months after the end of the campaign, in the night of 14-15 March 1536 Ibrāhīm Pasha was strangled in a bedroom of the Topkapı palace. This is how that brilliant protagonist, a product of the *dewshirme* [*q.v.*], the friend from his youth of a master who had raised him to the position of Grand Vizier and had supported him there for thirteen years as a mark of his continuing favour, left the stage. The elevated position enjoyed by Ibrāhīm was clearly far superior to that of any of the Grand Viziers before or after him, and was marked by his use in foreign correspondence of unprecedented titles such as *ḳāʾimaḳām-i salṭanāt*, *serʿasker-i sāmī mertebet*, and above all *serʿasker-sulṭān*, used during the campaign of the "Two ʿIrāḳs".

The question arises as to whether he took advantage of the weakness of the sultan or whether they had come to an agreement over the division of roles. The end of Ibrāhīm at least attested the wish of Süleymān to put a stop to that experience, even if the immediate causes of the event must remain conjectural.

The military campaigns of 1537-55

It was this turning point in his reign that brought to a close the period of his most spectacular conquests, but it in no way ended the military activity of Süleymān. On the contrary, in the remaining thirty years of his life he was to lead seven more campaigns. During the course of these operations, the fleet which had already been put to the test at Rhodes became increasingly important. However, the sultan understood that it needed to be reinforced in order to be able to withstand the maritime threat of his adversaries, in particular, of the Habsburgs, in the Mediterranean. The latter had had at their disposal since 1528 the assistance of an admiral of the first order, the Genoese Andrea Doria. This was the reason for the eager welcome given by the sultan to offers of service by privateers, the most important of whom was Khayr ul-Dīn Barbarossa [*q.v.*], the holder of power in Algiers, who was not only a mariner but an organiser on a large scale, and he made him his *ḳapudan pasha* in 1533.

This was also the period when the two parties concerned tried to bring about a diplomatic revolution for the age; the alliance between the Most Christian King Francis I and the Ottoman ruler. After the plea for help from the Frenchman, who was defeated and made captive at Pavia (1525), the Ottoman realised the advantage of holding a pawn on the chessboard of Christian Europe.

This alliance of the two principal enemies of the Habsburgs was given new impetus at sea through Barbarossa, once he had become *ḳapudan pasha*, and this gave an increased opportunity of producing actual military results. The instructions given to the French ambassador Jean de la Forêt did not only include the pursuit of commercial and judicial guarantees but also comprised plans of joint action against Charles V: Francis I was to penetrate into Lombardy, while Süleymān would attack the kingdom of Naples by land and sea from a base in Albania, with the French fleet envisaged as joining up with that of Barbarossa. But things did not proceed as expected. Francis I did not attack Milan. His fleet was very much delayed and did not reach Avlonya until 10 September. Süleymān, for his part, gave up his attack on Naples, and because his relations with Venice had deteriorated, on 26 August he arrived at last at Corfu in order to mount a siege against this possession of the Most Serene Republic. He lifted it when the French fleet eventually arrived, for it was growing late in the season. Though Corfu was saved, Barbarossa went on to seize the greater part of the Aegean islands which were still in the possession of the Venetian patricians.

Apart from this, on 28 September 1538 he achieved the greatest Ottoman naval success at Preveze [*q.v.*] in the Gulf of Arta, where he put to flight the joint naval forces of Spain and Venice led by Andrea Doria. Venice was driven to making concessions. The *ʿahd-nāme* in the form of a *nishān* which was issued by the sultan on 2 October 1540, was to establish peace between the two powers until the Ottoman conquest of Cyprus. The sultan acquired Nauplia and Monemvasia in the Peloponese, Vrana and Nadin on the Bosnian frontier as well as numerous Aegean islands (such as Naxos, Paros, Santorino and Andros). There was control of access by Venetian ships to Ottoman ports, and guarantees necessary for the smooth running of commerce between the two states were formulated.

In the same summer of 1538, Süleymān intervened on his own account on the Lower Danube, where he went to quell a vassal, the Voivode of Moldavia, Petru Rareş, who was suspected of intrigues with Vienna and whose designs on Pokucia (the region of Kolomiyya and Snyatyn) risked impairing the alliance between the sultan and Poland. From 15 to 22 September 1538, Süleymān occupied Suceava, nominated a new Voivode and withdrew from Moldavia, but not without annexing the south-east of the country, the region between the Prut and the Dniestr (Budjaḳ [*q.v.*]) along with the fortress of Bender (Rum. Tighina). Thus he completed the Ottoman military system north of the Black Sea and secured land links with another vassal, the *khān* of the Crimea.

In the years which followed, the attention of Süleymān was redirected to Hungary where the situation remained ambiguous and unstable. His tributary Janós Szapolyai remained under the thumb of Ferdinand of Habsburg, who had in February 1538 imposed on him the secret treaty of Varad (Oradea), by which both protagonists kept their title of King of Hungary and their respective possessions in the country; but Szapolyai was committed to transferring his rights to Ferdinand after his death. Now a late marriage to Isabella, one of the daughters of Sigismund of Poland, produced a son who was born several days after his own death in July 1540.

His chief advisor, Georges Martinuzzi-Utiešenović, the bishop of Varad, had the infant proclaimed king at Buda and asked the sultan to recognise "the son of King John", the one whom ~~the Ottomans were~~ to call "Istefan". Meanwhile, Ferdinand rallied to his cause most of the Hungarian lords and laid siege to Buda from May 1541 onwards. Süleymān reoccupied Buda at the end of July. He finally decided on the transformation of the central part of the kingdom into an Ottoman province (the *beglerbegilik* of Budun) and allocated to Istefan, whose guardian was to be "brother George", "the land of Transylvania", which meant in reality not only the actual voivodate of Transylvania but also all the eastern region of the ancient former kingdom of Hungary, with the northern and western parts of the country remaining to Ferdinand.

For the Banat of Temesvár, the sultan recognised more especially the authority of Petro Petrovics, a Serb by birth who was related to Szapolyai, on whom he conferred a *sandjaḳ* by investiture. From 1543 onwards, Transylvania paid him a tribute of 10,000 pieces of gold which then increased to 15,000. In the summer of 1543, Süleymān set out again for Hungary, having prepared his campaign particularly carefully and having provided on an unprecedented scale for its provisioning and logistics. Numerous places were conquered (Valpo, Sziklos, Pécs, and especially important, Esztergom and Székesféhervár), but it took more than that to knock Ferdinand out of the game.

The Ottoman policy of attrition continued during the following summer, this time led by the *beg* of the frontiers. The projected campaign for the summer of 1545 was nevertheless abandoned in view of the progress of negotiations with Ferdinand, on whom it also managed to apply pressure. The successful outcome of these negotiations led to successive truces, and a five-year peace treaty was concluded in June 1547. While this peace treaty confirmed the territorial status quo, it also instituted the payment of

a tribute to the Sublime Porte of thirty thousand ducats per year by the Archduke.

From this time onwards, Süleymān had his hands free for affairs on the Persian frontier where, since 1536, tension had been limited to sporadic border incidents. A pretext for intervention was provided for him by the flight of Elḳas Mirzā, the brother of Shah Ṭahmāsp and governor of Shirwān, who came to Istanbul to seek the sultan's help (cf. *İA* art. *Elḳas Mirza*; J.R. Walsh, *The revolt of Alqas Mirza*, in *WZKM*, lxviii [1976], 61-78). In the spring of 1548 the sultan, who had not been on campaign for five years, once again set off for Persia, and on his way through Anatolia met his sons the *shehzādes* in their respective spheres of provincial government. He got as far as Tabrīz without meeting any resistance, as the Shāh had, according to his usual preference, declined battle and, in the hope of eluding him, had withdrawn into the steppelands and deserts.

Süleymān then left in the direction of Van, which he besieged. Van had been conquered in 1534 but retaken by the Persians the following year. On 25 August, after a brief resistance, Van fell [see WĀN]. The sultan fortified the citadel and, leaving a strong garrison there, departed in the direction of Diyārbekir and Aleppo, where he spent the winter.

A campaign against the Georgians of Akhaltzikhé, who had conducted a raid in the frontier zones, led to a reinforcement of Ottoman control of the Tortum region. As for Elḳas Mīrzā, he did not succeed in launching the expected uprising in Persia, but fell into the hands of Shāh Ṭahmāsp, whose overthrow then ceased to be the priority of the day.

Süleymān set out again for Istanbul, which he reached on 21 December 1549 (for information of this campaign, see J. Chesneau, *Le voyage de Monsieur d'Aramon, ambassadeur pour le Roy en Levant*, ed. Ch. Schefer, Paris 1887). In the following years, Shāh Ṭahmāsp emerged again. Ṣafawid horsemen set out to raid and plunder in 1551, and the troops of the *beglerbeg* of Erzurum, Iskender Pasha, suffered reverses. A new Persian campaign was then planned but the Grand Vizier, Rüstem Pasha [*q.v.*], who had received the title of *serdār*, was put in charge; Süleymān declined to take part. His refusal strengthened the opinion in the army that the age of the sultan meant that he was no longer able to play the role of military commander-in-chief which the soldiers under him expected of him.

A rumour then emerged that his son Muṣṭafā intended to take over from his father. Faced with this danger, Süleymān changed his plans and set out for Anatolia at the end of August 1553, entrusting to his son Bāyezīd the defence of the European frontiers, with the office of *muḥāfiẓ* of Edirne, which he himself had held in the past. On the way, he was joined by the princes Selīm and Muṣṭafā with their respective troops. On 6 October, near Ereğli in Ḳaramān, after the ceremony of kissing hands, Süleymān had his son Muṣṭafā executed as a presumed rebel (Y.T. Ünal, *Şehzade Mustafa'nın Ereğlide idam edilmesi*, in *Anıt* xxviii [1961], 9-22; Uluçay in *İA*, art. *Mustafa Sultan*) and dismissed the Grand Vizier Rüstem Pasha. Then he set off again to spend the winter in Aleppo. He did not start travelling again until April 1554, which was the real beginning of what was to become the campaign of Nakhčevān [*q.v.*]. He reached Ḳars by way of Diyārbekir and Erzurum, then went into Nakhčevān on 28 July. Being unable to make contact with the Shāh, the sultan ravaged the frontier zones of Persia and Ḳarabāgh [*q.v.*]. Once he had reached this goal he withdrew, and then contacts with Shāh Ṭahmāsp ended in a truce concluded in September. The sultan arrived at Amasya on 30 October and spent the winter there, and there he received a delegation from the Shāh, with whom he concluded the so-called peace of Amasya in May 1555, which formalised the official status quo of the territories of the two empires: the Ottomans kept 'Irāḳ, a good part of Kurdistān and Eastern Armenia, but gave up Tabrīz, Erivan and Nakhčevān. This period of participation in person in military operations and a phase in his reign both came to an end in the 1550s.

Other military operations

After the victory at Preveza and the end of the war with Venice, in August-September 1543, Barbarossa, acting within the framework of the Franco-Ottoman alliance, laid siege to Nice, a possession of Savoy; he then went on to spend the following winter with his fleet as the guest of the King of France in the port of Toulon. Later, other corsairs were to play an active role in the naval operations commissioned by the sultan, as for example the capture of Tripoli in 1551 which was carried out by Murād Agha and Ṭorghud Re'īs [*q.v.*] (Dragut; see St. Yerasimos in *Soliman le Magnifique et son temps*, 529-47). In 1560 the sultan had his last great naval success, when Piyāle Pasha [*q.v.*], then *ḳapudan pasha*, put to flight the troops of Philip II, king of Spain, from the island of Djerba. By contrast, the massive siege of Malta in 1565 ended in failure. But in the following year, Piyāle Pasha again seized the island of Chios, which was the last Genoese possession in the archipelago (Ş. Turan, in *Kanunî armağanı*, 79-109). Other naval activities were mounted on the Eastern front in order to counter the attempts of the Portugese to capture the former maritime trade routes of the Red Sea and the Persian Gulf for the benefit of their route through the Indian Ocean.

In 1538 the *beglerbeg* of Egypt, Khādim Süleymān Pasha [*q.v.*], who had previously been commissioned to build a fleet at Suez, launched the so-called campaign against Diu in Gudjarāt with 72 ships. Firstly he seized Aden and then, in cooperation with the forces of Gudjarāt, was engaged in the Indian Ocean in 1535-6 in laying siege to the fortress built by the Portugese at Diu. He abandoned his efforts in the following November to return to Egypt; he reorganised on his way the province of Yemen around Aden and Zabid (H. Melzig, *Hadım Süleyman Paşanın Hind seferi*, Istanbul 1943; S. Özbaran, *Osmanlı imparatoluğu ve Hindistan yolu*, in *Tarih Dergisi*, xxxi [1978], 98-104). In 1552, a second offensive led by Pīrī Re'īs [*q.v.*] was carried out against the Portugese. He left Suez with 25 galleys and 4 galleons, with 850 soldiers on board, and pillaged Muscat on his way; he then laid siege to Ormuz, which had been occupied by the Portugese since 1515. Pīrī Re'īs did not succeed in capturing the island, and even failed to bring back his galleys, and this led to his execution (C. Orhonlu, *Hint kaptanlığı ve Piri Re'is*, in *Belletin*, xxxiv, 134 [1970], 235-54).

In 1554 Sīdī 'Alī Re'īs left Baṣra and was involved in the only serious confrontation between the Portugese and the Ottomans. He lost several ships there before suffering a terrible storm on the coast of Makrān. He finally gained refuge in Sūrat [*q.v.*], when the remainder of his fleet dispersed (Seydī 'Alī Re'īs, *Mir'āt ul-memālik*, Istanbul 1313/1895). It is clear that, in sum, Süleymān succeeded in preventing the complete annihilation of trade in the Red Sea and the Persian Gulf but failed to dislodge the Portugese from the Sea of Oman and the north-western shores of India.

The man and the ruler

This more or less favourable view which has been taken of the war leader should not obscure the aspect of the man and the statesman which has been of more interest to recent historiographers. By general opinion, Süleymān demonstrated the physical majesty commensurate with his rank. Commentators are equally agreed on his private virtues: frugality, temperance, modesty, loyalty, generosity, faithfulness to his word, piety and even a tendency to mysticism which had been encouraged from the time of his youth at Manisa by the influence of the Khalwetī (Sünbülī) *sheykh* Merkez Efendi, whom he invited to take part in the Corfu campaign (N. Clayer, *Mystiques, État et société. Les Halvetis dans l'aire balkanique de la fin du XV^e siècle à nos jours*, Leiden 1994, 119-20). Then, subsequently deriving confidence from his first victories, he experienced a firmly-rooted faith in his privileged support by God (*te'yīd-i ilāhī*). It has even been shown that, in the first years of his reign, he was the focus of current thought concerning the generalised Messianic hopes of that time, appearing to some people as the *ṣāḥib-ḳirān* [*q.v.*]. This Messianic excitement of the first years of his reign co-existed with an extraordinary taste for splendour, and this certainly went hand-in-hand with an acute sensitivity to propaganda. Conversely, he also established an eclectic aestheticism, which probably developed from the booty acquired in the West as well as from the humanist, Renaissance tastes of his vizier Ibrāhīm Pasha, tastes far removed from the strict principles of Islam.

However, things changed greatly, later on, once Ibrāhīm Pasha was removed from power and the mood of the sultan darkened with age. His religious feelings began to turn to a strict austerity which bordered on puritanism, which naturally ran counter to the passions of his youth. Even the most favourable opinions on the grandeur of the sovereign are not without reserve. Did not the unprecedented influence exerted on him by succeeding relatives show evidence of a certain lack of character? Nevertheless, an ability deliberately to delegate authority may also be observed, the very quality which his father had lacked. This goes equally well for the viziership of Ibrāhīm, and for the two long vizierships of Rüstem Pasha in 1544-53 and in 1556-61, who was accused of avarice and corruption (T. Gökbilgin, *Rüstem Paşa ve hakkındakı ithamlar*, in *Tarih Dergisi*, viii, 11/12 [1956], 11-50), but who also stimulated remarkable progress in the domain of public finance and commerce.

Other aspects concerning his private life are more difficult to justify. He was deplorably given over to outside influences, particularly those of the harem. A first concubine of Süleymān, Gülbahār, is known. But it was another woman who held the centre position in the affections of the sultan; she was a slave of Ruthenian descent known in the West by the name of Roxelana and figuring in Ottoman sources under the appellation of Khürrem Sulṭān, Khürrem-Shāh Khātūn or Khāsseki Khürrem Sulṭān. She became the legal spouse of Süleymān in 1534 [see KHURREM].

There are records of eight sons born to Süleymān: three died at an early age; another, Djihāngīr, the son of Khürrem, was an invalid and though dearly loved, died in 1553. The other four sons held provincial governorships and were eligible to succeed their father: Muṣṭafā was the only one who was not a son of Khürrem. Meḥemmed was removed from the competition by his premature death in October 1543, and he was commemorated by the Shehzāde mosque in Istanbul; then there remained Selīm (II) and Bāyezīd.

The style of the sovereign was very different from that of his father Selīm "the Cruel", or of his great-grandfather Meḥemmed "the Conqueror". His own style was that of a universal monarch devoted to realising the ideal of the tradition of the "mirrors of princes". Order and justice were founded on the law which, in the Ottoman state, had two sources, the *sherīʿa*, the canonical law of Islam, and the *ḳānūn*, the secular law emitted by the sultan. Süleymān was therefore to remain in Ottoman Turkish tradition as the *Ḳānūnī*, the one who at one and the same time formulated laws and supervised their application. In fact, the creation of a code of general law for the empire was attributed to him. It is preserved in several manuscripts copied during his reign or afterwards. Nevertheless, it has been demonstrated that most of the provisions included in it in reality went back to the code of laws of Meḥemmed II (H. İnalcık, *Süleyman the lawgiver*, 117-36). The legislative works of the *Ḳānūnī* were therefore marked not so much by their originality but more by the effort exerted in compilation, systematisation, adaptation and diffusion. The kingpin in this enterprise was the *nishāndji* Djelālzāde Muṣṭafā, the so-called "great" *nishāndji*, the celebrated chancellor of Süleymān.

Inasmuch as the Ottoman *ḳānūn* was given a new slant under Süleymān, it moved towards the reinforcement of centralisation. This implied for the sultan an increased hold on the land and on the *reʿāyā* there which could not be used without his express mandate. The acquisition of land was made possible in a limited way by large-scale, meticulous campaigns for registration on the ground, from which resulted the registration collections (*taḥrīr defteri*) which made the reign of Süleymān the Golden Age for Ottoman land registration in pre-modern times. The general land registrations of the *sandjaḳ* of Anatolia and of Rūmeli in 1528, or of Eastern Anatolia in 1540, of Hungary in 1545-6, of Syria and Palestine in 1525-6 and 1538, were all launched in this way (for the list of the documents of land-registry, *tapu ve tahrir defteri*, kept in the archives of the presidency of the council in Istanbul, see *Başbakanlık Osmanlı arşivi rehberi*, Ankara 1992, 190-221). Such centralisation required the affirmation of the authority of the sultan over all his agents, as opposed to their being involved in the habitual process of forming private clienteles (M.T. Gökbilgin, *Kanûnî Sultan Süleymanın timar ve zeamet tevcihi ile ilgili fermanları*, in *İstanbul Üniversitesi Edebiyat Fakültesi Tarih Dergisi*, xvii [1967], 35-48, and Topkapı Saray Kütübhanesi, KK 888, fols. 338b, 357a, 366b, 393a). Conquests or new registrations gave him the opportunity to draw up codes of the provincial laws of Hungary, Syria and Egypt (the Grand Vizier Ibrāhīm Pasha, the *defterdār* Iskender Čelebi and Djelālzāde Muṣṭafā all participated in these), and also of Diyārbakır and of Erzurum. The effort of codification and diffusion of the *ḳānūn* was coupled with the unprecedented exaltation of the *sherīʿa*, and more generally, of the Sunnī Muslim characteristics of the state, while only according a limited and marginalised position to the title of caliph in Süleymān's rhetoric.

Süleymān clearly played his role of "servant of the two holy sanctuaries" (*khādim al-ḥaramayn al-sharīfayn*) to the full by his pious bequests to Mecca and Medina and the care which he took to protect the Pilgrimage. On a wider front, by his titles and by his monumental inscriptions he proclaimed his pre-eminence over all the sovereigns in the world, and at the same time his supremacy within the bosom of Islam associated with the evidence of divine predilection which

had singled him out. In fact, this primacy in the Muslim world also laid on him the obligation of coming to the aid of less important Muslim sovereigns.

Another reason which could equally explain the insistence of Süleymān on Muslim orthodoxy in his empire was the rivalry inherited from his father with the Ṣafawids of Persia and the threat of political and religious subversion inherent in their influence on the *ḳizilbash* Türkmens of Anatolia. This threat was evident in the great political and religious revolts of the first years of the reign of Süleymān: the revolt of Bābā Dhu 'l-Nūn in 1526, and the revolt of Shāh Ḳalender in 1527 (H. Sohrweide, *Der Sieg der Safaviden in Persien und seine Rückwirkungen auf die Schiiten Anatoliens im 16. Jahrhundert*, in *Isl.* xli [1965]; A. Allouche, *The origins and development of the Ottoman-Safavid conflict 906-962/1500-1555*, Berlin 1983).

The right-hand man of the sultan during this trend in increasing the Sunnī nature of the state was Ebū Su'ūd Efendi, the *muftī* of Istanbul from 1545 to 1574 (see ABU 'L-SU'ŪD, and R.C. Repp, *The müfti of Istanbul*, Oxford 1986, 272-96). The application of the *sherī'a* in its Ḥanafī form (notably according to the treatise of Ibrāhīm al-Ḥalabī, the *Multaḳā*, Istanbul 1309; cf. Ş.S. Has, *The use of the Multaqa 'l-Abhur in the Ottoman madrasas and in legal scholarship*, in *Osmanlı Araştırmaları*, vii-viii [1988], 393-418) was stipulated for the *ḳāḍī* and, as it were, regulated by the writings of the *muftī* himself, his *fetwās* and his *ma'rūḍāt* (M.E. Düzdağ, *Şeyhülislam Ebusuud Efendi fetvaları*, Istanbul 1972; P. Horster, *Zur Anwendung des islamischen Rechts im 16. Jahrhundert*, Stuttgart 1935), but the cleavage between the *ḳanūn* and the *sherī'a*, on that point perceptible in several areas such as landed property, fiscal and penal matters, was reduced or blurred by the task of justifying and reformulating the *ḳānūn* according to the *sherī'a*. The sultan supervised the formation and the orthodoxy of the *'ulamā* by the institution of numerous *medreses*.

Besides this, in a decisive way he reinforced the tendency which had already arisen during the preceding reigns to make the *'ilmiyye* into a structural hierarchical body dependent on the state (İ.H. Uzunçarşılı, *Osmanlı devletinin ilmiye teşkilâtı*, Ankara 1994; R.C. Repp, *op. cit.*, 27-72; H. İnalcık, *The Ruznamce registers of the Kadiasker of Rumeli as preserved in the Istanbul Müftülük*, in *Turcica* xx [1988] 251-75). But Ebū Su'ūd (and through him the office of the *muftī* of Istanbul, which in that period was more often referred to by the title of *muftī el-enām* than by that of *sheykh ul-islām*, which was imposed later) was put at the head of the order of clerics which was being formed (M. Zilfi, *Sultan Süleymân and the Ottoman religious establishment*, in *Suleyman the Second*, 112 ff.).

There are still more dimensions to the politics of the increasing of the Sunnī nature of the state. *A firmān* in 944/1537-8 arranged for the building of a mosque in every village (*Ma'rūżāt*, in *Milli Tettebü'ler Medjmū'asi*, ii, 338), while a policy of religious persecution was being conducted on a grand scale. But this in no way affected Christians or Jews who were conversely protected by their status as *dhimmīs*, which was completely respected; rather, it concerned all forms of heresy or dissidence within Islam. Persecution took very different forms; as, for example, a lawsuit where dissidents were examined by the highest *'ulamā*, if necessary in the presence of the sultan, like those who brought an action against Mollā Ḳābiḍ [*q.v.*] (1527), or various *sheykhs* of the Melāmī-Bayramī *ṭarīḳa* or of the *gülshenī* branch of the Khalwetīs (A.Y. Ocak, *Les réactions socio-religieuses contre l'idéologie ottomane et la question de zendeqa ve ilhâd (hérésie et athéisme) au XVI^e siècle*, in *Turcica*, xxi-xxiii [1991], 71-82; idem, *Idéologie officielle et réaction populaire: un aperçu général sur les mouvements et les courants socio-religieux á l'époque de Soliman le Magnifique*, in *Soliman le Magnifique et son temps*, 185-92).

"The Magnificent"

Contemporary Christian observers who were more aware of the conquests of the Great Turk, of his personality and above all, of the matchless splendour of his court, accorded him the epithet "the Magnificent". Before the morose austerity of his old age, Süleymān was indeed an incredible patron, by encouraging expert craftsmanship through the group which he supported in his Topkapı palace, or by giving external commissions to craftsmen in the capital, the provincial centres (Bursa, Iznik) or abroad (Venice, Brussels). This expertise encompassed skills concerning books (calligraphy, book-binding, illuminations, miniatures) as well as metal-working, wood carving, textiles, ceramics, sculpture in stone, and skills in setting precious stones. As a collector, he assembled in his palace Chinese porcelain from the Yüan dynasty and the beginning of the Ming dynasty as well as works of art picked up as booty during his conquests. He himself was a poet in the manner of his father Selīm and his great-uncle prince Djem [*q.v.*], and composed a *dīwān* in Ottoman Turkish with some pieces in Persian under the pseudonym of Muḥibbī "he who loves with affection" (von Hammer, vi, 248). His work was dominated by the figure of his beloved, the *khāṣṣekī* Khürrem, and many of his verses became popular.

However, it was in the realm of architecture where the sultan exercised his greatest, most spectacular and most constant patronage, since, even after he had abandoned the other arts, he continued building, with the closest possible scrutiny of operations, in a way which characterised classical Ottoman architecture. He commissioned in his own name or for his family a great number of buildings for manifold purposes; religious, charitable, utilitarian and military buildings were constructed both in Istanbul and in the rest of his empire. However, it was the capital, the historic cities of Islam and the eastern provinces that were more favoured by his patronage than European places (see the attempt at an inventory, though far from being exhaustive, made of buildings commissioned by the sultan in his own name and in that of his family by A. Kuran in *Soliman le Magnifique et son temps*, 217-25). Most of these constructions were the work of Mi'mār Sinān [*q.v.*] (*mi'mār bashî*) from 1539 to 1588). The most grandiose of the buildings of Süleymān, the complex of the Süleymāniyye mosque and its subsidiary buildings, were constructed between 1550 and 1558; they cost 897,350 gold florins, which amounted to one-tenth of the budget for the empire in 1527-8.

The campaign of Szigetvár

The old sultan sprang one last surprise on the world in the circumstances surrounding his disappearance. His health had begun seriously to deteriorate from the end of the 1540s onwards, and during this time, periodic announcements were given out that he had died. But he was in no way daunted, and after more than ten years of military activity, he embarked on a new campaign in Hungary, driven, it would seem, by his last Grand Vizier Ṣoḳollu Meḥmed Pasha [*q.v.*], who wanted to obliterate from memory the badly-failed siege of Malta in 1565; also, he wanted to react spectacularly to the encroachments attempted by the new emperor Maximilian II.

Süleymān was in pain, was irritable and in the worst of physical conditions, but nevertheless he per-

sonally led the campaign of Szigetvár. On the way, he received his now adult protégé John Sigismund Szapolyai "the son of King John" with great pomp and circumstance. But on the night of the 20-1 Ṣafer 974/6 September 1566, in his tent under the walls of the fortress of Szitgetvár, which was being defended by Miklos Zrinyie, he breathed his last. He had begun the siege of this fortress on 5 August, and on the day after his death it fell. It seems that the remains of the sultan were eviscerated and were provisionally buried in secret under his tent.

There then followed what could be called the posthumous life of the sultan, which was organised with remarkable composure and authority by the Grand Vizier Ṣoḳollu, who was assisted by some very reliable followers (Selānikī, ed. İpşirli, 35-53). After the disagreement which took place in Belgrade between Selīm and the Janissaries, Ṣoḳollu protected the body of Süleymān from any further anger of the mutineers by hastily despatching it to Istanbul, in the custody of the advance guard of the army accompanied by the vizier Aḥmed Pasha, by the governor of Egypt, ʿAlī Pasha, by the former *mīrākhur* Ferhād Agha, by Nūr ul-Dīn-zāde and his Ṣūfīs, and by a modest escort of 400 cavalrymen.

Süleymān was buried according to his wishes in the cemetery of the Sülemāniyye, in a mausoleum built by Sinān. Its position, beside that of Khürrem, had been decided in his lifetime, but, in accordance with custom, this was probably not carried out on the orders of his son and successor Selīm II until after the interment (for a discussion on the chronology of this edifice, see N. Vatin and G. Veinstein, *Les obsèques des sultans ottomans*, in *Les Ottomans et la mort: permanences et mutations*, Leiden 1996, 233-5). The ceremony involved a reading of seven stanzas of a *merthiye* by Bāḳī [*q.v.*], and this, according to Selānikī, "caused the entire nation to lament".

Bibliography: 1. Oriental sources. From Süleymān's time, the surviving Ottoman archives become very rich. Numerous of the sultan's original acts, including *fermāns*, *berāts*, *ḳānūn-nāmes*, *ʿahd-nāmes* or treaties, *tapu ve taḥrīr defteri* or land registers and other military land and fiscal registers have survived, of which only a small part were given in J. Matuz, *Herrscher-Urkunden des Osmanensultans Süleyman des Prächtigen. Ein chronologisches Verzeichnis*, Freiburg im Br. 1971. The main collections are in the Başbakanlık Osmanlı Arşivi in Istanbul (cf. the *Rehber*, Ankara 1992), esp. the first six vols. of the *Mühimme defteri* (vols. iii, v-vi, publ. in transcription with facs. by the General Directorate of Archives, Ankara), and several other series (625 acts of Süleymān in the *Ali Emiri tasnifi*). Other important collections in the Topkapı Museum. incl. two registers of *dīwān* orders prefiguring the *Mühimme defterleri*; see also Ü. Altındağ, *Topkapı Sarayı Müzesi Osmanlı Saray arşiv kataloğu. Fermanlar*, i, Ankara 1985, 7-13, ii, 1988, 108-12. To these one should add pieces preserved in the *sidjills* [*q.v.*] of local *ḳāḍīs* of the time (for Turkey, see A. Akgündüz (ed.), *Şer'iye sicilleri*, i, Istanbul 1988, 83-215, and art. s.v.), and the collections of Ottoman documents in foreign archives, the main ones for this period being in Sofia (see B.A. Cvetkova, *Sources ottomanes en Bulgarie...*, in *Studi preottomani et ottomani*, Naples 1976, 79-99), in Venice (M.T. Gökbilgin, *Venedik devlet arşivindeki vesikalar külliyatında Kanunî Süleyman devri belgeleri*, in *Belgeler*, i/2 (Ankara 1965), 119-220), in Warsaw (Z. Abrahamowicz, *Katalog dokumentów tureckich*, Warsaw 1959, docs. nos. 19-189) and in Vienna (A.C. Schaendlinger, *Die Schreiben Süleymans des Prächtigen an Karl V., Ferdinand I. und Maximilian II. aus dem Haus-, Hof- und Staatsarchive zu Wien*, Vienna 1983; idem, *Die Schreiben ... an Vasallen, Militärbeamte, Beamte und Richter....*, Vienna 1986), amongst the many collections containing relevant material, the best known is that of Ferīdūn Beg, *Münsheʾāt-i selāṭīn*, Istanbul 1275, i, 500 ff., ii, 1-86, giving notably accounts of the first eight campaigns, some of them cited above.

As well as those mentioned in connection with particular points, the main Ottoman chroniclers covering all or part of the reign are: Rüstem Pasha, *Taʾrīkh āl-i ʿOthmān*, tr. L. Forrer, Leipzig 1923; Djelāl-zāde Muṣṭafā, *Ṭabaḳāt ul-memālik we deredjāt ül-mesālik*, facs. ed. P. Kappert in *Geschichte Sultan Süleyman Kanunis von 1520 bis 1557*, Wiesbaden 1981; Luṭfī Pasha, *Tewārīkh-i āl ʿOthmān*, ed. S.M. Tayşi, Istanbul 1990; Muṣṭafā ʿĀlī, *Künh ül-akhbār, rukn* 4, mss.; Ferdī, *Taʾrīkh-i Sulṭān Süleymān* (up to 1552), Flügel no. 998; Muḥyī al-Dīn, in *Tewārīkh-i āl-i ʿOthmān*, ed. Giese, Breslau 1922, 138-53 (up to 1553), Selānikī Muṣṭafā Ef., *Taʾrīkh*, ed. M. İpşirli, Istanbul 1989, see also *T.-i Selānikī. Die Chronik des Selaniki*, Freiburg 1970. Later historians: Pečewī, *Taʾrīkh*, Istanbul 1284, and ed. F. Derin, Istanbul 1980, and B.S. Baykal, Ankara 1981-2; Ḳara Čelebi-zāde, *Süleymān-nāme* (continuation of Saʿd al-Dīn's *Tādj al-tawārīkh*) and *Rawḍat al-abrār*, both Būlāḳ 1248; Ṣolaḳ-zāde, *Taʾrīkh*, Istanbul 1298, and ed. V. Cabuk, Ankara 1989; Münedjdjim-bashî, *Ṣaḥāʾif al-akhbār*, iii. Numerous *shāh-nāmes* and *hüner-nāmes* dedicated to the sultan have survived, inc. the *Süleymān-nāme* of the official historiographer ʿĀrifī (covering 1520-58), splendidly illustrated, publ. in E. Atil, *Süleymanname. The illustrated history of Suleyman the Magnificent*, Washington-New York 1986.

2. The sources in Western languages include the correspondence and reports of envoys from the main powers to the Porte. See esp. E. Albèri, *Le relazioni degli ambasciatori veneziani al-Senato durante il secolo decimosesto*, ser. 3, Florence 1840-55; E. Charrière, *Négociations de la France dans le Levant*, Paris 1848-55; I. de Testa, *Recueil des traités de la Porte ottomane avec les puissances étrangères*, i, Paris 1844, 15-99; A. von Gévay, *Urkunden und Actenstücke zur Geschichte der Verhältnisse zwischen Österreich, Ungarn und der Pforte im XVI. und XVII. Jahrhunderte*, 3 vols. (years 1527-41) Vienna 1841-2; M.S. Džaja and G. Weiss, *Austro-Turcica 1541-1552. Diplomatische Akten des habsburgischen Gesandtschaftverkehrs mit der Hohen Pforte im Zeitalter Süleymans des Prächtigen*, Munich 1995. There are also many travel accounts, treaties and pamphlets. See C. Göllner, *Turcica. Die europäischen Türkendrucke des XVI. Jahrhunderts*, Baden-Baden 1961-78; St. Yerasimos, *Les voyageurs dans l'Empire ottoman (XIVe-XVIe siècles). Bibliographie, itinéraires et inventaire des lieux habités*, Ankara 1991.

3. There are various biographies of Süleymān, e.g. J.B. Merriman, *Süleiman the Magnificent*, New York 1944; H. Lamb, *Suleiman the Magnificent, Sultan of the East*, New York 1951; R Sertoli Salis, Tkish. tr. *Muhteşem Süleyman*, Ankara 1963; Gy. Kaldy-Nagy, *Szulejman*, Budapest 1974; A. Clot, *Soliman le Magnifique*, Paris 1983. These are of very unequal quality, but none reflect completely the state of historiography, and this place is in one sense better taken by three collective, commemorative works: *Kanunî armağanı*, Ankara 1970; G. Veinstein (ed.), *Soliman le Magnifique et son temps*, Paris 1992; and H. İnalcık and C. Kafadar (eds.), *Süleymân*

the Second (sic) *and his time*, Istanbul 1993. The *EI*[1] art. by J.H. Kramers and, still more, the *İA* one by M.T. Gökbilgin, remain of value, as well as various general works, older and more recent, such as Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, Gotha, 1854, repr. Darmstadt 1963, ii, 611-936, iii, 1-380; Iorga, *GOR*, ii-iii, Gotha 1909; İ.H. Uzunçarşılı, *Osmanlı tarihi*, ii, [4]Ankara 1983 and iii/2, [2]Ankara 1977; Von Hammer, *GOR*[2], v, 1520-47, vi 1547-74; V.J. Parry, *The Ottoman Empire 1520-1566*; Inalcik, *The Ottoman Empire. The classical age*, London 1973; R. Mantran (ed.), *Hist. de l'Empire ottoman*, Paris 1989, 139-225; İnalcık and D. Quataert (eds.), *An economic and social history of the Ottoman Empire, 1300-1914*, Cambridge 1994, 9-409. For numismatics, see İ. Artuk, *Kanunî Sultan Süleyman adına basılan sikkeler*, Ankara 1972.

4. Special studies. On relations with Hungary: G. Perjés, *Az orszagut szélére vetett orszag*, Budapest 1976; S.B. Vardy, *Clio's art in Hungary and in Hungarian-America*, New York 1985, 157-9; G. Veinstein, *La politique hongroise du sultan Süleymân et d'Ibrâhîm pacha à travers deux lettres de 1534 au roi Sigismond de Pologne*, in *Acta Historica*, xxiii/2-4 (Budapest 1987), 177-91.

SÜLEYMĀN II, the twentieth Ottoman sultan (1099-1102/1687-91).

Süleymān II's succession to the throne came about in his middle age as the result of the forced abdication of his half-brother Meḥemmed IV [*q.v.*] in 1099/1687. He inherited rule over an empire facing severe internal problems and external challenges. The financial position of the empire at this time (after four years of unremitting war with Austria) was dire and, according to the contemporary historian Mewḳūfātī, writing about the period just after Süleymān's demise (see *Bibl.*), even during periods of peace regular state expenditures exceeded revenues by about 72 million *aḳčes*. The treasury deficit was made worse (by a further 137 million *aḳčes*) due to pressures, irresistible in periods leading up to major military involvements, to expand Janissary enrollments. Given the magnitude of the problems which he faced and the brevity of his reign, Süleymān II's achievements were impressive. Progress during the first year and a half of his rule was effectively blocked by the turmoil in the capital led by Janissary "rebels" who agitated for enhancement of their (already extensive) privileges and for payment of the pay bonuses customarily awarded at the accession of a new sultan. Their activities were mirrored in the provinces by recalcitrant troop mobilisers, such as Yegen ʿOthmān Pasha, whose final suppression was achieved only at the close of winter in 1100/1689. But once these obstacles were removed, and especially during the grand vizierate of Köprülüzāde Fāḍil Muṣṭafā Pasha beginning in Muḥarram 1101/October 1689, recovery was swift and in 1101-2/1690 the Ottomans launched a successful counter-offensive against the Habsburg armies in both Serbia and Transylvania.

Apart from these military successes (which made a significant difference to the dispirited Ottoman rank-and-file), Süleymān's reign is especially noteworthy for its initiatives for fiscal and bureaucratic reform. A significant narrowing of the budget gap was achieved (in part) by the introduction of new taxes on the sale and consumption of luxury items such as tobacco, but in addition a number of more radical measures (some more successful than others) were attempted. In general, it may be said that Süleymān's reign was a time of considerable experimentation with new monetary (e.g. the introduction of copper coinage) and general fiscal policies. But above all it is in the realm of administrative reform that Süleymān left his most enduring legacy. The sultan's preoccupation with record-keeping is clear from the massive scale of the work he commissioned Mewḳūfātī to write; Mewḳūfātī's account of his reign lasting less than four years takes up the better part of two volumes covering more than 1,100 pages of text.

Süleymān appears to have been committed to the goal of closer coordination of policy with provincial authorities, and he devised a means for monitoring the performance (and compliance) of his governors. Documentary evidence suggests that he was the first sultan to introduce the pioneering concept of separate and duplicate registration, according to region, of outgoing orders (*fermāns*) sent by the Imperial Council to the *dīwāns* of key provincial governors. The *wilāyet aḥkām defterleri* were later more fully systematised and regularised, but that the institution existed in Süleymān II's time is clear from a register for Aleppo preserved in the Damascus archives (see Bibl.).

Comparison of the lag in time between a *fermān*'s promulgation in the capital and its registration in the provinces (in this case, Aleppo) reveals the state's interest in maintaining a cumulative as well as current record of problem-solving at the provincial level. As a result of such changes in governing procedure, Süleymān was able to bequeath to his successors—at the time of his premature death from a condition associated with anasarca in Ramaḍān 1102/June 1691—a stabler, more solvent and better-administered empire.

Bibliography: 1. Sources. Mewḳūfātī, *Wāḳiʿāt-i rūz-merre*, 3 vols., Topkapı, Revan Köşkü mss. 1223-5, cf. Karatay's cat., i, 271-2 (on the work, see R. Murphey, *Biographical notes on "Mevkufati", a lesser-known Ottoman historian of the late seventeenth century*, in *Prof. Dr. Bekir Kutukoğlu'na armağan*, Istanbul 1991, 193-204); the parts relevant to Süleymān's reign are all of vol. i (331 fols.) and fols. 1-244 of vol. ii, whilst vol. iv, Süleymaniye, Esad Ef. 2347, fols. 257a-258b, contains a summary report (*telkhīṣ*) on the size of Ottoman treasury deficits in this period. The Damascus State Directorate of Archives, Aleppo, *Awāmir-i sulṭāniyya* series, i, 1-118 = copies

(*süret*) of imperial *fermāns* received and recorded at Aleppo in 1101-2/1689-91.

Mayer, *Das Osmanische Registerbuch der Beschwerden (Şikayet Defteri) von Jahre 1675*, Vienna 1984, 17.

(R. Murphey)

SULEYMĀN ČELEBI, Ottoman prince and eldest son of Bāyezīd I [*q.v.*], ruler in Rumelia and a considerable part of northern and northwestern Anatolia in the confused years after Bāyezīd's defeat and capture by Tīmūr at the Battle of Ankara in 804/1402, b. ?779/1377, d. 813/1411.

He is heard of in 800/1398, when his father sent him against the Aḳ Ḳoyunlu Ḳara Yülük at Sivas, and he fought at Bāyezīd's side, together with his brothers, at Ankara. He managed to escape to Europe with his retainers by being ferried across the Bosphorus by the Genoese. He had to make peace with the Venetians, the Genoese, the Knights of Rhodes and the Byzantines, ceding lands along the Black Sea and Thracian coasts plus Salonica to Manuel II Comnenus and renouncing the requirement of tribute. But he was still a powerful force in Rumelia, with the Serb Stefan Lazarević as his vassal, and when Tīmūr left Anatolia in 1403, Süleymān began to reconquer the former Ottoman lands in northwestern Anatolia as far as Ankara in the east and Aydîn in the south. He was now in strenuous rivalry with his younger brothers Meḥemmed in Anatolia and Mūsā in Rumelia, and was unable to maintain himself in Anatolia; by 1410 Meḥemmed was in control there and began his first reign as sultan Meḥemmed I [*q.v.*]. In Rumelia, Mūsā Čelebi had mixed success against Süleymān in 1410, and Süleymān endeavoured to secure Byzantine support by marrying a princess of the Palaeologi; but subsequently Mūsā managed to surprise Süleymān in his capital at Edirne and then capture him at the village of Do<u>gh</u>and<u>j</u>ilar as he fled towards Constantinople, executing him on 22 <u>Sh</u>awwāl 813/17 February 1411.

Mūsā was thus now dominant in Rumelia, but became engaged in warfare there, which involved Stefan Lazarević and Süleymān's son Or<u>kh</u>on, released by the Byzantine Emperor to harass Mūsā; he fended off attacks from Anatolia by Meḥemmed, but was finally captured and killed by the latter after a battle near Sofya in 816/1413 [see mūsā čelebi].

Bibliography: The early historical sources include the *Anonymous chronicle* in Ne<u>sh</u>rī, ʿĀ<u>sh</u>ıḳpa<u>sh</u>a-zāde and Lütfī Pa<u>sh</u>a; see also Saʿd al-Dīn, *Tād<u>j</u> al-tewārī<u>kh</u>*, i, 218-20, and *SʿO*, i, 42. Mantran (ed.), *Hist. de l'empire ottoman*, Paris 1989, 53, 56-61; C. Imber, *The Ottoman empire 1300-1481*, Istanbul 1990, 41, 52, 54, 56-9, 63-9; *İA* art. *Süleyman Çelebi* (M. Tayyib Gökbilgin). (C.E. Bosworth)

SÜLEYMĀN ČELEBİ, DEDE (?752-826/1351-1422), Ottoman poet, author of *Wesīlet el-ned<u>j</u>āt* (*Vesiletü'n-necat*) ("Means of salvation"), a *ma<u>th</u>nawī* [*q.v.*] in honour of Muḥammad completed in 812/1409, referred to in Turkey as the *Mewlid* ([*q.v.*], and see Neclâ Pekolcay, *Mevlid*, Ankara 1993, 1-3), *Mewlūd*, or *Mewlid-i <u>Sh</u>erīf* ("The [noble] birth").

Sources provide little biographical information, but show his forbears as religious scholars and bureaucrats closely connected with the Ottoman dynasty. The identity of his father Aḥmed Pa<u>sh</u>a is obscure. His (maternal?) grandfather <u>Sh</u>ay<u>kh</u> Maḥmūd lectured at an Iznik *madrasa*, and is credited with poetry and a commentary on the *Fuṣūṣ* of Ibn al-ʿArabī.

Süleymān was born in Bursa and is described as having been a disciple of Emīr Sulṭān [*q.v.*], the "patron saint" of Bursa (and son-in-law of Bāyezīd I) and as having served as *imām* to Bāyezīd. After the latter's death (1403), he became chief *imām* of the Great Mosque in Bursa, where he died and was buried. His precise birth date remains in debate. A reference to his completing the *Mewlid* when he was sixty led Ahmet Ateş to posit his being born in 752/1351 (*Vesiletü'n-necât*, Ankara 1954, 25 ff.). Pekolcay, who earlier questioned that date (*İA*, art. *Süleyman Çelebi*), now agrees (*Mevlid*, 36).

Tradition claims that the *Mewlid* was composed to counter statements of a popular preacher that Muḥammad was not superior to Jesus (Gibb, *HOP*, i, 232-5). Whatever his inspiration, Süleymān displayed a familiarity with the Muslim corpus of works concerning the Prophet, and the *Mewlid* shows influence from the *<u>Gh</u>arīb-nāme* of ʿĀ<u>sh</u>ıḳpa<u>sh</u>a [*q.v.*] and echoes some of the verses interposed by Muṣṭafā Ḍarīr (an Erzurum Turk writing in Mamlūk Egypt) in his life of the Prophet (*Siyerü'n-nebewī*) (see A. Bombaci, *La letteratura turca*, Milan 1969, 211-12, 301-4). Many later Ottoman *mewlids* appeared, but Süleymān's remained the favourite, becoming part of the official celebration of Muḥammad's birth (12 Rabīʿ I) introduced under Murād III (d'Ohsson, *Tableau général*, ii, 358-68), and continues to be recited by Turks celebrating the Prophet's birth, marking the fortieth day after bereavement, fulfilment of a vow, etc. A vivid description of its place in Ottoman life occurs in the novel *The clown and his daughter* by Halide Edib Adıvar [see <u>kh</u>ālide edīb].

Manuscripts (the earliest from the 10th-11th/16th-17th centuries) and printed editions vary in length (from about 260 to some 1000 *bayts*) and topics covered. The work has been translated into a number of languages, including Albanian, Greek, Serbo-Croat and Kurdish, and Schimmel has noted an echo of it in a work by Abū ʿAlī Ḳalandar, an 8th/14th-century Indian poet (*Mystical dimensions in Islam*, Chapel Hill 1975, 216-7). F. Lyman McCallum's 263-*bayt* English translation (*The Mevlidi Sherif of Süleyman Chelebi*) appeared in London in 1943; and an annotated English translation of the text published by Ateş (*op. cit.*) formed the Senior Thesis of Stephanie R. Thomas at Barnard College in New York 1988. This text, a compilation from five manuscripts, omits the well-known *Merhaba* ("Welcome") section (McCallum, 23-4).

A devout work, the *Mewlid* has a short prose prologue in Arabic, then follows a typical *ma<u>th</u>nawī* format with praise of Allāh, apology, prayer for the author, etc. The main narrative is preceded by a discourse on the Light of Muḥammad [see nūr muḥammad], then includes not only Muḥammad's birth and the wonders preceding it, but his virtues, attributed miracles, the *Miʿrād<u>j</u>* [*q.v.*], his final illness and death. The metre is the hexametric *ramal*, and the language is a simple Ottoman that is both lyrical and moving.

Bibliography: For mss. and further studies, see Pekolcay's 1993 work quoted.

(Kathleen R.F. Burrill)

SÜLEYMĀN PA<u>SH</u>A (?-758/?-1357); son, probably the eldest, of the second Ottoman ruler, Or<u>kh</u>an [*q.v.*]. He was the first member of the dynasty to establish Ottoman rule on the European side of

the Straits of Gallipoli and, as such, occupies a revered position in Ottoman tradition and historiography. However, the earliest Ottoman accounts of his deeds appear in the chronicles composed in the second half of the 9th/15th century and, although these contain obvious allusions to real historical events, they belong to the genre of popular epic (*dāstān*), and cannot serve as historical sources. The only contemporary and seemingly reliable references to events in Süleymān Pas͟ha's life appear in the Byzantine chronicle of John Cantacuzenus (ed. L. Schopen, *Corpus scriptorum historiae byzantinae*, xx, vols. i-iii, Bonn 1828-32). References to Süleymān Pas͟ha therefore inevitably occur in the context of Cantacuzenus' own relations with Süleymān Pas͟ha's father, Ork͟han.

In 747/1346, Cantacuzenus formed an alliance with Ork͟han and, with his help, seized the Byzantine throne in the following year. The first reference to Süleymān Pas͟ha dates from 749/1348, when Cantacuzenus sought help from Ork͟han against the Serbian Tsar, Stephen Dus͟han, who had occupied Thessaly. Ork͟han sent "over ten thousand" troops under the leadership of Süleymān and his other sons, but when this force reached Macedonia, and learned that it was Dus͟han from whom they were to recover the Thessalian cities, they deserted "and started plundering and killing" (iii, 32). The second reference to Süleymān recalls a similar event. In 751/1350, Cantacuzenus called on Ork͟han to give assistance in recovering Thessaloniki from the rebel Alexius Metochites. Again, Ork͟han sent Süleymān with a force of "twenty thousand horsemen", and again these deserted. The reason, Cantacuzenus claims, was that Ork͟han had recalled them to fight a war against a neighbouring prince in Anatolia (iii, 111). A similar incident occurred in 753/1352, when the co-Emperor, John V Palaeologus, attacked Cantacuzenus' son, Matthew, near Adrianople/Edirne [*q.v.*]. Cantacuzenus again called on Ork͟han, who once again sent Süleymān Pas͟ha with "at least ten thousand cavalry". On this occasion, Süleymān Pas͟ha was victorious, leading John V to try unsuccessfully to win him over to his cause (iii, 248).

These events have left no echoes in the Ottoman tradition, which remembers Süleymān as, above all, the conqueror of Gallipoli and parts of Thrace. It is again Cantacuzenus who provides what appears to be the most accurate account of these events.

In 753/1352, the Turks occupied the fortress of Tzympe (Bolayır?) in Thrace. It seems that Cantacuzenus himself had invited them there so that the soldiers would be more easily at his disposal, and that he had granted them, in return for military service, the right to tax the inhabitants (N. Oikonomides, *From soldiers of fortune to Gazi warriors: the Tzympe affair*, in C.J. Heywood and C. Imber (eds.), *Studies in Ottoman history in honour of Professor V.L. Ménage*, Istanbul 1994, 239-48). The Turks in Tzympe were, it seems, under the command of Süleymān Pas͟ha. When Cantacuzenus asked Ork͟han to abandon the fortress, Ork͟han replied that it was his son, Süleymān, who had control of Tzympe and, if he were to abandon it, he would require compensation. Cantacuzenus provided a thousand gold pieces, and the Turks "sent men to hand over the stronghold to him" (iii, 277). This was in February 755/1354. On 2 March a violent earthquake destroyed Gallipoli and the surrounding towns. The Greek inhabitants fled, and Süleymān Pas͟ha, ignoring the agreement to abandon Tzympe, crossed the Dardanelles from his base at Pegai on the Asiatic shore, and settled Gallipoli and the abandoned towns and villages with Turks from Anatolia. He restored the fortifications of Gallipoli, making them stronger than before, and left a large garrison. Süleymān Pas͟ha never restored to the Emperor Gallipoli and the other places which he had occupied. Cantacuzenus sought them from Ork͟han, but Süleymān refused to abandon them, "replying that he had not conquered the cities by force, but merely occupied abandoned and ruined ones". Ork͟han, however, eventually persuaded his son to hand over the towns for 40,000 gold pieces, but the agreement foundered when Ork͟han failed to meet Cantacuzenus at Nicomedia/Izmid to finalise the arrangement (iii, 277-81).

In the summer of 755/1354, Süleymān Pas͟ha also led an army eastwards, capturing the towns of Crateia/Gerede and Ankara [*q.v.*], but from whom he took them is not clear (iii, 284). He died in 758/1357 (Ç.N. Atsız, *Osmanlı tarihine ait takvimler*, Istanbul 1961, 25).

Bibliography: Given in the article. All modern accounts of the reign of Ork͟han (see *Bibl.* to that article) contain references to Süleymān Pas͟ha, but these tend to be essentially romantic re-workings of the apocryphal materials in the Ottoman chronicles.

(C. Imber)

SÜLEYMĀN PAS͟HA, MALAṬYALİ, Dāmād, Silāḥdār, Ḳod͟ja, (*ca.* 1016-98/1607-87), Ottoman Grand Vizier under Sultan Meḥemmed IV [*q.v.*].

Born in Malaṭya [*q.v.*] of non-Muslim parents, possibly Armenians, he was educated in the *dews͟hirme* [*q.v.*] establishment of the Ibrāhīm Pas͟ha palace at Istanbul upon the instigation of his relative, the *Ḳapu Ag͟hasi̊* [*q.v.*] Ismāʿīl Ag͟ha, and made his career in the palace service (see enderūn). From being *Dülbend ag͟ha*, he became *Miftāḥ s͟hāgirdi* in the *Seferli odasi̊* and the *K͟hāṣṣ oda* [*q.v.*], and in 1050/1640 became *Silāḥdār* [*q.v.*] to the sultan. Six months later he was raised to the rank of *Ḳubbe wezīri* [*q.v.*]. On 12 D͟jumādā I 1054/17 July 1644 he was appointed *beglerbegi* of Sīwās [*q.v.*, i.e. *Rūm*], and two years later, of Erzurum [*q.v.*]. He was able to suppress the *D͟jelālī* [see d͟jalālī, in Suppl.] revolts in his governorships at this time. Recalled to the capital, he was appointed military governor of Ṣaḳi̊z [*q.v.*] or Chios and entrusted with the transport of troops from Čes͟hme to the theatre of war in Crete [see ḳandiya; iḳrītis͟h] in 1057/1647. After this, he was restored to his position of *Ḳubbe wezīri*. He was made Grand Vizier upon the suggestion of the influential ex-Ag͟ha of the Janissaries, Ḳara-Ḥasanzāde Ḥuseyin Ag͟ha on 16 S͟hawwāl 1065/19 August 1655 and married to the princess ʿĀʾis͟he Sulṭān, a daughter of Sultan Ibrāhīm [*q.v.*], who had previously been the wife of Ips͟hir Muṣṭafā Pas͟ha [*q.v.*]. The new "supremo" turned out to be unable to get a grip on affairs. It was a particularly difficult juncture of events, with the "War of Candia" going from bad to worse, revolts raging in the Crimea as well as in Anatolia, and the imperial finances out of control. The Grand Vizier confessed later to having been unable to break up the corrupt networks of patronage and protection of the leading personalities of that period of the "sultanate of women" (*ḳadi̊nlar salṭanati̊* [see wālide sulṭan]). Nor was he able to reduce the size of the *Ḳapu Ḳulu* corps. His financial policy consisted of the farming out, two to three years in advance, of certain items of taxation, the sale in rapid succession (every six to seven months) of offices and a debasement of the coinage. The *Ḳapu Ḳulu* troops, however, refused to accept their pay in the new "*čingene*" or "*meyk͟hāne*" *aḳčesi*. The *Dār al-Saʿāde Ag͟hasi̊*, after a long hesitation of the leading circles, advised the Wālide Sulṭān, Turk͟hān K͟hadīd͟je Sulṭān, to dismiss Süleymān Pas͟ha (2 D͟jumādā I 1066/28 February

1656). The Pas̲h̲a's life was spared during the bloody revolt in Istanbul known as the *Waḳʿa-yi Waḳwāḳiyye* or *Čïnar Waḳʿasï* (8-12 D̲j̲umādā I 1066/4-8 March 1656). Süleymān Pas̲h̲a was appointed *Beglerbegi* of Bosnia for eight months in 1066/1656. Two years later, he was made *ḳāʾim-maḳām* [*q.v.*] at Istanbul (1069/1659). A year later, after a great fire had raged for 49 days in Istanbul, he was dismissed and transferred to the government of the province of Silistre at Oczakow [see ÖZÜ], where he had to tackle the maritime raids of the Cossacks of the Don. After a not-too-successful tenure of office in these border areas, he was recalled to the capital to become *ḳāʾim-maḳām* once more (1075/1665). Fires again devastated the capital in that year; the sultan came to see the damage, and dismissed the *ḳāʾim-maḳām* as being the responsible authority (29 Rabīʿ I 1076/12 October 1665). Süleymān Pas̲h̲a retained his rank, and in spring of the next year accompanied the Wālide Sulṭān to Edirne. He was made *beglerbegi* of Erzurum in 1076/1666. Dismissed a year later, he was given the status of *maʿzūl* and retained all his vizierial *k̲h̲āṣṣ* estates (1077/1667). For the remaining twenty years of his life, Süleymān Pas̲h̲a lived as a private person, dying aged around eighty on 15 Rabīʿ II 1098/28 February 1687. His career may be seen as characteristic of a decent, not very talented statesman, helped along by the *intisāb* network of patronage to which he belonged.

(A.H. DE GROOT)

ṢULḤ (A.), an abstract noun from the verb *ṣaluḥa* or *ṣalaḥa* "to be sound, righteous", denotes the idea of peace and reconciliation in Islamic law and practice.

The purpose of *ṣulḥ* is to end conflict and hostility among believers so that they may conduct their relationships in peace and amity. In the relationship between Muslim and non-Muslim communities, the purpose of *ṣulḥ* is to suspend fighting between them and establish peace, called *muwādaʿa* (peace or gentle relationship), for a specific period of time. In Islamic law *ṣulḥ* is a form of contract (*ʿaḳd*), legally binding on both the individual and community levels.

According to the *S̲h̲arīʿa*, *ṣulḥ* between two believers is a contract of settlement, consisting of offer (*īd̲j̲āb*) and acceptance (*ḳabūl*). The objects of the *ṣulḥ* are essentially the same as those in contracts of sale, consisting of material and non-material objects, except those prohibited commodities such as wine and dead animals.

Three kinds of settlement are recognised under the *S̲h̲arīʿa*. First, the defendant can, by *iḳrār*, acknowledge the settlement. Secondly, he can, by *inkār*, dispute or reject it. Thirdly, he can, by *sukūt*, say nothing. The three kinds of settlement, however, are not recognised without differences among the schools of law. From the early classical period, the principal founders of the schools of law, especially Abū Ḥanīfa (d. 150/768) and al-S̲h̲āfiʿī (d. 204/820), have differed as to which of the three kinds of settlement is binding.

Abū Ḥanīfa maintained that competence to negotiate a *ṣulḥ* settlement by the parties, i.e. that they should have attained their majority, *bulūg̲h̲*, is not essential. But *ṣulḥ* by *iḳrār* is not binding; it must be by *iḳrār* and *sukūt*. Al-S̲h̲āfiʿī set no qualifications, and held that, by *iḳrār*, a *ṣulḥ* is binding. He also set no conditions about the claimed object, as he divided the settlement into *ṣulḥ al-ibrāʾ*, by virtue of which the object would be a *hiba* (donation), and *ṣulḥ al-muʿāwaḍa*, when the claimed object is replaced by another. The caliph ʿUmar is reported to have opined that all kinds of disputes should be considered as settled, irrespective of any qualifications, and his opinion seems to have been accepted by the Companions.

Like *ṣulḥ* between two believers, the *ṣulḥ* between the community of believers in the *dār al-Islām* (territory of Islam), and the community of unbelievers in the *dār al-ḥarb* (territory of war), is also considered a legal *ʿaḳd* (a treaty), called *muhādana* or *muwādaʿa*, consisting of all the terms and stipulations agreed upon between the two sides which will become the law governing the relationship between them. Such a treaty is not intended to supersede the normal "state of war" existing between the *dār al-ḥarb* and *dār al-Islām* as envisaged by the early Muslim scholars. The period of such a treaty is limited in duration not to exceed 10 years (a limit set on the basis of the Prophet Muḥammad's first treaty with the people of Mecca in 2/624), although it can be renewed for one or more terms.

The early Muslim scholars and founders of the schools of law, however, differed in their views as to the relationship between the two *dārs*. Abū Ḥanīfa, and even more Abū Yūsuf and al-S̲h̲aybānī, held that a "state of war" (war in the legal sense, not in the sense of fighting) had existed between the two *dārs*, but they made no explicit statements that the *d̲j̲ihād* [*q.v.*] was a war against such non-Muslims as Christians and Jews solely on account of their disbelief in Islam, because they believed in God and repudiated idolatry. For this reason, they were not denounced as the people of *kufr*, but they were often referred to as *d̲h̲immīs*, the protected people who lived under Islamic rule [see DHIMMAH]. This was also the position of al-Awzāʿī in Syria, and Mālik in the Ḥid̲j̲āz. It was al-S̲h̲āfiʿī who first formulated the doctrine that the *d̲j̲ihād* was intended to be a permanent war on the unbelievers, not one merely when they came into conflict with Islam, on the basis of Ḳurʾān, ix, 5, which commands believers "to fight unbelievers whenever you may find them" (*K. al-Umm*, iv, 84-5).

When conditions in the *dār al-Islām* began to change from the 4th/10th century, and the expansion of Islam had come to a standstill, Muslim scholars began to argue that the *S̲h̲arīʿa* did not require performance of the *d̲j̲ihād* duty unless the *dār al-Islām* were threatened by foreign forces. Ibn Taymiyya [*q.v.*] held that Islam should not be imposed by force on unbelievers who made no attempt to encroach upon the *dār al-Islām*. He said, "If the unbeliever were to be killed unless he becomes a Muslim, such an action would constitute

the greatest compulsion in religion," and this would be contrary to the Ḳur'ān, in which it is stated that "no compulsion is prescribed by religion" (II, 257). But when unbelievers from the *dār al-ḥarb* (e.g. the Mongols and the Crusaders) menaced the *dār al-Islām*, such a situation required every Muslim to fulfill the *dj̲ihād* as an individual duty.

It follows that *ṣulḥ* as a concept of peace and harmony was not applied by the *dār al-Islām* to the *dār al-ḥarb* in regard to territorial rule, but in regard to a community or a group or even one person in their relationship with Islam. Three specific categories were acknowledged by the *S̲h̲arī'a*:

(1) When the *d̲h̲immīs*—Christian, Jews, Sabians and other who claimed to have a scripture—had passed under Islamic rule, under an agreement, a permanent peace was established between them under certain conditions; for these, see DHIMMA.

(2) Non-Muslims who believed in more than one God and worshipped idols were denounced as *kuffār* or unbelievers; for their position, see KĀFIR. Any convert who had renounced Islam after the death of the Prophet was denounced as a *murtadd* or apostate; for his position, see MURTADD.

(3) *Ṣulḥ* under an *amān*. Despite occasional conflicts between the Byzantine and the Islamic empires, under both the Umayyads and the 'Abbāsids, a number of treaties and agreements were reached between the two sides to maintain periods of peace and also to facilitate occasional commercial and cultural relationships. As the two *dārs* were in principle in a state of war, the entry by non-Muslims from the *dār al-ḥarb* into the *dār al-Islām* was made possible by the granting of *amān*, a pledge of security by virtue of which the person from the *dār al-ḥarb*, called a *ḥarbī*, was at peace with Islam during his visit to the *dār al-Islām*. No longer at war with Islam, the *ḥarbī* would become a *musta'min*, and he would be entitled to protection by the Muslim authorities (for details, see AMĀN).

The institution of *amān*, like a passport to facilitate peaceful relationship among nations today, may accordingly be considered as a factor promoting *ṣulḥ* in the relationships between the *dār al-Islām* and the *dār al-ḥarb*.

ṢULḤ-I KULL, the central principle in the religious thought of the Mug̲h̲al Emperor Akbar (d. 1014/1605) and his counsellor Abu 'l-Faḍl, apparently developed under the influence of Ibn 'Arabī's ideas.

As a *farmān* of Akbar from 999/1590 (publ. in Desai, 545) puts it, the highest station of spiritual attainment is *muḥabbat-i kull*, absolute love, where only unity remains. A lower station is *ṣulḥ-i kull* or absolute peace, which constitutes a recognition of diversity and calls upon one to be benevolent to all. By 989/1581, the doctrine of *ṣulḥ-i kull* was dominant at Akbar's court, as reported by a letter from his counsellor Abu 'l-Fatḥ to S̲h̲arīf Āmulī (*Ruḳa'āt*, 150), where it is taken to mean "accommodating oneself to people, good and bad, and regarding oneself, with all one's defects, as a necessary part of this world." In Akbar's mind, *ṣulḥ-i kull* most strongly implied the necessity of tolerance of all the different and contradictory religious beliefs. As he moved away from Muslim orthodoxy after the theologians' *maḥḍar* of 987/1579, which had admitted him to be an authoritative interpreter of the *S̲h̲arī'a*, he came to occupy, at almost the same moment, "the sovereign seat of *ṣulḥ-i kull*" and so assumed as an obligation, the tolerance of "all the idle-talkers" against his religious views, according to the official history of the Emperor, written by Abu 'l-Faḍl (*Akbar-nāma*, iii, 271). In 1000/1591, while holding the Muslim prayers and fasts to be mere ritualistic exercises, Akbar forbade his son Murād from prohibiting or interfering with them on the explicit ground that it was "incumbent on sovereigns and administrators to keep to *ṣulḥ-i kull* with all the world and its denizens" (*Akbar-nāma*, early version, fol. 389a). *Ṣulḥ-i kull* was stressed as a basic article in Akbar's preaching to his own spiritual followers (see D̲j̲ahāngīr's statement of these "articles" in his *Tūzuk*, 28). *Ṣulḥ-i kull* is not heard of after the early years of D̲j̲ahāngīr's reign (1014-37/1605-27). Perhaps it was too early for its time. Even some of the religions which Akbar protected under its umbrella, were not impressed. The Jesuit Monserrate wrote (1581) that Akbar "cared little that, in allowing every one to follow his own religion, he was in reality violating all religions" (*Commentary*, 142).

(M. ATHAR ALI)

AL-ṢŪLĪ, ABŪ BAKR MUḤAMMAD B. YAḤYĀ b. al-'Abbās b. Muḥammad b. Ṣūl, man of letters, court companion of several caliphs, expert on poetry and chess, d. 335/947. As a prolific author, collector of poetry, and as an often-quoted authority for reports on caliphs and poets, he holds a place of eminence in classical Arabic literature. Since he himself mentions that he attended—and disliked—the lectures of Ibn Abī Ṭāhir Ṭayfūr (d. 280/893-4 [*q.v.*]) at Baṣra in the year 277/890-1 (*Ak̲h̲bār al-s̲h̲u'arā' al-muḥdat̲h̲īn*, 210), the year of his birth may be placed about twenty years earlier, i.e. around the year 257/874 (for further evidence, see Nu'mān, *Sharḥ al-Ṣūlī*, i, 70, n. 1). He was born into an illustrious Bag̲h̲dādī family; his great ancestor, "Ṣūl the Turk", had held D̲j̲urd̲j̲ān at the time of its conquest (al-Ṭabarī, iii, 1323-5). In the course of events leading to the 'Abbāsids' rise of power, his family became closely linked to the new dynasty. Muḥammad b. Ṣūl, who must have joined the *da'wa* at an early date, was

appointed governor of Mawṣil and Ādharbaydjān under the caliph Abu 'l-ʿAbbās al-Saffāḥ. Another member of the family, Abū ʿAmr Masʿada b. Saʿīd b. Ṣūl, served in the chancellery of al-Manṣūr and the Barmakids (Yāḳūt, *Irshād*, vi, 88), as did his son ʿAmr (d. 217/832) at the beginning of his career; ʿAmr was later given several high offices under al-Ma'mūn (D. Sourdel, *Le vizirat ʿabbāside*, Damascus 1959-60, i, 234-8; Shawḳī Ḍayf, *Ta'rīkh al-adab al-ʿarabī, al-ʿaṣr al-ʿabbāsī al-awwal*, Cairo 1966, 552-8). From the time of al-Ma'mūn until al-Mutawakkil there had flourished also his great-uncle, Ibrāhīm b. al-ʿAbbās b. Muḥammad al-Ṣūlī, who was one of the famous secretary-poets and a master of ornate prose and poetry in *badīʿ* style (d. 243/857; cf. Sezgin, *GAS*, ii, 578-80).

Abū Bakr al-Ṣūlī himself never held any administrative post, but mainly served as *nadīm* [*q.v.*] and tutor, positions which did not provide him with a secure rank and income, a fact reflected in his frequent requests directed to the addressee of his panegyrical poetry (e.g. *Akhbār al-Rāḍī wa'l-Muttaḳī*, 14 ll. 6-12; 23 ll. 3-5; 153 ll. 5-7). Biographical dictionaries name the famous Abū Dāwūd al-Sidjistānī, Thaʿlab and al-Mubarrad as his teachers, but the authorities most often quoted by him are ʿAwn b. Muḥammad al-Kindī, al-Ḥasan b. ʿUlayl al-ʿAnazī and Muḥammad b. Zakariyyā al-Ghalābī. At first admitted to the *madjlis* of the caliph al-Muktafī for his praised mastery of chess, as it seems (al-Masʿūdī, *Murūdj*, ed. Pellat, § 3471; quoted by Ibn Khallikān, ed. ʿAbbās, iv, 359-60), his excellence in literary matters was soon recognised, and al-Muḳtadir entrusted to him the education of two of his sons. One of them, Muḥammad, the later caliph al-Rāḍī (in succession to al-Ḳāhir, from the year 322/934), was a gifted poet and particularly attached to al-Ṣūlī. This relationship, which lasted until the caliph died (329/940), gave him a privileged position at court. With the succession of al-Muttaḳī, who did not entertain literati and court-companions, al-Ṣūlī had to find a new sphere of activity and went to Wāsiṭ, where he was generously received by Badjkam [*q.v.*], the later *Amīr al-Umarā'*, as he himself reports (*Akhbār al-Rāḍī wa'l-Muttaḳī*, 193-4). In the reign of al-Mustakfī, al-Ṣūlī tried to find admission to court again, but did not succeed, and, according to a short note of Ibn al-Nadīm (*al-Fihrist*, ed. Tadjaddud, 167) and others, was subsequently accused of ʿAlid sympathies. He then retired to Baṣra, where Abū ʿAlī al-Tanūkhī [*q.v.*] attended his reading of his *Kitāb al-Wuzarā'* in the year 335/946-7 (*al-Faradj baʿd al-shidda*, *Ḳiṣaṣ* 111, 113, 140, 276, 326, 402). Here he died in the month of Ramaḍān of the same year, again according to the testimony of al-Tanūkhī (no. 328); biographical literature, beginning with al-Marzubānī (d. 384/994), has also 336 as the year of his death (*Muʿdjam al-shuʿarā'*, ed. Krenkow, 465). It is not clear, in how far this accusation should be understood as a reflection of his Shīʿī leanings, but al-Ṣūlī has become part of the Shīʿī tradition (cf. Āghā Buzurg al-Ṭihrānī, *Ṭabaḳāt aʿlām al-shīʿa. Nawābigh al-ruwāt fī rābiʿat al-mi'āt*, Tehran 1971, 214), and it is most likely that he was on good terms with ʿAlids and their traditions, as his *Waḳʿat al-Djamal* (cf. Sezgin, i, 331) may suggest.

Al-Ṣūlī had a multitude of written sources at his disposal, since he possessed an impressive library of many volumes, well arranged and with marvellous bindings. However, a strong bias against reliance on books as a sole source of transmission prevailed at his time, and even Ibn al-Nadīm mentions that his library was considered to be a stain on his scholarly reputation (168). Al-Ṣūlī claimed, as recorded by his pupil Abū Bakr Ibn Shādhān (*Ta'rīkh Baghdād*, iii, 431), that in the course of his studies he had attended "the reading" of all the books he possessed. In spite of this attempt at self-defence, verses defining his library as the only source of his knowledge spread widely. A few other critical voices attack his reliability as author, for example Ibn Abi 'l-ʿAshshār, who disqualifies the transmission of al-Ṣūlī's materials by Abū Aḥmad al-ʿAskarī as lies, and disqualifies al-Ṣūlī's transmission from al-Ghalābī as well (Ibn Ḥadjar al-ʿAsḳalānī, *Lisān al-mīzān*, v, 428). Also, Ibn al-Nadīm accuses him of plagiarism (see below).

In any case, those of his writings mainly concerned with history and poetry won recognition among his colleages. Al-Masʿūdī refers to al-Ṣūlī's main work, the *Kitāb al-Awrāḳ*, as a collection of accounts (*akhbār*) about the ʿAbbāsid caliphs and their poetry, and about their secretaries, ministers and poets, and appreciates the originality of the information and literary quality of its contents (*op. cit.*, § 11). Al-Khaṭīb al-Baghdādī made extensive use of this source (cf. al-ʿUmarī); and traces of this and other works of al-Ṣūlī are scattered in *adab* literature, such as the works of al-Ḥuṣrī, al-Murtaḍā, and al-Tanūkhī. Al-Marzubānī, the excellent connoisseur of poetry and *adab* tradition, considered al-Ṣūlī as his master (*op. cit.*) and quoted him extensively in his *K. al-Muwashshaḥ*. Abu 'l-Faradj al-Iṣfahānī refers more than four hundred times to al-Ṣūlī for materials on poets and poetry in his *Aghānī* (cf. Fleischhammer).

Only some of his works listed by Ibn al-Nadīm (*loc. cit.*) are preserved. Traces of them may be identified from exact quotations. As mentioned above, al-Tanūkhī studied the *K. al-Wuzarā'* with the author, and Abū Saʿīd al-Samʿānī copied from his own teacher al-Djawālīḳī two large volumes of al-Ṣūlī's *Amālī*, not mentioned by Ibn al-Nadīm (*al-Ansāb*, ed. al-Barūdī, iii, 567); the *Kitāb al-Anwāʿ*, which seems to have dealt mainly with poetry and poets, is quoted by al-Baghdādī (*Khizānat al-adab*, Būlāḳ, iii, 53). Further quotations from al-Ṣūlī are gathered by I. Kratschkovsky in his *EI*[1] art. s.v.; Brockelmann S I, 218-19, and Sezgin, *GAS*, i, 330-1 (with further references). See also the footnotes to al-Dhahabī, *Ta'rīkh al-Islām*, ed. ʿUmar ʿAbd al-Salām Tadmurī, years 331-50, pp. 131-2.

The extant works give a vivid impression of his literary production. His *K. al-Awrāḳ* included under its heading (cf. Ibn Shākir al-Kutubī, *Fawāt al-wafayāt*, ed. ʿAbbās, iii, 354) a number of his books as enumerated by Ibn al-Nadīm. These depict many sides of the culture of his time dealing with the—mostly literary—aspects of courtly life and poets, and also include a few autobiographical notes. The edition of the parts entitled *Akhbār al-Rāḍī wa'l-Muttaḳī, Ashʿār awlād al-khulafā'; Akhbār al-shuʿarā' al-muḥdathīn* (ed. J. Heyworth-Dunne, London 1934-6) did not cover all the parts preserved in manuscripts. A new and completed edition has now been announced at St. Petersburg (cf. Chalidov).

His handbook for secretaries, *Adab al-kuttāb* (ed. Muḥammad Bahdjat al-Atharī, Cairo 1341), which deals with the technical requirements of the secretarial profession, namely, appropriate writing tools, the right formulae of address, some administrative expertise and orthography, also contains anecdotes and shows a strong interest in the aspects of etiquette.

His writings assign much space to the poetry of "the modern" poets (*muḥdathūn*). The study of this poetry was obviously his main literary interest, which he pursued with the collection, arrangement and edi-

tion in the form of *dīwāns*. This scholarly work is an important contribution to Arabic literature, mainly because most of the *dīwāns* he collected, as they appear in the listing of Ibn al-Nadīm, belong to poets of the 3rd/9th century or contemporary poets, e.g. Abū Shurā'a al-Ḳaysī, 'Alī b. al-Djahm, Di'bil b. 'Alī, Khālid b. Yazīd al-Kātib and al-Ṣanawbarī. Al-Ṣūlī's redactions of these *dīwāns* seem not to have survived in separate manuscripts; some are referred to in works of Arabic literature, such as those of Abu 'l-Shīṣ (cf. Sezgin, *GAS*, ii), Ibn Ṭabāṭabā and Ibn al-Rūmī (*ibid.*). Excerpts from his scholarly work are preserved in the *dīwāns* of Ibn al-Mu'tazz and, probably, of Muslim b. al-Walīd. Whereas his redaction of the poems of Abū Nuwās has survived in many manuscripts (cf. Wagner), the poetry of the above-mentioned Ibrāhīm b. al-'Abbās al-Ṣūlī is preserved only in his redaction (cf. al-Maymanī); the redaction of the *dīwān* of Abū Tammām is preserved along with his commentary (*Sharḥ Dīwān Abī Tammām*, ed. Nu'mān).

In addition to the mere transmission of poetry, al-Ṣūlī collected narratives of the events which supposedly had inspired or provoked the poets' verses, and occasionally explain and evaluate the poems themselves. In this vein, the *Akhbār Sudayf b. Maymūn* and *Akhbār al-Sayyid al-Ḥimyarī* are mentioned as parts of the *K. al-Awrāḳ* (Ibn al-Nadīm, *loc. cit.*); elsewhere we find mentioned the *Akhbār shu'arā' Miṣr* (Yāḳūt, *Irshād*, v, 454), the *Akhbār al-'Abbās b. al-Aḥnaf*, used by Abu 'l-Faradj (cf. Sezgin), and more may be found scattered in Arabic literature, as Ṣāliḥ al-Ashtar has demonstrated with the collection of the *Akhbār al-Buḥturī* (Damascus 1958). In the *Akhbār Abī Tammām* (ed. Muḥammed 'Abduh 'Azzām), al-Ṣūlī gives a detailed and elaborate defence of the latter's poetic style; moreover, he presents, in his *Risāla* to Muzāḥim b. Fātik—edited together with the *Akhbār*—a critical analysis of the position of those who rebuked the new style of Abū Tammām, along with a thoughtful comparison between the art of the Moderns and the Ancients.

The critical remarks of Ibn al-Nadīm, who accused him of plagiarism from a work of al-Marthadī (143, 168), and suspected him of having produced the poetry ascribed to Ibn Harma himself (181), cannot be corroborated. In any case, they may indicate al-Ṣūlī's strong inclination to defend the qualities of "modern" poetry.

For his contribution to the literature on chess and his role as a master player, see SHAṬRANDJ.

(S. LEDER)

SULLAM (A.), *Scala*, denoting a bilingual Coptic-Arabic vocabulary, and by extension, a ms. of a Coptic-Arabic philological miscellany.

As Arabisation progressed in Egypt, and the usage of Coptic, the latest form of Ancient Egyptian, diminished [see ḲIBṬ], local scholars put together bilingual (and even trilingual, with Greek) vocabularies, composed to respond to the need of social adaptation or the preservation of the ancient patrimony. At the outset, the lexicographical work was a prolongation of the earlier, rich local tradition, which had already mingled the Pharaonic and Hellenistic heritages. But from the 13th century A.D. onwards, within the framework of the philological movement marking the intellectual and literary Coptic renaissance, one aspect of which was the birth of Coptic grammar of Arabic inspiration [see MUḲADDIMA], new directions appeared.

The oldest and most represented genre in this lexicography is that called "onomasiological" (sc. the classification of words by subjects or themes). Editions by Munier and Kircher, unfortunately defective and incomplete, based on single mss., have brought to light the most developed of these vocabularies: the anonymous and composite Greco-Copto-Arabic one called "Book of degrees" (βιβλίον τῶν βαθμῶν, *K. Daradj al-sullam*) and the "Scala magna" (*al-Sullam al-kabīr*), a Copto-Arabic work by the encyclopaedist Abu 'l-Barakāt Ibn Kabar (d. 1324 [*q.v.*]). But many others exist (incl. Greco-Arabic lexica), still unpublished, which served either directly or indirectly as models for later compilations, whose archetypes may go back to the pre-Islamic period, in the form of monolingual "onomastica", Greek or Coptic, or also bilingual, Greco-Coptic.

Apart from a less numerous type of vocabulary, of the glossary type, analysing Biblical and Christian liturgical texts, and another dealing with homonyms (*kalām mushtabih*), not to speak of those of a hybrid character, there exist rhymed (*muḳaffā*) alphabetically-arranged lexica on the Arabic pattern. These are owed to two other polymaths of the 7th/13th century: Abū Shākir Ibn al-Rāhib and al-Mu'taman Ibn al-'Assāl [*q.vv.*]. The first has not survived, but its existence and its method of arrangement are known to us thanks to the prologue preserved with the grammar which served as an introduction (*muḳaddima*) to it, whilst the second was edited by Kircher, in the same poor conditions as those mentioned above.

Independent of their intrinsic value in regard to Coptic lexicography, these mediaeval vocabularies proved very useful to European scholars of the last century for discovering and getting to know the ancient language of the hieroglyphs; but they also contain precious information on the lexicon of the Greek *koiné* and the mediaeval Arabic used in the Nile Valley.

(A. Sidarus)

SULṬĀN (a.), a word which is originally an abstract noun meaning "power, authority", but which by the 4th/10th century often passes to the meaning "holder of power, authority". It could then be used for provincial and even quite petty rulers who had assumed *de facto* power alongside the caliph, but in the 5th/11th century was especially used by the dominant power in the central lands of the former caliphate, the Great Saldjūḳs [see saldjūḳids. II, III.1], who initially overshadowed the ʿAbbāsids of Baghdād. In the Perso-Turkish and Indo-Muslim worlds especially, the feminine form *sulṭāna* evolves to denote a woman holder of power. A denominative verb *tasalṭana* was formed, with the somewhat contemptuous diminutive *mutasalṭin* for a petty prince, whilst in Spanish Muslim sources, *sulaṭān* was used to designate Alfonso VII of Castile after he had come to the throne as a child only (Dozy, *Supplément*, i, 674).

1. In early Islamic usage and in the central lands of Islam.

The native Arabic verb *salaṭa* "to be hard, strong" (cf. Akkad. *šalāṭu* "to have power") often occurs in ancient poetry, but not in the Ḳur'ān. *Sulṭān*, on the other hand, occurs frequently in the Ḳur'ān, with the denominative verb *sallaṭa fulān^an ʿalā fulān^in* "to empower s.o. over s.o." appearing in IV, 92/90, and LIX, 6. *Sulṭān* has there most often the meaning of a moral or magical authority supported by proofs or miracles which afford the right to make a statement of religious import. The prophets received this *sulṭān* from God (cf. e.g. sūra XIV, 12, 13) and the idolators are often invited to produce a *sulṭān* in support of their beliefs. Thus the dictionaries (like *TʿA*[1], v, 159) explain the word as synonymous with *ḥudjdja* and *burhān*. There are also six passages in the Ḳur'ān where *sulṭān* has the meaning of "power", but it is always the spiritual power which Iblīs exercises over men (XIV, 26; XV, 42; XVI, 101, 102; XVII, 67; XXXIV, 20). Now it is this meaning of power, or rather of governmental power, which is attached to the word *sulṭān* in the early centuries of Islam. The word and its meaning were undoubtedly borrowed from the Syriac *shulṭānā*, which has the meaning of power, and, although rarely, also that of the wielder of power (Payne-Smith, *Thesaurus Syriacus*, col. 4179; Nöldeke, *Beiträge zur semitischen Sprachwissenschaft*, Strassburg 1910, 39; A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 176-7). The Ḳur'ānic sense of the word may probably also be derived from the meaning of power (some lexicographers try to explain it as the plural of *salīṭ*, "olive oil"). Later, an attempt was made to connect the title *sulṭān* with the meaning of "argument", and it was paraphrased as *dhu 'l-ḥudjdja* (*TʿA*, *loc. cit.*).

In the literature of Ḥadīth, *sulṭān* has exclusively the sense of power, usually governmental power (the *sulṭān* is the *walī* for him who has no other *walī*, al-Tirmidhī, i, 204) but the word also means sometimes the power of God. The best-known tradition, however, is that which begins with the words *al-sulṭān ẓill Allāh fi 'l-arḍ* "governmental power is the shadow of God upon earth" (cf. Goldziher, *Muhammedanische Studien*, ii, 61, Eng. tr. ii, 67, and idem, *Du sens propre des expressions Ombre de Dieu, Khalife de Dieu, pour désigner les chefs dans l'Islam*, in *RHR*, xxxv [1897], 331-8). Al-ʿUtbī quotes this tradition at the beginning of the *Kitāb al-Yamīnī*, and his commentator al-Manīnī says that it was transmitted by al-Tirmidhī and others as going back to Ibn ʿUmar (*al-Fatḥ al-wahbī*, *Sharḥ al-Yamīnī*, Cairo 1286, i, 21). This tradition later played a part in the theories of the Sultanate because an allusion to the title was wrongly seen in it. Apart from Ḥadīth, Arabic literature to the end of the 4th/10th century only knows the word *sulṭān* in the sense of governmental power (among the many examples, cf., e.g. al-Yaʿḳūbī, *Kitāb al-Buldān*, 346, 349; Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. Torrey, 183, where it is said that in ancient times the residence of the *sulṭān* of Ifrīḳiya was Carthage, and Ibn Ḥawḳal, ed. de Goeje, 143, where al-Mawṣil is called the residence of the *sulṭān* and of the *dīwān* of al-Djazīra) or of the person who at a particular time is the personification of the impersonal governmental power, as opposed to *amīr*, which is rather in the nature of a title. This last meaning, which is sometimes more completely rendered by *Dhu 'l-Sulṭān* (e.g. in Ḥadīth), and is totally different from the first, is found as early as the Egyptian papyri of the first century (for the governor of Egypt, cf. Becker, *Beiträge zur Geschichte Aegyptens*, 90, n. 6) and in the following centuries sometimes also for the caliphs (the caliph al-Manṣūr is called Sulṭān Allāh in a *khuṭba*, al-Ṭabarī, iii, 426; the caliph al-Muwaffaḳ is called *Sulṭān*, *ibid.*, iii, 1894; and again in 997 the caliph al-Ḳādir, al-ʿUtbī, *op. cit.*, 265). This practice of designating a person by the word which indicates his dignity has parallels in all languages (see e.g. for Turkish official language, H. Ritter, in *Islamica*, ii [1927], 475); it even appears that the Assyrian form *silṭān* was applied to foreign sovereigns (according to Ravaisse in *ZDMG*, lxiii [1909], 330). The meaning of "power, government", has been maintained in Arabic literature to the present day.

The transition in meaning from an impersonal representative of political power to a personal title is a development the stages of which are difficult to follow. Authorities writing later than this development make statements which can only be accepted with reserve. Thus Ibn Khaldūn (*Muḳaddima*, ed. Quatremère, ii, 8, tr. Rosenthal, ii, 8-9) says that the Barmakī Djaʿfar was called *sulṭān* because he held the most powerful position in the state and that, later, the great usurpers of the power of the caliph obtained *laḳabs* like *amīr al-umarā'* and *sulṭān*. The same thing is recorded of the Būyids (A. Müller, *Der Islam in Morgen- und Abendland*, i, 568) and of the Ghaznawids. Ibn al-Athīr (ix, 92) says that Maḥmūd of Ghazna obtained the title of *sulṭān* from the caliph al-Ḳādir. This statement is not confirmed by al-ʿUtbī, who, in giving the various *alḳāb* conferred on Maḥmūd by the caliph (*op. cit.*, i, 317), makes no mention of this title. It is, however, true that al-ʿUtbī himself always calls Maḥmūd *al-Sulṭān*, giving in explanation the fact that Maḥmūd had become an independent sovereign (*op. cit.*, 311); but to al-ʿUtbī *sulṭān* cannot yet have been an official title, since he gives the same epithet to the caliph (see above). The first Ghaznawid on whose coins the title appears is Ibrāhīm b. Masʿūd (451-92/1059-99),

apparently stimulated by the extensive use of the title by the Great Saldjūḳs to the Ghaznawids' west (see C.E. Bosworth, *The titulature of the early Ghaznavids*, in *Oriens*, xv [1962], 222-4). We find the Fāṭimids using the epithet Sulṭān al-Islām (Ibn Yūnus, Leiden ms.) and in the same period we find the *laḳab* of Sulṭān al-Dawla among the Būyids of Fārs (Sulṭān al-Dawla, Abū Shudjāʿ, 403-15/1012-24 [*q.v.*]). The same *laḳab* was borne by the last Būyid al-Malik al-Raḥīm at Baghdād at the time when the usurping Saldjūḳ Ṭoghrïl Beg received from the caliph in 443/1051 the *laḳab* of al-Sulṭān Rukn al-Dawla (al-Rāwandī, *Rāḥat al-ṣudūr*, ed. M. Iqbál, 105; cf. also Ibn Taghribirdī, *al-Nudjūm al-zāhira*, ed. Popper, 233).

Ṭoghrïl Beg was also the first Muslim ruler whose coins bear the epithet or rather title *Sulṭān*, and that in the combination *al-Sulṭān al-Muʿaẓẓam* (S. Lane-Poole, *Cat. of oriental coins in the Brit. Mus.*, iii, 28-9). This fact makes it very probable that the Saldjūḳs were the first for whom *Sulṭān* had become a regular title for a ruler; the qualification by *al-Muʿaẓẓam* was necessary to lift the word definitely out of its use as a more or less impersonal common noun. This development would at the same time explain why the word *Sulṭān* immediately became the highest title that a Muslim prince could obtain, while in the centuries preceding, any representative of authority could be so designated. The adjective *al-Muʿaẓẓam*, essential for the title, was soon omitted in unofficial language. Thus with the Saldjūḳs, *Sulṭān* became a regular sovereign title. Neither the provincial lines of the Saldjūḳs (among whom, however, we find the proper name Sulṭān-shāh) nor the Atabegs after them bore the title *sulṭān*; they were content with titles like *malik* and *shāh*. It was only after the end of the Great Saldjūḳs in the middle of the 6th/12th century that the Khʷārazm-shāhs assumed it. The caliph al-Nāṣir was, however, able to take advantage of the weakness of Djalāl al-Dīn Khʷārazmshāh by refusing to recognise his claim to this title (al-Nasawī, *Vie de Djelal-eddin Mankobirti*, ed. Houdas, 247). Soon the Saldjūḳs of Rūm also called themselves *Sulṭān* (on coins from Ḳïlïdj Arslan II, *r.* 551-88/1156-92, onwards). Almost at the same time the title is applied in literature to the early Ayyūbid Ṣalāḥ al-Dīn (Ibn Djubayr, *Riḥla*, ed. Wright and de Goeje, 40), although *Sulṭān* never appears on the coins of the Ayyūbids, whose official titles were all combined with *al-Malik*. By the literature of the 7th/13th century, *Sulṭān* had become a title indicating the most absolute political independence. Ibn al-Athīr (xi, 169) speaks of Baghdād and its environs as the territory where the caliph reigned without a *sulṭān*. It is not certain if in the last period of the ʿAbbāsids in Baghdād, the caliph was already regarded as the only authority who could confer the title *sulṭān*. We see, however, that after the fall of the caliphate an increasing number of Muslim potentates arrogated the title to themselves. In official use, the title was very often followed by an adjective like *al-Aʿẓam*, *al-ʿĀdil* etc. (a complete list is given in O. Codrington, *A manual of Musalman numismatics*, London 1904, 81-2). During the 7th-9th/13th-15th centuries, the Mamlūk *sulṭāns* of Egypt added the greatest lustre to the title of *Sulṭān*; after them came the Ottoman *sulṭāns*.

Sultans, having thus become potentates whose absolute independence was generally recognised, jurists and historians set themselves to construct theories to find a justification in law for the existence of such potentates, for whom there had been no place in the old conception of the Muslim caliphate [see KHALĪFA]. We find these theories as early as al-Māwardī (who wrote in the time of the later Būyids), for whom *sulṭān* had not yet any other meaning than governmental power, as is evident from the title of his book *al-Aḥkām al-sulṭāniyya*. This same author says (ed. Enger, Bonn 1853, 30-1) that the caliph may remain in office even if he is dominated by one of his subordinates, provided that the latter's actions are in conformity with the principles of religion. Al-ʿUtbī, who quotes the tradition that the sultan is the shadow of Allāh on earth (see above), does so very probably to justify the independent position of Maḥmūd of Ghazna, to whom he always gives the epithet *al-Sulṭān*; but this allusion to the well-known tradition is perhaps rather a play upon words than the theory of a jurist. To al-Ghazālī, the "Sultans of his age", of whom he has a very low opinion (Goldziher, *Streitschrift des Gazālī gegen die Bāṭinijja-Sekte*, Leiden 1916, 93), are in general the representatives of temporal power. It is only under the Mamlūk sultans of Egypt that a definite theory is laid down by Khalīl al-Ẓāhirī (*Zubdat kashf al-mamālik*, ed. Ravaisse, 89-90), who says that it is only the caliph who has the right to grant the title of *sulṭān* and that, in consequence, this title only belongs in reality to the sultan of Egypt. The Mamlūks called themselves in their inscriptions *Sulṭān al-Islām wa 'l-Muslimīn* (M. van Berchem, *Inschriften aus Syrien, Mesopotamien und Kleinasien*, Leipzig 1909). About the same time, Ibn ʿArabshāh in the biography of Sultan Djaḳmaḳ (*JRAS* [1907], 295 ff.) calls the sultan the *Khalīfa* of Allāh on earth in affairs of government, while the *ʿulamāʾ* are the heirs of the Prophet in matters of religion; this statement contains, like that of al-ʿUtbī, an apt allusion to the tradition (in another form). Lastly, al-Suyūṭī (*Ḥusn al-muḥāḍara*, ii, 91 ff.) gives a definition of the titles of *sulṭān* (he in whose possessions there are *maliks*) of *al-Sulṭān al-Aʿẓam* and of *Sulṭān al-Salāṭīn*, which is the highest title. In the time of the Mamlūks there were actually quite a number of Muslim potentates who called themselves *Sulṭān*; some of these, in keeping with al-Ẓāhirī's theory, had even asked the permission of the fainéant ʿAbbāsid caliph in Cairo to bear the title.

From the beginning of the use of the title, we may say that all the great rulers who bore it were Sunnīs. It is therefore not a mere coincidence that this development went parallel with the religious revival in Islam in the period of the Crusades; the great sultans became at the same time the defenders of Sunnī Islam, and the originally pagan Mongol rulers, after having in general embraced this form of Islam, assumed this very title. This Sunnī significance of the title is specially noticeable in the Ottoman sultanate. It appears that some coins of Orkhān [*q.v.*] already bear the title *sulṭān* (S. Lane-Poole, *Cat. or. coins*, viii, 41), although the first Ottoman princes were generally regarded as *amīrs* (Ibn Baṭṭūṭa, ii, 321). Bāyezīd I is said to have been the first to obtain from the caliph in Cairo the right to call himself *Sulṭān* (von Hammer, *GOR*, i, 235). After the taking of Constantinople, Meḥemmed II [*q.v.*] assumed the title of *Sulṭān al-barrayn wa 'l-baḥrayn* (*GOR*, i, 88), but even in the Ottoman empire itself as the title of the sovereign it was never as popular as those of *Khunkār* and *Pādishāh*. In the official protocol, on the other hand, it occupies an important place, e.g. in the formula *al-Sulṭān ibn al-Sulṭān*, etc., before the names of the rulers. After the extinction of the Mamlūk sultanate by the conquest of Selīm I, Ottoman rulers had become indisputably the greatest sultans in Islam. The Ṣafawids of Persia were called *Shāh* and the opposition *Sulṭān-Shāh* henceforth corresponded to that between Sunnīs

and Shīʿīs. It is true that officially the Ṣafawids also called themselves *Sulṭān*, e.g. on their coins (R.S. Poole, *Catalogue of the coins of the Shahs of Persia in the British Museum*, London 1887, index, 313, s.v. *Sulṭān*), but they were only known by the title of *Shāh*. In general under the Ṣafawids, *sulṭān* was a title of deputy governors in the provinces (see K.M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966).

In Ottoman Turkey, *Sulṭān* was always an elevated title. In addition to rulers, it was borne by princes, and one of the causes why the Grand Vizier and favourite of Süleymān I, Ibrāhīm Pasha [*q.v.*], was disgraced is said to have been that he had taken the title of *Serʿasker Sulṭān* (*GOR*, iii, 160). In the time of ʿAbd al-Ḥamīd II, the petty chiefs who were appointed *sulṭān* in their own country (e.g. in Ḥaḍramawt) were not allowed to use the title when they visited Istanbul. In Turkish, the title *sulṭān* was always placed before the name of the sovereign or of the prince, showing its foreign origin. The really popular use of the word in Turkish is with the meaning of princess (see e.g. the story *Söleyme Sulṭān*, in G. Jacob, *Hilfsbuch*, ii, 59, and the use of the word in erotic poetry). It is by this usage that the practice of placing *sulṭān* after the word when it means princess is to be explained, as in Wālide Sulṭān, Khāṣṣeki Sulṭān (cf. also ʿĀlī, *Künh al-akhbār*, v, 16). For the same reason. Sulṭān is added after the name when it is applied to a mystic (see 4. below).

In Persia, on the other hand, as noted above, *sulṭān* was used as a title for officers and governors (ʿĀlī, *loc. cit.*, in *ZDMG*, lxxx [1926], 30). Ewliyā Čelebi speaks of the sulṭāns of Persia as minor governors (*Siyāḥat-nāme*, ii, 299-305). The only case in which the sovereign has been given the title *Sulṭān* is that of the last Ḳādjār Aḥmad Shāh, who received it on his accession in 1327/1909 after the Constitutional Revolution.

In Egypt, the title had disappeared with the last Mamlūks, but was revived for the short period (1914-1922) of the reign of *Sulṭān* Ḥusayn Kāmil and the beginning of the reign of Fuʾād [see KHIDĪW].

The number of dynasties whose rulers have borne or bear the title *Sulṭān* is very great. Only in North Africa did it appear relatively late; in Morocco the dynasty of the Filālī Shurafāʾ or Shorfāʾ [*q.v.*] (since the second half of the 12th/18th century) was the first to assume the title *Sulṭān*.

2. In South-East Asia.

Muslim rulers in the South-East Asian archipelago did not automatically adopt the title of a sultan after their conversion to the Prophet's religion. They usually maintained the title of a *raja*, or *maharaja*, or similar titles rooted in their respective cultural and tribal tradition. In Malaysia, the traditional Malay title *Yang di-Pertuan* (he who is made Lord) is still used officially.

Together with the titles, pre-Islamic religious and mystical conceptions legitimated by mythology were continued. The true king can only fulfill his task, i.e. to safeguard prosperity and harmony in the cosmos he rules, after he has reached a kind of mystical union with the Divine power which works through him and expresses itself as his *śakti* (magical power, in Islamic times also called *keramat*). Thus the king appears as the *dewa raja*, the representative of the Divine. Dynasties which had adopted Hinduism, or even Buddhism, legitimated their rule by linking their genealogical lineages with the heroes of the Indian mythical past. Since the ruler is the manifest representative of Divinity, and thus also of Divine Law, he on his own authority may issue the laws of the country and adjust them to changing circumstances. On the part of his people, absolute obedience is demanded. He should not be adored like a god, but certain rituals to strengthen his *śakti*, and that of his *regalia* were usual and frequent.

The religious and dynastic traditions out of which the Malayan sultanates developed, were rooted in Srīvijaya, the Mahayana Buddhist maritime empire which declined in the 7th-8th/13th-14th centuries. These traditions were supported by those Muslims who participated in the establishment of the first Islamic principalities. They originated from Persia or Northern India and the Dakan (Deccan), had a Ṣūfī background and were influenced by the dynastic ideologies which had developed in the eastern parts of the Islamic world since the 4th/10th century, and which reactualised old Iranian conceptions in a cultural setting in which the influence of Mahayana Buddhism still was present. The famous *ḥadīth* that the sultan is the *ẓill Allāh fi 'l-ʿālam* "God's shadow on earth," fitted well with this understanding, and again bestowed absolute power to the ruler, to which his people had to respond with absolute obedience and loyalty; this made them a *bangsa* (nation), indissolubly linked to their ruler.

With regard to the first Islamic dynasty in the archipelago, that of Samudra (later Pasai [see PASÈ]) in northern Sumatra, which had turned from Shīʿism to Sunnism in 683/1285, the official chronicle (*Ḥikāyat Raja-raja Pasai*) narrates that its first ruler, al-Malik al-Ṣāliḥ (d. 696/1297), was converted to Islam in a dream in which the Prophet himself magically transferred the basic knowledge of Islam to him and presented him with the title of *sulṭān*. Shortly after that dream, a messenger "from the caliph of Mecca" arrived and installed him indeed as a sultan, while a mystical preacher from India, who came with the same vessel, is said to have taught Islam to the people.

This story gives importance to the fact that the title of *sulṭān* should be bestowed by "the caliph". There seems to have been, however, only scanty knowledge about that person. When an embassy of the rulers of Aceh [see ATJÈH], who at that time were still consolidating their position among the Malayan sultans, visited Istanbul *ca.* 1562, it asked for military equipment but not for the title of *sulṭān* for their king (Lombard, 1967, 37). Sultan Agung of Mataram in Java (see below), however, prided himself on the fact that he had obtained this title in 1641, again through a direct delegation from Mecca, despatched by the *ʿulamāʾ*, and from the "Meccan caliph" (Ricklefs, 1974, 17).

The founder of the once most influential sultanate of Malacca [*q.v.*], Paramēśvara, a refugee from the Śailendra court in Palembang [*q.v.*], had maintained the Buddhist court etiquette of Srīvijaya, even after his conversion to Islam (*ca.* 816/1413) on his marriage with a daughter of the sultan of Pasai. Thus during the years of his rule and that of his sons, the centre of the court was again shaped according to the Hindu and Buddhist symbol of the windrose, thus representing the order of the cosmos in which the sultan takes the centre, his main aids and highest dignitaries (after himself) being the *bendahara* or Chief Minister; the *penghulu bendahari*, responsible for maintaining the sacred traditions; the *temenggung*, responsible for security; and the *laksamana*, as the supervisor of the fleet. Below these "Big Four" was the next level of eight dignitaries, followed by others accordingly (Winstedt, 1961, 63 ff.; Hashim, 1990, 147 ff.). This structure was later taken over by most of the succeeding Malay sultanates, and in most of them it exists until the present, although more or less significant adjustments may have taken place in the course of time.

Since the emperor of the Ming dynasty of China had acknowledged his authority already in 1405, Paramēśvara and his sons continued to use the Śailendra title of *Śri Maharaja*. In the *Sejarah Melayu*, the court chronicle of the Malaccan sultans and their descendents in Johore, the necessary genealogical legitimation of this dynasty was established by linking them to Alexander the Great, or Iskandar D̲h̲u 'l-Ḳarnayn, who is said to have journeyed to Andelas (an old name of Sumatra, not al-Andalus!), established there the Śailendra dynasty and is thus the ancestor of the Malaccan dynasty. Logically, Paramēśvara had already used, after his conversion, the name of Iskandar S̲h̲āh. But only his third, or fourth successor, Raja Kasim (Ḳāsim) or Sultan Muẓaffar S̲h̲āh (850-63/1446-59), whose mother was the daughter of a Tamil merchant, established Islam firmly as the religion of his dynasty and upgraded the use of the title of *sulṭān*. A policy of intermarriage with the major principalities in the archipelago introduced this title more firmly as a notion of a Muslim ruler; usually it is combined with an Arabic name, preferably with a theophoric meaning, such as e.g. Sultan ʿAbd al-Raḥmān.

On the Malayan peninsula, nine Islamic kingdoms have survived until the present, two of them not using the title *sulṭān* for their rulers: Perlis (Raja) and Negeri Sembilan (Yang di-Pertuan Besar). In contrast to Indonesia with its centralised republic, the existence of these Islamic kingdoms demanded the formation of a federal Malayan state after independence from the British was achieved. Malay "nationalism", *kebangsaan*, still could not separate itself from the basic loyalty of each Malay *bangsa* towards its ruler (cf. Omar, 1993, *passim*). Thus the Constitution of the Federation of Malaysia (1963) provided that, on one hand, the authority of the rulers in all matters related to religion (Islam) should remain untouched; they remain the Heads of the Islamic religion in their states (art. 3.2). Also in the Federation, Islam was proclaimed to be the official religion, although freedom of religion is guaranteed to all non-Muslims. For all Muslims in the Federation who do not live in a sultanate or Islamic kingdom, i.e. who live either in Penang, Malacca, Sabah, Sarawak or one of the Federal Territories, the Head of State (of the Federation), or Yang di-Pertuan Agong, elected by the nine rulers—who constitute the "Conference of Rulers"—from among themselves for a period of five years, acts as their religious-legal head and protector (art. 3.3). The position as head of the religion (Islam) gives much influence on the practice and interpretation of Islamic law to the rulers, sometimes resulting in conflict with other legal or constitutional institutions and their representatives. On the other hand, as natural members of the "Conference of Rulers", which is a particular chamber provided by the Constitution (art. 38) whose membership is limited to them, the rulers may exercise some influence also on federal politics. One of their major privileges, a natural legal immunity with regard to the federal law, has, however, been abolished recently (1993) on the initiative of the Prime Minister, Mahathir bin Mohamad. But perfect loyalty (*kesetiaan*) to the Ruler (*Raja*) and the state is still the second of the Five Basic Principles (*Rukunegara*) of the Federation.

While the sultanates in North Sumatra, Malaya, North Borneo and up to the Southern Philippines were dynastically and ideologically linked to Malacca and its tradition, those in South Sumatra, South and East Borneo, Sulawesi, Eastern Indonesia and Java came under the influence of the Central Javanese Islamic kingdoms, starting with Demak (1474-1546) and climaxing with Mataram (since 1582).

The West Javanese *Ḥikāyat Ḥasanuddin* reports that the third ruler of Demak, Terengganu (*r.* [1505-18 ? and] 1521-46), had been offered the title of *sulṭān* by Sèh Nurullah (S̲h̲ayk̲h̲ Nūr Allāh, also known as Mawlānā Mak̲h̲dūm, Sunan Gunung Jati etc.) in 1524; the *s̲h̲ayk̲h̲*, originating from Pasai, was said to have completed his *ḥad̲j̲d̲j̲* before he came to Java and thus seems to have been entitled to bestow such a title (cf. H.J. de Graaf and Th.G.Th. Pigeaud, 1974, 50-1). The most eminent ruler of Mataram, Agung (*r.* 1613-1646), after having his dynasty legitimised according to the criteria of the last Hindu empire of Majapahit, and thus as its successor, obtained the title of *sulṭān* by a special delegation dispatched by the Meccan *ʿulamāʾ*, in 1641. But only after the division of Mataram in 1755 into the two main principalities Surakarta and Yogyakarta [*q.vv.*] did the ruler of the latter one resort to it again and, moreover, add the titles of *kalipatulah (k̲h̲alīfat Allāh), panatagama* (regulator of religion), and *sayidin*, thus even claiming descent from the Prophet. All of his successors until the present one, who is the tenth one (in office since 1986), have born the title Sultan Ngabdurrahman Hamengku Buwono ("holding the universe in his lap"). Again, the position of the sultan, being the representative of the Prophet who is the representative of God, is understood according to Ṣūfī traditions. The sultan has obtained the highest mystical insight into God and His Will, not only externally according to the written *s̲h̲arīʿa* but internally. To underline the religious and social importance of his person, he is usually the *ḳibla* of his courtiers, particularly in times of leisure or meditation.

While all other sultanates in Indonesia lost their political power either in the colonial period or in the years immediately after independence (1945), the sultanate of Yogyakarta still exists to some degree as an independent administrative entity or *daerah istimewa* ("special district") in the Republic of Indonesia, the sultan taking a similar position to that of a governor in other provinces. This exceptional position is due to the late Sultan Hamengku Buwono IX's active support given to the "Republican government" under Soekarno during the times of military confrontation with the Dutch colonial administration (1946-9). For many Javanese, the Sultan thus gave proof of being a kind of *ratu adil* (just king), with the *kesaktian* (cf.

śakti) of his rule still being active, and so he strengthened his personal and particularly his religious/spiritual authority.

The only sultanate in South-East Asia which still has maintained its independence is that of Brunei [*q.v.* in Suppl.].

3. In West Africa.

The least one can say is that, in West Africa, as in other parts of the Muslim world, the term is very rich and varied in meaning. In Moorish tribal society in general, the dominant personality is called, in Ḥassāniyya Arabic, *Sulṭān* or *Shaykh* in an interchangeable manner, with the term thus expressing the idea of power.

In one of his writings called *Nadjm al-ikhwān* ("The star of the brethren"), the great fighter for the faith Usuman Dan Fodio [see ʿUTHMĀN B. FŪDĪ], gave validity to the idea that the terms *khilāfa*, *imāma*, *imāra* and *salṭana*, and consequently the titles *khalīfa*, *imām*, *amīr* and *sulṭān*, are all authorised in the *Sharīʿa*. What the founder of the most powerful politico-economic system in the Central Sūdān during the 19th century wished thereby to say, was, according to his interpreters, that it was not so much that there were no nuances in the fields of the exercise of power by those who claimed one or other of these titles, but rather that, whatever might be the title adopted by a person who claimed to rule in the name of Islam, he had to disassociate himself from the anti-Islamic tradition of royal power (*mulk*), which had no foundation of religious legitimacy.

Nevertheless—and in this they resembled the greater part of their contemporaries—those who in practice directed the Sokoto [*q.v.*] caliphate until the colonial conquest, most often styled themselves *amīr al-muʾmimīn* "commander of the faithful", in Hausa, *Sarkin Musulmi*. When *sulṭān* was used to designate them, it was usually in combination with other honorific titles, notably that of *amīr al-muʾmimīn*.

After the colonial conquest, the British, who retained pre-colonial political structures as part of the policy of "Indirect Rule" and within the context of the political system of Sokoto, designated its head as Sultan, a title which continues to be used substantially today in order to refer to the person who is considered as the supreme Muslim religious authority in contemporary Nigeria.

A certain number of the heads of Islamicised political structures in West Africa also claimed this title of Sultan. Thus the Aïr had a Sultan based in Agadès, as also in Damagaram (or the sultanate of Zinder), based in Zinder. Al-Hajj Umar Said Tall (1774-1864), the founder of an ephemeral empire in the Western Sūdān on the eve of the colonial conquest, is styled *sulṭān* of the Tidjānī state by his biographer Muḥammad al-Tidjānī and his son and successor Ahmadu likewise claimed the title of *sulṭān*. But according to F. Dumont, the title of *sulṭān* attributed to al-Ḥādjdj ʿUmar by Muḥammad al-Ḥāfiẓ was more a feature of style, since there emerges clearly from al-Tidjānī's work that al-Ḥādjdj ʿUmar was in no way swayed by the idea of temporal power but sought to combat it and render it subordinate to the faith. One should mention a polemical point raised by contemporary writers on the state created by Usman dan Fodio. The authors who consider him as endowed with Islamic legitimacy call this last a caliphate and consider those who directed it as above all *amīr al-muʾminīn*, reserving the term *sulṭān* for political systems which were fairly strong and based on absolute rule such as Kebbi, Gobir and Zamfara (Last, 1967), whilst others who classify it as a state just like all the others call it an empire and its heads *sulṭāns* (Johnson, 1967).

4. In mysticism.

This use of the word is not earlier than the 7th/13th century, and it spread particularly in Asia Minor and the countries influenced by Ottoman civilisation. The beginning of the development of the use of the word may have been titles like *Sulṭān al-ʿāshikīn* given to the mystical poet Ibn al-Fāriḍ [*q.v.*] and *Sulṭān al-ʿulamāʾ* borne by Bahāʾ al-Dīn Walad, father of Djalāl al-Dīn Rūmī [*q.v.*]. But this mystical epithet was no doubt also influenced in its development by the conception frequently expressed in mystical poetry that the mystic obtains the rank and power of a sovereign in the spiritual world. It is through the same order of ideas that the title of Khunkār (cf. the name of the Ottoman province *Khudāwendigār*) may be explained. Ewliyā Čelebi (*Siyāḥat-nāme*, iii, 367-8), in bracketing the names of Sultans Meḥemmed II and Bāyezīd II with the names of two mystics, says that all were great *sulṭāns*.

This was the origin of names like Dede Sulṭān and Baba Sulṭān. The Shaykh Badr al-Dīn b. Ḳāḍī Samāwnā [*q.v.*], leader of the religious revolutionary movement in Asia Minor in the early 9th/15th century, was also called *Sulṭān* by his adepts; Babinger (in *Isl.*, xi, 74) sees in this an indication that he was considered a real sovereign. It appears that the surname of *Sulṭān* was especially borne by the Bektāshīs. It did not, however, indicate a particularly high rank in the order; thus Babinger (*loc. cit.*) was probably right, in any case for the latter period, in regarding it as simply a hypercoristic or term of affection.

Bibliography: See that for TAṢAWWUF.

(J.H. KRAMERS)

SULṬĀN AL-DAWLA b. Bahā' al-Dawla Fīrūz, Abū Shudjā', Būyid ruler in Fars, and at first in 'Irāḳ also, 403-15/1012-24, succeeding his father [see BAHĀ' AL-DAWLA, in Suppl.] at Shīrāz.

Much of his reign was spent in conflict with his brothers, including Abu 'l-Fawāris Ḳawām al-Dawla, who eventually became ruler in Kirmān as Sulṭān al-Dawla's subordinate, and Abū 'Alī Ḥasan, with whom he disputed control of 'Irāḳ. By 412/1021 the latter was able to secure recognition as ruler in 'Irāḳ with the honorific of Musharrif al-Dawla (he had already declared himself *Shāhānshāh* "king of kings"), and in 413/1022 there was a formal division of territories, with Musharrif al-Dawla reigning over 'Irāḳ and Khūzistān and Sulṭān al-Dawla over Fārs and Kirmān.

Sulṭān al-Dawla died at Shīrāz in Shawwāl 415/ December 1024 at the age of 32, six months before Musharrif al-Dawla's own death, and he was succeeded in Fārs by his son and heir Abū Kālīdjār Marzubān [*q.v.*].

Bibliography: The main primary sources are Ibn al-Djawzī and Ibn al-Athīr. These are utilised in Mafizullah Kabir, *The Buwayhid dynasty of Baghdad (334/946-447/1055)*, Calcutta 1964, 92-8; H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Beirut-Wiesbaden 1969, 91-8, 171.

(C.E. BOSWORTH)

SULṬĀN ḤUSAYN, SHĀH, Ṣafawid ruler, reigned 1105-35/1694-1722, the eldest son and successor of Shāh Sulaymān [*q.v.*], born in 1080/1669-70 to a Circassian mother, and died in 1139/1726. He was crowned Shāh on 7 August 1694, nine days after his father's death after divisions of opinion at court over the succession.

Shāh Sulṭān Ḥusayn resembled his father in having grown up in the confines of the harem and in coming to power with limited life experience and virtually no training in the affairs of state. Exceedingly devout, he immediately fell under the spell of the religious forces, led by the zealous Shaykh al-Islām of Iṣfahān, Muḥammad Bāḳir Madjlisī, seen in the proclamation, directly following the accession, of a series of decrees that proscribed the production and consumption of wine, and popular practices such as gambling and pigeon flying, but as was customary, these bans soon fell into desuetude, and before long the Shāh was given to drinking as much as his predecessors.

Sulṭān Ḥusayn came to power at a time when Persia's long-standing outward stability was breaking down, with rebellions in Georgia and Kurdistan, and Omani and Balūčī incursions.

The Shāh made some efforts to counter these problems: he strengthened the eastern border, sent an army to quell the revolt in Georgia and made an (abortive) attempt to respond to Omani aggression, but subsequent historians without exception have criticised him for being a *fainéant* and a weakling, while some have blamed him personally for the demise of the Ṣafawid state.

It is certainly true that he was even more removed from statecraft than his father had been. Withdrawn and disconnected, he spent most of his time amid his immense numbers of eunuchs and women, and in this climate factionalism and peculation were allowed to thrive as never before. Corruption became so widespread that local officials became accomplices in highway robberies. Taxes went up and became particularly onerous for the Armenians and Indians, two groups with a disproportionally large role in the economy. The Shāh, meanwhile, built pleasure gardens and palaces, the money for which was extorted from merchants and court officials, and expended riches on the restoration of the *'atabāt* [*q.v.* in Suppl.], the Shī'ī shrines in 'Irāḳ, as well as on costly pilgrimages to Ḳum and Mashhad.

After 1710 the signs of distress rapidly multiplied, with bread riots in urban areas. Revolts broke out in various border regions with alienated Sunnī populations. The greatest pressure came from the east, where the Afghān Ghilzay tribe, led by Mīr Ways, extended control over Ḳandahār, while their Abdālī rivals expanded into Khurāsān, taking Harāt in 1717. In 1721 Maḥmūd Ghilzay, Mīr Ways's son, invaded Persia, reached Iṣfahān virtually unopposed and defeated a hastily-assembled Ṣafawid army at the battle of Gulnābād, subsequently besieging the city. Sulṭān Ḥusayn's third son, Ṭahmāsb Mīrzā, managed to escape to the old Ṣafawid capital of Ḳazwīn, where he proclaimed himself Shāh. After a six month's siege, Sulṭān Ḥusayn left Iṣfahān on 23 October and went to the Afghān camp and surrendered to Maḥmūd. Instead of killing him, Maḥmūd imprisoned him in his harem, from which he was forced to proclaim the Afghān conquerer as legitimate ruler of Persia. Maḥmūd was assassinated in 1725 and succeeded by his cousin Ashraf. Faced with Ottoman support for Ṭahmāsb, he ordered the killing of Sulṭān Ḥusayn on 9 September 1726.

SULṬĀN ISḤĀḲ [see SULṬĀN SEHĀK].

SULṬĀN MUḤAMMAD SHĀH [see MAḤALLĀTĪ].

SULṬĀN ÖÑÜ, the ancient name of a region in northwestern Anatolia with its centre at Eskishehir [*q.v.*]. As an Ottoman administrative unit, it meant the first Ottoman *sandjaḳ* [*q.v.*], more or less identical with the Sakarya River bend and the present provinces (*il*) of Eskişehir and Bilecik. It was already under the Rūm Saldjūḳs a *sübashilik*. ʿOthmān Ghāzī was given the district by Sultan ʿAlāʾ al-Dīn Kay Ḳubādh III (d. 1307). According to the chronicle of Idrīs-i Bidlisī, ʿOthmān granted the province of Ḳara Ḥiṣār, otherwise known as Sulṭān Öñü, to his eldest son Orkhan (H. İnalcık, *Osmān Ghāzī's siege of Nicaea*, in E. Zachariadou (ed.), *The Ottoman emirate (1300-1389)*, Rethymon 1993, 87).

During the Ottoman centuries the *liwā* or *sandjaḳ* of Sulṭān Öñü was part of the *beglerbeglik* (later *eyālet*) of Anadolu [*q.v.*]. The registers of the 16th century have indifferently Eskishehir (with Ḳaradja shehir), Seydī Ghāzī, Günyüz, İnönü and Biledjik as *nāḥiyes* of the province. Ḥādjdjī Khalīfa's *Djihān-nümā* has a long chapter on the province (631-3). The *sandjaḳ* existed until the *Tanẓīmāt* administrative reforms. Shemsü 'l-Dīn Sāmī underlines its role as "the cradle of the Ottoman dynasty", which preserved the name for a long period (*Ḳāmūs al-aʿlām*, Istanbul 1888-98).

In no other region of the empire did there exist a special category of *müsellem* [*q.v.*], such as the *taydji djemāʿati*, which enjoyed exemption from taxes in exchange for the breeding of horses for the royal stables (*khāṣṣ akhiri*). A statute (*ḳānūn*) for them dating from 1034/1624 was published by I.H. Uzunçarşılı (*Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 500).

It has been suggested that the spelling Sulṭān Öñü, though exclusively used in post-15th-century sources, may have replaced an earlier form *Sulṭān öyüğü* "Sultan's tumulus". But the form Sulṭān Öñü appears as early as *ca.* 1180 in the travel book of al-Harawī [*q.v.*] (ed. and tr., J. Sourdel-Thomine, Damascus 1952-7) for hot springs in the region (*al-Thirmā/aw garm*). Al-ʿUmarī's *Masālik al-abṣār fī mamālik al-amṣār* (ed. F. Taeschner, Leipzig 1929, 39) has a ductus without dotting, Sulṭān اوںی). The word formation Sulṭān + öñü corresponds to a number of place-names in Turkey (e.g. Eminönü, Hammamönü, Hanönü, İnönü). The foundation act of the *amīr* Djadja-oghlu Nūr al-Dīn of 1272 (ed. Ahmet Temir, Ankara 1959, 61 l. 538) has *maḥrūsa Sulṭānyügi* obviously for the town of Eskishehir. Ibn Baṭṭūṭa [*q.v.*] mentions the name Sulṭān Öñü only in the form of the *nisba* of two persons in Iznik (324) and Kastamonu (342).

(K. Kreiser)

SULṬĀN SEHĀK, a historical figure of the highest importance to the sect known as Ahl-i Ḥaḳḳ [*q.v.*], who lived in the 15th century (textual variants: Seḥāk, Sihāk, Sohāk, Ṣoḥāk) a name of Biblical origin (Isaac) but incorporated into the Islamic tradition and attested in the Ḳurʾān in the form Isḥāḳ.

The uncertainties which remain concerning the dates of Sulṭān Sehāk have recently been to a great extent clarified and resolved, following the discovery of original sources and the publication of studies assiduously conducted over the past forty years (see *Bibl.*) The mystical and biological genealogy of this individual is, however, better attested in regard to his close ancestors then in regard to his direct successors. The tradition of the sect presents him as the fourth great theophany (or rather avatar or, indeed, in the language of the sect, *maẓhar* "Manifestation of God on earth", as well as *djāma* (Persian) or *dūn* (Turkish) corporeal "habit" into which the Essence of Truth has entered, and *yort/yurt* (Turkish) "place" wherein God has dwelt). The first Theophany is said to be that of Yā, at the time when God, the Khāwandgār (God-Creator), inhabited the primordial gleaming white pearl (*al-durra al-bayḍāʾ*) in which He was enclosed, with his angels, this after concluding a pact of fidelity and submission to the conditions inherent in human life during his forthcoming appearances in the world; the second, that of ʿAlī, son-in-law of the Prophet Muḥammad; the third that of Shāh-Khōshīn, in an episode which is said to have taken place in Luristān on Mount Yāfta-kūh around the 4th/10th century, again according to the vague information concerning the sect.

In view of the approximate contemporaneity of the historical founders of the Ahl-i Ḥaḳḳ with those of other circles and fraternities, the transformation from "mystical chain" to "sect" as correctly defined, for numerous connected social and circumstantial reasons, in spite of their secrecy which has surrounded them until recent times, can be fairly reckoned to have taken place around the end of the 17th and start of the 18th century, the oldest credible documents (manuscripts previously jealously preserved) dating back no earlier than these dates.

On the historical and social climate of the time, see AHL AL-ḤAḲḲ, ḤURŪFIYYA, NAḲSHBANDIYYA, NŪRBAKHSHIYYA and SHĀHRUKH. This article will be confined to essential information.

It was precisely from the time of Shāhrukh and of his fellows in other provinces of the kingdom that conflicts of ideas under the rubric of mysticism took on other dimensions and a more rapid pace than in earlier years.

The renowned Sayyid Muḥammad Nūrbakhsh, claiming to be the awaited Mahdī of a messianic movement, preoccupied for some time the mind of Shāhrukh, who was more moderate than his father and proclaimed himself the defender of an integral but not fundamentalist Islam. This mystical Master was still alive after the death of Shāhrukh and was the leader of a renowned mystical fraternity, the Nūrbakhshiyya, which was capable of surviving over the centuries, numerous scholars, poets and authors being counted among its supporters.

As a counterpart to the movement of the Nūrbakhshīs which appeared to the east of Persia, in Turkistān and Transoxania, and that of the Ḥurūfīs in the north-west of Persia, there appeared some years later another subversive and extremist movement, in Khūzistān and the Djazāyir (marshy regions between the town of Wāsiṭ and lower ʿIrāḳ, which was centred on Hawīza (Ḥawīza/Ḥuwīza) in Khūzistān. Its founder, Sayyid Muḥammad Mushaʿshaʿ, son of

Sayyid Falāḥ, born in Wāsiṭ, was able to gather around him a host of Bedouins, villagers, low-caste workers and, especially, members of the numerous Arab tribes nomadising in the plains and valleys situated near the ancient Karkha canal and between Baṣra and Wāsiṭ.

Finally, he chose for his capital the town of Hawīza: initially he claimed to be "the place" and "the veil" (*ḥidjāb/parda*) of the Hidden Imām, later, by gradual stages, the Mahdī and then, hesitantly, the Essence of God. He disseminated his doctrine as far as Luristān, and sometimes in the course of his travels took refuge in the mountains of this province, which bordered on Ḥawīza and Wāsiṭ. But his son, Mawlā ʿAlī, more ambitious than he, courageous, bellicose and bloodthirsty, and usually successful in battle, eclipsed his father and took power into his own hands. Not content with claiming to be the Mahdī, he openly declared himself, before his adherents, the Essence of God itself. In the meantime, Pīr-Budāgh, having eliminated Mawlā ʿAlī and having rebelled against the Ḳara Ḳoyunlu Djahānshāh in Baghdād, was defeated by the latter and killed by his brother, Muḥammadī, who was in his turn killed by his rival Uzun Ḥasan [*q.v.*] head of the Aḳ Ḳoyunlu.

The Mushaʿshaʿīs, descendants and followers of Sayyid Muḥammad b. Falāḥ, controlled a part of Khūzistān and of ʿIrāḳ, and survived even after the execution of the two brothers by Shāh Ismāʿīl almost to the present day, as conventional governors on behalf of the Persian state [see further, MUSHAʿSHAʿ].

Sulṭān Sehāk, the founder or rather the reformer of the Ahl-i Ḥaḳḳ, was born in this historical and politico-religious climate.

Birth. Relative lack of interest in regard to dating as well as simple modesty and effacement are at the root of a reluctance even to engrave the dates of deaths on tombstones, in particular among the Khāmūshī, one of the eleven (or twelve) *khānadān* "families" of the sect; see on this subject M. Mokri, *Étude d'un titre de propriété du début du XVI^e siècle*, in *JA* (1963), 229-56 and other sources mentioned in the *Bibl.*

In Ahl-i Ḥaḳḳ tradition, it is accepted as a constant fact that the manifestation of each theophany on the earth should appear in the form of a miraculous birth. The great avatars representing the Divine Essence are born, in fact, of virgin mothers and are foretold by mysterious signs. Certain categories of miraculous births date back to Altaic origins distinct from Indo-European beliefs, if account is not to be taken of the universality of this theme. The first miraculous birth related by the tradition of this sect is that of Shāh-Khōshīn, according to them the first great avatar after ʿAlī.

For the birth of Sulṭān Sehāk, the same procedure applies, with more details and precision. He was born of a virgin mother named Khātūn Dāyrāk. Ahl-i Ḥaḳḳ tradition applies to this event accounts conforming to their own meta-historical myths. According to them, at the time of his disappearance Shāh-Khōshīn had promised his faithful companions (incarnate angels) that he would re-appear many times in this world, in particular shortly before the birth of Sulṭān Sehāk. It was for this reason that Pīr-Binyāmin (a manifestation of the Angel Gabriel), net in hand, searched through time and space for the divine being, the Royal Eagle, occupying the form of an unwitting believer. In the pursuit of their quest, the four angels had a presentiment of the imminent arrival in the world of the Essence of God, in the shape of the Royal Eagle. Having uncovered his traces, they convened near a spring in Awrāmān, at the foot of the mountain of Shāhū in the Dālāhū [Zagros] range. Then the divine being, still in the form of an eagle, appeared to them and commanded them to marry the daughter of Ḥusayn Beg Djald of the Djāf tribe to Shaykh ʿĪsī who lived in Barzandja. He also ordered the planting of an orchard under the supervision of Iwat Hushyār ("Iwat the Perspicacious"), and the planting within the orchard of a clump of dried-up mulberry bushes. When this should once again be green, the Royal Eagle perching on it, they would know this was the moment of the Manifestation of the Divine Being. When all this had been done and the time of the confinement of Khātūn Dāyrāk arrived, the Royal Eagle re-appeared and rubbed against the legs of the young woman. He was then transformed into a bright and handsome boy later named Sulṭān Sehāk. This bizarre birth is by no means a unique case in the tradition of the Ahl-i Ḥaḳḳ.

History. The date of the birth of Sulṭān Sehāk is an object of controversy and has yet to be fixed definitively. V. Minorsky located it broadly in the 14th century, solely on the basis of testimony of members of the Ahl-i Ḥaḳḳ. For his part, C.J. Edmonds (*Kurds, Turks and Arabs* 184), relying on notes written by a former Ottoman official which were drawn to his attention, written in Turkish and sometimes translated into Kurdish (which he entitles the *Tadhkira*), gives the year 671/1272-3 as the birth date of Sulṭān Sehāk. Numerous ethno-historical enquiries conducted on the ground by M. Mokri since 1942 and his decipherment and publication of numerous original manuscripts (see *Bibl.*) have contributed to the relative elucidation of ambiguities on these dates. The author of the *Shāhnāma-yi ḥaḳiḳat* offers no precision, but muddles and complicates the assumptions of this question. It proposes the year 612/1216 as the date of his arrival, as a means of crediting this individual with a suitably prestigious antiquity, but to palliate the startling fantasy of this arbitrary date he gives him three centuries of life with the object of adjusting to the facts. This date is still earlier than that in the *Tadhkira* placed at the disposal of Edmonds. It is true that this period is obscure on account of the lack of precise historical documents. Numerous former enquiries conducted in various places from 1942 to 1949 have even produced a date later than the 15th century, which marks a new stage of the sect. If there is such a lapse of time (from the 15th or from the 16th century to the present day) it may be wondered whence come all these ancient riches of legend, custom, stories and thought.

On the assumption that the union of ʿĪsī and Khātūn Dāyrāk was some years previous to the death of Shaykh Mūsī and the marriage of his widow to ʿĪsī in 828/1424-5, it may be inferred as a primary estimate that the birth of Sulṭān Sehāk took place shortly before 846/1442 (thus at the end of the first half of the 15th century, and not, at the 7th/13th dates mentioned above, nor yet at that vague and arbitrary date in the 14th century proposed by certain members of the sect).

The (manuscript) treatise *ʿĀlam-i ḥaḳīḳat* written by religious representatives of Ahl-i Ḥaḳḳ in the tribe of the Gūrānīs (the three great dervishes Kā-Turāb, Kā-Raḥīm and Kā-Bashar, two of whom were questioned extensively between 1942 and 1949), speaks of the date of the birth of Sulṭān Sehāk, apparently with some lack of precision, but with more eloquence and plausibility than are possessed by previously-mentioned sources, as follows: "As for the date of the arrival of Sulṭān Sehāk, it is not known to us. But it seems, in

relation to the year in which we are now living, 1322/1943, to be approximately five hundred years previous" (meaning 1443). In giving the reasons for the choice of this date, the treatise cites the evidence of the deed of ownership of Anzala (studied and published in *JA* [1963]), a village offered to Bābā Yādigār by a noble neophyte of Zehāb named Ḳamām al-Dīn, son of Faḳīh ʿUthmān Kurdī, following a dream in which his release from prison in Baghdād was foretold. This document bears the date 933/1526. On the assumption that this offer was made when Bābā Yādigār had attained a certain age, and that the Sarāna period (the time when Bābā Yādigār established himself in Sarāna in Zarda) was some years subsequent to the Pirdīwar period (the properly defined period of Sulṭān Sehāk and of the spread of his ideas), the birth of Sulṭān Sehāk could well have taken place, according to this treaty, in 1443-4. The *ʿĀlam-i ḥaḳīḳat* assumes an interval of 83 years between the birth of Sulṭān Sehāk and the date of the composition of the Anzala document, to arrive at its round figure of 500 years before the year 1943, this figure being only approximate. Thus an agreement is reached, more exact than that of the other sources, between the date suggested by the Gūrānīs and that of the genealogical treatise, undoubtedly written one or two centuries previously.

Other historical data tend to corroborate this last date. There is no doubt that the two brothers Shaykh ʿIsī and Shaykh Mūsī were the sons of Sayyid Bābā ʿAlī Hamadānī, the great mystic of Hamadān. It is he who was the master of Khʷādja Isḥāḳ Khuttalānī, in his turn the master of Sayyid Muḥammad Nūrbakhsh. Sayyid Bābā ʿAlī, a mystic whose paternal genealogy extends as far as the Imām Mūsā Kāẓim, the seventh Shīʿī Imām, was the son of ʿAlī b. Shihāb Hamadānī and was also related to the Prophet through seventeen generations in the maternal line, according to the *Madjālis al-muʾminīn*, 301. Once the paternity of Sayyid Bābā ʿAlī Hamadānī over Shaykh ʿĪsā and Shaykh Mūsā is accepted, the ascendant genealogy of Sulṭān Sehāk poses no further problems, the lineage of dignitaries and mystics of Hamadān playing an important role in history. But the same does not apply to the descendants of Sulṭān Sehāk. From a historical point of view there is considerable confusion, with various traditional accounts vitiated by the lack of reliable documentation and by the intervention of numerous persons claiming to be the offspring of Sulṭān Sehāk, a common phenomenon in the case of eminent individuals in a period for which valid registers do not exist, such that the way is open for families to believe in their descent from a known patronym. Some of the numerous brothers of Sulṭān Sehāk have even been regarded as his own sons, while various other records, including the genealogical treatise of Ashrafiyya Baḥr-al Ansāb, declare that he died childless.

According to the *khānaḳāh* of Tūt Shāmī (the religious centre of the Gūrānīs) the last great manifestation of the Ahl-i Ḥaḳḳ is that of Ḥaydarī, under the leadership of Sayyid Brāka, the son of Sayyid Manṣūr, who lived in Dūl Dālān (Tūt Shāmī), was born in 1210/1795 and assassinated by one of his kinsmen in 1290/1873. The latter's era is considered the most brilliant period of the Ahl-i Ḥaḳḳ, known as the period of the *Yerī tanī* (Triad), since in the opinion of his disciples Sayyid Brāka was the incarnation simultaneously of Dāwūd, Yādigār and Sulṭān Sehāk; he was *shāh mehmān*, meaning that "he was host to the Divine Essence". The latter's son, Sayyid Rustam Ḥaydarī Gūrān, one of the major figures of the Ahl-i Ḥaḳḳ, was a man of great eminence in western Persia, giving his support to the Constitution of 1906.

There is no proof that the heads of the five "families" (*khānadān*), to which six more were to be added over the course of time, are genuinely the direct descendants of Sulṭān Sehāk. No reliable historical document supports this proposition, only later tradition, and even this is imprecise.

Bibliography: For the earliest studies, reference should be made to V. Minorsky's detailed bibl. to AHL-I ḤAḲḲ.

Studies by M. Mokri. Numerous studies concerning the dialects, tribal organisation and hierarchy of the sect of the Gūrāns, extended to other regions where members of the Ahl-i Ḥaḳḳ reside, as well as their guides and their religious procedures, were conducted by M. Mokri between 1942 and 1951, and verification of these notes and observation of new developments within the sect has continued to the present day. *Le Chasseur de Dieu et le mythe du Roi-Aigle* (*Dawra-y Dāmyārī*), ed., tr. and annotated, Wiesbaden 1967; *La grande assemblée des Fidèles de Vérité au tribunal sur le mont Zagros en Iran* (*Dawra-y Dīwānā-gawra*), Paris 1977; *Cinquante-deux versets de Cheikh Amīr*, in *JA* (1956); *L'idée de l'incarnation chez les Ahl-i Ḥaqq*, in *Akten des XXIV Internationalen Orientalisten-Kongresses, München 1957*, Wiesbaden 1959; *Le symbole de la perle dans le folklore persan et chez les Kurdes Fidèles de Vérité*, in *JA* (1960), 463-81; *La naissance du monde chez les Kurdes Ahl-i Ḥaqq*, in *Trudî XXV Mezdunarodnogo Kongressa Vostokovedi*, Moscow 1963, ii, 159-63; *Étude d'un titre de propriété du début du XVIᵉ s. provenant du Kurdistan "Qabāla-y Anzala"*, in *JA* (1963), 229-56; *L'ésotérisme kurde. (M. MOKRI, shortened by the Editors)

SULṬĀN AL-ṬALABA (*vulgo* AL-ṬOLBA), a traditional Moroccan spring festival, a combination of a carnival and a picnic, celebrated annually in the second half of April, primarily at Fās. Although all the people joined in, the main participants and

beneficiaries were the foreign students in the *madrasas* of the Ḳarawiyyīn [*q.v.*].

A central feature of the feast was the election of a mock sultan for a week (whence the name), the office being auctioned; in 1923, the bidding reached 22,500 Fr. This was financed by an interested party, since the mock sultan enjoyed the privilege of asking the real sultan of Morocco for certain favours (e.g. release of prisoners, exemption from taxation). The *makhzan* or government provided aid in the form of tents, food and cash, and awarded the *sulṭān al-ṭolba* the royal insignia. After the week had passed in feasting, singing, dancing, etc., the two sultans might sometimes meet ceremonially on horseback, and a burlesque *khuṭba* was delivered by the mock *muḥtasib* who had been appointed by the mock sultan (for two specimens, see E. Doutté, *La khot'ba burlesque de la fête des Tolba au Maroc*, in *Recueil de mém. et de textes publiés en l'honneur du XIVe Congr. des Orientalistes*, Alger 1905, 197-219).

The origins of the festival are linked by local tradition with the founder of the ʿAlawī dynasty, Mawlāy Rashīd, and his overthrow of a tyrannical Jewish chief, Ibn Mashʿal. E. Laoust considered this to be pure fable, and saw in the festival an ancient rite involving the personification of a god of vegetation (see *Hespéris*, i [1921], 290). P. de Cenival, however, whilst discarding the patently legendary motifs, thought there was some truth in the story, since native Moroccan historians agree on it, as also three independent, near-contemporary European accounts (see his *La légende du Juif Ibn Mech'al et la fête du Sultan des Tolba à Fès*, in *Hespéris*, v [1925], 137-218, esp. 150-1, 216). But this still leaves unexplained the special relationship between this sultan and the Fās students, unless this is seen as part of his general favour towards learning. The appearance of similar festivals in other parts of Morocco, e.g. at Marrakesh in the late 18th century, for a while at Casablanca and amongst some tribes in the Gharb and Djibāla regions, is clearly derivative.

Bibliography: De Cenival's article (see above) is the most comprehensive study. Of subsequent studies, see P. Marty, *Le Maroc de demain*, Paris 1925, 43-9; N. Slouschz, *Travels in North Africa*, Philadelphia 1927, 394, 405, 407-13, 416-17; R. Ricard, *La fête du Sultan des Tolba et la "fiesta del obispillo" en Espagne*, in *Hespéris* (1937), 138-9 (Spanish parallel); R. le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 466-9; G. Deverdun, *Marrakech des origines à 1912*, Paris 1959, i, 570-1, H.Z. Hirschberg, *A history of the Jews in North Africa*, Leiden 1981, ii, 243-6, 251-2. See further, ṬALABA.

(P. SHINAR, shortened by the Editors)

SULṬĀN WALAD, BAHĀʾ AL-DĪN MUḤAMMAD-i Walad (623-712/1226-1312), eldest son of Djalāl al-Dīn al-Rūmī [*q.v.*], poet and Ṣūfī, is one of the founders of the Mawlawiyya [*q.v.*] order. He was born on 25 Rabīʿ II 623/24 April 1226 in Lāranda, present-day Karaman, south of Konya. He was given the name of his grandfather Sulṭān al-ʿulamāʾ Bahāʾ al-Dīn Walad (Aflākī, *Manāḳib*, ii, 785, 994; on Bahāʾ see F. Meier, *Bahāʾ-i Walad*, Leiden 1989). Mawlānā Djalāl al-Dīn al-Rūmī himself looked after Sulṭān Walad's education, sending him, together with his brother ʿAlāʾ al-Dīn Muḥammad, who was one year younger than him, to Aleppo and Damascus to study the religious sciences.

Sulṭān Walad was very close to his father and is said to have resembled him so greatly that they were thought to be brothers. From his boyhood he was on intimate terms with the circle around Mawlānā and had close ties with the latter's friends, in contradistinction to his brother ʿAlāʾ al-Dīn who was, probably falsely, accused of having been involved in the death of Shams-i Tabrīzī [*q.v.*]. It was Sulṭān Walad who, after Shams's disappearance on 21 Shawwāl 643/1 March 1246, was sent by Mawlānā to bring him back from Damascus to Konya (*Mathnawī-yi Waladī*, 47 ff., Farīdūn Sipahsālār, *Risāla-yi Sipahsālār*, 133, Aflākī, *op. cit.*, ii, 695-6). The oldest known manuscript of the *Maḳālāt* of Shams-i Tabrīzī is in Sulṭān Walad's hand.

At the behest of Mawlānā, Sulṭān Walad married Ṣalāḥ al-Dīn Zarkūb's [see DJALĀL AL-DĪN AL-RŪMĪ] daughter Fāṭima Khātūn. He had two daughters by her and one son, Djalāl al-Dīn ʿĀrif (Ulu ʿĀrif Čelebī, d. 719/1320), who was to become his successor. In 683/1284, after the death of Čelebī Ḥusām al-Dīn Ḥasan (see *ibid.*), who had held the title *khalīfa* when Mawlānā was still alive, Sulṭān Walad, at the insistence of his entourage, took up the succession which, at his father's death, he had declined in favour of Ḥusām al-Dīn. The report that Karīm al-Dīn Bektemür was *khalīfa* of the Mawlawiyya from 683/1284 until his death in 690/1291 and that Sulṭān' Walad took up office only after his demise cannot be found in Aflākī nor in Sipahsālār, but only in the *Walad-nāma* and in later *silsila-nāmas* of the Mawlawiyya. The role played by Karīm al-Dīn Bektemür in the history of the order does not become transparent from the sources on the Mawlawiyya. On the basis of the testimonies, it has been suggested that he served as a kind of spiritual guide to Sulṭān Walad.

With Sulṭān Walad begins the history of the Mawlawiyya order in the true sense of the word; he gathered the *murīds* of his father around himself and organised the order. He had a mausoleum erected for Mawlānā which was to become the centre of the order. He sent out *nuwwāb* and *khulafāʾ* and established branches outside Konya. Contrary to earlier assumptions that it had been Sulṭān Walad who had established firm rules for the *samāʿ* [*q.v.*], it has now been shown that the *samāʿ* received its final form for the first time under Pīr ʿĀdil Čelebī (d. 864/1460) (A. Gölpınarlı, *Mevlânâ'dan sonra Mevlevîlik*, ²Istanbul 1983, 100). The solemn triple circumambulation at the beginning of the ceremony is called *dawr-i Waladī devr-i Veledî* (*Sultan Veled devri*) in memory of Sulṭān Walad. He died at the advanced age of nearly ninety years on 10 Radjab 712/12 November 1312 in Konya and was buried next to his father. For nearly fifty years he had lived in the shadow of his famous father, whose personality had determined the life and work of his son even beyond his death.

His works, of which there exist numerous manuscripts, have, with the exception of a *mathnawī*, all been printed (Ritter, *op. cit.*, 229 ff.). Four poetic and one prose work in Persian are known. The first three poetic works contain, apart from some early Turkish verse, also some Arabic and a few Greek lines.

1. *Dīwān-i Waladī* contains *ghazaliyyāt*, *ḳaṣāʾid*, *muḳaṭṭaʿāt*, *tarkībāt*, and *rubāʿiyyāt*. It was published for the first time by F.N. Uzluk, *Dīvānı Sulṭān Veled*, Istanbul and Ankara 1358/1941 and later by Saʿīd Nafīsī, *Dīwān-i Sulṭān Walad*, Tehran 1338/1960.

2. Three *mathnawīs* which were composed after the *Dīwān*:

(a) *Ibtidāʾ-nāma*, also called *Walad-nāma* or *Mathnawī-yi Waladī*. Composed between Rabīʿ I and Djumādā II 690/1291, it is written, like Sanāʾī's *Ḥadīḳat al-ḥaḳāʾiḳ*, in the metre *khafīf*. It constitutes an important source for the biographies of Bahāʾ al-Dīn and

Mawlānā as well as for the early history of the order. Edition by Djalāl-i Humā'ī, *Walad-nāma, Mathnawī-yi Waladī bā taṣḥīḥ wa muḳaddama*, Tehran 1315-16/1936-37.

(b) *Rabāb-nāma*, composed, at the behest of a notable, within five months of the year 700/1301 in the metre *ramal* of his father's *Mathnawī*. It contains explanations to ideas in the *Mathnawī* and to general Ṣūfī notions. Edition by 'Alī Sulṭānī-i Gurdfarāmarzī, *Rabāb-nāma*, Tehran 1359/1980 (see F.T. Ocak, *Sultan Veled'in Rebâbnâme'si*, in Erdem, iv, [1988], 11).

(c) *Intihā'-nāma*. Like the *Rabāb-nāma* written in *ramal*, completed on the last day of Dhu 'l-Ḳa'da 708/1309. It was composed for parenetic purposes, and is a kind of summary of the first two *mathnawīs*.

3. *Ma'ārif-i Waladī*, also called *al-Asrār al-djalāliyya*. It is a prose work in a style approaching the spoken language and containing accounts of Sulṭān Walad's thoughts and words. The title is an evocation of his grandfather's work by the same title. An uncritical edition appeared as an appendix to an undated Tehran print of Mawlānā's *Fīhi mā fīh*; a scholarly edition was prepared by Nadjīb Māyil-i Hirawī, *Ma'ārif*, Tehran 1367/1988.

The Turkish verses in the *Dīwān* (129), the *Ibtidā'-nāma* (76), and the *Rabāb-nāma* (162 or 157) are among the oldest examples of Anatolian Turkish literature and are the most extensive testimony of this early stage of the language. Their language is simple and easily comprehensible. It has been suggested that they served the purpose of propaganda for the Mawlawiyya. From the beginning these verses have attracted the attention of European scholars. Hammer, Wickerhauser, Behrnauer, Radloff, Kúnos, Smirnov, and Salemann have dealt with them (see J.H. Kramers, art. *Sulṭān Walad*, in *EI*[1]). The verses have been collected by Veled Čelebī (İzbudak) and Kilisli Rif'at, *Dīvān-i turkī-i Sulṭān Veled*, Istanbul 1341/1925, cf. Fuat Köprülü, in *Türk dili ve edebiyatı hakkında araştırmalar* (1934), 162-73, and *TM*, ii (1928), 475-81, and Mecdut Mansuroğlu, *Sultan Veled'in Türkçe manzumeleri*, Istanbul 1958.

(Gudrun Schubert)

SULṬĀNĀBĀD, the name of various places in Persia.

1. The best-known one is the town presently known in Persia as Arāk lying in long. 49° 41' E. and lat. 34° 5' N. at an altitude of 1,753 m/5,751 feet, 284 km/176 miles to the southwest of Tehran. It lies in the southwestern corner of the plain of Farahān, adjoining the Zagros massif. The popular (and now official) name Arāk must come ultimately from 'Irāḳ, in the sense of 'Irāḳ-i 'Adjam or Persian 'Irāḳ, the mediaeval Djibāl [*q.v.*]. The modern region of Arāk lies within the bend of the Ḳara Ṣu. Its rural districts include that of Kazzāz, which seems to be identical with the mediaeval Karadj Abī Dulaf (see Le Strange, *The lands of the Eastern Caliphate*, 197-8; Schwarz, *Iran im Mittelalter*, 575-8; AL-KARADJ), and Dargazīn on the left bank of the Ḳara Ṣu, with which two viziers of the Great Saldjūḳs in the early 6th/12th century were connected, Abu 'l-Ḳāsim Nāṣir and Abu 'l-Barakāt Dargazīnī Ansābādhī.

Sulṭānābād was founded in 1223/1808 by Fatḥ 'Alī Shāh Ḳādjār as part of a plan to overawe the local chiefs, and it was laid out on a rectangular plan, with defensive walls and towers, by the commander Yūsuf Khān Gurdjī. In the later 19th century, Sulṭānābād began to grow in importance as a centre for carpet-weaving, and it became, at least until the 1940s, Persia's most important centre for commercial carpet manufacture. It also acquired under Riḍā Shāh Pahlavī [*q.v.*] various other industries. Its importance was further enhanced when it became a major station on the Trans-Persian railway, at the point where the line from Khūzistān emerges from the Zagros. Arāk is now the chef-lieu of a *shahrastān* or district of the same name in the Central Province, and in 1976 had a population of 114,500.

Bibliography: For older bibl., see Minorsky's *EI*[1] art. and that to AL-KARADJ. Also Admiralty Handbooks. *Persia*, London 1945, 98, 553-8; Razmārā (ed.), *Farhang-i djughrāfiyā-yi Īrān-zamīn*, ii, 6; H. Dermet-Grégoire and P. Fontaine, *La région d'Arak et de Hamadan: cartes et documents ethnographiques*, Cahiers de Studia Iranica 6, Paris 1988; and the detailed bibls. to *EIr* art. *Arāk* (C.E. Bosworth and X. de Planhol).

2. The Mongol Il Khān Öldjeytü [*q.v.*] founded in 711/1311-12 at Čamčamāl, at the foot of the Bīsutūn mountain in the region of eastern Kurdistān-western Djibāl, a town which was called Sulṭānābād (Mustawfī, *Nuzha*, ed. and tr. Le Strange, 107, tr. 106; d'Ohsson, *Hist. des Mongols*, iv, 545; H.L. Rabino, *Kermanchah*, in *RMM* [1920], 14), and this same ruler founded Öldjeytü-Sulṭānābād in the Mūḳān [*q.v.*] steppe in Arrān near the Kur river (B. Spuler, *Iran in Mongolenzeit*[1], Leipzig 1939, 450).

3. There are several other villages of this name in Ādharbādjān, Khurāsān, Kirmān, Khūzistān, etc.

(C.E. Bosworth)

SULṬĀNIYYA, a town in the mediaeval Islamic province of northern Djibāl some 50 km/32 miles to the southeast of Zandjān [*q.v.*] (lat. 36° 24' N., long. 48° 50' E.).

1. History.

Sulṭāniyya was founded towards the end of the 7th/13th century by the Mongol Il Khānids and served for a while in the following century as their capital. The older Persian name of the surrounding district was apparently Shāhrūyāz or Shārūyāz/Sharūbāz (which was to be the site, adjacent to Sulṭāniyya, of the tomb which the Il Khānid Abū Sa'īd [*q.v.*] built for himself, according to Ḥāfiẓ-i Abrū). It was originally a dependency of Ḳazwīn. The Mongols called this district Ḳongḳur Öleng ("the pasture ground of the Alezans"; there is still a village called Öleng to the southeast of Sulṭāniyya). Sulṭāniyya is about 5,000-5,500 feet above sea-level. The coolness of its climate

in summer and the richness of the high plateau in pasturage and game must have had a special attraction for the Mongols. Arg͟hun began the construction of a town, the wall of which (*bārū*) was 12,000 paces in circumference. His son and later successor Öld͟jeytü (704-16/1304-16 [*q.v.*]), to celebrate the birth of his son Abū Saʿīd, began in 705/1305 to enlarge the new town (up to 30,000 paces in circumference) and made it the capital (or, more accurately, the chief seasonal residence) of his kingdom. The sovereign and his ministers vied with one another in embellishing Sulṭāniyya. The vizier Ras͟hīd al-Dīn alone built a quarter of 1,000 houses, the *rabʿ-i Ras͟hīdī* (d'Ohsson, iv, 486; Hammer, *Geschichte d. Ilchane*, ii, 184-6; Sheila S. Blair, *Ilkhanid architecture and society: an analysis of the endowment deed of the Rabʿ-i Rashīdī*, in *Iran JBIPS*, xxii [1983], 67-90). The building of the town was finished in 713/1313 and was solemnly celebrated. After his conversion to the S͟hīʿa, Öld͟jeytü thought of bringing to Sulṭāniyya the remains of the caliph ʿAlī and of the Imām Ḥusayn. Ḥamd Allāh Mustawfī says that nowhere except Tabrīz could so many splendid buildings be seen as in Sulṭāniyya and he makes the five great roads (*s͟hāh-rāh*) radiate from Sulṭāniyya as the centre of Iran (*miyān-i Īrān-zamīn*). The exaggeration in the last statement is apparent; the site "so inconvenient" (P. della Valle) of the town was the main cause of its decline (cf. Minorsky, *Geographical factors in Persian art*, in *Iranica, twenty articles*, Tehran 1964, 47). Öld͟jeytü died in Sulṭāniyya and was buried in the famous mausoleum there. The *ḳurultay* [*q.v.*] of Abū Saʿīd was held in Sulṭāniyya, but the fact that ʿAlī S͟hāh, this ruler's minister, began to build a magnificent mosque in Tabrīz seems to indicate that pride of place was returning to the old capital. European envoys and merchants were nevertheless to be found there, and in 1318 the Pope created an archidiocese at Sulṭāniyya, still in existence at the beginning of the 15th century.

After the fall of the Il K͟hānids, Sulṭāniyya often changed hands and its possession was disputed between the Čūbānids [*q.v.*], the D͟jalāyir [*q.v.*] and the Muẓaffarids. A former captain of S͟hayk͟h Uways D͟jalāyir called Sarïḳ ʿĀdil fortified himself in Sulṭāniyya in 781/1379. He inflicted a defeat upon the Muẓaffarid S͟hāh S͟hud͟jāʿ, but finally submitted to him and kept his position. A little later, Sarïḳ ʿĀdil proclaimed Bāyazīd D͟jalāyir as sultan at Sulṭāniyya; his brother sultan Aḥmad complained of this to S͟hāh S͟hud͟jāʿ, who removed Sarïḳ ʿĀdil from Sulṭāniyya. Tīmūr's troops took Sulṭāniyya from the sons of Aḥmad in 786/1384. At the same time, Tīmūr reestablished Sarïḳ ʿĀdil as governor there and seems to have respected the tomb of Öld͟jeytü (cf. Olearius). Among the villages built by Tīmūr around Samarḳand with the names of celebrated towns, there was one called Sulṭāniyya (Barthold, *Ulug͟h-beg*, in *Four studies on the history of Central Asia*, Leiden 1958-62, ii, 41). In 795/1393 Sulṭāniyya formed part of "the fief of Hülegü" conferred by Tīmūr on his son Mīrān S͟hāh, see S͟haraf al-Dīn Yazdī, *Ẓafar-nāma*, i, 388, 399, 623. Clavijo, who visited Sulṭāniyya in 1404, says that Mīrān S͟hāh (from 798/1395 afflicted with madness, which showed itself in the destruction of monuments, *Ẓafar-nāma*, ii, 221), had plundered the town and citadel (*alcazar*) and profaned the tomb of Öld͟jeytü ("é el Cabellero que yacia enterrado mandólo echar fuera"). In spite of this, the ambassador of Henry III of Castile adds that the town had many inhabitants and that its trade was greater than that of Tabrīz. Under the Ṣafawid S͟hāh Ṭahmāsp I, the mausoleum was restored and Pietro della Valle and Olearius found it in good preservation. Trade, however, gradually went back to Tabrīz, and the removal of the political centre to Iṣfahān completed the ruin of the old capital of Öld͟jeytü and caused it to become forgotten. It only experienced a brief revival of favour when, in the reign of the Ḳād͟jār Fatḥ ʿAlī S͟hāh, when the court followed the old custom of moving to a summer residence, a hunting-palace was built near Sulṭāniyya with materials taken from the old city. This new Sulṭānābād was also abandoned after the Russo-Persian war of 1828. The splendid mausoleum then rose from the centre of a wretched little village. In 1880 Houtum-Schindler counted 400-500 houses there, but the place has in the present century increased somewhat in size and importance because of its position near the Ḳazwīn-Zand͟jān-Tabrīz highway.

The modern Sulṭāniyya is now in the province of Zand͟jān; in 1991 it had a population of 5,114 (Preliminary results of the 1991 census, Statistical Centre of Iran, Population Division).

(V. Minorsky-[C.E. Bosworth])

2. Monuments.

Like most Persian cities, Sulṭāniyya was composed of an inner citadel surrounded by a moat and an outer city surrounded by ramparts. The square citadel was built of dressed stone and articulated with sixteen towers, a machicolated parapet, and an iron gate, all visible in the earliest depiction of the city, a painting in an Ottoman manuscript recounting the stages

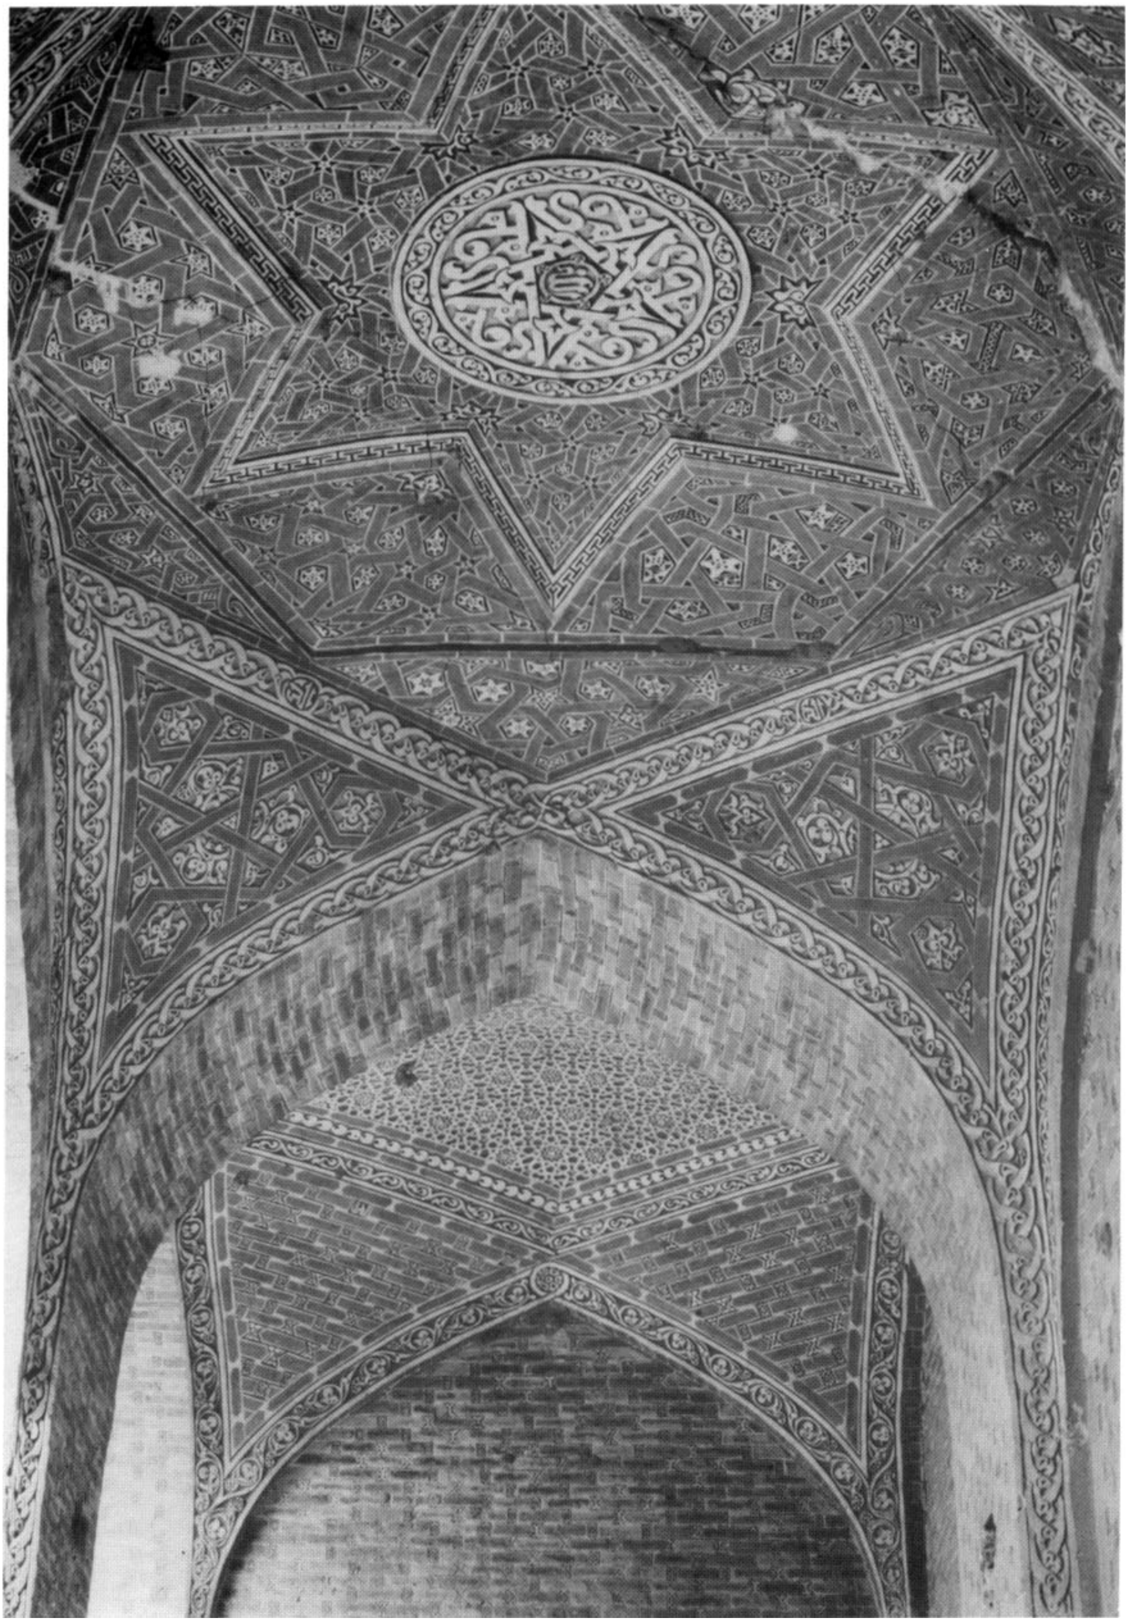
of the journeys of Sultan Süleymān the Magnificent composed by Maṭrāḳī Naṣūḥ in 944/1537-8 (Istanbul University Library, Yıldız T 5964, fols. 31b-32a; facs. reproduction by H.G. Yurdaydın, *Naṣūḥü's-Silāḥī (Maṭrākçī), Beyān-i Menāzıl-i Sefer-ı ʿIrāḳeyn-ı Sulṭān Süleymān Hān*, Ankara 1976). Much of the citadel survived until the 1780s, and traces are still visible (Muḥammad Mihryār, Aḥmad Kabīrī and Fāʾiḳ Tawḥīdī, *Bar-rasī wa paygardī-yi muḳaddamatī: Burdj wa bārū-yi arg-i shahr-i ḳadīm-i sulṭāniyya (zimistān 1364)*, in *Āthār*, xii-xiv [1345/1988], 209-64).

The centrepiece of the citadel and the major building to survive is the tomb of Sultan Öldjeytü (Iranian National Monument 166). Oriented almost cardinally, it is an enormous octagon (diameter 38 m) with an adjoining hall (15 × 20 m) on the south. The central domed chamber (height 50 m; diameter 25 m) is supported by heavy, 7-m thick walls and ringed by eight towers. On the interior the walls are pierced by eight tall and deep bays, and on the exterior a gallery, reached by staircases in the north-east and north-west corners, encircles the building below the base of the dome. In addition to its size and sophisticated handling of spaces, the tomb is remarkable for its decoration. The exterior was decorated with inventive patterns of tile mosaic, and the interior was decorated twice; a lower layer of glazed brick and tile combined with carved stucco and terracotta was covered by a second layer, largely of painted plaster, with smaller areas of cuerda-seca tiles, appliqué plaster, and plaster-stiffened cloth ornaments. The building was apparently dedicated in its original state in 713/1313-14, but redecorated shortly before Öldjeytü's death three years later. Several explanations have been proposed for the quick redecoration, most of them dealing with Öldjeytü's religious conversions or political aspirations, but none of them is entirely convincing. Even more speculative are attempts (e.g. P. Sanpaolesi, *La Cupola di Santa Maria del Fiore ed il Mausoleo de Soltanieh*, in *Mitteilungen des Kunsthistorischen Institutes in Florenz*, xvi/3 [1972], 221-60) to connect this remarkable domed structure with contemporary innovations in vaulting in Europe.

Like most other major Il Khānid funerary complexes, Öldjeytü's tomb was part of a pious foundation that included places for prayer, Ḳurʾān reading, meditation, and residence. The ensemble had four *īwāns* connected by arcades around a court and was set in an elaborate garden. It had one of the largest pious endowments of its time; according to Shams al-Dīn Āmulī, a *mudarris* there, it exceeded 100 *tūmāns*. The fittings and furnishings for the tomb complex were the finest that money could buy. The contemporary panegyrist Abu 'l-Ḳāsim Kāshānī waxes eloquent about the lavish materials used, including marble, *muḳarnas*, gold, and silver. The windows and doors had elaborate grilles, and three ball joints (diameter 13 cm) made of bronze inlaid with gold, silver, and a bituminous material and inscribed with Öldjeytü's name may have come from his tomb or other buildings at Sulṭāniyya. The largest copy of the Ḳurʾān made in the period, a gigantic (72 × 50 cm) 30-part manuscript transcribed at Baghdād between 706 and 710 (1306-13), was also endowed to the tomb (D. James, *Qurʾāns of the Mamlūks*, London and New York 1988, no. 40).

Other Il Khānid buildings in the citadel have not survived but can be reconstructed from descriptions and depictions by historians and travellers. There was a large congregational mosque with a monumental portal leading to a large central court with four *īwāns* and a domed sanctuary. The sultan's enormous palace had a large marble court and suites of rooms. The inner city also boasted numerous bazaars, hostelries for merchants, and palaces and gardens for notables. The vizier Rashīd al-Dīn, for example, built an entire quarter that housed a large pious foundation with a *madrasa*, hospital, and *khānaḳāh* announced by a large entrance portal with minarets flanking an *īwān*. His rival Tādj al-Dīn vied by building a bazaar of stone and baked brick and a lavish palace costing 10,000 dīnārs.

One pair of Il Khānid buildings located several hundred metres southwest of Öldjeytü's tomb survives from the many public and private structures in the bustling outer city: an octagonal tomb tower (Iranian National Monument 167) and an adjacent *khānaḳāh*. Although commonly known as the tomb of Čelebi Oghlu, the tomb tower (diameter 12 m) actually marks the grave of Shaykh Burāḳ, a leading Ṣūfī who was killed during Öldjeytü's invasion of Gīlān in 706/1306. The tomb was built at royal command soon after the Shaykh's death, and the site served as an important Ṣūfī centre at least until the succeeding generation when Khʷādja Shams al-Dīn Muḥammad Ḳazwīnī (re)built the adjacent *khānaḳāh* and had an inscription dated 733/1332-3 carved in the plaster near the *miḥrāb* announcing his endowment of water to the Shamsiyya *khānaḳāh* that he had built at Ḳazwīn.



Near these buildings is the tomb of Mullā Ḥasan Kāshī Shīrāzī, a theologian, orator, and poet of the early Ṣafawid period. The tomb (Iranian National Monument 168) is an octagonal building with four *īwāns* leading to a square tomb chamber (6.22 m) surmounted by a tall dome. An inscription in *abdjad* at the base of the dome records that the tomb was built in 963/1565-6; another inscription on the drum give the names Muḥammad b. Fatḥī, the builder, and Ḥadjdjī Bannāʾ, probably the person responsible for the tile decoration. A third inscription at the base of the *muḳarnas* dome in the interior records that the building was restored under the Ḳādjār ruler Fatḥ ʿAlī Shāh.

SULU [see PHILIPPINES].

SULŪK (A.), a technical term in Islamic political and mystical thought. *Sulūk* is a verbal noun derived from the root *s-l-k* "to travel or follow a road". Depending on the context, connotations of the term in Islamic literature include "progression", "method", "behaviour", "comportment", "demeanour", "wayfaring", "conduct", and "manners".

1. In political theory. Here the term usually carries the implication of "conduct" or "comport-

Sulṭāniyya, tomb of Öldjeytü, view of vaults in the second-story gallery (photo: Sheila S. Blair and Jonathan M. Bloom, 1977).

ment". A Persian treatise by Faḍl Allāh b. Rūzbihān Khundjī [*q.v.*], composed in 920/1514, concerning the proper comportment which various types of leaders in the religious and political sphere should observe, is appropriately entitled *The conduct of kings* (*Sulūk al-mulūk*, ed. M.ʿA. Muwaḥḥid, Tehran 1362 *Sh.*/1983). In the same fashion, a Ṣūfī author like Nadjm al-Dīn Rāzī (d. 654/1256) devoted all eight divisions (*faṣl*) of the final chapter of his monumental conspectus of Ṣūfī doctrine, the *Mirṣād al-ʿibād* (ed. M.A. Riyāḥī, Tehran 1352 *Sh.*/1973, 409-548), to the "proper conduct (*sulūk*)" to be observed by kings, ministers, deputies, the learned classes, the rich, landowners, merchants, businessmen and artisans.

2. In mysticism. From the standpoint of comparative religion, *sulūk* is the Islamic version of the archetypal motif of the "journey" which mystics of different religious traditions have used to describe the various steps which must be taken to leave illusory selfhood behind and realise union with the divine. In the particular lexicon of Muslim mysticism, *sulūk* denotes methodical progress on the *via mystica* or *ṭarīḳa*, the process of ascension and advancement—psychical, ethical and spiritual—which the Ṣūfī "wayfarer" (*sālik*) experiences in his pursuit (*ṭalab*) of God. Constituting the main "course of practice" on the Ṣūfī Path, it involves an integral method of spiritual progress based on spiritual warfare (*mudjāhada*) and inner "unveiling" (*kashf*), combining what in Christian mystical theology are known as the *via purgativa* and the *via illuminativa* into a broad-based mystical highway. In this way, the term *sulūk* designates—as J.S. Trimingham (*The Sufi orders in Islam*, London 1973, 140) aptly put it—"the *scala perfectionis* of the orders".

Suʿād Ḥakīm (*al-Muʿdjam al-ṣūfī*, Beirut 1981, 720) points out that the term *al-ṭarīḳ* (way) referred to throughout the Ḳurʾān (e.g. XLVI, 30—although the exact construction *sulūk* does not occur in the Ḳurʾān, there is one reference to *salaka*, XX, 53) is more or less equivalent to the later Ṣūfī conception of *sulūk*; Rāzī introduces the term in this sense in the exordium of the *Mirṣād* (ed. Riyāḥī, 11), where he states that his work is devoted to "expounding the modes of proper conduct on the Ṣūfī Path" (*bayān-i sulūk-i rāh-i ṭarīḳat*).

Sulūk is the not merely proper "wayfaring", but "spiritual correctness" (as is conveyed by the modern Persian expression *ḥusn-i sulūk*, "becoming conduct"), the "travelling-manners"—appropriate spiritual attitude and proper ethical comportment—which the roadwise Ṣūfī "wayfarer" (the term *sālik* is defined by ʿAbd al-Razzāḳ Kāshānī, *Iṣṭilāḥāt al-ṣūfiyya*, ed. Muḥammad Ibrāhim Djaʿfar, Cairo 1981, no. 259, as "one who is travelling towards God, being midway between the novice [*al-murīd*] and one who has attained the end of the Path [*al-muntahī*]") must possess to traverse the stations of the Way.

It would appear that, with the rise of institutional Ṣūfism in the early 5th/11th century, the traditional technical usage of the term denoting the progression of the mystic pilgrim on his path came to the fore. The conspicuous omission of *sulūk* from Massignon's *Essai sur les origines du lexique technique de la mystique musulmane* (Paris 1928) is symptomatic of the term's absence from nearly all the early—3rd-4th/9th-10th century—classical Ṣūfī texts written in Arabic. *Sulūk* is notably not featured in either Nicholson's index of technical terms to his critical edition of al-Sarrādj's *Lumaʿ*, nor in the *Taʿarruf* by al-Kalābādhī, nor in the *Ḳūt al-ḳulūb* of Abū Ṭālib al-Makkī, nor in the *Ṭabaḳāt al-ṣūfiyya* of al-Sulāmī, nor in the *Ḥilyāt al-awliyāʾ* of Abū Nuʿaym al-Iṣfahānī, nor in the *Risāla* of al-Ḳushayrī, nor in (both the Persian and) the Arabic writings of ʿAbd Allāh Anṣārī—those key works which played a formative role in the literary blossoming of 6th/12th-century Ṣūfism. Neither does any mention of *sulūk* occur in the oldest Persian treatise on Ṣūfism, namely the *Kashf al-maḥdjūb* of Hudjwīrī (d. 463/1071). Perhaps the earliest known usage of the term to describe the proceeding of the mystic on the Path under the supervision of a teacher is to be found in al-Ḳushayrī's *Tartīb al-sulūk* (see F. Meier, *Qušayrī's* Tartīb as-sulūk, in *Oriens*, xvi [1963], 1-39).

As an integral part of the Ṣūfī lexicon of technical terms, *sulūk* is later regularly featured throughout early 6th/12th-century mystical literature in Arabic and Persian. In his *Iḥyāʾ ʿulūm al-dīn, K. Kasr al-shahwatayn*, Bk. 23, al-Ghazālī gives a detailed description of the practical requirements of *sulūk* in Ṣūfī discipline taught to neophytes, and this mystical usage is further underlined by ʿAyn al-Ḳuḍāt Hamadhānī (d. 525/1131, the famous pupil of Abū Ḥāmid's brother, Aḥmad al-Ghazālī) in his *Tamhīdāt* (ed. ʿA. Osseiran, Tehran 1962, 71, 4) who draws a distinction between "the people of religion on the religious way" (*ahl-i dīn dar rāh-i dīn*) and "the people of spiritual conduct who follow the mystical method" (*ahl-i sulūk dar rāh-i sulūk*). According to ʿAyn al-Ḳuḍāt, *sulūk* principally relates to the "conduct" of the elect who tread the Ṣūfī *ṭarīḳa*, and is only secondarily treated as an affair of the *Sharīʿa* (which is shared in common among all Muslims). A few decades later, Ibn Munawwar in his *Asrār al-tawḥīd* (composed between 553-88/1158-92), ed. M. Shafīʿī-Kadkanī, Tehran 1987, 4, used the term in exactly the same sense to describe the saintly manner of "conduct on the course of the Ṣūfī Path" (*sulūk-i ṭarīḳ-i ṭarīḳat*) observed by the holy companions of Abū Saʿīd b. Abi ʾl-Khayr.

In the poetry of ʿAṭṭār (d. 618/1221 [*q.v.*]), an ethical dimension of *sulūk* figures prominently, referring, in a more general sense, to the mystic's "proper conduct" amongst all creatures, ranging from the lowliest ant unto the highest human being. The Ṣūfī should relate to all creation from what might be called *sulūk*'s "transcendent ecological perspective", he or she should comport him or herself with all creatures equally through viewing all beings *sub specie aeternatis*. ʿAṭṭār thus recounts how ʿAlī encountered an ant on the road which aroused in him a state of terror, and was later informed by the Prophet in a dream of the ant's exalted spiritual rank (*Ilāhī-nāma*, ed. H. Ritter, Tehran 1359 *Sh.*/1980, 54, vv. 2, 10).

Other technical taxonomies of the science of *sulūk* attempt to integrate the term into an entire programme of mystical behaviourism and spiritual pedagogy through underlining the importance of the varieties of psychological types of human beings. Despite rather strict requirements for *sulūk* in Ṣūfī spiritual discipline, scope for individual variation in "conduct"—due to contrasting types of character differentiation—is theoretically unlimited. Thus there cannot be said to exist any single, exclusively "correct" form of conduct on the Path, insofar as much divergence in "mystical procedure" is usually tolerated. Abu ʾl-Mafākhir Yaḥyā Bākharzī (d. 776/1261) thus devotes an entire chapter of his lengthy treatise on Ṣūfism, the *Fuṣūṣ al-ādāb* (ed. Īradj Afshār, Tehran 1358 *Sh.*/1979, 55-6) to the subject of the *ikhtilāf al-masālik* the "divergent ways" among the Ṣūfīs, citing some nine different approved methods of *sulūk* or Ways of spiritual conduct.

First, states Bākharzī, comes the way of the devotee: "One group base their conduct on the path of

devotion (*sulūk-i ṭarīk-i ʿibādat*), focusing their practice on water [for ritual ablutions] and the prayer niche, occupying themselves intensively with *dhikr*, supererogatory works of obedience and litanies". His categorisation continues to that of: (2) "the ascetic" to (3) "the solitary", to (4) the "itinerant traveller and voluntary exile", to (5) the way of service and charitable preference of one's Ṣūfī brethren over oneself to (6) the way of spiritual struggle, to (7) the way of self-humiliation and self-abasement before people, to (8) the way of [conscious] helplessness and weakness, and lastly, to (9) the way of teaching [religious] knowledge and keeping the company of scholars, listening to the "traditions" [of the Prophet and his companions] and preservation of knowledge. Bākharzī is careful to emphasise that each of these *sulūk* types has its own proper conditions and etiquette (*ādāb*) to be observed "exactly as the masters have taught or else the wayfarer will be halted and never reach the goal".

Perhaps the most comprehensive treatment of the entire human/divine continuum and spectrum of meanings of *sulūk* can be found in the *Risāla dar bayān-i sulūk* written by Bākharzī's contemporary and fellow Kubrāwī *shaykh*, ʿAzīz Nasafī (d. between 1281-1300, see his *K. al-Insān al-kāmil*, ed. M. Molé, Tehran-Paris 1962, 80-99).

In many Ṣūfī works, *sulūk* is contrasted, on the one hand, to "attraction" (*djadhba*) and to "spiritual travel" (*sayr*) on the other. Sometimes paired as two different polar opposites to *sulūk*, and sometimes coupled to the term for the sake of rhetorical effect, the term takes on interesting nuances:

Djadhba/sulūk. "Attraction" (*djadhba*) by God *before* undergoing *sulūk*, states Tādj al-Dīn Khwārazmī (d. 840/1436-7), "is the quality of beginners", whereas "the experience of 'attraction *after sulūk*' belongs to the most advanced and perfect adepts" (*Sharḥ-i Fuṣūṣ al-ḥikam ... Ibn ʿArabī*, ed. N.M. Harawī, Tehran 1989, 235). Maḥmūd Kāshānī (d. 735/1335) in his *Miṣbāḥ al-hidāya wa-miftāḥ al-kifāya* also describes *sulūk* as an initial stage leading to *djadhba*. Only two sorts of mystics are worthy to become guides on the Ṣūfī Path, he affirms: 1. "The 'wayfarer who later becomes an ecstatic' (*sālik-i madjdhūb*), must first traverse all the deserts and perils of the qualities of the lower passions with the feet of *sulūk*, until by grace of divine attraction (*djadhabāt*) he surpasses all the degrees of the heart and hierarchical levels of the spirit, attaining to the realm of mystical unveiling and certitude (*kashf wa yaḳīn*)". 2. "The 'ecstatic who later becomes a wayfarer' (*madjdhūb-i sālik*), who by grace of divine attraction crosses the wide expanse of the stations (*maḳāmāt*), attains to the world of unveiling and direct vision (*ʿiyān*), only later re-experiencing the stages and levels of the Path (*ṭarīḳ*) through pedestrian *sulūk*, finding the reality of his spiritual disposition in the form of knowledge. In a similar vein, al-Tahānawī (*Kashshāf iṣṭilāḥāt al-funūn/A dictionary of the technical terms used in the sciences of the Musalmans*, 686) contrasts *sulūk* with the personal "effort" (*kūshish*) of the *sālik* and *djadhba* with the fore-ordained "pull" (*kashish*) of God.

Sayr/Ṭayr/Sulūk. Contrasted with *sulūk* in Ṣūfī terminology are terms such as *sayr* ("visionary voyage") and *ṭayr* ("spiritual flight"), denoting higher degrees or levels of the same spiritual journey. The terms "*sayr* vs. *sulūk*", "flight of spiritual vision" vs. "methodical progression" on the Path belong to those popular linguistic pairs of opposites whose alliterative rhyming was manipulated to great rhetorical effect by the Ṣūfī writers. What is interesting here is not only the typological difference of *sayr* and *sulūk* but also their analogical relationship, aimed at creating an equilibrium between such apparently polar opposites. Thus Maḥmūd Kāshānī, *Miṣbāḥ*, 110, observes that "The visionary voyage (*sayr*) of lovers through the hierarchical levels of the spiritual stations (*maḳāmāt*) cannot be undertaken except by correct methodological order and graduation. As long as the lover has not fulfilled the requirements of a lower station he or she cannot attain to a higher one.... Hence no progress (*taraḳḳī*) will be made unless each station is traversed step by step in proper methodological order by following [the process of] the 'journey within' (*sayr*) and 'conduct without' (*sulūk*). Then and only then shall his conduct (*sulūk*) be transformed into divine attraction (*djadhba*) and his inner voyage (*sayr*) culminate in spiritual flight (*ṭayr*)...." The *sayr/sulūk* relationship is thus complementary rather than hierarchically distinct; instead of considering the former as a higher stage of the latter, each should be seen as depending on the other, *sayr* being the fruit of the tree of *sulūk*. Other Ṣūfīs, however, such as Nasafī, *op. cit.*, 12-13, did not discriminate between *sayr* and *sulūk* and considered them as synonyms.

Descriptions found in Ṣūfī writings of the terminus of the *maḳāmāt* of *sulūk* are unanimous on one point: the end of *sulūk* is the attainment of *fanāʾ fī ʾllāh*, annihilation of the temporal selfhood in God, and the realisation of the perfection of existential Oneness (*tawḥīd*) which pertains to the level of the "transconscious" (*khafī*). Nonetheless, the mystics varied considerably in their comportment whilst bidding "farewell to wayfaring". Some, like Tādj al-Dīn Ushnawī (d. *ca.* 610/1213) could pronounce philosophically: "This station [*fanāʾ fī ʾlāh*] is the farthest point of the *sulūk* of the wayfarers, and the ultimate desideratum of the seekers (*ṭālibān*), for beyond this station there is no wayfaring (*sulūk*), wayfaring being but a derivative part of existence (*wudjūd*), and when existence, which is the principle, is annihilated, how should the derivative ever remain?" (*Madjmūʿa-yi āthār-i fārsī ... Shaykh Tādj al-Dīn Ushnawī*, ed. N.M. Harawī, Tehran 1368 *Sh.*/1989, 93); others, such as ʿAyn al-Ḳuḍāt, in his *Tamhīdāt*, 317, voiced their realisation more stridently.

Bibliography (apart from the references already cited): ʿAlī Akbar Dihkhudā, *Lughat-nāma*, s.v. *sulūk*. As an example of typical usage of the term in mediaeval Persian Ṣūfism, see Saʿīd al-Dīn al-Farghānī, *Mashāriḳ al-darārī, Sharḥ-i Tāʾiyya Ibn Fāriḍ*, ed. Djalāl al-Dīn Āshtiyānī, Tehran 1979; *sulūk*: 61, 71, 73, 84, 166, 185, 187, 205, 209, 216, 217, 232, 234-6, 261, 274, 277, 285, 287, 306, 309, 312, 315, 340, 356, 369, 383, 395-7, 459, 476, 526, 572-3, 610, 612; *djadhba/sulūk*: 307-10; *sayr/sulūk*: 60, 72, 77, 108, 144, 147, 150, 175, 203, 261, 271, 292, 337, 380, 511, 544, 573, 590. For a somewhat idiosyncratic usage of the term in the Persian *ḥikmat* tradition, incorporating its technical Ṣūfī sense into traditional Shīʿī theosophical thought, see the Persian tract on *sulūk* ascribed to Sayyid Muḥammad Mahdī Baḥr al-ʿUlūm (d. 1212/1797), a famous Shīʿī scholar with strong Ṣūfī sympathies, *Risāla-yi sayr u sulūk-i mansūb bi-Baḥr al-ʿUlūm*, ed. S.M.Ḥ. Ṭihrānī, Tehran 1360 *Sh.*/1981.

(L. Lewisohn)

ṢUʿLŪK (A.), pl. *ṣaʿālīk*, brigand, brigand-poet and mercenary in time of need. The *ṣaʿālīk* owe their place in history mainly to their poetic talents which were without equal at the time of the *Djāhiliyya* and until the end of the Umayyad régime.

It is not at all easy to unravel the problem posed by the existence of this group, on account of the

absence of contemporary documents. On the other hand, later authors, in copying ancient texts, have replaced the original terms with those in use in their own time: the *ṣaʿālīk* mentioned by al-Balād̲h̲urī (*Futūḥ*, 310-11) become *d̲h̲uʿʿār* ("thieves") in the same text as recorded by Yāḳūt (*Buldān*, s.v. *Sīsar*).

I. *Equivalents.*

It is impossible to speak of synonyms as such; the majority of relevant terms refer to categories or certain behavioural patterns of the *ṣaʿālīk.*

Al-ag̲h̲riba or *ag̲h̲ribat al-ʿArab* ("the crows of the Bedouin") is not the equivalent of *ṣuʿlūk*; it was used to designate poets of negroid maternal ancestry. On this basis, according to the texts, the *ag̲h̲riba*/*ṣaʿālīk* poets were represented by three individuals: K̲h̲ufāf b. Nudba, al-Sulayk b. al-Sulaka and al-Ḥārit̲h̲ b. S̲h̲arīd (Hibat Allāh al-Ḥillī, *al-Manāḳib al-mazyadiyya fī ak̲h̲bār al-mulūk al-asadiyya*, ʿAmmān 1404/1984, 170). Also mentioned are *d̲h̲uʾbān* ("wolves"), *k̲h̲ulaʿāʾ* (sing. *k̲h̲alīʿ*; originally it signified one who has been disowned by his kinsmen for fear of accepting the consequences of his crimes; very soon, it acquired the meaning of *s̲h̲āṭir*, a rebel who makes a conscious decision to practise evil; al-Fīrūzābādī, *Ḳāmūs*, s.v. *k̲h̲.l.ʿ*, tells of a *fak̲h̲id̲h̲* of the ʿĀmir d. Ṣaʿṣaʿa which was nicknamed al-K̲h̲ulaʿāʾ, since they refused to submit to anyone's authority, *wa-li-annahum kānū lā yuʿṭūna aḥad^an ṭāʿat^an*), *rad̲j̲liyyūn*, *futtāk* (sing. *fātik* "killer"; cf. the hybrid *futtāk al-ʿArab*, Ibn Ḳutayba, *al-S̲h̲iʿr wa 'l-s̲h̲uʿarāʾ*, 438; al-Āmidi seems not to know the term *ṣuʿlūk* and systematically uses *fātik* in *al-Muʾtalif wa 'l-muk̲h̲talif*, Beirut 1411/1991, 70, 81), *luṣūṣ* [see LIṢṢ] ("brigands"), *s̲h̲ud̲h̲d̲h̲ād̲h̲* ("miscreants"; the word is not attested in D̲j̲āhilī and Umayyad poetry) and *al-d̲h̲uʿʿār* ("thieves").

II. Ṣaʿālīk *in pre-Islamic times.*

(1) Meanings of the term.

A discrepancy exists between the poems attributed to the *D̲j̲āhiliyya* which evoke these individuals on the one hand, and the texts which claim to sketch their biographies on the other. Rather than evoking honourable brigands, a significant number of the quotations attributed to these poets use the term in the sense of "poor" (al-Kaḥlaba Hubayra b. ʿAbd Manāf: *ʿalā l-samāḥati ṣuʿlūk^an wa-d̲h̲ā māli* "my generosity whether I be *ṣuʿlūk* or the possessor of camels" [Abū Zayd, *al-Nawādir*, Beirut 1894, 154, l. 7]); Ḥātim al-Ṭāʾi and al-Aʿs̲h̲ā make comparisons in their verses between wealth (*g̲h̲inā*) and *taṣaʿluk*, in this case, poverty (*Dīwān s̲h̲iʿr Ḥātim b. ʿAbd Allāh al-Ṭāʾī*, Cairo 1411/1990, 203, v. 15; *al-Mufaḍḍaliyyāt*, Oxford 1918-21, 342, l. 6; al-Bakri, *Simṭ*, 928, l. 7; al-Aʿs̲h̲ā, *Dīwān*, London 1928, 61, v. 16). This meaning is also attested in Umayyad poetry: it is found in the work of Aʿs̲h̲ā Hamdān (*al-Ag̲h̲ānī*[3], vi, 44, l. 6; al-Ak̲h̲ṭal, *Dīwān*, Beirut 1891, 8, l. 4; 122, l. 4). This meaning is that used in the prose texts which record pre-Islamic events, but which were put into writing at a much later date (Wensinck, *Concordance*, iii, Leiden 1955, 313b; al-Zubayrī, *Nasab Ḳurays̲h̲*, Cairo 1953, 177-8).

What remains evokes an eventful existence: the *ṣuʿlūk* tells in verse of his temerity, his solitude and the dangers he has surmounted (Ḥātim al-Ṭāʾī, *op. cit.*, 226-7, vv. 38-42; al-Sulayk b. al-Sulaka was nicknamed *al-riʾbāl* ["the lion"], T̲h̲uwaynī and ʿAwwād, *al-Sulayk b. Sulaka, ak̲h̲bāruhu wa-s̲h̲iʿruhu*, 18; al-Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, v, Jerusalem 1938, 293, l. 19; ʿUrwa b. al-Ward, *Dīwān*, Beirut 1412/1992, 48, ll. 3-6), and expresses mordant criticism of the *ṣuʿlūk* who demeans himself by accepting the crumbs thrown by wealthy *sayyids* (al-Buḥturī, *Ḥamāsa*, Beirut 1910, 127-8, § 634, al-Mubarrad, *Kāmil*, 298).

(2) The socio-tribal background.

The process of exclusion (*k̲h̲alʿ*) constituted a sentence pronounced against a fellow-tribesman guilty of a crime leading to dishonour. Such opprobrium damaged the pact instituted by *ʿaṣabiyya* [*q.v.*] ("loyalty to the group"), since it almost invariably rebounded on the tribe. Since this culpable act constituted a threat to the economic existence of the whole, impairing any enterprise where solidarity was required, the *k̲h̲alīʿ* was banished and his blood could be shed with impunity. Thus rejected, his survival was precarious; if he was fortunate he might receive *d̲j̲iwār* [*q.v.*], the protection of another tribe, but even this was a highly problematical status, the *d̲j̲ār* ("protected one") being constantly threatened by the potential loss of goods and of honour. At other times, those excluded were banished to Ḥaḍawḍā. According to Yāḳūt, this mountain is located in western Arabia; the Bedouin of the *D̲j̲āhiliyya* banished their undesirables there (*kānat al-ʿArab fī 'l-D̲j̲āhiliyya tanfī ilayhi k̲h̲ulaʿāʾaha* [Yāḳūt, *Buldān*, s.v. *Ḥaḍawḍā*]). The strongest and most determined either constituted or joined a band of brigands and became *ṣaʿālīk.* Thus Ḳays b. al-Ḥudādiyya of the Salūl b. Kaʿb b. ʿAmr (K̲h̲uzāʿa) was banished by his kinsmen for involvement in the murder of a fellow-tribesman. He gathered around himself other *k̲h̲ulaʿāʾ* and *s̲h̲ud̲h̲d̲h̲ād̲h̲*. Ḍirār b. al-K̲h̲aṭṭāb, a poet of the Banū Fihr (Ḳurays̲h̲), assembled a group of clients and rebels (*murrāḳ*); he carried out raids (*yug̲h̲īr*), practised abductions (*yusbī*) and stole camels (al-D̲j̲umaḥī, *Ṭabaḳāt fuḥūl al-s̲h̲uʿarāʾ*, Cairo 1394/1974, i, 250-1). The texts describe them by the name of *ṣaʿālikat al-ʿArab. Ag̲h̲riba* were integrated into these bands; most often, they gained admittance by shedding their own blood.

Finally, some have identified a third distinct category, that of impoverished individuals who opted for *ṣaʿlaka* in order to survive. Such was the case of Fahm, of Hud̲h̲ayl and of the brigands who gathered around ʿUrwa b. al-Ward.

(3) The activities of D̲j̲āhilī *ṣaʿālīk.*

These marginal characters conducted armed incursions and, if their poems are to be believed, they seem to have possessed to a high degree the qualities required for this type of activity (see below, 4. The poetry).

Little information survives regarding the places where the *ṣaʿālīk* operated. They were numerous, and active, in the western sector of the mountainous region of Sarāt, bordering on Tihāma, to the south of Mecca (al-Sid̲j̲istānī, *K. fuḥūlat al-s̲h̲uʿarāʾ*, Cairo 1411/1991, 121; al-Bakrī, *Muʿd̲j̲am*, i, 88); the sources mention other regions ravaged by these troublesome elements; the Sarāt of the Banū Fahm raiding the region of al-Ṭāʾif, the *diyār* of Bad̲j̲īla, the D̲j̲awf Murād in the region of Sabaʾ (*al-Ag̲h̲ānī*[3], ii, 352; *al-Sulayk*, 15, 50), Turba and Bīs̲h̲a, two regions belonging to K̲h̲at̲h̲ʿam (*Ag̲h̲ānī*; xiii, 51-2), Yat̲h̲rib and the valleys surrounding it (ʿUrwa, *Dīwān*, 62-4) and the Nad̲j̲d (al-Aʿlam al-Hud̲h̲alī and his two brothers pillaged al-Siṭāʿ, a day and a half's journey to the south of Mecca [al-Sukkarī, *op. cit.*, i, 233, 243]).

As for the targets of their plunder, camels (*amwāl*) were their prime objective. *Ṣaʿālīk* of this category were known as *k̲h̲āribs* ("camel-thief;" *wa-huwa sāriḳ al-ibil k̲h̲āṣṣa*, he is above all a camel-thief [*al-Ag̲h̲ānī*, xiii, 3]).

In other instances, they invaded agricultural regions with the object of pillage: al-Sulayk, with a gang drawn from the Taym al-Ribāb, was active in the *aryāf* (cultivated and fertile regions) around Fak̲h̲k̲h̲a

(Ibn Ḥabīb, *Mughtālīn*, 226), as were Taʾabbaṭa Sharran and Abū Khirāsh al-Hudhalī; according to ʿUrwa b. al-Ward, the booty coveted was dates (ʿUrwa, *Dīwān*, 89, v. 4). Whatever the case, whether it was camels or dates that were involved, the *ṣaʿālīk* seem to have acted with the complicity of the major tribes; ʿUrwa sold the goods obtained by theft to members of the Banu ʾl-Naḍīr; in times of drought, the latter approached him (al-Suhaylī, *al-Rawḍ al-unuf*, Cairo 1332, ii, 180).

There is very little surviving evidence regarding attacks on caravans, markets and sanctuaries. One isolated tradition relates that al-Nuʿmān b. al-Mundhir was accustomed to sending a camel laden with musk and silk (*laṭīma*) to the market of ʿUkāẓ [*q.v.*], where the merchandise was to be sold: the *sayyid* of Muḍar guaranteed him protection against attacks from the *ṣaʿālīk* (*al-Aghānī*, xxii, 57). However, indirect details are of crucial importance, alluding to a certain level of activity on the part of these brigands against caravans and markets: a tradition owed to al-Djāḥiẓ (al-Sandūbī, *min K. faḍl Hāshim ʿalā ʿAbd Shams*, Cairo 1352/1933, 70-1) testifies clearly to the importance of this menace; it is said that Hāshim imposed taxes on the chiefs (*ruʾūs*) of the tribes in order to protect the inhabitants of Mecca against attack by the *dhuʾbān al-ʿArab wa-ṣaʿālīk al-aḥyāʾ* ("Bedouin wolves and the brigands of the tribes"). Furthermore, numerous important individuals and members of the leading mercantile families of Ḳuraysh gave shelter and assistance to *ṣaʿālīk*, probably with the aim of gaining their favour and thus protecting commercial routes and merchandise; the Ḳurashī patrons most often mentioned are ʿAbd al-Muṭṭalib b. Hāshim (al-Marzubānī, *Muʿdjam al-shuʿarāʾ*, Cairo 1354, 375), Ḥarb b. Umayya (*al-Aghānī*, xxii, 56), the Banū Makhzūm (*ibid.*, xii, 49), al-Zubayr b. ʿAbd al-Muṭṭalib (Ibn Ḳutayba, *Shiʿr*, 229) and al-ʿAbbās b. Mirdās (Djawād ʿAlī, 622; Khulayf, 138-9).

Finally, certain *ṣaʿālīk* seem to have lent their services in the pursuit of vendettas and the struggles which ensued: Zayd al-Khayl appealed to the *shudhdhādh al-ḳabāʾil* to avenge him on his enemies the Banū ʿĀmir (*al-Aghānī*, xvii, 52); Zuhayr b. Djanāb al-Kalbī did the same at the time of his campaign against the Bakr and the Taghlib (*ibid.*, xxi, 96).

These activities have been diversely interpreted according to the mood of the times; the romanticism of the 19th century, although diluted, persists in current research. Some regard these brigands as socialists before their time, their acts of violence as expressions of class struggle and the financial support offered to some of the poor as socialist-inspired redistribution of wealth (Khulayf, 47, 143-4; Ḥifnī, 334-50; Djawād ʿAlī, iv, 563-5; ix, 66).

(4) The poetry.

Pre-Islam is the golden age of the poetry of the *ṣaʿālīk*, who seem to have preserved the best of the ancient poetic tradition. Besides the suspicions and doubts which are legitimately expressed concerning the authenticity of much of this material (Brahim Najar, *Madjmaʿ al-dhākira aw shuʿarāʾ ʿabbāsiyyūn mansiyyūn*, i, Tunis 1987, 47, 52-5, 66-8), serious problems of attribution are raised, but such is to be expected in dealing with archaic texts. Several parameters may be observed in the endeavour to decipher the diverse meanings of these poems.

The apologetic parameter: this poetry is often presented as an intimate journal. Here the poet tells of his life with particular emphasis on his poverty; but this is a case of poverty overcome by virtue of his endurance, his courage and his determination; this insistence on his personal qualities allows him to deploy justificatory themes and to underline his beneficent pretensions. This aspect is crucial in the poetry of al-Shanfarā [*q.v.*], of Taʾabbaṭa Sharran and of ʿUrwa b. al-Ward (*Dīwān*, 51-2, 67-70, 83). It is also a vigorous element in that of the Hudhalī *ṣaʿālīk* (al-Sukkarī, *op. cit.*, i, 315; *al-Aʿlam*, iii, 1198-1204, 1231-2, Abū Ṣakhr).

The lyrical parameter: the *ṣuʿlūk* poet, more than any other, has succeeded in endowing his discourse with sentimentality of the very highest order. The desert, its topography, its fauna and flora, have often been evoked by these poets. All of this is integrated into the theme of a journey, combining travel with a description of the desert and its toponymy and of the silence of the night; accompanied by members of his band, the poet attacks and loots. All of this is evoked with a passion seldom equalled in Arabic poetry. Having withdrawn to his *marḳaba* ("mountain refuge") for the night, close to the sky and the stars, he lords it over nature (al-Sukkarī, *op. cit.*, ii, 571, v. 24-6; ʿAmr Dhu ʾl-Kalb, iii, 1222-3; Abū Khirāsh; al-Shanfarā; al-Ḳālī, *Amālī*, ii, 119; al-Bakrī, *op. cit.*, ii, 393; ʿAmr b. Barrāḳa, i, 316; ʿAbda b. al-Ṭabīb, iii, 1012; Abū Khirāsh). In these poems, weapons are likewise idealised.

The therapeutic parameter: despite its pronounced lyrical aspect, an ambience of death usually dominates the verse of the *khulaʿāʾ*. Other taboo subjects are likewise addressed; these individuals break down all the barriers, setting ambushes, conducting raids, committing abductions. In most cases, they thoroughly enjoy this behaviour. Dangers confronted and temporary triumphs give to these characters, who are currently outside the law, a sense of power, clearly visible in the work of all the *ṣuʿlūk* poets without exception. This is in fact an artificial power. This liminal zone is by its very nature precarious. Here, the transition fails, and is absent. Implacable death lies in wait. The transitory *ṣuʿlūk* is thus doomed to a period of expiration of greater or shorter length; he succumbs or delivers himself with pleasure to a violent death. The poetry here responds to a triple need: (i) the poet thumbs his nose at death, being thus better equipped to deal with it; (ii) the poem serves as a means of surmounting the difficulties which are bound to be faced in the course of this phase; and (iii) it also enables the poet to cleave to the group which has marginalised him.

III. *The* mukhaḍramūn *and Umayyad* ṣaʿālīk.

The emergence of the new religion presented to the *ṣaʿālīk* an unexpected opportunity to improve their situation. According to Ibn Saʿd (*Ṭabaḳāt*, i, 278) the Prophet had promised to spare the lives of the brigands of Kināna and Muzayna in the region of Tihāma on condition that they converted; furthermore, they were permitted to keep all the spoils hitherto amassed. The Ḳurʾān definitely prescribes severe punishment for brigands: crucifixion, death, amputation or banishment (v, 33-4). Among the *ṣaʿālīk* who embraced Islam were Abū Khirāsh, al-Uḥaymir al-Saʿdī, Djurayba b. al-Ashyam al-Faḳʿasī, etc.

After the death of the Prophet, a situation favourable to the *ṣaʿālīk* came into being: with the *Ridda* and the major upheavals of the *fitna*, the *ṣaʿālīk*, in return for a share of the spoils, placed very valuable additional forces at the disposal of the belligerents (*Khizāna*, ii, 156-61). At the time of the Battle of the Camel, two partisans of the assassinated caliph ʿUthmān, Ḥasaka b. ʿAttāb al-Ḥabaṭī and ʿImrān b. Fuḍayl al-Burdjumī (Tamīm), had obtained the support of reinforcements

from *ṣaʿālīk al-ʿArab*; after their defeat they withdrew, still accompanied by these troops, to Sidjistān and subsequently to Zālik. Even during the period of the great conquests, bands of *ṣaʿālīk* were fighting the Byzantines under the command of their own chieftains (for example, ʿAbd Allāh b. Ṣabra al-Ḥurashī, *al-Ḥamāsa*, 239); among those who died for Islam at this time was Yazīd b. al-Sikkīl al-ʿUkaylī, otherwise renowned as a camel-thief (al-Mubarrad, *al-Kāmil*, 59). For the *ṣaʿālīk* of the *mukhadramūn*, camels were still the favourite form of booty.

(1) The Umayyad period, the great age of *ṣaʿlaka*.

Under the Umayyads, the need to consolidate a properly structured central power and to guarantee freedom of movement on roads frequented by pilgrims and caravans, induced the caliphs of Damascus to treat with the utmost severity the gangs causing instability on these routes. Henceforward they were classed as *liṣṣ*, i.e. common thieves. This term seems to have been seldom used in Djāhilī poetry to denote these outlaws; at this time, and for a certain category of brigands, it replaced *ṣuʿlūk* (Djarīr, *Dīwān*, Cairo 1354/1935, 90, v. 7, 126, v. 1; *al-Ḥamāsa*, 42, 769; al-Mubarrad, *al-Kāmil*, 454, l. 1; *al-Aghānī*, xi, 371, l. 5; Ibn Ḳutayba, *Shuʿarāʾ*, 293, l. 6, 448, l. 9). For others, few in number, the old appellation survived.

(i) The activity of these *luṣūṣ* became intensified and diversified; furthermore, their number seems to have risen in comparison with the earlier period. Organised bands took the place of freelancers and controlled certain regions. Cases which could be cited include that of Abu ʾl-Nashnāsh al-Nahshalī and his band of outlaws (*shudhdhādh al-ʿArab*) who attacked caravans on the Damascus-Ḥidjāz route (*al-Aṣmaʿiyyāt*, 124; *al-Ḥamāsa*, 156-7), that of al-Samharī b. Bishr al-ʿUklī (al-Bakrī, *Dhayl ṣimṭ al-laʾāli*ʾ, 38) and those of Mālik b. al-Rayb al-Māzinī and of Djaḥdar b. Mālik al-Ḥanafī who caused panic among travellers in the Ḥidjāz (al-Ṭabarī, ii, 178; *al-Aghānī*, xix, 163); Ṭahmān b. ʿAmr al-Kilābī (*Dīwān*, 54) was active in Yamāma; Shaẓẓāẓ al-Ḍabbī pillaged sites in the neighbourhood of Baṣra, and Muḳātil b. Rabāḥ opposed the Taghlib in Djazīra (*al-Waḥshiyyāt*, 93).

The nature of spoils was significantly diversified; these consisted primarily of the luggage of pilgrims, but also targeted were camel markets and communal pasturages such as those at Nāhik in the outskirts of Baṣra. Al-Uḥaymir al-Saʿdī deserves special mention. Alongside verses in which he boasts of his acts of depredation against herds of livestock, he is the first of the outlaw poets to evoke his assaults on merchants (*al-tudjdjār*). Accompanied by his gang, he plundered stocks of silk (*bazz*) in ʿIrāḳ, and items of streaked silk originating from Yemen (*maṭārif* [*al-Waḥshiyyāt*, 34; al-Ḳālī, *Amālī*, i, 48; al-Bakrī, *Ṣimṭ*, 1961]); luxury articles, perfumes (Ibn Ḳutayba, *ʿUyūn*, 181-2) and leatherwork are also mentioned.

(ii) The state authorities pursued policies of repression. Systematically hunted, these men disappeared, going into hiding in the remotest corners of the realm. Although their clans rejected them, the system of *khalʿ* no longer applied. The governors of the time refused to absolve the clan of its responsibilities even after repudiation; considerable pressure was applied on the collective group to hand over the outlaw, or induce him to surrender himself. Among the *khulaʿāʾ* handed over by their own kinsmen the following are mentioned: Ibrāhīm b. Hāniʾ b. Muslim b. Ḳays *alias* Yaʿlā al-Azdī, ʿUbayd b. Ayyūb al-ʿAnbarī, Masʿūd b. Kharasha al-Tamīmī and al-Ḳattāl al-Kilābī.

(iii) Certain outlaws were known as *al-ṣaʿālīk al-futtāk*. In the texts of the time, the *fātik* was an indomitable man, refusing to submit to the wielders of power (*fātik lā yuʿṭī al-umarāʾ ṭāʿa* [al-Balādhurī, *Ansāb*, v, 290]). Members of this group were opposed to the authorities and mounted armed resistance to them, not solely for the sake of financial profit. Undoubtedly, in the course of these struggles they were induced to commit acts of banditry, but neither the texts nor those in power seem to have regarded them accordingly. On the contrary, they were admired: the most illustrious name is that of ʿUbayd Allāh b. al-Ḥurr al-Djuʿfī, the most famous of all Arab heroes according to al-Djāḥiẓ. ʿAbd Allāh b. al-Ḥadjdjādj of the Ḳays ʿAylān was considered one of the finest warriors of Muḍar; he is said to have shown great courage, whether in his capacity as a member of the *ṣaʿālīk al-ʿArab* or when participating in rebellions (*kāna shudjāʿan ṣuʿlūkan min ṣaʿālīk al-ʿArab mutasarriʿan ilā al-fitani* [*Aghānī*, xiii, 158; Ibn Ḥabīb, *al-Muḥabbar*, Ḥaydarābād 1361/1942, 231]). Finally, Abū Djilda al-Yashkurī, who had taken part in the revolt of Ibn al-Ashʿath [*q.v.*], earned the same title (al-Nahshalī, *op. cit.*, 126). What is striking about these three *ṣaʿālīk* is the respect which they seem to have enjoyed on the part of the wielders of power.

(2) The poetry of the Umayyad *ṣaʿālīk*.

This is as rich in diverse resonances and as personal as that of their pre-Islamic forebears. It appears in the form of short fragments and constitutes an emotional and artistic response to a situation confronting the brigand-poet. The poetry is less cultivated and its poetic language is clear and transparent. The *ṣuʿlūk* uses it in order to stay alive, or to avoid captivity and torture, and therefore his poetic discourse needs to be easily comprehensible. Furthermore, this body of work is firmly rooted in space by means of intensive use of names of places and of water-sources, and evocation of the precise details (fauna and flora) which characterise a given environment.

The apologetic parameter. In this context, the poets stress their poverty as a justification for banditry. It might be wondered whether this is not rather a case of creative poverty, since the literary treatment of the issue is identical to that previously expressed by their Djāhilī predecessors. The Umayyad *ṣaʿālīk*, in their celebration of their tenacity and determination, are simply continuing an established tradition, although two original themes emerge within this framework: their refusal to bow in the face of official repression (al-Mubarrad, *al-Kāmil*, 118; *al-Ḥamāsa*, 30-3, 325-6, 326-7, Saʿd b. Nāshib declares his determination to continue in his way after the demolition of his home) and of the torture inflicted in prisons (al-Ṭabarī, ii, 771; al-Ḳattāl al-Kilābī, 75-7). Henceforward, themes of captivity occupy a significant place in the discourse of the brigand-poets. The 22-verse poem of Djaḥdar b. Muʿāwiya al-ʿUklī on his imprisonment brings together in a single text the entire range of humiliating punishments reserved for captives; but nothing lessens his determination to pursue his career as an outlaw (al-Ḳālī, *Amālī*, i, 281-2).

The lyrical parameter. The desert takes on an ambivalent aspect. In the work of some poets, it is described as a dreadful place infested with injurious creatures (i.e. a treatment identical to that attested in the previous era); others insist on the irresistible appeal of its vast spaces. Thus al-Ḳattāl al-Kilābī sings of the romantic space of the ʿAmāya, the protectress and mother of fugitives (*umm kull ṭarīd*); in this interminable expanse, mounted on his camel, he enjoys a liberty

which nothing and nobody can shackle (al-Ḳattāl al-Kilābī, 45).

Whether fugitives or captives, these people have memories of a place and its inhabitants, and of a time, the past. This territorial nostalgia (*al-ḥanīn ilā al-awṭān*) represents the most important contribution of the *mukhaḍramūn* and Umayyad *ṣaʿālīk* to the poetry of the period (see A. Arazi, *al-Ḥanīn ilā al-awṭān entre la Djāhiliya et l'Islam*, in *ZDMG*, cxliii [1993], 300-3). This nostalgia is all-consuming and ever-present. Yaʿlā b. Muslim al-Azdī, Yazīd b. al-Ṭathriyya, Darrādj b. Zurʿa al-Kalbī, Djaḥdar b. Muʿāwiya al-ʿUklī, al-Khaṭīm al-ʿUklī and ʿUṭārid b. Ḳarrān pine for the urban landscapes and enchanted suburban sites of their youth. Furthermore, this parameter has given to Arab culture the martyr of *ḥanīn*, Mālik b. al-Rayb al-Māzinī, who died at Ṭabasān devastated by statelessness, the memory of the abandoned hearth, of lost loves and the beloved city of Baṣra.

The therapeutic parameter. This disappears almost completely from the verses of post-Muslim *ṣaʿālīk*. The phenomenon of rejection (*khalʿ*) having become inoperative as a result of official Umayyad policy, the liminal phase itself is rendered obsolete. All is reduced to lamentation and recrimination against the clan which has surrendered them to the agents of authority. The tribe has failed them (al-Ḳattāl al-Kilābī, 39, 55, 85; *al-Aghānī*, xxi, Leiden 1305/1888, 19-25, al-Samharī al-ʿUklī).

IV. Ṣaʿālīk *in the ʿAbbāsid era*.

(1) *Ṣaʿlaka* as a sociological phenomenon.

New activities gave different connotations to the term *ṣuʿlūk*. Researchers have established equivalences between *ṣaʿālīk*, *fityān*, *shuṭṭār*, *ʿayyārūn* [see ʿAYYĀR] and *mukaddūn* [see MUKADDĪ]; and hitherto unknown synonyms also came into existence, such as *zawāḳīl* [*q.v.*]. This sudden proliferation of terms denotes a complex reality which is not always easy to disentangle.

In 132/750, Ibn Hubayra, besieged for several months in Wāsiṭ, saw his supporters gradually dwindling in number; in the end, according to a tradition attributed to Abu 'l-Sarī and quoted by al-Ṭabarī, only the *ṣaʿālīk* and the *fityān* remained loyal (al-Ṭabarī, iii, 66). This association of the two terms, which is in any case unique, seems somewhat enigmatic; it could signify either equivalence or divergence. The text suggests that what is involved here is the rabble which remained following the disengagement of warriors from the Ḳaysiyya and the Yamaniyya. On the other hand, texts of the 2nd-3rd/8th-9th centuries avoid mention of the *ṣaʿālīk*, *ʿayyārūn* and *shuṭṭār* together. The latter two have nothing in common with the *ṣaʿālīk*, being urban or suburban troublemakers; there is no question of any kind of equivalence between them, in spite of certain resemblances in matters of detail, such as a shared appetite for plunder and armed robbery.

Important texts containing precise details on the diverse activities of the *ṣaʿālīk* feature in various chronicles.

At the time of the civil war between al-Amīn and Maʾmūn, reinforcements comprising Bedouin of the desert (*aʿrāb al-bawādī*), some *ṣaʿālīk al-Djibāl* and heterogeneous elements joined the army of ʿAlī b. ʿĪsā b. Māhān (al-Ṭabarī, iii, 798). The same *ṣaʿālīk al-Djabal* (var. of Djibāl) are encountered again in a *khabar* on the armies which assembled in 213/828-9 to put down the insurrection of Bābak (al-Azdī, *Taʾrīkh al-Mawṣil*, 386); a third instance of this expression will be analysed below. The mention of Djibāl is very instructive. In the early years of the ʿAbbāsid régime, this region was swarming with *ṣaʿālīk*, who succeeded eventually in controlling the entire region as well as Sīsar [*q.v.*], the provincial capital. According to al-Balādhurī, in the reign of al-Mahdī it became necessary to send a powerful army (*djaysh ʿaẓīm*) to the place under the command of two persons of the very highest importance since they were *mawlā Amīr al-Muʾminīn*; they were charged with the task of constructing a fortified town for the accommodation of livestock, herdsmen and soldiers. The enterprise seems to have lasted some time; after the destruction of Sīsar by the *ṣaʿālīk*, the caliph sent in a permanent garrison of 1,000 men commanded by Khāḳān *al-khādim* (*Futūḥ*, 310-1; al-Hamadhānī, *Mukhtaṣar K. al-Buldān*, 239-40).

Numerous concordant indications (al-Masʿūdī, *al-Tanbīh wa 'l-ishrāf*, 361-2; idem, *Murūdj*, ed. Pellat, § 2683; al-Ṭabarī, iii, 1677-8; al-Azdī, *Taʾrīkh*, 34, 345, 385; Ibn al-Muʿtazz, *Ṭabaḳāt al-shuʿarāʾ al-muḥdathīn*, Cairo 1956, 177) confirm the impression that this term denoted quasi-military units composed of Arabs who invested a province, established themselves there and practised brigandage on a major scale, and with such success that garrisons of regular troops were unable to dislodge them. At times of civil war or armed struggle, their services were sought; they took part in operations in a mercenary capacity. On conclusion of these operations, they were expected to return to their homes.

In his homily, the *mukaddī* Khālid b. Yazīd takes pride in the fact that at one time in his life, he had been a member of the *ṣaʿālīk al-Djibāl* and of the *zawāḳīl al-Shām*. The two terms seem to be equivalents; in fact, in both cases it is a reference to seasoned Arab forces playing a dual role as mercenaries and brigands (an equivalence accepted by D. Ayalon, *The military reforms of Caliph al-Muʿtaṣim; their background and consequences*, 13-20, especially n. 32, at p. 18, *in Islam and the Abode of War*, Variorum, London 1994).

(2) Literary activity.

This disappears almost completely. New activities, the cessation of persecution and imprisonment and the acceptance of these people into respectable society seem to have dried up the wells of their inspiration. Only one poet is cited for this period, Bakr b. al-Naṭṭāḥ (d. 211/826-7); a single verse expresses some vague notions about the ideals of the outlaw (*al-Aghānī*, xix, 107), about the need to seize what one needs rather than be reduced to the status of a beggar.

Bibliography (in addition to references in the article): al-Ḳattāl al-Kilābī, *Dīwān*, Beirut 1961, 29, 33, 39, 41, 45, 51, 55, 68, 73, 75-6, 85, 184-95; Ṭahmān b. ʿAmr al-Kilābī, *Dīwān*, Baghdād 1968, 19-27, 35-40, 54, 59-62; Ibn Ḥabīb, *K. man nusiba ilā ummihi min al-shuʿarāʾ*, in *Nawādir al-makhṭūṭāt*, Cairo, i, 1392/1972, 86-7, 89, 91; idem, *Asmāʾ al-mughtālīn*, in *Nawādir al-makhṭūṭāt*, ii, 1393/1973, 215-7, 220, 226-9, 231-2, 240-3, 247-8, 250-5, 268; Ibn Ḳutayba, *ʿUyūn al-akhbār*, Cairo 1963, i, 175-8, 182-3, 237; Abū Tammām, *al-Waḥshiyyāt*, Cairo 1963, § 36-44, 50, 143; idem, *al-Ḥamāsa*, Bonn 1828; Abu 'l-Faradj al-Iṣfahānī, *Aghānī*, Cairo 1927-78; Yazīd b. (A. Arazi)

al-ṢU'LŪKĪ, the name of a family of influential legists in 4th-5th/10th-11th-century Nīshāpūr.

1. Abū Sahl Muḥammad b. Sulaymān b. Muḥammad b. Hārūn b. 'Īsā b. Ibrāhīm b. Bishr al-Ḥanafī (*nasab*^an) al-'Idjlī, al-Imām al-Ustādh. A Shāfi'ī legist during Shāfi'ism's formative period, al-Ṣu'lūkī was born in Iṣfahān in 296/908 and studied there with his father. He first "audited" *ḥadīth* at the age of 9. After studying *ḥadīth* with his father, he travelled to Baṣra in 320/932. At this time, from an account in the *Baḥr al-muḥīṭ* (i, 150), it seems he must have met and associated with the theologian Abu 'l-Ḥasan al-Ash'arī [*q.v.*]. Since Abū Isḥāḳ al-Marwazī praised his merits in his *madjlis*, and since Ibn Khallikān says that Abū Sahl was al-Marwazī's student, it appears that Abū Sahl must have gone also to Baghdād. Thereafter, he went to Iṣfahān, where he taught, and studied *fiḳh*. At some point, according to al-Sam'ānī (in al-Nawawī, 242), he also toured Khurasān, studying with various prominent figures there. He returned to Nīshāpūr at the death of his uncle Abu 'l-Ṭayyib Aḥmad—himself a prominent legist—in 337/948-9. There he spent the rest of his life until his death on 15 Dhu 'l-Ḳa'da 369/2 June 980.

Abū Sahl was acclaimed as the intellectual leader of Nīshāpūr throughout his life there. He taught *fiḳh* and *kalām* sequentially on days appointed for the topic. He refused, however, to teach *ḥadīth* until 365/975-6. He was also a poet of note (al-Tha'ālibī, iv, 483-4). He defended the doctrine of the "vision of God" (*ru'yat Allāh*) using "intellectualist" (*'aḳlī*) arguments, namely that one yearns to see God, and yearning implies the possibility of achievement (al-Subkī, iii, 172). His memory is praised by al-Marwazī, al-Ḳaffāl al-Shāshī, Abū Bakr al-Ṣayrafī, and other formative figures in speculative Shāfi'ism. He seems also to have been part of the nascent Ṣūfī movement. He was an associate of the Ṣūfīs al-Shiblī [*q.v.*] and Abū 'Alī al-Thaḳafī. He is mentioned by Abu 'l-Ḳāsim al-Ḳushayrī [*q.v.*] as an associate of al-Sulamī [*q.v.*], who reports a story of Abū Sahl's having worn a woman's garment after he gave his only *djubba* to a poor man during the winter. When summoned to ride out in welcome to some dignitaries, the commander of the army was affronted by Abū Sahl's wearing of women's dress. The measure of his asceticism may be seen in his declaration to al-Sulamī (al-Subkī, iii, 170) "I have never made a contract, I never had a lock or key, I never pocketed gold or silver at all." He seems firmly to have believed in a hierarchy of master and teacher; al-Sulamī reports that when al-Sulamī one day asked Abū Sahl, "Why? (*li-mā*)" he retorted, "Haven't you learned that anyone who asks his professor 'why?' will never succeed?" (al-Subkī, iii, 171). He also said "the disobedience to parents is effaced in forgiveness; nothing effaces recalcitrance to professors." Most biographies seem to be dependent on that of al-Ḥākim al-Nīsābūrī [*q.v.*]. The most complete biography is in al-Subkī (iii, 167, no. 138).

2. Abu 'l-Ṭayyib al-Ṣu'lūkī, Sahl b. Abī Sahl Muḥammad. He succeeded to leadership in Shāfi'ī circles in Nīshāpūr after his father's death. He seems to have been both less accomplished and more prominent than his father. It appears that his legal positions are never subsequently cited, but in his time he was not merely *muftī* of Nīshāpūr, but was addressed as "Imām", a title which he accepted. It was said also that he "gathered together leadership of this world and the next" (Ibn Khallikān, s.v.). His death date is disputed; Muḥarram 387/January-February 997 and early in 402/1011, Radjab 404/January 1014 are both cited.

SŪMANĀT, the spelling in the Indo-Muslim sources for the ancient Indian town of Somnāth, properly Somanātha "lord of soma" (the hallucinogenic drink of the early Indo-Iranians), referring to Śiva (Shiva), and, by extension, "lord of the moon". It is now an ancient ruined town on the southwestern coast of the Kāṭhīāwāṛ peninsula of western India, in what was the older Indo-Muslim sultanate of Gudjarāt [*q.v.*].

Recent excavations have revealed settlement there dating back to 1500 B.C., and Somnāth plays a part

in the story of the death of Kṛṣna (Krishna) in the *Mahābhārata*. In the 8th century A.D. Somnāth was ruled by the Čāvada Rādjputs, vassals of the Čawlukyas. Its fame in Islamic history arises from the famous attack on its temple, mounted from Multān, by Maḥmūd of Ghazna [*q.v.*] in 416-17/1015-16. The sultan desecrated the shrine and destroyed its idol, pieces of which were reputedly sent to Mecca and Medina to be trodden underfoot by the true believers; the whole event vastly enhanced Maḥmūd's reputation in Islam as the hammer of infidels. This was nevertheless essentially a plunder raid, and Kāṭhiāwāṛ reverted to Hindu control in the persons of the Vadja Rādjputs. In 697/1298, in the reign of the Dihlī Sultan ʿAlāʾ al-Dīn Khaldjī, the shrine was again sacked by the commander Ulugh Beg, but only came under prolonged Muslim control in 875/1470 when the sultan of Gudjarāt, Maḥmūd I, conquered Djunāgaṛh or Girnār from its Rādjā [see MAḤMŪD I, SAYF AL-DĪN, BEGAṚHĀ]. It was eventually conquered by the Nawwābs of Djunāgaṛh, and in British Indian times it fell within their princely state.

The modern port of Pātan-Somnāth or Somnāth-Pātan (lat. 20° 58' N., long. 70° 28' E.), on the old town site, is in Junagadh District of the Gujarat State in the Indian Union, and in 1971 had a population of 64,618, but it is now overshadowed by the adjacent port of Verāval.

SUMANIYYA, the name given to the Buddhists by several Muslim authors. In this survey, first the Arabic word will be examined, then the doctrines of the *sumaniyya* according to Muslims will be discussed, and finally the Buddhist heritage in Persia and references to Buddhists in Muslim writings will be presented.

The Arabic word is here given in its usual vocalisation, though it sometimes appears as *samaniyya*, and this is based on the information spelt out literally by al-Djawharī, *Ṣiḥāḥ*, Būlāḳ 1282/1865, ii, 283, and cited by Ibn Manẓūr (*LA*, xiii, 220a). It is now generally acknowledged that the first origins of this term are to be found in Sanskrit *śramana*, which with some phonetic modification has come to mean a Buddhist monk in the languages of Central Asia (particularly in Sogdian); it is from there that it passed into Arabic.

To all appearances it is the same word which in its form Σαμαναῖοι is found previously in Hellenistic Greek (Alexander Polyhistor, Porphyry) and as *šaman* at the end of the 3rd century in the Middle Persian inscription of Kaʿba-yi Zardusht (Gignoux, 46, 69). However, "shamanism", despite the homonymy, is derived from the Tungus word *saman/šaman*, which certainly does not come from an Indian language and has nothing to do with the *sumaniyya*.

Several doctrines have been attributed to the *sumaniyya* by the *mutakallimūn*, some of which are very vague. It was said that they were idolaters and that they believed the world was eternal. Moreover, they were accused of professing transmigration (*tanāsukh*). In this connection, al-Maḳdisī has two passages of great interest but which in reality describe a belief that is common to all Indians and not one distinctive of the *sumaniyya*. These last al-Māturīdī credits with a very remarkable theory, inasmuch as they claimed to know that the whole earth "is hurtling indefinitely into the void" (Gimaret). Al-Naẓẓām is said to have objected to this theory when he observed that if a pebble is dropped it falls to the ground; but the earth is in contrast much heavier than a pebble and therefore it would fall faster than a pebble. The conclusion is that such a pebble would never be able to catch up with the earth if it really were falling.

However, Muslim theologians regularly associate the name *sumaniyya* with another thesis, which concerns a scepticism which "limits certain knowledge to perceptible knowledge". This is the general attitude but it is in fact presented in different ways. Sometimes it comes within the scope of a debate about our knowledge of God and sets out the controversy between Djahm b. Ṣafwān [*q.v.*] and the *sumaniyya* according to two accounts with diverging purposes. On other occasions it takes on a universal value but comprising two variants, the second of which seems to be a dialectical refinement of the first. The first takes its support from given facts derived only from the five senses and is said to deny the probative power of information (*akhbār*), including the *khabar mutawātir*. The second variant, which became a recognised subject of refutation by the Ashʿarīs, essentially sees in the scepticism of the *sumaniyya* the systematic denial of the value of speculative reasoning (*naẓar*) and inference (*istidlāl*). Any conclusion from a careful study of these bookish discussions is invariably restrictive. Like the doctrines of the *barāhima* which were contrasted with them, the doctrines of the *sumaniyya* which the theologians note are most often fictitious. The presumptions made about their proponents serve to give more substance and more shame to the positions rebutted by the *mutakallimūn*, or at least by some of them.

Any traces of Buddhism within Muslim culture must be sought elsewhere. The expansion of Buddhism towards the north-west of India is an acknowledged fact but its extent has not always been recognised. Modern archaeological discoveries and recent studies of toponyms in Zābulistān, Transoxiana and Khurāsān now seem to show clearly that Buddhism "largely embraced the eastern half of the Iranian world, even if it is improbable that it was ever the exclusive religion there" (A.S. Melikian-Chirvani, in *Le Monde iranien et l'Islam*, iii [Paris 1976], 3). This Buddhist presence, which varied in intensity with place and time, lasted for about a thousand years, from the 2nd century B.C. to the 8th century. From the end of the 3rd century it dwindled in the face of the vigorous influence of Mazdaism, the state religion of the Sāsānids, at the very time when Indian Buddhism was progressively losing its impetus under the Gupta dynasty. This double evolution explains why the Muslim empire was able to eliminate the Buddhist religion rapidly from its territory, and why Muslims had hardly any contact with it in India. But the Eastern Iranian world had been experiencing a long permeation of Buddhism which could not disappear so easily. The accepted ideals and established literary and plastic aspects of Buddhist art were for centuries incorporated into the poetry and arts of Islamic Persia.

Even the name *bot* that was given to the "idol" of the poet, by which is meant the object of his affection, the "moon-face" (*māhrūy*) which describes him, his physical type in pictorial art, many other recurring details as well as the compassionate sentiment which penetrates the epic of Firdawsī, can have no other origin. The Persian word *nawbahār*, from Sanskrit *nava-vihāra*, "the new monastery", is still today the name of several villages in the region of Nishāpūr, but it has chiefly remained associated with the memory of

the great monastery of Balkh, destroyed by the Muslims in 42/663. Its superior had as his descendants the Barmecides [see AL-BARĀMIKA and NAW BAHĀR].

The last monastic sites at Bāmiyān [*q.v.*], right in the centre of present-day Afghānistān, were devasted as late as 257/871 and the two enormous faceless rock Buddhas, 53 m and 35 m high, continue to call on men silently to go beyond all external scrutiny.

The paucity of references and imprecision in Muslim writing on the subject of Buddhism can be explained from what has been mentioned previously. Yet they should not be the subjects of undue criticism. Leaving aside the theologians and their conceptual plots, genuine scholars were hindered by the proper name Būdhāsf (a corruption of the original Sanskrit *bodhisattva*). Al-Masʿūdī (*Murūdj*, §§ 535, 1371) and Ibn al-Nadīm confused it with the Buddha, and several scholars annoyingly linked it with the so-called Sabaeans [see AL-ṢĀBIʾA]. But the majority (included in *Murūdj*, §§ 1371, 1375) described the geographical area of Buddhism very correctly, and the person of the Buddha (*al-Budd*) is clearly recognised by several as the founder of the Buddhists or the *sumaniyya* [see BUDD].

Nevertheless, only two authors made any connection with Buddhism which even begins to resemble actual and doctrinal reality. One of these was al-Shahrastānī. He very clearly distinguishes the previous Buddhas, the historical Buddha and the *boddhisattva*. Then he gives the list of ten sins enumerated by the Buddhist tradition, and then the list (a little Islamicised) of the ten types of virtuous behaviour which should be acquired.

For his part, Rashīd al-Din Faḍl Allāh, in his *Djāmiʿ al-tawārīkh*, has on the subject a whole section of about thirty pages preserved in Persian and also in Arabic, and for this he went to one of the best sources, that of a Buddhist scholar who, thanks to the unprecedented situation prevailing there at the end of the 7th/13th century, came to Iran. The paths of Buddhism and Islam crossed again for several decades during the Mongol domination of Persia [see ILKHĀNS and BAKHSHI]. For the extraordinary fortunes of a Buddhist theme, including its ups and downs in several Arabic versions and several different languages, see BILAWHAR WA-YŪDĀSAF (= Būdhāsaf).

SUMATRA, after Borneo [*q.v.*] the second largest island of the Malay Archipelago and the westernmost island (area 473,606 km^2/ 182,859 sq. miles).

In pre-Islamic times, the kingdoms in Sumatra were strongly Hinduised in culture and religion (Buddhism and Śivaist Brahmanism). Islam had appeared in Sumatra by the end of the 14th century, since Marco Polo in 1292 mentions the northern Sumatran ports of Perlak (as Ferlec), Samudra (from which the name Sumatra probably derives; Marco calls the island "Java the Lesser") and Lambri, and he says that Muslim merchants had implanted the faith at Perlak (Yule-Cordier, *The Book of Ser Marco Polo*, London 1903, ii, 284 ff.). These merchants doubtless traded from Malacca [*q.v.*] in the Malay peninsula, the first great Muslim city-state of the region. Thereafter, Islam spread, especially under the impetus from the 16th century onwards from the kingdom of Aceh or Atjèh at the northwestern tip of Sumatra.

Hence see for the subsequent history of Sumatra, ATJÈH; INDONESIA. V; MINANGKABAU; and see also SUMATRA in *EI*[1]. (ED.)

AL-ṢUMAYL b. Ḥātim b. Shamir b. Dhi 'l-Djawshan al-Kilābī, lieutenant and confidential adviser to the last governor of al-Andalus before the establishment of the Umayyad dynasty, Yūsuf al-Fihrī (129-38/746-56 [*q.v.*]). Al-Ṣumayl is presented by the sources as chief of the Muḍar Ḳays faction, openly opposed to the Yemenis, in a confrontation which seems to be an accurate reflection of events in the East (see Patricia Crone, *Were the Qays and Yemen of the Umayyad period political parties?* in *Isl.*, lxxi/1 [1994], 1-57). However, as will be shown, circumstances in al-Andalus were very different and it does not seem that tribal differences played such an important role; indeed, al-Ṣumayl is seen at one moment supporting the exercise of government by a Yemeni and at another moment one of his fellow-tribesmen.

Al-Ṣumayl was the direct descendant, probably the grandson, of Shamir b. Dhi 'l-Djawshan, one of the killers of al-Ḥusayn b. ʿAlī [*q.v.*] at Karbalāʾ in 61/680. His family was obliged to flee Kūfa, its town of origin, and to settle in Ḳinnasrīn. He joined the expeditionary force sent, under the command of Kulthūm b. ʿIyāḍ [*q.v.*] to suppress disorder instigated by Berbers in North Africa. The survivors of the defeat suffered at Oued Sebou (Wādī Sabū) in 123/741 succeeded, under the leadership of Kulthūm's nephew, Baldj b. Bishr, in reaching al-Andalus. Among these al-Ṣumayl established himself, with his *djund* of Ḳinnasrīn, in the region of Jaen (Djayyān), and more specifically in the locality of Jodar (Shawdhar).

Shortly after, during the governorship of Abu 'l-Khaṭṭār al-Kalbī [*q.v.*], al-Ṣumayl took over the leadership of those opposing the policies of the *wālī*, and the latter was defeated at the battle of Guadalete (Wādī Lakka) in 127/745, by an army composed of both Muḍar and Yemen. For reasons of his own, which remain unclear, al-Ṣumayl deemed it inappropriate to take power personally, leaving this to the Yemeni Thawāba b. Salama al-Djudhāmī. But Thawāba died soon afterwards, and al-Ṣumayl engineered the appointment of a Fihrī, Yūsuf b. ʿAbd al-Raḥmān, who definitively defeated Abu 'l-Khaṭṭār at the battle of Secunda (130/747 [see SHAḲUNDA]) and retained nominal power, with al-Ṣumayl as his lieutenant and counsellor. Two years later, Yūsuf sent al-Ṣumayl to Saragossa (Saraḳusṭa) to govern the *Thaghr* or Frontier. This decision was not welcomed with alacrity by al-

Ṣumayl, representing as it did a form of disguised exile, but he accepted it without demur.

During al-Ṣumayl's residence at Saragossa, two Muḍarīs (non-Ḳaysīs), ʿĀmir b. ʿAmr al-ʿAbdarī and al-Ḥubāb b. Rawāḥa al-Zuhrī, rebelled and laid siege to the city, placing him in an almost desperate situation. He appealed to Yūsuf for assistance, but the latter being unable, or unwilling, to provide it, he had recourse to the Arabs of his own *djund* of Ḳinnasrīn and of the neighbouring one of Damascus. Although there was not total unanimity between them, they succeeded in mustering a contingent of some 400 horsemen, including around thirty Umayyad clients. More warriors joined them on the way and, on their approach, the rebels raised the siege of Saragossa, leaving al-Ṣumayl to join forces with those who had come to his rescue, with whom he returned towards Cordova. On the way, the Umayyad clients informed al-Ṣumayl of the intention of ʿAbd al-Raḥmān b. Muʿāwiya [*q.v.*] to travel through al-Andalus and appealed for his support, but he asked for time to consider.

The following spring (137/755), Yūsuf and al-Ṣumayl organised a campaign against the rebels of Saragossa, who had taken control of the city on al-Ṣumayl's departure. At the approach of the army, the inhabitants handed over the two leading insurgents, who were later to be executed. But this campaign was also the occasion of a more significant development: the Umayyads once again raised with al-Ṣumayl the question of ʿAbd al-Raḥmān b. Muʿāwiya; having initially indicated his agreement, he reconsidered and informed them that at the most he would allow the Umayyad to establish himself in al-Andalus as a privileged exile, but without any access whatsoever to power. Soon afterwards, during the return of the victorious army, came news of the landing of ʿAbd al-Raḥmān b. Muʿāwiya. Although al-Ṣumayl was in favour of a rapid reaction, giving the Umayyad no time to consolidate his strength, the fatigue of the troops persuaded Yūsuf to withdraw to Cordova, whence he sent a delegation to ʿAbd al-Raḥmān, with presents and an offer of matrimonial alliance.

But confrontation was inevitable. The Umayyad claimant and his supporters would settle for nothing less than absolute power. Taking advantage of the winter, which prevented Yūsuf and al-Ṣumayl from attacking them, they built up their army and obtained pledges of allegiance from numerous local chieftains. In the spring the two armies met near Cordova and the battle ended with the triumph of ʿAbd al-Raḥmān b. Muʿāwiya (10 Dhu 'l-Ḥidjdja 138/14 May 756) and the flight of Yūsuf and of al-Ṣumayl. Some months later, in the village of Armilla near Granada, Yūsuf and al-Ṣumayl surrendered to ʿAbd al-Raḥmān on condition that their lives and their property be guaranteed. They established themselves in Cordova, but intrigues on the part of Yūsuf's supporters induced him to make a further attempt to regain power, which led finally to his death. Although al-Ṣumayl was totally uninvolved in the rebellion, ʿAbd al-Raḥmān seized the opportunity to be rid of him and confined him to prison where he died soon after (142/759), officially as a result of excessive consumption of alcohol; there was widespread suspicion that he had been strangled on the orders of the sovereign.

Bibliography: 1. Sources. The most detailed source is constituted by the *Akhbār madjmūʿa*, ed. and tr. E. Lafuente Alcántara, 56-100, which may be supplemented by the information supplied by Ibn ʿIdhārī, *al-Bayān al-mughrib*, ii, 34-50, al-Maḳḳarī, *Nafḥ al-ṭīb*, ed. I. ʿAbbās, especially iii, 23-36, 52-3, and the *Fatḥ al-Andalus*, ed. L. Molina, 61-97, in addition to other sources for the history of the period, such as Ibn al-Ḳūṭiyya, *Taʾrīkh Iftitāḥ al-Andalus*, Ibn al-Athīr, *al-Kāmil*, *Dhikr bilād al-Andalus*, etc. Biographies of him are included in the registers compiled by Ibn al-Abbār, *al-Ḥulla al-siyarāʾ*, ed. H. Muʾnis, i, 67-8, and Ibn al-Khaṭīb, *al-Iḥāṭa*, ed. M.ʿA. ʿInān, iii, 345-9.

2. Studies. Dozy, *Histoire des Musulmans d'Espagne*, remains useful for its detailed account of events. Other general works: Levi-Provençal, *Hist. Espagne musulmane*; P. Chalmeta, *Invasión e islamización*, Madrid 1994, 335-48. On the influence of the tribal element, there are divergent opinions on the part of P. Guichard, *Structures sociales "orientales" et "occidentales" dans l'Espagne musulmane*, Paris-The Hague 1977 (Sp. version *Al-Andalus. Estructura antropológica de una sociedad islámica en Occidente*, Barcelona 1976), and M. Cruz Hernández, *La estructura social del periodo de ocupación islámica*, in *Awrāq*, ii (1979), 25-43. (L. Molina)

SUMAYSĀṬ, a mediaeval Islamic town of upper al-Djazīra, classical Samosata, Ottoman Samsāṭ, modern Turkish Samsat in the *il* or province of Adıyaman (lat. 37° 30' N., long. 38° 32' E.).

Not to be confused with Shimshāṭ [*q.v.*] (Arsamosata) further up the river to the north-east, it lies on the right bank of the Euphrates' northwards bend at an important crossing of the north-south route to Edessa or Urfa, 50 km/30 miles to the south of Sumaysāṭ, and the east-west one from Mārdīn. It may have had a bridge over the river in Antiquity, and the present village preserves Roman vestiges at least in the city walls. It was taken by ʿIyāḍ b. Ghanm in 18-19/639-40 (al-Balādhurī, *Futūḥ*, 179-80; a variant account attributes this to Abū Mūsā al-Ashʿarī), but was thereafter often endangered by Byzantine raids, e.g. in 242/856 and 245/859 (al-Ṭabarī, iii, 1434, 1447). At the time of the ʿAbbāsid revolution, it was at first defended for the Umayyads by Isḥāḳ b. Muslim al-ʿUḳaylī. Under the early ʿAbbāsids, its inhabitants were amongst those implanted at the newly-founded al-Ḥadath [*q.v.*] in 169/785-6 (see C.E. Bosworth, *The city of Tarsus and the Arab-Byzantine frontiers in early and middle ʿAbbāsid times*, in *Oriens*, xxxiii [1992], 272 ff.). Byzantine attacks intensified in later ʿAbbāsid and Ḥamdānid times until in 347/958 it was finally conquered by John Tzimisces (see Honigmann, *Die Ostgrenze des Byzantinischen Reiches*, 78, 81). It became an episcopal see and residence of the Greek *Protospatharios* of the Euphrates towns, and it was from there that Byzantine forces recaptured Edessa in 1031 (see J.B. Segal, *Edessa, the "Blessed City"* Oxford 1970, 217-18). Briefly in Saldjūḳ possession, it was then held by Armenians and was a fief of Joscelin de Courtenay's in the County of Edessa. Regained by the Artuḳids, it was seized once more from the Greeks in 546/1151 by the Rūm Saldjūḳs and then passed under Nūr al-Dīn Zangī's control followed by that of Ṣalāḥ al-Dīn. It remained a bishop's seat at least until the end of the 12th century (see J.M. Fiey, *Pour un Oriens Christianus Novus*, Beirut 1993, 263), and Yāḳūt still mentions an Armenian quarter (see his *Buldān*, ed. Beirut, iii, 258). But without its border function, it sank into insignificance by Ottoman times and became little more than a village. At the end of the 19th century, Cuinet estimated its population as 800 (*La Turquie*

d'Asie, ii, 379). After 1920 the Armenian element disappeared and the population is now largely Kurdish.

AL-**SUMAYSĀṬĪ** [see AL-SHIMSHĀṬĪ].

SUMERĀ or **SUMRĀ**, the name of a Rādjpūt tribe of Lower Sind in mediaeval Islamic times. Their origins are shrouded in mystery, but they are first mentioned in Muslim historians' account of Maḥmūd of Ghazna's return from his attack on Somnāth in 416/1026 [see SŪMANĀT]. For the next three centuries, they were the leading power in Lower Sind, but in the 8th/14th century their domination was challenged by the rival tribe of the Sammās [*q.v.*]. Despite attempts by the Tughlukid Sultan of Dihlī, Fīrūz Shāh (III), to aid the Sumerās, the Sammās finally emerged triumphant over their rivals in 752/1351. The early Sumerās may have been affected by the Ismā'īlism current in early Islamic Sind, but they do not seem to have been strong Muslims, if Muslims at all, and have left no monuments behind.

Bibliography: M. Habib and K.A. Nizami (eds.), *A comprehensive history of India. V. The Delhi Sultanate (A.D. 1206-1526)*, Delhi etc. 1970, 1118-23. (C.E. BOSWORTH)

SUMM, SAMM (A.), poison, venom, pl. *sumūm*, adj. *sāmm*, poisonous; Pers. *zahr*. *Al-sāmm* or *al-sāmma* was also a term for "death".

Sources of poison included bites or stings of venomous creatures, especially vipers and scorpions; and substances of plant, animal, or mineral origin, accidentally ingested or deliberately administered. Arabic writings on poisons concentrate largely on detecting and avoiding them, on their origins, identification, and most importantly, treatment and remedies.

Early Islam.

The poison from scorpions and snakes was recognised in pre-Islamic times, and treatment of a basic kind would be given. Other poisons must have been known and sometimes used. Several *ḥadīths* relate how after Khaybar [*q.v.*] in AH 7, the Prophet was given a poisoned sheep, of which he began to eat a piece, but spat it out because of its evil taste. Although he recovered, he said that the effects remained with him and eventually would lead to his death (Ibn Hishām, *Sīra*, Cairo 1936, iii, 532; Ibn Isḥāḳ, tr. Guillaume, 516; al-Bukhārī, *Ṭibb*, 55). According to one version, he was treated by cupping, *ḥidjāma*, the aim being to expel the poison from the blood (*al-Ṭibb al-nabawī*, 192-3, tr. 94-5).

Another *ḥadīth* states that a fly has "poison in one of its wings, and healing, *shifā'*, in the other"; here "poison" would seem to indicate infection. Another claims that to eat seven dates from Medina, in the morning, protects against poison and magic (*samm wa-siḥr*) for that day (al-Bukhārī, *Ṭibb*, 52, *Aṭ'ima*, 39, 45, 47; *al-Ṭibb al-nabawī*, 165/71). Some followers of the Prophet are said to have cured a Bedouin chief of a scorpion sting, when all the tribe's efforts had been in vain, by reciting the *Fātiḥa* (al-Bukhārī, *Ṭibb*, 33; *al-Ṭibb al-nabawī*, 241/133).

Medical writings.

(i) Non-Arabic. The Arabs derived knowledge of toxicology from the Indians, especially the book of Shānāḳ on poisons, which was translated first into Persian and later into Arabic, under al-Ma'mūn (Ullmann, *Medizin*, 324; *Islamic medicine*, 20).

Greek sources translated into Arabic include Rufus of Ephesus, *K. al-Adwiya al-ḳātila* or *K. al-Sumūm* (Sezgin, *GAS*, iii, 66-7; Ullmann, *Medizin*, 75). The Arabic version of Dioscorides contains a sixth chapter on poisons, a translation of additional material wrongly attributed to Dioscorides; this is referred to in several places by Ibn al-Bayṭār, under the name of *Mudāwāt adjnās al-sumūm*. Dubler and Terés omit this "suplemento apócrifo" from their edition (*La Materia Médica*, ii, p. vii). Galen's two works on Theriac and one on Antidotes were translated by Ḥunayn b. Isḥāḳ: *K. al-Tiryāḳ ilā Bīsun* and *ilā Bamfūliyānus*, and *K. al-Adwiya al-muḳābila li 'l-adwā'* (Sezgin, iii, 121; Ullmann, *Medizin*, 49).

(ii) Arabic writings on poisons. A work attributed to Ibn Waḥshiyya [*q.v.*], probably written in the first half of the 4th/10th century and claiming to be a translation from one al-Nabaṭī ("The Nabataean"), quotes Indian writings, and discusses in considerable detail the nature and action of poisons and also remedies, with specific and general antidotes.

A work entirely on poisons, attributed to Djābir b. Ḥayyān [*q.v.*], dates from probably the late 3rd/9th or early 4th/10th century. Sources of poison are classified: (a) animals, including gall of viper or tiger, tortoise tongue, "sea hare", Spanish flies, frogs; bites or stings of scorpion, hornet, spider, and tarantula. (b) plants, include Aconitum, *bīsh*; ergot, *ḳurūn al-sunbul*; opium, *afyūn*, extracted from hyoscyamus or henbane, *bandj*; and numerous others including hellebore, *kharbaḳ*; the Euphorbiaceae, *yattū'āt; Anamirta cocculus* or *Menospirmum c.*, known in Persian as "fish poison", *māhī zahrah; Ecballium elaterium, ḳiththā' al-ḥimār*; oleander, *diflā*; and mandragora, *luffāḥ* or *yabrūḥ*. (c) minerals, including verdigris, *zindjār*; yellow lead, *martak*; and arsenic, *shakk*.

Using the translations available, and referring to their own experience, most Arabic physicians included at least a chapter on poisons in their general medical works. The emphasis would be on treatment. The primary concern, and the first to emerge, according to al-Madjūsī, was to counteract poisons from the bites and stings of vipers and other reptiles, insects, and rabid dogs, followed by treatment for the effects of other poisonous substances (*Kāmil*, ii, 256-31). 'Alī b. Sahl al-Ṭabarī devoted a chapter of his *Firdaws al-ḥikma* to the indication of, and treatment for, various poisons, mentioning the use of a tourniquet, and cautery (445-8). This is followed by a chapter on *tiryāḳ* and compound remedies. According to Thābit b. Ḳurra, poison comes from bites or stings, or else is drunk. He refers to the Aconitum (*bīsh*, or the *Akūnītun* [*q.v.* in Suppl.]) as an example of poisons which kill "by their essence" *bi-djumlat djawharihā*. Compound poisons of mineral origin are particularly deadly, "poison of one hour", *samm sā'a*. The worst kinds are those which oppose the very constitution, *mizādj*, of the human body (*al-Dhakhīra*, 143-8).

Other prominent physicians who described poisons include al-Rāzī in the 8th book of his *K. al-Manṣūrī* and at various places in *K. al-Ḥāwī* (cf. Ullman, *Medizin*, 331). Ibn Sīnā deals with poisons in the 6th *fann* of the 4th book of the *Ḳānūn*. Maimonides wrote for al-Ḳāḍī al-Fāḍil the *Risāla al-fāḍiliyya fī 'ilādj al-sumūm wa-dhikr al-adwiya al-nāfi'a minhā wa-min al-nuhūsh*, also known as *K. al-Sumūm wa 'l-mutaḥarriz min al-adwiya al-ḳattāla* (tr. M. Rabbinowicz, *Traité des poisons*, Paris 1865; Brockelmann, I^2, 645).

Some general themes emerge from these works on poisons: (a) Classification by source. Animal or insect bite or sting; bite of mad dog, *kalb kalib*; tarantula, *rutaylāʾ*; hornet, *zunbūr*; vipers, *afāʿī*; serpents, *ḥayyāt*; substances of animal, plant or mineral origin.

(b) The action of poisons. By upsetting the humours, *akhlāṭ*, or the whole constitution (cf. Thābit); by cold or heat, etc. (ʿAlī b. Sahl al-Ṭabarī).

(c) Remedies. These may be physical: cautery, tourniquet, (*ibid.*, 445), cutting around a bite, causing emesis; or by administering medicines to counteract the poison.

Chief of these remedies was the *tiryāḳ*, which could be used as a prophylactic; one could take *tiryāḳ* regularly (Thābit, 146), or "accustom oneself to poison" and thus build up immunity (al-Ṭabarī, 448). These elaborate remedies were generally the property of kings or rulers, a famous early example being the antidote used by Mithridates VI of Pontus (120-63 B.C.), after whom the *mithrūdhīṭūs* theriac was named.

Despite all precautions on the part of individuals and the care taken by physicians, poisons were developed and used, and a number of persons are thought to have been despatched in this way. The death of the Eighth Imām ʿAlī al-Riḍā [*q.v.*] was suspected of having been caused by poison, administered in a pomegranate or in pomegranate juice. Naturally, such poisons are neither specified nor well-documented. But the attention paid to antidotes and the identification of poisons make it likely that poison played more part in the political life of the Islamic world than is generally realised.

AL-ṢUMMĀN [see AL-ṢAMMĀN].

AL-SUMNĀNĪ [see AL-SIMNĀNĪ].

SUMNŪN (or Samnūn) b. Ḥamza (or ʿAbd Allāh), Abū Bakr (or Abu 'l-Ḥasan or Abu 'l-Ḳāsim, nicknamed *al-Muḥibb* "the Lover," well-known Ṣūfī of the Baghdādī school, died 298/910-11 (Ibn al-Djawzī, *Muntaẓam* vi, 108); he was a disciple of Sarī al-Saḳaṭī [*q.v.*], Muḥammad b. ʿAlī al-Ḳaṣṣāb (d. 275/888-9), Abū Aḥmad al-Ḳalānisī (d. 270/884) and Abū Yaʿḳūb al-Sūsī (second half of the 3rd/9th century).

Sumnūn became famous for his love of God. In that, it is said, he followed his own peculiar approach and even placed the love of God above the knowledge of God (*maʿrifa*) (thus al-Ḳushayrī, 161, 9, = *Sendschreiben* 48, 16, and ʿAṭṭār, *Tadhkira*, ii, 69, -3 f.). At any rate, he has added a new, emotionally active, dimension to Sarī's idea that God, in order to measure the truth of the lovers' pretentions with their steadfastness (*ṣabr*), puts them through well-nigh unbearable trials. In the ecstasy of love, he chafes his legs down to the bare bone; he aspires to fill the whole world with his cry of love; and, finally, he challenges God to a match between Divine tribulation and human *ṣabr*. Taken up by God on his challenge with a case of urine retention, he does not pass his test with flying colours and, from that day onward, chides himself as "liar" (*al-kadhdhāb*) instead of "lover". This has, however, not affected his postumous fame negatively (al-Ḳushayrī, 23, 19-25, = *Sendschreiben*, 1.31).

With his irrepressible temperament, Sumnūn developed the heritage of his master into extreme forms of thought and behaviour in other respects, as well. Thus he advocated a remembrance of God (*dhikr*) in which everything but God is forgotten, so that all experiential moments are filled by it and one, thus, turns entirely into remembrance of God (al-Sulamī, *Ḥaḳāʾiḳ, ad* sūra II, 152; cf. also al-Sarrādj, 58, 11-12). He was also convinced that already a small part of God's forbearance would suffice on the Day of Judgment to let all evildoers join the ranks of the just. He even persuaded his master al-Ḳalānisī to match a rich person's gift of 40,000 dirhams in alms with an equal number of *rakʿas*, which they proceeded to perform together without interruption.

In general, Sumnūn was a tactful man, witty as well as modest, but also a great wielder of words, in prose as well as in poetry. A striking example is his six-line *ḳiṭʿa* in which he describes his *cognitio Dei experimentalis* (al-Sarrādj, 250, 10 ff. = *Schlaglichter*, 92.9). With regard to the love of God, he thought that it was too subtle to be described, but he knew to speak about the states and experiences of the lovers of God in such a moving way that even the dumb and inanimate creation is said to have fallen into a trance (al-Kalābādhī, 125, -8 f.; al-Ḳushayrī, 160, -17, = *Sendschreiben* 48/12). It goes without saying that, for a notorious enemy of the Ṣūfīs' "love of God" like Ghulām Khalīl (d. 275/888-9), Sumnūn's activities were a thorn in his side; they may even have been the trigger for the case he brought against the school of Sarī (al-Sarrādj, ed. Baghdād, 498-9; Hudjwīrī, 173, 3 ff.; ʿAṭṭār, ii, 71, 6 ff.; also Gramlich, *Alte Vorbilder*, i, 383 ff.).

SUMRĀ [see SUMERĀ].

ṢUNʿ ALLĀH b. Djaʿfar al-ʿImādī, Ottoman *Shaykh al-Islām* [*q.v.*], d. 1021/1612.

Born in 960/1553, the son of the *ḳāḍī ʿasker* [*q.v.*] Djaʿfar Efendi, a first cousin of Abu 'l-Suʿūd Efendi [*q.v.*], Ṣunʿ Allāh studied under Mollā Fuḍayl al-

Djamālī and afterwards under Abu 'l-Suʿūd, then *Shaykh al-Islām*, whom he served as *muʿīd* and through whom he became *mulāzim* [*q.v.*] in 977/1569-70. Because of his family connections, his first *madrasa* appointment (Ramaḍān 978/February 1571) was at the 40-*aḳčes* level. He passed through the ranks of the *madrasas* until, with his appointment to the post of *ḳāḍī* of Bursa in Dhu 'l-Ḳaʿda 998/September 1590, he entered the highest stream of learned offices, the *mewlewiyyats* [*q.v.*], in due course becoming Rumeli *ḳāḍī ʿasker* in Shawwāl 1001/July 1593. Retiring with a pension in Djumādā I 1003/early 1595, he succeeded Khōdja Efendi [*q.v.*] as *Shaykh al-Islām* in Rabīʿ I 1008/October 1599, the first of an unprecedented four occasions on which he held that post.

Ḳoči Beg [*q.v.*] notes admiringly that "though he was removed several times, he still spoke the truth and showed no compromise in the business of religion and the state" (A.K. Aksüt, *Koči Bey risalesi*, Istanbul 1939, 35); and Ṣunʿ Allāh's first two periods of office were indeed marked by contentious involvement in state matters. His first came to an end when he persuaded Meḥemmed III [*q.v.*] to order the unwilling Grand Vizier Yemishdji Ḥasan Pasha [*q.v.*] to go out on campaign, for which the latter, in revenge, secured Ṣunʿ Allāh's dismissal in Ṣafar 1010/August 1601. Brought back as *Shaykh al-Islām* in Radjab 1011/January 1603 in an attempt to mollify the *sipāhīs*, then rebelling largely because of the deteriorating situation in Anatolia resulting from the revolts of the *Djalālīs* [*q.v.* in Supplement] but also because of Ḥasan Pasha's alleged military incompetence, Ṣunʿ Allāh—sympathetic to the *Djalālīs*, and in particular to Ḳara Yazidji [*q.v.*]—issued a *fatwā* for the execution of Ḥasan Pasha but was himself ousted and forced to go into hiding (Shaʿbān 1011/February 1603) (for these events, see Naʿīmā, *Taʾrīkh*, Istanbul 1281-3, i, 307 ff.).

Having held the office twice more, somewhat less eventfully (Muḥarram 1013/June 1604 to Rabīʿ I 1015/July 1606 and Radjab 1015/November 1606 to Ṣafar 1017/June 1608), Ṣunʿ Allāh retired fully from public life with a pension of 750 *aḳčes* daily and died in Istanbul on 8 Ṣafar 1021/10 April 1612.

Bibliography: Newʿī-zāde ʿAṭāʾī, *Ḥadāʾiḳ al-ḥaḳāʾiḳ fī takmilat al-Shaḳāʾiḳ*, Istanbul 1268, 136-7, 552-7, and the references in the article.

(R.C. Repp)

SUNAN (A.), pl. of *sunna* [*q.v.*], "norm", "custom", is used separately in the literature of *ḥadīth* and *fiḳh* [*q.vv.*] as referring to several important collections of traditions and legal pronouncements (= *aḳwāl*), thus resulting in this plural being used as a generic book title of such works, as was the case with the term *Ṣaḥīḥ* [*q.v.*]. The oldest collections called *Sunan* or *Sunan fi 'l-fiḳh* have not come down to us, and are only known from references to them in a work like Ibn al-Nadīm's *Fihrist*, cf. ed. Riḍā Tadjaddud, index vol., 123, right col., such as the *Sunans* by Makḥūl (d. 112-16/730-4), Ibn Djuraydj (d. 150/767) and Muḥammad b. ʿAbd al-Raḥmān Ibn Abī Dhiʾb (d. 159/776). *Sunan* works are arranged according to the *muṣannaf* [*q.v.*] principle, i.e. separate chapters divided into paragraphs on *ʿibādāt* [*q.v.*] and *muʿāmalāt*, just as we find in *fiḳh* literature. The earliest such works available in printed editions are the pre-canonical collections by Saʿīd b. Manṣūr (d. 227/842) and ʿAbd Allāh b. ʿAbd al-Raḥmān al-Dārimī (d. 255/869). Of the six canonical Books, four are entitled *Sunan*, namely the collections of Abū Dāwūd al-Sidjistānī (d. 275/888); Muḥammad b. ʿĪsā al-Tirmidhī (d. 279/892), whose collection acquired the title *al-Djāmiʿ al-ṣaḥīḥ*; Aḥmad b. Shuʿayb al-Nasāʾī (d. 303/915), whose *Kitāb al-Sunan al-kubrā* was later abbreviated by the author in his *K. al-Sunan*, also called *al-Mudjtabā*; and Muḥammad b. Yazīd al-Ḳazwīnī Ibn Mādja (d. 273/886). Other prestigious collections known by this title and available in print are those of ʿAlī b. ʿUmar al-Dāraḳuṭnī (d. 385/995) and Aḥmad b. al-Ḥusayn al-Bayhaḳī (d. 458/1066).

Bibliography: Given in the article.

(G.H.A. Juynboll)

SUNBĀDH (also Sunfādh), Zoroastrian supporter of Abū Muslim al-Khurāsānī [*q.v.*] and leader of a rebellion seeking to avenge his death.

He originated from a village near Nīshāpūr, and is described as a man of wealth and a friend and associate of Abū Muslim. Two months after the murder of the latter by the caliph al-Manṣūr (Shaʿbān 137/February 755), he rose with the backing of Abū Muslim's followers and, according to the main historical tradition, seized Nīshāpūr. According to another, probably more reliable tradition (al-Madāʾinī), he had been stationed in Ḥulwān and from there set out for Khurāsān. Abū ʿAbda (ʿUbayda) al-Ḥanafī, the governor of Rayy, who was under orders not to allow Abū Muslim's followers to return to Khurāsān, detained him. He escaped, however, and rebelled. He defeated and killed the governor and seized control of Rayy. Returning to his Magian religion, he committed atrocities against the Muslims and adopted the title Fīrūz Ispahbadh. He seized Abū Muslim's arsenal and treasure in Rayy and sent part of it to the Dābūyid Khūrshīd, the Zoroastrian Ispahbad of Ṭabaristān, with whom he formed an alliance. His following is said quickly to have swelled to 100,000 men, coming mostly from Djibāl and Ṭabaristān. The king of the Daylamīs, to whom he wrote that the reign of the Arabs had come to an end, joined him with his men. He defeated the governors of Dastabā and Ḳūmis. Then he set out with a massive army, predicting that he would destroy the Kaʿba. But at Djardjānbān between Rayy and Hamadān, he was heavily defeated by Djahwar b. al-Marrār al-ʿIdjlī, who was sent by al-Manṣūr; 30,000 or 60,000 of his men are said to have been killed. Sunbādh fled, trying to join the Ispahbad Khūrshīd. He was killed, however, by Khūrshīd's cousin Ṭūs, allegedly because he did not show him due respect. Khūrshīd sent the heads of Sunbādh and his brother to Djahwar, but refused to surrender his treasury to al-Manṣūr. The revolt had lasted only seventy days.

According to Niẓām al-Mulk, Sunbādh told his followers that Abū Muslim had not been killed but had, by reciting the greatest name of God, turned into a white dove and flown away. He was now dwelling in a brazen castle together with the Mahdī and Mazdak. All three would soon reappear and Abū Muslim would rule with Mazdak as his vizier. When the Rāfiḍīs (Shīʿīs) and the Khurramiyya heard mention of the Mahdī and Mazdak, they joined Sunbādh in large numbers. He would tell the Khurramiyya that Mazdak had become a Shīʿī and was ordering them to make common cause with the Shīʿa. Niẓām al-Mulk's account is evident fiction designed to establish a pedigree of Mazdakite teaching and activity for the Ismāʿīliyya, whom he portrayed as a neo-Mazdakite subversive heresy. From the early reports, it is clear that Sunbādh was leader of an anti-Arab and anti-Islamic rebellion aiming at the restoration of Iranian kingship and religion, and not a sectarian chief teaching a syncretistic religious doctrine. The heresiographers, however, mention the Sunbādhiyya as the name of one of the

extremist factions which arose out of the ʿAbbāsid revolutionary movement [see KHURRAMIYYA].

SUNBŪḲ [see MILĀḤA; SAFĪNA].

AL-**SUNBULA** [see MINṬAḲAT AL-BURŪDJ].

SUNBULIYYA, in Tkish. SÜNBÜLIYYE, a mystical brotherhood derived from the Khalwatiyya [*q.v.*], which emerged and developed in the Ottoman empire from the final years of the 15th century onwards.

Its founding saint, Yūsuf Sinān b. ʿAlī b. Ḳayā Bey, nicknamed Sunbul Sinān or Sunbul (Sünbül) Efendi, was born in Merzifon (or in the region of Merzifon) *ca.* 1475-80. Having begun his studies in his region of origin, he made his way to Istanbul where he was the pupil of Efḍal-zade (d. 903/1497-8) and was associated with the *shaykh* Čelebi Meḥmed Djamāl al-Dīn, known as Čelebi Khalīfe, who was then directing the first Khalwatī *tekke*, recently founded in the Ottoman capital. On receiving the latter's *khilāfe*, he was sent to Cairo with the object of disseminating his master's teaching. Some years later, *ca.* 899/1493-4 or 903-4/1497-9, after Čelebi Khalīfe had informed him that he was performing the Pilgrimage to Mecca and hoped to meet him there, Sunbul Sinān arrived in the Holy Places, where he heard of the death of his *shaykh*, as well as his last wishes: that he should marry his daughter and succeed him as director of the *tekke* of Ḳodja Muṣṭafā Pasha in Istanbul. Thereafter, and until his death in 936/1529, he supervised this establishment which became the centre of a specific Khalwatī network, the Sunbulī one, marked by his personal influence. He was also a preacher (*wāʿiẓ*) in the prestigious mosques of Fātiḥ and Aya Sofya and enjoyed the honour of delivering the first sermon in the Selīmiyye mosque. According to Bursalı̊ Meḥmed Ṭāhir (*ʿOthmānlı̊ müʾellifleri*, i, 78), he is said to have left, besides a few *ilāhīs*, two works, the *Risālat al-Aṭwār*, concerning degrees of mystical initiation, as well as a treatise on the licit nature of *dewrān* and of *samāʿ* (*Risālat al-Taḥḳīḳiyya*, of which an abridged version exists under the title *Risālat-i Sunbul dar ḥaḳḳ-i dhikr u dewrān* (Ist. Univ. Ktp. TY 3868). This latter work must have been written when he was obliged to reply on this subject to the attacks of certain of the *ʿulamāʾ* of Istanbul.

The close links forged by Čelebi Khalīfe with the political authorities of the empire (sultan Bāyezīd had invited the *shaykh* to leave Amasya and move to the capital) and maintained by Sunbul Sinān and his successors gave added vigour to the Sunbuliyya, especially in the 16th century, with the exception of the brief and perhaps rather less favourable period of the reign of Selīm I (1512-20). In fact, leading dignitaries assisted the expansion of this Khalwatī network by founding *tekkes* for the *khalīfes* of Sunbul Efendi, following the example of the mother of the sultan Süleymān I who had built at Manisa (in western Anatolia) a complex, in which the *tekke* was directed for some time by the eminent *shaykh* Merkez Efendi (before the latter himself founded a *tekke* in the capital); the same example was set by the daughter of Selīm I, Shāh Sulṭān, who founded two Khalwatī establishments in Istanbul, or indeed by the *ketkhudā* Ferrukh Agha (Farrūkh Agha) who arranged for the construction of a *tekke* in the Balat quarter. During this "golden age" of the 16th century, the Sunbuliyya had a tendency to supplant its mother-*ṭarīḳa*, the Djamāliyya (one of the four principal branches of the Khalwatiyya) which had been founded by Čelebi Meḥmed Djamal al-Dīn, the *shaykh* of Sunbul Efendi. In Istanbul, besides the *tekke* of Ḳodja Muṣṭafā Pasha (also known as Sünbül Efendi Tekkesi), the heart of the network, eleven other *tekkes* were founded during this period. While it is true that the brotherhood had a distinctly metropolitan character, its network also extended at the same time into Anatolia and Rumelia. Its diffusion in the Asiatic provinces has yet to be studied; it is, however, known that *shaykhs* of Istanbul were sent not only to Manisa, but also to Akshehir in the region of Konya, to Čavdarlu near Kütahya and even to Amasya. As for the European provinces, two future *shaykhs* of the *āsitāne* of Ḳodja Muṣṭafā Pasha were principally responsible for the expansion of the brotherhood in certain regions: Yaʿḳūb Germiyānī (d. 979/1571-2) founded a *tekke* at Yanina in Epirus, and Ḥasan ʿAdlī (d. 1026/1617) another house at Serez (Serres) in Macedonia. Both appointed numerous *khalīfes* who guided the faithful in *zawāyā* founded in localities more or less close to these two new centres. The Sunbulī network in Rumelia also extended to cities such as Hayrabolu, Baba Eski, Edirne and Tekirdağ, and as far as the frontier regions of Hungary and Bosnia, on both sides of the Temeshwar/Sarajevo-Belgrade-axis, as well as to Kefe in the Crimea.

In the 18th century, the Sunbuliyya experienced a period of renewed expansion, especially in the Ottoman capital where more *tekkes* were founded and others affiliated to it. Until the mid-19th century, it was to remain the branch of the Khalwatiyya best represented in Istanbul, with 22 houses; only the Shaʿbāniyya [*q.v.*] was to overtake it in the last decades of the empire. Its network was one of the most durable, all the more so in that from the second half of the 17th century onwards, families of *shaykhs* were founded to head each one of these houses, forging bonds among themselves by means of marital ties. After the disintegration of the Ottoman empire and the proscription of the *ṭarīḳas* by Muṣṭafā Kemāl (Atatürk) in 1925, the Sunbuliyya witnessed the gradual disappearance of their last spiritual masters, and even though there still exist today a few individuals who adhere to Sunbulī teaching, it does not figure among the currently active brotherhoods.

In the context of doctrine and practice, the Sunbulīs insisted, as do most of the Khalwatīs, on the practice of spiritual retreat (*khalwa* [*q.v.*]), as well as on the initiation by the seven names (*al-asmāʾ al-sabʿa*). Their *dhikr* was of the *dewrān* type, performed by turning in an upright position, and this attracted criticism to which they were obliged to respond, particularly at the beginning of the 16th century, as has been seen. For their part, certain Sunbuli *shaykhs*, including Yūsuf Sinān b. Yaʿḳūb Germiyānī (d. 987/1579) and Meḥmed ʿĀmiḳī (d. after 1023/1614-15), wrote letters denouncing the heterodoxy of the Malāmī-Ḥamzawīs (cf. Abdülbakî Gölpınarlı, *Melamilik ve Melamiler*, Istanbul 1931, 74-6). It may also be mentioned that there existed a particular prayer, called *Sünbüli ṣalāti*, in the

beste form (vocal composition in four verses each followed by the same melodic passage). Sunbulī circles in Istanbul, especially those of the *tekke* of Ḳodja Muṣṭafā Pasha, were in fact very supportive of the development of Ṣūfī music. In this respect, as in other aspects of Ṣūfism and popular Islam, this house remained for centuries one of the most prestigious *tekkes*, if not the most prestigious, of the Ottoman capital. Evidence of this is the affluence, far greater than that of the other *tekkes*, which it has always enjoyed and still enjoys on the occasion of the feast of the *Āshūre* (*ʿAshūrāʾ*), 10 Muḥarram, as well as the number of visits to the *türbes* of Sunbul Efendi and his successors. In terms of costume, it should be noted that the Sunbuli *tādj* varies slightly from the other Khalwatī *tādjs* with its decidedly pointed shape.

SÜNBÜL-ZĀDE WEHBĪ (modern Tkish. Sünbülzade Vehbi), Meḥmed b. Rāshid b. Meḥmed Efendi, Ottoman poet, scholar and bureaucrat born in Marʿash [*q.v.*] probably in 1133/1718-19, died in Istanbul 14 Rabīʿ I 1224/29 April 1809, his life spanning the rule of eight Ottoman sultans, and is thought to have been buried outside Edirne Ḳapî (see Süreyya Ali Beyzâdeoğlu, *Sünbülzâde Vehbi*, Istanbul 1993, 7, 20-1).

1. Life.

The Sünbül-zāde family was a prominent one. His grandfather Meḥmed was *muftī* in Marʿash and author of several works on Islamic law. His father Rāshid (or Reshīd), also a poet and scholar, is said to have named his son after the poet and *ḳāḍī* Seyyid Wehbī (Wehb-i ewwel), as whose assistant he was working in Aleppo when Sünbül-zāde Wehbī was born.

Wehbī was educated in Marʿash, then went to Istanbul, where his writing of *ḳaṣīdas* and chronograms gained him influential patrons, securing him the rank of *müderris* [see madrasa, I, 7], then that of *ḳāḍī*, in which he was to serve for seventeen years or more in a number of locations in the Balkans, in Rhodes and al-Manisa, and with the Imperial Army in the Edirne, Sofya and Nish areas. He also served for seven years in the Ottoman scribal institution, rising to the rank of *khʷādje* [see khʷādjegān-î dīwān-î humāyūn].

In 1187/1775, early in the reign of ʿAbd al-Ḥamīd I (1774-89), Wehbī (having an excellent knowledge of Persian) was sent as envoy to Iṣfahān to investigate complaints that Karīm Khān Zand [*q.v.*] had lodged against ʿÖmer Pasha governor of Baghdād, whom Wehbī found culpable. But the governor's influence threw Wehbī into disfavour, and he went into hiding in Scutari. His well-known *Ḳaṣīde-yi ṭannāna* ("Resonant Ode"), in which he extravagantly eulogises the sultan, describes his Persian journey and ranks things Turkish high above those Persian, helped him regain ʿAbd al-Ḥamīd's favour (Gibb, *HOP*, iv, 249). Controversy, however, dogged him. While *ḳāḍī* on the island of Rhodes he supported the harsh decision to execute Shāhīn Girāy Khān [*q.v.*], and in his *Ḳaṣīde-yi ṭayyāre* ("Ode on the wing") he praised the sultan and abused the victim (*ibid.*, iv, 250). Sünbül-zāde himself claimed that his subsequent seizure and detention when serving in Stara Zagora (Eski Zaghra) was revenge on the part of Shāhīn Girāy's supporters. Others say that he and his assistant (*ketkhudā*), the poet Sürūrī [*q.v.*], had aroused the indignation of the local populace by dissolute conduct, and that they were both arrested on this account (Beyzâdeoğlu, 14-17).

Wehbī spent the last years of his life in Istanbul, reportedly writing and merrymaking but, at least in the last seven years, troubled with gout, failing sight and perhaps unsound mind.

2. Works.

Influenced especially by Nābī, Thābit (on whose poems he wrote a number of *naẓīras*) and Nedīm [*q.vv.*], Wehbī was honoured with the title *Sulṭān al-Shuʿarāʾ* "Sultan of Poets" and highly regarded as a poet by his contemporaries. Today he is not judged to have been endowed with great artistic imagination or poetic sensitivity. More than once his questionable reputation, which he did little to disavow, resulted in dismissal from appointments, and he also had financial worries (Ali Canib Yöntem, *Sünbülzade Vehbi*, in *Türk Dili ve Edebiyatı Dergisi*, i/2 [1946-7], 88-9). This resulted in a number of poems lamenting his situation and requesting help, and in 1205/1790-1 he dedicated his Turkish *dīwān* (some mss. of which include a few poems in Arabic and his small Persian collection) to Selīm III (1789-1807), whose valuable patronage he enjoyed to the end of his life. The *Luṭfiyye* is an *akhlāḳ* work, a *mathnawī* giving advice to his son Luṭf Allāh (who died of the plague within five years of its being composed). It owes much to Nābī's *Khayriyye*, and its value lies more in its contribution to social history than in its literary value. (For an interesting study of Wehbī the man, and of this work in particular, see Danuta Chmielowska, *La femme turque dans l'œuvre de Nābī, Vehbī et Vāṣıf*, Warsaw 1986, 39-48.)

Two other *mathnawīs*, the *Tuḥfe-yi Wehbī* and *Nukhbe-yi Wehbī* were educational and used for many years in Ottoman schools. The former, a rhymed Persian-Turkish vocabulary written in 1197/1783 for his son in imitation of a similar work by the 10th/16th-century writer Shāhidī, contains an introductory *mathnawī*, a series of *ḳiṭʿas* presenting the vocabulary, a second *mathnawī* on a selection of expressions (*iṣṭilāḥāt*) and and epilogue (recent ed. Numan Külekçi and Turgut Karabey, *Sünbülzade—Tuhfe*, Erzurum 1990). The second is an Arabic-Turkish counterpart. The *Shewk-engīz*, a *mathnawī* of some 775 *beyts* in the *remel* metre, features a disputation in very free language between a libertine womaniser and a pederast comparing male and female beauties and the pleasure they afford. Unable to agree on which makes the stronger case, the contenders consult a man of religion (the Sheykh

of Love) who upbraids them for knowing only carnal desire and shows them the way to pure and absolute love (see Gibb, iv, 252-4, and J. Schmidt, *Sünbülzade Vehbī's Şevk-engiz, an Ottoman pornographic poem*, in *Turcica*, xxv [1993], 9-37).

SUNDA ISLANDS, the geographical denotation of the Southeast Asian islands stretching from Sumatra to Timor and the Aru islands, first introduced by the Portuguese; divided in the Greater and Smaller Sunda Islands, the latter—and those dealt with here—beginning with Bali and stretching to the East. The name originates from Sunda or *Pasundan* (= West Java), and the Straits of Sunda between Java and Sumatra. In Indonesian, the Smaller Sunda Islands are called the *Nusa Tenggara* (Southeastern Islands).

While Bali maintained its predominantly Hindu character and only in its Western parts experienced some cultural, religious and ethnic influences from neighbouring Madura [*q.v.*] and East Java (both predominantly Islamic), in Lombok [*q.v.*] the Sasak people in the eastern part of the island were able to protect their Islamic identity. Among the islands further to the east, only Sumbawa experienced a significant impact of Islam on the history of its people. Already in pre-Islamic times, this island had been visited by trading vassals from Malacca [*q.v.*] and Java on their ways to the Moluccas. The Islamisation of its various kingdoms was, however, conducted by Makassar [*q.v.*]. This kingdom, after having been united and established as a sultanate in 1607, launched first a *djihād* against the neighbouring Buginese kingdoms and, after the surrender of the last one of them, Bone, in 1611, turned overseas to the south, where it subdued, in the course of three expeditions, the kingdoms of Sumbawa.

Except the kingdom of Sanggar, which accepted quite quickly the new religion and therefore was granted a vassal kingdom status, the other kingdoms, particularly Dompu, Bima and Sumbawa (originally only the name of the western part of the island) resisted fiercely. Sumbawa, which surrendered in 1626, was able to improve its position when, in 1650, its king married a half-sister of the *karaëng* (king) of Tallo' (Makassar). Bima gave up its resistance in 1621 when a new king ascended the throne. In 1632-3 a visiting Dutch expedition, however, found the capital city burned by the Makassarese, who thus reacted to the rebellious people who had abducted their king to an island as a protest against the newly-imposed religion. But in 1640 king ʿAbd al-Ḳāhir established himself as sultan, after having married a sister-in-law of Sultan ʿAlāʾ al-Dīn of Gowa (Makassar).

Following the military conquest of Sumbawa, some religious teachers originating from the tradition of the Javanese *walīs*, were sent via Makassar to teach Islam among the people. After the Dutch conquered Makassar in 1669, their Bugis ally Arung Palakka, becoming king of Bone in 1672, waged a series of campaigns in South Sulawesi which caused many Buginese and Makassarese to flee to other islands, including Sumbawa, where they established their own communities, sometimes with a semi-autonomous rule. In Bima they represented a large number of the populace.

In 1662 the Sultan of Bima claimed suzerainty over Sumba and Komodo, and expanded his influence to Manggarai on Western Flores. He and his successors maintained the pre-Islamic tradition which linked this place to Bhima, the third brother of the Pandavas, the heros of the Hindu epic of the *Mahābhārata*. They claimed that the royal family were their descendants. The sultan himself was considered to be ritually pure and infallible, and represented the highest, untouchable authority. The administration rested on three pillars: the administration proper, supervised by the Prime Minister, the legal department supervising the application of the (Islamic) Law, and a third department concerned with the customary or *adat* law. The sultanate of Bima remained until in 1950, when it was abolished, together with the other remaining sultanates, by the new government of the Indonesian Republic. Since independence, many Muslims originating from elsewhere in Indonesia have settled down in the whole region of the *Nusa Tenggara* as civil servants, soldiers, traders etc.

(O. Schumann)

SUNDARBAN, a thick forest region on the coastal region of the Gangetic delta mainly in the southernmost part of the present division of Khulna in Bangladesh and in the district of 24 Parganas in the West Bengal state of India. Once extending much deeper into the mainland, Sundarban bears traces of early human settlement. Non-Aryan nomad aborigines roamed in this region, who were gradually influenced by Hinduism, Buddhism (through rulers such as Dummanpal around the 12th century), and finally, by Islam. The ancient Harikela kingdom (known to Muslim geographers as Harkand, from which comes Baḥr al-Harkand, the early Arabic name for Bay of Bengal) once extended up to Sundarban. To the east, a Hindu kingdom Čandradvīpa (Deva dynasty) emerged in the 13th century, which was gradually absorbed in the Mug̲h̲al empire in the early 17th century.

It was K̲h̲ān D̲j̲ahān ʿAlī (d. 863/1459, see Mohammad Yusuf Siddiq, *Arabic and Persian texts of the Islamic inscriptions of Bengal*, Watertown, Mass. 1992, 65-7), a charismatic saintly figure and a great commander, who consolidated Islam in this region, mainly through his massive public welfare works such as roads, ponds, wells, hostels, etc. His most impressive architectural work is the S̲h̲ayk̲h̲-Gumbad Masd̲j̲id in Bagerhat, one of the biggest mosques in South Asia. Islam spread rapidly during this period as people started settling massively in the region through clearing the forest (as reflected in the names of the villages with the suffixes *kāṭī-i* and *-ābād* meaning clearing, e.g. *S̲h̲aroopkati*).

At present, it remains a vast natural sanctuary of birds, fishes and wild animals such as the famous royal Bengal tigers, deers, monkeys and crocodiles, and the largest forest region of Bengal.

Bibliography: A.F.M. Abdul Jalil, *Sundarbaner itihas*, Dhaka 1986; R.M. Eaton, *The rise of Islam and the Bengal frontier*, Berkeley 1993.

(Mohammad Yusuf Siddiq)

SUNḲUR or Sonḳor, the name of a district and of a present-day small town in western Persia (town: lat. 34° 45' N., long 47° 39' E.). It lies in the Zagros Mountains between modern Kangāwar [see kinkiwar] and Sanandad̲j̲ [*q.v.*] or Sinna, within the modern province of Kirmāns̲h̲āh.

In mediaeval Islamic times, it lay on the road between Dīnawar [*q.v.*] and Ād̲h̲arbāyd̲j̲ān, and must correspond approximately to the first *marḥala* on the stretch from Dīnawar to Sīsar, the name of which is read al-D̲j̲ārbā (al-Muḳaddasī, 382), K̲h̲arbārd̲j̲ān (Ibn K̲h̲urradād̲h̲bih, 119; Ḳudāma, 212), etc. which was 7 *farsak̲h̲s* from Dīnawar (the actual distance between the present ruins of Dīnawar and Sunḳur is, however,

not more than 24 km/15 miles). Sunḳur might therefore correspond to the district of Māybahradj (al-Balādhurī, *Futūḥ*, 310), which was detached from Dīnawar under the caliph al-Mahdī and joined to Sīsar [*q.v.*]; cf. Schwarz, *Iran im Mittelalter*, iv, 477-9. If, however, we are to recognise in the name of the Kurd tribe Payrawand (Pahrawand) a reminiscence of the old name Pahradj ("custodia, vigilia"), this tribe must have been driven westwards for it now occupies the west face of Mount Parrau (= Bīsutūn), lying to the southwest of Dīnawar (cf. Rabino, *Kermanchah*, in *RMM*, xxxviii [1920], 36).

The easy pass of Mele-mās on the line of heights from Dālakhānī to Amrula separates Sunḳur from Dīnawar. On the northeast, Sunḳur is bordered by mount Pandja-ʿAlī (Mustawfī, *Nuzhat al-ḳulūb*, ed. Le Strange, 217: Pandj-Angusht), behind which runs the direct road from Hamadān to Sanandadj. Sunḳur is watered by the upper tributaries of the river of Dīnawar, which ultimately joins the Gamas-āb (Karkha). Sunḳur in the strict sense is adjoined by the more northern district of Kulyāʾī on the upper course of the Gāwa-rūd, the western dependencies of which are Bīlawar and Niyābat (on the Kirmānshāh-Sanandadj road; cf. Rabino, *op. cit.*, 12, 35). The importance of Sunḳur lay in the fact that it was on the road followed by Muslim pilgrims from Tabrīz to Kirmānshāh; to avoid the Kurdish territory of Sanandadj the road made a detour by Bīdjār (Garrūs) and Sunḳur, from which Kirmānshāh could be reached in a day's march.

The population of the district is made up of two distinct elements. The town (1991 population figure: 37,772) is peopled by Turks, who are said to have come there in the Mongol period. Their chief Sunḳur was a vassal of the Mongols of Shīrāz (?).

The district, on the other hand, is inhabited by Kurd agriculturists whose chiefs belong to the tribe of Kulyāʾī. The Khāns in control there until the early 20th century were said to be the descendants in the eighth generation from Ṣafī Khān who lived in the time of the latter Ṣafawids. In 1213/1798, ʿAlī Himmat Khān and his brother Bābā Khān (of the Nānakalī tribe) supported the pretender Sulaymān Khān and were executed by Fatḥ ʿAlī Shāh (Sir Harford Jones Brydges, *History of the Kajars*, London 1833, 58-9, 67). The Kulyāʾī speak a Kurd dialect resembling Kirmānshāhī and are suspected of Ahl-i Ḥaḳḳ [*q.v.*] religious tendencies.

(V. Minorsky*)

SUNNA (a. pl. *sunan*; see above, s.v. sunan, for a different connotation), an ancient Arabian concept that was to play an increasingly important role during the formative centuries of Islam, acquiring a range of interrelated nuances. Eventually, some time after the preaching of Islam had begun, the term *sunna* came to stand for the generally approved standard or practice introduced by the Prophet as well as the pious Muslims of olden days, and at the instigation of al-Shāfiʿī, the *sunna* of the Prophet was awarded the position of the second root (*aṣl*) of Islamic law, the *sharīʿa*, after the Ḳurʾān. Not long after that, *sunna* came to stand for the all-encompassing concept orthodoxy, which is still in use today. Out of this there grew the dichotomy between Sunnī (orthodox) and Shīʿī (heterodox) Islam. During the first three centuries of Islam, the term *sunna*, standing alone or in various genitive constructions with other words, displays an evolution in meaning which will be sketched in more detail in the following. For the technical *sharīʿa* term, see 2. below.

1. In classical Islam.

In the *Djāhiliyya*, the concept *sunna* originally stood for a way or manner of acting, whether good or bad, hence (dis)approved custom or norm of previous generations, *al-awwalūn*, cf. esp. Bravmann, in *Bibl.* The verbs used for laying down a *sunna* are *sanna* and *istanna*. During the 1st/7th century when, after the death of Muḥammad, the Muslim community was ruled first by the *khulafāʾ rāshidūn* and then the Umayyads, the term *sunna* was used in debates on legal and ritual issues to indicate any good precedent set by people of the past, including the Prophet. Moreover, various pre-Islamic *sunnas* were accepted into Islam with or without modification. In certain ancient texts, the term was occasionally also used for any bad or indifferent precedent. It turned up in political debates too, for which see further down.

During Muḥammad's lifetime and immediately after that, when faced with problems to solve, people reminded each other in their discourse (*ḥadīth*) of how the Prophet and his first faithful followers had acted under particular circumstances. This resulted in an as yet unstructured, oral transmission of more or less correctly remembered practices and customs, *sunnas*. Towards the end of the 1st/7th century, when the need thereto arose, these memories began to be transmitted in a more standardised manner after the introduction of a newly-developed authentication device, the *isnād* [*q.v.*]. The first reports (*ḥadīths*) of *sunnas* that eventually found their way to one or more of the *ḥadīth* collections compiled in the course of the 2nd/8th century and later, originated in the final quarter of the 1st/7th century.

Recent *isnād* analytical research has established that, initially, these first *sunnas* were on the whole few and disparate. Next to *ḥadīths* of *sunnas* supported by *isnāds* that allegedly went back all the way to the Prophet, which in other words were *marfūʿ* [see rafʿ. 2], there circulated hordes of other ones whose *isnāds* ended in a Companion, the *mawḳūf* strands, or even a Successor [see mursal]. These three types of *sunna* reports existed side-by-side and were supposed to register more or less faithfully what the pious forebears, *al-salaf al-ṣāliḥ*, during and since the lifetime of the Prophet had said or done. But the Companion reports, as well as the Successor reports, did not necessarily contain opinions exclusively modelled on what the Prophet was supposed to have decided in a given situation, but often represented what these authorities thought about a particular issue themselves. They were the *fuḳahāʾ*. Rather than basing themselves all the time upon a pious practice attributed to someone from the past, they sometimes preferred to exercise their own judgment, their *raʾy*, and their personal opinions, *ārāʾ*, were occasionally also granted the status of *sunna*. Personal *ad hoc* problem-solving, without recourse to precedent, developed alongside searching for precedents, for which the general term *ʿilm*, lit. knowledge, was used. Thus *ʿilm* consisted of *sunnas* which had originated at the hands of pious forebears and which were eventually moulded into *ḥadīths*. *ʿIlm* seekers, *ʿulamāʾ* (pl. of *ʿālim*), were often antagonistic towards those who resorted to their *raʾy*, the *ahl al-raʾy*, and this gave way to an ongoing dialogue, or bitter dispute, between, on the one hand, a basically religious, precedent-centred point of view and, on the other hand, a somewhat secular stance with, according to some *ʿulamāʾ*, far too little religion mixed in with it.

It is clear that, at least during the first three centuries of Islam, *ḥadīth* and *sunna* cannot be equated

but are just related concepts. The former is the initially orally transmitted and later written registration of, among other things, the revered practice of the pious forebears, with at their head the Prophet and the earliest Muslims, while the latter is an abstraction which encompasses the revered practice of anyone of the past, although despised or indifferent practices are also occasionally referred to with the term. At the turn of the 1st/7th century, the Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz (d. 101/719-20 [*q.v.*]) was allegedly the first to single out the *sunna* of the Prophet among the *sunnas* of others. Thus it happened that, after *ḥadīth* had begun to comprise a sizeable number of *sunnas* supposedly introduced increasingly often by the Prophet rather than by the *khulafāʾ rāshidūn* or other well-known Companions, the concept *sunna* began to shed its broad meaning of "any precedent" and the connotation "any laudable precedent" started to prevail.

But *sunna* as a more vague concept did not die out. Moreover, next to the term emerging in debates on legal and ritual issues, it played a significant part in the political discussions of the 1st/7th century. When the confrontation between ʿAlī b. Abī Ṭālib and Muʿāwiya b. Abī Sufyān [*q.vv.*] at Ṣiffīn (37/657 [*q.v.*]) was concluded with an arbitration agreement, the *kitāb Allāh* and *al-sunna al-ʿādila al-djāmiʿa ghayr al-mufarrika*, i.e. the Book of God and the just *sunna* that unites rather than disperses, had to be consulted in order to find a solution for the dilemma that had arisen. *Sunna* in this document refers to the still broad term: the approved practice in political and administrative matters instituted by the leaders of the past (synonymous in fact with *sīra* [*q.v.*], cf. Bravmann in *Bibl.*), and the substitution of the term *sunna* in one version of this agreement by the genitive construction "the *sunna* of the Prophet" is a spurious, later interpolation, cf. the penetrating analysis of Martin Hinds in his *The Ṣiffīn arbitration agreement*, in *JSS*, xvii (1972), 93-129. It has to be stated that, in the earliest extant Islamic documents in which the term *sunna* crops up frequently, one must always reckon with the possibility that the equation of *sunna* with *sunna* of the Prophet was achieved at the hands of anonymous transmitters or copyists through—in many cases—no longer traceable interpolations of the genitive "of the Prophet". That this is the case can often be shown by carefully collating the various versions in which these documents have come down to us.

Towards the end of the 2nd/8th century, the jurist al-Shāfiʿī (d. 204/820 [*q.v.*]) began to throw new light on the position of the *sunna* of the Prophet, in preference to that of any ancient authorities. He came to consider it the second most important root of Islamic jurisprudence after the Ḳurʾān, hence his predilection for *sunnas* recorded in *ḥadīths* that were *marfūʿ*, i.e. whose *isnāds* went all the way back to Muḥammad. Thus *al-sunna* began to be felt as tantamount to *sunnat al-nabī* "the good example of the Prophet"; that is what most texts that were written during and after al-Shāfiʿī's lifetime convey. For a survey of the reception in later years of al-Shāfiʿī's ideas on *sunna*, see Wael B. Hallaq, *Was al-Shāfiʿī the master architect of Islamic jurisprudence?*, in *IJMES*, xxv (1993), 587-605.

Although the term *sunna* occurs a number of times in the Ḳurʾān, it refers nowhere to the exemplary example of the Prophet or his contemporaries, but mostly to the manner in which God chose to deal with the peoples of old who rejected the conversion endeavours of prophets sent to them. In early *tafsīr* literature there are no attempts to equate certain terms from scripture with *sunna* or *sunnat al-nabī* either. It was al-Shāfiʿī who was the first to try and link up an important Ḳurʾānic term with *sunna*, in an attempt to provide scriptural evidence for his insistence that *sunna* should be equated automatically with *sunnat al-nabī*. The word chosen by him was *ḥikma* "wisdom", but even after his lifetime this identification does not seem to have caught on with other jurists. And, finally, the verse that comes to mind most readily as offering a good opportunity for tracing the concept *sunna* of the Prophet and/or that of his faithful followers in the Ḳurʾān, namely XXXIII, 21, "You had in the Messenger of God a perfect example, etc.", was not even hinted at by al-Shāfiʿī in his *Risāla*. It is Aḥmad b. Ḥanbal (d. 241/855 [*q.v.*]) who mentions the verse (cf. his *Musnad*, ii, 15 = ed. A.M. Shākir, no. 4641) in connection with *sunna*. Identification of the traditionist responsible for the gloss in which the verse is cited as pertaining to the *sunna* of the Prophet has as yet proved fruitless. The only person for whom a case could conceivably by made is Sufyān b. ʿUyayna (d. 198/813), cf. al-Mizzī [*q.v.*], *Tuḥfat al-ashrāf*, vi, no. 7352.

The relationship of Ḳurʾān and *sunna* has long been a matter of debate, formulated in the question of whether a *sunna* could abrogate a Ḳurʾānic verse. It has always been realised in Islam that the Ḳurʾān was more in need of elucidation, e.g. through *sunnas*, than that *sunnas* required explanation from scripture. Even so, the debate was couched in cautious terms, lest a *sunna*, which is after all a custom instituted by man, was too readily taken to be capable of abrogating scripture—which is after all of divine origin—or modified the Ḳurʾān's *prima facie* interpretation. In the first chapter of the *Sunan* of al-Dārimī (d. 255/869 [*q.v.*]) a number of traditions and opinions on *sunna* vis-à-vis the Ḳurʾān are listed. The statement: *al-sunna ḳāḍiyat*[un] *ʿalā ʾl-Ḳurʾān wa-laysa al-Ḳurʾān bi-ḳāḍ*[in] *ʿalā ʾl-sunna* (i.e. *sunna* may determine the Ḳurʾān but not vice-versa) is ascribed to an early authority but is probably al-Dārimī's own handiwork, cf. i, 153, no. 587.

The term *sunna* emerges also in the dogmatic-political discussions among the doctors of theology, the *mutakallimūn*; see ʿILM AL-KALĀM. During the time that these disputes of, for example, adherents of the Ḳadariyya, Murdjiʾa, Rāfiḍa or Muʿtazila [*q.vv.*] with their opponents occupied increasingly large numbers of theologians from the middle of the 1st/7th century until after the *miḥna* [*q.v.*], the so-called "inquisition" instituted by the ʿAbbāsid caliph al-Maʾmūn, which ended in 234/848, the *ḥadīth* people or *ahl al-ḥadīth* [*q.v.*], busily searching for *sunnas*, were out of their depth and constituted no match for them. Among these theologians they even acquired the derogatory nickname *ḥashwiyya* [*q.v.*] lit. "those that stuff", predominantly because of their credulity in respect of certain traditions, which they collected alongside *sunnas*, containing anthropomorphic descriptions of God [see also NĀBITA]. On the other hand, the ranks of *sunna* seekers were swollen by large numbers of traditionists suspected and/or accused of harbouring one or more of these innovative dogmatic ideas (*bidʿas* [*q.v.*]), but as long as they did not propagate them in their traditions by slipping such ideas into the reports they were instrumental in transmitting, they were on the whole tolerated. In retrospect, it can be surmised that, if the *ahl al-ḥadīth*, while transmitting *sunnas*, had shunned the participation in this activity of all those known to harbour a predilection for one or more of those *bidʿas*, they would have been so few

in number that the total bulk of what became known as Islam's canonical *ḥadīth* would have attained a mere fraction of its present size.

So traditions containing descriptions of *sunnas* gradually multiplied. This growth may in part be due to a *ḥadīth* ascribed to the Prophet, but for the wording of which the Baṣran *muḥaddith* Shuʿba b. al-Ḥadjdjādj (d. 160/776 [*q.v.*]), who is the undeniable common link of its *isnād* bundle, may be held responsible: "He who introduces in Islam a good *sunna* will be given the ensuing merit and the merit accruing to all those who practise/adopt it after him, but he who introduces in Islam a pernicious *sunna* will have to carry its burden and that of those who practice/adopt it after him", cf. al-Mizzī, *Tuḥfat al-ashrāf*, ii, no. 3232. Shuʿba need not necessarily be assumed to be the first person to have thought of this saying, for it may be considered to have been foreshadowed in a differently worded tradition, without the crucial term *sunna*. On the basis of its *isnād* bundle, that tradition can safely be ascribed to al-Aʿmash (d. 147-8/764-5 [q.v.]), incidentally an alleged sympathiser of the Shīʿa(!) from Kūfa, who transmitted it to, among others, his junior *ḥadīth* colleague Shuʿba: "He who draws attention to a good (practice), he will enjoy the same reward as those who adopt that (practice)," cf. al-Mizzī, *ibid.*, vii, no. 9986. Traditions in this vein became numerous (cf. al-Tirmidhī, *al-Djāmiʿ al-ṣaḥīḥ*, ed. A.M. Shākir *et alii*, v, 41-5) but, judging by their *isnāds*, all these originated much later than al-Aʿmash and Shuʿba.

Be that as it may, the adherents to the *sunna*, or *ahl al-sunna* as they were increasingly often called, were thought of during the heyday of theological disputes as living in concealment, as strangers in their own home, that is in any case how al-Ḥasan b. ʿAlī al-Barbahārī (d. 329/941 [*q.v.*]), the author of an early Islamic creed, expressed it, cf. Ibn Abī Yaʿlā, *Ṭabaḳāt al-Ḥanābila*, ii, 29, ll. 2-6. The appellative *ahl al-sunna* is found already in a well-known early statement on the origin of the *isnād* requirement attributed to the Baṣran *muḥaddith* Ibn Sīrīn (d. 110/728 [*q.v.*]). This man yielded to Islam's indomitable tendency to divide society up into categories, e.g. *ahl al-* ..., *aṣḥāb al-* ..., or formed by attaching a feminine *nisba* ending to the name of a person associated with a controversial doctrine, long before this alleged group formation constitutes a historically plausible description of the actual situation, if ever. Thus Ibn Sīrīn divided the people of his days into two categories, the *ahl al-bidʿa* or *ahl al-bidaʿ* and the *ahl al-sunna*. The latter appellative became later, to be more precise at the earliest as from the beginning of the second half of the 2nd/8th century and more especially after the suspension of the *miḥna*, that of the orthodox in Islam. Various contemporary sources convey the impression that they began to constitute the majority in Islam only *after* the theological squabbles culminating in the *miḥna* had been decided in favour of Ibn Ḥanbal, its most notorious victim. His influence spread rapidly thereafter and he became in the eyes of the public the centre of the henceforth steadily multiplying *ahl al-sunna*.

One individual from among the *ahl al-sunna* was called a *ṣāḥib sunna*. Probably the earliest definition of a *ṣāḥib sunna* is attributed to Ibn al-Mubārak (d. 181/797 [*q.v.*]), a *muḥaddith* well-known for his travelling *fī ṭalab al-ʿilm*, i.e. in search of traditions containing *sunnas*, all over the eastern Islamic world and for his conviction that "... the *isnād* is part of the religion for otherwise everybody would be free to say whatever he wanted," a conviction that can be viewed as typical of a man who is among the first theoreticians of the *ahl al-sunna*. His definition of *ṣāḥib sunna* is found embedded in al-Barbahārī's creed which is quoted in Ibn Abī Yaʿlā's *Ṭabaḳāt al-Ḥanābila*, ii, 40, ll. 11-20. This definition may at the same time be considered as a concise creed of Islam as a whole and constitutes in fact a polemic against the *ahl al-bidaʿ*, based upon a famous *vaticinatio post eventum* couched in the *sa-taftariḳu* tradition. It foretells that the Islamic community will be torn asunder into 73 factions, only one of which, the *ahl al-djamāʿa*, will eventually attain salvation, the 72 other factions ending up in Hell. The appellative *ahl al-djamāʿa*, lit. "the people of the community," is a well-known alternative of the appellative *ahl al-sunna wa 'l-djamāʿa*, an early, mainly political, designation of one of the warring parties at Ṣiffīn mentioned above. This designation survived in a number of biographical notices devoted to 2nd/8th and 3rd/9th century traditionists who were labelled as *ṣāḥib sunna* or *ṣāḥib sunna wa-djamāʿa*. The prophetic tradition which contains the said *vaticinatio* had recently been brought into circulation. The numbers 1:72 may very well be considered as reflecting a symbolic, albeit somewhat hyperbolic, approximation by the *ahl al-sunna* of their own limited numbers, vastly outnumbered as they initially were by the *ahl al-bidʿa*. Only in the course of the second half of the 2nd/8th century does the number of people, who are provided in the biographical lexicons with the label *ṣāḥib sunna*, show a marked increase.

Beside the collective *ahl al-sunna*, *ṣāḥib sunna* has two plurals, *aṣḥāb sunna* and *aṣḥāb al-sunan*, lit. "people of *sunnas*." On the basis of the latter plural, one may be forgiven for being struck by the coincidence that the majority of *ḥadīth* transmitters found in the biographical lexicons as being described by the term *ṣāḥib sunna* emerge at the same time as prolific common links, each responsible for (the wording of) a number of traditions listed in the canonical collections. Viewed from that angle, the plural *aṣḥāb al-sunan* permits of the connotation "originators of *sunnas*." Some time later, in the course of the 3rd/9th century, one finds increasingly frequently the word *sunnī*, plural *sunniyyūn*, being used for members of the *ahl al-sunna*. As an investigation of the biographical data on a number of transmitters labelled *ṣāḥib sunna* makes clear, the appellatives *ṣāḥib sunna* and *ṣāḥib ḥadīth* are by no means mutually interchangeable. Many belonging to the first category had their handling of traditions frowned upon, some were even accused of *kadhib*, i.e. mendacity in *ḥadīth*, while many belonging to the second were known for their support of one or more *bidʿas* (cf. Juynboll, in *JSAI*, x, in *Bibl.*). But with the multiplying of Muslims defined as orthodox, *sunna* and Islam came eventually to be felt, by some at least, as virtually synonymous, as is witnessed in the remark of the pious Bishr b. al-Ḥārith (d. 227/842, cf. *TT*, vii, 67-80): *al-sunna hiya 'l-islām wa 'l-islām huwa 'l-sunna*, i.e. *sunna* and Islam are in essence identical, cf. Ibn Abī Yaʿlā, i, 41, ult. In the writings of Abu 'l-Ḥasan al-Ashʿarī (d. 324/936 [*q.v.*]) the orthodox of Islam finally found their niche. In his *Maḳālāt*, appellatives like *ahl al-sunna* alternate with *ahl al-djamāʿa* as well as several other genitive constructions. Curiously, probably as a consequence of the ever expanding influence of a growing *sunnī* faction, the appellative *aṣḥāb al-islām* in this source seems to have a wider range of meaning, comprising next to the *sunniyyūn* an assorted number of people from heterodox denominations, which may differ in each occurrence of the term and are more often than not left unspecified. It

is as if in this—as it were—tolerant stance the definitive defeat of the *ahl al-bidʿa* is reflected now that the *ahl al-sunna* had started to constitute everywhere the majority. For a survey of the Sunnī creed which is still in force today, see ʿAKĪDA. From the 4th/10th century onwards, the term *sunna* did not acquire new connotations or nuances.

2. As a technical term in the *sharīʿa*. Various customs, legal injunctions and a host of (mostly supererogatory) ritual prescriptions etc. received in the course of time the predicate *sunna*. This labelling is not supposed to indicate that the issue was due to the Prophet or the people of old, but is rather meant to express the desirability to adopt or practise it. On the scale of qualifications developed in Islamic jurisprudence, ranging from absolutely compulsory via indifferent to strictly forbidden, the so-called *aḥkām khamsa*, *sunna* came to be used in the second grade of desirability following compulsory and more or less synonymous with *mandūb* [*q.v.*] and *mustaḥabb* [*q.v.*], all three indicating "recommended". Anyone observing a rule labelled *sunna* will be awarded, but neglecting it will not automatically entail punishment.

3. In the modern Islamic world. *Sunna* has become the central point of debate in modern Muslim discussions of religious authority. Controversy centres on three issues:

(i) *The authenticity of* ḥadīth. In the 19th century, Sayyid Aḥmad Khān and Muḥammad ʿAbduh [*q.vv.*] began to express doubts about the authenticity of the *ḥadīth* literature (Aḥmad Khān, *Maḳālāt*, i, 25-9, 48-9, ii, 187, 190, 363-8, 419; ʿAbduh, *Risālat al-Tawḥīd*, 223). In the early 20th century, the doubts of these modernists gave way to dogmatic rejection of *ḥadīth* among the Ahl-i Ḳurʾān of Lahore and Amritsar. Anti-*ḥadīth* views were elaborated by Aslam Djayrādjpūrī, Ghulām Aḥmad Parwīz and Ghulām Djīlānī Barḳ, and independently by Maḥmūd Abū Rayya in Egypt. These authors, labelled *munkirīn-i-ḥadīth* by their opponents, argued that traditions were not collected in writing until the 9th century; oral transmission of *ḥadīth* is untrustworthy; forgery of *ḥadīth* rendered the collections irredeemably corrupt; and *ḥadīth* criticism was inadequate to sift authentic traditions from forged. Conservative scholars have responded with a vigorous campaign in defence of *ḥadīth* (e.g. al-Sibāʿī, *al-Sunna wa-makānatuhā*, Cairo 1961).

(ii) *Prophetic authority*. Čirāgh ʿAlī and ʿAlī ʿAbd al-Rāziḳ limit prophetic authority to spiritual matters, implicitly rejecting much of *sunna*. The Ahl-i Ḳurʾān held that Muḥammad's activity as prophet was limited to the Ḳurʾān; his other actions are not binding on later generations. An Egyptian, Muḥammad Tawfīḳ Ṣidḳī, voiced similar arguments, but Rashīd Riḍā [*q.v.*] pressured him to recant (*Manār*, ix [1906], 515-24, x, 140). Riḍā himself argued for the subordination of *sunna* to the Ḳurʾān, and he has been followed by some revivalists (*Manār*, xii, 693-9; Muḥammad al-Ghazālī, *al-Sunna al-nabawiyya bayna ahl al-fiḳh wa-ahl al-ḥadīth*, Cairo 1989). Other revivalists limit the scope of prophetic authority by distinguishing human activities of Muḥammad from divinely-inspired prophetic *sunna* (Mawdūdī, *Tafhīmāt*, [16]Lahore 1989, 98-113).

(iii) *The relationship of* sunna *to* ḥadīth. Seeking to salvage *sunna* from the ravages of *ḥadīth* criticism, S.M. Yusuf and Fazlur Rahman defined *sunna* as the *idjmāʿ* of the early Muslims, reflected in *ḥadīth*, not derived from it (Rahman, *Islamic methodology in history*, Karachi 1961, 6, 18; S.M. Yusuf, in *IQ*, xxxvii [1964], 271-82, xxxviii [1964], 15-25). *Ḥadīth*, while not strictly historical, represents "the interpreted spirit of the Prophetic teaching" (Rahman, *op. cit.*, Karachi 1961, 71). Later generations of Muslims must duplicate this interpretive process, not by a literal application of *ḥadīth*, but by discovering the spirit of the prophetic example for themselves.

While such revisionist views have not gained a wide following, they have nevertheless exerted enormous influence on modern Muslim discussions of religious authority, giving rise to a plurality of definitions of *sunna* reminiscent of the formative period of Islamic thought.

SUNNI ʿALĪ [see SONGHAY].

SŪR (A.), pls. *aswār*, *sīrān*, the wall of a town or other enclosed urban or built-up space. The present article treats of town walls and fortifications in the central Islamic lands.

The development of urban fortification may be divided into two main traditions: (1) the Mediterranean region, descended from Hellenistic and Roman fortifications, characterised by stone and fired brick fortifications with regular projecting towers, a type first seen in the 4th century B.C., and itself probably derived from Mesopotamian city fortifications, such as are represented in Assyrian reliefs, and (2) the Middle East, which inherited Mesopotamian and Iranian traditions, typified by massive pisé (beaten earth) ramparts up

to 20 m thick. One can also define a general chronological distinction between the earlier Islamic period, where fortifications were more or less direct descendants of ancient traditions, and the high mediaeval period, when urban fortifications are influenced by the castle-building of the Crusading period. Finally, it should also be noted that frequently a city's fortifications evolved slowly over the centuries, from before Islam up to the modern day; in many cases, such as Istanbul and Damascus, fortifications constructed before Islam continued to be used with little modification. In addition the design of new gates and towers was constrained by the necessity to adapt to what already existed, and by long-standing local traditions in construction and materials, which dictated basic forms.

At the beginning of Islam, not all cities were fortified. While the digging of a *khandaḳ* (fosse) to defend Medina in the time of the Prophet was considered to be an innovation, the early *amṣār* at Kūfa, Baṣra and Fusṭāṭ [*q.vv.* and see MIṢR. B] were initially unfortified. Echos of the *amṣār* can also be seen in the absence of fortifications from Baghdād [*q.v.*] in the 2nd/8th century, except for the Round City, and Sāmarrā' [*q.v.*] in the 3rd/9th century. However, on the frontiers, the caliph Muʿāwiya fortified the cities of the Mediterranean coast (al-Balādhurī, *Futūḥ*, 128, 143), and the cities of the *thughūr*, the Anatolian frontier [see THUGHŪR. 1], were refortified from the reign of ʿAbd al-Malik onwards (*ibid.*, 165 ff.). At Anazarbos in Cilicia (Ar. ʿAyn Zarba), two successive defensive circuits with regular projecting square stone towers dating from the reigns of al-Mutawakkil (3rd/9th century) and the Ḥamdānid Sayf al-Dawla (4th/10th century), have been identified. They replaced late Roman walls on a smaller circuit.

In early new urban foundations, fortification played a mainly symbolic role. The Umayyad sites at ʿAndjar (Lebanon), ʿAḳaba and ʿAmmān Citadel (modern Jordan) were fortified with regular half-round or square towers, similar to the light fortifications of the Umayyad *ḳuṣūr* or "desert castles". According to the texts, the Round City of Baghdād was fortified with a double ring of walls of mud-brick, on the model of Constantinople, but in the year-long siege of Baghdād in 196-8/812-13, the Round City itself only resisted for 24 hours, owing to a defective water-supply. The surviving imitations of the Round City at Raḳḳa [*q.v.*] (built by al-Manṣūr in 155/772) and the Octagon of Ḳādisiyya at Sāmarrā' (built by Hārūn al-Rashīd before 180/796) have respectively double and single mud-brick curtain walls with regular U-shaped towers. In all these cases, larger, usually circular, towers were built at changes in the line of the walls, while the wall towers are often reduced almost to the status of buttresses. The gates have single passages, flanked by a tower on each side, or, during the 2nd/8th century, the passage way was built into a single tower. Only in the Round City of Baghdād does the device of a bent entrance with a right-angled turn incorporated, seem to have been used (Creswell *EMA*, ii, 1-38).

Most late Roman cities in the Near East did not have citadels in their fortification circuits (although their Hellenistic predecessors had); consequently, their early Islamic successors did not either. However, citadels or forts in Sāsānid cities were quite common, for example, Sīrāf (D.B. Whitehouse, in *Iran JBIPS*, ix [1971], 1-17) in southern Persia, and Karkh Fayrūz at Sāmarrā' in ʿIrāḳ (see Northedge, in *Mesopotamia*, xxii [1987]). In the latter case, the fortifications are composed of a square fort, and a curtain wall of pisé about 5 m wide, strengthened by regular half-round solid towers. However, apart from the examples cited, no well-preserved examples of early Islamic fortifications in the East are known, although unexcavated pisé circuits are known at Nīshāpūr and Sirdjān (4th-5th/10th-11th centuries) in Persia. A further specific characteristic of eastern construction was the use of fortifications to encircle a whole oasis, such as at Bukhāra, a fortification type intended to hinder nomad incursions, in the same way as linear defences such as Alexander's Wall in the Gurgān plain, and more distantly, Roman *limes* fortifications such as Hadrian's Wall in Northern England.

In the Maghrib and al-Andalus, a tradition of square towers predominated. The fashion for U-shaped towers characteristic of late Roman western Europe and the Middle East from the 3rd-4th centuries onwards, was limited to the East under Islam, and square towers are already known in the fortifications of the Byzantine reoccupation of Tunisia (6th century). Traces of early circuits have survived at Sousse in Tunisia, where projecting square towers alternate with smaller buttresses (245/859), at the citadel of Mérida (220/835) and at Madīnat al-Zahrā' outside Cordova in Spain (founded 324/936).

In the 5th/11th century, the tradition of regular projecting towers was continued in the first phase of the citadel of Damascus, and in the extension of the walls of Cairo begun by Badr al-Djamālī in 480/1087 (Creswell, *MAE*, 166-206). The three fine surviving gates of Bāb al-Naṣr, Bāb al-Futūḥ and Bāb Zuwayla, are each flanked by a pair of square or U-shaped towers, 20.89 and 22 m high with three storeys, and much larger than the wall towers.

The period of the Crusades led to considerable change. Large citadels were built or rebuilt in the major cities of the Near East, in Cairo, Boṣrā, Damascus and Aleppo. The citadel of Aleppo is best known for its magnificent entrance, a single massive square tower with an interior passage with five right-angled turns, built by al-Malik al-Ẓāhir Ghāzī in 606/1209-10, and approached by a bridge across the moat from a forecastle built by Ḳansūḥ al-Ghawrī in 913/1507. The slope of the mound was partly revetted by a glacis of stone, and the summit ringed by a wall with regular projecting towers. The city walls themselves date to the Ayyūbid period and later, with an extension to the east built in the second half of the 9th/15th century. In Cairo, the citadel built in 572-9/1176-83 by Ṣalāḥ al-Dīn is composed of two enclosures fortified by massive round towers added by al-Malik al-ʿĀdil in 604/1207-8. There was a substantial increase in the size of towers, whether square or circular, built mainly of fine ashlar masonry, often incorporating re-used column drums, and they were now placed irregularly, to conform to the terrain and tactical requirements. At Diyarbekir in Turkey, massive 6th/12th-century towers are U-shaped and placed at changes in the line of the walls. At Baghdād, the gate-towers of the later circuit, of fired brick with stone fittings, are built on the far side of bridges across the moat. Although only the Bāb al-Wasṭānī is preserved, the now-disappeared Bāb al-Tilsimān (618/1221) was decorated with relief-carved serpents. Relief-carved decoration was also characteristic of the walls of Konya. A late version of this type is to be seen in the restoration and reconstruction of the walls of Jerusalem by the Ottoman sultan Süleymān Ḳānūnī in 943-7/1537-40. In this case, there are few towers, probably because the objective was the pious act of protecting a holy city, and no great military activity was envisaged.

In southeastern Persia, well-preserved defences dating from the Ṣafawid period have survived at Bam, with a citadel with massive U-shaped brick towers and a brick curtain wall. At Bukhārā, the system of defences in its present form dates from the 18th century, partly based on massive earlier pisé ramparts, but with at least one gate flanked by half-round towers, while the new Ark was built on the site of the old citadel. New defences of the traditional type continued to be built even in the 19th century. In the 1830s, as a result of a pious donation to develop the Shīʿī sanctuary, Sāmarrāʾ was fortified with a brick wall having occasional projecting solid towers. The developments in artillery fortifications typical of Europe from the 17th century onwards, star-shaped fortifications with low gun bastions projecting from the main curtain, do not find a direct reflection in the Islamic world, although in Mughal military architecture, such as the Red Fort at Agra (*ca.* 1635), cannon loopholes are incorporated.

(A. NORTHEDGE)

ṢŪR, the Arabic name for Tyre, coastal city of southern Lebanon, regional capital of the *ḳaḍāʾ* of the same name. Built on an off-shore island, it was in the Phoenician period one of the most powerful commercial centres of the Levant. The Bible mentions a king Hiram who, a contemporary and ally of Solomon, supplied him with cedar-wood for the construction of the Temple of Jerusalem, as well as with highly skilled and esteemed masons, carpenters, goldsmiths and stone-cutters (I Kings v. 15-32). Tyre established flourishing colonies in the western Mediterranean, and its mariners were among the most adventurous of the time; it was they who, at the behest of the Pharaoh Necho, achieved the first circumnavigation of the African continent.

The conquest of the city by Alexander was marked by the construction of a causeway linking the island to the mainland, which became over time a veritable isthmus on which the city developed.

Covering an area of 15 ha, Tyre presents today the largest archaeological site of the Eastern Mediterranean coastland. Among the features excavated, one of the most significant is the main street, 175 m in length and fringed by a portico, which led to the harbour. A hippodrome and a necropolis are located on the mainland. Since 1984, the city has been designated a world heritage site by UNESCO.

The Arab conquest did not trigger off a decline of the city, since Muʿāwiya, governor of Damascus and founder of the Umayyad dynasty, is said to have installed there Persian colonists from Baʿalbakk, Ḥimṣ or Anṭākiya, the bulk of the population being constituted by Hellenised elements and Arab soldiers. According to al-Balādhurī, the caliph Hishām had the arsenals of ʿAkka transferred there and built warehouses and docks; the city subsequently became, under the Marwānids, the operational base of the Muslim fleet in place of ʿAkka. It was very well fortified, and accessible from the mainland only by a bridge. The ancient aqueduct, fed by the well of Raʾs al-ʿAyn or al-Rashīdiyya, still supplied water to the city, according to al-Muḳaddasī. Nāṣir i-Khusraw, who visited the city in 1047, mentions its houses, five or six storeys high, and a richly ornamented *mashhad*. The inhabitants were mostly Shīʿī, but the *ḳāḍī* was a Sunnī.

The merchants of the town resented their status as vassals of great empires controlled from distant capitals, and in 388/988 the people of Tyre, led by a peasant named Alaka, rose in rebellion against the Fāṭimid caliph al-Ḥākim. When the governor of Syria sent land and naval troops against the city, Alaka appealed for help to the emperor of Byzantium, but the latter's ships were sunk, and the city was taken and sacked.

In 1089, the vizier Badr al-Djamālī seized the town from the Saldjūḳ sultan of Damascus Tutush, and his successor al-Afḍal Shāhanshāh punished a new uprising in 490/1097 with a fearful massacre; this was the same year that the Crusaders set out from Constantinople. The city allied itself with ʿAkkā and Ṭarābulus against the invaders. In 1107 King Baldwin camped under the walls of the city for a month, only withdrawing in return for a ransom of 7,000 dīnārs. The Egyptian fleet, arriving too late to save Tripoli or Ṭarābulus, made its base at Tyre.

In 1111, Baldwin resumed his siege of the town, which was relieved by Tughtakīn, sent with an army from Damascus. The Crusaders made a fresh attempt in April 1124. Venetian ships blockaded the port to keep the Egyptian fleet at bay, and after a stubborn resistance, starvation forced the people of Tyre to submit. They were offered the choice of leaving the city with their property or staying on payment of a ransom; in July, they abandoned the city, settling either in Damascus or in Ghazza. The city remained in the hands of the Franks until 1191.

At this time, al-Idrīsī speaks of the flourishing industries of glassware, ceramics and high quality textiles which produced the wealth of the city.

On the sea side, the port was accessible by way of a narrow inlet flanked by two tall towers; it was the finest port of the entire Levantine coast. On three sides, the port was enclosed within the ramparts of the town, and on the fourth there was a wall and a kind of archway under which ships were docked. This

port within a city could be sealed by a huge chain deployed between the two towers.

After the capture of Jerusalem and the majority of coastal sites, Ṣalāḥ al-Dīn arrived to lay siege to Tyre in November 1187, but without success. Tyre remained, with the castle of Beaufort, the last place still held by the Franks: the knights released by Ṣalāḥ al-Dīn after each of his victories gathered there, and prepared to lay siege to ʿAkka. On 19 April 1192, Conrad, the deposed king of Jerusalem who resided in Tyre, was assassinated by Ismāʿīlīs. His successor Henry of Champagne, concluded the treaty of Ramla with Ṣalāḥ al-Dīn (September 1192); under the terms of this treaty the coast between Jaffa and Tyre remained in the hands of the Franks.

The city was devastated by two earthquakes, in 1201 and 1203. Although the treaty signed in 1229 between Frederick II and al-Malik al-Kāmil of Egypt maintained Frankish domination of Tyre and numerous coastal towns, the Crusaders were weakened by internal strife and rivalry between Venice and Genoa.

The Mamlūk sultan Baybars launched two expeditions against the city, in 1266 and 1269, but in 1270 he agreed to a treaty with the prince of the city under which the neighbouring territories were divided between them, part being placed under joint administration. Marguerite of Tyre bought from the sultan Ḳalāwūn a peace lasting ten years in return for sacrificing half of her revenues and a guarantee not to restore the city's fortifications. But after the capitulation of ʿAkkā in 1291, the other coastal cities were incapable of resisting much longer; the city was taken by Khalīl b. Ḳalāwūn, who destroyed it. Some of the inhabitants were sold into slavery, others were put to the sword.

The city remained unoccupied for several centuries, and neither the Druze *amīr* Fakhr al-Dīn Maʿnī in the 17th century, nor the governor of Acre Djazzār Pasha in the 18th, succeeded in restoring its dynamism. From 3,000 inhabitants in 1840, the population had grown to 6,000 by 1900; half of these were Muslims, the remainder Maronites, Greek Catholics and Jews.

In 1920 the Treaty of Sèvres, which dismantled the Ottoman Empire, incorporated Tyre and the Djabal ʿĀmil into Greater Lebanon, placed under French mandate by the League of Nations. The population of the south, Shīʿī for the most part, felt excluded from this Lebanese state, where it was represented by only a few families of dignitaries, wealthy quasi-feudal landowners who rallied to the new system. But in fact, the region constituted the northern sector of Upper Galilee, the southern being in Palestine under British mandate, with the major port of Jaffa for an outlet.

The destiny of Tyre, already constrained by this mandatory frontier, was overturned by the creation of the State of Israel in 1948, with Zionist leaders claiming territory extending as far as the Litani river, the waters of which they wanted to control, and 14 Lebanese border villages were to be occupied until 1949.

From 1967 onwards, despite the non-participation of Lebanon in the Six-Day War, southern Lebanon became engulfed in a spiral of violence from which it has yet (1996) to be extricated, and which has seriously handicapped the role which Tyre could have played in regional affairs.

Another important phenomenon has been the progressive consolidation of the Shīʿī community, led by the Imām Mūsā Ṣadr, who took up residence in Lebanon in 1960. Seeking to inspire the Shīʿī community, marginalised in spite of efforts made during the presidency of Shihāb (1958-64) to develop the infrastructures of the south, he founded in 1973 the Movement of the Dispossessed, then in 1975, in Tyre, the Amal political party. In January 1969, in response to the destruction by Israel of Lebanese civilian aircraft, a general strike paralysed Tyre and Sidon (Ṣaydā), with the demand that the Lebanese state introduce conscription to combat the Israeli threat. Amal was originally allied with the Palestine Liberation Organisation (PLO), which controlled the camps surrounding the city: Rashīdiyya (some 14,000 inhabitants in 1975), Burdj al-Shimālī (some 10,000 inhabitants in 1975) and Bass (about 5,000).

In fact, the sovereignty of the Lebanese state was challenged by Palestinian guerrilla groups, taking up residence in southern Lebanon after their expulsion from Jordan in 1971. The region of Tyre was one of their bastions, and the Lebanese army tried in vain to take control of the camps. The process which was to lead to the nationwide conflagration of 1975-6 was well advanced.

In September 1972 Israel launched its first intervention in South Lebanon, and after the first phase of the civil war, in 1976, it inaugurated its policy of the "good border"; by way of numerous frontier posts, the villagers were induced to work in Israel, while the region was inundated with Israeli produce; the destruction of orchards, infrastructures and hostile villages facilitated the economic integration of the region into Israel, to the detriment of Tyre, isolated and cut off from the rest of the country.

In March 1978, to halt Palestinian incursions into its territory, Israel launched "Operation Litani"; when its army withdrew in June, it retained control of a border strip of Lebanese territory, 5 to 10 km in width, in defiance of Resolutions 425 and 426 of the Security Council of the UN demanding Israeli withdrawal and creating UNIFIL, initially a contingent of 6,000 men acting as a buffer between the Syrian army deployed to the north of the Litani and the frontier zone occupied by the pro-Israeli militia of the Maronite Major Saʿd Ḥaddād, who had defected with his troops from the Lebanese army; in April 1979, he prevented the latter from re-occupying Tyre. The city of Tyre was then effectively under the control of the PLO and the Amal movement.

To eradicate the Palestinian presence in Lebanon after the Camp David accords with Egypt, and to induce the Lebanese state to sign a separate peace in its turn, Israel once more invaded Lebanon on 6 June 1982; this was Operation "Peace for Galilee", in which Tyre was the target of 57 air-raids. The city was occupied, but resistance to the Israeli presence was stubborn: in September 1982 250,000 Shīʿīs demonstrated in Tyre to mark the fourth anniversary of the disappearance of the Imām Mūsā Ṣadr, and in November 1983, Amal shelled the Israeli headquarters in the city.

In June 1985 Israel withdraw, retaining control only of the "security zone", some 850 km^2, through the intermediary of the Southern Lebanese Army of General Antoine Lahad, and Amal took over the city. But competition between Amal and the PLO for supremacy in the South led to the eruption in 1985-86 of the "war of the camps", the Shīʿīs being supported by Iran, which sent weapons and instructors to Tyre. The war between Shīʿīs and Palestinians resumed on 22 October 1986, and it was not until 4 January 1988 that Amal raised the siege of the Rashīdiyya camp. Israel has continued to make incursions

into South Lebanon, as in May 1988, and periodically to shell Tyre and its Palestinian camps, disrupting commerce and preventing marine fishing.

The city of Tyre comprised some 54,000 inhabitants in 1980, about a quarter of the population of the *ḳaḍā'*, but demographic estimates are not easily confirmed on account of the high level of mobility of the population, the result of insecurity and of a traditionally substantial trend towards emigration. In 1975, the civil war raging in Beirut impelled the Shī'ī population to seek refuge in the South, while the Israeli invasions of 1978 and 1982 provoked an exodus in the opposite direction. The annual demographic increase is at all events very high, of the order of 44 per thousand, as against 25 for Lebanon as a whole, and 34 per thousand for Ṣaydā, regional capital of the *muḥāfaẓa* of South Lebanon.

Emigration, especially towards West Africa, has affected a substantial proportion of the Shī'ī population (a quarter ?), and communities settled in clusters from Senegal to Nigeria retain close links with their region of origin. During the civil war, although cut off from the rest of the country, Tyre experienced a reasonable degree of economic prosperity, owed to remittances from these expatriates and the continuing operation of the port. But the destruction of olive and orange groves by the Israeli army, as well as, from the 1980s onward, the return of emigrants from the Gulf and Black Africa fleeing violence there, has aggravated unemployment.

Before the war, in 1973, the region produced annually 280,000 tonnes of agricultural produce. The Ḳāsimiyya canal irrigated nearly 7,000 ha, and an additional 4,000 ha were watered by some hundred wells. During the 1990s, the return of a precarious peace, interrupted by Israeli bombardments and hampered by blockade of the port, has permitted a modest economic revival, based on a boom in construction and agricultural redevelopment.

The city, which had grown on the promontory joining the former island to the mainland, was the object in 1964 of a development scheme. This permitted the opening of roads in the zone bordered to the west by recent house construction and the east by the archeological excavations of al-Bass (al-Ramī quarter). The port of Tyre is protected by a quay to the north, and matches the contour of the coast to the south: on one side are five small docks for fishing vessels, on the other a dock for merchant shipping. One of the main concerns of the development scheme has been the clearing of all the spaces invaded and disfigured by illegal construction, in particular on the isthmus, and the conservation of the beaches to the north and especially to the south of the city which, along with Tyre's cultural attractions, have the potential to constitute a profitable resort area.

(M. Lavergne)

SŪRA, the designation used for the 114 independent units of the Ḳur'ān, often translated as "chapter". The sūras are distinct units, unlike the frequently arbitrary divisions of the books of the Bible made by later editors. They are also unlike the topical, chronological and other types of major divisions of other books called "chapters". Thus it seems best to leave the term "sūra" untranslated, treating it as a technical term, similar to "mishnah", "seder", "sutra", "upanishad" and other terms for units of sacred writings that European languages have adopted from various religious traditions. As distinct literary units of scripture that are best not regarded as "chapters", the sūras of the Ḳur'ān have a parallel in the Psalms of the Bible.

1. Derivation and Ḳur'ānic usage. The fact that the early Muslim commentators and lexicographers offered a wide variety of opinions on the origin of the term *sūra*, normally seeking an Arabic root (see al-Rāghib al-Iṣfahānī, *Mufradāt*, 248; Nöldeke, *Gesch. des Qor.*, i, 31 n. 1), shows that its derivation was not known. The older European majority view, accepted also by Nöldeke (*ibid.*, i, 30-1), derived the Arabic *sūra* from the Hebrew *shūrā*, used in the Mishnah for "row, series". For a discussion of a variety of imaginative theories that derive *sūra* mostly from various Hebrew terms, along with arguments against each of these, see A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 180-2. Jeffery (182) and Bell-Watt (58) conclude that *sūra* entered the Ḳur'ān as a technical term, most likely derived from the Syriac word for "a writing" and "a portion of scripture", thus making it parallel to *ḳur'ān*, *kitāb*, and other Ḳur'ānic terms of Syriac origin that are associated with revelation or scripture. Opinions will no doubt continue to differ on the origin of this term. Regardless of its derivation, the view that its earliest usage occurs in the Ḳur'ān is the most plausible assumption.

The term *sūra* occurs in the Ḳur'ān nine times in the singular and once in the plural (*suwar*), all probably in Medinan contexts. It is useful to make a distinction between the usage of this term in the Ḳur'ān during Muḥammad's lifetime and its later usage after the compilation of the completed Islamic scripture. Within the Ḳur'ān the term *sūra* is best interpreted simply as "a unit of revelation", making it synonymous with some Ḳur'ānic usages of *ḳur'ān*, *āya*, and *kitāb* [see ḳur'ān, 1.b, esp. at 402a]. In most contexts the term *sūra* seems to refer to a short unit, possibly just a few verses, such as IX, 64, in which the Hypocrites [see munāfiḳūn] are said to be afraid "lest a sūra be sent down against them, telling [Muḥammad] what is in their hearts". Cf. IX, 86, 124, 127 and XLVII, 20, which also to refer to specific commands or information being "sent down" to Muḥammad, suggesting short units of revelation, rather than the present sūras. Three other contexts refer to accusations from Muḥammad's opponents that he had been forging or inventing revelations. The Ḳur'ān responds with challenges that may provide insight into the history of the sūras and of the text of the Ḳur'ān during Muḥammad's lifetime. The context that appears to be the earliest of these three is XI, 13: "Or do they say, 'He has invented it' (*iftarā-hu*)? Then bring ten *suwar* like it, invented, and call upon whomever you are able apart from God, if you speak the truth." This verse is later repeated verbatim in X, 38, with one significant change: "Then bring a *sūra* like it, ..."

This challenge to produce only one sūra equal to those recited by Muḥammad is then repeated verbatim in II, 23. It is quite possible that the challenge in XI, 13, to produce ten sūras equal to Muḥammad's revelations reflects the period when the Ḳur'ān consisted of a collection of mostly short recitations (see Bell-Watt, 137-41), whereas the other two verses reflect the later period in Medina when the Prophet was combining and expanding earlier revelations to form longer sūras as parts of a written scripture for his followers [see KUR'ĀN, 5.c, at 417b-418a]. Regardless of whether this hypothesis is accepted, it seems certain that most, if not all, occurrences of the term *sūra* in the Ḳur'ān refer to units of revelation that were shorter than the present, long sūras in which this term appears.

2. Composition and literary types. To say that the sūras are distinct units does not mean, however, that they are all alike in their literary form and contents. The Ḳur'ān contains a wide variety of literary or didactic types, but very few sūras consist of a single type or treat a single topic. Those that do are notable as exceptions to the nature of the vast majority of sūras. Three of the most striking of these exceptions, the first sūra (a short prayer addressed to God) and the last two (charms for driving away evil powers [see AL-MUʿAWWIḎHATĀN[1]]), were not considered to be parts of the revelation by at least one of Muḥammad's closest Companions (al-Suyūṭī, *Itḳān*, i, 64; *Gesch. des. Qor.*, ii, 39-42; Jeffery, *Materials*, 21). For a discussion of these three distinctive sūras, see *Gesch. des Qor.*, i, 108-14. Another exception is the unique Sūra of the All-Merciful (LV), which consists almost entirely of a litany, in which the refrain, "O which of your Lord's bounties will you two [human kind and the djinn] deny", occurs 31 times as a separate verse, usually every other verse. The Sūra of Joseph (XII), is another exception, unique in several ways, e.g. it is the only long sūra that consists almost exclusively of a single narrative, the longest narrative in the Ḳur'ān. Virtually all other sūras contain more than one major theme and literary type, the longer sūras containing several of each.

The issue of the composition of the sūras leads to questions regarding the classification of literary types, the unity of the sūras, and the chronology of the text of the Ḳur'ān, issues that are so closely related that it is difficult to treat them separately. For a variety of reasons, classical Muslim scholars made several attempts to determine the chronological order of all of the sūras, but in a number of cases could not agree even on whether a sūra was Meccan or Medinan (*Itḳān*, i, 10-11). The order that came to be most widely accepted is now indicated in the headings to the individual sūras in the Egyptian standard text of the Ḳur'ān. The classical scholars devoted some attention to the literary forms of the sūras in attempts to determine their chronological order, but the main criteria in this effort involved the contents of the sūras and the traditional accounts of their historical setting or "occasions of revelation" (*asbāb al-nuzūl*) [see KUR'ĀN, 5.b, at 415-16].

European scholars developed a keener interest is the Ḳur'ān's literary types. In his *Historisch-kritische Einleitung in den Koran* (1844), Gustav Weil stressed literary form as a major criterion in his rearrangement of the traditional chronological order and his division of the sūras into "early Meccan", "middle Meccan", "late Meccan" and "Medinan" periods. For instance, he placed all short sūras considered to be of the *kāhin* style [see KUR'ĀN, 7.a, 421-2] in his "early Meccan" period. Th. Nöldeke refined Weil's system in the 1st ed. of his *Gesch. des Qor.* (1860), and R. Blachère arranged the sūras in Nöldeke's order, with a few exceptions, in his first translation of the Ḳur'ān into French (2 vols., Paris 1949-51). For a description of this four-period system, see *Gesch. des Qor.*, 2 i, 74-234; Blachère, *Le Coran*, Paris 1966, 11-23; KUR'ĀN, 5.c, 416-18, which includes a critique.

The first modern attempt to classify all of the major literary types in the Ḳur'ān was made by H. Hirschfeld, in his *New researches into the composition and exegesis of the Qoran*, London 1902. His categories include "confirmatory, declamatory, narrative, descriptive, and legislative", along with "parables, political speeches, and passages on Muḥammad's domestic affairs". Hirschfeld surely went too far in concluding that the Meccan revelations occurred in the order of his first five categories (36, 143-5). Also, other conclusions and assumptions, along with the general tenor of his writing, are now outdated. The lasting contribution of his *New researches* is his convincing demonstration that any classification of literary types and themes within the Ḳur'ān must, with some exceptions, involve parts of sūras rather than sūras as wholes.

In her *Studien* (see *Bibl.*), A. Neuwirth classifies parts of Meccan sūras according to ten thematic types: oaths, "when" passages, other sūra beginnings, eschatological passages, lessons from history, hymnic passages, exhortations to the Prophet or to particular believers, polemic passages, affirmations of the revealed nature of the Ḳur'ān, and closing summons or closing imperatives (187-201). She concludes that, except for a few isolated cases, the middle and late Meccan sūras are "three-part compositions" similar to the three sections of the classical Arabic *ḳaṣīda*, and that by far the most common sūra type is "the revelation-confirmation-framed sura with a narrative comprising the middle part" (7). She cites as primary examples of this type sūras VII, XI, XII, XV, XVIII, XX, XXVI, and XXVII (242). While these sūras do contain stories and have references to the revelation near the beginning and end, they are far more complex than Neuwirth's presentation suggests. (For a critical review of Neuwirth's book, see A.T. Welch, in *JAOS*, ciii/4 [1983], 764-7; for examples of other classifications of literary types in the Ḳur'ān, which are not intended to be exhaustive, see Bell-Watt, 75-82, and KUR'ĀN, 7., at 421-5.)

One should also note Bell's view that references to the revelation, frequently to "the Book", that occur at the beginning of many sūras are parts of introductions that were added to previous, frequently Meccan, revelations when Muḥammad was preparing a scripture for his followers in the early Medinan years (see, e.g., the introductions to sūras XI and XV and the captions at the beginnings of sūras X, XII, XIV, etc., in Bell's *Translation*). Bell completed only the preliminary research for a modern critical understanding of the composition of the sūras, showing that they are far more complex than is assumed by the traditional view, which regards the sūras as unities (each revealed all at one time or completed before the next one was begun) and holds that it is possible to determine the chronological order of the sūras as wholes. It is now clear that some sūras contain units of varying length that date from different times. Others show signs of having been revised and expanded, possibly when Muḥammad recited them on later occasions or dictated them to his secretaries (see Wensinck, *Handbook*, 129; Bell-Watt, 37-8). W.M. Watt presents Bell's view of "The Shaping of the

Qur'ān", including evidences of revision and reshaping of the sūras, and provides a partial critique in Bell-Watt, ch. 6. For Bell's own descriptions of the composition of the sūras, see the introductions to the sūras in his *Translation* and his *Commentary on the Qur'ān* (see *Bibl.*), the latter being the long lost "Notes" to his translation. For explanations of Bell's view of the history and compilation of the sūras, see KUR'ĀN, 5.c, at 417-18, and Merrill (in *Bibl.*). Indirect support for Bell's conclusions regarding the internal divisions within the sūras can be seen in A.J. Arberry's *The Koran interpreted* 2 vols., London 1955, where the sūra divisions into sections or paragraphs are frequently identical with Bell's (see, e.g., XIX, XXIV, XXV, XXVII, XXX-XL and most of the shorter sūras, LX-CXIV). Blachère also acknowledges that many sūras contain sections that are earlier or later than their present contexts (see his *Le Coran*, 1969 ed.).

3. Arrangement. The classical writers devoted considerable attention to the arrangement or order (*naẓm*) of the Ḳur'ān's words, phrases and sūras, usually in the context of discussing its inimitability (*iʿdjāz*). Among those who stressed the arrangement of the Ḳur'ān as a proof of its *iʿdjāz*, three stand out: Abū Sulaymān al-Khaṭṭābī (d. 338/998), al-Bāḳillānī (d. 403/1013), and ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078). The best known of these three, al-Bāḳillānī, devotes the majority of his famous book *Iʿdjāz al-Ḳur'ān* to *naẓm*, which he identifies as one of the three major proofs of the Ḳur'ān's divinely-inspired inimitability. The wide variety of senses he gives to *naẓm* makes it difficult, however, to determine precisely what he means by the term (a problem discussed by Bint al-Shāṭi' in her *al-Iʿdjāz al-bayānī li 'l-Ḳur'ān*, Cairo 1971, esp. 100). Al-Khaṭṭābī discusses *naẓm* in his *K. Bayān iʿdjāz al-Ḳur'ān*, and al-Djurdjānī in his *Dalā'il al-iʿdjāz*, the latter published several times (see *Bibl.*). These three writers employ the concept of *naẓm* in relation to the Ḳur'ān's eloquence (*balāgha*) and its various literary devices involving grammar, special word usage, and, in particular, the interrelationship (*munāsaba*) of words and phrases in the Ḳur'ān, rather than treating specifically the coherence or unity of individual sūras.

Later classical writers such as al-Zamakhsharī (d. 538/1144), Fakhr al-Dīn al-Rāzī (d. 606/1209), al-Nīsābūrī (d. 728/1327), and al-Zarkashī (d. 794/1391) continued to stress the importance of understanding the *naẓm* of the Ḳur'ān as an essential component of its *iʿdjāz*, while extending the concept to include the relationships among verses, groups of verses within the sūras, and groups of sūras within the Ḳur'ān. This expansion of the concept of the Ḳur'ān's *naẓm* can be seen in al-Zamakhsharī's well-known commentary *al-Kashshāf* (see *Bibl.*), in which he relates the concept to the ways rhetorical devices, sentence structure, and the relationships among phrases, verses, and sūras convey complex meanings (see Darwīsh al-Djundī, *Naẓm al-Ḳur'ān fī Kashshāf al-Zamakhsharī*, Cairo 1969). Al-Rāzī is possibly the first commentator to apply the concept of *naẓm* to the whole of the Ḳur'ān, arguing that it is through its exquisite arrangement of words, phrases, and verses that the text reveals the subtlety (*laṭīfa*) of its meanings. Al-Rāzī stresses the progressive development of ideas within the sūras, showing how each verse leads to the next, and sometimes he points out similar relationships among sūras. Al-Nīsābūrī, in his *Gharā'ib al-Ḳur'ān* (see *Bibl.*), builds on al-Rāzī's approach by dividing a sūra into a number of passages and linking these passages by connecting their dominant ideas. In his *al-Burhān* (see *Bibl.*), al-Zarkashī develops al-Rāzī's approach to the *naẓm* of the Ḳur'ān further through his discussions of the interrelationships (*munāsabāt*) among verses and sūras (see, e.g., his second chapter, *Maʿrifat al-munāsabāt bayn al-āyāt*, Riyāḍ 1980, 35-52). Al-Suyūṭī's *Itḳān* contains a chapter similar to al-Zarkashī's called *Fī munāsabat al-āyāt wa 'l-suwar*, and he wrote an entire book on the order of the sūras (*Tartīb suwar al-Ḳur'ān*, Beirut 1986). These classical writers, unlike some modern commentators, provide descriptive analyses of the internal arrangement of the sūras, without attempting to develop elaborate theories that argue for the organic unity or thematic coherence of individual sūras and groups of sūras.

A number of collective names for groups of sūras occur frequently in the classical writings. Examples include *al-sabʿ al-ṭiwāl* ("the seven long ones", ranging from 300 to over 700 lines in a modern printed text): II-VII and IX; *al-mi'ūn* ("the hundreds", all sūras other than "the seven long ones" with over 100 verses): X-XII, XVI-XVIII, XX, XXI, XXIII, XXVI, and XXXVII; *al-musabbiḥāt* (those that begin with the formula "All that is in the heavens and the earth glorify God", beginning with *sabbaḥa li-llāh* or *yusabbiḥu li-llāh*): LVII, LIX, LXI, LXII, and LXIV; *al-ḥawāmīm* or *al-ḥawāmīmāt* (those that begin with the initials *ḥā-mīm*): XL-XLVI; *al-ṭawāsīn* (those that begin with the letters *ṭa-sīn*): XXVI-XXVIII; *al-ḳalāḳil* (those that begin with *ḳul*, "Say:"): LXXII, CIX, and CXII-CXIV; and *al-muʿawwidhatān* ("the two [sūras] for seeking refuge [with God from Satan]"): CXIII-CXIV (mentioned above). These are purely descriptive names, unlike the sūra pairs and sūra groups proposed by al-Farāhī and Iṣlāḥī, discussed below.

The commonly held and frequently repeated view that the sūras are arranged in the order of their length, from the longest to the shortest, is misleading, since over half of the sūras are significantly out of the order in which they would occur if descending length were the sole criterion (see Bell-Watt, 206-12). Other conspicuous and equally important criteria involve groups of sūras—such as the *ḥawāmīmāt*, the *ṭawāsīn*, and the group of short, Medinan sūras, LVII-LXIV, that include the *musabbiḥāt* (see above)—that appear together despite their widely varying lengths. Regarding the order of the sūras within the Ḳur'ān, see KUR'ĀN, 4.a, at 410a.

4. Unity and coherence. The idea of viewing the sūras as organic unities is not entirely a modern innovation. Abū Isḥāḳ al-Shāṭibī (d. 790/1388) wrote, "No matter how many subjects the sūra deals with, it is a single discourse; the end is linked to the beginning, and the beginning is linked to the end, and the whole is devoted to a single aim" (quoted in K. Zebiri, *Maḥmūd Shaltūt and Islamic modernism*, Oxford 1993, 143). Still, it has only been in modern times that scholars have devoted special attention to arguments supporting the structural unity and thematic "coherence" of individual sūras. The Indian Ḳur'ān commentator Ashraf ʿAlī Thānawī (d. 1943), whose *Tafsīr* was first published in 1908, was one of the first scholars of the modern age to emphasise the organic unity of the sūras. This same emphasis can be seen in M. ʿAbduh and M. Rashīd Riḍā's *Tafsīr al-manār* (see *Bibl.*), especially at the end of the commentary on each sūra where its subject matter is summarised. The concept of the unity of the sūra is prominent in Sayyid Ḳuṭb's commentary *Fī ẓilāl al-Ḳur'ān* (Cairo and Beirut, several eds.), in which he frequently refers to the central theme or aim of a sūra, often called its *ẓill* (metaphorically signifying its purpose or overall character)

or *miḥwar* (core or axis), which unites its various sections into a harmonious whole. Maḥmūd Shaltūt also takes for granted throughout his *Tafsīr* (see *Bibl.*) that the sūras are coherent, well-ordered structures, each being a perfectly balanced whole (Zebiri, *op. cit.*, esp. 152-5, 171-5).

Ḥamīd al-Dīn al-Farāhī (d. 1930) and Amīn Aḥsan Iṣlāḥī (b. 1906) made the unity and coherence of the sūras the primary principle of their interpretations of the Ḳur'ān. In his *Dalā'il al-niẓām*, Aʿẓamgaṛh 1968 al-Farāhī begins by re-defining the key term *naẓm* (or *niẓām*) to mean coherence, rather than simply order or arrangement. Every sūra is said to possess this coherence, which consists of three essential elements, order (*tartīb*), proportion (*tanāsub*), and unity (*waḥdāniyya*). Each sūra also has a central theme, called *ʿamūd*, around which the entire sūra revolves. Iṣlāḥī adopted al-Farāhī's ideas and developed them further in his eight-volume commentary, *Tadabbur-i Ḳur'ān*, Lahore 1967-80, in which he also asserts that most of the Ḳur'ān consists of "sūra pairs" (II & III, VI & VII, X & XI, XII & XIII, XVI & XVII, XVIII & XIX, XX & XXI, XXII & XXIII, etc.) that have closely related central themes. These pairs are then said to constitute seven "sūra groups". Iṣlāḥī found support for his innovative theory in the Ḳur'ān by interpreting the much-debated expression *sabʿan min al-mathānī* in XV, 87 (see *Gesch. des Qor.*, i, 114-16; Bell-Watt, 134-5) to mean "seven (groups) of the (sūra) pairs", and in the *Ḥadīth* by interpreting the expression *sabʿat aḥruf* (which can be taken to refer to the seven readings of the Ḳur'ān, though most *ḳurrā'* deny this; see *Gesch. des Qor.*, i, 48-51; Bell-Watt, 48-9) as referring to his seven sūra groups. For further explanation and a critique of the theories of al-Farāhī and Iṣlāḥī, see M. Mir, *Coherence in the Qur'ān*, and *The sūra as a unity*, in *Bibl.*). It is unlikely that these imaginative theories will be widely accepted.

The subjectivity of these and other modern attempts to demonstrate the unity of the sūras is seen in the fact that various writers, including al-Farāhī and Iṣlāḥī, identify different central themes for the same sūra. This is only to be expected, since the majority of the sūras treat several disparate topics. This new emphasis on the unity of the sūra was inspired partly by a reaction to the verse-by-verse approach of the classical commentators, which often stressed grammatical and linguistic details and yielded little insight into the larger themes of the sūras, and partly by a reaction to Western criticisms of the Ḳur'ān as being disjointed, repetitious and contradictory.

An equally elaborate and imaginative theory that purports to demonstrate the unity of the sūras has been developed by Neuwirth in her *Studien*. She quotes Bell-Watt, 73, "... many sūras of the Qur'ān fall into short sections or paragraphs. These are not of fixed length, however, nor do they seem to follow any pattern of length. Their length is determined not by any consideration of form but by the subject or incident treated in each" (175), and then states that it is the goal of her book to disprove this view of the structure of the suras. One major thesis of her book is that the Meccan sūras consist of groups of verses that are arranged in numerical patterns, often in balanced proportions, e.g., 5 + 9//6 + 6 + 6//9 + 5 in LXXIX, 6 + 5 + 5 + 6 in LXXXV, 4 + 6 + 6 + 4 in XC, and 24//20 + 20//24 in the medium-length XLIII. Most sūras are not said to consist of such perfectly balanced groups of verses, but she sees definite numerical patterns in all of them (175-321). One problem is that her balanced proportions are often based on changes which she makes in the traditional verse divisions in her ch. 1 (14-63). For this and several other reasons, her argument (314-15) that these numerical patterns show that the Meccan sūras are unities going back to the time they were first recited by Muḥammad is not convincing (see Welch review, *loc. cit.*, 766). The modern critical view of the structure of the sūras presented in Bell-Watt (73, 86-101) remains essentially intact. For a concise summary of the current critical view of the development and composition of the sūras during Muḥammad's lifetime, see ḲUR'ĀN, concluding paragraph of 5.c, at 418b-19. This view regards the sūras as composite in nature, with significant components from both the Meccan and Medinan periods. It thus rejects any attempt to date and arrange the sūras as wholes, including the traditional division into "Meccan" and "Medinan" sūras, as well as the modern western arrangement of the sūras into four periods, three Meccan and one Medinan.

Questions regarding the composition, unity, and coherence of the sūras are among the most disputed issues in modern Ḳur'ān studies. These differences of opinion, however, often stem from varying assumptions and approaches—theological, historical, literary, etc. Some approaches, literary as well as theological, are synchronic, assuming the unity of the present sūras and of the Ḳur'ān as a whole. Other approaches, linguistic as well as historical, are diachronic, seeking to trace the development of the language and teachings of the Ḳur'ān during Muḥammad's lifetime. Studies based on this diachronic approach have led to the conclusion that the sūras were fluid during Muḥammad's lifetime, that he recited parts of some sūras differently on later occasions in response to the changing needs of his followers, and that the compilers of the Ḳur'ān after his death were loathe to omit any attested revelations and thus placed alternative passages together. This view is not inconsistent with some early Muslim traditions (see Wensinck, *Handbook*, 129, 131) and with the Ḳur'ān itself (II, 106, XIII, 39, XVI, 101, etc.). Amīn al-Khūlī, in his *Manāhidj tadjdīd* (see *Bibl.*), and M. Arkoun, in his *Lectures du Coran*, ²Tunis 1991, have called for the application of modern historical and literary studies of the Ḳur'ān. Such studies would follow in the tradition of the classical commentators, who applied the literary and linguistic methods of their times. Studies that yield strong evidence that the sūras underwent revision and expansion need not be rejected as undermining belief in the divine origin of the sūras. Nor is this diachronic approach antithetical to synchronic studies. The two approaches to analysis of the sūras can, and some would say should, exist side-by-side within a single modern discipline of Ḳur'ān studies.

The art. ḲUR'ĀN treats other aspects of the sūras: their names (at 410), their rhymes and rhyme formulas (at 420), the formula called the *basmala* that precedes them (at 411-12), and the so-called "mysterious letters" that occur at the beginning of 29 of the 114 sūras (at 412-14).

ṢŪRA (A.), image, form, shape, e.g. *ṣūrat al-arḍ*, "the image of the earth", *ṣūrat ḥimār*, "the form of an ass" (Muslim, *Ṣalāt*, trad. 115), or face, countenance (see below). *Taṣāwīr* are rather pictures; see for these, TAṢWĪR. *Ṣūra* and *taṣwīra* are therefore in the same relation to one another as the Hebrew *demūt* and *ṣelem*.

1. In theological and legal doctrine. The Biblical idea according to which man was created in God's *ṣelem* (Gen. i. 27) has most probably passed into Ḥadīth. It occurs in three passages in classical *Ḥadīth*; the exegesis is uncertain and in general unwilling to adopt interpretations such as Christian theology has always readily associated with this Biblical passage. In al-Bukhārī, *Istiʾdhān*, *bāb* I (cf. Muslim, *Djanna*, trad. 28) it is said "God created man after (*ʿalā*) his *ṣūra*: his length was 60 ells". On this, al-Ḳasṭallāni (ix, 144) says: "the suffix 'his' refers to Adam; the meaning therefore is that God created Adam according to his, i.e. Adam's form, that is, perfect and well-proportioned" (see also *LʿA*[1], vi, 143-4). But there are also other explanations. Another tradition says: "One should not say 'May God make thy face hateful and the faces of those who are like thee', for God created Adam after his *ṣūra*". In this tradition, the possessive pronoun obviously refers to the person addressed. Others say that the possessive pronoun refers to God, for in one version the tradition runs: "God created Ādam in the shape of al-Raḥmān", i.e. as regards his qualities, knowledge, life, hearing, sight, etc., although God's qualities are incomparable. The theologians are divided into two groups on the exposition of this tradition; the one refrains from any interpretation through dread of anthropomorphism, whilst the other explains the expression as an indication of Adam's beauty and perfection, an *iḍāfat takrīm wa-tashrīf* (like *nāḳat Allāh*, *Bayt Allāh* says al-Nawawī, see below).

The second passage in which the tradition occurs is Muslim, *Birr*, trad. 115: "If a man fights with his brother, he ought to spare his face, for God created man after his *ṣūra*". Al-Nawawī's commentary on this tradition coincides in part with the already-quoted section in al-Ḳasṭallānī. We need only quote the following here: al-Māzarī says, "Ibn Ḳutayba has interpreted this tradition wrongly by taking it literally". He says, "God has a *ṣūra*, but not like other *suwar*". This interpretation is obviously wrong, for the conception *ṣūra* involves putting together, and what is put together is created (*muḥdath*); but God is not created, therefore is not composed, therefore he is not *muṣawwar*. Ibn Ḳutayba's interpretation is like that of the anthropomorphists, who say, "God has a body, but not like other bodies". They quote in support the orthodox pronouncement "The Creator is a thing (*shayʾ*), but not like other things". "This is, however, reasoning by false analogy, for *shayʾ* does not involve the conception of coming into existence (*ḥudūth*) and what is associated with it. Body and *ṣūra*, on the other hand, involve joining together and composition and therefore also *ḥudūth*", etc.

We have further to deal with the concept *ṣūra* in connection with the prohibition of images, which, in so far as it is known in the West, is traced to the Ḳurʾān, like most Muslim institutions. Although this idea is one of the numerous popular errors about Islam, it cannot be denied that the prohibition of images is based on a view which finds expression in the Ḳurʾān. In Ḳurʾānic linguistic usage, *ṣawwara* "to fashion" or "form" is synonymous with *baraʾa* "to create". Hence sūra VII, 10, "and We have created you, then We have fashioned you, then We have said to the angels, etc.". III, 4: "It is he who forms you in the mother's womb as he will". XL, 66: "It is God who has made the earth for a home for you and the heavens for a vault above you, shaped you and formed you beautiful" (cf. LXIV, 3). In LIX, 24, God is called *al-khālik*, *al-bāriʾ* and *al-muṣawwir*, i.e., according to al-Bayḍāwī, "He who takes the resolution to create things according to His wisdom, who creates them without error, who calls their forms and qualities into existence, according to His will".

This linguistic usage shows complete synonymity between the concepts "to fashion, to shape", and "to make, to create". In the older Hebrew literature also, Yahweh as creator is called *Yoṣer*, i.e. the potter. The roots *ṣ-w-r* and *y-ṣ-r* are ultimately connected.

If, then, God according to the Ḳurʾān is the great fashioner, it follows in *Ḥadīth* that all human fashioners are imitators of God and as such deserving of punishment: "Whosoever makes an image, him will God give as a punishment the task of blowing the breath of life into it; but he will not able to do this" (al-Bukhārī, *Buyūʿ*, *bāb* 104; Muslim, *Libās*, trad. 100). "Those who make these pictures will be punished on the Day of Judgment by being told, Make alive what you have created" (al-Bukhārī, *Tawḥīd*, *bāb* 56). "These whom God will punish most severely on the Day of Judgment are those who imitate God's work of creation" (Aḥmad b. Ḥanbal, vi, 36). Such are called the worst of creatures (al-Nasāʾī, *Masādjid*, *bāb* 13), cursed by Muḥammad (al-Bukhārī, *Buyūʿ*, *bāb* 25), compared to polytheists (al-Tirmidhī, *Djahannam*, *bāb* 1). Houses which contain images, dogs and ritually impure people are avoided by the angels of mercy (al-Bukhārī, *Badʾ al-khalḳ*, *bāb* 17, etc.). The latter statement is illuminated by the story of how ʿĀʾisha once purchased a cushion (*numruḳa*) on which were pictures; when Muḥammad saw it from outside the house, he stood at the door without coming in. When ʿĀʾisha saw repugnance expressed on his countenance, she said, "O Messenger of God, I turn full of penitence to God and His Messenger, but what law have I bro-

ken?" He replied, "What is the meaning of this cushion?" She said, "I purchased it for thee to sit upon and use as a cushion". Then the Messenger of God answered, "The makers of these images will be punished, and they will be told, Make alive what you have created". And further, he said, "A house which contains images is not entered by the angels" (Muslim, *Libās*, trad. 96; cf. 85, 87, 91-9; al-Bukhārī *Libās*, *bāb* 92; Aḥmad b. Ḥanbal, vi, 172). Muḥammad is said to have removed the images and statues from the Kaʿba (al-Bukhārī, *Maghāzī*, *bāb* 48). There are also references to this in the *Sīra*. Here we need only quote one more remarkable tradition, which has some resemblance to the St. Christopher legend. ʿAlī relates, "I and the Prophet walked till we came to the Kaʿba. Then the Prophet of God said to me, 'Sit down'. Then he stood on my shoulders and I arose. But when he saw that I could not support him, he came down, sat down and said, 'Stand on my shoulders'. Then I climbed on his shoulders and he stood up, and it seemed to me as if I could have touched the sky, had I wished. Then I climbed on the roof of the Kaʿba, on which there was an image of copper and iron. Then I began to loosen it at its right and left side, in front and behind, until it was in my power. Then the Prophet of God called to me, 'Throw it down'! Then I threw it down so that it broke into pieces like a bottle. I then climbed down from the Kaʿba and hurried away with the Prophet, till we hid ourselves in the houses for fear some one might meet us" (Aḥmad b. Ḥanbal, i, 84; cf. 151).

According to the *Sharīʿa*, it is forbidden to copy living beings, those that have a *rūḥ*. Al-Nawawī in his commentary on Muslim's *Ṣaḥīḥ* to *Libās*, trad. 81 (Cairo 1283, iv, 443) gives the following summary: The learned men of our school and other *ʿulamāʾ* say: The copying of living beings is strictly forbidden and is one of the great sins, because it is threatened with the severe punishment mentioned in the traditions. It does not matter whether the maker has made the copies from things used in little esteem or from other things, for the making of them is in itself *ḥarām*, because it is an imitation of God's creative activity. From this point of view, it makes no difference whether the image is put upon a piece of cloth, carpet, coin, vessel or wall, etc.

The copying of trees, camel-saddles, and other things apart from living creatures is not forbidden. Thus far the legal prescriptions affecting the copying itself.

As regards the use of articles which have on them images of living creatures, if these are hung on a wall or are on a garment which is worn, or on a turban or other article which is not treated lightly, they are *ḥarām*. If the reproductions, however, are on carpets which are walked upon, on cushions and pillows, etc., which are in use, they are not *ḥarām*. Whether the angels of mercy avoid houses which contain such articles will be discussed immediately, if God wills.

In all these cases, it makes no difference whether the reproductions have a shadow or not. Some of the older jurists say: Only what has a shadow is forbidden; there are no objections to other reproductions. But this is an erroneous view. For the reproduction on the curtain was condemned by the Prophet, and it certainly had no shadow. The other traditions should be remembered which forbid all images of whatever nature.

Al-Zuhrī says: Images are without exception forbidden, as well as the use of articles on which there are images or the entering of a house in which there are images, whether embroidered on a cloth or not embroidered, whether they are put on a wall, on a cloth or carpet, to be trodden upon or not, on the authority of the literal interpretation of the tradition about the *numruḳa* (pillow) which Muslim records (see above). This is a very strict point of view. Others say: What is embroidered on a piece of cloth, whether for lowly use or not, whether hung on a wall or not, is permitted. They regard as *makrūh* images which have shadows, or reproductions on walls, whether embroidered or not. They rely for this view on Muḥammad's words in several traditions in the *Bāb* concerned: "except what is embroidered on cloth". This is the attitude of Ḳāsim b. Muḥammad.

The consensus or *idjmāʿ* [*q.v.*] forbids all representations which have shadows and declares their defacement *wādjib*. The Ḳāḍī (ʿIyāḍ) says: "Apart from little girls playing with dolls and the permission for this". Mālik, however, declares it *makrūh* for a man to buy his daughter a doll. And some say that the permission to play with dolls was abolished by the traditions (447-8). These traditions lay it down without any ambiguity that the representation of living creatures is strictly forbidden. As regards representations of trees and such-like without a *rūḥ*, neither their making nor purchase is thereby forbidden. Fruit trees in this respect are the same as other trees. This is the view of all the *ʿulamāʾ* except Mudjāhid [*q.v.*], who considers the representation of fruit-trees *makrūh*. The Ḳāḍī (ʿIyāḍ) says: Mudjāhid is alone in this view. He relies on the tradition, "Who is more unrighteous, than he who imitates my creation?" (Muslim, *Libās*, trad. 101; al-Bukhārī, *Tawḥīd*, *bāb* 56), while all the others quote the tradition, "Then it shall be said to them, put life (*aḥyū*) into that which ye have made," for *aḥyū* means, make living creatures (*ḥayawān*) with a *rūḥ*. Thus far al-Nawawī.

In spite of the opinions of theologians and jurists, breaches are not rare, as in the case of the prohibition of wine; as, e.g., the frescoes in the bath-house of Ḳuṣayr ʿAmra [see ARCHITECTURE], the miniatures in Persian and Turkish manuscripts [see TAṢWĪR. 1] and the postage stamps of the great majority of Islamic countries [see POSTA]. There have even been pictures of Muḥammad in recent times. But this does not affect the fact that, among Muslim peoples, there has been neither painting nor sculpture to any considerable extent. Arabesques and calligraphy [see ARABESQUE and KHAṬṬ] may be regarded as a substitute for it.

Objections were for long made to photography (see Snouck Hurgronje, *Verspreide Geschriften*, ii, 432-3); now these seem, in certain circles at least, no longer to be so strong or even to have been quite overcome. In the Museum of al-Dawḥa in Ḳaṭar, one may see, in one of the rooms, rows of photographs of celebrated members of the ruling family, despite the fact that this is Wahhābī. In Cairo there appeared early an illustrated weekly *al-Muṣawwar*, produced entirely on western lines, and illustrated magazines and journals are now general in the Islamic world. This does not, however, mean that the old opinions have entirely disappeared. Chauvin gave examples of the horror of being photographed [see TAṢWĪR. 2.], examples which still have their counterparts in the modern western world. Here too we find people objecting to being photographed because they feel as if something were being stolen from their persons or spirits.

We also find the second commandment quoted literally in the West against pictures, although the usual interpretation regards it only as prohibiting the worship of idols. It may be asked whether the Muslim interdiction of images was influenced by the Jewish

interpretation of the second commandment. From the literature (Flavius Josephus) on the one hand, and the coins on the other, it is evident that the Jewish extension of the prohibition of images was exactly the same as the Muslim: no living creatures, only plants and other objects. On the one hand, we may assume Jewish influence on the Muslim prohibition of images, on the other hand recognise that the foundations for this transference can already be found in the Ḳur'an. The Biblical idea of the creation of man by the making of an image and breathing the breath of life into it as found in the story of the Creation is also found in the Ḳur'an (XV, 29; XXXVIII, 72), and it is this very idea which has had great influence on traditions and legal literature.

To the information from Tradition, some items of historical information may be added.

When the Meccans rebuilt the Kaʿba after it had been damaged by a fire, they painted on its pillars pictures (*ṣuwar*) of the prophets, trees and angels. Amongst these pictures, there were ones of Abraham, the Friend of God, in the shape of an elderly man drawing out the divinatory arrows [see ISTIḲSĀM], and ones of Jesus the son of Mary and his mother. On the day of the conquest of Mecca (the *Fatḥ*), the Prophet went into the Kaʿba, ordered a garment (*t̲h̲awb*) to be brought, dipped it in the waters of Zamzam and commanded that all the pictures should be rubbed out except for that of Jesus and his mother, which he covered with his two hands, saying at the same time, "Rub out all the pictures apart from the ones which I am covering with my hands!". Then, raising his eyes, he saw the picture of Abraham and said, "May God cause them to perish! They have represented him as drawing out the divinatory arrows. What has Abraham to do with arrows?" (al-Azraḳī, *Ak̲h̲bār Makka*, ed. Wüstenfeld, 111). ʿAṭā' b. Abī Rabāḥ relates that he saw in the Kaʿba a picture of Mary painted (*muzawwaḳ*) on the pillar at the building's entrance (*ibid.*, 111-12).

There are two items of information concerning the Prophet's revulsion at the sight of any kind of picture or image. Al-Ṭabarī, i, 1788, related that the Messenger of God had a shield (*turs*) with the head of a ram carved on it. He disliked this intensely. Hence one day, God made it disappear. Ibn Saʿd records via ʿĀ'is̲h̲a a conversation which took place between the Prophet's wives, who had gathered round him when he was ill. They were speaking about a church in Abyssinia, dedicating to Mary, whilst admiring its beauty and its images (one should note that Umm Salama and Umm Ḥabība had been in Abyssinia with the first group of Muḥammad's followers who emigrated thither). The Prophet interrupted them and said, "Those people erect on the tomb of one of the just persons amongst them an oratory (*masd̲j̲id*), then they paint these kind of pictures. Such people are the worst of creation" (*Ṭabaḳāt*, ii/2, 34).

Paintings were to be found in houses. One text leads us to think that they had a propitiatory effect. ʿAbd Allāh (or ʿUbayd Allāh, both of these being sons of Ziyād b. Abīhi) had a dog, a lion and a ram painted in the entrance porch (*dihlīz*), and said, "A dog which barks, a ram which buts with its horns and a grim and menacing lion" (Ibn Ḳutayba, *ʿUyūn*, ii, 147).

Another story, arising out of the legend of al-Zabbā' (Zenobia) makes one think of a usage current within social relations. This queen sent a skilful painter to make for her a portrait of her enemy ʿAmr b. ʿAdī (al-Ṭabarī, i, 762 ff.). A similar tale is told about Muḥammad, to whom Kisrā is said to have sent a painter in order to make a portrait for himself (al-Ibs̲h̲īhī, *Mustaṭraf*, ii, 177; al-Nuwayrī, *Nihāya*, iii, cited in Fahd, *La divination arabe*, 471-2).

Finally, I. Goldziher (*Zum islamischen Bilderverbot*, in *ZDMG*, lxxiv [1920], 288) drew attention to Ḳur'ān, V, 110, where it is said that God gave Jesus the power of forming (*k̲h̲alaḳa*) out of mud the figure of a bird, into which he was able to breathe (*nafak̲h̲a*) life. This verse must have been the departure point for theological discussions which took place over the question of images in Islam.

The question of the licitness or otherwise of the representation of living forms has recently been considered by historians of Islamic art, endeavouring to go beyond the blanket assertion in many textbooks that Islam was theologically and legally opposed to all such representation. A useful discussion is to be found in Oleg Grabar's ch. "Islamic attitudes towards the arts" in his *The formation of Islamic art*, New Haven and London 1973, 75-103. He examines the exiguous Ḳur'ānic references as a document for the arts, finding nothing comparable to the categorical message of Exod. xx. 4 "Thou shalt not make unto thee any graven images or any likenesses of anything that is in heaven or that is in earth beneath or is in the waters under the earth", but notes that the early Islamic attitudes, as developed in *Ḥadīt̲h̲*, clashed with authentic information about the presence of beautiful objects with figures—mainly textiles and metalwork—in the Prophet's immediate environment, so that some adjustment and amelioration of a blanket prohibition was evolved in Tradition. Grabar sees a possible explanation of the whole question in the initial confused attitude of awe and admiration on the one hand, and contempt and jealousy on the other, towards the art and architecture of the Byzantine and Eastern Christian worlds, which passed to downright hostility towards representation of living things, conceivably in part under the influence of Judaic thought and arguments, but primarily as a reaction to, and a need for differentiation from, the overwhelming impact of the sophisticated system of Christian art, so that Islam could preserve it own unique quality. Islamic iconophobia seems also to reflect a fear of the magical, potentially evil power of images as deception, an attitude deeply embedded in the folk culture of the Middle East.

2. In philosophy. For *ṣūra* as εἶδος, form, see hayūlā.

SURĀḲA b. MIRDĀS al-AṢGHAR, Umayyad poet and contemporary of Djarīr and al-Farazdaḳ [*q.vv.*], a member of the Yemeni tribe of Bāriḳ, of the Azd [*q.v.*], and one of three poets to bear the name Surāḳa b. Mirdās (see Sezgin, *GAS*, ii, 327).

Abu 'l-Faradj al-Iṣbahānī did not devote an entry to him in the *Aghānī*, although al-Ṭabarī mentions him often enough in his *Ta'rīkh*, because of the at times prominent role which Surāḳa played in the politics of his day; Surāḳa also, apparently at the instigation of Bishr b. Marwān [*q.v.*], participated in the public haranguing matches between Djarīr and al-Farazdaḳ, lending his support to the latter. Various anecdotes connect him with the opposition to al-Mukhtār al-Thaḳafī [*q.v.*], who had him imprisoned and then released upon Surāḳa's composition of a panegyrical *i'tidhār* (a *nūniyya*), with involvement with Muṣ'ab b. al-Zubayr [*q.v.*] in Basra, and with membership of the court circle of Bishr b. Marwān, to whom he dedicated a panegyric (a *bā'iyya*). Surāḳa's *dīwān* also contains a *marthiya* [*q.v.*] in honour of 'Abd al-Raḥmān b. Mikhnaf (a *rā'iyya*). His death is fixed to the year 80/699. Surāḳa's extant poetry belongs predominantly to the genres of *hidjā'* and *rithā'* with some *madīḥ* and distinctive *fakhr* espousing a pan-Yemeni fervour. It also contains a superlative horse description (a *bā'iyya*) and a fine poetic manifesto of sixteen lines, verses 57-72 of a bipartite *fakhr* (a *lāmiyya*), in which the poet awards poetical pre-eminence to himself over his non-Yemeni predecessors.

(J.E. Montgomery)

SURAKARTA, a city in Central Java, Indonesia, pop. 511, 585 (1988), formerly also the name of a Javanese kingdom.

Originally, the whole area was part of the kingdom of Mataram, with its capitals Yogyakarta (since 1582) and Kartasura (since 1677/80), in which Islam was accepted as official religion, but with both Hindu-Javanese and Javanese-monistic traditions functioning as well as ideology legitimating the rule of the dynasty. After a rebellion against the strong economic and political influence of the Dutch United East India Company (VOC), which originated in Batavia during a confrontation between the Dutch and Chinese traders who were subsequently massacred, and which soon spread to Central Java, the ruler of Mataram, Paku Buwono II, decided to abandon his *kraton* (palace) in Kartasura and established a new one in a village named Sala (Solo, in Javanese pronunciation), some 12 km/7 miles to the east and close to the river Bengawan Solo, renaming it Surakarta and taking his residence there in 1745. He was forced by the VOC to lease to them vast areas on the coasts and some in the interior of the island as well.

When Paku Buwono II died in 1749, the Dutch declared the crown prince as *susuhunan* (ruler), as Paku Buwono III. In Yogyakarta, however, a younger brother and long-time rival to Paku Buwono II and uncompromising opponent to the treaty with the Dutch, Mangku Bumi III, was declared king by his followers. In 1755 he adopted again the title of *sulṭān*, once held by Agung, the greatest ruler of Mataram (1613-46), by a special act of conferment from Mecca, and as Hamengkubuwono I he became the ancestor of the formally still ruling dynasty of (Nga) Yogyakarta Hadiningrat, with its present Sultan Hamengkubuwono X (since 1988). Thus in 1755 the unity of Mataram came to its end, and was replaced by two rival kingdoms: the *Kasunanan* Surakarta Hadiningrat, and the Kasultanan (Nga) Yogyakarta Hadiningrat. Both, however, experienced a further partition: to the still rebellious Raden Mas Said, younger brother of Paku Buwono II, some areas of the Surakarta kingdom had to be ceded where, since 1757, he and his descendants ruled as Mangku Negara, their palace being also in Surakarta, while the British, in 1812, handed over some districts of the Yogyakarta sultanate to the Paku Alam.

The influence of Islam was much less apparent in Surakarta court culture than, e.g., in Yogyakarta. The hereditary title of the ruler, Paku Buwono, means "nail of the universe" and points to his cosmic position. Priority was given to what was thought to be the authentic Javanese traditions in art, dance, gamelan music, court etiquette, batik weaving, etc., expressing the cosmic harmony. Literary life flourished with Pangeran (prince) Ranggawarsita (1802-73), who combined Javanese and Islamic mystical traditions in his philosophy.

After 1830, Dutch rule over the Javanese principalities, including Surakarta, was formally indirect, using the *susuhunan* as highest local authority, to whom also the appanage of the leased territories had regularly to be handed over. In 1905, Javanese Muslim Batik traders in Surakarta founded the *Serikat Dagang Islam* ("Islamic Trading Company") against the growing competition of Chinese Batik traders who were obviously supported by the court. After a reshuffle in 1911, it developed, as "*(Partai) Sarekat Islam (Indonesia)*", into the most influential nationalist organisation during the two decades to come [see sarekat islam]. Great poverty and social unrest made the area of the *kasunanan* and its eastern neighbourhood a focus for Communist agitation.

After World War II and the end of colonialism in Indonesia, the young Paku Buwono XII, who had been enthroned just a few weeks before the declaration of the independent Republic of Indonesia (on 17 August 1945), tried to maintain his sovereignty, albeit now under the umbrella of the Republic, by declaring his kingdom to be an "extraordinary region" (*daerah istimewa*) ruled by him, the *susuhunan*. Growing security problems caused by the Communists, the alleged lack of sufficient support to the republican defenders of independence against the returning Dutch (after 1946), and a general dislike of the feudal image of the *kraton*, resulted in the gradual reduction of the *susuhunan*'s authority to the area of his palace, while in 1950, the city and territory of the former kingdom, together with that of the Mangku Negara, were included in the province of Central Java, Surakarta maintaining only the status of a capital city of a residency (*kabupaten*). Nevertheless, it is still considered as a dominant centre of Javanese traditional culture, to which some institutions of higher education have been added.

(C.C. Berg-[O. Schumann])

SŪRAT, a city and port of western India, on the south bank of the Tāptī and some 16 km/10 miles upstream from where the river debouches into the Gulf of Cambay (lat. 21° 10' N., long 72° 54' E.). The geographer Ptolemy (A.D. 150), speaks of the trade of Pulipula, perhaps Phulpāda, the sacred part of Sūrat city. Early references to Sūrat by Muslim historians must be scrutinised, owing to the confusion of the name with Sorath (Saurāshtra), but in 774/1373 Fīrūz Shāh Tughluk III built a fort to protect the place against the Bhīls. The foundation of the modern city is traditionally assigned to the beginning of the sixteenth century, when its prosperity was restored by Gopī, a rich Hindū merchant, and in 1514 it was already an important seaport. The Portuguese burnt the town in 1512, 1530, and 1531, and the present fort was founded in 947/1540 by Khudāwand Khān, a Turkish officer in the service of Maḥmūd III of Gudjarāt. In 980/1572 it fell into the hands of the Mīrzās, then in rebellion against the Mughal Emperor Akbar, who besieged and took the place in the following year. It was plundered in 1018/1609 by Malik ʿAmbar [*q.v.*], the Ḥabashī *wazīr* of the Niẓām Shāhīs of Aḥmadnagar [*q.vv.*], but on the whole, for 160 years Sūrat enjoyed peace and prosperity under Mughal rule, and at its peak in the mid-17th century, may have had a population of *ca.* 200,000; it was known as "the Gate of Mecca" and "the Blessed Port" from its being the point of departure for Pilgrims to Arabia. An English ship first arrived at "Swally Hole" (Suwālī) the anchorage near the mouth of the Tāptī, in 1608, but the English encountered great difficulty in founding a factory, owing to the hostility of the Portuguese. They succeeded, and their position was secured by the treaty brought back from Djahāngīr at Agra by Sir Thomas Roe in 1618. The Dutch East India Company likewise secured a factory at Sūrat at the same time, their principal one in India, and there was also a French factory opened in 1667. The principal articles of trade at this time were silks and cotton textiles exported to Europe.

There was growing insecurity in the later part of Awrangzīb's reign. The Marāthā [*q.v.*] leader Śivādjī plundered the city in 1664, but was not able to touch the English and Dutch factories. Sūrat suffered a certain decline from the English East India Company's decision in 1687 to transfer the seat of its trading operations on the west coast of India to Bombay, and the Dutch became leading traders there. Marāthā raids became almost an annual occurrence. In 1733 the nominal Mughal governor Tēg Bakht Khān declared his independence, and his family held the city till 1759 when a British expedition from Bombay, with Marāthā compliance, took over Sūrat, the local Nawwābs continuing as nominal rulers till 1800, when it was formally incorporated into the Bombay Presidency.

In 1844 Sūrat, at the time economically depressed through the rise of Bombay, was shaken by large-scale riots against the Bombay Government's imposition of a new tax on salt to compensate for its losses through abolition of transit dues on manufactured goods; the new tax fell heavily on poor fishermen who salted their catches. However, the rise in cotton prices during the American Civil War benefitted the city, and it began to recover from its depressed state with the coming of railways. It is now the administrative centre of a District of the same name in the Gujarat State of the Indian Union, with a population in 1971 of 470,000.

Monuments include the mosque built by Khudāwand Khān (947/1540) and that of Sayyid Djaʿfar ʿAydarūs (1049/1639 [see ʿAYDARUS. no. 8]. The present population is mainly Hindu, but there is a significant Parsee community, with fire temples, and the Muslims include a significant community of the Bohorā Ismāʿīlīs. The head of the Dāʾūdī branch of the Bohorās, called the *Dāʿī al-Muṭlaḳ* or *Mullādjī Ṣāḥib*, has his headquarters in Sūrat although he normally resides in Bombay [see BOHORĀS].

(T.W. Haig-[C.E. Bosworth])

ṢŪRAT AL-ARḌ (A.), lit. "the form or shape of the earth", the term serving as the title for two early Islamic geographical works covering the world as it was then known, that of Muḥammad b. Mūsā al-Khwārazmī (d. *ca.* 232/847 [*q.v.*]) and that of Ibn Ḥawḳal (d. after 362/973 [*q.v.*]). See further DJUGHRĀFIYĀ.

AL-SURAYDJIYYA, AL-MASʾALA, "the question of [Ibn] Suraydj", a term in the Islamic law on divorce. The jurists term this one of the formulae of the "conditional divorce" (*al-ṭalāḳ al-muʿallaḳ ʿalā sharṭ*), a type of divorce admitted by the majority of jurists and consisting of the husband addressing his wife with a formula of the kind "If you go into this house, you are divorced". In most of the *fiḳh* treatises, extended developments of a casuistic nature are devoted to the different forms of this type of divorce, forms distinguished from each other by the particular conditional particle used (*man, in, idhā, matā*, etc.) in the formula of divorce or by the terms of the condition evoked.

The *masʾala suraydjiyya* envisages the case of a divorce formula in the following terms: "When I divorce you, you will have already been divorced, before this divorce, three times" (*matā ṭallaḳtuki fa-anti ṭāliḳ^{un} ḳablahu thalāth^{an}*). Different jurists, including the Shāfiʿī Ibn Suraydj (d. 306/918 [*q.v.*])—after whom this question is named—considered that a formula like this remained invalid (i.e. realisation of the condition did not entail that of that which was made conditional), since, they said, "affirmation of a divorce leads to its negation". There is a "circular argument" (*dawr*) here, as al-Subkī notes, because in this case, when a husband divorces his spouse, one must consider whether this act is already a third one (hence irrevocable), and if one considers that the woman is already divorced in that fashion, the *ṭalāḳ* pronounced (or the realisation of the condition) lacks any object and cannot therefore have the effect of provoking a threefold divorce. Certain jurists held that a simple (not threefold) divorce resulted, whilst others, that a threefold divorce depended entirely on this form of conditional divorce.

SÜRGÜN [see Suppl.].

ṢURRA (A.) lit. "purse", a sealed purse containing coins. In this meaning it is found in early Arabic papyri. It stands for the late Roman *sacculum signatum* or greek *follis* (see Hendy). The *ṣurra* was used for monetary transactions. Purses with a defined amount of money were sealed, because coins usually differ in weight (see Goitein).

In 9th/15th century Mamlūk Egypt, *ṣurra* is used for a purse of money distributed as a gift by the ruler. Ibn Iyās mentions foremost the purses annually given to the *'ulamā'* and *fuḳahā'* as well as the gifts given to the Sharīf of Mecca on the occasion of the *Ḥadjdj*. Before this period, the general terms *in'ām* [*q.v.*] or *ṣadaḳāt* were applied for those gifts.

After 922/1516 the Ottoman sultan became the protector of the Holy Cities. *Ṣurra* developed into a financial and administrative term (Tkish. *sürre*). It defined all expenses of the Pilgrimage caravan, payments to the Bedouin tribes for its safe-conduct, payments to the Sharīf in Mecca, as well as payments to the people connected with the services in religious institutions in Mecca and Medina, and later in Jerusalem too (see Shaw). From the 19th century, several descriptions of the connected office of the *amīn al-ṣurra* by *amīrs* of the Pilgrimage and European travellers are known (see Peters, Stratkötter, Landau).

SŪRS or SŪRĪ dynasty, a line of Dihlī Sultans (947-62/1540-55) founded by the Afghān commander Shīr Shāh Sūr b. Miyān Ḥasan [*q.v.*], who had been in the service of the preceeding Lōdī sultans [*q.v.*]. This brief Indian dynasty's period of rule spanned the interval between the first reign of the Mughal Humāyūn [*q.v.*] (937-47/1530-40) and his second reign and the final consolidation of Mughal rule (962/1555).

From a base in Bihār, Shīr Shāh in the 1530s made himself master of northern India, including Bengal, and twice repelled invasions from Agra by Humāyūn, so that in 947/1540 he assumed the sultanate (for details of his career and reign, see SHĪR SHĀH SŪR). When he was killed in warfare at Kālindjār in 952/1545, he was succeeded by his younger son Islām Shāh (952-61/1545-54), who managed to hold the sultanate together in the face of ambitious Afghān nobles, whose landed power he endeavoured to reduce; but on his death in autumn 960/1553, the throne was seized by Mubāriz Khān, who murdered Islām Khān's son Fīrūz Shāh and assumed royal authority as Muḥammad 'Ādil Shāh. The next year was filled with anarchy and strife as the central authority in Dihlī, and the sound administrative and financial system of Shīr Shāh and Islām Khān, collapsed. Various members of the Sūr family such as Ibrāhīm, Aḥmad and Muḥammad Khāns contested the throne from such bases as Lahore and Bengal, with the commander Tādj Khān Kararānī rebelling at Gwāliyār. Assuming the throne in Dihlī, Ibrāhīm Khān soon had to yield power to Sikandar Khān; an important additional figure in these power struggle was the Hindu general of the Sūrs, Hēmū, who was eventually killed combatting the Mughals at the second battle of Pānīpat [*q.v.*].

This confusion within the Sūr family enabled Humāyūn to reappear in 962/1555, occupying Lahore, defeating the Afghāns at Sirhind [*q.v.*] and entering Dihlī in 4 Ramaḍān 962/23 July 1555.

SURT, a mediaeval city of Libya, also known today as al-Mudayna or Madīna Sulṭān, lies 55 km/34 miles east of the modern city of Sirt.

It was originally a Punic emporium called Charax. Later, in Roman times, it was called Iscina and became the site of a Jewish colony. In many Berber revolts against Byzantine authority the city seems to have been destroyed. After the Umayyad conquest of North Africa, the town has no recorded history except for the fact that the Mindāsa, Maḥanḥa, and Fanṭās branches of the Butr confederation of Berbers began to settle there. To the east of them, the Mazāta and the Lawāta Berbers were settling, and to the west of them and beyond Tawarga up to Tripoli [see ṬARĀBULUS AL-GHARB] were the Hawwāra Berbers of the rival Barānis confederation. All these settlers from Adjdābiya [*q.v.*] to Tripoli seem to have been converted to Ibāḍī Khāridjism around the mid-2nd/8th century. Khāridjī affiliation made these townships independent of the newly-established 'Abbāsid caliphate. These settlements are mentioned by the Muslim geographers al-Ya'ḳūbī, Ibn Khurradādhbih and al-Muḳaddasī, but the most detailed description is given by Ibn Ḥawḳal, who passed through Surt in 336/947 on his way to the Fāṭimid capital al-Mahdiyya [*q.v.*]. He describes Surt as lying a bow-shot away from the sea, built on hard, sandy ground with strong walls of mud and brick. It was inhabited by Berber tribes who owned farms there. They had cisterns to store rainwater and they harvested sufficient dates, grapes and other fruit. They bred goats and camels and mined alum, which they exported. The city grew wealthier than the neighbouring Adjdābiya and paid tribute to the Fāṭimid caliph. Ibn Ḥawḳal mentions the walls and cisterns, but not a mosque or forts. A Muslim community without a mosque is not imaginable, and one must have been built by the original Ibāḍī settlers. The forts were probably built later by the Fāṭimid caliph al-Mu'izz (341-65/952-75 [*q.v.*]) in preparation for the final march of his general Djawhar [*q.v.*] for the conquest of Egypt. Al-Maḳrīzī gives the date 355/965.

In the period after the Fāṭimids' shift of their capital to the newly-built city of Cairo, the entire Syrtic region became a battleground between the Fāṭimids of Egypt and the new Berber rulers, the Zīrids [*q.v.*] of Ḳayrawān. For a time, the Zanātī Berber Banū Khazrūn of Tripoli, who declared themselves independent of the Zīrids, controlled the Syrtic region and brought it into a temporary alliance with the Fāṭimids. Also at this time (429/1037), we read about the settlement of the Arab Bedouin tribe of Zughba

and later of Riyāḥ and Ḳurra, all members of the Hilāl group, in this region, and this later exploded into the great Hilālian invasion of 443/1051, in the aftermath of which we have the report of al-Bakrī (d. 476/1083), "It is a large city by the sea and enclosed by a wall of bricks. It has a mosque, a bath and bazaars. It has three gates: Ḳiblī [i.e. southeast], Djawfī [i.e. landwards], and a small one facing the sea [i.e. north]. This city has no suburbs around it, but possesses date-palms, gardens, sweet-water springs and many cisterns. Its animals are goats and their meat is juicy and tender, the like of which is not found in Egypt." The new elements are a mosque, the bath, and bazaars. Al-Bakrī's report was the basis of the modern excavations in this area. He hints at the existence of Arab, Berber, Persian and Coptic merchants, whose commercial practices he criticises.

In the later Fāṭimid period, Surt began to be abandoned, being probably no longer a junction of east-west and north-south trade routes. The decline of Surt and Adjdābiya is attested by al-Idrīsī (d. 561/1166), who seems to have visited the Syrtic region. In the next century, ʿAlī b. Saʿīd al-Maghribī (d. 685/1286) talks of Surt's forts having survived. In the 19th century, the Ottoman writer Aḥmad al-Nāʾib al-Anṣārī also mentions Surt, but mainly on the basis of al-Bakrī's report.

The city withered away between the 6th/12th and the early 19th centuries. It is at this time that western exploration and modern archaeology revived knowledge of it. The Beachey brothers visited it in 1821; Heinrich Barth in 1846 (whose ideas were restated by Karl Müller); G.A. Freund in 1881; Luigi Cerrata in 1931; and Richard Goodchild in 1950. Later explorations by ʿAbd al-Ḥamīd Abu 'l-Saʿūd in 1963-4, Muḥammed Muṣṭafā in 1965-6, H. Blake, A. Hutt, and D. Whitehouse in 1971, and by Géza Fehérvari, Abu 'l-Saʿūd and Geoffrey and Joan King, as well as Masʿūd Shaghlūf and E. Chin, in 1978, have covered four seasons of excavations revealing walls that encompassed the city during the time of Ibn Ḥawḳal within 184,003 m^2, the mosque, the forts, the cisterns, and the roads and gates. No trace of the harbour remains, but as evidence of trade, 20 Fāṭimid lustre fragments and a coin of the time of the caliph, al-Muʿizz have been discovered.

(A. Hamdani)

SURŪR, Mīrzā Radjab ʿAlī Beg (*ca.* 1787-1867) early writer of Urdu fiction, born in Lucknow, for which city he retained great affection all his life. He was well educated, noted for his command of Arabic and Persian, as well as Urdu, and excelled in calligraphy. He was also an expert musician. He was trained in poetry by a pupil of Sūz [*q.v.*], Nawāzish. He was a friend of the poet Ghālib [*q.v.*], who regarded him as the leading, Urdu prose writer of his age. Apparently, Surūr fell foul of the Nawwāb of Lucknow Ghāzī al-Dīn Ḥaydar Shāh, and had to leave for Cawnpore and Benares, where he wrote his masterpiece, the romantic novel *Fasāna-yi ʿadjāʾib*. For further information about this work, see ḳiṣṣa, 5. In Urdu, at vol. V, 202. The title of the work is apt, meaning "Story of wonders", as it contains "plenty of necromancy and witchcraft, spiced with adventures in charmed forests and duels with demons and wizards" (Saksena). It is an archetypal *dāstān* or fairy-story in the tradition of the old *mathnawīs* [*q.v.*]. Two features must, however, be stressed. Firstly, the prose style tends to be ornate with much rhyme. But Muḥammad Sadiq does concede that "whenever the story interest predominates ... he comes quite close to the spoken language of the day, and is racy and idiomatic". Secondly, considerable light is shed on contemporary Lucknow life, seen in the long introduction. Surūr played an important role in the rise of the Urdu novel. He was imitated and, at times, satirised. Future developments were to come from European—chiefly English—influences. Although written in 1824, *Fasāna-yi ʿadjāʾib* was not published until nearly twenty years later. In the meantime, Surūr, had returned to Lucknow, and had been appointed a court poet to Wādjid ʿAlī Shāh, Nawwāb of Awadh or Oudh who was, however, exiled by the British to Calcutta in 1856. Surūr was left destitute, but later enjoyed the patronage of the Māhāradjas successively of Benares, Alwar and Patiala. He died in Benares.

The position of Surūr in Urdu literary history is that his fame is in one form only, the novel; indeed, almost entirely in one work. Yet, he excelled in several fields, and this was recognised by his contemporaries. Unfortunately, little of his vast output is readily available in print. This is attested by Saksena, writing in 1927. Among works mentioned are a review of Ghālib in rhymed prose, and an adaptation of the *Arabian Nights*, *Shabistān-i Surūr*. There is also a congratulatory ode on the marriage of Prince Edward, later King Edward VII. Very little of his works, apart from his prose, has survived, and of that, his works on calligraphy and music have been forgotten. As for his poetry, although it must have been of a high order, no *dīwān* is to be found. Some poems are available in his prose works and in various anthologies. According to Saksena, though he was a member of the Lucknow school, he followed an independent path, scorning artificiality and bombast. On the whole, Saksena's account of Surūr is one of the best parts of his *History of Urdu literature*, though at times verbose and inconclusive. It does show him as a controversial figure who merits further study.

Bibliography: Surūr's letters describing his travels in northern India were published, and are praised by Saksena. For further information, reference should be made to ḳiṣṣa. 5, and also to Muḥammad Sadiq, *A History of Urdu literature*, Oxford 1964, and Ram Babu Saksena, *History of Urdu literature*, Allahabad 1927.

(J.A. Haywood)

SURŪR, NADJĪB [see nadjīb muḥammad surūr].

SURŪRĪ (SŪRŪRĪ), the pen-name (*makhlaṣ*) used by several Ottoman poets, of whom the following two are the most remarkable:

1. Muṣliḥ al-Dīn Muṣṭafā, a distinguished

philologist and commentator, born in Gallipoli in 897/1491 the son of the merchant Sha'bān. After studying with learned men of renown, he became a *mülāzim* of Fenārī-zāde Muḥyi 'l-Dīn Efendi [*q.v.*], who appointed him *bāb nā'ibi* in 927/1521 when he was *ḳāḍī* of Istanbul. After an interval in his career during which he became a *derwīsh* of Naḳshbendī Maḥmūd Efendi, the *sheykh* of the Emīr Bukhārī *zāwiye*, Surūrī became *müderris* in 930/1523-4 of the Ṣarīdja Pasha *medrese* in Gallipoli, then of the Pīrī Pasha *zāwiye* in Istanbul in 933/1526-7, and in 944/1537-8 he became the first *müderris* to teach at the *medrese* which (Güzeldje) Ḳāsim Pasha [*q.v.*] had Sinān build in the quarter of Istanbul named after him. Although he resigned in 954/1547 to resume the life of a *derwīsh*, he later returned to the Ḳāsim Pasha *medrese* (lecturing also on Djalāl al-Dīn Rūmī's *Mathnawī-yi ma'nawī* in the Ḳāsim Pasha mosque in the afternoons). In 955/1548 he was appointed tutor to Muṣṭafā [see MUṢṬAFĀ. 3], the ill-fated son of Süleymān the Magnificent, for whom he wrote some of his best-known works. Upon the execution of this prince in 960/1553, he withdrew into private life, teaching in the *mesdjid* he had had built in the Ḳāsimpasha quarter of Istanbul. (The author of the *Künh el-akhbār*, 'Ālī [*q.v.*], also a native of Gallipoli, was a pupil of his here in 965/1557-8.) He died on 7 Djumādā I 969/13 January 1562 and was buried at his own *mesdjid* (but nothing remains of either his tomb or *mesdjid*).

The works of Surūrī, who was mainly a commentator and translator, treat a great variety of topics, such as exegesis of the Ḳur'ān, prophetic tradition, Islamic law, logic, astrology, medicine, grammar, and literature. Of over thirty commentaries of his (some in Arabic or Persian) his *Ḥāshiya* on al-Bayḍāwī's *Anwār al-tanzīl* and his *sharḥs* on al-Bukhārī's *al-Ṣaḥīḥ*, on the *Īsāghūdjī* [*q.v.*], and on al-Muṭarrizī's *al-Miṣbāḥ* are among the best-known. Especially remarkable among his translations is that of al-Ḳazwīnī's cosmography *'Adjā'ib al-makhlūḳāt*, a synopsis with the title *Kitāb el-'adjā'ib we 'l-gharā'ib*. As to literature, his commentaries on Sa'dī's *Būstān* and *Gulistān* and even more so those on Ḥāfiẓ's *Dīwān* and on the *Mathnawī-yi ma'nawī* are famous, that on the *Mathnawī* having even earned him the epithet of *Shāriḥ-i Methnewī*. Among his original works, *Baḥr el-ma'ārif*, a compendium of prosody, rhyme, rhetoric elements, and terms of *dīwān* poetry (with samples from Arabic and Persian poetry), which he wrote for prince Muṣṭafā in Turkish, was deservedly held in the highest esteem over the centuries. Surūrī is also the author of a Turkish *dīwān* (he remarks himself that he wrote the majority of his 500 *ghazels* in his youth), but the fragments of his poetry that have reached us are not remarkable.

Bibliography: The *tedhkires* of Sehī, Laṭīfī, 'Āshiḳ Čelebi, Ḳinalī-zāde Ḥasan Čelebi, Beyānī, Riyāḍī and Ḳāf-zāde; 'Ālī's *Künh el-akhbār*; Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1314, i, 426; 'Aṭā'ī, *Dheyl* to the *Shaḳā'iḳ al-nu'māniyya*, Istanbul 1268, 23-5; Hammer-Purgstall, *GOR*, iii, 318; idem, *Geschichte der Osmanischen Dichtkunst*, ii, 287-9; Ḥüseyin Aywānsarāyī, *Ḥadīḳat el-djewāmi'*, Istanbul 1281, ii, 4-5; *Sidjill-i 'othmānī*, iii, 12; *'Othmānlī mü'ellifleri*, ii, 225-6; Brockelmann, II^2, 579, S II, 650; F. Babinger, art. in EI^1, s.v.; C. Baltacı, *XV-XVI. asırlarda osmanlı medreseleri*, Istanbul 1976, 214-6; Ö.F. Akün, art. in *İA*, s.v. *Sürûrî*; *Başlangıcından günümüze kadar büyük türk klâsikleri*, iv, Istanbul 1986, 165-7; Â. Çelebioğlu, *Kanûnî Sultân Süleyman devri türk edebiyatı*, Istanbul 1994, 114, 117.

2. SEYYID 'OTHMĀN, the greatest Ottoman writer of chronograms (*tārīkhs*), which mastery earned him the epithet *Müwerrikh*, the chronogrammatist. He was born in Adana on 25 Rabī' I 1165/11 February 1752 as the son of Ḥāfiẓ Mūsā. He came to the capital in 1193/1779 encouraged by Yaḥyā Tewfīḳ Efendi, who later became *Sheykh el-Islām*, and who the same year changed the poet's pen-name from Ḥüznī (which he had already used six years) to Surūrī. Through his intercession, Surūrī became a *mülāzim* of *Sheykh el-Islām* Es'ad-zāde Meḥmed Sherīf Efendi; as such, he had to live in straitened means until his several appointments as *ḳāḍī* starting 1195/1781. During the years 1203-4/1788-90 he was the *ketkhüdā* of his close friend the poet Sünbül-zāde Wehbī Efendi [*q.v.*] in Eski Zaghra (Stara Zagora, in southern Bulgaria, where the latter was *ḳāḍī*). He died on 11 Ṣafar 1229/2 February 1814 and was buried beside Sünbül-zāde Wehbī Efendi outside Edirne ḳapīsī in Istanbul; neither grave exists today.

Surūrī's talent as poet was not all-encompassing (his *ḳaṣīdes* and *ghazels* are not remarkable) but restricted to the writing of chronograms, where however he showed such mastery that he earned for himself the position of unrivalled master of the Ottoman *tārīkh*. He stands apart from all other Ottoman poets who wrote chronograms before and after him, having written an incomparably greater number of *tārīkhs* (nearly 2,000) on an unlimited variety of topics, commemorating events ranging from the historic to the most trivial everyday occasion, often with a touch of humour. His admirable ease of composition is especially evident not only when he commemorates one and the same event with a great number of *tārīkhs* but also when he inbeds an amazing number of chronograms in one and the same hemistich or verse. Surūrī's *Dīwān*, which he called *Neshāṭ-engīz*, was printed at Būlāḳ in 1255/1839. He is also the author of *Hezeliyyāt* (humoristic and satirical poems) under the *makhlaṣ* Hawā'ī; these were printed twice in Istanbul (undated) and include about 100 *tārīkhs*. Especially often lampooned by Surūrī was Sünbül-zāde Wehbī Efendi [*q.v.*], who retaliated in like manner. Surūrī's predilection for the chronogram is also shown by his putting together a collection of *tārīkh miṣrā's* (chronogram hemistichs; this includes but a very few *tārīkh* verses) from his own work as well as from that of poets who were his predecessors or contemporaries. This collection, which had been enlarged through additions by the poet Kečedji-zāde [see 'IZZET MOLLA] and the official historiographer Es'ad Efendi [*q.v.*], was printed by Djewdet Pasha [*q.v.*] in 1299/1881-2 at Istanbul with the title *Surūrī medjmū'asī*; about half of the *ca.* 2,300 *tārīkhs* in this collection are by Surūrī.

SURŪRĪ KĀSHĀNĪ, the pen-name of Muḥammad Ḳāsim, Persian lexicographer of the 10th-11th/16th-17th century.

His father, Ḥādjdjī Muḥammad, is said to have been a shoemaker. Surūrī, during his early youth, practised the same profession but, later turned to

scholarship. According to a tradition, he was endowed with a prolific memory and could recite thirty thousand verses by heart. He chose to reside in Iṣfahān, and there he is reported to have met the traveller Pietro de la Valle, who visited the city in 1032/1622-3. Surūrī made a journey to India and was in Lāhawr during the reign of Shāh Djahān in 1036/1626-7. From there he went on a pilgrimage to Mecca, but died on the way.

Surūrī was the author of the famous Persian-to-Persian dictionary, the *Madjma' al-Furs* "A collection of words from the Persian language", also known as *Farhang-i Surūrī*. In the preface of the book (see *Farhang-i madjma' al-Furs*, ed. Muḥammad Dabīr Siyāḳī, Tehran 1338/1960, i, 1-6), the author states that he compiled his dictionary after consulting a number of works, gives the names of many of these works, and dedicates his production to Shāh 'Abbās I [*q.v.*]. Several years later, he prepared an enlarged edition of his book after he had come into possession of Djamāl al-Dīn Ḥusayn Indju's dictionary, the *Farhang-i Djahāngīrī*, a copy of which was brought to him from India, and from which he was to benefit in the revision of his own work. In the meantime, Surūrī had compiled a concise version of *Madjma' al-Furs*, named *Khulāṣat al-Madjma'*, the preface of which carries an endorsement to I'timād al-Dawla Ḥātim Beg, minister of 'Abbās I. It must have been composed not later than 1018/1609-10, since the Catalogue of the Sipah Sālār Library refers to a copy of the work in a private collection bearing that date (see *Fihrist-i Kitābkhāna-yi Madrasa-yi 'Ālī-yi Sipah Sālār*, Tehran 1316-18/1938-40, ii, 222).

Surūrī's *Madjma' al-Furs* is a useful piece of Persian lexicography; for the meaning of its terms, which are arranged according to their initial and final letters, it provides illustrative examples from the works of the poets.

Surūrī was also a poet, and some of the verses composed by him are cited by Muḥammad Ṭāhir Naṣrābādī in his *Tadhkira*, ed. Waḥīd Dastgardī, Tehran 1361/1982, 291.

(Munibur Rahman)

SURŪSH, Muḥammad 'Alī Khān, prominent Persian poet of the Ḳādjār period. He was born around 1228/1813 in Sidih, a district of Iṣfahān. His ancestors were artisans and farmers, and his father was reportedly a butcher by trade (see *Dīwān*, i, introd., 2). About 1243/1827 Surūsh moved to Iṣfahān after his father's death. There he completed his education and also discovered his poetic vocation. In 1247/1831 he left Iṣfahān to find suitable patronage, and travelled to various cities. Finally, he settled down in Tabrīz, where he gained access to the heir-apparent, Nāṣir al-Dīn. When the latter came to the throne in 1264/1848, Surūsh accompanied him to Tehran, and after the death of Ḳā'ānī in 1270/1854, succeeded the latter as the foremost poet of Nāṣir al-Dīn Shāh's court. The monarch awarded him the title of Shams al-Shu'arā' and later elevated him to the rank of Khān. He died at Tehran in 1285/1868-9 and was buried in Ḳum.

In his poetry, Surūsh was a follower of old masters like Anwarī, Mu'izzī and Farrukhī [*q.vv.*]. His main field of literary activity was the *ḳaṣīda*, in which he is reckoned among the leading exponents of his age. Besides *ḳaṣīdas*, he composed several *mathnawīs*, of which *Urdībihisht-nāma* "Book of Urdībihisht" and *Rawḍat al-asrār* "Garden of mysteries" are perhaps the most significant. The former, which comprises over 9,000 couplets, represents an account of the Prophet's life. The second *mathnawī*, *Rawḍat al-asrār*, comprises a little over 1,150 couplets. It was first published in 1286/1869-70, and deals with the tragic events that took place at Karbalā'. The poet is also credited with the composition of a *mathnawī*, modelled on Firdawsī's *Shāh-nāma* and describing the history of the Ḳādjār dynasty from its inception to the time of Nāṣir al-Dīn Shāh. Another achievement for which Surūsh is remembered relates to his involvement in the translation of *Thousand and one nights* into Persian. This rendering, made by Mullā 'Abd al-Laṭīf Ṭasūdjī, owed its verse extracts to the efforts of Surūsh, who replaced the Arabic originals either by substituting them with verses drawn from the works of Persian masters or, where it was not possible, by translating them himself.

SŪRYA [see al-sha'm].

SŪS (a.) "licorice", i.e. the root, and more specifically the decoction from the root of *Glycyrrhiza glabra* L. var. (family *Fabaceae*), a perennial herb indigenous to southern Europe and western Asia. Arabic synonyms of *sūs* (a common Semitic word corresponding to Akkadian *shūshu* and Aramaic *shūshā*) include *'ūd al-sūs* and *shadjarat al-furs*, whereas the Persian *mahak/mathak* seems to reflect Sanskrit *madhuka*; the Greek name γλυκύρριζα, of which *licorice* is a corruption (< late Latin *liquiritia*), literally means "sweet-root".

From ancient times, the herb has been cultivated throughout the Mediterranean. It grows up to one metre, with four to eight egg-shaped leaves, and axillary bunches of blue flowers. The long, thin underground roots are flexible, fibrous, easily cut, coloured yellow inside, and have a distinctively sweet taste. The

powder obtained from the dried root is supposed to hold cathartic properties, and was added to beverages and cataplasms. The evaporated juice extracted by boiling the root (*succus liquiritiae*) is mainly used as an expectorant in the form of lozenges or syrups, but it is also considered useful against pain in the stomach, kidneys, and bladder; besides, it serves as a mask for bitter medicines, and the sweetmeat known as licorice candy or black sugar is made from it.

(O. Kahl)

AL-SŪS, the early Islamic form for the ancient site of Susa in the south-west Persian province of Khūzistān, modern Persian Shūsh. It lies on the plain between the two main rivers of Khūzistān, the Kārūn and the Kerkhā [*q.vv.*], which were once connected by canals, and the Shāwūr river runs along the western side of the site.

From at least the second millennium B.C., it was the capital of the Elamite kingdom, destroyed by the Assyrian Ashurbanipal in the 7th century B.C., but rebuilt by the Achaemenids and a flourishing town under the Sāsānids; Syriac sources show that it was the seat of a Christian bishop in the years A.D. 410-695.

Sūs fell into the hands of the Arabs in 17/638 (or the next year), when Abū Mūsā al-Ashʿarī [*q.v.*] carried through the conquest of Khūzistān. The forces there, commanded by the Persian governor Hurmuzān, apparently offered little resistance to the Muslim troops (cf. the Syriac *Chronicle*, ed. Guidi, in *Actes du 8ᵉ Congrès Intern. des Orient.*, in *JA* [1891], 32, and history of the Armenian Sebēos of the 7th century; see Hübschmann, in *ZMDG*, xlvii [1893], 625). The older historians al-Balādhurī, *Futūḥ*, 374 ff., and al-Ṭabarī, i, 2561-7, know nothing of severe fighting with the natives and a destruction of the city by Arab troops, mentioned by al-Muḳaddasī (and cf. Loftus, *op cit.*, 344). Under Islam, Sūs remained for several centuries more a populous flourishing city—we have coins struck in it (cf. W.K. Loftus, *Travels and researches in Chaldaea and Susiana*, London 1857, 400)—but it was no longer the capital of the whole region of Khūzistān or Ahwāz; this role now fell to the city of Ahwāz (more precisely Sūḳ al-Ahwāz; see AL-AHWĀZ). Sūs was now merely the capital of one of the seven (and at times more) divisions of this district. To the district of Sūs belonged several smaller towns, notably Karkha (Syriac Karkhā dhᵉ Lēdhan), which is well known from Syriac literature. Sūs was surpassed in importance not only by the capital Sūḳ al-Ahwāz but soon also by other places in Khūzistān, e.g. Shushtar [*q.v.*] or Tustar and ʿAskar(a)-Mukram [*q.v.*]. All these three places lay on the river Kārūn, towards which during the caliphate the political and economic centre of gravity of the region moved.

The Arab geographers emphasise the busy industries of Sūs, notably weaving, which was highly developed. Its silk was famous (cf. the *Dīwān* of Ibn Ḳays al-Ruḳayyāt, ed. Rhodokanakis, in *S.B. Ak. Wien*, cxliv [1902], 63 v. 8, and R.B. Serjeant, *Islamic textiles. Material for a history up to the Mongol conquest*, Beirut 1972, 40-1, 44-5). The lemons grown here were held in particular esteem; in the Middle Ages a good deal of sugar was grown around the town and still more was refined in the town. According to al-Muḳaddasī, in his time (end of the 4th/10th century), the town proper had already fallen into ruins; the population lived in a suburb. Al-Idrīsī (tr. Jaubert, Paris 1836, i, 381, 384) makes Sūs still thickly populated at the middle of the 6th/12th century, and Benjamin of Tudela, who travelled through the Near East a few years later, says that there were no less than 7,000 Jews here with 14 synagogues. The two banks of the river "Ulai"—the Shāwūr (see above) must be meant—were united by a bridge; on the west bank was the quarter of the poor (cf. Ritter, *Erdkunde*, ix, 305; Loftus, *op. cit.*, 320). The Persian geographer Ḥamd Allāh Mustawfī, writing in the 8th/14th century, describes Sūs as still a flourishing town. But we are justified in doubting whether this is really accurate at this late period and was not simply taken from earlier writers. It is certain that Sūs became more and more completely deserted from the 15th century, and this agrees with the results of the French excavations, according to which most of the remains of the Arab period discovered in Sūs belonged to the 14th and 15th centuries (see de Morgan, *Mémoires de la Délégation en Perse*, Paris 1900 ff., viii, 32). Dizfūl [*q.v.*], to the north-east of Sūs, which only appears to have come into prominence since the Mongol period, and is now an important town in Khūzistān (ʿArabistān), may be in some way considered the successor of the mediaeval Sūs.

The very extensive ruins at Sūs have been under investigation since the time of the British scholar W.K. Loftus in 1851-2, in the 20th century above all by French archaeologists (for a good survey of the site, see Sylvia A. Matheson, *Persia, an archaeological guide*, ²London 1976, 147-52). The site includes the tomb-mosque of the Prophet Daniel [see DĀNIYĀL], called by the local people Pīr or Payghambar Dāniyāl. According to Arabic sources, the sarcophagus and bones of Daniel were found after the capture of the town by the Arabs (al-Balādhurī, 378; al-Ṭabarī, i, 840, 2566), although another tradition held that Daniel's sarcophagus was found at Shushtar, so that the two towns disputed over possession of the saint's relics, which were highly venerated for their curative properties (see al-Muḳaddasī, 417, who accounts this rivalry amongst the *ʿaṣabiyyāt* of Khūzistān).

The country round Sūs suffers for nine months of the year from the glowing heat of the South Persian sky. In January, however, a luxurious, almost tropical, vegetation springs up after the winter rains. The rich pastures that then cover the soil attract the nomads thither. In the spring it is mainly Arabian Bedouins that camp here and, indeed, they are in the majority in Khūzistān generally, so that this district is actually often called ʿArabistān by the Persians. The region of Sūs is particularly visited by the tribes of ʿAlī Kathīr and Banī Lām [*q.v.*]. On the ʿAlī Kathīr, who migrated hither over three centuries ago from Nadjd in Central Arabia, cf. A.H. Layard, in *JRGS*, xvi (1846), 33, 56, 90; Loftus, *op. cit.*, 327, 331, 356, 358, 381-2, and Schwarz, *Iran im Mittelalter*, 417. Of the great tribe of ʿAlī Kathīr, we are here mainly concerned with two of its subdivisions, the Kaʿb and Zabbā (cf. Layard, *op. cit.*, 33). The Kaʿb [*q.v.*] were originally members of the powerful Kaʿb tribe leading a nomadic life on the lower Kārūn; see Layard, *op. cit.*, 37-9, 41-5, and Loftus, *op. cit.*, 285-6, 381, 390. Lur nomad tribes are often found in the plain of Sūs. At the beginning of May all is again as quiet as the grave. Even the guardian of the tomb of Daniel leaves the district, which is filled with miasma from the swamps and the heat now becomes unendurable.

The site of al-Sūs is now marked by the town of Shūsh, the chef-lieu of a *bakhsh* in the *shahrastān* of

Dizfūl. In *ca.* 1950 it had a population of around 5,000, which had risen by 1991 to 48,134 (Preliminary results of the 1991 census, Statistical Centre of Iran, Population Division).

AL-**SŪS** AL-**AKṢĀ**, a district in the south of Morocco, forming a triangular plain about 120 miles long by 25 to 26 miles broad with an area of about 7,500 square miles. On the west it is bounded by the Atlantic Ocean and on the north by the last slopes of the Great Atlas and on the south by the Anti-Atlas, gradually narrowing till it reaches the junction of these two ranges. It is watered by the Wādī Sūs and its tributaries. The Arab geographers of the Middle Ages usually distinguish between *al-Sūs al-akṣā*, "Farther Sūs" and *al-Sūs al-adnā* "Hither Sūs". *Al-Sūs al-adnā* seems in those days to have meant the whole of northern Morocco with Tangier as its capital, and *al-Sūs al-akṣā*, the whole of the massif of the two Atlases. According to Yāḳūt, the distance which separated the two Sūs was two months' journey. The term *al-Sūs al-adnā* seems in any case to have been very early ousted by that of *G̲h̲arb*. The same geographers praise the excellence of the products of Farther Sūs and describe it as a thickly populated country. Al-Idrīsī speaks of the cereals which grew there—wheat, barley and rice, fruits of all kinds in abundance—nuts, figs, grapes, quinces, pomegranates, lemons, peaches, apples and, particularly, an incomparable sugar-cane. When he wrote, a sugar was made in the Sūs that was celebrated throughout almost the whole world. Cloth which enjoyed a good reputation was also made there. The same author gives some notes on the people, who were a mixed race of Maṣmūda Berbers. He charges them with a lack of urbanity, coarseness and insolence. The dress of the men consisted of a *kisā'* of wool which enveloped them entirely, with a *mi'zār* of wool around the waist which they called *āsfāḳis*. They were armed with short spears with steel heads. They drank a liquor made from the must of sweet grapes which they called *anzīz* and considered it a permitted beverage as it did not bring about drunkenness.

1. History.

These notes show clearly that the term *al-Sūs al-adnā* was then applied to a much wider area than at the present day; it included not only the valley of the Wādī Sūs but also the mountainous country towards the Ḥawz of Marrakesh, the Dra (Darʿa) and the Tāfīlālt.

Farther Sūs, as a province of the Mag̲h̲rib, has always been closely connected with the history of the whole country and with the histories of the different dynasties which have successively established themselves there. In 117/735 it was conquered and converted to Islam by Ḥabīb b. Abī ʿUbayda, the grandson of ʿUḳba b. Nāfiʿ. Under the Idrīsids it passed on the death of Idrīs II in 213/828 to his son ʿAbd Allāh, at the same time as the massif of the Great Atlas with the towns Ag̲h̲māt and Nafīs. It was next one of the main objectives of the Almoravids [see AL-MURĀBIṬŪN] when they thrust their way northwards. In 451/1059 the general Abū Bakr b. ʿUmar seized the towns of Māssāt and Tārūdānt but the authority of the Almoravids was never very secure in the Sūs, in spite of the submission of the province to Yūsuf b. Tās̲h̲fīn in 478/1085.

The Sūs played a prominent part in the early days of the Almohad movement in the Mag̲h̲rib. It was, along with the plain of Marrakesh, the centre of Almoravid resistance against the attempts at expansion by the companions of the Mahdī Ibn Tūmart beyond the massif of the Grand Atlas where the movement began. A son of the Almoravid ruler ʿAlī b. Yūsuf, Baggū, organised the resistance there and it was only in 535/1140-1 that the caliph ʿAbd al-Mu'min definitely conquered the whole of the Sūs. During the whole period of the Almohad dynasty it was one of the most important provinces of the empire. On its decline in the reign of al-Murtaḍā (646-65/1248-66), it was the scene of a rebellion on a great scale fomented by the agitator ʿAlī b. Yaddar. This individual, a former dignitary of the Almohad court, wishing to found a little independent kingdom in the Sūs, appealed to the Arab tribes settled between Tlemcen and the Rīf, the Dawī Ḥassān and the S̲h̲abbānāt of the Maʿḳil group. He was able to hold out against the Almohad governor of Tārūdānt, but his success was not of long duration. In 1266 the Almohad prince Abū Dabbūs, with the help of Marīnid contingents, regained the province from him and seized Tīzak̲h̲t and Tīyūnīwīn. Nevertheless, the independent kingdom of the Sūs was able after the final fall of the Almohads to maintain some sort of independence in the period of the early Marīnid sultans until the reign of Abu 'l-Ḥasan ʿAlī, who broke it up for ever.

In 1504 the Portuguese gained a footing on the coast of Sūs in the bay of Āgādīr [*q.v.*] and founded the fortress of Santa Cruz; it was a strategic point of great importance, the gateway to a rich hinterland and at the same time an excellent harbour, one of the best on the Atlantic coast of Morocco. The people of the country tried in vain to dislodge the garrison; in order to harass it unceasingly and to blockade it by land they established quite close to the Portuguese station, a *ribāṭ* or concentration point and residence of the "volunteers of the faith" who used to come there in relays to deliver open attacks on their Christian foes or prepare murderous ambushes for them. Between the sea and Tārūdānt, a *zāwiya* was soon formed to take charge of the local *d̲j̲ihād*, the *zāwiya* of Tedsī, the cradle of the Saʿdian [*q.v.*] dynasty. It was founded by some Ḥasanī *S̲h̲urafā'* [*q.v.*], whose ancestor Aḥmad b. Muḥammad b. al-Ḳāsim, had come in the 12th century from the Ḥid̲j̲āz and settled in the valley of the Wādī Darʿa, at Tāgmādart. His descendants then migrated to the Sūs near Tedsī, settled there and took up a position in the country which daily increased in importance. At the beginning of the 16th century, the head of the *zāwiya*, Muḥammad b. ʿAbd al-Raḥmān, became the real leader in the holy war in the Sūs; assisted by his two sons, Aḥmad al-Aʿrad̲j̲ and Muḥammad al-S̲h̲ayk̲h̲, he displayed great activity and denounced the impotence of the ruling dynasty to the people. He was not long in achieving his object; the tribes of the Sūs proclaimed him their sultan in 1510. He died soon afterwards, leaving his son to continue his work. The eldest, al-Aʿrad̲j̲, who had assumed the title of king of the Sūs in the lifetime of his father, established himself as sovereign in Tārūdānt and in 1541 succeeded in driving the Portuguese finally out of Āgādīr.

We see from the above what a large part the Sūs played in the history of the first of the two Sharīfian dynasties of Morocco. The Saʿdians also always kept a watchful eye on this vital part of their empire. Muḥammad al-Shaykh al-Mahdī was the first to extend the cultivation of sugar in the Sūs and thus created an important source of revenue for the treasury. It was in the reign of the great prince Aḥmad al-Manṣūr that this province saw its greatest revival of prosperity. A regular army, formed of citizens recruited in the Sūs, at this time formed the garrison of Marrakesh and relations between the capital and the province were never closer. But after the death of al-Manṣūr, when anarchy once more reigned throughout the empire, the Sūs did not escape the various rebellions which broke out on all sides. Prince Zaydān, a claimant to the throne, made his headquarters there. A few years later, the Sūs fell into the hands of a powerful rebel, Abu ʾl-Ḥasan ʿAlī al-Samlālī, called Abū Ḥassūn, who made an alliance with the Filālī Sharīf of Sidjilmāsa. But this alliance was only ephemeral, and the early days of the second Sharīfian dynasty of Morocco were marked by the struggle between Abū Ḥassūn and the ʿAlawid pretenders of Tāfīlālt. He was succeeded on his death by his son Abū ʿAbd Allāh Muḥammad, who was soon brought to terms by the ʿAlawid sultan al-Rashīd. In 1670 the latter led an expedition to the very heart of the Sūs and captured the stronghold of Īlīgh. Next year, the people of the Sūs sent a deputation to him at Marrakesh to offer their submission. The latter was not of long duration, for in 1677 Sultan Mawlāy Ismāʿīl had to send an expedition to the Sūs and another in 1682. The country was finally pacified, and at the end of his reign when Mawlāy Ḥasan divided his empire among several of his sons, the Sūs fell to Muḥammad al-ʿĀlim, with Tārūdānt as his capital. But this prince only went to his domain to set up as a pretender to the throne, and from this time onwards, we find each successive ʿAlawid sultan forced to suppress one or more rebellions in the Sūs during his reign. We may just mention the expeditions to put down rebellions sent by Mawlāy ʿAbd Allāh (1733), Mawlāy Sulaimān (1802) and particularly those of Mawlāy al-Ḥasan in 1882 and 1886. The Sūs was not definitively brought under the control of the Protectorate administration till the 1930s.

2. The present position.

Climatically, the Sūs is clearly an arid region, with an average annual rainfall of less than 250 mm. From April to October, in particular, precipitation is totally absent. The water courses are unable to supply this because the affluents of the Wādī Sūs only have water when they come down from the mountains, and even the main channel dries up through seepage into the ground. It is only through use of the underground water-table that surface cultivation for human needs there has been possible. Downstream from Tārūdānt, in the Huwwāra country, as likewise between the Wādī Sūs and Tiznit, amongst the Shtūka, wells are numerous, with their water in previous times raised by animal-power but now by diesel pumps, except where the waters held back by the dam completed in 1973 on the Wādī Māssa have not changed everything.

Nevertheless, only one-fifth of the surface area of the Sūs is used for agriculture, a proportion by no means the least of all the lowlands of Morocco. In addition to winter barley and a little maize in summer, the traditional peasant cultivates vegetables for his own use and also for market. He also has orchards of olive trees, almonds, figs and pomegranates. Within the modern sector of the economy, there are important citrus fruit plantations irrigated from pumps, all along the Wādī Sūs and near the coast, and early produce, above all tomatoes, which arrives on European markets out of the normal season. Otherwise, it is bare plain which, towards the north and east, blends with the wooded slopes of the same kind as in the High Atlas and Anti-Atlas, the open forest land of the argan trees. The argan is exploited by man, who presses from its fruit an edible oil which is appreciated and who leads up goats to browse on the foliage.

3. The towns.

The main town of the Sūs is no longer Tārūdānt [*q.v.*], 75 km/45 miles within the interior, but Āgādīr [*q.v.*] on the Atlantic coast. Starting from almost nothing at the beginning of the 20th century, the latter has surpassed Tārūdānt since the 1940s on account of the colonial period investment there, in the first place, on basic installations for the harbour. In the 1982 census, Āgādīr had a population of 100,000, with 160,00 if the quasi-conurbation Āgādīr—Ben Sergaou—Inezgane—Aït Melloul is taken into account; Tārūdānt had at that time 36,000. It was with a population of this order that Āgādīr was on 29 February 1960 stricken by a terrible earthquake which destroyed 80% of the town and killed 15,000 people. King Muḥammad V decided on reconstructing the town, and this was carried through by the local dynamic brought into being by the calamity. It is through the port of Āgādīr that the products of the Sūs plain and the network connected with it are exported. The airport of Inezgane-Āgādīr add further services to it. Fish curing is important, and investments for tourism has made it a resort of the highest quality.

Tārūdānt seems to have been founded at a very early period, and we already find it playing a part in history in the Almoravid period. In mediaeval times, the Sūs had as its capital sometimes Tārūdānt and sometimes Īglī. After the death of Mawlāy al-Ḥasan, at the end of the 19th century, Tārūdānt was the centre of the rebellion of Aḥmad al-Hība [*q.v.* in Suppl.], who held out there till the town was taken in 1913 by the *Maḥallas* of the Makhzen. It is surrounded by a great wall of clay which dates from the end of the 17th century.

Like Tārūdānt, Tiznit is a traditional town. Sultan Mawlāy al-Ḥasan is said to have founded it in 1882 at the time of the first of his expeditions into the Sūs. At all events, he threw a rampart round the nuclei of the four main contiguous quarters which is known today. Being 87 km/50 miles south of Āgādīr and 20 km/12 miles from the coast, at the foot of the Anti-Atlas, Tiznit had 23,000 inhabitants in 1982. This centre receives large sums of money sent as remittances by workers who have emigrated to Europe.

The aim of the sultan's expedition to Tiznit, one which was not achieved, was to recover control of the Sūs, at that time held by the chief of the house of Iligh, a much-frequented lodge of the very near *zāwiya* of Sīdī Aḥmad ū-Mūsā in the Tazerwalt. One recalls that, from this locality, some 25 km/15 miles south-east of Tiznit, came the troupes of dancers and acrobats who formerly travelled through the whole of North Africa and as far as Europe.

The people of the Sūs continue to speak a Berber dialect of the Tashelḥīt [*q.v.*] group, but Arabic-speakers are becoming more numerous through extensive emigration to the cities and towns of Morocco, Casablanca in the first place and then Europe, above all France, where they become mingled with other contingents of Maghribīs. The Sūsīs' dynamism does not merely

admit them to petty trading activities; since the 1980s, a minority of them, who have become entrepreneurs, have jostled with the Fāsī bourgeoisie for positions, above all in the agricultural, food-producing sector.

(E. LÉVI-PROVENÇAL-[CL. LEFÉBURE])

SŪSA, the Tunisian town of Sousse.

1. Site.

Sūsa is built on a 40 m high hill which dominates the Ḳaṣba. It is delimited by two wadis, to the north and the north-west by Wādī Blībān and its affluent Wādī 'l-Kharrūb, and to the south by Wādī 'l-Ḥallūf, near the Sabkhat Sūsa. The subsoil is essentially of sedimentary origin with ancient alluvial deposits, while to the north and the south, near to the sea, the alluvial deposits are recent. Like other neighbouring settlements, such as al-Ḳalʿa al-Kabīra, al-Ḳalʿa al-Ṣaghīra, Akūda and others, Sūsa has always had a defensive character. It lies on the Mediterranean coast in the eastern-central part of Tunisia at 35° 51' lat. N. and 10° 36' long. E. Winters are therefore mild; the average rainfall is limited to 69 days per year, while the region has a reduced cloud cover and a great deal of sunshine.

Sūsa lies in the centre of the Sāḥil, in an agricultural, industrial and heavily populated region. Due to its commercial port, the town is the outlet of a large area in central Tunisia, especially of the steppes around al-Ḳayrawān [*q.v.*] and Ḳasrīn. It is also a junction of roads and railways, and as such, it connects the northern and southern parts of the country.

2. History.

Founded by the Phoenicians around the 9th century B.C. (see Tissot in *Bibl.*), it had developed into an important town at the height of Carthage. After 146 B.C., Sūsa, known to the Romans as Hadrumetum, became the county town of a Roman colony. In the 3rd century A.D., it was the capital of the province of Byzantium. After the Vandal period, Sūsa was reconquered by the Byzantines and renamed Justiniapolis. The Arabs, under command of ʿAbd Allāh b. al-Zubayr, conquered and destroyed the town in 27/647. The Christian basilica, built in the 4th century, was razed to the ground. Between 158-79/775-96, Yazīd b. Ḥātim, the ʿAbbāsid governor of al-Ḳayrawān, had the first small fort built on part of the foundations of the basilica. In 821 the Aghlabid Ziyādat Allāh destroyed the south-western tower of the fort and constructed a *ribāṭ* [*q.v.*] instead. The Great Mosque was built in 237/851—in later times it was to be restored several times, most recently in 1964—and the ramparts of ancient Hadrumetum were restored in 245/859 and again in 602/1205.

From that time onwards, the *ribāṭ* lost its military function and remained just a dervish convent. Another much higher watch tower, the Burdj Khalaf, was constructed at the south-western corner of the town wall, on the highest spot of the site together with a new *ḳaṣba*. The Aghlabids also provided Sūsa with a powerful arsenal; it was from this port that Asad b. al-Furāt, *ḳāḍī* of al-Ḳayrawān, undertook the conquest of Sicily [see ṢIḲILLIYA. 1].

According to the Arab geographers, the town counted many bazars with a multitude of merchandise, fruit, meat, and textiles.

After this period of prosperity, Sūsa knew a relative decline, due to plundering by Arab nomads who, between the 5th/11th and the 8th/14th centuries, arrived from Upper Egypt. Sūsa regained a certain importance under the Turkish domination. After al-Mahdiyya [*q.v.*] had been ruined in the 9th-10th/15th-16th centuries, Sūsa remained the most important town of the Sāḥil, with a population of *ca.* 15,000 inhabitants.

European travellers such as Peyssonnel describe Sūsa as a town which lived largely on the products of the soil. Many inhabitants were landowners, and most of its industries depended upon rural products: oil-works, soap factories, pottery, fabrication of sandals (*balgha*), weaving of burnouses and blankets. But Sūsa was also a town of trade: local commerce

in the *sūḳ*s and at the weekly Sunday market (*sūḳ al-aḥad*), which took place near the *Bāb al-Gharbī*, as well as trade with Europe and the Orient. To a great extent, this trade depended upon al-Ḳayrawān, which served as an entrepôt of the steppes and of a part of the al-Kāf region in the north-west. Towards the end of the 13th/19th century, Sūsa, with some 7,000 inhabitants, was the most active town after the capital Tunis; but its role then became strictly regional.

3. The modern period.

At the beginning of the French Protectorate, towards the end of the 19th century, the urban structure of the Sāḥil had already become evident. For a very long time, Sūsa had been surrounded by urban settlements whose industries were exclusively agricultural. Two of these, Kala Kebira and Msaken, were more densely populated than Sūsa itself. The Protectorate immediately reinforced the tertiary character of Sousse by establishing Civil Control, enlarging the port and developing public transport, especially railways. Between 1896 and 1911, Sūsa was linked by railways with Tunis, Ḳayrawān, Moknin, Mahdiyya, Henshir Suwatir and Sfax. Food industries and public facilities were set up, serving both the town of Sūsa and the Sāḥil as a whole.

After Tunisia became independent in 1956, Sūsa was made the seat of a *wilāya* and developed into a regional metropolis. These transformations have had their influence on the demographic, spatial and functional growth of the town:

(a) The population increase was spectacular. It grew from 8,577 in 1885 to 134,835 in 1994. Sūsa now is the third largest city of Tunisia, after Greater Tunis and Greater Sfax.

(b) The spatial extension is no less important. Until the first years of the Protectorate, the entire population of Sūsa lived inside the *madīna*, whose walls were right on the seaside. Already before 1939, a modern city in the European style was constructed around the old centre, but between 1926 and 1946 the developed site remained thinly populated. Between December 1942 and May 1943, in the fighting between the armier of the Axis powers and the Allies, Sūsa suffered 39 bombardments which wrought great havoc, and in 1946 priority was given to reconstruction. After independence, Sūsa developed in all directions. The urban perimeter, only 29 ha (71.66 acres) in 1881, had grown to 3,100 ha (7,660 acres) in 1992.

(c) The functional growth of Sūsa is almost exclusively secondary and tertiary, primary activities being limited to fishing. More than 45% of the working population is active in secondary functions, such as textile and leather industries, in the fabrication of mechanical, electrical and electronic devices, in construction and chemicals. The real importance of Sūsa, however, is to be found in its tertiary function (administration, education up to higher academic level, health and other social activities, trade, communications, banking) which occupies more than half of the working population. As a port, Sūsa is surpassed by Sfax, but it is important for the tourist industry.

(MOHAMED JEDIDI)

SŪSAN or more often SAWSAN, iris or lily; generally *Iris florentina* L., or *Lilium sp.* Of Middle Persian origin, from *sōsan*, it is related to Hebrew *shūshan*, and is possibly originally a loan-word from Egyptian (I. Löw, *Die Flora der Juden*, Vienna-Leipzig 1924-34, ii, 1-4, 160-84). The *sūsan asmāndjūnī* (Pers. *āsmān-gūnī* "sky-coloured") was the blue iris; other colours were white and yellow.

In the Arabic Dioscorides, *īrisā*, a "type" of *sawsan*, is equated with the Greek *iris*; *zahr al-sawsan* with lily (*krinon*) (see M.M. Sadek, *The Arabic materia of Dioscorides*, Quebec City 1983). Ibn al-Bayṭār lists three varieties: white or *azād*; wild; and cultivated. (*Djāmi' al-mufradāt*, Cairo 1874, iii. 43-4). He quotes Dioscorides, Galen, and others: its "power" is mainly dessicative (*tadjfīf*) and dissoluent (*taḥlīl*). Its roots, seeds and leaves were used as an oil or a juice.

External use was for skin complaints such as scab (*djarab*), scalds, burns and ulcers; internally, it could be chewed for toothache, or drunk for vermin bite and cough (al-Ghāfiḳī) or to sharpen the intellect and remove "yellow water" (Ibn Sīnā). Ibn Rabban al-Ṭabarī says that the wild and the white varieties relieve pain in muscles or nerves (*'aṣab*).

Precise identification of species is not practicable (see W. Schmucker, *Die pflanzliche und mineralische Materia Medica im Firdaus al-Ḥikma des Ṭabarī*, Bonn 1969, 253-4). W. Ainslie refers to *Iris florentina*, or Orris root, as used by Arabs and Persians as suppurative and deobstruent; and in Europe formerly as a cathartic in dropsy (*Materia Indica*, London 1826, i, 182, 284). Iris is still sometimes used in herbal-based medicine.

Levey, *The medical formulary or Aqrābādhīn of al-Kindī*, Madison 1966, 289; Ḳazwīnī, *'Adjā'ib al-makhlūḳāt*, ed. Wüstenfeld, i, 286-7; Bīrūnī, *K. al-Ṣaydana*, ed. al-Ḥ.M. Sa'īd, Karachi 1973, 238-40 (Arab.), 194-95. (P.C. JOHNSTONE)

SUTRA (A.), covering, protection, shelter, especially at the *ṣalāt*, where *sutra* means the object which the worshipper places in front of himself or lays in the direction of the *ḳibla*, whereby he shuts himself off in an imaginary area within which he is not disturbed by human or demoniacal influences. "The fictitious fencing off of an open place of prayer, the *sutra*, seems to have had among other objectives that of warding off demons" (Wellhausen, *Reste*², 158). In one tradition, the man who deliberately penetrates into this imaginary area is actually called a *shayṭān* (al-Bukhārī, *Ṣalāt*, *bāb* 100; cf. Aḥmad b. Ḥanbal, *Musnad*, iv, 2; al-Ṭayālisī, *Musnad*, Ḥaydarābād 1321, no. 1342).

The word is not found in the Ḳur'ān. In *Ḥadīth*, the root often occurs in the expression *satara* (*tasattara*, *istatara*) *bi-thawb* in traditions which describe the ritual ablution, in which one conceals one's nakedness or causes it to be concealed by a cloak or curtain (e.g. al-Bukhārī, *Ṣayd, bāb* 14; *Ghusl, bāb* 21; Muslim, *Ḥayd*, trad. 70, 79; Abū Dāwūd, *Ṭahāra, bāb* 123; *Manāsik, bāb* 37). Similarly, *sitr* is the name given to the curtain by which Muḥammad concealed his women from the gaze of the world (al-Bukhārī,

Maghāzī, bāb 56; *Nikāḥ, bāb* 67). We are further told that one performs the *ṣalāt* in the direction of an object which isolates him from the multitude (*yasturuhu min al-nās*) so that he is not disturbed by them (e.g. al-Bukhārī, *Hadjdj, bāb* 53; Muslim, *Ṣalāt*, trad. 259; Abū Dāwūd, *Manāsik, bāb* 53).

Muḥammad is said to have been quite unrestricted in his choice of a *sutra*: baggage camels, horses, trees, saddles (al-Bukhārī, *Salāt, bāb* 98), a couch (*ibid., bāb* 99), lance (*ḥarba, bāb* 92), stick (*ʿanaza, bāb* 93) and the pillars of the mosque (*bāb* 95) are mentioned. *Ḥadīth* has preserved the memory of two opinions regarding the *sutra*; one gives minute rules and the other opposes this.

The first opinion endeavours to lay down accurately what distance should be preserved between the *sutra* and him who performs the *ṣalāt* (*mamarr al-shāt* "space to allow a sheep to pass"; al-Bukhārī, *Ṣalāt, bāb* 91; Muslim, *Ṣalāt*, trads. 263, 264, etc.); it makes Muḥammad explain that no one is to be allowed to pass between anyone and his *sutra* (al-Bukhārī, *Ṣalāt, bāb* 100, 101; Muslim, *Ṣalāt*, trads. 258-62, etc.), that passers-by, especially dogs, asses and women, render void the *ṣalāt*: the Apostle of God said: "If one performs the *ṣalāt* without having in front of him something, such as the end or central part of a saddle, his *ṣalāt* is rendered void by a passing dog, ass or woman" (al-Tirmidhī, *Mawāḳīt, bāb* 136; Aḥmad b. Ḥanbal, vi, 86).

The other view holds that the *ṣalāt* is never rendered void by passers-by (this is also al-Shāfiʿī's view, according to al-Tirmidhī's note on *Mawāḳīt, bāb* 135). ʿĀʾisha exclaims indignantly, "you place us on the same level as asses and dogs; by Allāh, the Prophet used to perform the *ṣalāt* while I lay on the couch between him and the *ḳibla*" (al-Bukhārī, *Ṣalāt, bāb* 105). The same tendency is seen in an anecdote by Ibn ʿAbbās: "I was riding behind al-Faḍl on a she-ass; we came up to the Prophet just as he was performing the *ṣalāt* with his companions in Minā. We dismounted and took our places in the row, while the animal ran among the people without rendering void the *ṣalāt*" (al-Tirmidhī, *Mawāḳīt, bāb* 135; cf. Aḥmad b. Ḥanbal, ii, 196).

The Shāfiʿīs call the *sutra* a *sunna*. The various views of the jurists are given in al-Nawawī in his commentary on Muslim's *Ṣaḥīḥ*, Cairo 1283, ii, 76-7; cf. also al-Tirmidhī's remarks on *bāb*s 133-6 in his chapter *mawāḳīt al-ṣalāt*.

Abū Isḥāḳ al-Shīrāzī, ed. Juynboll, 29, writes as follows: "If anyone passes a man who is performing the *ṣalāt* and there is a *sutra* or stick between them of about an arm's length in size, it is not *makrūh*; nor is it *makrūh* if there is no stick but a line which the worshipper has drawn at a distance of 3 ells; if, on the contrary, there should be nothing of the kind at all then it (sc. passing by) would be *makrūh*. The *ṣalāt* would however remain valid".

It may be mentioned in conclusion that the *sutra* of the *imām* at the *ṣalāt* is valid for those with whom he performs the *ṣalāt* (al-Bukhārī, *Ṣalāt, bāb* 90).

Bibliography: The material of the classical *ḥadīth* is given in A.J. Wensinck, *Handbook of early Muhammadan tradition*, Leiden 1927, s.v.; Ibn Hadjar al-Haytamī, *Tuḥfa*, Cairo 1282, i, 180-1. See also ṢALĀT. (A.J. WENSINCK)

SUʿŪD, ĀL, a major Arabian dynasty belonging to the ʿAnaza tribe, first rising to power in Nadjd in the 12th/18th century in association with the religious reform movement of Ibn ʿAbd al-Wahhāb [*q.v.*]. The Āl Suʿūd provided the leadership for three successive states inspired by Wahhābī doctrines: the first Suʿūdī-Wahhābī state, 1159-1233/1746-1818, with its centre in Nadjd, but controlling much of central and northern Arabia at its greatest extent; the second such state re-established in Nadjd, 1240-1305/1824-87; the third state restored with its capital in al-Riyāḍ [*q.v.*] from 1319/1902 and culminating in the modern kingdom of Suʿūdī Arabia [*q.v.*] from 1351/1932. The Islamic basis of the rule of the Āl Suʿūd is evidenced by their assumption of the title *imām*, denoting their spiritual headship of the community, in addition to the temporal rank of *amīr*, although the two titles were on occasion held by different members of the family.

The founder of the dynasty, Muḥammad b. Suʿūd (1159-79/1746-65 [*q.v.*]), is chiefly remembered for lending his support to the reform efforts of Muḥammad b. ʿAbd al-Wahhāb from his power base as *amīr* of al-Dirʿiyya [*q.v.*], seeking to enforce a Ḥanbalī interpretation of *Sharīʿa* and to root out perceived un-Islamic innovation, *bidʿa*, notably as represented in the cult of saints. In exchange, his rule acquired religious legitimacy, but for twenty years he was engaged in a struggle with forces opposed to the creation of the new theocratic state.

During his reign, military campaigning had been entrusted to his capable and dedicated son ʿAbd al-ʿAzīz, who assumed office as the new *imām* on his death in 1179/1765, embarking on an energetic thirty-eight year period of rule, ending with his assassination by a Shīʿī, or possibly Ṣūfī, assailant in 1218/1803. During his time the power of the Āl Suʿūd was consolidated in Nadjd and extended to al-Ḥidjāz with the capture of the Holy Cities, while raids were made deep into al-ʿIrāḳ, Karbalāʾ being sacked in Dhu ʾl-Ḥidjdja 1215/April 1801 as part of the Wahhābī attack on Shīʿism. Much of the coastal region of eastern Arabia was brought under Suʿūdī control, including for some time the island of al-Baḥrayn [*q.v.*]. Both ʿAbd al-ʿAzīz and his son Suʿūd (1218-29/1803-14) have been widely regarded as capable rulers and strategists, respected among their Wahhābī followers for their strict adherence to the principles of the faith and their readiness and ability to ensure justice and security among the Bedouin in areas that had suffered from blood feuds and lawlessness. Understandably, they were not so appreciated by the Ottomans, whose authority and status as Muslims they challenged, and by the settled Ḥidjāzīs and the eastern Arabian and ʿIrāḳī Shīʿa.

ʿAbd Allāh b. Suʿūd (1229-33/1814-18) inherited a difficult situation, which he was less well-equipped to handle than his predecessors, lacking their strategic skills. The Ottomans were determined to end Suʿūdī and Wahhābī hegemony in Arabia and the threat posed by them to the region. In 1222/1807 Muḥammad ʿAlī [*q.v.*] as viceroy of Egypt had received orders from the Ottoman sultan Muṣṭafā IV to launch an expedition against the Suʿūdī *imām*. However, it was not until 1226-7/the winter of 1811-12 that the Egyptian forces were able to wrest control of the Holy Cities from Suʿūd, and only in 1232/early 1817 that Muḥammad ʿAlī's son, Ibrāhīm Pasha [*q.v.*], led a fresh expedition into central Arabia. There has frequently been criticism of ʿAbd Allāh's tactics in choosing to hold out in al-Dirʿiyya rather than to attack Ibrāhīm's vulnerable lines of communication more effectively. Yet he was also faced with the problem of treachery by those tribes who succumbed to Egyptian financial inducements to turn against the Āl Suʿūd. Nevertheless, he was able to withstand a six-month siege before surrendering the town in Dhu ʾl-Ḳaʿda

1233/September 1818. The first Suʿūdī state had come to an end and al-Dirʿiyya was razed to the ground. ʿAbd Allāh himself was sent for execution to Istanbul. Many of the Āl Suʿūd had been killed in the fighting and a number of others were deported to Egypt.

It was several years before the second Suʿūdī state could be recreated in Nadjd by Turkī b. ʿAbd Allāh (1240-9/1824-34), a cousin of Suʿūd and grandson of Muḥammad b. Suʿūd. Abandoning hope of reviving al-Dirʿiyya, he made his new capital to the south of it in al-Riyāḍ, which he captured from the Egyptians, who subsequently withdrew to al-Ḥidjāz. Turkī was noted for his just government and efforts to maintain order, also for his guaranteeing safe passage to non-Wahhābī pilgrims passing through his territories. He effectively restored the Suʿūdī position in eastern Arabia, but became the victim of intrigues within the Āl Suʿūd, being assassinated by a nephew in 1249/1834. However, his son Fayṣal took prompt action against the assassins and succeeded in establishing his rule, until a second Egyptian expedition invaded Nadjd, forcing him to surrender and taking him as captive to Cairo.

A period of Suʿūdī weakness and instability followed, Khālid b. Suʿūd (1253-7/1837-41), brother of the late Imām ʿAbd Allāh, being returned from his exile in Egypt and imposed as ruler by Muḥammad ʿAlī's forces. He had little popular support and briefly gave way before a rebellious relative, ʿAbd Allāh b. Thunayyān (1257-9/1841-3), who also proved unpopular owing to harsh taxation and inability to preserve security and assert his authority.

Real independence was asserted by the Āl Suʿūd with the escape of Fayṣal b. Turkī from his captivity in Egypt and his successful return to his homeland. His second reign (1259-82/1843-65) marked a high point in Suʿūdī fortunes. The British Political Resident in the Gulf, Lt. Col. Lewis Pelly, visited him shortly before his death and noted him as "a just and stern ruler", who was interested in encouraging the Bedouin to adopt a more settled life and to pursue agriculture and trade. Unfortunately, his death ushered in a time of fratricidal struggle between his sons ʿAbd Allāh and Suʿūd, ʿAbd Allāh ruling twice, from 1282-88/1865-71 until his deposition by Suʿūd (1288-91/1871-4), then again from 1291-1305/1874-87 when he lost power to the Āl Rashīd [see RASHĪD, ĀL] of Djabal Shammar in northern Nadjd. Thus the second Suʿūdī state came to an end, its fall owed both to internal power struggles and to the temporarily greater dynamism and political skill of the Rashīdīs. Fayṣal's youngest son, ʿAbd al-Raḥmān, tried to hang on to a limited local authority, but, after a disastrous defeat at the battle of al-Mulayda in 1309/1891, was forced to leave al-Riyāḍ accompanied by his family, among them his young son ʿAbd al-ʿAzīz, the future king of Suʿūdī Arabia.

ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān b. Fayṣal Āl Suʿūd [*q.v.*] began his long reign with his return from exile in al-Kuwayt and bold recapture of al-Riyāḍ in 1319/1902. There followed many years in which he sought to establish Suʿūdī control over Nadjd and extend his power eastwards to al-Aḥsāʾ by a combination of military and diplomatic tactics, confronting challenges from the combined forces of the Ottomans and Āl Rashīd as well as the dissension of relatives, rebellious tribes and the growing power of the *amīr* of Mecca, the Sharīf Ḥusayn b. ʿAlī. He was also well aware of the advantages of gaining British support, while preserving the maximum degree of independence, and the treaty he signed with Britain in Ṣafar 1334/December 1915 assured him of a regular subsidy and assistance in the event of aggression against him. In 1339/1921 he crushed the Rashīdī power in northern Nadjd, taking their centre of Ḥāʾil [*q.v.*] and assumed the title of *sulṭān* of Nadjd. After years of soured relations and occasional hostilities with the Sharīf Ḥusayn, now king of al-Ḥidjāz, ʿAbd al-ʿAzīz invaded his territory in 1343/1924, being provoked by the Sharīf's claim to the caliphate and his refusal to allow Wahhābī pilgrims to perform the Ḥadjdj. In 1344/1926 he assumed the title of king of al-Ḥidjāz for himself, an un-Islamic title disliked by the Wahhābīs. His father ʿAbd al-Raḥmān had held the spiritual position of *imām* until his death in 1346/1928, when it devolved on to ʿAbd al-ʿAzīz, although he had informally been so addressed earlier.

Those who met ʿAbd al-ʿAzīz seem invariably to have been impressed. Thus Gertrude Bell in a letter of 1916 wrote of him as "one of the most striking personalities I have encountered. He is splendid to look at, well over 6' 3", with an immense amount of dignity and self-possession". However, assessments vary as to the importance of his character and personality in building the power of the Āl Suʿūd in Arabia, from eulogy of him as the key figure in the enterprise to judgment of his role as overrated and his being no more than fortunate in his historical circumstances. As a Muslim leader, he was pious and conscientious in the performance of his religious duties, convinced that Islam must triumph and dedicated to its promotion. This may be witnessed in his policy of establishing the *hidjar* [*q.v.*], agricultural religious settlements for the Wahhābī Ikhwān [*q.v.*] and his systematic implementation of the *Sharīʿa* in al-Ḥidjāz after its conquest with the same strictness as in Nadjd. Yet there were those among the Ikhwān for whom his religious zeal was insufficient and who condemned him for his dealings with the unbelieving British, his use of infernal innovations such as cars and telephones, his allowing the tribes of Transjordan and al-ʿIrāḳ to graze their herds on the lands of true Wahhābī Muslims and his failure to impose Wahhābism among the Shīʿa of al-Aḥsāʾ. While noted for the traditional Arab virtues of generosity and magnanimity to defeated enemies, ʿAbd al-ʿAzīz could also be implacable if angered and utterly ruthless, as is evidenced by his final suppression of the Ikhwān in Shaʿbān 1348/January 1930. To the end of his life, even after the commercial exploitation of his country's vast oil reserves, he retained his simple and austere lifestyle.

The same could hardly be said of his son and successor, Suʿūd b. ʿAbd al-ʿAzīz (1373-84/1953-64), who was widely criticised for his exceptional extravagance as well as for his political ineptitude and the corruption in his government. This was to bring his country to the edge of bankruptcy by 1377/1957 and lead to speculation that the days of the Āl Suʿūd were numbered. In 1384/1964 Suʿūd was formally deposed by a council made up of senior members of the royal family, *ʿulamāʾ* and government officials on the grounds that his rule was in violation of the *Sharīʿa*.

His brother Fayṣal, who succeeded him and ruled until his assassination by a nephew in 1395/1975, inherited his father's political acumen and is credited with establishing the modern institutions of Suʿūdī Arabia, moving away from the traditional patriarchal rule associated with ʿAbd al-ʿAzīz and Suʿūd. He oversaw successful development programmes financed by more efficiently managed oil revenues, ensuring increased prosperity for all sectors of the population. As a deeply committed Muslim, Fayṣal was active in

promoting pan-Islamic policies even before his accession to the throne. In 1382/1962 he encouraged the founding of the Islamic World League (*Rābiṭat al-ʿĀlam al-Islāmī*) in Mecca dedicated to the worldwide promotion of the faith, sponsoring the work of *daʿwa* and aiding Muslim minorities. As king, Fayṣal urged Muslims to work for the liberation of Jerusalem and, following an Australian Christian's attempt to set fire to al-Aḳṣā Mosque in 1389/1969, called for a *d̲j̲ihād* against Israel and organised an Islamic summit in Rabat, Morocco. In Muḥarram 1390/March 1970 he held an Islamic conference of foreign ministers in D̲j̲idda, leading to the establishment of the Organisation of the Islamic Conference (*Munaẓẓamat al-Muʾtamar al-Islāmī*).

Fayṣal's successor, K̲h̲ālid b. ʿAbd al-ʿAzīz (1395-1402/1975-82), was already elderly at the time of his accession and plagued by poor health. During his reign, his Islamic credentials were challenged by a revolt organized by neo-Ik̲h̲wān with the takeover of the Great Mosque at Mecca on 1 Muḥarram 1400/21 November 1979 [see MAKKA. 3] and by unrest among the S̲h̲īʿa of al-Aḥsāʾ. In both cases, the incidents were brought under control, but the Āl Suʿūd became increasingly sensitive to the need to re-establish respect for their Islamic leadership at both the domestic and international levels.

Fahd b. ʿAbd al-ʿAzīz (acceded 1402/1982) had considerable experience in government when he became king on K̲h̲ālid's death. He sought to strengthen the Islamic Wahhābī character of the state, and in Ṣafar 1407/October 1986 assumed the title of *k̲h̲ādim al-ḥaramayn*, thus seeking to enhance Suʿūdī religious legitimacy.

The Āl Suʿūd today are estimated as numbering between 4,000 and 7,000, of whom several hundred are direct descendants of ʿAbd al-ʿAzīz. They are intermarried with many traditionally important tribal families, notably the Ṣudayrīs of northern Nad̲j̲d, and with the Āl al-S̲h̲ayk̲h̲, the descendants of Muḥammad b. ʿAbd al-Wahhāb. Members of the Āl Suʿūd who have been prominent in government include full brothers of Fahd, especially Sulṭan, Minister of Defence from 1382/1962, Nāʾif, Minister of the Interior from 1395/1975 and Salmān, governor of al-Riyāḍ from 1382/1962.

(ELIZABETH M. SIRRIYEH)

AL-SUʿŪDĪ, ABU 'L-FAḌL AL-MĀLIKĪ, theologian of the 10th/16th century. He wrote a controversial work finished in S̲h̲awwāl 942/April 1536 against the Christians (and the Jews), which has been edited from manuscripts of Leiden and Oxford by F.J. van den Ham (*Disputatio pro religione Mohammedanorum adversus Christianos*, Leiden 1877-90) and is in substance an extract (*muntak̲h̲ab*) from a book by Abu 'l-Baḳāʾ Ṣāliḥ b. Ḥusayn al-D̲j̲aʿfarī (wrote in 618/1221) entitled *Tak̲h̲d̲j̲īl man ḥarraf al-Ind̲j̲īl*. He is probably to be identified with Abu 'l-Faḍl al-Mālikī, the servant (*k̲h̲ādim*) of the Ṣūfī S̲h̲ayk̲h̲ Abu 'l-Suʿūd al-D̲j̲āriḥī (died some years after 930/1524), see al-S̲h̲aʿrānī, *Lawāḳiḥ al-anwār fī ṭabaḳāt al-ak̲h̲yār*, Cairo 1317, iii, 113-14), who wrote, according to Ḥād̲j̲d̲j̲ī K̲h̲alīfa (iv, 557, no. 9521) a commentary on the *Hamziyya* of al-Būṣīrī [*q.v.*]. For al-Suʿūdī refers in his polemic (146, 14, 147, 4) to Abu 'l-Suʿūd as his master (*ustād̲h̲*), and al-S̲h̲aʿrānī (*op. cit.*, ii, 113, 5 ff.) mentions Abu 'l-Faḍl al-Mālikī as a devoted adept of Abu 'l-Suʿūd, from whom he probably derives his *nisba* al-Suʿūdī. According to van den Ham (*Praefatio* of his edition, 6), his book contains many passages occurring word for word in a manuscript commentary on the *Hamziyya* preserved in Gotha (Pertsch, *Die Arab. Handschriften... zu Gotha*, iv, 294, no. 2295), in which the author's name is Faḍl Allāh al-Mālikī.

SUʿŪDĪ (or ABU 'L-SUʿŪD) B. YAḤYĀ B. MUḤYĪ 'L-DĪN AL-MUTANABBĪ AL-ʿABBĀSĪ AL-S̲H̲ĀFIʿĪ AL-DIMAS̲H̲ḲĪ, a man of letters, who died in Damascus in Ṣafar 1127/February 1715. He studied several branches of Islamic knowledge, and one of his preceptors was ʿAbd al-G̲h̲anī al-Nābulusī [*q.v.*]. Al-Murādī mentions his *Dīwān* entitled *Madāʾiḥ al-ḥaḍarāt bi-lisān al-is̲h̲ārāt* and gives specimens of his poetry. According to the same author, al-Muḥibbī gives an article on him in his *Nafḥat al-rayḥāna wa-ras̲h̲ḥat ṭilāʾ al-ḥāna* (cf. Brockelmann², II, 379). A *muwas̲h̲s̲h̲aḥ* in praise of Damascus from his pen is extant in a manuscript of the Preussische Staatsbibliothek (Ahlwardt, *Verzeichnis*, no. 6090, We 1120, fol. 78a, cf. no. 8174, 2).

Bibliography: Murādī, *Silk al-durar fī aʿyān al-ḳarn al-t̲h̲ānī ʿas̲h̲ar*, Būlāḳ 1301, i, 58-62, M. Hartmann, *Das arabische Strophengedicht. I. Das Muwaššaḥ*, *Semitist. Studien*, ed. C. Bezold, Heft 13/14, Weimar 1897, 83; Brockelmann², II, 360.

AL-SUʿŪDĪ, SAYF AL-DĪN ʿABD AL-LAṬĪF B. ʿABD ALLĀH, a theologian who died in 736/1335-6. Biographical data do not seem to be known hitherto. He contested the tenets of Ibn ʿArabī [*q.v.*] in some *ḳaṣīdas* occurring in al-Sak̲h̲āwī's work *al-Ḳawl al-munabbiʾ ʿan Tard̲j̲amat Ibn ʿArabī* (ms. in Berlin, Ahlwardt, *Verzeichnis*, 2849, cf. 7846, 4) and is mentioned (*op. cit.*, 8379, cf. 3658) as the author of a prayer (*duʿāʾ*).

Bibliography: Brockelmann², II, 10.

(C. VAN ARENDONK)

AL-SUʿŪDIYYA, AL-MAMLAKA AL-ʿARABIYYA, the modern Saudi Arabian kingdom, declared on 16 December 1932.

It emerged from the transformation of the Suʿūdī chiefdom, located in the central Arabian province of Nad̲j̲d, into a more organised, expanded and territorially-defined state. The chiefdom itself passed through three historical stages: there was the first Saudi chiefdom based on an alliance, struck in 1744, between the House of Suʿūd, and its Bedouin tribes, with the religious leader Muḥammad Ibn ʿAbd al-Wahhāb [*q.v.*]. This alliance was expressed through territorial expan-

sion into neighbouring territories, accompanied by an attempt to rid Muslim society of unlawful innovations (*bidaʿ*). These attempts, however, resulted in the chiefdom's destruction in 1818-21 by Muḥammad ʿAlī's Egyptian forces on behalf of the Ottomans. A subsequent second Suʿūdī chiefdom was continuously immersed in internal struggles, leading to internal warfare and disintegration in 1891. A third Suʿūdī chiefdom emerged in 1902, when the new leader of the Suʿūdī family, ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān, returned from exile in Kuwayt to reoccupy the city of al-Riyāḍ and its vicinity, reinforcing Suʿūdī rule there in the ensuing years [for details, see SUʿŪD, ĀL].

The transformation of this Suʿūdī chiefdom had two stimulating factors. One was a drive, attributed to ʿAbd al-ʿAzīz and other family members, to restore the ancestral first and second Suʿūdī states, thereby reactivating the Wahhābī movement aimed at giving the *Sharīʿa* a position of supremacy in society and at purifying Islam from *bidaʿ* [see WAHHĀBIYYA]. This motive, while it explains the desire to re-establish a third Suʿūdī chiefdom, with its *raison d'état*, does not shed light on the need to transform the chiefdom as it evolved after 1902, without defined borders, minimal government based on *ad hoc* arrangements among the ruling élite, main tribal groups and townspeople, and the persistence of tribal loyalties, into a more organised state, nor on the dynamics of this process.

The second motive, which accounts for these developments, concerns the principles of evolution of states in tribal societies. It was articulated in ʿAbd al-ʿAzīz's skill in responding to new challenges by increasing the Suʿūdī chiefdom's cohesion, governmental centralisation and territorial expansion. This motive became evident during and after the First World War when, by facing the challenges of British and Ottoman rivalry, the Arab Revolt led by the rival Hāshim clan, economic hardships and floating tribal groups, the Suʿūdī leader was nevertheless able to muddle through and develop state-like attributes for his dominions.

The process of state formation in tribal societies has several characteristics; first it evolves in stages. As the transformation comes about in response to challenges of a certain period, its effect is also relatively limited, until new challenges arise, requiring new responses. Since 1902, the Suʿūdī state has undergone three stages of state-building. Responding to the earlier-mentioned challenges of the First World War period, the Suʿūdī chiefdom turned into a conquest movement which, in the 1920s, expanded over large parts of the Arabian peninsula, and secured British protection, from which it obtained full independence in May 1927. Then, responding to the establishment of the Arab state system and British regional dominance, it strengthened its territorial definition and internal consolidation in the 1930s. New challenges, emanating from the use of oil wealth and coping with regional radical waves, prompted a third stage, marked by institutionalisation and welfare, in the 1960s.

The actual attributes of state building evolved through these stages. The territorial-framework and borders were already completed during the first and second stages, i.e. by the mid-1930s. The Suʿūdī occupation in 1913, of former Ottoman Turkish al-Aḥsāʾ on the Persian Gulf shores, rather than being an all-out campaign, had specific aims, i.e. to draw British attention and finally to reach an alliance with Britain as the new great power in the Gulf, a goal which was achieved in December 1915. The Suʿūdīs were then involved in mainly tribal skirmishes with the Hāshimī rulers of the Ḥidjāz and the Āl Ṣabāḥ rulers of Kuwayt. Only in 1920, faced by an alliance of regional rivals, did ʿAbd al-ʿAzīz embark on organised expansionist campaigns, leading to the capture of the Rashīdī chiefdom of Djabal Shammar in 1921, northern ʿAsīr in 1923, and the Ḥidjāz, with its holy shrines, in 1924-5. The southern parts of ʿAsīr (including Djizān and Nadjrān) were occupied during the Saudi-Yemeni war in 1934.

The new state's borders were mostly fixed by a series of international treaties: the protocol of ʿUḳayr in 1922 and the treaties of Baḥra and Ḥaddāʾ in 1925 basically determined the borders with Kuwayt, ʿIrāḳ and Transjordan, with some areas remaining undelineated. The border with Yemen was fixed in the 1934 Ṭāʾif treaty. Saudi Arabia's borders with the Gulf states and Yemen were established mainly according to the 1913 "blue line" agreement between Britain and the Ottoman Empire, which had marked Britain's sphere of influence over the coastal chiefdoms, and in 1935-6 was employed to demarcate the Gulf States' borders from Saudi Arabia.

A second process of state building concerned the evolution of central government. A most conspicuous aspect of centralization was subjugation of opposition. The *Ikhwān* tribal groups, notably the Muṭayr, parts of the ʿUtayba and the ʿUdjmān, who favoured the continuity of the chiefdom system (including the tribes' own choice of markets, raiding, and political conduct according to their own zealous interpretation of the Wahhābī code), were defeated and subjugated in a series of battles during 1929-30. The formation of political parties, and any kind of political opposition, were subsequently forbidden. Centralisation was accompanied by the establishment, between 1926 and 1929, of a new, minimal, physical infrastructure of communications, several main roads leading from Nadjd to the new occupied territories, a radio telegraph system at the leaders' disposal, and new markets in the Gulf coast cities of Hufūf and Djubayl. Centralisation was also evident in economic change: from 1924 ʿAbd al-ʿAzīz began to use civilian taxation and pilgrimage income (*ca.* £100,000 annually in the late 1920s, declining by two-thirds during the 1930s economic recession) to establish a central treasury. The forbidding of raids into neighbouring states was also laid down during this period.

Two new governmental formations then emerged: the *Sharīʿa*, in its Wahhābī interpretation, was a substitute for a constitution and the primary source of daily law. In a series of conferences of *ʿulamāʾ* and *Ikhwān* with ʿAbd al-ʿAzīz and his aides during 1927-30, the ruler was able to establish the principle that, while the senior *ʿulamāʾ* remained the main interpreters of the Wahhābī principles of Islam, as in the 18th and 19th centuries, their religious rulings would defer to the policies of the ruler and the state. A form of state Islam thereby emerged: the senior *ʿulamāʾ*, incorporated within a Supreme Council, were responsible for judicial and religious rulings (*fatāwī*) but appointed by the ruler and representing state interests.

A further sphere of centralisation was seen in institution-building. In 1932, there was a *ca.* 43,000-strong army, and a police force of indeterminate size (probably several thousand), acting in the cities and provinces. Several government departments were inaugurated between 1925 and 1933, notably internal and foreign affairs, finance, pilgrimage and health, the whole functioning as a Council of Ministers from 1932. There were two main provincial judicial and administrative systems, one in Nadjd and the other in Ḥidjāz. In view of its religious importance and separate history,

a Basic Law detailing arrangements for the governance of Ḥidjāz was promulgated by 'Abd al-'Azīz in 1926. An Advisory Assembly, representing Ḥidjāz's élite families, had existed since 1926. The law of the state derived from the *Sharīʿa*, notably criminal and personal law, although customary law (*ʿurf*), was exercised when it was not contradictory to the *Sharīʿa*.

'Abd al-'Azīz was given formal allegiance (*bayʿa*) in 1926, by the inhabitants of Nadjd and Ḥidjāz and assumed the title of King (*malik*) in 1927; he ruled the central and provincial governments, sanctioned by the *ʿulamāʾ*, unrestricted by any elected or appointed bodies and limited only by the *Sharīʿa*.

In reality, until the 1960s, the centralisation policies encapsulated chiefdom practices and did not result in full institutionalisation and bureaucratisation. Tribal and townspeople's groups co-existed, through fighting and/or bargaining, with the new army and police forces. New offices were headed by the king's patrimonial appointees: 'Abd al-'Azīz's son Su'ūd was governor of Nadjd, and his other son Fayṣal was governor of Ḥidjāz and minister of foreign affairs. The King ruled as a modern head of state and, at the same time, as a tribal arbiter, consulting royal family members, *ʿulamāʾ* and tribal leaders; and he was also as an Imām, head of the Wahhābī community. Policies were not carried out in a bureaucratic, rational form: tribal rebellions were usually stemmed by the payment of arbitrary financial subventions to the head of the turbulent tribal group, and no separation between the royal and tribal purse was introduced. In addition, while the government was able to quell tribal political autonomy, tribal groups remained the source of group identity, the individual's livelihood and security. The royal family, in fact, consisted of a chain of political marriages between the members of the House of Su'ūd and other notable families, nomad or urban, thereby forming a biological élite of the state's major families.

However, the process of encapsulation reached a deadlock in the 1950s. 'Abd al-'Azīz's death in 1953, and the reign of his son King Su'ūd (1953-64), were marked by the government's need to utilise the growing oil income; to tackle a new type of worker's opposition (which erupted in strikes in 1953 and 1956); to confront radical, anti-royalist Pan-Arabism in the Middle East, led by the Egyptian President Djamāl 'Abd al-Nāsir; and cope with the implications of East West rivalry. All of these were treated with indecisiveness, when a more resolute and institutionalised ruling system was required. Only during the third stage of Saudi state formation, did the reforms of King Fayṣal (1964-75) and King Khālid (1975-82), have the effect, in Max Weber's terms, of transforming the Saudi state from a crude monarchical government, incorporating chiefdom practices, into a "routinised", bureaucratic system. To be sure, the King's absolute position was uncompromised by any constitutional arrangements as some liberal elements suggested. Furthermore, Fayṣal, utilising modern administrative planning (initially formulated by a Ford Foundation Committee in 1963) enlarged the council of ministers into twenty ministries, including petroleum, public works, education, planning, commerce and industry, which used new methods of planning and calculated decision-making. A ministry of justice was established in 1970 to control the judicial system. A civil service, which grew from 62,000 to 336,000 personnel between 1960 and 1980, extended the government's influence to all spheres of public life throughout the realm; the state organism gained full control.

From 1970, economic development evolved through "Five-year plans," focusing both on diversification and growth. Through administrative outreach and economic means, the state established centralising networks, including schools and seven universities (the number of graduates rose from 1,700 in 1975 to *ca.* 17,000 in 1985); 24,000 km of roads connected the main towns with each other; and *ca.* 226,000 houses, telecommunication and medical facilities were built.

Centralisation was also evident, through a policy of "divide and rule", in the evolution of two separate bodies of armed forces: the regular army, composed of volunteer recruits from the entire Saudi society, under the command of the minister of defence and aviation (currently Sulṭān Ibn 'Abd al-'Azīz, King Fahd's full brother) and the National Guard, which functions as a militia maintaining internal order, composed of conscripted recruits from the main Nadjd tribes (such as the Muṭayr and 'Utayba) with long-established contacts with the royal family, under the command of the crown prince (currently 'Abd Allāh b. 'Abd al-'Azīz, King Fahd's half-brother). In itself, this division attests to a factional division within the royal family, which King Fayṣal was able to balance, so as to ensure the functioning of the Saudi royal family in its role as the Kingdom's central-governing élite. He established a policy of co-operation between Fahd and his six full brothers, sons of 'Abd al-'Azīz and Hasa bint Aḥmad al-Sudayrī (who therefore became known as the "Sudayrī seven") who are now principal ministers, with a group of other princes, descendents of 'Abd al-'Azīz and various mothers, led by Crown Prince 'Abd Allāh, with the effect that the factions' candidates alternate as Kings and as Crown Princes. Thus during the reigns of Fayṣal and Khālid, the centralisation of the Saudi state reached its peak.

Saudi Arabia underwent another process of state building, which concerns its socio-political cohesion. Unification under Saudi rule of the different territories and segments, which until 1932 were known as Nadjd, Ḥidjāz and their dependencies, did not mean full assimilation, but rather the introduction of a loose, unifying framework of tribal groups, which remained socio-economically autonomous. It showed society's compliance or acquiescence with Saudi rule, and war-weariness with the effects of territorial expansion and *Ikhwān* fighting. This loose unification was demonstrated by the King's functioning, in tribal tradition, as an arbiter between the two main provinces of Nadjd and Ḥidjāz, reflecting each region's interests vis-à-vis the other, and symbolising their readiness to co-operate. Su'ūd's and Fayṣal's appointments as governors of Nadjd and Ḥidjāz respectively, further signified the role of the Su'ūdī family as the principal unifier of the kingdom. The imposition of the *Sharīʿa*, in its Wahhābī interpretation, as the legal norm of the entire realm, was another step in this loose unification, although followers of other legal schools continued to practice their own doctrines (notably Shī'īs in al-Aḥsā' and Shāfi'īs in Ḥidjāz).

Finally, 'Abd al-'Azīz used unification as a means to foster feelings of regional loyalty to the central government, amidst economic recession and several tribal uprisings in Northern Ḥidjāz and 'Asīr during 1930-4. After enlisting the support of various tribal leaders and prominent businessmen, on 16 September 1932, 'Abd al-'Azīz declared formal unity among Saudi-ruled territories, under the newly-named Saudi Arabian Kingdom (*al-Mamlaka al-ʿArabiyya al-Suʿūdiyya*). However, the provinces were ruled separately, according to traditional principles of allegiance to tribal

chiefs, based on a complex system of subventions and taxation. Only during the reigns of Fayṣal and Khālid were all parts of society technologically made more accessible to each other and more dependent on the central government, adding a sense of a state-based, bureaucratic identity to their cohesion.

However, reforms also had disruptive socio-political effects, emanating from the impact of modernisation. Relying on financial and oil sales reserves, which in 1981-2 reached a peak of *ca.* $165 billion, Saudi Arabia became urbanised: its population, which in the 1930s was 70% nomadic, was in the 1980s about 90% urban. Djidda and Mecca in Ḥidjāz, and al-Riyāḍ in Nadjd, became megalopolises of over one million people each. Five new civil-military city-bases (notably Yanbuʿ, Djubayl, and Khamīs Mushayṭ) were built and other older centres were renovated and enlarged. Society became more stratified, divided into a wealthy businessman élite, a professional middle class and a lower class of manual workers, including several millions of imported Asians and Africans. An atmosphere of materialism and consumerism disoriented the formerly more austere and rather egalitarian Saudi society. However, Islamic and tribal principles remained effective as value systems, even after the tribal groups became sedentarised. Thus the norms of Wahhābī conduct remained dominant, both through the role which the *ʿulamāʾ* continued to play as teachers (notably in girls' schools), judges, prayer-leaders and religious instructors (*muftī*), and, most notably, as legal-political advisers to the government. Religious zealots continued to operate as a "moral police", for "the promotion of good and abrogation of evil" (known as *Hayʾat al-nahy min al-munkar waʾl-amr bi ʾl-maʿrūf*), whose duty is to supervise public conduct and punish offenders. Moreover, tribal, kin-based co-operation is upheld as the guiding principle of intermarriage, administrative appointments, business enterprises and for building political support. Finally, a welfare system of free health and education services, subsidised food, electricity and water, combined with free, weekly access of the lower classes to a provincial governor or cabinet minister for allaying grievances, maintained internal balance and a sense of cohesion and stability in a rapidly-changing Saudi society.

Events in the 1990s indicate that the political and socio-economic dynamic which has characterised Saudi Arabia's state-building since the days of King Fayṣal, resulting in centralisation and cohesion, may have exhausted itself. Lower oil prices and huge military expenses (both as assistance to ʿIrāḳ in its war against Iran in the 1980s and for the Desert Storm operation in 1990-1) caused a decline in state revenues. The fast-growing population (at a rate of 4% annually, reaching *ca.* 13 million Saudis and over three million foreign workers) has made it difficult for the government to provide for employment and welfare services. Islamic and tribal values stimulate opposition movements rather than generate support for the government. Even terrorist attempts have occasionally erupted. Consequently, there is a growing need for a new stage of state-building which will create a new order and stability.

SUWĀʿ, the name of one of the five gods dating from the time of Noah mentioned in the Ḳurʾān (LXX, 23), together with Wadd, Yaghūth, Yaʿūk and Nasr [*q.vv.*].

Suwāʿ was worshipped by the Hudhayl [*q.v.*] at Ruhāt in the region of Yanbuʿ (Ibn al-Kalbī, 6) in one of the valleys running from the Red Sea towards Medina (Yāḳūt, *Buldān*, iv, 1038). The tribe assiduously frequented his shrine, made pilgrimages to it and constantly offered sacrifices of their best smaller beasts to it (Ibn al-Kalbī, 6, 35, citing two verses attributed to a Yemeni, cf. also Yāḳūt, iii, 181-2, ii, 878). The idol was said to have been given by ʿAmr b. Luḥayy, the reformer of idol worship in Arabia, to al-Ḥārith b. Tamīm b. Saʿd; its custodians [see SĀDIN] were the Banū Liḥyān. The name's etymology reflects the fact that the Hudhayl, a pastoral tribe, might have given the name to the protecting deity of stray herds, since *suwāʿ*, as a *maṣdar* of *sāʿa*, is applied to a troop of camels wandering without a herdsman (*TʿA*, v, 384-5).

Suwāʿ has been seen as a female deity and the consort of Wadd, the first representing the fertility principle (the Moon) and the second, the fertilising principle (the Sun) (cf. Osiander, in *ZDMG*, vii [1853], 496; Krehl, *Über die Religion der vorislamischen Araber*, 66 ff.). Wellhausen (*Reste*², 19) was dismissive of this; to him, both the sex of this divinity and its connection with Wadd, its alleged consort, were highly doubtful. The five gods from Noah's time are represented as male ones, and Suwāʿ appears as a genealogical element in Hudhalī onomastic. Moreover, Suwāʿ's male sex emerges clearly from the verses of Ibn al-

Kalbī and Yāḳūt's notice, cited above. That Suwāʿ was worshipped with female features by the Hamdān, according to commentators cited by Krehl, *loc. cit.*, comes from a very late Arab tradition, one not confirmed in South Arabian inscriptions (those adduced by Derebourg and Glaser are not listed in Ryckmans, *Les noms propres sud-sémitiques*). We have probably a confusion between Suwāʿ and Sūʿ, the name of a Yemeni tribe which appears in a deformed guise in the *Dīwān* of al-Nābigha al-Dhubyānī (ed. Derenbourg, Paris 1906, 79; cited also in *TʿA*, v, 384, ll. 4-5). As for the association of Suwāʿ and Wadd, admitted by Robertson Smith (*Kinship and marriage*, 293) on Krehl's affirmation, it is merely in reality based on the side-by-side enumeration of the two names in the Ḳurʾānic list and in the onomastic of Hudhayl (cf. Wüstenfeld, *Tabellen*, Göttingen 1853, 5, where is found ʿAbd Wadd b. Suwāʿ).

The absence of the name Suwāʿ from Semitic inscriptions confirms its essentially Ḥidjāzī character. Like Hubal, it was a god peculiar to the Hudhalī pastoralists, represented by a stone (al-Ṭabarī, i, 1648-9) like all the primitive Arabian deities. Its sanctuary was destroyed by ʿAmr b. al-ʿĀṣ at the same time as that of al-ʿUzzā in the year 8. In the face of the god's powerlessness to protect itself, its *sādin* became a Muslim (Ibn Saʿd, ii/1, 105).

SUWĀR (p.), Pahlavi *aswār*, Old Persian *asabāra-*, in Muslim Indian usage *sawār*, "horseman", but assigned a special technical meaning in the bureaucratic organisation of the Mughal nobility instituted by Emperor Akbar (r. 963-1014/1556-1605). The hierarchical rank given to every noble was represented by two numbers, one designed *dhāt* "person" and the other *sawār*. The *sawār* rank determined the mounted retainers (*tābīnān*, so spelt) and horses the *manṣabdār* [see manṣab] was required to maintain. The amount sanctioned to cover the pay against the *sawār* rank was termed *ṭalab-i tābīnān*. In 981/1573-4 Akbar first introduced a numerical system of ranks, but with a single rank only, i.e. the rank determined only by the number of cavalry (*sawār*) the noble was expected to maintain. A payment at a rather low rate began to be made in advance for a contingent of a size, generally less than the titular rank. This came to be known as *bar-āwardī* ("by estimate"). Ultimately, the *bar-āwardī* defined the number of the second or *sawār* rank, and payments for this were made according to complex rules. The rate per unit of *bar-āwardī/sawār* under Akbar initially ranged from between 12,000 *dāms* (rupees 300 per unit) of *sawār* rank per annum and 9,600 *dāms* (rupees 240). Subsequently, payments were adjusted in accordance with the actual number of horsemen and horses presented at muster [see istiʿrāḍ], and this was called the *asp-i dāghī* payment, set at a uniform rate of 15,360 *dāms* (rupees 384) per annum for every unit of *sawār* rank. This system, modified by succeeding rulers, could work best so long as mounted archers formed the bulk of the Mughal army, but with the increasing use of musketry [see bārūd, vi], the military significance of cavalry became less and less, and in any case, administrative laxity after Awrangzīb's death contributed to a breakdown of the entire system of Mughal ranks.

In the Indian Army of British Indian times, *sowar* was the designation for troopers in cavalry regiments (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, ²London 1903, 857, and also the *Bibl.* to sipāhī. 3).

al-SUWAYDĪ (also Ibn al-Suwaydī), ʿIzz al-Dīn Abū Isḥāḳ Ibrāhīm b. Muḥammad b. Ṭarkhān, Arab physician (b. 600/1204 in Damascus, d. there 690/1292). He was a student of Ibn al-Bayṭār and a friend of Ibn Abī Uṣaybiʿa [*q.vv.*]. The latter reports that al-Suwaydī was an excellent writer of poetry and prose (see *ʿUyūn al-anbāʾ*, 267, for some verse) and, in addition, an outstanding calligrapher who penned his own books in the "well-proportioned script" (*al-khaṭṭ al-mansūb*) devised by Ibn al-Bawwāb [*q.v.*] or in clear Kūfī script.

Three works of al-Suwaydī are extant in manuscript:

1. *K. al-Tadhkira* (*al-hādiya*). It consists of a collection of excerpts concerning remedies from about 400 Islamic, Greek, and other authors whose names are mentioned at the end of the book. Al-Suwaydī proposes to include only such remedies as have (allegedly) been confirmed by experience (*al-mudjarrabāt*). The book has, however, only a limited value as a source of information, since the remedies are only mentioned, but not described in detail.

2. *K. al-Simāt fī asmāʾ al-nabāt* ("The characteristics concerning the names of plants"), al-Suwaydī's main work. His autograph is preserved in the ms. Paris, BN, arab. 3004 (= Suppl. 877). The book is probably the most comprehensive of all the writings on synonyms and a lexical treasure trove for the plant names in use in the 7th/13th century. In addition to the Arabic names, the author gives the Greek, Syriac, Persian, Mozarabic (*laṭīnī*), and Berber equivalents. The sheer size leads one to expect a comprehensive pharmacognostic encyclopaedia. But a look at the text very soon shows that one-third, if not one-quarter of its size would have sufficed, if, under the appropriate synonyms, the author had simply referred to his discussions under the main entry, i.e. the most common name of the drug. Instead he offers the same or a similar text again under the synonyms which naturally swells up the text enormously. This uneconomical procedure is *mutatis mutandis* also true for the *Tadhkira*. Both works are products of unchecked literary transmission.

3. In addition to these two pharmacognostic works, al-Suwaydī also composed a small mineralogical work with the title *K. al-Bāhir fi 'l-djawāhir* (also known as *K. Khawāṣṣ al-aḥdjār min al-yawāḳīt wa 'l-djawāhir*). It treats of twenty-six minerals. Being a late compilation, without any originality, it is interesting only for the authors quoted.

4. A work cited by Ibn Abī Uṣaybiʿa (*ʿUyūn*, ii, 267), *al-Dhakhīra al-kāfiya fi 'l-ṭibb*, has not yet been found.

(A. Dietrich)

AL-**SUWAYDIYYA** (modern Tkish. Samandağ), nowadays an important town and headquarters of the sub-province (*ilçe*) of Samandağ. It is situated 26 km/16 miles south-west of Antakya (Anṭākiyā [*q.v.*]), the capital of the Hatay province of Turkey, near to the Mediterranean Sea, 5 km/3 miles north of the Orontes River (Ar. al-ʿĀṣī [*q.v.*]).

In the mediaeval period, when al-Suwaydiyya is first mentioned, the name apparently refers to the port at the mouth of the river on the north bank, which the Crusaders knew as Soudin or Port Saint-Simeon, after St. Simeon Stylites the Younger, the remains of whose monastery are to be found on Mont Admirable (Samandağ), situated a little to the east. Port Saint-Simeon occupied the site of a Greek trading colony which was abandoned in later antiquity in favour of Seleucia Pieria to the north, but then reoccupied at the time of the Arab conquests, when the harbour at Seleucia Pieria silted up. References to al-Suwaydiyya are mostly in connection with the transit of people and goods through the port to and from the hinterland, and largely cease after the end of the 7th/13th century. The port, also known as al-Mīnāʾ, was probably abandoned again in the 8th/14th century, and few traces remain. After centuries of obscurity, present-day Samandağ profits from the light industrial and agricultural prosperity that has transformed Hatay, without, however, effacing Samandağ's Levantine flavour. This recalls the time, before the 1939 plebiscite, when it belonged to the partially Arabic-speaking autonomous Sandjak of Alexandretta (Iskandarūn [*q.v.*]) under French-mandated Syria [see AL-SHAʾM 2.(b)]. Samandağ continues to be associated with the predominantly Syrian Nuṣayrī sect [see NUṢAYRIYYA], who venerate an important popular shrine (*türbe*) identified with Khiḍr (al-Khaḍir [*q.v.*]) located at the nearest point to the town on the sea-shore.

(E. Honigmann-[D.W. Morray])

AL-**SUWAYRA**, Mogador, a town in Morocco on the Atlantic coast. The Bay of Mogador, protected against the north winds by the rocky promontory on which the town is built, against those from the west by an island about 1 km/1,000 yards in length, forms a natural harbour which, although not large and inaccessible for ships of large tonnage, has however the merit of being accessible at all seasons, an advantage which secures it a favourable place among the anchorages of the Atlantic coast of Morocco which is, generally speaking, inhospitable. This favoured situation was taken advantage of at a very early period. In spite of the lack of precision in the sources, it is probable that we should seek at Mogador the site of one of the five Phoenician colonies founded by Hanno (5th century B.C.). Pliny records that at the end of the 1st century B.C. the king Juba II founded purple dye-works on the *Purpurariae Insulae*, apparently islands and islets opposite al-Suwayra. Getulic purple, which was celebrated at Rome, was supplied by the molluscs abundant on this coast.

In the 5th/11th century, according to al-Bakrī, Amogdul, a very safe anchorage, was the port for all the province of Sūs. We see in the name that of a local saint, Sīdī Mogdūl, still venerated in this region, whose tomb is on the bank near the mouth of the Wādi 'l-Ḳsob. It is however possible that the saint gets his name from an old Berber place-name. Mogador is only a Spanish or Portuguese transcription of Mogdūl, through the forms Mogodul, Mogodor, which we sometimes find in the texts. The harbour and the island bear the name Mogodor or Mongodor on a series of portolans of the 14th and 15th centuries (publ. by Ch. de la Roncière, *La découverte de l'Afrique au Moyen-âge*, Paris 1925) but there was not a town here, when in September 1506, the king of Portugal Dom Manuel I commanded a gentleman of his court, Diogo d'Azambuja, to build a fortress here which was called *Castello Real* of Mogador. Built with great difficulty, the Portuguese stronghold did not long resist attacks from the local tribes. It seems that at Mogador they came up against strong resistance, probably organised by the old Berber marabout body of the Ragrāga. The garrison had to remain blockaded in Castello Real, revictualled with difficulty from Portugal and Madeira, until in 1510, the tribes were strong enough to seize the fortress.

This old Portuguese castle situated on a rocky promontory supporting the western mole of the modern harbour, survived till 1764 or 1765 and was only destroyed when the town of al-Suwayra was built (see below).

In spite of the lack of success of the Portuguese attempt, this privileged situation continued to attract the envy of European nations. At the beginning of the 17th century, Spain thought of seizing it to protect the route to the Indies. At the same time, English agents were thinking of making Mogador a base against Spain. In France, Richelieu and Père Joseph were drawing up schemes for a colonial policy. The Chevalier de Razilly in 1626 suggested to them the occupation of Mogador and the organisation of a factory and fisheries there. He had it reconnoitred in 1629, but found it impossible to take it by surprise.

In spite of so many projects and attempts against it, the island and the shores remained practically deserted. Ships, however, frequented the roadstead. It was through Mogador that in the first quarter of the 17th century, the greater part of the trade between Marrākush and Holland took place. Later, in the time of Mawlāy Ismāʿīl, the harbour was mainly used as a refuge for corsairs who came there to rest and repair their vessels.

Shortly after 1750, Sīdī Muḥammad b. ʿAbd Allāh, having become sultan and having made Marrākush his capital, decided to found a town at Mogador and to conduct all the commerce of the south of his kingdom through it. The harbour also served as a base for the corsairs who, through the menace they offered to the fleets of Europe, forced the Christian nations to conclude treaties with the sultan. In order to populate the town and start business in it, he demanded

that European consuls and merchants should settle there and have houses built at their own expense.

It is from the autumn of 1764 that the foundation of the town really dates; it was given the name al-Suwayra (Swīra), the little fortress; the name Mogador was only used by Europeans. We also find a Berberised form (*Tasuirt*). The English provided the sultan with an architect. They sent him a French "engineer", a native of Avignon, called Nicolas Cournut, who had made the plans for the fortifications of some places in Roussillon. He was an adventurer who, after working in France as a contractor, had entered the English service during the Seven Years' War. The sultan did not gain much by his services and sent him back to France at the beginning of 1767. None of the present buildings in Mogador can be attributed with certainty to Cournut, for after him a number of European architects and masons worked for the sultan, notably a Genoese architect who built the battery called the *sḳāla* situated on the western rampart facing the sea. Suwayra owed to its builders the narrow streets, massive gateways and bastions of European type, the like of which cannot be found in other Moroccan towns and which give it quite a specific character as an "orthagonal médina". Sīdī Muḥammad also built outside the town a country palace which still stands half buried in sand opposite the little village of Diyābāt.

The dreams of the sultan were only imperfectly realised. The prosperity of al-Suwayra remained insignificant under Sīdī Muḥammad and declined under his successors. The situation of the town, a long way from great cities and main roads, made it frequently used in the 19th century as a political prison and compulsory place of residence for high officials in disgrace. Mogador remained, however, the starting-place for the caravans to the Sūs, Mauritania and the Sūdān, and retained from this position a certain commercial importance, to which the opening of the port of Agadir to commerce was to cause considerable harm.

On 15 August 1844, a French squadron commanded by the Prince de Joinville, who had just bombarded Tangier, came and bombarded al-Suwayra likewise. It was intended to make an impression on Mawlāy ʿAbd al-Raḥmān by striking at a town which belonged to him personally and from which he drew considerable revenues. A three hours' bombardment silenced the batteries; the French army then disembarked on the island, the garrison of which, entrenched in the mosque, made a vigorous defence until the next morning. On 16 August, a detachment of 600 men went to spike the guns, throw the gunpowder into the sea and destroy the last defences of the town.

Under the French Protectorate, the town now called Mogador became the seat of a *contrôle civil*. In the 1926 census, it had 18,401 inhabitants, including 7,730 Jews. This important community progressively decreased, and on the eve of independence was reduced to only 1,341. During the colonial period, Mogador became an important fishing port, furnished with canning factories, on the impulse of Breton entrepreneurs. A commercial port was set up, and dealt with the agricultural products of the town's hinterland: cereals, almonds, cummin, wax, woollens, hides and gums. In 1956, the town re-assumed the name of al-Suwayra.

The drying-up of the oceans' resources and the development of better-equipped ports both to the north (Safi) and to the south (Agadir and then Tan Tan) brought to a precipitate close the industrial activities of processing fish, throwing part of the working population into unemployment, a quarter of which had worked in the fishing industry and its ancillaries. It was Morocco's third fishing port in 1970, with over 40,000 tonnes of fish landed annually, but this fell to 20-25,000 tonnes after 1982 and down to 6,000 tonnes in 1991. Commercial activity in the port became negligible. Its administrative significance (al-Suwayra is the chef-lieu of a province), the presence of a large-scale and a petty commerce serving the Chiadma (S̲h̲iyādma) region, and the survival of workers in marquetry (of national importance, starting from working with the thuya or arbor vitae wood), have enabled it to survive with difficulty. The industry benefited from some incoming capital and employed 4,600 persons in 1993 (Ministry of Industry statistics). But al-Suwayra remains above all a town whose tertiary sector has withered away.

Despite an exceptionally mild summer and winter climate, an original countryside mingled with sand dunes, forests of argan trees and a splendid, diversified coastline, al-Suwayra has not been able to grow into a residential centre for international tourism. It is mainly frequented by Moroccan town-dwellers, especially those from Marrākus̲h̲ (Marrakech), in search of bathing and an unusual coolness. It has become a refuge for "hitch hikers" and, at times, for groups of hippies, so that its image as a tourist centre has been impaired. On the other hand, its unspoilt appearance has meant that it is frequently used as a stage for shooting films: "Saharan desert" scenes, utilising the surrounding massive sand dunes; urban and seaport settings for Orson Welles' *Othello*; and, more recently, for a film on Rimbaud (*L'homme aux semelles de vent*) by Marc Rivière.

In these conditions, population growth has remained relatively modest. From 30,000 inhabitants in 1971, there were 42,000 in 1982 and 56,000 in 1994. The rate of annual increase of the twelve years 1982-94 has been 2.4%, whilst the urban population of the economic region of Tensift, in which al-Suwayra is situated, has grown by 3.6% during the same period.

As a town isolated amid the dunes, poorly connected with its hinterland (which is in any case poor), away, as it always has been, from the great axial road connecting Safi with Agadir, al-Suwayra cannot compete with the two towns between which it is situated. It appears today as the archetype of a medium-sized Moroccan town in crisis, at the end of the world as it were, and a town turned inwards with the memories of its rich past.

(P. DE CENIVAL-[J.-F. TROIN])

AL-**SUWAYS** or SUEZ, a seaport in Egypt, located at the northern end of the Red Sea (lat. 29° 59' N., long. 32° 33' E.).

The town centre is situated closely south to the ancient town of Ḳulzum [*q.v.*] which continued the Ptolemaic settlement of Κλυσμα or Κλεισμα at the western shore of the bay of Suways and of which only a few ruins remain, known as Kūm al-Ḳulzum. The foundations of al-Suways were laid after the formerly famous trading centre al-Ḳulzum (al-Maḳrīzī, *Khiṭaṭ*, i, 213) had been fallen into decay in the 5th/11th century because of severe problems in supplying the inhabitants with fresh water and the difficulties in using the place as a permanent harbour, which had been effected by increasing silting up of the coast. Al-Idrīsī still mentioned al-Ḳulzum on his map of the world (*Charta Rogeriana*) dated 1154. Yāḳūt says that "today", al-Ḳulzum is ruined and the newly-founded al-Suways, which al-Muḳaddasī had already mentioned nearly two centuries before "was also like ruins where only a few people lived" (*Buldān*, iv, 388). In earlier times, al-Suways had just been one of several wells which had been used to supply the inhabitants of al-Ḳulzum with fresh water. In the Middle Ages, al-Suways served as a modest harbour for pilgrims travelling to Mecca and Medina by sea, as a trading place for Bedouin tribes and as the point of departure for the Egyptian annual tribute for the Ḥidjāz (see *ibid.*, iii, 286). At al-Suways, the old pilgrim road from Cairo and the caravan track through the Wādī 'l-Tīh ended. The use of the seaport was limited, although at the end of the 9th/15th century, the Mamlūks tried to restore the importance of the place as a military harbour. In Ottoman times, however, al-Suways became a supply centre for ships of the Ottoman Red Sea naval forces which were lying in the roads. In addition, the Ottomans built a fortress which, however, fell into decay. Prior to the urban extension works of the 19th century, the old town, covering 0.15 km^2, enclosed 11 quarters (*ḥāra*) with a total of 112 residences, 2 mosques, a mill, several ovens, some 18 larger shops and *khāns*, six markets with 120 shops and workshops and a *zāwiya*. Two new quarters named Salīmiyya and al-Munsha'a were built in the 1810s as Muḥammad 'Alī promoted a small ship-building industry in order to facilitate the transportation of troops to the Ḥidjāz during the Egyptian-Wahhābī wars (1811-18). This already anticipated the urban development of the 19th century, when al-Suways experienced a remarkable refoundation, and, after Alexandria, became Egypt's second trading centre. In 1838 al-Suways was connected to the new post road to Cairo and Alexandria, and also became the starting point for the new steamship liners to Bombay, with steam now allowing the all-year-round use of al-Suways as harbour. Its importance grew when, during the Crimean War, the telegraph link between Egypt and Aden was laid.

In the early 1840s, Ferdinand de Lesseps (1805-94) made further investigations into the possibility of digging a new canal from the Mediterranean to the Red Sea. He elaborated earlier plans published by J.P. Le Père (1808) and Linant de Bellefonds (1821), and, after earlier measurings, according to which the level of the Red Sea was about 9 m/30 feet higher than that of the Mediterranean Sea (Lepère 1798), had been corrected, de Lesseps finally submitted a proposal to the then *wālī* of Egypt, Sa'īd Pasha [*q.v.*]. He supported the opinion of Bellefonds' Saint-Simonist study group and of an Egyptian-European commission which had been set up in 1846, according to which the building of a canal through the Isthmus of Suez was possible. On 5 January 1856, Sa'īd signed the concession, hoping that the canal would strengthen his ambitions of making Egypt more independent of the Ottoman Empire. After three years of fund-raising and political quarrels, which involved the question of Ottoman sovereignty, the Suez Canal Company was founded with the support of Napoleon III in Paris in 1858. In the course of time, French entrepreneurs bought more than 50% of the shares. Sa'īd Pasha himself, who had originally acquired 21% of the shares, had to sell some of them already in 1860. Finally, canal construction started on 22 April 1859. The Egyptian government recruited 25,000 peasants to work in the Canal region. Simultaneously, a sweet water canal was dug from Cairo to the region of Ismā'īliyya. This canal followed the old canal which had linked the Red Sea with the Nile in Late Pharaonic times and which had been restored several times till the 2nd/8th century [for details, see *EI*[1] art. *Suez*]; it took five years to dig this canal. After 1863 and the introduction of machines, the infrastructure and working conditions were considerably improved. When on 16 November 1869 the Canal was opened, construction costs had reached about 19 million pounds sterling, one-third of which had been paid by the Egyptian government. The Canal was now owned by the Companie Universelle du Canal Maritime de Suez, which controlled further property along the Canal. As a result of severe financial problems the Egyptian Khedive Ismā'īl Pasha [*q.v.*] was forced to sell his shares in the Suez Canal Company to the British government. Following the digging of the Canal (1859-69), two new permanent artificial harbours (formerly called Port Ibrāhīm and Port Tawfīḳ) were built 3 km/2 miles to the south of Suez at the entry into the Canal. The Convention of Constantinople (29 October 1888) guaranteed the freedom of shipping through the Canal even in time of war. This treaty was again recognised by the Egyptian government on 24 April 1952. When opened, the Canal had a length of 164 km and a breadth of 52 m; in 1982, the length was 195 km and its breadth 164 m, now allowing even larger tankers (up to 150,000 registered tons in 1980) to pass through.

In 1858, Suez was connected to the railway network, and the railway was used to import fresh water into Suez, which gradually turned into a town. Having become the southern port of entry into the Canal, its population has steadily increased (1860: 4,160; 1897: 17,500; 1992: 388,000), being nowadays the sixth largest town of Egypt. From 1882 to 1954, the Canal Zone remained a British military deployment area. Following the Anglo-Egyptian Treaty of 10 October 1954, the British were to demilitarise the zone within 20 months; on 26 July 1956, the Egyptian government nationalised the canal. Until 1960, Suez formed part of the Canal Governorate, but in that year it became the centre of a separate province (*muḥāfaẓa*). From 1956 to 1967, the sharp increase in oil shipment favoured an economic boom of the town, and the Canal was dredged out several times in order to bring the depth into line with the steadily increasing

tonnage of tankers. Suez severly suffered from the wars and military activities from 1948 to 1973. During the Suez Crisis in 1956, Suez was not occupied and only a few bombing attacks hit the town. The Egyptian-Israeli Wars of 1967 and, in particular, of that of 1973, however, devastated Suez, destroying up to 70-80% of it. The town only slowly recovered from the damage. From 1967 to 1975 whilst the Canal was blocked, Suez was almost a dead city. After 1975, there were ambitious plans to reconstruct Suez and it was projected as an urban agglomoration of nearly 1 million inhabitants by the year 2000, although only a few of these plans have since been realised. Refineries have been established, and a production pipeline now links the town with Cairo, and some chemical industries and an aluminium works constitute the present industrial importance of Suez.

SŪYĀB, a settlement in the Semirečye region of Central Asia [see YETI SU] mentioned in the history of the Early Turks and their connections with the adjacent Islamic lands. It apparently lay slightly to the north of the Ču river valley, hence just north of the modern Kirghizia-Kazakstan border. Minorsky suggested that the name means "canal (*āb*) on the Ču".

At the time of the Arab incursions into Central Asia, the chief *ordu* or encampment of the Türgesh ruler Su-lu was located at Sūyāb; it was sacked by the incoming Chinese army in 748, and then in 766 the site was occupied by the Ḳarluḳ [*q.v.*] when they migrated southwards and westwards after the fall of the Western Turkish empire. The *Ḥudūd al-ʿālam*, tr. Minorsky, 99, mentions 20,000 warriors as coming from it, but Gardīzī, *Zayn al-akhbār*, ed. ʿAbd al-Ḥayy Ḥabībī, 279, has the more modest figure of 500. The author of the *Ḥudūd* placed it, in his time (late 4th/10th century), in the country of the Tukhsī, who may have been remnants of the Türgesh. Thereafter, however, it fades from mention; it does not e.g. appear in Kāshgharī's *Dīwān lughāt al-turk*.

SUYURGHATMISH [see ḲUTLUGH-KHĀNIDS].

SUYŪṬ [see ASYŪṬ].

AL-**SUYŪṬĪ**, ABU ʾL-FAḌL ʿABD AL-RAḤMĀN B. ABĪ BAKR b. Muḥammad Djalāl al-Dīn al-Khuḍayrī, famous Egyptian scholar, at present recognised as the most prolific author in the whole of Islamic literature.

1. Life.

Through his father, al-Suyūṭī was of Persian origin. He himself states that his ancestors lived at al-Khuḍayriyya, one of the quarters of Baghdād (hence his second *nisba*). In the Mamlūk period his family settled in Asyūṭ [*q.v.*], where its members were engaged in important religious and administrative duties. Al-Suyūṭī was born on 1 Radjab 849/3 October 1445 in Cairo, where his father taught Shāfiʿī law and acted as substitute *ḳāḍī*. An anecdote prefigures Djalāl al-Dīn's fertile career: his mother, a Circassian slave, is said to have borne him while she found herself in the family library. To this, al-Suyūṭī owes the surname "son of books" (*ibn al-kutub*) (A. al-Aydarūsī, *Taʾrīkh al-nūr al-sāfir ʿan akhbār al-ḳarn al-ʿāshir*, Baghdād 1934, 51). His father died prematurely in 855/1451, and so the son had several teachers. At the age of fourteen, he deepened his education in the various religious sciences (*tafsīr, ḥadīth*, Shāfiʿī law, etc.) as well as in Arabic. Among his numerous teachers were ʿAlam al-Dīn al-Bulḳīnī, Sharaf al-Dīn al-Munāwī and Muḥyī al-Dīn al-Kafyādjī. Al-Suyūṭī includes among them Ibn Ḥadjar al-ʿAskalānī [*q.v.*], but he attended only once his courses, and that at the age of three (*Taʾrīkh al-nūr al-sāfir*, 54). He studied *ḥadīth* under the aegis of a dozen women specialising in this discipline (M. al-Shakʿa, *Djalāl al-Dīn al-Suyūṭī, masīratuhu al-ʿilmiyya wa-mabāḥithuhu al-lughawiyya*, Cairo 1981, 35-40). In 867/1463, hardly eighteen years old, he inherited his father's position, taught Shāfiʿī law in the mosque of Shaykhū and gave juridical consultations in which he handled various sciences in a brilliant way (an example of a complex *fatwā* given at that early age is reported by S. Abū Djīb in *Ḥayāt Djalāl al-Dīn al-Suyūṭī maʿ al-ʿilm min al-mahd ilā ʾl-laḥd*, Damascus 1993, 189-93). In 872/1467 al-Suyūṭī took up again the tradition of dictating (*imlā*) *ḥadīth* in the mosque of Ibn Ṭulūn, where his father had been a preacher. This method had been interrupted twenty years earlier at the death of Ibn Ḥadjar. As a result, al-Suyūṭi obtained in 877/1472 the post of teacher of *ḥadīth* at the Shaykhūniyya. Though nominated by his teacher al-Kafyādjī, it seems that he obtained this post because of the support of a Mamlūk *amīr*. From 891/1486 he was also in charge of the Baybarsiyya *khānḳāh* [*q.v.*]. These obligations left him time to write his works and to see to their spread outside Egypt. Before he had reached thirty years of age, his works were sought after in the entire Near East, and later circulated from India to Takrūr in Sahilian Africa, where he, from Cairo, played the role of counsellor in matters of Islamisation (see the *Asʾila wārida min al-Takrūr*, in the *Ḥāwī* presented below, i, 377-85).

In fact, his career developed much more smoothly abroad than in Egypt. Here he found himself in the middle of numerous polemics: the intransigence and arrogance he displayed certainly contained elements which irritated his colleagues and stirred up their jealousy. These controversies touched upon questions of theology and law as well as mysticism, and the *Ḥāwī li ʾl-fatāwā* (new ed. Beirut, n.d.), through the titles of the *fatwās* and chapters which the work brings together, attests that al-Suyūṭī must have refuted (*al-radd ʿalā ...*) many times the views of his adversaries. His main detractor was Muḥammad al-Sakhāwī (d. 902/1497 [*q.v.*]), a traditionist who took offence at the fame of his colleague (as is admitted by al-Shawkānī in *al-Badr al-ṭāliʿ bi-maḥāsin man baʿd al-ḳarn al-sābiʿ*, Cairo 1348/1929-30, i, 328-35). Al-Sakhāwī's acrimony

appears in the pages which he reserves for al-Suyūṭī in *al-Ḍaw' al-lāmi' fī a'yān al-ḳarn al-tāsi'* (Beirut n.d., iv, 65-70). The tension came to a head when al-Suyūṭi, probably in 888/1483, pretended to have reached the degree of *mudjtahid muṭlaḳ muntasib*, that is to say that he exercised *idjtihād* [*q.v.*] by following the method of one of the four *imāms*, in this case that of *imām* al-Shāfi'ī. He thus does not present himself as an "independent" *mudjtahid* (*mustaḳill*). In *al-Radd 'alā man akhlada ilā 'l-arḍ* (Algiers 1907), he reminds the reader that *idjtihād* is a collective duty (*farḍ kifāya*), underlined not only by the masters of the Shāfi'ī school but also by Ibn Taymiyya. He also affirms that his *idjtihād* is not at all limited to the *Sharī'a* but also applies to the disciplines of the *ḥadīth* and of the Arabic language. Al-Suyūṭī's allegations aroused a real *fitna* (this term is used by Muhammad Abu 'l-Ḥasan al-Bakrī; cf. al-Sha'rānī, *al-Ṭabaḳāt al-ṣughrā*, Cairo 1970, 78), and so it becomes understandable that al-Sha'rānī devoted the greater part of his entry on al-Suyūṭī, whom he venerated, to the justification of the latter's points of view with regard to *idjtihād* (*op. cit.*, 17-36). In consistency with his pretentions to *idjtihād*, al-Suyūṭī, two or three years before the year 900/1494, announces himself as the renewer of Islam (*mudjaddid*) [*q.v.*] for the 9th century of the *Hidjra* (see his epistle on this subject in the *Ḥāwī*, ii, 248 ff. and his autobiography with the title *al-Taḥadduth bi ni'mat Allāh*, ed. E.M. Sartain, Cambridge 1975, 215-27).

From 891/1486, at the age of about forty, al-Suyūṭī decided to retire from public life. Progressively he resigned his functions and stopped delivering *fatwās*. Apart from the resentment of his colleagues towards him, the reasons he put forward were corruption in the milieu of the *'ulamā'* and their ignorance. Indeed, the decline of the cultural level at the end of the Mamlūk period was manifest. At the same time, al-Suyūṭī's relations with sultan Ḳā'it Bāy [*q.v.*] became more acrimonious. He refused to pay a visit to the sultan at the beginning of each month: frequenting the wordly rulers, he profounded, was condemned by the first Muslims (cf. his epistle *Mā rawāhu al-aṣāṭīn fī 'adam al-madjī' ilā 'l-salāṭīn*, Ṭanṭa 1991). On several occasions, he clashed with Ḳā'it Bāy (see his *fatwā* in the *Ḥāwī*, ii, 154-79) and declined the offer made later by sultan al-Ghawrī [*q.v.*] to assume direction of his *madrasa*. Al-Suyūṭī always rejected peremptorily the *de facto* power of the Mamlūks whom he, following the example of al-'Izz Ibn 'Abd al-Salām (d. 660/1261), considered as "slaves" (*mamlūk*). He never missed the opportunity to point this out in one or the other of his *fatwās* (*Ḥāwī*, i, 206-10). He reproached sultan Baybars [*q.v.*] for having weakened the Shāfi'ī rite—and, beyond that, Islam—by designating a grand *ḳāḍī* for each of the three other rites. Conversely, the 'Abbāsid caliphs were for him the incarnation of legitimacy, for they were the best guarantors of the revealed Law and of the prophetic *Sunna* (see J.Cl. Garcin, *Histoire, opposition politique et piétisme traditionaliste dans le Ḥusn al-muḥāḍara de Suyūṭī*, in *AI*, vii [1967], 33-88; see also *Le sultan et le Pharaon*, in *Hommage à François Daumas*, Montpellier 1986, 261-72). The indestructible support al-Suyūṭī gave to the caliphate is also explained by the bonds which his father wove with the caliphs residing in Cairo, and from which he himself profited: in 902/1496, he succeeded in having himself nominated "supreme *ḳāḍī*" by al-Mutawakkil, but the latter had to retract when faced with the hostility of the *'ulamā'*.

Al-Suyūṭī's complete retreat into his house on Rawḍa island took place in 906/1501, following the conflict which opposed him to the residents of the Baybarsiyya. For him, who venerated the masters of *taṣawwuf*, the residents of that *khānḳāh* were only pseudo-Ṣūfīs. Forced to reduce their salaries, he was obliged to hide in order to escape the persecution of sultan Ṭūman Bāy, who supported his adversaries. He was then dismissed from his functions, but, as E.M. Sartain has shown in her *Jalāl al-Dīn al-Suyūṭī, biography and background*, Cambridge 1975, 101, this certainly did not happen because of mismanagement of the finances of the establishment. In his house on Rawḍa, he concentrated on the editing and revision of his works. He died there on 19 Djumādā I 911/18 October 1505. His reputation as a scholar and the aura of godliness which were already his during his lifetime, then reached their zenith; his clothes were bought as if they were relics (Ibn Iyās, *Badā'ī al-zuhūr fī waḳā'i' 'al-duhūr*, Istanbul 1934, iv, 83).

2. Al-Suyūṭī as a scholar, and his works. The self-confidence of al-Suyūṭī was based on his being aware of his own gifts. He had a prodigious memory (he knew by heart all the *ḥadīth*s which had come to his knowledge, namely 200,000) and his remarkable synthetic mind enabled him to edit or to dictate several works at the same time. He certainly did not lack ambition (at the age of twenty, during the Pilgrimage, he asked God to grant him more knowledge in *fiḳh* and in *ḥadīth* than the two great scholars of his time had in these disciplines; cf. *al-Nūr al-sāfir*, 55), and this prompted him to write on the most divers subjects. He did not want to remain ignorant in any field of knowledge (see Goldziher's judgement on this matter, in J.O. Hunwick, *Ignaz Goldziher on al-Suyūṭī*, in *MW*, lviii (1978), 94, 96). He asserted, however, that it was not a question of pride on his side, but of concern for bearing witness to the blessings with which God had favoured him (*al-taḥadduth bi-ni'mat Allāh*; cf. also *Ḥāwī*, ii, 562). Moreover, we know that he led a rather frugal life. He was convinced that he had been invested with a mission which prevailed over every other consideration, in particular, over the opinion others had of him. This mission consisted in assembling and transmitting to coming generations the Islamic cultural patrimony before it might disappear as a result of the carelessness of his contemporaries. In fact, he quotes in his works numerous ancient texts which are now lost, in particular in the field of the Arabic language. Al-Suyūṭī represents the apex of mediaeval science (among others, David King makes this point with respect to al-Suyūṭī's treatise on cosmology (*al-Hay'a al-saniyya fī 'l-hay'a al-sunniyya*) in his review of A. Heinen, *Islamic cosmology*, Beirut-Wiesbaden 1982; cf. *JAOS*, cix/1 [1989], 125, and *Djam'al-djawāmi'*, Cairo 1984, 9 vols., al-Suyūṭī's great—unfinished—compilation of the prophetic tradition). At the same time, he prefigures the modern period by certain aspects, such as being partly an autodidact, presenting to a public, which he wanted to be widened, manuals which were centred around precise themes (this is, e.g., the case with his *Itḳān fī 'ulūm al-Ḳur'ān* (many editions), which remains a work of reference wherever Ḳur'ānic sciences are taken up. Moreover, his epistles and *fatwās* are often the fruits of a request from the public, Egyptian or foreign. In the same spirit of vulgarisation, he epitomised the works of others, as well as his own (e.g. *al-Djāmi' al-ṣaghīr*, a summary of the *Djam' al-djawāmi'* quoted above). For all that, al-Suyūṭī cannot be considered as a mere compiler. He indeed takes up themes which were usually neglected in Islamic literature. He is the first to have introduced Muslim mystics into

the field of the *fatwā* (in this, he was to be followed by other Shāfiʿī scholars of the 10th/16th century, such as Nadjm al-Dīn al-Ghayṭī and, above all, Ibn Ḥadjar al-Haytamī [*q.v.*]. As for the form, al-Suyūṭī's procedure is scientific in so far as he quotes his sources with precision and presents them in a critical way. In the introduction to a work, he often defines the method which he is going to follow. His works benefit from a clear structure, and he often broke new ground by expounding his material according to its alphabetical order.

Regarding the number of his works, Arab and Western authors have brought forward different figures, and these go up parallel to our knowledge. A study of 1983 mentions up to 981 works (A. al-Khāzindār and M.I. al-Shaybānī, *Dalīl makhṭūṭāt al-Suyūṭī wa-amākin wudjūdiha*, Cairo), whereas al-Suyūṭī lived only for sixty solar years. In our days, his manuscripts are published with great success, and from this point of view, he has won the battle which laid him open to his detractors. Al-Suyūṭī's versatility is the illustration of the Islamic ideal, according to which there is no really profane science. He explored geography as well as lexicography, pharmacopeia, dietetics and erotica. Certain works of his are studded with the most anecdotal details, which in his eyes are all worthy of interest (cf. *al-Kanz al-madfūn wa 'l-fulk al-mashḥūn*, Cairo 1991—if this indeed is his—or "The hundred questions" to which he answers in his *Ḥāwī*, ii, 527-67). More profoundly, his approach of a subject is often multidisciplinary. The purpose of his small treatise *al-Aḥādīth al-ḥisān fī faḍl al-ṭaylasān* is to prove to sultan Ḳā'it Bāy that wearing the *ṭaylasān* is a *sunna*, but he does not deprive himself of introducing philological expositions. Moreover, he asserts that, at the elaboration of his *al-Khaṣā'iṣ al-kubrā*, on the specific virtues of the Prophet (Beirut 1985, 2 vols.), he made use of the sciences of *tafsīr*, *ḥadīth*, law and its foundations (*uṣūl*), of Ṣūfism, etc. (S. Abū Djīb, *op. cit.*, 52).

However, a well-defined main line of al-Suyūṭī's attachment to the Prophet and his *Sunna* stands out from this versatility. In his field of vision he includes the most scattered sciences as long as they do not contradict the Revelation which has come down upon Muḥammad. That is why he condemns in several texts Hellenistic logic (*al-manṭiḳ*) (cf. in particular *Ṣawn al-manṭiḳ wa 'l-kalām ʿan fann al-manṭiḳ wa 'l-kalām*, Cairo 1947). He is a man of Tradition, and for him every speculation is submitted to it. From this comes al-Suyūṭī's *salafī* aspect, which explains why he often walks in the footsteps of Ibn Taymiyya, although he dissociates himself from him in certain points (cf. E. Geoffroy, *Le soufisme en Égypte et en Syrie*, IFEAD, Damascus 1995, 448-9). Among the disciplines which he says he controls (*Ḥusn al-muḥāḍara fī akhbār Miṣr wa 'l-Ḳāhira*, Cairo 1968, i, 238-9; *al-Taḥadduth*, 204), that of the *ḥadīth* prevails, for its impregnates the greater part of his works. The various sciences which are related to the Arabic language perhaps represent his favourite subject (this is what he asserts in *al-Ashbāh wa 'l-naẓā'ir fī 'l-lugha*, Ḥaydarābād 1940, i, 3-4), but the influence of *ʿilm al-ḥadīth* is quite distinctly to be noticed in his major work on the language, *al-Muzhir fī ʿulūm al-lugha wa-anwāʿihā* (see e.g. B. Weiss, *Language and tradition in medieval Islam: the question of al-Ṭarīq ilā Maʿrifat al-Lugha*, in *Isl.*, lxi [1984], 98-9), and al-Suyūṭī himself acknowledged this in the prologue of his *Muzhir* (Beirut 1986, i, 1). In the same way as he did for the *ḥadīth*, al-Suyūṭī reintroduced the "dictation of the language" (*imlā' al-lugha*) after this had been interrupted for almost five hundred years (Hunwick, *op. cit.*, 92). It is worthwhile to note that, in his other works on language, al-Suyūṭī follows the method of the religious sciences, that of the *uṣūl al-fiḳh*, in *al-Iḳtirāḥ fī ʿilm uṣūl al-lugha*, and that of *fiḳh* in *al-Ashbāh wa 'l-naẓā'ir fī 'l-lugha*, which he puts side-to-side with *al-Ashbāh wa 'l-naẓā'ir fī fiḳh al-imām al-Shāfiʿī* (Cairo 1959). Though claiming that he innovated the science of the "foundations of the Arabic language" (*uṣūl al-lugha*), he worked as a philologist rather than as a linguist. Another pole of al-Suyūṭī's work are the Ḳur'ānic sciences (about twenty works), and if the above-mentioned *Itḳān* gives a generous share to language and rhetoric, al-Suyūṭī's main commentary, *al-Durr al-manthūr fī 'l-tafsīr bi 'l-maʾthūr* (Beirut 1990, 8 vols.) is exclusively supplied with *ḥadīth* and the sayings of the first Muslims. In this field should also be mentioned the very practical *Tafsīr al-Djalālayn* (many editions), the commentary begun by Djalāl al-Dīn al-Maḥallī (d. 864/1459 [*q.v.*]), one of al-Suyūṭī's teachers, and perfected by the latter. Brockelmann wrongly identified this work with the *Lubāb al-nuḳūl fī asbāb al-nuzūl*, which deals with the "circumstances of the revelation" (Cairo n.d.; see *EI*[1] art. *al-Suyūṭī*, at IV, 573b).

If in al-Suyūṭī's eyes the discipline of the *ḥadīth* represents "the noblest of sciences" (*Ḥusn al-muḥāḍara*, i, 155), this is because it is related to the prophetic model, which for him is the only way leading to God. In this field, al-Suyūṭī completes Ibn Ḥadjar's contribution by establishing the chain of guarantors and the degree of reliability of certain traditions introduced by his precursor. Here al-Suyūṭī's key work is perhaps *Tadrīb al-rāwī fī sharḥ taḳrīb al-Nawawī* (Beirut 1979), which deals with the terminology of *ḥadīth* (see e.g. the extensive use made of it by Ṣ. Ṣāliḥ in his *ʿUlūm al-ḥadīth wa-muṣṭalaḥuhu*, Beirut 1982), but many others could be quoted. The prophetic model evoked previously cannot be transmitted exclusively by bookish science; it must be vitalised from inside. Al-Suyūṭī, who claimed to have seen the Prophet more than seventy times while awake (al-Shaʿrānī, *op. cit.*, 29; al-Suyūṭī justifies this faculty in a long *fatwā* in *Ḥāwī*, ii, 473-92), assures people that, during a vision, one may be entertained directly by the Prophet about the validity of a *ḥadīth* (*Taḥdhīr al-khawwāṣ min akādhib al-ḳuṣṣāṣ*, Beirut n.d., 50). He attached importance to the complementarity between the esoteric and exoteric aspects of the Prophet in a work with the explicit title *al-Bāhir fī ḥukm al-nabī (Ṣ) bi 'l-bāṭin wa 'l-ẓāhir* (Cairo 1987). As a Ṣūfī, al-Suyūṭī found in the Shādhiliyya [*q.v.*] a just equilibrium between the Law and the Way (cf. his *Taʾyīd al-ḥaḳīḳa al-ʿaliyya wa-tashyīd al-ṭarīḳa al-shādhiliyya*, Cairo 1934). As master, he had a *shaykh* of this order, Muḥammad al-Maghribī (d. 910/1504), and his principal disciple, who served him for forty years, was called ʿAbd al-Ḳādir al-Shādhilī. In accordance with this personal engagement, al-Suyūṭī profited from his fame as *ʿālim* and jurisconsult to spearhead a clear-sighted apology for Ṣūfism and its masters. He saw the highest form of adoration in the *dhikr*, showed that one must interpret the sayings of the Ṣūfīs and not stop at their first appearance, maintained that the saints had the gift of ubiquity, put the initiatory hierarchy of the saints back into a Sunnī perspective, defended the orthodoxy of Ibn al-Fāriḍ and Ibn al-ʿArabī, etc. (the relationship between al-Suyūṭī and Ṣūfism is treated in detail in the above-mentioned *Le soufisme en Égypte et en Syrie*). Among the supernatural favours attributed to al-Suyūṭī we may cite his predictions on the first Ottoman period (Ibn

Iyās, *op. cit.*, v, 218; al-Sha'rānī, *op. cit.*, 30-2). Moreover, the eschatological dimension is very much present in his work (see the many *fatwās* in his *Ḥāwī*, e.g. ii, 213-56, 358-66, etc.; see also *Bushrā al-ka'īb bi-liḳā' al-ḥabīb*, Cairo 1969).

Finally, it should not be forgotten that al-Suyūṭī also was a historian and biographer. In this field, he took up theory (e.g. *al-Shamārīkh fī 'ilm al-ta'rīkh*, but above all he wrote on several concrete subjects, such as a history of the caliphs (*Ta'rīkh al-khulafā'*, Cairo 1964), a history of Egypt (*Ḥusn al-muḥāḍara*, quoted above), and a great number of biographical collections, chosen according to specialities (*ṭabaḳāt* of commentators, traditionists, grammarians, poets, etc.). He did not neglect literature, but this was hardly ever an end in itself. He took it up, in particular, under its historical angle (*al-Mustaẓraf min akhbār al-djawārī*, Beirut 1963) or under its erotic one (his *Rashf al-zulāl min al-siḥr al-ḥalāl* has been translated by René Khawam under the title *Nuits de noces*, Paris 1988), and his poetry is dedicated to the praise of the Prophet.

Bibliography: Add to the sources quoted in the article, al-Suyūṭī's biography, written by his disciple 'Abd al-Ḳādir al-Shādhilī, *Bahdjat al-'ābidīn bi-tardjamat Djalāl al-Dīn* (mss. in London, Dublin, Kuwayt), as well as Shams al-Dīn al-Dāwūdī, *Tardjamat al-Suyūṭī* (ms. Tübingen); Nadjm al-Dīn al-Ghazzī, *al-Kawākib al-sā'ira bi-a'yān al-mi'a al-'āshira*, Beirut 1945, i, 226-31. E.M. Sartain, *Jalāl al-Dīn al-Suyūṭī*, remains the most complete study in a Western language; see also eadem, *Jalāl al-Dīn as-Suyūṭī's relations with the people of Takrūr*, in *JSS*, xvi (1971), 193-8. In his bibliography, S. Abū Djīb mentions several studies in Arabic (*op. cit.*, 331-2). In his *Muhammad's birthday festival* (Leiden 1993, 45-70), N.J. Kaptein presents and translates al-Suyūṭī's *fatwā* which validates the practice of the *mawlid nabawī*. (E. Geoffroy)

SŪZ, Sayyid Muḥammad Mīr (1133-1213/1720-98), Urdu poet, was born in Dihli. His father was descended from a Gudjarātī saint, but the family originally hailed from Bukhārā. The poet had the broad education and training typical of the noble classes. He was an excellent archer and horseman, and generally skilled in the martial arts and noted for his physical strength. He was an expert calligrapher, and excelled in all the seven different types of ornamental writing. After a licentious youth, he became a dervish. As a writer, whilst a number of *tadhkira* authors refer to him and quote from his verse, there is a lack of firm detailed information. Mīr Ḥasan [*q.v.*] asserts in his *Tadhkira* that Sūz wrote prose as well as poetry: but none of this has survived; not even, regrettably, his book on archery.

His skill as a poet is recognised, but while the salient points of his poetry are well-known, we lack an authoritative *dīwān*. He was known for his emotional recitation, which contrasted with the more common *taḥt al-lafẓ* method, which perhaps placed phonology before feeling. His Urdu poetry is dominated by *ghazal*, but also includes *mathnawī*, *rubā'ī* and *mukhammas*. He at first used the *takhalluṣ* Mīr, but, to avoid confusion with Mīr Taḳī Mīr [*q.v.*], changed it to Sūz (= "passion, burning"). He was the first Urdu poet to achieve fame for *rēkhtī* verse, that is, using women's language, in which Rangīn later became better-known. Spontaneity, simplicity, avoidance of high-flowing similes and obscure allusions, all these, according to Saksena (*op. cit.* in *Bibl.*, 60), are among his characteristics. He does not make excessive use of Persian expressions: and, unlike his contemporary, Sawdā [*q.v.*], he has no penchant for virtuosity in prosody, such as rich and difficult rhymes. It is all very tantalising, and from what we know of his life and works, one is tempted to ask, "Is this a genius *manqué*?" Though essentially a Dihlī poet, he was, like others, driven by Marāṭhā and Afghān incursions to leave the city, and after a stay in Murshidābād, seat of the Nawwābs of Bengal, he became mentor of the Nawwāb Āṣaf al-Dawla in Lucknow in 1797, but died the following year. A pleasant, witty and courteous gentleman, he did not take easily to patronage, but won a niche for himself as a "prince of amorous style" (Saksena, 60). It must be admitted, however, that it contains more pathos than passion.

Bibliography: Ḳudrat 'Alī Shawḳ, *Ṭabaḳāt al-shu'arā'*, ed. Nithār Aḥmad Fārūḳī, Lahore 1968, 231-40, contains a short account and useful examples of Sūz's poetry. This should be taken together with Abu 'l-Layth Ṣiddīḳī, *Lakhnaw kā dabistān-i shā'irī*, Lahore 1955, 135-8. Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1926, 59-60, is helpful. In addition to Ḳudrat 'Alī Shawḳ's work mentioned above, the *tadhkira*s of the following authors merit reference: Muṣḥafī [*q.v.*]; Nassākh, *Sukhan-i shu'arā'*; and Mīr Ḥasan [*q.v.*]. (J.A. Haywood)

SŪZANĪ (better Sōzanī), Muḥammad b. 'Alī (or Mas'ūd?) al-Samarḳandī, Persian satirical poet of the 6th/12th century. A native of Nasaf (Nakhshab), he eulogised several of the Ḳarakhānid rulers of Samarḳand, from Arslān Shāh Muḥammad II (495-*ca.* 523/1102-*ca.* 1129) up to Ḳilič Ṭamghāč Khān Mas'ūd II (*ca.* 556-74/*ca.* 1161-78), but also several of the Burhānid *ṣadrs* of Bukhārā [see ṣadr. 1], the Saldjūḳid Sandjar [*q.v.*] and others. Dawlatshāh, who appears to have seen Sūzanī's grave in Samarḳand, says that he died in 569/1173-4, and adds that before his death he repented his many sins and turned his hand to devotional poetry.

However this may be, Sūzanī is now remembered mainly as the author of vehemently abusive invectives and of pornographic (mostly homoerotic) facetiae. For modern scholars (as already for the mediaeval Persian lexicographers) their interest resides largely in the fact that they contain many examples of the Samarḳand dialect and of unusual slang expressions. The poems were collected, together with a good number of scurrilous anecdotes, by the Ṣafawid antiquarian Taḳī Kāshī [*q.v.*] in his *Khulāṣat al-ash'ār*, from which virtually all of the manuscripts purporting to contain Sūzanī's *dīwān* are apparently derived, and a selection of these mediocre manuscripts forms the basis of the published edition by N. Shāh-Ḥusaynī, Tehran 1338 *Sh.*/1959. However a fair number of Sūzanī's poems are contained in a textually superior form also in anthologies of the 7th-8th/13th-14th centuries.

Bibliography: 'Awfī, *Lubāb* ii, 191-8; Mustawfī, *Tārīkh-i guzīda*, ed. Nawā'ī, Tehran 1339 *Sh.*/1960, 733-4; Dawlatshāh, *Tadhkira*, 100-3; Taḳī Kāshī, *Khulāṣat al-ash'ār*, B.L. ms. Or. 3506, fols. 361a-396a; Browne, *LHP*, ii, 342-3; de Blois, *Persian literature*, v, 546-50 (with further references); R. Zipoli, *I Carmina Priapea di Sûzanî*, in *Annali di Ca' Foscari*, xxxiv/3 (Venice 1995), 205-56. (F.C. de Blois)

SŪZĪ ČELEBI, Meḥmed b. Maḥmūd b. 'Abd Allāh, Ottoman poet who lived in the second half of the 9th/15th century and the first decades of the following one, d. 931/1524.

Born at Prizren [*q.v.*] near Üsküb [*q.v.*] (Skoplje), he became secretary to Mīkhāl-Oghlu [*q.v.*] 'Alī Beg,

and after the latter's death in 913/1507, secretary to Mīkhāl-Oghlu Meḥmed Beg up to 918/1512. From a *wakfiyye* of his dated 919/1513, it appears that Sultan Selīm I granted him the farm of Grajdanik with a *temlīk-nāme*, and that he left the service of Meḥmed Beg. He settled down in Prizren and established a *mesdjid* and a school in the Khōdja Ilyās district, becoming an *imām* and *mü'edhdhin* and teaching there. He probably remained there till his death, and was buried in the graveyard of his own mosque near the grave of his elder brother Nehārī.

The *tedhkires* quote two elegies by him and a few couplets, but do not mention whether he composed a complete *Dīwān*. However, it seems that he composed a *Ghazawāt-nāme* of 15,000 couplets in *mathnawī* form, describing and lauding ʿAlī Beg's campaigns in Rumelia, but only 1,795 couplets survive today. In its first part are narrated the campaigns of the Mīkhāl-Oghlu, and in its second the love affair of ʿAlī Beg and Meryem, daughter of Erdel Beg, so that the work can be considered as a hybrid epic-romance. The extant four ms. have been critically edited by Agâh Sırrı Levend, together with a facsimile of the Millet ms. *manzum* 1339 (*Gàzavāt-nāmeler. Mihaloğlu Ali Bey'in Gazavātnāmesi*, Ankara 1956) and with an extensive study on this type of literature in general and of ʿAlī Beg's Balkan campaigns. At the end, Levend includes some new information on Sūzī Čelebi from Olesnicki's biography in Serbo-Croat (Üsküp 1934).

SUZMĀNĪ [see lūlī].

SVIŠTOV [see zishtowa].

SWAHILI, a language extensively used on the coastland of East Africa (< Ar. *sawāḥil* "coastlands").

1. Language.

Swahili, also known as Kiswahili, belongs to the Bantu family of languages which are spoken in the southern third of Africa, from Cameroon and Kenya to South Africa. The languages share striking features of grammar—all nouns, for example, belong to one of a number of concord-classes, with characteristic prefixes and agreements—and a considerable common lexicon.

Swahili is spoken as a mother-tongue on the east coast of Africa, from the southern part of Somalia to the northern areas of Msumbiji (Mozambique), including the islands of the Lamu archipelago off the coast of Kenya, Pemba, Zanzibar, Mafia, and Kilwa off the coast of Tanzania, and on the Comoro islands. The location of the region on the rim of the Indian Ocean basin has enabled it to engage in maritime trade with other countries across the seas. The anonymous Greek traveller of *ca.* A.D. 50 (thus dated by Casson) notes such trade with Arabia in his *Periplus of the Erythraean Sea.* He also observed that the Arab captains and agents, as he called them, did not merely possess a superficial acquaintance of the coastal towns but were familiar with the people, intermarried with them, and that they knew the whole coast and understood the language. The coast also traded with Sīrāf and Shīrāz in Persia.

Trade was followed in time by the introduction of Islam to the coast by at least the 10th century. In the 12th century, al-Idrīsī gives a Swahili word *waganga* "practitioner of white magic", and four centuries later, Aḥmad b. Mādjid [see ibn mādjid] speaks of the *lughat al-Zandj*, presumably Swahili. With the appearance of Islam on the coast arose the necessity to learn the Arabic alphabet in order to read the Ḳur'ān, a practice which gave rise to a certain amount of literacy, especially among the urban population; this, in turn, prepared the ground for the development of poetry. Islam also widened the contact with the Middle East, initiating a continual flow of migration to the East African coast of scholars and learned persons with a good command of Arabic. Consequently, the influence of Arabic on Swahili has been semantically extensive in religious and commercial fields. Three ways have been suggested whereby Islamic concepts and Arabic religious terms entered the language: (i) the original Arabic term was Swahilised, e.g. *rūḥ* ("soul") became *roho*; (ii) the original Arabic term was Swahilised but a Bantu synonym was also used, e.g. *rasūl* "messenger" was realised both as *rasuli* and as *mtume* "the one sent"; (iii) the original Arabic term was not adopted as such but its concept was realised through the use of a pre-existing Swahili word, e.g. *Allāh* was rendered by the Swahili *Mngu.*

Words of Arabic origin in commercial discourse include the word for "trade", which is a combination of the Arabic words for "buying" and "selling", *bayʿ* and *shirā'*, Swahilised as *biashara*; others are *soko* ("market"), *faida* ("profit"), *bidhaa* ("goods"). The Swahili word for "contract", *mkataba* is formed out of the root *k-t-b*, which has also supplied *kitabu* ("book"), *katiba* ("constitution"), *katibu* ("secretary"), *maktaba* ("library").

The importance of Swahili as a language complementary to Arabic has long been recognised by some scholars. One such, Sheikh Abdulla Saleh al-Farsy (d. 1982), deliberately employed Swahili in his sermons, radio broadcasts and writing. The use of an African language was to him a legitimate medium for the expression of Swahili Islam, a necessity for a fuller assertion of one's identity. His translation of the Ḳur'ān, originally serialised in a Zanzibari weekly newspaper, *Mwongozi*, is a major contribution in this field. Al-Farsy's ideas are being continued today by his pupils, notable among whom is Sheikh Saidi Musa (b. 1944), who writes extensively from his headquarters at Ugweno, Moshi, on mainland Tanzania. The outcome is that Swahili has today made inroads in areas previously reserved for Arabic. The Friday sermon, for example, is now preached in Swahili, though Arabic is employed in the "formulaic" parts which require reading from a set text.

The way in which the two languages complement each other is best exemplified in the adoption of what is known as the "Swahili-Arabic script" as the orthography of the coast. The script was used extensively prior to the introduction of the Latin script by the Germans, and remains in limited use among Swahili Muslims of the coast. Thus the earliest phase of Swahili literature—16th to the 19th centuries—is given expression in this script. It is a phase dominated by poems written on religious themes. The poets drew their inspiration from the life of the Prophet: the earliest extant work is the *Hamziyah*, composed in 1652 by Idarus Othman, which is a translation in verse of the *Ḳaṣīda Hamziyya* of al-Būṣīrī (d. 1296 [*q.v.* in Suppl.]). But while the earlier poets projected themselves to the Arabia of the 7th century for their inspiration and themes, later poets expressed their understanding of Islam through local idioms and imagery. An interesting example is the Swahili poem *al-Inkishafi* by Sayyid Abdallah Nasir (d. 1820), in which the poet uses the deserted city of Pate [*q.v.*] as an image of the transitoriness of life, a theme often invoked in Muslim literature.

Gradually, both language and literature spread beyond the coast, moving inland more rapidly and deeply in Tanganyika than in Kenya. Trading caravans from around 1800 onwards diffused Swahili up-country, creating settlements (e.g. at Tabora and Ujiji) where the language and its Muslim culture took root. Christian missionaries of various nationalities and orders also used Swahili in their evangelical work, in both oral and written media, including the translation of the Bible. The early missionaries contributed significantly to the study of the language through their scholarly works. Ludwig Krapf (of the Church Missionary Society) published the first grammar of Swahili in 1850, to be followed by his dictionary in 1882, Bishop Edward Steere of Zanzibar (of the Universities Mission to Central Africa) produced a *Handbook* of Swahili in 1870, and, a few years later, Fr. Charles Sacleux (of the Holy Ghost Mission in Zanzibar and Morogoro) started his studies of the dialects of Swahili which culminated in the publication of his Swahili-French dictionary in 1891, "a dictionary in which there is a wealth of dialectal and verse material not available elsewhere" (Whiteley, 1968, 13). Mention must also be made of the Rev. W.E. Taylor, who collaborated with a local Swahili scholar, Mwalimu Sikujua, in the 1880s in collecting and preserving the work of the Swahili poet Muyaka bin Mwinyi Haji (d. 1840).

Another factor which aided the spread of Swahili and its consolidation as a *lingua franca* in Tanganyika was its use by the colonial powers as the language of administration, police and education. The German administration of Tanganyika (1891 to 1918) laid the foundations upon which the British (1918-61) continued to build. A far-reaching decision was taken in 1930 to select the Swahili spoken on Zanzibar as the "standard" language to be used officially in education and for all publications to be written in a standard Latin orthography.

In Tanganyika, Swahili was adopted by early manifestations of organised labour which grew into the political parties that fought for independence; in Kenya, the future President, Jomo Kenyatta, chose to speak in Swahili to raise his originally local Gikuyu organisation into a national movement. In both countries, the language contributed to the creation of a sense of unity. In recognition of this fact, the independent government of Tanganyika (1961) declared it a national language; and, together with English, Swahili is an official language in Kenya. At least 40 million people speak it today. Its extensive use in Tanzania [*q.v.*] (the union of Tanganyika and Zanzibar) has given rise to a group of mother-tongue speakers of Swahili whose parents use the language as their common medium of communication. Not all of them are Muslims. Whereas a century or so ago, to be a Swahili was synonymous with being a Muslim on the coast, that equation is increasingly being challenged and debated. A crucial factor of change has been the use of Swahili as a home-tongue by families belonging to different nationalities, different ethnic communities and different faiths.

2. Literature.

This is covered in detail in the following articles: ḤAMĀSA. vi, in Suppl.; ḲIṢṢA. vii; MADĪḤ, MADḤ. 5; MARTHIYA. 5; MATHAL. 5; MIʿRĀDJ. 3; SHAABAN ROBERT. See also TAʾRĪKH. East Africa:

SWĀT, a region of the North-West Frontier region of what is now Pākistān, lying roughly between lats. 34° 30' and 35° 50' N. and long. 72° and 73° E. It is bounded on the north-west by Čitrāl, on the west by Dīr, on the east by Bunēr and Hazāra and on the south by Mardān. It comprises essentially the basin of the Swāt River, from its headwaters down to the Malakand Pass, after which it runs into the Kābul River below Peshāwar and near Nawshēra. The northern part of the basin, Swāt Kōhistān, includes high mountains, but Kūz or lower Swāt is the alluvial basin of the river, fertile and intensively cultivated. In classical times, Lower Swāt may well have been traversed by Alexander the Great and his army.

Swāt must originally have been peopled by speakers of Indian or Dardic languages. By the 16th century, the majority of the Swātīs were incoming (displacing Dilazāks) Pashto-speaking Yūsufzay and other Pushtūns, although there remain Dardic-speaking Torwāls and Gārwīs in Swāt Kōhistān [see DARDIC and KAFIR LANGUAGES]. Also by this time, Swāt became Muslim, and its history since then, into the 20th century, has been inextricably linked with that of Dīr, Čitrāl and Badjawr [*q.vv.*]. Dīr and Swāt were centres of the Rawshaniyya movement [*q.v.*] of the late 16th century, and the whole region north of the Kābul River was never really controlled by the Mughals or by Aḥmad Shāh Durrānī [*q.vv.*]. Arising out of the *mudjāhidīn* movement led by Sayyid Aḥmad of Bareilly (killed 1246/1831) in the early 19th century [see AḤMAD BRĒLWĪ and MUDJĀHID. 2], the Ākhund ʿAbd al-Ghafūr (d. 1877) in 1835 established himself as a religious leader at Saydū in lower Swāt, and the shrine at Saydū Sharīf later became one of the holiest Islamic sites in northern India.

Although British rule was imposed on the Peshāwar valley after 1849, British influence was only fitfully exercised in the lands further north. Swāt and the adjacent petty states were the targets of the British Indian Army's punitive campaign of Ambēlā in 1863, and Swāt (but not Dīr) was involved in the Malakand rising of 1897 led by Mullā Saʿd Allāh Sartōr ("The Madman"). It was shortly after this, in 1901, that a railway branch from Nawshahra (Nowshera) to Dargai at the foot of the Malakand Pass was completed.

Temporal rule in Swāt had been exercised until his death in 1857 by the *Pādishāh* Sayyid Akbar of Sitāna, patron of Sayyid Aḥmad Brēlwī and leader of warfare against the Sikhs. After the death of the Ākhund ʿAbd al-Ghafūr and, shortly afterwards, those of his two sons, Sayyid Akbar's family again had tem-

poral power in Swāt, whilst the spiritual succession was disputed amongst the Ā͟khund's four grandsons, the Miyānguls. Swāt was recognised by the Government of India as a princely state in 1917. It was not until 1926 that one of these grandsons, Miyāngul Gul S͟hāhzāda ʿAbd al-Wadūd, succeeded in finally excluding Sayyid Akbar's descendants and in consolidating the Swāt valley under his leadership. He was recognised by the Government of India as Wālī or ruler of the Swāt princely state; by his death he had extended the State northwards and eastwards into Indus Kōhistān and had taken over Bunēr. His son Miyāngul D͟jahānzīb succeeded in 1949. After Partition, Swāt remained a princely state within Pākistān, with the Wālī independent in regard to internal affairs and ruling with a partially-elected Advisory Council, until 1969, when Swāt was peacefully integrated within the regular administration of Pākistān. A demographic trend there has been the steep rise in the population of the valley, now dense, with pressure on resources there.

SYLHET [see silhet].

SZECHUAN (also spelled as Ssŭ-ch'uan in the Wade and Si-chuan in the Pin-yin systems) is a province in the south-west of the People's Republic of China. Geographically, the four grand rivers (Min, T'o, Chialing and Wu; three of them are tributaries of the Yangtze River) flowing north-southward give the modern name of Sze-chuan (meaning "four rivers") to the province. The whole province is a huge basin, some 75,000 square miles in extent. The mountains on all sides bar easy access to the outside world. The azure mountains of the Tibetan borderland rise in the west, crossed only by the road to Lhasa and penetrated by only a few trails. The T'apa and Tsinling ranges run across the north, traversed by a single road and one railway. These mountains continue south-eastward and close to the Yangtze Gorges. Terrain which is difficult to cross surrounds the basin in the south, next to Kweichou and Yunnan provinces. The Szechuan basin is also known as the "Red Basin" because of its underlying soft sandstone and shales, ranging from red to purple in colour. In ancient times, the region was called "Pa Shu," denoting the original non-Han cultures of this region. The geographical isolation of the region has made its culture unique, and distinct from that of inland China. Various aboriginal cultures still exist today.

Modern studies suggest that the ancient Chinese silk industry was invented by the Ti and Ch'iang peoples in Szechuan. According to the *Han Annals*, Ch'iang Ch'ien, the Han envoy sent by Emperor Wu to the Central Asian countries, found Szechuan silk, crafts and other industrial products in the country of T'a Hsia (modern Afghanistan) around 139-126 B.C. Apparently, a trade route between Szechuan and Central Asia existed in ancient times. The ancient south-western silk road was probably the earliest communication route between China and Hsi Yu ("the western countries": Central and Western Asia). This route is supposedly 700 years older than the northern one, which was discovered by Ch'ang Ch'ien on his mission to the Huns in Central Asia.

The south-western silk road started from Ch'engt'u city, which has been, throughout history, the cultural, economic and political centre of Szechuan; and then split into two routes: the eastern river way along the Min river entered Yunnan province to Kunming city; the western land route, running from the ancient steel-making centre of Ch'iunglai through various valleys, entered western Yunnan to T'ali city, then the two routes joined at T'ali and, following the traditional horse caravan route, entered Burma and ended in India. This road is the so-called ancient Shu Junt'u T'ao ("Szechuan—Indian Path"). From India, it then went in two directions: either southward via the Indian Ocean to the Persian Gulf, then to Arabia; or northward by land to Central Asia. The south-western silk road was often used by Muslims of Yunnan and Szechuan as the caravan trade route to India or as the Pilgrimage route to Mecca before modern transport became available.

From the Han period (195 B.C.-A.D. 220), the Han culture gradually permeated Szechuan and was imbibed by the local people, with subsequent syncretisation. In spite of its existence in China during the T'ang and Sung periods, Islam never appeared in Szechuan until the Mongol conquest of the province. According to Chinese sources, the first appearance of Islam here took place probably in the year A.D. 1253, when a Muslim contingent of the Mongol Tamači army was sent by Ḳubilay K͟hān [*q.v.*] to conquer Szechuan and Yunnan. After the conquest, Muslim troops stayed there to cultivate the conquered lands. From then on throughout the Mongol-Yuan (1278-1368), Ming (1368-1644) and Manchu-Ch'ing (1644-1911) dynasties, Muslims, mostly from the north-western provinces of Kansu, Shensi and Ninghsia, and some from inland provinces, continued to migrate into the region either for trade or for military campaigns. Islamic communities were thus formed and mosques built in the main cities all over the province. The Ku-ch'ie Lou mosque in Ch'engt'u city, which was built in the Ming period and reconstructed in the 17th century, is apparently the oldest of those still in existence. It is known for its traditional architectural design and use of local construction materials.

The Muslim population in Szechuan grew rapidly during the Ch'ing period, especially when the Muslim rebellions of Ma Hua-lung [*q.v.*] in Shensi and Kansu and T'u Wen-hsiu [*q.v.*] in Yunnan failed and a great number of Muslims fled the Manchu massacres to Szechuan. The Naḳs͟hbandiyya-D͟jahriyya order thus spread into Szechuan. However, the Ḳādiriyya and Naḳs͟hbandiyya-K͟hafiyya orders had existed in the province from early in the 17th century, and the Ḳādiriyya are reported to have set up seven shrines in the province. The indigenous Chinese Ṣūfī order called Hsi-T'ao-Tang and founded by Ma Ch'i-hsi in Lin-t'an-Kansu at the beginning of the 20th century, also set up its branch *zawāyā*, which also served as their trading and preaching centres, in the north-west of the province. The order probably entered the region mainly through Muslim traders. At the present time, the Muslim population of Szechuan is about 109,000 (2.2% of the provincial minority population), according to the rather laconic report of the 1990s official census. During the last three decades, due to the Communist central government's assimilation policy

towards the national minorities, Szechuan Muslims have increasingly been integrated into Han-Chinese society. Nowadays, it is not easy to distinguish Muslims from ordinary Chinese, apart from pork avoidance.

SZEGED (Ottoman, Segedīn), a town and centre of a *sandjak* in the Great Plain of Hungary, along the river Tisza. First mentioned in a 1183 charter, Szeged acquired town privileges in the 13th century and became a *civitas* ("free royal town") in 1498. After being ransacked by the Ottomans in 1526 and by the Serbian militia of "Tsar" Yovan in 1527, it enjoyed peaceful years until 1541. Since the town had some ruinous remnants of a mediaeval castle only, it was unable to show resistance, and was easily taken by the Ottoman Pasha of Buda early in 1543. A *sandjak* was created immediately around Szeged, which was to extend over a large territory later, and whose first *mīrliwā*, Derwīsh Beg, was an active participant in the 1543 campaign.

By 1547-8 the castle was rebuilt by the Ottomans. In 1552 Mihály Tóth and his haiducks, as well as the mercenary troops of Bernardo de Aldana, made an abortive attempt at regaining Szeged. After this event, Ottoman rule remained uninterrupted until September 1686. Following the 1596 establishment of the *wilāyet* of Eger, the *sandjak* of Szeged was transferred to its territory, though its governor occasionally resided in Bács (Serbian Bač).

The Hungarian population of the town reached approximately 10,000 souls both in the 1520s and the 1540s, thus being among the three largest places in Ottoman Hungary. After a sudden and significant drop by 1560, when 700 hearths were found instead of 1,350, due to the migration of the wealthiest elements to Kecskemét and to towns of Habsburg Hungary, a period of stagnation followed. The high annual number of Catholic baptisms registered in the second half of the 17th century—160 on the average with an increasing tendency—suggests that there was no population fall among the Christians in 100 years.

Economically, Szeged was a traditional centre of salt transportation. Cattle and sheep breeding stood in the foreground of agricultural activities, while locally-produced grain and wine could not cover the needs of consumption. Export-oriented trade concentrated on cattle. The role of handicrafts was modest.

SZÉKESFEHÉRVÁR (Ottoman, Istōlnī/Ustōlnī Belghrād [from Serbian *stolni belgrad* "white capital castle"]; German, Stuhlweißenburg; Latin Alba Regia), a town and centre of a *sandjak* in Transdanubia, Hungary, and one of the main royal and ecclesiastical centres from the time of St. Stephen (1000-38), where several kings were crowned and buried.

Realising its strategic and spiritual importance in the Buda-Esztergom-Székesfehérvár triangle, the Ottomans took the town and its castle, which fell without considerable resistance, on 3 September, during the 1543 campaign, two years after they had captured the Hungarian capital and had created a new *beglerbegilik* there [see BUDIN]. Except for a short interval in 1601-2, Székesfehérvár remained under Turkish rule until May 1688, when it surrendered to the Austrians after a long blockade.

A *sandjak* of extensive territories was established around Székesfehérvár, including some western regions which were not actually in Ottoman possession; out of the 591 towns and villages registered in the *idjmāl defteri* of 1570, only some 250 paid the *djizye* in 1563-5. Among its *sandjak begis*, significant personalities can be found such as Ḥamza Beg, who spent most of his life in Hungary, as well as Ḳāsim Pasha, who served also as *beglerbegi* of Buda and Temesvár, and Ibrāhim Pečewī [*q.v.*], the famous chronicler, in the years 1632-5.

The castle underwent restoration in 1545-6, before 1550, in 1572 (this time, more than 1,000 workers and 650 carts were employed), and finally in the period 1640-60. Otherwise, only a few Ottoman buildings were erected: two *djāmi*'s or *mesdjids* and two baths.

Following the usual pattern in administrative centres, the original Hungarian population—estimated at 7-8,000—diminished to 1,200-1,500 by 1563-5 and to some 500 by the time of the rule of Murād III. The number of Ottoman garrison soldiers, which was nearly 3,000 in 1543, fell to 1,400 by 1568-9; besides, some 1,000 timariots lived here in the 16th century, including their *djebelüs* and families.

Apart from occasional fluctuations, Székesfehérvár preserved its economic importance, at least in the 16th century. This is proved by financial sums in customs lists and the high number of shops. The town was a significant place on the transit route of cattle exported to Austria, Germany, and Italy. However, due to lack of sources the 17th century history of the town is almost unknown.
